In order that the ship may be enabled to let slip her cable in case of necessity, chain cables are furnished with bolts at distances from each other of a fathom or two, which can be readily withdrawn. A chain of which the section is 1 inch in diameter breaks with 16 tons; such a chain is nearly equivalent to a 10-inch hemp cable. And the dimensions of the chain cable corresponding to any hemp cable are therefore easily found by merely dividing the circumference of the hemp cable by 10. The strength of every part of the chain is proved before it leaves the manufactory.

Cable's length. (Naut.) The length, or paying out dimensions, of a ship's cable, generally 120 fathoms, or 720 feet.—**Stream cable.** A smaller cable than the bow-ers, used to moor a ship in a tolerably safe anchorage-ground.—**To pay out, or veer out, cable.** To let the cable run out of the hawse-holes in a slack manner.—**To serve the cable.** To fasten old rope, canvas, &c., around the cable to prevent undue friction.—**To slip the cable.** To let the cable go by the run. (Practiced generally in cases of emergency, when there is not sufficient time to haul the cable aboard.)

—**a.** To fasten or furnish with a cable.

(Arch.) To ornament a fluted column with a cable.

Cable, Electric. A conductor for the electric current, in which the conducting wire is covered with a sheath of insulating material, which in its turn is protected from injury by a metallic covering. Submarine cables, which are in constant danger of abrasion, are surrounded by a coating of steel wire. To provide for greater flexibility, cables are usually made up of many strands.

Cable Road, n. Consists of an underground tube, through which a cable passes kept in constant motion by a stationary engine. The tube is provided with an open slot, through which passes a device to transfer motion to the car from the cable. These roads were first used upon the street railways in San Francisco, Chicago, and Philadelphia, in the latter city in 1885, and later on Broadway, New York. They have been largely replaced by the electric trolley system, being now in use principally in San Francisco, where the steepness of many of the streets renders the cable system desirable.

Cachica'ma, n. (Zool.) The nine-banded armadillo, an edentate animal found from Texas to Paraguay. It is also known as *Taton-peba*. The *C.* is 16 inches long, with a long tail, and is covered with plates of armor, those of the tail being horny rings and those of the body in nine bands. The *C.* feeds principally on ants, but will also eat vegetable food. It is easily tamed.

Cadam'ba, or Kudam'ba, a tree, native to India, which yields a handsome cabinet wood of deep-yellow color. It is closely related to the button-bush, or *Cephalanthus*, of North America.

Cad'does. (Anthrop.) A family of North American Indians, including a northern group, the Rees or Arikaras; a middle group, the Pawnees; and a southern group, the Caddo, Wichita, Kiawah, and other tribes. Their family relation consists in the affinity of their languages. Once numerous and wide-spread, they now number little over 2,000, part on Fort Berthold reservation, N. Dakota, the remainder in the Indian Territory.

Cadell', FRANCIS, an Australian explorer, born at Cockenzie, Scotland, Feb., 1822. He entered the service of the East India Company in 1836, and in 1848 visited Australia. In 1850 he ascended the Murray river in a boat for several hundred miles, and in 1853 and 1855 continued his explorations in a steamboat, reaching a point 1,740 miles from the river's mouth. In 1858 he explored the Murrumbidgee river for 2,000 miles, and in 1859 went up the Darling as far as Mt. Murchison. He was murdered by a mutinous crew in June, 1879.

Cad'lliac, in Michigan, a city, cap. of Wexford co., 96 miles N. of Grand Rapids. It lies in the largest belt of hardwood timber in the U. S., and between two beautiful lakes. Pop. (1890), 4,461; (1897) abt. 7,000.

Cagots (Kü-gó'), n. pl. (Anthrop.) [Fr.] An outcast and despised race, who wandered for centuries over N. Spain and S. France, somewhat resembling gypsies; origin doubtful. Before the French Revolution they had to wear a peculiar dress, to live apart, and to do only menial work. Since then they seem to have sunk out of sight.

Caine, THOMAS HENRY HALL, born in 1853, of Manx parentage. An eminent British novelist and dramatist, in early life an architect in Liverpool, England. Wrote *Sonnets of Criticism*; *The Shadow of a Crime*; *A Son of Hagar*; *The Deemster*; and more recently *The Bondman*; *The Scapegoat*; *The Manxman*; *The Christian*, 1897.

Caird, EDWARD, LL.D., born at Greenock, Scotland, 1824; educated at Oxford University, and became fellow in Merton College, Oxford. He was appointed professor of moral philosophy in Glasgow University in 1866, and Master of Balliol College, Oxford, in 1893. His works are: *A Critical Account of the Philosophy of Kant*, pub. in 1877; *Essays on Literature and Philosophy*, 1892; and *Evolution of Religion*, 1893.

Caird, JOHN, D. D., LL. D., born at Greenock, Scotland, Dec. 15, 1820. He was a graduate of the University of Glasgow. For short periods afterwards was pastor of churches in Edinburgh, Perthshire, Newton-on-Ayr, and of Park Church in Glasgow in 1857. The University of Glasgow appointed him Professor of Divinity in 1862, and principal of the University in 1873. His works comprise, *The Religion of India*; *Brahmanism and Buddhism*, &c.

Caird, SIR JAMES, agriculturist, born at Stranraer, Scotland, in 1816. He received his education at the High School and University of Edinburgh. His close study of the subjects of land and farming led to the publication of *English Agriculture*; *The Landed Interest*; *India, the Land and the People*; and other works. The passage of the bill in Parliament providing for the collection of agricultural statistics in the United Kingdom was largely due to his exertions. Died Feb. 10, 1892.

Cairnes, JOHN ELLIOT, economist, born in County Louth, Ireland, Dec. 26, 1823. He was appointed to the chair of Political Economy in Dublin, in 1856; in 1859 accepted a similar position in Queen's College, Galway, and in 1866 in University College, London. He was a powerful and independent thinker, whose

opinions were the result of his own research. Among recent English economists he was second only to Mill. Died July 8, 1875.

Cairns, HUGH MACCALMONT, Earl of, born in County Down, Ireland, in 1819. Educated at Trinity College, Dublin. Was returned to Parliament for Belfast in 1852; became Q. C. in 1856, Solicitor-General in 1858, and Attorney-General under Lord Derby in 1866. Was also made a Judge of Appeal, and the title of Baron was conferred upon him in 1867. He became Lord Chancellor in 1868 and again in 1874, and was created Viscount Garmoyne and Earl Cairns in 1878. As a lawyer and Parliamentary debater he was noted, and also as a philanthropist. Died April 2, 1885.

Calamandar Wood, n. (Joinery.) A highly valuable cabinet wood, resembling rosewood, but much more beautiful and durable. It is the product of *diospyros hirsute*, a species of the genus which produces ebony, and is a native of Southern Hindostan and Ceylon. The wood is very dense and difficult to work, and takes an exquisite polish. Veueers of *C. W.* are of unusual beauty, dark wavings and blotches, almost black, being gracefully disposed over a delicate fawn-colored ground. This tree has been so wastefully felled by the Dutch, and afterward by the English, that it has become very rare. Its name is believed to be a corruption of *Coromandel* wood.

Calambu'co, n. A tree of the island of Luzon, used for ship building and the manufacture of farming implements. It is highly durable, and is indestructible by ants.

Caland, PIETER, an engineer of Holland; born in Lierikzee in 1826. He was educated at the Royal Academy at Breda; became engineer-in-chief of the second class in 1867, and was afterwards appointed Inspector of the Waterstaat. He is the author of a work (in French) *Etude sur l'Effet des Marées dans la Partie Maritime des Fleuves*. He was made knight of the Order of the Netherlands Lion; and vice-chairman of the Royal Institution of Engineers of Holland. As an engineer, Mr. Caland's fame will be founded on the advantage which the great seaport of Holland derived from his engineering labors.

Calcium Light, or Lime Light. A light produced by directing a blow-pipe flame against a block of pure, compressed quicklime, or calcium oxide. The lime should be warmed in advance, and under the influence of the flame glows with a brilliant incandescence. The blow-pipe flame may be produced in a number of ways, in some a mixture of oxygen and coal gas, under pressure, being employed; in others, oxygen saturated with benzolene, or a combination of oxygen and hydrogen. The gases, coming from different receptacles, meet and burn at the nozzle, and, as they are explosive when mixed, great care must be taken to prevent the flame from running back, or the gases from mingling elsewhere than at the nozzle. The light given by the incandescent lime is very brilliant. *C. L.* was used on the stage as far back as 1837-38. It is now commonly employed where a brilliant illumination is required, as in lanterns for projecting photographic pictures on a screen.

Caldecott, RANDOLPH, artist, b. at Chester, Eng., Mar. 22, 1846. He was employed as clerk in a bank at Whitechurch, 1861-67, and afterward held a similar position in Manchester. His illustrations for the London papers met with such success that he removed to that city, intending to make illustration his life-work. The best productions from his pencil were those representing country life and animals. He contributed to *Punch* and the *Graphic*, and illustrated Irving's *Old Christmas* and *Brucebridge Hall*, Mrs. Ewing's *Jackanapes*, &c. Died in Florida, Feb. 12, 1886.

Cal'deron, FRANCISCO GARCIA, lawyer and statesman; was born in Arequipa, Peru, 1834. Before he became of age admittance to the bar was granted him and he was appointed Professor of Jurisprudence at the age of twenty-one. He was elected to the Peruvian Congress in 1867 and became Minister of the Treasury in 1868. *C.* was made Provisional President of Peru, June 6, 1883, and during the war was seized and made prisoner by the Chilians, whose occupation of Lima had left Peru without a government. During his captivity he was confirmed as President by the Peruvian Congress, but was not liberated before the expiration of his term of office. He was President of the Senate in 1886, and was influential in arranging the Grace contract. He has published a *Dictionary of Peruvian Legislation*.

Cal'deron, PHILIP HERMOGENES, R. A., painter, was born at Poitiers in 1833, and studied in London and Paris. He received the first medal awarded to English art at the Paris International Exhibition in 1867, and in 1878 was awarded their first-class medal and the cross of the Legion of Honor. In 1889 he was appointed keeper of the Royal Academy.

Cal'derwood, HENRY, LL.D., was born in Peebles, Scotland, May 10, 1830, and received his education in Edinburgh University and the United Presbyterian Theological Hall. He was minister in Greyfriars church, Glasgow, 1856-68; Examiner in Mental Philosophy to the University of Glasgow, 1861-64; conducted the class in Moral Philosophy in Glasgow University in 1866, and in 1868 was appointed to the chair of Moral Philosophy in Edinburgh University. A number of works have been published by him, including *The Philosophy of the Infinite*; *Handbook of Moral Philosophy*; *Relations of Mind and Brain*; *Evolution and Man's Place in Nature*, &c.

Cald'well, CHARLES HENRY BROMEDGE, commodore in U. S. Navy. Born in Hingham, Mass., June 11, 1828, and entered the navy as midshipman, Feb. 27, 1838.

An expedition which he conducted with great ability against a tribe of cannibals of the Fiji Islands. While in command of the steamer *Itasca* he took an active part in the bombardment of Forts Jackson and St. Philip, April 24, 1862. He was engaged in the action with the Grand Gulf batteries, Mississippi river, June 9, 1862. During the spring and summer of 1863, he was commander of the iron-clad *Essex*, and took part in the operations at Port Hudson. Died at Boston, Mass., Nov. 30, 1877.

Caldwell, MERRITT, A. M., author and educator in the Methodist Episcopal Church; was born in Hebron, Me., Nov. 29, 1806, and educated at Bowdoin College; appointed principal of the Maine Wesleyan Academy, Readfield, in 1828, and professor of mathematics and vice-president of Dickinson College, Pa., in 1834; 1837 was made professor of metaphysics and English literature in the same college. His books comprise *A Manual of Elocution*; *Philosophy of Christian Perfection*, and others. Died in Portland, Me., June 6, 1848.

Caldwell, SAMUEL LUNT, D. D., LL. D., born in Newburyport, Mass., Nov. 13, 1820. His education was received at Colby University, where he graduated in 1841. He afterward studied at Newton Theological Institute, graduating in 1845. A pastorate was offered him, Bangor, Me., which he accepted, and he subsequently filled other pulpits. Of the positions held by him the most important was that of president of Vassar College, 1878-85. Died in Providence, R. I., Sept. 26, 1889.

Caldwell, in Kansas, a city of Sumner co. It is 2½ miles distant from the border of the Indian Territory, where it is a leading trading point. Pop. 1890, 1,642.

Calico-Printing. (Manuf.) The art of impressing cotton fabrics with various figures in one or more colors. In describing this art, the term will be taken in its widest sense, as signifying printing on any fabric whether cotton, woollen, or silk. There are few dyes which of themselves will impart to cotton a brilliant color, able to resist the actions of light and washing. The dye must be combined with a substance called *mordant*, which has an affinity both for the dye and the cotton fibre. These substances, although generally colorless, have the property of changing the color of the dye. Thus, if a piece of cotton cloth be impregnated with acetate of alumina in liues, with acetate of iron in dots, and with a mixture of the two in circles, will become permanently impressed with red like black dots, and chocolate circles. The process of printing in different colors by means of mordants is very ancient, being described by Pliny as having been practiced in his day in Egypt. In his *Natural History* he says: "Robes and veils are painted in Egypt in a wonderful way, being first imbued, not with dyes, but with dye-absorbing drugs, by which they appear to be undyed, but when plunged into a caldron of boiling dyestuff, it is curious to see many colors imparted to the robe, in consequence of the modifying agency of the excipient drug." In India, the modern method of printing by resist-pastes has been known from time immemorial, the process employed being that of painting the design upon the fabric by hand with melted wax. Many of the specimens of Indian calico-printing by this method are most intricate in their design, and it has taken a lifetime to execute. The processes employed in calico-printing are:—*Singeing*, by which the cloth is denuded of its fibrous down, which would prevent the perfect application of the dyestuff. It is effected in two ways: either by rapidly passing the cotton cloth over a red-hot iron, or by passing it over a series of gas-flames, which are sucked through the fabric by suction-tubes placed over them. The fabric is then bleached by being boiled in an alkaline lye of soda or lime, rinsed, steeped in a weak solution of chloric lime, rinsed again, steeped in dilute sulphuric acid, once more rinsed, dried, and smoothed. The cloth is now ready for printing, being brilliantly white, and capable of receiving dyes of the brightest and palest colors. Calicoes are printed in four ways:—by *hand*, wooden blocks worked by hand, by large wooden blocks worked by a machine, by copper plates, and by *cylinders*. The first and third methods are almost obsolete; the second is practised principally in France; and the fourth is the English method. In the first two blocks mentioned in the second method, the patterns are generally made of sycamore laid upon deal and either engraved in relief, or formed by copper slips of different shapes, being driven into the surface. The machine used in this style is termed a *Perrotine*, in the name of its inventor, M. Perrot, of Rouen. The cloth is wound round a prismatic iron roller, and different colored blocks are brought down on it successively. By this process, one man and three children can print thirty pieces of cloth in a day. In the English process, the pattern is impressed upon copper rollers by hard steel rollers called *dies*. These rollers are mounted upon strong iron shafts, upon the end of which is a toothed wheel, by means of which motion is communicated to them. Several of the engraved cylinders, one for each color, are united in one machine, forming two-, three-, five-, and even ten-color machines. The cotton cloth is made into a continuous web of forty or fifty pieces, and is drawn over the rollers, each one receiving its color from a cylinder covered with woollen cloth, and revolving in an endless trough of coloring matter, mordant, or resist-paste, transferring it to the cloth. Calico-printings have reached such a state of perfection that they will print nearly ten miles of cloth per day, with a pattern containing four or five colors. Dyestuffs are of two kinds, those which impart their color alone, and those which require the application of a mordant. The former are

called *substantive*, the latter *adjective*. There are, principally, five styles of calico-printing. — 1. The *Fast-color*, or *chintz* style, in which the pattern is applied in the form of a mordant, the cloth being afterwards passed through a dye-bath. The color, of course, clings only to the mordanted portion, the rest being washed out in an after-process. 2. The *Rougeant* style, in which the pattern is worked upon the cloth by the agency of some chemical substance which discharges portions of the uniform color in which the cloth was first printed. 3. The *Resist-paste* style, when the pattern is printed in some substance which resists the general dye afterwards applied to it, such as indigo or some other substantive color. 4. *Steam colors*, in which a mixture of the mordant and dye is printed on the cloth, the union of the two being effected by subjecting it to the action of steam. 5. *Spirit colors*, in which a mixture of dye and tin spirits, or chloride of tin, is used. Patterns printed in this style are very brilliant, but extremely fugitive. In the first style the mordant used may be either acetate of alumina, or red liquor; acetate of iron, or iron liquor; or chloride of tin, or tin spirits. The mordant is mixed with starch or British gum, and different shades of the same color may be obtained by diluting it more or less. The principal dyes used in this style are logwood, Brazil-wood, peach-wood, Persian berries, archil, madder, cochineal, fustic, catechu, quercitron, and galls. (The different colors obtained by the combinations of various mordants with dye-stuffs will be found fully described under *DYEING*, in the body of this work.) In the *rougeant*, or discharge style, the discharge generally consists of some strong acid, such as nitric, oxalic, or tartaric acid, made into a paste with pipe-clay gum, and applied either to the dyes or mordanted cloth. In the latter method a new mordant may be applied along with the discharge, in which case a colored pattern will be the result. For instance, a violet ground with red lines and white dots may be produced by passing the cloth through weak iron-liquor, and printing the lines with red-liquor mordant. The dots are then printed with a discharge-paste of tartaric oxalic acid, and the whole is passed through a madder dye-vat. In the *resist*, or reserve style, various substances capable of resisting the action of substantive dyes are used; such as oils, metallic oxides, and their salts; and reserves containing mordants are used when a colored impression is desired. The latter method of printing with mordant resists is called the *lapis-lazuli* style — why, it is hard to say. Steam colors are mostly produced by the aid of peroxide of tin, or stannic acid, or perchloride of tin is used as a mordant. A full-bodied red, for instance, is produced in the following manner: A decoction of peach-wood is thickened with chloride of tin. The impression is printed on the cloth with this mixture, and, when dry, the goods are submitted to the action of dry steam, which causes the union of the substances contained in the dyestuff. *Spirit colors* are brilliant but very fugitive. They are mostly vegetable dyes, mixed with perchloride of tin, or tin spirits, as it is termed. A sixth style, *pigment-printing*, is when a heavy insoluble color, such as ultramarine or magenta, is mixed with gutta-percha solution, albumen, or casein, and printed on the cloth. Since the introduction of the aniline dyes, this method of printing has somewhat revived. These colors now constitute the largest and most important section of steam-fixed dyeing materials, and in their behavior and method of printing they form a class by themselves. The range of aniline colors now embraces almost every possible shade; and in no other department of scientific and technical research has equal activity been displayed within the few years which have passed since these colors were introduced. The number of colors introduced, and the methods of preparing them which have been suggested, are beyond computation, and the list of those which are now in current use is exceedingly extensive. In addition to the dyes procured from aniline, many more of an allied nature are prepared from other derivatives of coal-tar, phenol, naphthalin, and anthracene, some of which have also come into extensive use, and the applicability of others has been demonstrated. The use of these colors in connection with extract of madder, Guignet's green, ultramarine, &c., has exercised a powerful influence in improving the art of design in connection with calico-printing, placing, as they do, at the disposal of the designer an unlimited range of the most striking, brilliant, and pure colors. Aniline colors have a powerful affinity for animal substances, dyeing silk and woollen tissues readily without the intervention of any mordant. Taking advantage of this property, aniline colors were, on their introduction, printed as dye colors, albumen being used as a mordant. An albuminous solution was printed and fixed on the cotton, and on its introduction, so prepared, into the dye-vat, the albumen readily took up the color, while the unmordanted portions merely imbibed any discharged stain. Aniline colors were also printed with albumen in the manner already described as applied to pigments and colored lakes; and the patents secured by Mr. Walter Crum for the application of gluten and lactarin in printing, had reference chiefly to the use of aniline colors. The process of fixing these colors is now generally adopted as the arsenite of alumina process. In this process the dye is dissolved in water or acetic acid, carefully filtered through a fine cloth and mixed with acetate of alumina, a thickener, and arsenious acid dissolved in glycerine. This mixture is printed on the cloth, which is then introduced to the steaming-chest. In the steaming, acetic acid is liberated and arsenite of alumina formed, which, with the aniline color, is precipitated in the fibres as a brilli-

ant insoluble lake. — After the prints have undergone the various operations indicated above, they are submitted to a series of processes, whose object is to give to the fabrics such an appearance as will please the eye of the buyer. All the finishing processes have one common end, namely, to fill up the interstices which exist in the fabrics, and thus give to the calico a more substantial and glossy appearance; and this is effected by filling the cloth with boiled starch, farina, or sour flour, which is obtained from wheat flour which has been allowed to ferment. To these are often added large quantities of sulphate of lime or baryta, and other similar substances, with the object of imparting to the cloth a weight and appearance of solidity which it does not really possess. The finishing processes are varied according to the nature of the print, muslins requiring a quite distinct method of treatment from ordinary calicoes, and furniture chintzes also receive a finish peculiar to glazed goods. As the general features of finishing, including water-mangling, drying, damping, starching, and calendaring are the same both for white cottons and prints, it is unnecessary here to detail these operations. The machinery and operation in a finishing-room may be briefly noticed as follows: The goods are opened by passing over a winch at a considerable elevation, and, if necessary, stretched in breadth on a machine which evens the texture and draws it out laterally. They are then passed into the chloring machine, which has two rollers, one of brass and one covered with india-rubber. The lower one is made to revolve in an aqueous solution of chlorine, and as the cloth passes between the rollers it is saturated with this solution. It passes immediately through a box containing a vapor of steam, which at once arrests the action of the chlorine, the momentary contact being considered sufficient to brighten the white ground without giving time for the colors to be affected. From the steaming-box the piece passes through a water-mangle, where pure water is spurted on the cloth, and after passing through the trough it receives a hard squeeze to extract as much moisture as possible before the drying is reached. The machine is a range of steam-cans, generally made of copper. The next operation is that of starching, the machinery of which is almost identical with that used for chloring, starch-paste, however, occupying the place of the chlorine liquor. The lower roller revolves in and carries up the starch to the cloth, which passes round the upper rollers and becomes saturated by the squeezing action produced and regulated by the screws and levers of the machine. After starching, the goods pass direct to another drying-machine, whence they are taken to be damped by a slight sprinkling of water, which they receive in passing over a simple machine for the purpose, consisting of a rapidly revolving brush throwing up a fine spray. Calendaring is the next and final operation, after which each piece is separated and folded up by a plaiting-machine, or hooked by hand. It is then made up in the ordinary book form, and after being pressed in a screw or hydraulic press is ready for the market. By reason of super-excellence in machinery and knowledge of chemistry, England was for many years at the head of the calico-printing trade, although the output of her mills never rivalled the products of France and Alsace, which have always been noted for the exquisite taste shown both in coloring and design. Of later years the mills of our own country have greatly improved their product, both in quality and amount, and may now be said to hold their own against all competition, although certain grades of calicoes are still imported in rapidly diminishing quantities.

California, in *Pennsylvania*, a borough of Washington co. Pop. 1890, 1,024.

California, Gulf of. [Sp. Mar. *Bermejo*, red sea.] An arm of the Pacific Ocean, separating the peninsula of Lower California, on the west, from the Mexican states of Sonora and Chihuahua on the east. It is about 700 m. long, and from 70 to 150 m. wide. Its coasts are indented with many small bays and numerous islands and its surface. The Colorado river discharges its waters into the upper extremity of the gulf, and several streams empty into it from the east. The ports of Loreto, La Paz and Guaymas are situated on its shores. The N. portion is full of shoals, hidden rocks, and dangerous currents; the S. portion is safe for navigation. The California coast abounds in pearl oysters, and the fishery, now little pursued, was formerly very important.

California, University of. An institution of learning established by act of the California legislature in 1868. It grew out of the College of California, a non-sectarian institution chartered in 1855, and which admitted its first class in 1860. Desiring a larger and better endowed institution, the trustees, in 1867, offered all their property to the State, including a site of 160 acres at Berkeley, 5 miles north of Oakland. The State accepted the offer and incorporated the college with the agricultural college provided for by act of Congress, desirous of combining these various interests into a university worthy of the State. The university received its first class in 1869. It had, in 1897, 300 instructors and 2,400 students, while its graduates numbered 2,588. Its list of presidents has been Henry Durant, Daniel C. Gilman, John Le Conte, W. T. Reed, Horace Davis, and Martin Kellogg, the latter having held the office since 1893.

Calithump, *n*. [Humorously, from Gr. *kulos*, beautiful, and *thump*.] A noisy parade or a burlesque serenade in which all manner of discordant noises are produced by blowing horns, thumping on tin pans, etc. In some localities used as a means of expressing displeasure or hostility, as to a political opponent.

Calithump'ian, *n*. One who participates in a calithump.

—*n*. Of, or pertaining to a calithump; as *calithumpim* band; a *calithumpian* serenade.

Cal'la, or **Cal'la Lily**, *n*. (Bot.) A South African plant (*Richardia Ethiopica*) of the arum family, now in general cultivation. It has a milk-white, velvety spathe, and is also known as *Trumpet-lily*, *Lily of the Nile*, *Egyptian Lily*, &c.

—A hooded cloak sometimes worn in Ireland.

Calliandra, (*kāl-le-ān'drah*). (Bot.) A beautiful genus of plants, Ord. *Fabaceæ*, peculiar to America, found as far north as California, and extending southwards to Buenos Ayres. A few are herbs not more than a foot high, but the greater portion shrubs or small trees, most frequently met with on river-banks. The leaves of all are bipinnate, the leaflets varying much in size and number. In one section the leaves have one to four pairs of pinnae, with few but large leaflets (one to eight inches long), the ultimate ones always the largest; while in another there are many pairs of pinnae, the leaflets scarcely half an inch long, linear in form and almost numberless. The flowers are usually borne on stalked globose heads, but sometimes in terminal racemes; the corollas small and hidden by the very numerous long filaments of the stamens, which are almost always of a beautiful red color. From this latter circumstance the genus is named *Calliandra*, signifying "beautiful stamened." It differs from all allied genera in the valves of its compressed pod rolling backwards in a remarkable manner from apex to base when the seeds are ripe.

Fig. 2756.—CALLIANDRA TWEEDII.

Caln, in *Pennsylvania*, a twp. of Chester co.

Calochortus, (*kāl-o-chōr'tūs*). (Bot.) A gen. of beautiful bulbous plants. Ord. *Liliacæ*. They have tunicated bulbs, and produce rigid ensiform leaves, and an erect scape supporting a few large showy flowers which are racemously arranged and remain open for several days. The perianth is deciduous, six-leaved, the three outer or calycine divisions linear and beardless, the three inner petaloid, very much larger and broader than the outer, and bearded on the inside; the flowers, therefore, appear to consist of three large spreading petals, and three narrow sepals. There are six stamens adherent to the base of the perianth, and a three-celled ovary crowned by three sessile stigmas. The few known species, which are found in Mexico, California, and N.W. America, are all plants of gorgeous beauty, but found to be exceedingly difficult of cultivation. *Calochortus venustus* is one of the handsomest; it grows about two feet high, and produces large flowers, upwards of three inches across, with narrow green sepals, and broad roundish wedge-shaped petals which form a cup, and are white above, yellowish towards the base, each of them marked with a wedge-shaped deep crimson stain, terminating in a yellow spot, and above this, in the same line, with a deep red spot bordered with yellow, and a spot of lighter red.

Fig. 2757.
CALOCHORTUS VENUSTUS.

Calorescence, (*kāl-lōr'ēs-sēns*). [Fr., from Lat. *calor*, heat.] (Phys.) A term introduced by Professor Tyndall to designate the transmutation of invisible heat-rays into rays of higher refrangibility, that is, into visible rays. Sir William Herschel discovered the fact, that, beyond the red end of the spectrum, there are invisible heat-rays of great intensity. Suppose a sunbeam is caused to pass through a prism, it is split up into rays of different refrangibility, occurring in the order of violet, indigo, blue, green, yellow, orange, red. This experiment constitutes the so called decomposition of white light, and was first made by Newton. Sir W. Herschel, in passing a delicate thermometer through the various portions of the spectrum, found that the temperature gradually rose as it passed from the violet to the red end, and the red was found to be the hottest portion. He then moved his thermometer into darkness beyond the red, and found an indication of a considerable amount of heat, — in fact, a greater amount than had been found in any part of the visible spectrum. It was thus clearly demonstrated that invisible heat-rays accompany the visible light-rays emitted from the sun. The relationship of the heat spectrum to the light spectrum has been determined by Sir W. Herschel and Pro-

fessor Müller in the case of the solar spectrum, and by Professor Tyndall in the case of the spectrum of the electric light. The last-mentioned physicist, in attempting to sift the luminous from the calorific rays of the total radiation from the voltaic arc, tried various substances with a view of finding something which should cut off the whole of the light, and allow the heat to pass. He ultimately decided on using a solution of iodine in bi-sulphide of carbon. The bi-sulphide alone was found to absorb only 5.2 per cent. of the heat-rays passing through it; and when iodine was added until the solution was perfectly opaque, the absorption of heat was scarcely increased, while the absorption of light was complete. When a beam of light from the sun, or from the electric lamp, was passed through a layer of this opaque solution, and concentrated by a lens, the dark heat-rays were brought to a focus, at which intense calorific effects were manifested; black paper was instantly set on fire, gunpowder and gun-cotton were exploded, and thin plates of tin and zinc fused. At the dark invisible focus, carbon was brought to incandescence, and caused to burn vividly, — blackened silver-leaf was brought to a red heat, copper was melted, and platinized platinum rendered incandescent. It was necessary in these experiments to blacken bright surfaces exposed to the focus of dark heat, otherwise the reflection of heat would have been so considerable that the substance would not have absorbed a sufficient amount to raise it to red heat. Here, by ultra-red invisible heat-rays, Tyndall raised metals to incandescence — that is, they emitted light of their own — and we perceive at once that this is virtually a transformation of invisible rays into visible rays. The ultra-red rays possess low refrangibility; the vibrations which produce them are long, and move too slowly to produce in us the sensation of vision; they fall as dark invisible heat on the platinum, or other metal raised to incandescence, and they leave it as light; the slow vibrations have become quicker, the long waves have become shorter, the refrangibility has been raised. This change of heat-rays into light-rays is *calorescence*. The transformation is complete. The invisible heat-rays are not converted into light of one kind, for when a piece of white hot platinum is examined by means of a prism, a complete spectrum is obtained — in a word, the heat-rays of low refrangibility are converted into light-rays of all refrangibilities. A detailed account of the experiments in connection with this subject will be found in Tyndall's *Heat Considered as a Mode of Motion*, and in his various memoirs in the *Philosophical Transactions*.

Caloric Engine. (*Mech.*) A form of heat engine, invented by the distinguished Swedish engineer, John Ericsson, in which hot air is the acting substance. Air engines, in their principal working parts, closely resemble steam engines, the heated air being introduced into a cylinder in which works a tightly-fitting piston, which is forced to move up and down by the expansive pressure of the heated air, and transfers its motion to machinery by means of a connecting rod and revolving shaft in the usual manner. The air is heated in a furnace, is introduced below the piston, lifts it, and then escapes into the atmosphere. As the power of the engine depends on utilization of the heat of the air, means are taken to preserve as much as possible of this heat and prevent its escape into the atmosphere. This is done by means of a "regenerator," or chamber filled with screens of wire gauze, through which the hot air is made to pass in its escape from the cylinder, and which take up much of its heat, which they give up again to the fresh air passing through them, inward to the furnace. Caloric engines have the advantages of needing no boilers and not being subject to explosion. Their power, however, is comparatively small, and they are only useful for light machinery.

Calorie (*kal-lōr-ē*). [Same deriv. as *calorescence*.] A term used by the French to designate the unit of heat which they adopt. It is the amount of heat necessary to raise 1 kilogramme (2.2046215 lbs. avoirdupois) of water one degree centigrade in temperature; strictly from 0° to 1° C. A calorie, when converted into mechanical force, is competent to raise a weight of 1 kilogramme to a height of 425 metres (one metre is equal to 3.2808992 feet), and conversely the fall of 1 kilogramme through a space of 425 metres represents, as heat, one calorie.

Calorimetry. (*kāl-ōr-īm-ē-tre*). [Lat. *calor*, and Gr. *metron*, measure.] (*Phys.*) The thermometer indicates relative, not absolute amounts of heat; it shows the condition of a body in regard to sensible heat, that is, the temperature of the body, but the real amount of heat absorbed or emitted by a substance cannot be determined by thermometrical means. *Calorimetry* is that branch of the science of heat which treats of the absolute measurement of heat, and the instruments employed for such determinations are called *Calorimeters*. The existence of two such terms as *Thermometry* and *Calorimetry*, in the same science, is undoubtedly unfortunate, because as far as their derivation is concerned, they might both apply to the same classes of phenomena. The thermometer was invented and named before calorimetry had been even thought of, and when the latter came to be practised, it was thought that no term which did not express the measurement of heat, could with any justice be applied to determinations of absolute quantities of heat, and the only convenient term remaining was calorimetry. It would be preferable to call the thermometer a *thermoscope*, and the calorimeter a *thermometer*, but it is unlikely that the latter term, from its comparative antiquity, will ever cease to be used in its present form. For the exact measurement of heat three forms of thermal unit are employed: to wit, the amount of heat necessary to raise 1 lb. of water

from 32° to 33° F.; or the amount necessary to raise 1 lb. of water from 0° to 1° C.; or again, the French unit or calorie, viz., the amount of heat necessary to raise 1 kilogramme of water from 0° to 1° C. The absolute quantity of heat absorbed or given out by a substance in passing through a given range of temperature compared with that absorbed or given out by water under similar conditions is called its *specific heat*; we have here to examine the various methods by which specific heat is determined, in other words, the various processes of calorimetry. Three principal methods are employed for the determination of specific heat. In the first the heat is measured by the amount of ice which it melts; in the second, known as the *method of mixtures*, bodies of different temperatures are mixed with water, and the heat calculated from that of the mixture; and in the third, or *method of cooling*, the heat is determined by noticing the time which a body requires to cool. — 1. *Determination of Specific Heat by Fusion of Ice.* The first and rudest form of calorimeter was a block of ice containing a cavity covered by a lid of ice; a known weight of the substance to be examined, at a known temperature, was placed in the cavity, and when it had cooled down to the temperature of the surrounding ice, it was removed, and the cavity was wiped dry by a weighed cloth, which, on being again weighed, obviously gave the weight of water resulting from the fusion of the ice by the substance introduced. This calorimeter was employed by Black and Wilke; it was greatly improved by Lavoisier and Laplace, and used by them for the determination of the specific heat of a number of substances. The instrument in its improved form is

Fig. 2758.—ICE CALORIMETER.

known as the *Ice Calorimeter* (Fig. 2758, in which 1 gives a perspective view of it, and 2 represents a section), and consists of three concentric vessels, in the innermost of which (M) the substance whose specific heat is to be determined is placed, the surrounding vessel (A) is filled with ice, and is provided with a tap for drawing off the water, while the outermost vessel (B) also contains ice, and is for the purpose of preventing the melting of ice in the intermediate vessel, by other means than the heat of the warm substance in the central vessel. The chief objection to this instrument is, that the actual quantity of water resulting from the fusion of the ice, cannot be actually determined, because some remains in contact with the unmelted ice. — 2. *Method of Mixtures.* According to this method, a known weight of the substance whose specific heat is to be determined, is heated to a known temperature, and is then immersed in a known weight of cold water, the precise temperature of which is noted. The temperature which results from the immersion of the warm body, when both it and the water possess the same temperature, is then observed, and the specific heat of the immersed substance calculated therefrom. — 3. *Method of Cooling.* When equal volumes of different substances at the same temperature are allowed to cool under precisely similar conditions, the rate of cooling is found to vary considerably. It has been found that equal weights of different bodies cool through the same number of degrees of temperature in times which are directly as their specific heats, hence the application of this method to such determinations. It has been chiefly employed by Dulong and Petit, and by Regnault.

Calverly, CHARLES STUART, the prince of modern English parodists, was born Dec. 22, 1831. His education was received at Harrow, Balliol College (Oxford), and Christ College (Cambridge), where he graduated as second classic in 1856. He was called to the bar in London in 1865, but a fall on the ice closed what gave every promise of being a brilliant career in the law. He became famous as a humorous poet, his works comprising *Verses and Translations* and *Fly Leaves*, the former published in 1862, the latter in 1872. Died Feb. 17, 1884.

Calvert, GEORGE HENRY, journalist; born in Baltimore, Md., Jan. 2, 1803. He graduated at Harvard, and also studied at Göttingen. He wrote many poems, translations and dramas, and published *Scenes and Thoughts in Europe*, and studies of several of the poets, including Shakspeare, Goethe, Wordsworth, &c. He was the author of a *Life of Rubens*, an artist whom he claimed as an ancestor; he also claimed descent from Lord Baltimore,

the founder of the city bearing that name. Died in Newport, R. I., May 24, 1888.

Calvert, in Texas, a city of Robertson co., 85 m. N.E. of Austin. Pop. (1890) 2,632.

Cal'ybite, n. [Gr. *kalybētēs*, dwelling in a hut.] One of the Eastern saints of primitive days who passed nearly all their lives in huts or other primeval habitations.

Calymmatotheca, n. (*Bot.*) A genus of fossil ferns of the Paleozoic period, which seem to be closely allied to the sphenopterids.

Calypso'sis, n. (*Crust.*) A larval stage, as seen in the schizopods, in which there is a clear line of demarcation between the abdomen and the thorax.

Cambaye', n. (*Fabrics.*) A sort of cotton fabric, which is made in certain parts of India, especially in Bengal.

Cam'bin-utan, n. (*Zoöl.*) The *Nemorhædus sumatrensis*, or large goat antelope, found on the island of Sumatra.

Cambiogenet'ic, a. (*Bot.*) Having a tendency to promote the formation of cambium, the zone of cells between the wood and bark of exogenous plants, from which new tissues are produced.

Cambo'dia. (*Geog.*) A country of Indo-China, on the middle Mekong river, bounded N. and W. by Siam, E. by Annam and French Cochinchina, and S. by the Bay of Siam. Its area is about 32,370 sq. m., its population estimated at 1,500,000. In the north and west are mountains, some of them over 3,000 feet high, and containing iron and some copper. The country as a whole, however, consists of alluvial plains, which are completely inundated during the rainy season, through the overflow of the river and its branches. The principal stream is the Mekong—otherwise known as the Cambodia, and Tonlé-Tom—with its branching channels. The Tonlé-sap forms a kind of backwater, which expands into the Great Lake, 100 miles by 25 in area. In the northeast are tracts covered with forest. The climate is divided into a rainy season, from April to October, with an interruption in August, and a dry season for the remainder of the year. The range of the thermometer is from 70° to 104° F. Inland the country is well cultivated, especially along the river and on the lakes, but the interior abounds with extensive jungles, in which elephants, lions, tigers, and wild buffaloes find shelter. There are also deer, goats, hogs, and many species of wild fowl. The agricultural products are rice, tobacco, cotton, maize, pepper, cinamon, sugar cane, indigo, manioc, vanilla, gutta percha, &c. The forests yield much excellent timber. The tree *Garcinia gambogides* yields the finest gamboge. Teak, sandal-wood, and numerous dyestuffs abound. In addition to iron, tin and precious stones are found and the gold mines of Bontalang are noted. — *Population.* The Cambodians are less Mongoloid and more nearly approach the Aryan type than the neighboring peoples they presenting some resemblance to the Malay and Indian types. Their language is of the monosyllabic character of the Chinese. Phnom-Penh, the capital stands at the junction of the "Four Arms" of the river and has a population of 35,000. In addition to the industries mentioned, fishing in the Great Lake is of importance, and silk raising is likely to become of great value, there being great plantations of mulberry tree whose silk worms yield silk of the finest quality. — *History.* The kingdom of Cambodia or Klnmer formerly embraced much of Indo-China. It is claimed to have arisen 2,400 years ago. Buddhism was probably introduced in the fourth century. About 1540 the Cambodian king attacked Siam, but the war ended in the subjection of C., which became tributary to Siam. In the 16th and 17th centuries Portuguese, Spanish, and Dutch factories were successively set up at the mouth of the Mekong. In the last part of the 18th century C. fell under the control of Annam, which in 1809 divided up its provinces with Siam, dismembering the kingdom. The Cambodians in consequence offered to place themselves under the protection of France. The movement in this direction were consummated in 1863, and since 1887 C. has been practically a French province. — *Antiquities.* The most remarkable feature of C. is the splendor of its early architecture. The temples and palaces of Angkor, the old capital, are of striking artistic value and of great size and number. The principal edifice Nakhon Udat, is composed of a central tower surrounded by four turrets and flanked by two other towers, connected by extensive galleries. These buildings are covered with exquisite sculptures in bas-relief. There are also several massive stone bridges of great size and solidity.

Cam'bridge, in New York, a village of Washington co. Pop. 1,589.

Cam'eron, JAMES DONALD, son of Simon C., was born at Harrisburg, Pa., May 14, 1833. Graduated at Princeton, 1852; in 1862-74, president of the Northern Central R.R., which prospered under his direction. Was subsequently active in State and national politics, following closely in the footsteps of his father; was Secretary of War, 1875; U. S. Senator from Penna., 1877-97, declining a re-nomination in the latter year for the reason (among others) that his advocacy of the free coinage of silver had placed him in partial antagonism with the Republican leaders of his State.

Cameron, SIMON. An American politician, born at Lancaster co., Pa., March 8, 1799. He edited a Democratic paper in Harrisburg, in which he strongly advocated the claims of Gen. Jackson to the Presidency. In 1845 he was elected U. S. Senator, and served till 1849. In the convention of 1860 at Chicago, the third highest vote on the first ballot for the nomination as President was cast for him, but his name was afterwards withdrawn.

drawn. In March 1861, President Lincoln appointed C. Secretary of War. He resigned this position in 1862, accepting the appointment of Minister to Russia. Within a year he returned to the U. S., and in 1867 again took a place in the U. S. Senate. From this time he was conspicuous for his influence over the Republican party in Pennsylvania. In Feb. 1811, he was chosen to succeed Sumner in the chairmanship of the Committee on Foreign Affairs, and occupied that position until succeeded in office by his son, J. Donald C. in 1877. Died June 26, 1889.

Cameron, Verney Lovett, C. B., African explorer, was born at Radpole, Eng., June 1, 1844. He entered the British navy in 1857. In 1872 was sent by the Royal Geographical Society of London to the relief of Livingstone and to aid in his explorations. He was the first to travel across Equatorial Africa and on his return to England was rewarded by the gold medals of the Geographical Societies of London and Paris. His work, *Across Africa*, gives an interesting description of his African journey. His later exploration, a journey upon which he set out in 1878, is described in his work, *Our Future Highway to India*. Died March 26, 1894.

Cameroons. (*Geog.*) A German colony in the W. coast region of Africa, extending from the mouth of Rio del Rey southward to a point somewhat south of the parallel of 3° N. Lat., making a coast line of about 120 miles. Interiorly the country has been but little explored, and the limits of the colony are not well defined, though the E. boundary is understood to be about 15° E. Lon. The area is estimated at 130 sq. m. The name is derived from the Cameroon river, a large stream which enters the Bight of Biafra opposite Fernando Po Island, its estuary being over 20 miles wide. For a considerable distance from its mouth the stream is nearly a mile wide. The climate is very trying to Europeans, on account of the low mangrove swamps at the river's mouth, and they generally live in hulks, merely storing their goods on shore. The natives belong to the Bantu group. In 1884 a war was nearly brought on by the refusal of two native kings to allow their subjects to trade directly with Europeans. England was asked to assume a protectorate over the country, but declined. Germany was then appealed to by the traders, and on July 14, 1884, the German flag was raised at Cameroons, a governor appointed, and the whole territory claimed, except the small station of Victoria, on Ambas Bay, founded by English Baptists in 1858. C. is bounded on the S. by French Congo, on the N. W. by the British Niger protectorate. The country is very fertile. The Cameroons is noted for its cotton and ivory, and has long been known as an "oil river." Ebony, redwood and palms clothe its banks, many tropical fruits grow wild, and others are cultivated by the natives. The Cameroons mountains, a volcanic group, attain a height of 13,746 feet in the peak Mongo na Lobah (mount of the gods). These volcanoes, while not extinct, have had no historical eruption, and their peaks are often covered with snow. Barton and Mann, in 1862, reached their highest point. The population is estimated at 2,600,000. The chief towns are Cameroons, opposite Fernando Po, Bimbia, in its vicinity, and Batanga and Bakundin, farther south.

Campe Point, in Illinois, a village of Adams co. Pop. (1890) 1,150.

Campanini, Italo, singer, born in Parma, Italy, in 1846. He joined Garibaldi's army at the age of 15, and served for two campaigns. After the war he returned to his forge, having been a blacksmith previous to his enlistment as a soldier. Here his voice attracted the attention of a singing teacher, who aided and encouraged him to cultivate it, and C. studied a year at the Parma Conservatory. His first appearance before the public was a failure, but he afterwards sang both in the U. S. and Europe, and for many years was considered the greatest tenor on the operatic stage. An affection of the throat proved injurious to his voice, which had been of large compass and singular purity of tone.

Campebell, Bartley, an American dramatist, born in Allegheny City, Pa., Aug. 12, 1843, of Irish parentage. He became a reporter and later an editor, and subsequently removed to New Orleans, where he started a monthly magazine. His first play, *Through Fire*, written in 1871, met with such success that he decided to devote his pen to the stage. His drama of *My Partner* had an enthusiastic reception, and caused a popular demand for his plays. His *Siberia*, an attractive melodrama, still holds the stage. He was the first American to confine his work to dramatic authorship. Others of his successful plays are *Fairfax*, *Risks*, &c. D. 1888.

Campebell, John A., jurist, born in Washington, Ga., June 24, 1811. His father, Duncan G. C., was a prominent lawyer. Mr. C. graduated with honor from the Georgia University in 1826, and by special act of the legislature was admitted to the bar before reaching his majority. He received from President Pierce the appointment of associate justice of the U. S. Supreme Court in 1853. After the outbreak of the Civil War he signed this position. Although opposed to the policy of secession, he believed that the States seceding were in their rights, and while in office in Washington sided with the South. He was afterwards appointed Assistant Secretary of War of the Confederate States. After the fall of Richmond he was arrested and imprisoned at Pulaski. Died in Baltimore, Md., March 12, 1889.

Campebell, John Francis, a prominent folk-loreist, born at Islay, Scotland, Dec. 23, 1822. He was educated at Eton and the University of Edinburgh. His great work is his *Popular Tales of the West Highlands*, published in 1862. Much attention was given by C. to scientific folk-lore, the fruits of which were his interesting works,

Frost and Fires; Natural Engines; Toolmarks and Chips, &c. Died February 17, 1885. An obelisk was raised to his memory at his birthplace, June, 1887.

Campbell, George W., an American statesman, born in Tennessee, 1768, adopted the legal profession, and represented his State in Congress from 1803 to 1809, during which period he held the chairmanship of the Committee of Ways and Means. He was elected to the Senate in 1811, made Secretary of the Treasury in 1815, and in 1818 proceeded to Russia in charge of the U. S. mission. Died 1848.

Campeño, Narciso, statesman and soldier, was born at Tojo in Argentina, in 1815. He was educated partly in Europe, and on his return entered the Bolivian army, in which he was promoted to the rank of brigadier. In 1872 he occupied the position of Minister of War for a short time. The Bolivians elected him President, Apr. 9, 1880. In the Tacna campaign he commanded the combined forces of Bolivia and Peru, his army meeting with defeat at the battle of Tacna, May 26, 1880. His administration was peaceful internally.

Canadol (*kín'ah-díl*). (*Chem.*) The name given to a peculiar petroleum found in Canada, and which has been considered especially valuable as a solvent of the fats; hence its use has been suggested to obtain oils and fats from their natural sources, rather than by cold or warm pressure. From investigations regarding the applicability of the liquid it has been concluded that it is superior to bisulphide of carbon. Vegetable oils may be readily extracted, and on the evaporation of the solvent, it is said they are left in a greater state of purity than when other liquids are employed. Cacao butter may be readily extracted from the bean, and castor and other oils from the seeds. Even the fat from bones, from the ivory tusks of elephants, the narwhal and walrus, may be removed without impairing in the slightest degree the texture of the remainder. Bisulphide of carbon, and the lighter hydrocarbons distilled from petroleum, are now largely used as solvents of fats.

Canal, n. (*Hydraul. Eng.*) An artificially-formed water-course, usually employed for navigation, though the word is also applied to channels for drainage and irriga-

tion. The difference in level of the country traversed by canals usually requires some means of changing the water level, or of lifting or lowering the canal-boats from one level to another. There are several ways in which this is done, known under the names of the *lock*, the *lift*, and the *incline*. The lock is a watertight chamber, closed by gates at each end, which can be filled with water to the level of the upper reach, or emptied to the level of the lower reach. A boat being admitted to an empty lock can be lifted to the upper level by the admission of water; or, if admitted to a full lock, can be let down to the lower level by discharging the water. The principal defect of locks is the great loss of water in their use, in case of active traffic.—*Incline*. In case of scarcity of water and a large lift, an inclined plane is sometimes used, the boat being carried in a special carriage moving on rails laid on the incline, and moved by a cable. Very primitive inclines have long been in use in the canals of China, the boats being hauled up the slope by a capstan, or made to slide down its smooth surface. On the Morris C., in New Jersey, there are 23 inclines, with an average rise of 58 feet, on which boats of 80 tons are drawn up a gradient of 1 in 10. On the Oberland C., in Prussia, the largest incline has a height of 80½ feet.—*Lift*. A canal-lift consists of two iron troughs, filled with water, which balance one another, one going up as the other goes down, and thus raising or lowering a boat from one level to another. The advantages of the lift are economy in water, space, and time, and, under certain conditions, in cost of construction. Hydraulic canal-lifts have only recently been introduced, the first being opened for traffic in 1875, on an English C. Two troughs, 75 by 15½ feet, each supported in the centre by a hydraulic ram, and containing 5 feet of water, balance each other. The main motion is effected by removing 6 inches of water from the bottom trough, the hydraulic ram being used only for the final portion of the lift, of about 4½ feet. A 100-ton barge can be lifted in the trough in 2½ minutes, and barges can be transferred in both directions, from one level to the other, in 8 minutes. To pass through a series of locks giving an equal rise (50 feet) would occupy over an hour.—*Modern Canals*. Within recent years several canals of great dimensions have been constructed, some of them cutting across isthmuses, others intended to bring inland towns in communication with the sea. Of the first class the two most notable examples are the Suez C., completed in 1869, and connecting the Mediterranean with the Red Sea, and the Panama C., begun in 1882, and yet far from completed, though an immense amount of money has been expended upon its construction. This was abandoned on account of seemingly insuperable difficulties, and the impossibility of obtaining more money; but work on it has been resumed and it is proceeding slowly. What seems a more promising project for connecting the Atlantic and Pacific oceans is the designed Nicaragua C., whose route has been surveyed and some preliminary work performed. This will be 180 miles long, though a great part of this distance will be over the waters of Lake Nicaragua and navigable rivers, the length of actual canalising being comparatively small. Two or three locks, with lifts of from 50 to 120 feet, will be required on either side.—*Corinth Canal*. A C. across the Isthmus of Corinth, which connects the Peloponnesus with the remainder of Greece, was begun as long ago as the reign of Nero, and traces of this ancient work remain. It was again undertaken in 1882, and completed in 1893. This canal is 4 miles long. Its central portion traverses a rock cutting, with a maximum depth of 285 feet. The canal is open throughout, 72 feet wide at bottom, and 26½ feet deep, while solid jetties for the protection of its openings have been built out into the sea at both ends.—*Baltic Canal*. This, known officially as the Kaiser Wilhelm I. Canal, and frequently termed the Kiel Canal, extends between the Baltic and the North seas. It is 61½ miles long, starting from Kiel Bay, on the Baltic, and ending at Brunsbüttel, on the Elbe estuary, in the North Sea. It was begun in 1887, and completed in 1895, the opening taking place with imposing ceremonies on June 20 of that year. This

Fig. 2759.—EASTHAM LOCKS, AT ENTRANCE OF MANCHESTER SHIP CANAL.

important ship-canal is 197 feet wide at top, and 72 feet 2 inches at bottom, its depth 29 feet 6 inches, adapting it to the largest sized war vessels. The total cost was \$38,500,000. There are but two locks, one at each end, their purpose being to control the inflow of tidal or storm water. Four lines of railway and one road cross the C. by bridges. Two of these are 138 feet high, and permit the passage of the highest-masted ships. The leading purpose of this canal is to afford safe and rapid passage for German ironclads in time of war, but its commercial utility will also be great, it enabling ships sailing from the North sea to the Baltic to save from 200 to 1000 miles in distance.—*Manchester Ship Canal*. The scheme for connecting the great English manufacturing city of Manchester with the sea, long projected, was finally authorized by act of Parliament in 1885, and the construction of the C. soon after began. This great canal is over 35 miles long, 26 feet deep, and has a bottom width of 120 feet. There are tidal locks at Eastham, and locks at several places along the route of the C. Its bottom width is nearly twice that of the Suez C., and the average width at the water-level is 172 feet. The cost was about \$75,000,000. This great C. was formally declared open to commerce by Queen Victoria on May 21, 1894. It has, in a measure, proved a failure, its use by commercial vessels being not nearly so great as was expected.—*Danube Canal*. An important work has recently been achieved on the Danube, in the cutting of a canal through the famous Iron Gates, a locality of rocks and whirlpools which for thousands of years rendered the navigation of that river dangerous. Operations were begun here by the Romans, more than 2,000 years ago. The recent work began about 1891, the principal engineering labor being the clearing out the rocky channel where the stream cuts through the Transylvania Alps, some two miles above the Iron Gates. The total length of the passage cleared is more than 50 miles, the river in this distance cutting through five or six dykes. The canal deflects the river to a new channel cut out on one side

of the stream, from which it is separated by an embankment 7,200 feet long, 16 to 20 feet wide at top, and 120 to 160 feet at bottom. The excavations were made in solid rock, and a great dam was built to deflect the river into the C. The formal opening of this important work was made Sept. 27, 1896, as a part of millennial celebration of the Hungarian state.—*Chicago Drainage Canal.* Of the many American canals the most recent and the most stupendous is the great Chicago Drainage C., begun September 3, 1892, and completed in 1897, at a cost of \$27,000,000. This huge work, which is intended to carry off the sewage of Chicago, but which may be utilized for commercial purposes, is 28 miles long, extending from Chicago to Lockport on the Illinois river, into which stream it discharges. Its cross-section in earth is 202 feet, in rock 160 feet, the average depth being 30 to 36 feet, depth of water 22 to 26 feet, fall between Chicago and Lockport $5\frac{1}{2}$ feet. It has a greater cross-section than either the Suez, Manchester or Baltic Canals, and a flow equal to that of the Ohio at low water, the minimum flow at present being 300,000 cubic feet a minute. Fears are entertained of pollution of the Illinois river by sewage, and of a permanent lowering of the level of Lake Michigan, whose waters will flow freely into the C., and be the main element in carrying off the sewage.—In addition to the various canals named, others of importance have been completed of recent years, one of the largest of which is the St. Petersburg and Kronstadt ship canal, commenced in 1877 and completed in 1884. This starts from the Neva at St. Petersburg, and runs $18\frac{1}{2}$ miles to Kronstadt, with a depth of 22 feet, and bottom width of 207 feet, enlarging to 271 feet. The canal to Brussels, in Belgium, is 32 miles long and $21\frac{1}{2}$ feet deep.—*Projected Canals.* Of projected ship canals may be named one across the peninsula of Florida; one between Barnstable and Buzzard's Bay, to avoid the danger of navigating around Cape Cod; one to enable sea-going vessels to reach Paris; and one to cut through the island of Ramswaer, and shorten by about 350 miles the route to the east coast of India. A C. is projected through the isthmus of Perekop, which connects the Crimea with the mainland of Russia; another to connect the Mediterranean and the Red Seas by a route from the Bay of Acre via the depression of the Dead Sea and the Araba defile; one across France to connect the Atlantic and the Mediterranean, while Russia is considering a project that throws all these in the shade. This is to make a C. from the Baltic to the Red Sea, starting from the Port of Riga, following the course of the Dwina, the Beresina and the Dnieper, and entering the Black Sea at Coherson. This C. would be about 1,000 miles long, or about the same as the Imperial C. of China. The projected depth is 30 feet and width 230, the neighboring towns to be connected by smaller feeding canals. The cost would be enormous, but the saving in time and expense of travel would probably justify the cost.—*Trolley Service on Canals.* Efforts to run boats on canals with power other than that of the antiquated mule have been made, steam, cable, and other methods of traction having been tried or projected. The latest system tried is that of the electric trolley, with which fairly satisfactory experiments have been made on the Erie C. It is quite possible that electricity will be generally adopted for C. boat traction before many years. Barges made of steel have been lately tried, drawn by a propeller. These are much more durable than the old wooden boats, and have the advantage that they can stand the lake travel, so that they may be drawn from any of the lake ports to New York without breaking bulk, a thing impossible under the old conditions, as the wooden boats could not be insured except at exorbitant rates.

Canal Dover, in Ohio, a village of Tuscarawas co., situated on the banks of the Tuscarawas River, about 100 miles each from Pittsburgh, Cleveland and Columbus. Has various manufactures. Iron ore, coal, and fire-clay abound in vicinity. Pop. (1897) abt. 4,000.

Canby, EDWARD RICHARD SPRING, LL.D., an American military commander, b. in Kentucky 1818, graduated at West Point in 1836, and served with credit during the Mexican campaign in 1846-7, becoming colonel in 1861. In the year following he was made major-general, succeeded General Banks in the command of the army of Louisiana and the South-West, in 1864, and in April 1865, was placed in command of the city of Mobile. In 1866 he was made brigadier-general in the regular army, and given, in 1868, the command of the Second Military District. He was treacherously shot dead April 11, 1873, by the Modoc "Capt. Jack," while negotiating for the removal of the Modocs to a reservation.

Candle Fish or Eulachon. (Ichth.) A fish of the Salmonidae family, and entitled *Thaleichthys pacificus*. It is found in the Pacific Ocean, near the western shores of America, its range extending from Vancouver northward. Like the copelin, to which it is nearly allied, it is strictly a sea-fish, approaching the coast to spawn, but not entering rivers. The C. F. is not larger than the smelt, has a somewhat pointed and conical head, a large mouth, pharyngeal teeth and a rough tongue, but the lower jaw, palatines and vomer are without teeth. It is of a greenish olive color on the back, which passes into silvery white on the sides and belly, spotted with a dirty yellow hue. This is probably the fattest of all fish, or indeed, of all animals, and is used by the Indians not only for food, but as a source of oil. They also use it, when dried, as a lamp for lighting their lodges, drawing through it a piece of rush-pith, or a strip from the inner bark of *Thuja gigantea*, a species of Arbor Vitæ, as a wick. A long needle of hard wood is used to draw the wick through, and the fish, being then lighted at one end, continues to burn until entirely consumed.

In addition to its use as a candle, it serves as an excellent article of winter food in the severe climate of the northern regions, and is of agreeable flavor, notwithstanding its excessive oiliness. The civilized people of northwest America have not yet in any way utilized it.

Candle-Nut, n. (Bot.) A tree of the natural order Euphorbiaceæ, a native of the South Sea Islands, Madagascar, Molucca, Java, &c. Its fruit consists of a heart-shaped nut with a very hard shell, and a kernel which is edible when roasted, though when raw it possesses slightly the tendency to cause purging and colic so common to the Euphorbiaceæ. The nut is about the size of a walnut, and yields an excellent bland oil,

Fig. 2760.—PNEUMATIC DISAPPEARING GUN CARRIAGE, INVENTED IN 1872 BY CAPT. JAMES B. EADS.

which is used both for food and for illuminating purposes. The inhabitants of the Society Islands, after slightly baking these nuts in an oven and removing the shell, bore holes through the kernels and string them on rushes. Thus prepared, they hang them up in their houses and make use of them as torches, four or five strings of the nuts being inclosed, for this purpose, in a leaf of the screw-pine. They burn with much brilliancy, and are often used for fishing at night. The shell used in tattooing was obtained by the islanders from the shell of the C-N. The tree yields a gummy substance, which is chewed by the Tahitians.

Candolle, ALPHONSE LOUIS PIERRE PYRAMUS DE, an eminent botanist, born at Paris, 1806, being the son of the celebrated Augustin de Candolle, who died in 1841. He went through a course of study in literature and science at Genoa, and then turned his attention to law, of which faculty he was admitted a doctor in 1829. Finally, however, he made botany his exclusive study, and became first the assistant and subsequently the successor of his father. For eighteen years he was director of the Botanic Garden, and during the same period he gave lectures in the Academy of Geneva. M. de Candolle was elected a correspondent of the French Institute in 1851, and the following year was decorated with the cross of the Legion of Honor. His works are: *Monographie des Compagnies* (1830); *Introduction à l'Etude de la Botanique* (2 vols., 1834-35); *Sur le Musée Botanique de M. B. Delessert* (1845); *Note sur une Pomme de Terre du Mexique* (1852); *Géographie Botanique raisonnée* (2 vols., 1855); *Lois de la Nomenclature Botanique* (1867). He also brought out a new edition of his father's *Théorie Élémentaire de la Botanique*, and continued his *Podromus Systematis Naturalis Regni Vegetabilis*.

Candy Sugar. The name applied popularly to ordinary sugar when obtained by the gradual and slow evolving of a concentrated solution of sugar, it then taking the form of large crystals.

Cank'er Worm. (Entom.) The name given the larvae of certain geometrid moths. Called also the measuring worm, from its peculiar mode of locomotion. The larva of *Anisoplytus vernata*, a common American species, feeds upon the leaves of trees, especially of the apple and elm, which become pierced with multitudes of holes. After feeding for some four weeks, the larva descends, usually by the aid of a thread, to the ground, into which it burrows. Here it is changed to a chrysalis, from which the moth emerges. These worms are very injurious to the trees they infest. As the females

are wingless, trees may be protected by the aid of tar or fish-oil placed around their trunks, or other means of preventing their ascent. They may often be dislodged by shaking the trees.

Canned Foods. Food substances preserved by being enclosed in air-tight tin cans, a method which is now very largely carried on, vegetables, fruits, meats, fish, soups, &c., being kept in enormous quantities by this process. The substance to be preserved is placed in tins, which are sealed with a soldered cover, except a small pin-hole for the escape of steam. They are then heated for the expulsion of the air, or the destruction of the bacterial germs they may contain, when the pin-holes are closed by solder, and the tins allowed to cool.

Tins of meats thus prepared have been kept for 20 years without sign of putrefaction. At present glass jars are largely used for household food preservation, there having been occasional cases of poisoning from badly prepared tins. These are sealed completely before being heated. As the air cannot escape, the preservation of the food must be due to the destruction by heat of all its putrefactive germs.—England, in 1810, granted to Augustus de Heine a patent for a mode of preserving substances in air-tight cases from which the air was forced by an air pump, but the device was not successful. Perfection has been reached by a long series of experiment.

Cannon.—Continued from SEC. I, p. 507. Col. Bomford's device was, some years afterward, introduced into France by Gen. Paixans, and became generally known in Europe as the Paixan gun. In 1856 appeared the Dahlgren gun, the invention of Lieutenant (later Rear-Admiral) Dahlgren, of the U. S. navy, who had made numerous experiments regarding the best

form and distribution of metal in C. These guns were of cast-iron, cast solid and cooled from the exterior. They were of great thickness at the breech, but from the trunnions forward diminished rapidly in thickness. They were intended solely for shells, and were generally of 9- and 11-inch bore. An important improvement was made by Captain Rodman, of the U. S. army, in 1860. The guns made by him were cast hollow, his invention consisting in a method of interior cooling. A stream of cold water was made to flow through the hollow bore of the gun, while fires were kept round its exterior to prevent rapid cooling from the outside. These C. were adapted to solid as well as hollow projectiles, and were of 8-, 10- and 15-inch bore. At the

Fig. 2761.—BREECH-LOADING CANNON, ON REVOLVING CARRIAGE; USED BY GUSTAVUS ADOLPHUS IN SEVENTEENTH CENTURY.

time the Rodman 15-inch gun was the most powerful piece of ordnance in existence. Its solid shot weighed 450 lbs., and was propelled by a charge of 100 lbs. of gunpowder.—*Rifled Guns.* About the time the rifling of C. was introduced, and smooth-bore guns began to pass out of existence. Comparatively few of them are now in use, the rifled C. having proven itself immensely more effective. Cast-iron rifled pieces were produced in 1846 by Col. Cavalli Sardinia, and Baron Wahrendorf, of Sweden. The

Fig. 2762.—BREECH-LOADING CANNON OF SIXTEENTH CENTURY—BREECH-BLOCK SECURED BY A PIN.

advantage was first clearly shown in the Italian campaign of 1859, and it was not long before all nations had begun their adoption, the use of armor-plating on ships of war rendering necessary C. of much greater penetrative power than previously used.—*Construction of Cannon.* Previous to 1854 C. were cast in iron, brass, or an alloy called gun-metal, consisting of 90 parts of copper and 10 of tin. This proved expensive and difficult to work, and was generally abandoned after 1870, though a similar alloy, called phosphor-bronze or steel-bronze, is still used for Austrian field-guns. About 1850 cast-steel guns were made by Krupp in Germany and Whitworth in England, and in 1859 the Armstrong gun (q. v.), made of coiled wrought-iron, was adopted by the English government. The first experiments with wire-guns were made between 1875 and 1879 at the Armstrong factory at Elswick, the largest being a 10-inch arm. Others were made at Woolwich, 1884-88. These resembled the Armstrong gun in general construction, but the inner tube was first made thicker at the breech, and then turned down at the part which needs the greatest strength, that inclosing the powder chamber.

Fig. 2763.—DUTCH CANNON (BREECH-LOADING) OF 1650.

A flat steel wire, or riband, with a breaking strain of 100 tons to the square inch, was then coiled round this part, and over the wire were shrunk hoops of forged steel firmly locked together to prevent any tendency to slip. Hundreds of guns of this character are now in use in the British land and sea service, varying from the 12-pounder of 600 lbs. weight to the 12-inch guns,

Fig. 2764.—PUCKLE'S MACHINE GUN OF 1718.

weighing 46 tons each, with which the new battleships are being armed. On each of the 12-inch guns of the *Majestic* class no less than 102 miles of wire are wound, the dimensions of the wire being .06 by .25 of an inch. Before this system was adopted the construction of a heavy caliber gun occupied from 14 to 16 months, while

the wire guns can be made in less than 11 months, the wire-winding process taking from 6 weeks to 2 months and the rifling nearly as long.—*Brown Segmental Wire Gun.* A newly-invented weapon known as the Brown Segmental Wire Gun, and tested in the U. S. proving grounds at Sandy Hook in 1893 and again in May, 1896, stood the tests superbly, and is full of promise as the gun of the future. Guns, as now constructed, are made up in a series of overlying cylindrical rings, each ring shrunk over the others, with the result that the innermost tube is thrown into a state of initial compression. In firing such a gun the shock of discharge is instantly felt and resisted by each of the cylinders or hoops, and its strength will depend on the amount of initial compression and tension which the inner tube and the outer layers can respectively be made to carry, this depending, in its turn, upon the elastic strength of the materials employed. In the British wire gun, as mentioned, a

interlocked at the breech end by shrinking on, and fits with a slip joint over the chase. In the production of a 10-inch gun by this process, a total length of 75 miles of wire is employed. The tests made of the 5-inch gun of this pattern showed an elastic limit of 126,000 lbs. per sq. inch and an ultimate strength of 176,000 lbs., while the wire showed an elastic limit of 230,000 lbs., and an ultimate strength of 262,000 lbs. per sq. inch. The superiority of this gun, as proved by the army trials at Sandy Hook, is shown in the fact that, while the hooped navy gun has a muzzle energy of 15,285 foot tons, the Brown gun, which is only two tons heavier, has 37,800 foot tons energy; or, in other words, the 10-inch Brown gun has an energy over 4,000 tons greater than the 13-inch hooped gun.—*Breech-loading.* The British were among the first to adopt the modern breech-loading principle, but soon afterward abandoned it, fearing that breech-loading field pieces, if employed in the East India service, could not be repaired in case of injury. The Krupp works, of Germany, which have not only supplied C. for their own country, but for most of the nations of Europe as well, have been the pioneers in C.-making progress. The Krupp guns are made of crucible steel, low in carbon, and with a jacket of the same material shrunk around the breech. The apparatus for breech opening and closing is known as the "round-wedge breech-block," and consists of a cylindrical prismatic wedge filling the breech of the gun, and tightened there by an interrupted screw, acting per-

Fig. 2765.—DRAGONNEAU USED AT SIEGE OF SANTANDER, A. D. 1511.

high grade of steel wire is wound around the inner core of the gun, the limit of strength of the gun being the elastic strength of its inner core, which must not be compressed beyond its elastic limit. Capt. J. H. Brown, the inventor of the gun now in question, conceived the idea of building up the internal tube with a number of longitudinal steel bars or staves laid side by side in a cylindrical form, and bringing them into intimate contact under the tension of a wrapping of steel wire. By this means he was able to secure a core having a much higher elastic limit than could be obtained in an ordinary tube. This gun is said to have the following advantages: The small weight of each of its parts enables crucible steel to be used economically, and permits the careful casting and uniform forging of each segment. As they can readily be rolled into shape, the method of construction is very economical. The size of the segments admits of readily setting up conditions of special elasticity by cold work, which renders it possible to use a character of steel far superior to anything heretofore employed in the core of a gun. Such a core could readily be wound so as to produce a compression between the segments of 112,000 lbs. to the sq. inch without exceeding its elastic limit. The steel wire used is one-half of one inch square in section. Its end is keyed into the gun at the breech-nut and wound on at the required tension by means of an automatic winding machine. When the wire reaches the shoulder it is tightly wedged against it, turned over, and keyed into the gun. The next layer is started at the second shoulder, 24 inches from the breech nut, and wound back to the breech. The successive layers thus are made to run in opposite directions till the necessary amount of wire is laid on. The gun is then bored out, heated internally by gas, and shrunk on to a thin steel lining. The chase jacket is shrunk on in two-foot sections. The trunnion jacket is

perpendicularly to the axis of the gun. The breech-block is withdrawn for the insertion of the projectile and cartridge, which done, the block is inserted in place and held immovably by means of the screw. The piece is fired in the ordinary way, by the use of friction-primers. There is a gas-check composed of a ring of soft steel bearing against the steel plate in the surface of the wedge. When the gun is fired this ring instantly expands and is pressed rearward with great force, hermetically closing the tube of the piece and preventing all escape of gas. This gas-check, a highly-necessary detail of a breech-loading gun, was invented by an American named Broadwell, whose name it bears. Finding no demand for his invention in his own country, he patented it in Great Britain, and it was soon after adopted in the Krupp factory. There are various other methods of breech-closing, but the interrupted screw, an American invention, seems the most effective device, and probably four-fifths of all breech-loading guns are made after that model.—*Rifling.* A variety of practices are in use as regards the number and depth of the grooves in rifled guns. With the adoption of the breech-loading principle the number of grooves and the rapidity of their twist have been increased and their depth and width diminished. The projectiles are generally made to take the rifling by means of copper rings. Elongated projectiles are used in all cases, whether for solid shot, shell, case-shot, or shrapnel. Steel or steel combined with wood, is used in the carriages and limbers of most modern guns, the ammunition chests opening to the rear like a cupboard, instead of in chest fashion. Some of the most powerful modern C. are sighted for 8,700 yards, at which distance an object 10 feet high may be hit. The 12-pounder field gun is sighted for as much as 6,000 yards, but in battle fire would rarely be open at more than 3,000

Fig. 2766.—BREECH-LOADING CANNON OF FOURTEENTH CENTURY, WITH SHIELD.

yards on account of atmospheric difficulties, and the limitation of human vision. The use of telescopic sights, however, has largely overcome this difficulty, yet fog, mist, rain, or any atmospheric thickening must always interfere with artillery practice at very long ranges.—*Heavy Artillery.* In 1862 Captain Palliser, of the British service, introduced a method of converting the cast-iron smooth-bores in use into rifled *C.* by inserting a tube of wrought iron or steel, which was then

a distance of 7,000 yards. The modern steel rifled *C.*, now forming the most important part of the armament of European nations, was late in its introduction into the U. S., but this country now vies with the most advanced nations in this respect. Gun factories have been established at Washington under the Naval, and at West Troy under the Army department, in both of which rifled guns of unsurpassed power have been made up to 12-inch caliber; and there are private establishments, such as the Bethlehem Iron Works, which are prepared to supply rifled *C.* of any caliber desired. Guns as large as 16-in. are occasionally made for land use, but the best authorities doubt if rifles of more than 12- or 13-inch bore can be used to advantage. Italy has a 15.75-inch Krupp gun capable of piercing 24 inches of steel at a mile; the largest English guns are 16.25-inch. Armstrongs: France has rifled guns of still greater caliber, while larger ones are being produced. The *C.* used in the U. S. for sea-coast artillery are ordinarily 8- to 12-inch breech-loaders, though one of the arms in use is a 16-inch breech-loading rifle calculated to throw a projectile of 2,370 lbs. The heaviest projectiles of 12-inch rifles are 1,000

lbs.—*Disappearing Carriages.* The question of a disappearing gun-carriage—that is, a carriage so constructed that the gun can be raised high enough to fire over a parapet, and then lowered into a safe position for re-loading—has given rise to much thought of late years, and many such are now employed. These are intended to protect the gun and its carriage as well as the cannoneers, the few and large guns now used rendering the danger of their being disabled by an enemy's fire a

distances of 1,500, 2,000, and 2,500 yards, and one shell, carrying 100 lbs. of dynamite, was thrown a distance of two miles. Great accuracy of aim was attained, and the tests were satisfactory in every respect.—*Machine Guns.* These, which do not properly come under the designation of *C.*, but may be briefly mentioned here, had their origin in the Gatling gun, invented by R. J. Gatling, of Illinois, in 1861. This preceded the French

Fig. 2770.—PROJECTILES FOR PNEUMATIC CANNON.

mitrailleuse, and was brought to such mechanical perfection as to be widely adopted by foreign nations. It has been succeeded by others, each with some point of superiority, including the Gardiner, the Lowell, and the Hotchkiss, invented in the U. S., and the Nordenfeldt, of Swedish invention. The most recent and effective of guns of this character is the Maxim, the invention of the American air-ship experimenter. This gun, as recently exhibited to the U. S. Ordnance Board at the Sandy Hook proving ground, demonstrated its ability to fire about 605 rounds of .303-in. calibre cartridges in a minute. The gun, with its extra barrel and the neces-

rifled. This system was soon taken up in the U. S. for the purpose of making its large supply of smooth-bores serviceable. A number of 10-inch guns were converted into 8-inch rifles, which proved very efficient and are still retained in service. The Parrott guns, introduced in 1861, are of cast-iron, with a band of coiled wrought-iron shrunk over the ammunition chamber. The larger

Fig. 2769.—AN IMPROVED CANNON-MOUNTING OF THE FOURTEENTH CENTURY.

matter of serious moment. The Moncrieff "counterpoise gun carriage" has been extensively adopted in Great Britain, and in this country similar devices have been invented by Eads, Buffington, Crozier, and other engineers of ability, which give promise of complete success, and are already introduced into some of our seacoast works. Most of these devices are based upon the Moncrieff idea of a counterpoise. See CARRIAGE, DISAPPEARING.—*Pneumatic Gun.* Lieutenant Zalinski, of the U. S. Artillery, has invented an effective pneumatic gun to throw a shell charged with dynamite, a substance whose dangerous character rendered projection by means of explosives inadmissible. One of his guns, 8 inches in calibre, was fired in 1887 at an old hulk 2,000 yards distant, which a second shell, charged with 55 lbs. of nitro-gelatin, completely destroyed. This weapon is 40 feet long, but light in weight, the barrel, which is not rifled, being made of $\frac{3}{8}$ inch wrought-iron with $\frac{1}{8}$ inch seamless brass tubing. The air reservoirs have a capacity of 137 cubic feet. The projectile is made of brass, 40 inches long, with a conical cast-iron point 12 inches long, and spiral vanes attached to the base to give it rotation. It is exploded by an electric fuse which can be adjusted to act an instant before impact, or, if the object is missed, an instant after striking the water, the maximum effect being attained in either case. In experiments made in Dec. 1895, at the mouth of San Francisco harbor, 8-inch shells were thrown to

sary tools, weighs but 127 lbs., and can be easily carried. Cartridges are fed into the gun by means of a belt which passes through feed blocks, the recoil of the gun from the discharge of the first cartridge acting to insert the next charge, raise the breech lock, cock the hammer, fire the charge, and extract and eject the shell while the next charge is being brought into position.

Fig. 2771.—MODERN SCREW BREECH-BLOCK.

The operator has simply to hold back the trigger and the bullets are poured forth automatically with extraordinary rapidity, a water-jacket keeping the barrel cool. The release of the trigger stops the firing.—*Paper Cannon.* Early in 1897, the Krupp works turned out a number of paper field-*C.* for the use of the

Fig. 2768.—CROSS-SECTION OF 10-INCH BROWN SEGMENTAL WIRE GUN, 12 INCHES FROM THE BREECH.
A.—Lining Tube. B.—Segmental Core. C.—Wire Wrapping. D.—Trunnion Jacket.

of these are cast hollow, on the Rodman plan. They range from 10 to 300-pounders, and the diameters of the bores from 3 to 10 inches. A large number of these were used during the Civil War, and did very effective work, they being the first rifled *C.* used in any country for bombardment and the breaching of masonry walls. Charleston was successfully bombarded by them from

German army. Their caliber is a little less than two inches, but they are so light that a soldier can easily carry one, while the power of the piece is said to be greater than that of the ordinary steel C. of similar caliber. It is hardly expected that paper C. can be made to supersede those of steel, but, because of their lightness, they may be used with expedition in locations where the heavier arms could not easily be employed. The extent to which paper may be utilized in the manufacture of artillery remains yet to be determined; but its successful use in making car wheels, telegraph poles, &c., leads to the belief that it may become a useful factor, when reinforced by steel tubes and bands, in the fabrication of the lighter forms of ordnance and of pneumatic guns.

Cann'on Falls. in *Minnesota*, a village of Goodhue co., on Cannon River, 25 m. W. of Redwing. Pop. 1895, 1,329.

Cannstatter (*kahn'statt-ter*), *n.* [Ger. from *Cannstadt*, an ancient town of Württemberg, where a universal fair annually occurs.] A term applied by Germans to their extensive fairs and festivals of all kinds, as the *Cannstatter volkfest verein*, which is often colloquially shortened to the single word, *Cannstatter*. An assemblage; a gathering together of all the people.

Canoe'ing. The use of the canoe as a pleasure boat has come greatly into vogue within recent years, both in Europe and America, alike for racing purposes and for the making of long journeys over interior waterways. They are usually constructed of oak, cedar or pine, though paper, tin and India rubber have been used, lightness and strength being the two main requisites sought for. The revival of C. began about 1850, and was largely due to the efforts of Mr. John McGregor, an English enthusiast, who, in his famous canoe, the *Rob Roy*, traversed many of the little-known rivers of Europe, and even made a long journey up the Jordan and the Nile, telling the story of his travels in a popular book. The *Rob Roy* was 14 feet long, 26 inches wide, and weighed, with its 7-foot paddle, masts and sails, 72 lbs. It was oak below, with a deck of cedar, while its sails were dyed blue to resist the glare of the sun. This type of canoe has since been greatly modified. The modern cruising canoe is, on an average, 15 feet long and 30 inches beam, is generally fitted with two sails, a metal center-board and deep rudder. It can sail as close to the wind, when tacking, as a yacht. The canoe is usually decked over except in the middle, and water-tight compartments occupy part of the decked space, which contain air enough to keep the boat afloat in case of accident. The Royal Canoe Club of England limits the weight of cruising canoes to 200 lbs., and the sail area to 75 square feet, although some modern canoes carry more than 150 square feet of sail. A speed of 40 miles a day has been made on smooth water, while racing canoes, 20 feet long and 18 inches broad, attain a speed of 8 miles an hour. A new mode of sailing has come into use: The crew, instead of sitting in the well, sit on the side of the deck, just aft amidships, and thus lean forward to balance the wind pressure, steering the boat by a tiller fitted on deck. The long-voyage equipment for a canoeist includes such articles as the following: tent, cooking apparatus, compass, cork seat, air-bed, lamp, water-bottle, water-proof sheet, fishing appliances, &c.; while for dress there is needed a pith hat, woven cap, Norfolk jackets, trousers, shirt and under-vests of flannel, cape and hood, sou'-wester, mackintosh coat, water-proof boots, &c. The Royal Canoe Club, of which the Prince of Wales is commodore, was founded in 1866, and has about 200 members. It is said that only one member of this club has lost his life, and on that occasion his canoe came safely to land, with sails spread and flag flying. Indeed, the modern canoe, in spite of its great spread of sail, is the safest pleasure-boat in use, and will ride out open boats many times larger. C. has made rapid progress in the U. S., its streams, from Maine to Florida, having been traversed by adventurous canoeists, whose boats may be seen on all the coastwise and inland waters of the U. S. and Canada. As early as 1888 the American Canoe Club numbered about 5,000 members, and there are various other clubs in this country, which have their annual meets on some favorite sheet of water. See CANOE.

Canoph'ilist, *n.* [Lat. *canis*, dog, and Gr. *philōn*, love.] One who is fond of dogs; a dog-fancier.

Canov'as. NEL CASTILLO, ANTONIO, Spanish statesman and writer, was born June 5, 1828. His first political office was that of representative of Malaga to the Cortes. He was a member of the liberal party until 1868, when it was disbanded. He then made himself the leader of the group called Liberal Conservative, and always adhered to monarchial principles, refusing to accept the republic. He was prominent among the leaders of the movement which placed Alfonso XII on the throne. During the life of this monarch, except for short intervals, he held the position of prime minister, but after the death of Alfonso was obliged to yield the office to Señor Sagasta, leader of the Liberal party. The cabinet of Sagasta was dismissed by the Queen regent in 1890, and Canovas was recalled to power; but in 1892 he was again forced to resign the reins of government to Sagasta, whom he once more succeeded as Premier in 1895. C. was assassinated by an anarchist, Aug. 8, 1897.

cantan'kerous. *a.* Ill-natured; disposed to find fault; disputations; given to quarrelling. (*Colloquial*.)

an'tar. *n.* A unit of weight in vogue on the eastern and southern borders of the Mediterranean, and especially in Egypt and Turkey, equivalent to our hundred-weight.—A unit of weight used in the Orient, varying from 100 to 125 lbs., and known in Turkish as *gandâr*, in Arabic as *qindâr*, &c.—A Spanish measure of capacity, of from two to four gallons.

Can'tor. *n.* (*Mus.*) A chief singer; a precentor.

Cantor'is. *a.* Pertaining to a chief singer or cantor.—Designating or pertaining to the side of a choir to the left of one who faces the altar—technically known as the north side in Anglican churches.

Caoutchousine (*koo'choo-seen*), *n.* (*Chem.*) The oil of caoutchouc, an oily liquid obtained from caoutchouc by destructive distillation.

Capel. THOMAS JOHN, an English divine of the Roman Catholic Church, was born at Hastings, England, Oct. 28, 1836. He became one of the founders and vice-principals of St. Mary's College, Hammersmith, in 1854. During an absence on the Continent, where he had gone to regain his health, he established a Catholic mission at Pan, and was appointed chaplain. After his return to London he attracted overflowing congregations by his oratorical powers. He was appointed chamberlain, and in 1873 domestic prelate, to the Pope, with the title of Monsignor. At the Vatican, during the Ecumenical Council, a course of lectures which he delivered drew immense audiences. In 1873 the Catholic public school at Kensington, London, was established by him. He received the appointment as rector of the Roman Catholic University College, at Kensington, and has made many converts to his church from all classes of society.

Capital Pun'ishment. The death punishment for crime. It has been applied for many offences and in many ways. Murder has been punished by death from the earliest times, and execution for this crime still prevails. Treason or rebellion against the lawful government has also been thus punished since prehistoric times. In the past centuries counterfeiting, forgery, mail-robbery and many minor offences were thus punished, even petty larceny being in some countries atoned for by death, while divergence from established religious opinions has led to the capital punishment of many thousands. The method of execution has varied greatly. In ancient times crucifixion and still more cruel punishments were common. In the mediæval period burning to death was the usual punishment for heresy. In modern times cruel methods of capital punishment persist in China, while in Japan the offender, in some instances, was formerly condemned to take his own life by disembowelment in the presence of officials. At present the usual mode of punishment for military offences is by shooting. Decapitation on the block, formerly prevalent for political offences by people of rank, is preserved in France in the punishment by the guillotine. In Spain the garrote is used, the spinal cord in the neck being pierced. Hanging, however, is the most widely prevalent mode of capital punishment. In the States of New York and Ohio it has been replaced by electrocution, all condemned murderers being now put to death in those States by the electric shock. Many persons at the present day oppose capital punishment under any circumstances, and it has been abolished in some States, as Rhode Island, Maine and Wisconsin, also by the governments of Holland, Portugal, and Brazil. What effect this abolition is likely to have on the commission of crime is not yet demonstrated. In several of our States the death penalty is still inflicted for other crimes than murder, such as rape, arson, assault with intent to kill, mayhem, and in some cases simple robbery, burglary or perjury.

Capitalism. *n.* (*Polit. Econ.*) The power of concentrated wealth.—An economic system which promotes the concentration of capital in a few hands, and the centralization of power which wealth confers.

Cap'per. *n.* One who or that which caps; specifically, a person or machine for affixing the caps on cans in a canning-factory.—Also, a workman who takes the filled moulds from a brick-making machine; a device for placing percussion caps in the head of a cartridge shell; and (slang) a person employed as a decoy by mock auctioneers, gamblers and confidence men.

Caprivi de Caprera de Monte-Cucculi. GEN. GEORG LEO VON, German soldier and statesman, was born at Charlottenburg, Feb. 24, 1831. He entered the army in his eighteenth year, and received rapid promotion. In the campaigns of 1864-66 he won distinction. He was chief of staff of the Tenth Corps in the Franco-German War, and in 1883 was placed in command of the Thirtieth Division at Metz. In 1884 he was appointed as the head of the Admiralty department. After the reorganization of the navy by Emperor William II, Gen. von Caprivi returned to the army, and took command of the Hanoverian Army Corps, one of the finest in the army. He succeeded Bismarck as Chancellor of the German Empire and President of the Prussian Council, Mar. 19, 1890. Caprivi retained the chancellorship, but resigned the presidency of the council, October 26, 1894.

Car'amel. *n.* A popular confection composed of various ingredients—sugar, butter, chocolate, &c.

Car'bide of Cal'cium. (*Chem.*) The carbides, formerly called *carburets*, are compounds of carbon with the metallic elements, with many of which carbon combines. It is to the carbides of iron in steel and cast-iron that these owe their valuable properties. The carbide of calcium has recently become of importance as an abundant source of acetylene, whose illuminating powers are so remarkable. It is produced by the treatment of lime and carbon in any form—coal, peat, petroleum, charcoal, coal-dust, etc.—in an electric furnace, the calcium and carbon combining into a solid substance which, when brought into contact with water, produces a double decomposition, the principal result being acetylene, which rises as a combustible gas. Hitherto carbide of calcium has been electrically produced only at an electric works in North Carolina, but the successful

introduction of acetylene as an illuminant would lead to its large production at the Niagara electric plant.

Car'bine. *n.* (*Milit.*) A short rifle used by cavalry soldiers. It is in every respect but length similar to the infantry rifle, than which it is a foot shorter in the barrel, and is provided with a smaller cartridge.

Car'bon. in *Wyoming*, a town of Carbon co., 140 miles N.W. of Cheyenne. It is in an agricultural district. Pop. (1895) abt. 1,500.

Carbon Printing. See PHOTOGRAPHY.

Carboniferous Age.—Continued from SECTION I.

The rocks of the carboniferous period are of wide occurrence throughout the world. We have mentioned their chief localities in the U. S. They occur largely in Great Britain and Ireland, where the coal beds of England and Wales have yielded this useful mineral in quantities unequalled in any other part of the world. In Europe the most notable coal beds, after the British, are those of Mons and Liege in Belgium, and of Saarbrück in the Rhenish provinces, which contain an enormous quantity of coal. In Prussia carboniferous strata of 6,000 to 8,000 feet in thickness occur, with about 130 seams of coal, in all 300 feet thick. A still greater development occurs in the Pfalz-Saarbrücken basin, where the total thickness of the coal measures is about 20,000 feet, having about 350 or 400 feet of coal. In eastern Europe the most important coal fields are those of Silesia, the thickness of these measures being about 10,000 feet, while the greatest thickness of workable coal seams is 333 feet in all. The carboniferous strata of southern Europe are of little importance, but there is a considerable development in Austria-Hungary, while in central Russia the carboniferous limestone strata are said to cover about 13,000 square miles. The coal here is of inferior quality, but in southern Russia is a more important development of carboniferous beds, covering an area of 11,000 square miles, and containing 60 seams of coal, with a total thickness of 114 feet. Little is known of the carboniferous strata of Africa. In Asia these strata occur in Asia Minor, and somewhat widely in India; but the great coal deposits of this continent are in China, where they cover a very large area, only comparable to the carboniferous area of North America. On the south of the great mountain chain which stretches across western China the coal measures cover an area of 100,000 square miles, while bounding the great plain of China is a limestone escarpment which is capped by a plateau covered by 30,000 square miles of coal measures. These beds contain vast quantities of workable coal, the seams near Peking being 95 feet thick. Australia has a large development of carboniferous strata, which in Queensland cover an area of 24,000 square miles. In South America carboniferous beds occur in several provinces of Brazil, in Peru, and elsewhere. It must be said, however, that the coal yield in some of the localities named is not all of the C. A., the cretaceous, and even the tertiary, strata being in places rich in coal. Yet the great coal yield of the earth comes from the strata known distinctively as carboniferous.

Carboru'dum. (*Mineral.*) The name given to the electrically produced carbide of silicon, which is one of the recent important products of the electric furnace. It was discovered about 1890 as the result of an effort to make artificial diamonds by sending the electric current through a mixture of carbon and clay, the result being some bright blue crystals hard enough to cut precious stones. This substance, at first supposed to be a carbide of aluminum, and named *carborundum*, proved an analysis to be a carbide of silicon. Its remarkable hardness quickly brought it into use as an abrasive mineral, for which purpose its powdered form proved to be superior to emery or even to diamond dust. It is now largely produced at Niagara Falls, and a great demand for it has arisen, it being employed as a sharpening agent in the form of wheels, hones, files, scythe stones, &c., while dental instruments are made of it. It takes rank with carbide of calcium as one of the most remarkable products of the modern electrical industries.

Carbure'ter. *Carbure'tter.* *n.* An apparatus designed to impregnate air or gas with volatilized hydrocarbons in order to endow it with illuminating power by combustion.

Carburom'eter. *n.* An instrument used for the purpose of determining the amount of hydrogen, carbon, &c., contained in fuel substances.

Car'diff Giant. The name given to a rudely-carved statue, 10½ feet high, dug up at Cardiff, N. Y., in 1869, and exhibited as the petrified remains of a gigantic human body. It was eventually proved to be a fraud, having been sculptured from a block of Iowa gypsum, conveyed to Cardiff, buried there, and dug up as a discovery.

Car'digan. JAMES THOMAS BRUDENELL, EARL OF. An English general, b. in 1757. Sat in the house of Commons (where he succeeded his father) from 1818 to 1837. In 1824 he entered the army, but was obliged to leave the service, when a lieutenant-colonel, on account of his treatment of a brother officer. He was never in any degree popular, though he won world-wide fame as a leader of the celebrated charge of the six hundred at Balaklava. The position of inspector general of cavalry was held by C. in 1857-60. Died March, 28, 1868.

Car'digan. or **Cardigan Jacket.** A jacket of knitted wool; so named from the Earl of Cardigan, leader of the famous "charge of the six hundred."

Carle'ton. WILL, the popular poet, was born in Hudson, Michigan, Oct. 21, 1845. He was educated in Hillsdale College, in his native State; has devoted much of his time to lecturing in various parts of Canada and the U. S., and has become widely known through his ballads

of domestic life, which have won him fame both in America and Europe. Among his writings are: *Farm Ballads*; *Farm Legends*; *Farm Festivals*; *City Ballads*; &c.

Carlisle, JOHN GRIFFIN, was born in Kenton co., near Covington, Ky., Sept. 5, 1835. He began his career as a teacher while reading law, and was admitted to the bar in 1858. From the beginning of his public life he met with success. In 1859-61 C. was a member of the Kentucky House of Representatives; was elected State Senator in 1866 and again in 1869. Kentucky sent him as a delegate-at-large to the National Democratic Convention at New York in July, 1868; and he was elected Lieutenant-Governor of Kentucky in 1871. He was a member of Congress 1879-90, and speaker of the House in the 48th, 49th, and 50th Congresses. He was elected U. S. Senator from Kentucky in 1890, succeeding James B. Beck, and was Secretary of the Treasury under Cleveland, 1893-97.

Carlskrona, a fortif. seaport of Sweden, on its S. coast, 30 m. W. of Carlskrona. It has considerable manufs. of canvas, leather, tobacco, &c. Pop. 6,529.

Carlson, FREDERICK FERDINAND, historian, was born in Upland, Sweden, June 13, 1811. He was educated in the University of Upsala, where he graduated in 1833, and in 1836 was made professor of history. In 1837 he was called to Stockholm as tutor to the prince royal, and subsequently was minister of public instruction and worship at Stockholm. He became a member of the Academy of Sweden, and of the French Academy of Sciences. His principal work is his *History of Sweden*, which appeared both in Swedish and German. This work attained a high place in the literature of his country. Died March 18, 1887.

Carminé Purple. (Dyeing.) A dye obtained by the solution of nitric acid in nitric acid, care being taken to prevent boiling over and too great an increase of temperature. The mixture should remain standing quietly for some days, after which a thick, pasty, or doughy substance is obtained, which is to be treated with warm water. The filtered liquid possesses a reddish or yellowish color, resulting from the organic substances decomposed by the nitric acid. It is next to be evaporated in a large enamelled iron vessel, but not heated to the boiling-point. After the liquid has been evaporated to a sirupy consistency, and has assumed a beautiful brownish-red or violet color, it is allowed to cool.

Carnegie (*kar-ni-gy*), ANDREW, manufacturer; born at Dunfermline, Scotland, Nov. 25, 1835; removed to the U. S. in 1845. After having served as telegraph messenger and operator, he was appointed clerk to the superintendent of telegraph lines of the Pennsylvania R. R. Co. at Pittsburg, and superintendent of the Pittsburg Division of Pennsylvania R. R. The foundation of his present fortune was started by his success in introducing the Woodruff sleeping car. He afterward formed one of a syndicate which purchased the Story farm on Oil Creek for \$40,000. The returns from this investment netted him \$1,000,000 in cash dividends the first year. The steel works which bear his name are now among the largest and best in the world. A number of British newspapers are owned by him, and he has spent large sums of money for educational and charitable purposes. For the use of the people in his native town he established commodious swimming baths, and also gave \$40,000 for a free library. To the Bellevue Hospital Medical College he gave \$50,000 in 1884, for a histological laboratory, and for a public library at Pittsburg, \$500,000, in 1886; \$250,000 for a music hall and library at Allegheny City, Pa. The Carnegie Music Hall, in New York, was erected in 1890 through his instrumentality. For a library in Edinburgh he has given \$250,000, and \$50,000 for a library at Ayr; and he has also established a library at Brad-dock, Pa. He is the author of *An American Four-in-hand in Britain*; *Round the World*; and *Triumphant Democracy*; and has contributed articles to periodicals on social and economic topics.

Carnot (*kar-no'*), MARIE FRANCOIS, SADI-, a French statesman, born in 1837, grandson of Bonaparte's celebrated war minister, Lazare N. M. C. (*q. v.*) His father was also a well known politician and author, and a follower of the *Simonians*. (See SAINT SIMON.) Sadi-C. graduated as engineer in 1863; in 1871, at the downfall of the second Empire, he was appointed Prefect of the Department of *Seine-Inferieure*, and was charged with the organization of the national defence. In 1871 he was elected to the Assembly. He was Minister of Public Works under M. Ferry in 1881, and Minister of Finance in 1882 and again in 1886. On the resignation of Mr. Grévy, in 1887, he was elected by the Legislature (Dec. 3) to the office of President of France. The policy of his administration was one of peace, reform, economy, and the promotion of the efficiency of the army and navy. He was opposed by the radical factions of the state, and on the night of June 24, 1894, while attending an exposition at Lyons, was stabbed by an Italian anarchist. He died the next day.

Caro, ELME-MARIE, a French philosopher and author, was born March 4, 1826, at Poitiers. Received his education in Paris at the Collège Stanislas. The prize in philosophy was awarded him at the general competition of the colleges of Paris. His studies were completed at the Ecole Normale in 1848. He was appointed professor of philosophy at Dowai, and in 1858 was called to Paris as master of the conferences of philosophy in the Ecole Normale. The Academy of Moral and Political Science, also the French Academy, made him a member of their bodies. His style of writing is attractive, and, in contrast to most of the contemporary French critics, prominence is given to the ethical aspects of literary questions. His last work, published in the *Revue des Deux Mondes*

in 1882, is an exposition and refutation of the positive philosophy.

Caro, in Michigan, the capital of Tuscola co., on Cass River, 100 m. N.N.W. from Detroit. In an agricultural and stock-raising district. Pop. (1897) about 2,200.

Carotte, *n.* A roll of Perique tobacco; used in this sense especially in the New Orleans tobacco trade, and less largely elsewhere as applied to other tobaccos.

Carp, *n.* (*Icthy.*) A fresh-water fish of the family *Cyprinidae*, which has long been a favorite food fish in Europe, being considered superior to any other fish except the trout and salmon. It has been introduced into and widely cultivated in the U. S., where, however, it has fallen in disfavor, its presence being considered detrimental to the increase of other fish, whose spawn it devours, while it is not much liked as a food fish. In the lower Sacramento, where it has become abundant, it is said to feed upon and destroy the water-eelery, the favorite food of the canvas back duck, and is disliked by sportsmen in consequence.

Carpenter, FRANCIS BICKNELL, portrait-painter; b. at Homer, N. Y., Aug. 6, 1830. He studied under Sanford Thayer, in Syracuse, N. Y., 1844. He has been made an associate of the National Academy in New York. Among his best known portraits are those of Presidents Fillmore and Lincoln. The former is in the City Hall, New York, and that of President Lincoln is in the Capitol at Albany. His noted work, *The Emancipation Proclamation*, painted in 1864, is in the Capitol at Washington. Carpenter is the author of *Six Months in the White House with Abraham Lincoln*.

Carpenter, LOUIS G., C. E., irrigation engineer; was born March 28, 1861, at Orion, Mich.; graduated from the Michigan Agricultural College in 1879, when he was appointed Instructor and Assistant Professor of Mathematics and Engineering. He subsequently pur-

in 1861-62. Among the many engagements in which he took part were those of Wilson's Creek, the pursuit of Price into Arkansas, and that of Pea Ridge, where he was twice wounded. He commanded the army of southwest Missouri in 1862, and St. Louis district 1862-1863; also a division in the Vicksburg campaign. Subsequently he served in various operations in the southwest, and was breveted major-general, U. S. A., in Mar. 1865. After the war he was engaged in frontier service; became colonel of the Sixth Cavalry, Apr. 29, 1879, and commanded several expeditions against the Indians, and was promoted brigadier-general in 1892. Retired, Feb. 15, 1893.

Carr, JOSEPH B., general of volunteers, was born in Albany, N. Y., Aug. 16, 1828. He held the position of lieutenant-colonel of the Second New York Volunteers in the Civil War, and was made colonel May 10, 1861. The first volunteer regiment to leave the State was the Second. C. was commissioned a brigadier general of volunteers in 1862, and took part in all the battles of the Army of the Potomac up to the surrender of General Lee, April, 1865. He was brevetted major-general March, 1865, and discharged from service in Sept. of the same year. The State of New York elected him Secretary of State in 1881, and he held the same office again in 1883. He received the nomination for Lieutenant-Governor of New York by the Republican Convention, Sept. 23, 1885. Died in Troy, N. Y., Feb. 24, 1895.

Car'rageen Moss, or **Irish Moss**. The common name of several species of algae, so named from Carrageen, in southern Ireland, but occurring elsewhere on rocky coasts of European countries, and on the shores of eastern North America. *Chondrus crispus*, one of the red algae, yields most of the carrageen of commerce. It is used both as an article of food and a medicine, and is palatable and easy of digestion. By boiling the

Fig. 2772.—BUFFINGTON-CROZIER DISAPPEARING GUN CARRIAGE, LOADING POSITION.

sued his studies at the University of Michigan, and at Johns Hopkins University. He was appointed Professor of Engineering at the Colorado Agricultural College, and meteorologist and irrigation engineer on the Agricultural Experiment Station, in 1888. The first course in irrigation engineering given in any American college was instituted by him. In the Congressional investigation (1890), relating to artesian wells, Colorado and New Mexico made him their special agent. He founded the American Society of Irrigation Engineers, 1891, and is a member of the British Association for the Advancement of Science, &c.

Carpenter, MARY, philanthropist, was born at Exeter, April 3, 1807. She took an active part in the movement for the reformation of neglected children and several reformatories for girls were established by her. In 1835 she founded a working and visiting society. A ragged school in one of the worst parts of Bristol was opened by her in 1846, and in 1852-54 she established reformatories for boys and girls at Kingswood and the Red Lodge. She visited India four times, her attention being called to the destitution there by the visit of Rammohun Roy to Britain in 1833. Besides her reformatory writings she published *Our Convicts*; *Six Months in India*, &c. Died June 14, 1877.

Carpenter, MATTHEW H., lawyer and statesman, was born in Vermont in 1824; admitted to the bar in 1845, and removed to Wisconsin three years later, which State he represented in the U. S. Senate 1869-1881. Died Feb. 24, 1881.

Carr, EUGENE A., soldier, was born in Erie county, N. Y., Mar. 20, 1830; graduated at West Point in 1853. In the Civil War he was appointed colonel of the Third Illinois Volunteer Cavalry, Aug. 15, 1861, and received the appointment of brigadier-general of U. S. Volunteers, Mar. 7, 1862, serving in operations in Missouri

C. in water or milk, with sugar and spices added, jel and blanc-mange are produced. The plant is from 2 to 12 inches long, flexible and cartilaginous, its color being a reddish brown. Medicinally, it has emollient and nutritive properties.

Carriage, Disappearing Gun. The utility of disappearing gun carriages, particularly for coast defence, has been clearly demonstrated. The value of these devices lies in the almost complete safety which they give to the gun they bear. A gun in an ordinary barbette offers an inviting target to an attacking force, and vigorous efforts would naturally be made to dismount it and to kill or disable the gunners. The disappearing carriage in great measure obviates this danger, the gun being exposed only at the moment of firing, and the gunners not at all. Under Cannon's historical account of these devices may be found. In our purpose here to speak particularly of some recent American inventions which have been tested by the U. S. government with very satisfactory results.—1. *Gordon Carriage*. Of these the Gordon disappearing carriage was subjected to an official test in December 1894, with results considerably beyond government expectations. The contract called for 10 shots an hour but no less than 32 shots an hour were fired, thus winning a considerable bonus for the inventor. The Gordon carriage is built on a platform with a central pin or "turn-table," and is movable in a circle. When firing position, it is lifted 20 feet above the ground. After firing it is dropped 8 feet, to load, and is protected from an enemy's fire until again raised. The moving instrumentality consists of two electric motors, one of which pumps air to raise the carriage, the other sweeps the gun about on the pintle. The recoil of the carriage after firing is partly taken up by air-pressure, partly counterweights; and the latter, being beside the

add to the protection of the cannoneers. The carriage can be moved either by hand or electric power.—*Buffington-Crozier Carriage.* This carriage, which has been adopted by the U. S. government as the standard type for coast-defence fortifications, is somewhat lighter and more graceful than the Gordon carriage, and has stood very severe tests. It is of the front pintle form, and consists of the following principal parts: the levers, the top carriage, the cheek plates or chassis, the elevating gear, the live rollers, the base ring, the transoms, the traverse wheels, traverse circle, and the projectile crane. The trunnions of the gun rest in sockets at the ends of a pair of huge levers which swing freely, and are attached to a large counterpoise. This is lifted and held up by a pawl and ratchet. When the gun is fired the piece recoils and the levers sink. With an 8-inch breech-loading rifle the counterpoise weighs 32,000 pounds. A pivoted frame-work connected with the breech of the gun keeps it in exactly the desired position. The counterweight takes up only about one-third of the recoil, the remainder being received by two

The crosshead guides are formed on the inner sides of the chassis. On one face of each crosshead clip is a vertical ratchet, to be caught by a pawl on the chassis and thus hold up the counterweight. This pawl is mounted on a short crank actuated by a long lever at the side of the carriage, this arrangement being used to aid the lowering of the piece, should the recoil be insufficient. The rear traverse wheels and their transom are of cast steel, the axles resting on roller bearings. The traversing chain lies around the traverse circle and is fastened to the parapet, there being an arrangement for taking up the slack. The circle is cast in segments and bolted firmly to the platform. The following is the action of the carriage: On the piece being fired, it is driven back by the recoil, the central pivot of the levers moving horizontally to the rear and carrying the top carriage with it. The lower end moves vertically upward, being constrained by the crosshead guides. The gun moves downward and to the rear, traversing the arc of a circle, while the energy of recoil, as already said, is partly absorbed by raising the counterweight and

would be very difficult to hit, and a shell could be placed within the fort only by the use of high-angle fire, which is impracticable on modern war-ships from the fact that the breech of the gun could not be sufficiently depressed for such fire, and existing decks are not strong enough to stand the heavy vertical strain of the recoil. In consequence, forts mounted with guns with disappearing carriages are probably destined to overbalance the assailing force of the great modern ships of war.—The accompanying engravings, showing the Buffington-Crozier carriage as used at Fort Hamilton, in New York harbor, are reproduced, by permission, from the *Scientific American*.

Carriages, Modern. The types of carriages at present in use are variously classified, according to the number of wheels, the method of entering, the number of seats, and the manner in which the occupants are seated. The two-wheeled vehicles embrace the cart, the gig, the sulky, the hansom cab, the Irish jaunting car, &c. The four-wheeled vehicles embrace the omnibus, coach, the buggy, the cab, the tarouche, &c. Some are

Fig. 2773.—THE BUFFINGTON-CROZIER DISAPPEARING GUN CARRIAGE, ELEVATED FOR FIRING.

hydraulic cylinders. The supporting levers are made of cast steel, and are pivoted near their middle points on an axle of forged steel, the axle resting in bearings in the top carriage, which, with the two hydraulic cylinders, is formed in one piece of gun iron. The cylinders are connected by a pipe at their forward ends to equalize the pressure upon them during recoil. The top carriage rests upon rollers of forged steel, which are placed in recesses in the cheek plates. These plates are bolted at their forward ends to the racer, and have guides bolted to them for the elevating rack. The upper surfaces slope 2° to the front in order to aid the return of the piece to battery and to reduce the preponderance of the counterweight. The elevating rods of forged steel are attached at their lower ends to bronze elevating racks. The elevating handwheels are mounted on a through shaft, upon which are pinions gearing into spur wheels, on the shaft with which are bronze pinions, gearing into the elevating racks. The action of recoil is so adjusted that the gun will always have an inclination of about 7° to the horizontal when in the firing position, whatever its elevation when firing.

partly by the resistance of the hydraulic cylinders. After loading, the pawls are tripped and the greater momentum of the counterweight enables it to lift the gun into battery. The return to battery is softened by hydraulic counter-recoil buffers in the cylinders. The piece can be hauled down by hand to the loading position for drill and cleaning by means of a windlass arrangement, the rope passing through sheaves on the levers and chassis. This carriage has proved itself capable of great rapidity of action. Ten shots have been fired in 12 minutes and 21 seconds from an 8-inch gun. The horizontal range of fire is 127 degrees, and the pointing of the gun can be varied from 12 degrees elevation to 5 degrees depression. When in the loading position the gun is completely covered from a shot arriving at an angle of 7 degrees. An attacking fleet would be practically at the mercy of a battery mounted with disappearing guns of this character. The aiming of the gun is all done under shelter, the gunner, by means of a "range finder" and "converter board," being able to sight the piece with perfect accuracy while it is still below the level of the parapet. During the few seconds of its exposure it

entered at the side, some at the rear; in some the occupants sit face to face, in others back to back, as in the dog-cart, but usually they all face forward.—*Two-wheeled vehicles.* For hauling purposes the cart is of prehistoric origin, while of two-wheeled riding carriages the gig is apparently the oldest now in use. Its body rests on two or more semi-elliptical springs, and may have a hood or not at the pleasure of the owner. It is intended for two persons and drawn by one horse. The hansom cab, invented in 1835 by an Englishman named Joseph Hansom, is a very useful vehicle for crowded streets. The body hangs very low and the driver sits behind on a high seat, the whole being so balanced as to relieve the horse's back from weight. The Irish jaunting car has the distinctive feature of having very low wheels, with the body placed above them. The occupants sit back to back, facing towards the sides of the road. The dog cart, now much used, is a vehicle for one horse or tandem driving, and has sitting-room for four occupants, placed back to back. The body rests on half-elliptical springs, and it or the seat may be shifted, so as to balance the load and relieve the horse from carrying

weight. This was originally a hunting vehicle and carried dogs, but is now much used as a pleasure carriage. The *sulky* may be named as a special American product, where it originated through the requirements of the trotting horse. It is of very slight build, has a seat for one person only, and is used for speeding trotters. The pneumatic rubber tire, originated for use on the bicycle, has been adapted to the sulky, with an increase of speed, the mile trotting record having been reduced about four seconds. It is also used on other light vehicles built for speed. Japan possesses a special two-wheeled vehicle, the *jirikisha*, in which a man replaces the horse in the shafts. It is said to have been invented by an American missionary.—*Four-wheeled carriages.* The principal covered vehicles of this kind include the coach, the landau, the brougham and the rockaway. The *coach* is the special family carriage, being constructed with a closed, panelled body suspended on elliptic springs, to which may be added curved C springs front and back. This latter method is called "double suspension." The coach is arranged to carry four persons inside, facing each other, and two more on the coachman's seat in front. Coaches are also now often constructed with seats on top, these being used with four horses as road coaches, under the names of "mail coach," "drag," and "tally-ho." The *landau* differs from the coach only in having a falling top. This may be made entirely of leather, or may have glass quarters, it being variously named in accordance with the lack of or the number of glasses. The *brougham*, first made for use by Lord Brougham, is a low-hung, close, straight glass-front carriage, with a single seat for two persons inside, and a panelled seat for the coachman in front. It is a convenient doctor's carriage. It

inally intended for hilly and mountain roads, but is now much used in level country, its cheapness recommending it.—*Older American vehicles.* The family coaches of the 18th century were heavy, lumbering affairs, drawn slowly by six powerful horses through the mud and over the rough roads of those days. Specially American was the great *Conestoga wagon*, used particularly by the farmers of Pennsylvania, a broad-wheeled wagon with a huge canvas covered body, elevated in front and rear, drawn by strong horses or from four to six yoke of oxen, and creeping slowly to market over the primitive roads of that time. Wagons of the same kind were later used in the West and elsewhere as goods vans and emigrant wagons, and became known as "prairie schooners." The *stage coach* had a century or more of existence in this country, from its earliest introduction until replaced by the railroad, and in the same way the *omnibus* had a limited period of existence in city streets, until driven into oblivion by the street car. Here and there it still is in use, and held its place in New York until quite recent times. For travel over the rougher roads of the country what were called *Concord wagons* were much used, and coaches of this character are still employed in the Pacific states. They are supplied with heavy brakes to check their speed in descending mountain roads.

Carriages, Motor. Among the important results of modern invention must be included the motor carriage, which has been widely introduced in France, and is more slowly making its way into other countries. These carriages are moved by power derived from various sources, petroleum or gasoline furnishing the power for some, electricity for others, and steam for still

people of England and the United States have appeared. The carriages produced are objected to as unsightly, costly, producing an unpleasant noise, and deficient in other particulars. A number of them have been put in use on our city streets, principally as delivery wagons, but without very creditable performance. The various objections will very likely be in time overcome, but the

Fig. 2775.—TREVITHICK AND VIVIAN STEAM CARRIAGE. CONSTRUCTED IN 1801.

popularity of the motor carriage in France has not yet extended to other countries.

Carroll, in Iowa, a town, cap. of Carroll co., 93 m. E. of Council Bluffs. In a farming country. Pop. (1897) 2,800.

Carrousel. (*kär-oo-z'el*), n. [It. *carosello*.] A merry-go-round; a circular platform revolving on a turn-table, and generally fitted up with figures of horses, chariots, &c.; sometimes called "flying horses."

Carson, CHRISTOPHER, a noted American scout and guide, was born in Kentucky, Dec. 24, 1809. For many years he led the life of a trapper and hunter in Missouri and became famous under the title of Kit Carson. His acquaintance with the language and habits of the Indians was the means of his being chosen as guide in Fremont's explorations, and as Indian agent in New Mexico, an appointment given him in 1853. He was brevetted brigadier-general for his services while in New Mexico. Died in Colorado, May 23, 1868.

Carter, SAMUEL POWHATAN, rear-admiral U. S. Navy was born in Elizabethtown, Carter county, Tenn., Aug. 6, 1819; he entered the navy as midshipman, Feb. 14, 1840, and served in the Mexican war. While attached to the steamer *San Jacinto*, in 1856, he took part in the capture of the Barrier Fork, at the mouth of the Cantow river, China. The Tennessee brigade was organized by him, and he was subsequently appointed brigadier-general of volunteers. He was on active duty during the entire war, his services being most important in Tennessee, Kentucky, Virginia and North Carolina. For gallant and distinguished conduct he received the brevet of major-general. He was placed on the retired list of the U. S. Navy, with the rank of rear-admiral May 16, 1882. Died May 26, 1891.

Cartersville, in Missouri, a city of Jasper co., 10 m. S.W. of Carthage. Gold, copper and other minerals are found in its vicinity. Pop. (1897) about 3,000.

Cartesian Diver. (*Phys.*) An instrument, usually in the form of a toy, which admirably illustrates several of the properties of fluids. It consists essentially of a glass tube, closed at one end, nearly filled with water and inverted into a cylindrical vessel nearly full of water, the mouth of which is closed air-tight by a

Fig. 2776.—CARTESIAN DIVER.

Fig. 2774.—THE FILS DE PEUGEOT FRERES CARRIAGE—PETROLEUM MOTOR. WINNER OF THE ROAD RACE FROM PARIS TO BORDEAUX AND RETURN.

is sometimes built to hold four persons. The French *compé* is a brougham with a curved glass front. The *clarence* seats two or four persons and has a front of curved glass. The *rockaway* was first made as a cheap, convenient carriage at Jamaica, Long Island. It is a covered carriage, with sides curtained or panelled, the roof extending over the driver's seat, which is on a level with the other seats. It is made to carry four or six persons, and is otherwise known as a *carryall* and a *germanstown*. It is now much used as a family carriage, being named *rockaway coach*, and *compé rockaway*. The *barouche* has an open-topped coach body, and is furnished with a leather hood over the back seat. It is now often made without doors and called a *sociable*. The *cabriolet* is a hooded carriage for two persons, without door, and with a panelled seat for the driver. Similar to this is the *victoria*, except that the driver's seat is not panelled, but is connected by iron loops with the carriage body. On these loops the driver's seat is constructed, being an iron framework. The *mail phaeton* has a heavy square box-body, with a hooded seat in front for two persons and a seat for the grooms behind. It is variously modified into the *stanhope phaeton* and the *spider phaeton*. The *break*, originally used for breaking colts, is a heavy phaeton seating from six to twelve persons. Of peculiarly American C. may be named the *buggy*, a light, one-seated, four-wheeled vehicle, drawn by a single horse, and hooded or not, at pleasure. It was formerly hung high on elliptical springs, but is now hung low on side bars of wood, attached at their ends to springs. The *buckboard*, of the same type as the buggy, is of very simple construction, the springs being replaced by a long, springy plank, on whose center rests the seat. The rear axle is firmly attached to the plank, while the front one is attached by a king-bolt, about which the axle swings in turning. The buckboard was orig-

others. Experiments in this direction have been made for many years, and in 1801 a steam carriage was constructed by Trevithick and Vivian, which was followed from time to time by others, though no very satisfactory results were attained until our own times. Of the various sources of power, petroleum has hitherto proved the most successful. In one successful invention gasoline is stored in a reservoir over the rear wheel, and the gas arising is conveyed by a small tube to the cylinders, where, on its coming into contact with air, it is kindled by an electric spark from an induction coil. The explosive force of the detonated gas moves the pistons in the cylinders. Those propelled by petroleum power are able to run for three hours, or from 25 to 30 miles, with one charge of oil. They can then be recharged from a reservoir attached to the carriage, which holds enough oil for a twenty-hour run. Progress in motor carriages was brought prominently to public attention by a race with vehicles of this character on June 11, 1895, from Paris to Bordeaux, and return. The total distance traversed was about 726 miles, part of it over steep hills and bad stretches of road, making a severe test of the new vehicles. A prize of \$8,000 was offered for four-seated carriages, and other prizes for other vehicles, motor bicycles, &c. The result was highly gratifying. The first carriage reached Bordeaux in 22 hours, 28 minutes, its average speed being about 15 miles an hour. The success of this competition set many inventors in England and America at work, and similar races have occurred in this country—from Milwaukee to Chicago, on Nov. 2, 1895, and in New York city, from Broadway through Central Park to Irvington and return, a distance of 52 miles, on May 30, 1896. No important result arose from these races, and though inventors are still busy in the direction of motor carriage improvement, no results quite satisfactory to the

diver rises. Attempts have been made to utilize such diver for the purpose of determining, or at least indicating, the barometric pressure. But variation in temperature affects the density of the water and the air, especia-

the latter, to such a slight degree, as to invalidate conclusions as to atmospheric pressure drawn from the position of the silver.

Carns, JULIUS VICTOR, an eminent zoölogist, was born at Leipzig, Aug. 25, 1823. He studied surgery and medicine at Leipzig, later at Würzburg and Freiburg, and in 1849 was appointed keeper of the museum of comparative anatomy at Oxford. He returned to Leipzig in 1851 and accepted the chair of Comparative Anatomy there in 1852. His books are numerous and valuable. The best known of them are *System der Theiischen Morphologie* (1853); *Handbuch der Zoologie*; &c.

Casas Grandas, or Casas de Montezuma, (*Geog.*) A town of Chihuahua, Mexico, so named from the striking ruins of ancient buildings found in its vicinity. These casas grandes, or great houses, are built of adobe, their walls, as now standing, being from 5 to 20 feet high. The largest building had a length of 800 and a width of 200 feet, and possessed numerous courts, rooms and closets. There is reason to believe that it was several stories in height. Nothing is known of the history of these edifices. Others like them are found near the Gila, Salinas and Colorado rivers. The buildings at C. G. seem to indicate a former population of 20,000 to 30,000.

Case, AUGUSTUS LUDLOW, rear-admiral U. S. Navy, was born in Newburg, N. Y., Feb. 3, 1813. He entered the navy as a midshipman, April 1, 1828. During the Mexican war he participated in the capture of Vera Cruz and Tobasco. He took part in the capture of Forts Hatteras and Clarke while serving as fleet-captain of the North Atlantic blockading squadron. With the assistance of the steamers *James Adger* and *Mt. Vernon*, while in command of the *Iroquois*, in 1863, he cut out the blockade runner *Kate*, under the fire of the forts and batteries at New Inlet, N. C. In June, 1873, he was appointed to the command of the European squadron, and was also chief of the Bureau of Ordnance from Aug. 1869 to May 1873. Died in Washington, D. C., Feb. 17, 1893.

Case-hardening, (*Mech.*) A method of covering, with a surface-layer of steel, articles of cast or wrought iron or steel. Its purpose is to enable the articles treated to resist surface wear, while retaining their original tenacity. The articles are packed in a vessel filled with some substance which will yield carbon at a red heat. This carbon combines with the surface-iron of the article and converts it into a skin of steel. After being heated to the requisite length of time, it is plunged into water. The substances formerly used as carbon-yielders in case-hardening were such animal refuse as hoofs, horns, bones, skins, &c., but yellow prussiate of potash is now nearly always employed. The steel coating produced is usually very thin, its thickness being seldom more than a sixteenth of an inch.

Casey, SILAS, soldier, was born in East Greenwich, R. I., July 12, 1807; graduated at West Point, 1826. He served on the western, northern, and Pacific frontiers, in the war with Mexico, 1847-48, and engaged in several Indian skirmishes. During the Civil War he prepared volunteers for the field at Washington, D. C., 1861-62. Until the end of the rebellion he was engaged in the service in various ways. Was made brevet major-general, U. S. Army, Mar. 31, 1866, for gallant and meritorious services. Compiled and edited a system of *Infantry Tactics* for the U. S. service (1863), and *Infantry Tactics for Colored Troops* (1863); retired from active service, July 8, 1868. Died in Brooklyn, N. Y., Jan. 22, 1882.

Casey, THOMAS LINCOLN, was born at Madison Barracks, N. Y., May 10, 1831. He graduated at the U. S. Military Academy in 1852, and received the appointment of brevet second-lieutenant of the corps of engineers. He was engaged in engineering duties until the outbreak of the Civil War, in which he served as staff officer in the Virginia department until Aug. 16, 1861, and subsequently in engineering duties till the close of the war. From 1867 to 1879 he was assistant to the chief of engineers, and afterward in charge of architectural construction in Washington, including that of the Washington Monument, from 1877 till its completion in 1885. Became chief of engineers with rank of brigadier-general in 1888; retired May, 1895. Died March 25, 1896.

Cashew-nut, *n.* (*Bot.*) The fruit of *Anacardium occidentale*, related to sumach, and a native of the West Indies, but now widely grown in the tropics. This tree grows to 16 or more feet in height, and bears edible, kidney-shaped fruits, known as C. N., which when subjected to pressure yield an oil resembling olive oil. The fruits are borne on the enlarged and fleshy ends of the stem, and possess a pleasantly acid flavor. The poisonous principle inherent in several species of sumach is present in a degree in the C. N., which, when roasted, yield fumes which are apt to cause inflammation in the face and eyes.

Casimir-Perier, JEAN PAUL PIERRE, President of the French Republic; born in Paris, Nov. 1847. He entered the Franco-German War, and for distinguished services received the cross of the Legion of Honor. After peace was declared, he took an active part in politics, holding an office of importance in the ministry of the interior, of which his father, Auguste C.-P., was then at the head. In 1876 he was elected to the Chamber of Deputies, to which he was successively reelected. In 1890 he was elected vice-president of the chamber, and in 1893 became president, was reelected in November of the same year, but resigned to become president of the council. He was chosen on the first ballot by the National Congress to succeed President Carnot (q. v.), in 1894, but resigned suddenly Jan. 15, 1895.

Cassagnac, ADOLPHE GRANIER DE, French journalist, was born in the department of Gers in 1806. Until 1848 he was a zealous Orleanist, but a change in his views made him one of the earliest promoters of the empire, and he represented his native department as a supporter of the government from 1852 to 1870. Several papers of all shades of political and religious thought were founded by him. In these his turbulent style of writing brought him a number of duels and law suits. He published two romances and a number of compilations. Died Jan. 1, 1880.

Cassagnac, PAUL GRANIER DE, French journalist, politician and duelist; born Dec. 2, 1843. He was editor of *Le Pays*, and was appointed in 1879 a member of the Chamber of Deputies, was also a follower of the Bonaparte party and was noted for his zeal in that cause. His numerous "affairs of honor" made him known throughout all Europe. He is the author of a *History of the Third Republic*.

Castelar, EMILIO, a Spanish politician, b. in 1832, who became noted early in his career in consequence of his extreme democratic and socialistic opinions, which he expounded in various Liberal journals. For a time he was professor of History and Philosophy in the University of Madrid, and in 1868 he took a leading part in the revolutionary movement, which was put down by Serrano. On this occasion he was condemned to death, but he made good his escape and sought refuge first in Geneva and afterwards in France. When the revolution broke out in Sept., 1868, he returned to his native country, and was one of the most energetic leaders of the republican movement. He exerted himself to the utmost in order to bring about the establishment of a republic, but at the general election for the Constitutional Cortes in Feb., 1869, the republicans succeeded in returning only a small proportion of their candidates, among whom, however, was Señor Castelar. In June, 1869, he vigorously opposed the project of a regency, and became the most popular leader of the Republican party. In 1873, he took an active part in establishing the new Republic, became Minister for Foreign Affairs, Feb. 12, and President, Sept. 7. The latter office he was forced to resign, Jan. 3, 1874. During his presidency he put down energetically a communist revolt, and succeeded in reorganizing the army. Since 1875 he has been the leader of the moderate republicans. He has written several important works, including *Civilization: Questions politiques y sociales*; *Tragedias de la Historia*, &c.

Castelman, FRANCIS CONNIT, a French traveler, born in Louisa, 1812. His early travels were in Canada, the United States and Mexico. Under the auspices of the French government, he started on an exploring expedition to South America. Of those who accompanied him, M. Huznes Weddell undertook a separate exploration of Bolivia, and M. d'Usery descended the Amazon by another route than that undertaken by C., but was killed by his Indian canoe-men. On his return to France, in 1847, he published his *Expédition dans les parties centrales de l'Amérique du Sud*. This work comprises six volumes, including one by M. Weddell, and contains much of geographical and ethnological interest. Connit C. was successively consul at Bahia, Cape of Good Hope and Singapore, and consul general at Melbourne, Australia, where he died, Feb. 4, 1880.

Castle Garden. A building erected on the tract of ground which forms the southern extremity of New York city. It was originally a fort, known locally as the Battery, then was used as a public garden and play-house, and afterward as a landing-place for immigrants, where they were temporarily cared for. The fort was built in 1807 by the U. S. government, and called Castle Clinton. It was at that time 300 yards from the shore, but the space between became filled up, and the fort was ceded to New York city in 1832. Being leased to private parties, it was converted into a theatre and indoor garden under the above title, and was brought into wide notice as the place of Jenny Lind's first appearance in America. In 1855 it was converted into an immigrant depot, and continued so until the end of 1891, when it was returned to the city and placed in charge of the park commissioners. Since then it has been converted into an extensive aquarium, fitted up with a number of large tanks and numerous smaller ones, and abundantly stocked with salt-water fishes.

Catacan'sis, *n.* [From Gr. *kata*, downwards, and *kaiō*, burn.] (*Path.*) Spontaneous human combustion. See COMBUSTION.

Catamaran, *n.* (*Naut.*) Kind of raft in use on the Coromandel coast of Hindustan, formed of three planks or logs tied together, the middle being longer than the side pieces. There is here no good harbor, and the surf is apt to be violent. The C., propelled by a paddle, is used by the people of Madras to communicate with ships when the condition of the surf renders the use of ordinary boats unsafe. A similar device, carrying a sail, is in use on the coast of Brazil. The word C. is also applied to any craft with two hulls having their inner sides parallel, however propelled, and was given to the fire-boats which the British prepared in 1804 to destroy the French fleet of invasion.

Cat'echu, *n.* (*Pharm.*) An extract obtained from the wood of *Acacia catechu*, an East Indian tree, 20 to 40 feet high, whose wood is very heavy and durable. The heart-wood, which yields the C., is of a dark brown color. It is cut into chips, which are boiled in water until a strong decoction is obtained, which is then strained and evaporated until the extract becomes thick enough to be poured into moulds. As thus formed it composes masses of various shapes, such as balls, circular cakes, or irregularly flattened pieces. This substance is of a rusty brown color, odorless, and with a

bitter and astringent taste, though with a trace of sweetness. It frequently is largely contaminated with wood, sand, etc. In Great Britain true C. is replaced by an extract from another tree, *Uncaria gambier*, which has similar properties and is given the same name. C. is used in medicine to produce an astringent effect in cases of relaxation of the mucous membranes, particularly those of the stomach and intestines. It is commonly used in treating watery diarrhoea, in the form of a preparation known as compound tincture of C. It has also been used in the treatment of inflammations of the mucous membrane of the genito-urinary tract, and as a gargle and mouth-wash in certain affections of the membrane of the mouth and throat.

Cat'enary, *n.* [From Lat. *catena*, a chain.] (*Mach.*) The curve formed by a uniform flexible string, or chain, suspended from its extremities. The chief properties of the C. are as follows:—1. Let an horizontal line be drawn at a distance below the lowest point of the string, equal to the length of string, having a weight equivalent to the tension at the lowest point. The tension at any point is the weight of a portion equal to the distance of the point above the horizontal line. 2. The radius of curvature, at any point, is equal to the portion of the normal, intercepted by the curve and the horizontal line. 3. The horizontal tension, at any point is constant. 4. Of all curves of a given length, drawn between two fixed points in an horizontal line, the common C. is that which has its center of gravity furthest from the line joining the points. If the string vary in diameter, so that the area of a section, at any point, is proportional to the tension at that point, the curve in which the string hangs is called the C. of Equal Strength.

Catharization, *n.* [From Gr. *catharizo*, to purify, purify, or clean.] (*Chem.*) The art of clearing the surface of bodies from alien matter; and the substance is said to be catharized when the surface is so cleaned. As everything exposed to the air, or to the touch, takes more or less a deposit or film of foreign matter, substances are classed as *catharized* or *uncatharized*, according as they have been or not so freed from foreign matter. The term *catharized*, denoting the condition of pure surface, may also be applied to surfaces that have not undergone the process of catharization. Thus a flint stone, in the rough, has an uncatharized surface; but, when split, the inner surface of the pieces will, at least for some time, be chemically clean, or in a catharized state.

Cathode, *n.* (*Phys.*) The negative electrode in a Crookes or Geissler tube, an electrolytic bath, &c., by which the electric current departs; the opposite of the anode, by which the current enters.

Cathodic, *a.* Of or pertaining to a cathode.

Cathodic Rays, (*Phys.*) When a Crookes tube is excited by a series of electric sparks or an alternating electric current of high potentiality, rays are projected in straight lines from the cathode to the opposite wall of the tube; these are termed C. R., and are believed by some physicists to consist of radiant matter, while by others the phenomenon is ascribed to a progressive disturbance in the ether. These rays are employed in the process of skiagraphy (q. v.), and are susceptible of deflection by the magnet or by a conductor terminating in the earth. See RÖNTGEN; SKIAGRAPH; SKIASCOPE; FLUOROSCOPE, &c.

Cathodograph, *n.* A lamp that has been suggested for the permanent picture made by use of the cathodic rays; otherwise known as *radiograph*, *skiagraph*, *shadow-graph*, &c.

Catholic Apostolic Churches, (*Ecol. Hist.*) A name given to a body of Christians who held that the Church Catholic is made up of all the baptized, and has apostles for its highest ministry. See IRVING (EDWARD), and IRVINGITES.

Catholic University of America. An institution of learning founded at Washington, D. C., under an endowment of \$300,000 made in 1864 by Miss Mary Caldwell. It was incorporated in 1865, as a superior institution of ecclesiastical learning, and approved in 1887 by Pope Leo XIII, who granted it the power of conferring degrees. The faculty of theology was opened in 1889. In 1891 Rev. James McMahen, of New York, donated \$400,000 towards the philosophical department. Various other donations have been received. The university is governed by a board of directors chosen from the episcopate, the clergy and the laity. It is now (1897) under the presidency of Rev. Thomas J. Conaty.

Cat'lin, GEORGE, an American artist and traveller, born in Pennsylvania, after passing several years among the aborigines of the far West, produced a series of admirable pictures representative of Indian ethnology and costume, which he exhibited in the U. S. and Europe with profitable results. His work entitled *Illustrations of the Manners, Customs, and Condition of the North American Indians* (2 vols., 1841), is one of acknowledged authority. Died Dec. 23, 1872.

Cat's-eye, *n.* (*Min.*) A very hard precious stone, semi-transparent, and, when cut in a particular way, presenting a chatoyant appearance; that is, when turned, it displays several colors in succession, like the opal. It derives its name from the similar property in the eye of the cat. The true or Oriental C. is found in Ceylon and Brazil, and is highly esteemed. There is a quartz C., of little value, found in Ceylon and at H. t. Bavaria. The tiger-eye variety is found in the Orange river region, S. Africa. It is plentiful and inexpensive. True C. is a variety of chrysoberyl, the variation in the ray of light being due to the twinned structure of the crystal or to contained impurities.

Cattle Plague. See RINDERPEST.

Cau'dine Forks. (*Hist.*) In the valley of Claudium in the Apennines, now called the Val D'Arpaja, the Romans under Veturius and Postumius, were completely surrounded by the Samnites in the spring, B. C. 321. Half their number were cut to pieces on the spot, and the remainder capitulated to the Samnite general, C. Pontius, and were compelled to pass under the yoke. The treaty of peace was, however, rejected by the Roman Senate, B. C. 320. The name of the pass into which the Roman army had been allured was *Furculæ Caudinæ*. According to Livy (b. ix. 2), it consisted of two narrow defiles, which opened into a plain, surrounded, excepting at these outlets, by mountains. The Romans advanced through the first defile, and found the second blocked up to oppose further progress, and their vigilant enemy at once closed the one through which they had entered. Hence retreat was impossible.

Causerie (*kaws-ree'*), *n.* [*Fr. causor*, reason.] Informal, unstilted conversation or criticism; free and unconventional discussion of historical or literary subjects, &c.

Cautery, Electric or Galvano. In this form of *C.* the hot iron formerly employed is replaced by a platinum wire, heated to the required temperature by a galvanic current. It has largely taken the place of cauterizing irons. In its employment a special battery is used, having strong electric quantity. The knife or needle of platinum has an attached mechanism by which the circuit may be closed or broken at will, while the temperature may be increased, if desired, from a dull red to a white heat. The ease of its application and complete control of the temperature gives great value to this method, which is coming into very general use. For the purpose of removing internal tumors, &c., the wire is formed into a hoop, and charged with the current after being placed in position, thus doing the work of the knife, while the flow of blood is checked by the cauterization of the severed parts.

Cave.—Continued from SECTION I, page 545.

whose walls are composed of balsatic columns. Caves are also formed in lava, in cases where the crust has solidified while the liquid lava flowed out below, thus leaving a long underground tunnel, with black stalactites of lava depending from its roof. Extensive caves formed in this way, some of them over 100 feet wide, exist in the Azores, the Canary Islands, Iceland, and other volcanic regions. Many caves are of interest to geologists from their containing a detritus of clay, sand, gravel, &c., within which are imbedded the bones of extinct animals, and occasionally the weapons and implements of man. These are known as bone caves (*q. v.*). Among the most famous of fossil-bearing caves in this country is that at Port Kennedy, Pennsylvania. In England are Kent's *C.* and Brixam *C.*, each of which has yielded human implements, while various similar caves exist on the continent of Europe. Many of these caves seem to have been the haunts of carnivorous animals, which dragged thither the bodies of their prey; and some of them seem afterward to have been used as human abodes for very long periods, if we may judge by the depth of the detritus in which traces of human occupation are formed, this being in turn often thickly covered with stalagmite.—*Cave Animals.* Among the various animals which dwelt in caves in the early human period were several carnivora, occasionally considerably larger in size than their modern representations. One of these was a large bear, *Ursus spelæus*, or the *C. bear*, whose bones are found very abundantly in the Pleistocene caves of Europe. Associated with it was *Hyæna spelæa*, no longer found in Europe, but resembling *Hyæna crocuta* of Africa. *Felis spelæa*, a fossil lion, very similar to the modern lion, was at that time an abundant tenant of the caves of Europe and Britain. The modern animal inhabitants of caves are of special interest from the fact that they are partly or wholly blind, while closely related to surface animals possessed of vision. The eyes seem to have degenerated from disuse, or because no longer of utility and therefore lost through the action of natural selection. Of *C. fauna* that of Mammoth *C.* has been most studied. The animals found here include an amphibian *Proteus*, with embryonic eyes; several blind fish, such as *Amblyopsis*, *Typhlichthys*, &c.; hundreds of blind insects, of which, in some cases, only the females are blind; blind spiders and negriapods; numerous blind crustaceans; a few univalve mollusks, and other forms. This blindness exists in various degrees. Some of these animals are destitute of any trace of eyes, and others possess eyes in a rudimentary state; and many forms with well-developed eyes inhabit caves, covering most of the orders of animal life above mentioned. It is thought probable that this retention of vision is due to their having inhabited caves for a comparatively brief period.

—*Cave Men.* In all ages men seem to have sought shelter in natural caverns, and have frequently excavated artificial caverns as places of abode. During the palæolithic, or old-stone, period of human existence in Europe, caves, so far as we know, were the only abodes of men, who have left there numerous traces of their presence in the debris with which the floors are often deeply covered, there being occasionally 20 to 30 feet of successive layers of clay, pebbles, charcoal, and stalagmite, which contain articles of human manufacture which aid us in gaining some knowledge of the customs and condition of their inhabitants. Wild beasts usually chose dark and narrow caverns for their lairs. Men, on the contrary, made their dwellings in those of wide entrances, high roofs, and shallow depth, admitting freely light and air, being often rather rock shelters than caves. Caves of this character have been investigated in Southern Belgium, along the valley of the Meuse, and in that of the Vezère, a branch of the Dordogne,

in Southern France. One of the first examined was at Antriguac, in France. In England, Kent Cavern is the most noted, while various others have been investigated. Similar caves have been found in Spain and Switzerland; and in southern France, near Mentone, is a cavern which has yielded a striking fossil skeleton of man. The antiquity of those *C. dwellers* is shown by the fact that many of the animals then living in Europe are now extinct. Among those were the *C. bear* and hyæna, the sabre-toothed tiger, the woolly rhinoceros, and the mammoth, a huge, hairy elephant, long since vanished. Other animals now living, but not in that locality, were the reindeer and musk-ox, creatures belonging to an Arctic climate. There was a small species of horse, which seems to have been used only for food, while the dog, so long man's companion, was not known. There is an abundance of fish bones, but few of those of birds, showing that while the fishing art was known, there were no weapons suited to securing flying animals. Fire was used, and the *C. dwellers* cooked their food, but their arts were very crude. They had no pottery, and had not learned how to bore or polish stone. Their implements were made of chipped stones, horn, bone, and doubtless of wood, though no trace of the latter remains. They have left us arrow- and lance-heads, knives, scrapers, and gonges of flint, many of them of fine workmanship. Bone needles and awls indicate that they wore skin clothing. Perforated shells and bored pieces of ivory were probably worn as ornaments, while the artistic skill of the *C. men* is shown by figures cut or scratched on pieces of bone and horn, some of these representing with much fidelity the outlines of fishes, deer, horses, and men, and even the great mammoth, now extinct. The skeletons of the *C. men* have been in some instances preserved. Those found at Cromagnon, in the south of France, belonged to a tall and powerful race, nearly 6 feet high, and strongly built. Those found in the Belgian caves, on the contrary, indicate a much smaller race, but symmetrical in body, and with well-shaped heads.

Cedar. (*Bot.*) The common name of various trees, but more especially applied to the Cedar of Lebanon, as follows:—*C.*, BARBADOS. *Juniperus barbadensis*.—*C.*, BASTARD BARBADOS. *Cedrela odorata*, also called the Sweet-scented Barbados Cedar.—*C.*, BASTARD. *Guzonia ulmifolia*; also a common name for *Cedrela*.—*C.*, BEAMUDA. *Juniperus Bermudiana*.—*C.*, GUIANA. *Icica altissima*.—*C.*, HONDURAS. *Cedrela odorata*.—*C.*, INDIAN. *Abies* (or *Cedrus*) *deodara*.—*C.*, JAPAN. *Cryptomeria japonica*.—*C.*, MOUNT ATLAS. *Abies atlantica*.—*C.*, OF GOA. *Cupressus lusitana*.—*C.*, OF LEBANON. *Abies Cedrus*, often called *Cedrus Libani*.—*C.*, OF N. S. WALES. *Cedrela australis*.—*C.*, PRICKLY. *Cyathodes Oxycedrus*.—*C.*, RED. *Juniperus virginiana*; or of Australia: *Cedrela australis*.—*C.*, SHARP. *Juniperus Oxycedrus*.—*C.*, STINKING. *Torreya torifolia*.—*C.*, VIRGINIAN. *Juniperus virginiana*.—*C.*, WHITE. *Cupressus thuyoides*; of Australia: *Melia australis*; of B. Guiana: *Icica altissima*; of Dominica: *Bignonia leucocorylon*.

Cedar Apples. (*Bot.*) The Pennsylvania name of the curious excrescences on *Juniperus virginiana*, caused by a fungus called *Podisoma macropus*.

Celestial Sphere. The seeming spherical surface of the sky upon which all celestial objects appear to us to be projected. It is crossed by systems of imaginary circles to fix the positions of stars upon its surface by means of spherical co-ordinates.

Cel'lier. ALFRED, musician, was born at Hackney, England, Dec. 1, 1844. From 1855 to 1860, he was a chorister of the Chapel Royal, St. James. His subsequent engagements as organist or conductor were numerous. His works comprise a cantata to Gray's Elegy, and several operas and operettas, which include *The Tower of London*; *Nell Gwynne*; *The Masque of Pandora*; *Dorothy*, &c. Died Dec. 28, 1891.

Celluloid. *n.* (*Chem.*) A substance discovered in 1870, which is practically a homogenous form of cellulose, the basis of almost all vegetable fabrics. Cellulose is insoluble, but by treating it with nitric acid it undergoes a chemical change, a portion of the nitrogen uniting with it and forming a body known as nitro-cellulose, or gun-cotton. Gun-cotton is soluble in ether, alcohol, chloroform, bisulphide of carbon, and various other substances. Gun-cotton dissolved in alcohol and ether is well known, being then called collodion or liquid adhesive plaster. In this form it is employed in the "wet-plate process" of photography, being there used as an organic, transparent, inalterable film, coating a plate of glass and adhering firmly to it, and yet capable of absorbing the chemical salts whose properties render photography possible. The attempt to procure commercially any useful product by means of liquid solvents were failures until it was discovered by the Messrs. Hyatt, of Albany, N. Y., in 1870, that gun-cotton was soluble in melted gum-camphor, and produced a body uniform in structure, solid at all ordinary temperatures, and having remarkable properties. This product they patented under the name of celluloid. In practice, now, pure white tissue paper is treated with a mixture of nitric and sulphuric acids, the functions of the sulphuric acid being merely to take up the water. The paper is converted by the nitric acid into nitro-cellulose. It is cautiously dried to free it from all admixtures. It is then ground with camphor and a small amount of alcohol to facilitate the powdering of the camphor. Finally it is heated to the temperature at which the camphor melts, and worked between hot rollers, when the nitro-cellulose is dissolved and the resulting product is *C.* *C.* is a tough, moderately hard, very elastic material, not fibrous but homogenous in its

texture, and having a distinct odor of camphor. It is not altered by the action of the atmosphere except that it grows somewhat harder by age, is capable of high polish, flexible, elastic, and at high temperature, excluded from the air, is plastic. It burns readily with a smoky flame, but is not explosive under any conditions. It may be made of any desired shade, through all the colors of red, blue and green; and from opaque white to a jetty blackness. *C.* has been sent to Japan, there to be carved by Japanese artists, and sent back to this country, bearing a striking resemblance to ivory carving. So closely is the veining of ivory imitated that only a careful examination would convince anyone that some of these products were not genuine ivory. *C.* is made into divers articles, collars, cuffs, "amber" mouth pieces for pipes, harness trimmings, artificial teeth, handles for cutlery, billiard balls, coral, ivory, malachite, tortoise-shell, turquoise, lapis-lazuli, agate, &c.

Cellulose Ship Lining. An important application of cellulose to the protection of warships, for preventing the inflow of water through shot-holes or other perforations. The method is to fit a double skin or coffer dam for some distance above and below the water-line, the face being several feet thick and filled with some material which would expand when wet and fill up the space through which a shot had passed. In 1892 the U. S. navy adopted for this purpose a preparation called *cellulose*, obtained from the fibrous husks of cocoanuts. This, as prepared, was a brown, fibrous substance, very light, and yielding largely to compression. This substance was first used in France, and has been employed to some extent by other nations. The English battleship *Inflexible* is protected by a mixture of cork and oakum, which in all weighs 143 tons. In early 1895 a Philadelphia inventor brought to the notice of the Navy Department a new cellulose made of the pith of corustalks, which is granulated by machinery. Secretary Herbert directed thorough tests of this new substance to be made, and duplicate coffer dams were constructed, measuring 6 feet square and 3 feet thick, one being packed with cocoa fibre and the other with corustalk cellulose. Into each a six and an eight inch shell were fired. Water was then forced into the dams under pressure. The result was that the water soon oozed through the cocoa product, but it failed to penetrate the corustalk cellulose, which proved to be completely water-tight. Another valuable quality possessed by the corustalk cellulose is its incombustibility, as proved by the most severe tests. It has also the advantage of cheapness and abundance and of light weight, being little over half the weight of the cocoa fibre. The 143 tons of the lining of the *Inflexible* would be reduced to 25 tons if this material were substituted for the cocoa fiber. Our five new battleships, the *Kearsarge*, *Kentucky*, *Alabama*, *Illinois*, and *Wisconsin*, are to be lined with the corustalk product, which now seems likely to prove of the greatest value in naval construction. See *BATTLE SHIP*; *CRUISER*, &c.

Cement (*sê-mênt'*, or *sê-m'-ênt*), *n.* (*Building*). The cements now in use may be divided into three classes. 1. The stone cements, such as Roman and Portland cements and ordinary mortar, which are used to unite stone and brick work and cover buildings with a protective coating. 2. Substances used for binding joint in much thinner layers, such as white and red lead and putty. 3. Substances like glue, isinglass and dissolve caoutchouc, which are used in very thin coatings. A these have the one main purpose, that of binding building or other materials together.—*Mortar.* Of the first class ordinary mortar is the most widely used. It is a mixture of slaked lime with sand, made into a paste with water, one part of lime to three or four of sand being generally used, and thoroughly mixed. Mortar as used to unite the joints of brick or stone work, is with sufficient rapidity to permit the work to be steadily prosecuted, yet it takes years to reach its maximum hardness. This hardening is due, in the first place, to the loss of water, and secondarily, is supposed to arise from the absorption of carbonic acid from the atmosphere, yielding a carbonate of lime which serves to bring together the stone and mortar. Some ancient mortars thus attain an extreme hardness. A mortar celebrated for its properties is that formed from *Puzzuolana* or *Pozzuolana*, a volcanic sand found at Pozzuoli near Naples, and which forms a valuable hydraulic *C.* when mixed with lime. The *hydraulic cements* are those which harden and set under water, or in damp places not exposed to contact with the atmosphere; and a *hydraulic lime* is one which, when reduced to powder and made into a paste with water, manifests this property. For masonry constructions of importance, common lime is now seldom used alone, hydraulic lime *C.* being added to hasten the setting and secure great ultimate strength. The cements possess this property more fully than the hydraulic limes, attaining the final hardness with great rapidity.—*Roman Cement.* There are certain natural mixtures of clay and lime which are called cement stones. The best of what is known as Roman *C.* is made of such compounds found in the newer geological strata of southern England, which contain a large percentage of carbonate of lime. This material is calcined in kilns, ground and sifted, sets very quickly, 15 minutes being sufficient when of good quality, and is valuable for work needing to be done between tides and similar instances where rapid hardening is requisite. It is, however, of only moderate strength.—*Portland Cement.* Of the stone cements it is by far the most important, and is far more used than Roman *C.* Though resembling Portland stone, when its name, it is an artificial product. It is made by the processes, the wet and the dry. As manufactured

England by the former, three parts of white chalk, which furnishes the carbonate of lime, are mixed with one part of clay, and the two substances, along with water, are thoroughly mixed in a "wash mill." The mixture, after being dried, is burnt in kilns and ground to a fine powder. In the dry process the chalk is replaced by the hard limestone of other formations, which is crushed small, mixed with clay or chalk, then roughly burned and ground to powder. This, being slightly moistened, is run through a pug-mill, and then made into bricks, which are afterward burned in kilns and ground to powder. This C. was originally made from Portland stone, which is an argillaceous limestone containing a large proportion of clay, but nearly all used at present is artificial. Portland cement was hardly known until 1840, but its use has now greatly extended, particularly for the construction of docks and harbors, many of which are partly or wholly constructed of it, mixed with sand and broken stones in the form of a concrete. Its manufacture in the U. S. began in 1875, and it is now largely produced, an argillaceous-limestone possessing the requisite properties having been found. Portland cement sets slowly as compared with Roman cement, but, like the latter, sets under water, which no mortar will do that contains less than 10 per cent. of silica. It has not always proved durable, but these failures are usually attributed to carelessness in manufacture or in the solution of materials.—*Argillo-magnesian cements.* The natural hydraulic cements of the U. S. are all made from limestones which contain the carbonates of lime and magnesia combined with clay. They are found in many localities. The stones are dealt with as above described, being broken, burnt, crushed and ground to powder. The Rosendale cements, from the valley of Rondout Creek, Ulster county, N. Y., are the most valuable of these. They are all quick-setting, but none of them attain more than one-third the ultimate hardness and strength of the best Portland cement.—*Magnesian cement.* Pure carbonate of magnesia, or magnesite, yields a cement of excellent properties, which surpasses even Portland cement in strength and hardness. It is known as Union cement. Hydraulic cements are now subjected to certain tests, recommended by a committee of the Society of Civil Engineers in 1885, and the application of which has forced manufacturers to greatly improve the quality of their products. Similar tests have been adopted in Europe.—*Plaster of Paris.* This material is used for cementing marble and alabaster, much as mortar is for brickwork, also for uniting the separate moulded pieces of large objects cast in plaster of paris. Several cements are made from it, and used as a hard plaster in forming the projecting portions of halls and rooms, such as pilasters, columns, and other work of internal finish. Dentists employ it in taking casts of the mouth for artificial plates, from its very quick-setting properties.—Of the thin class of cements may be named mastic cement, rust or iron cement, sulphur cement, water-glass cement, white and red lead cements, which are variously employed in making water-tight joints, joining earthen-ware pipes, or, in the case of water-glass cements, for furnaces where a cement capable of standing an intense heat is necessary. They are made of fire-clay or asbestos powder, made plastic with silicate of soda or water-glass. The cements used for mending broken glass, china, ivory, wood, etc., or for the many purposes needing a thin, firmly-holding cementing substance, are numerous, and may be classed as shell-lac cements, gelatin and isinglass cements, glue resin cements, elastic or caoutchouc cements, Armenian or diamond cement, cutler's cement, &c., they being much varied in composition and different in their holding properties.

ement Stone, n. (Mineral.) A somewhat argillaceous and ferruginous limestone, generally compact, which is used to some extent in making hydraulic mortar or cement. A group of strata in the carboniferous system of Scotland is known as the *Cement-stone Series*.

ensus, United States. The census, as now developed in this country, presents wide differences from those taken in Europe, and embraces a thoroughness of detail that omits scarcely any important interest of the country or essential feature of its civilization. Its growth presents some interesting characteristics that may be rapidly reviewed. Various estimates of the population of this country were made previous to 1790, but they were all inadequate, and nothing approaching exactness is known of the population during the colonial or the Revolutionary period. The Constitution, adopted in 1787, made provision for a decennial C. of the people, and under this provision a law directing a C. to be taken was passed March 3, 1790, the enumeration to date from August 1 of that year. Nine months was allowed for the completion of the work, which was confined to a counting of the people, six questions being asked, and the result giving the numbers of white males under and over 16 years of age, of white females, of all other free persons, and of slaves. In 1800 the scope of inquiry was somewhat extended, though it was still confined to a count of the population. Much of the same was the case with the four succeeding censuses, though the population was more definitely classified, and some statistics of manufacturing industries were added, but without results of special importance, there being no penalty for refusing to answer questions of this kind. In the C. of 1850 an effort was made to obtain a considerably wider range of statistics. A C. office was added to the new Department of the Interior and a C. board created, consisting of the secretary of State, the Attorney-General and the Post-

master-General. The following subjects of inquiry were scheduled: 1, free inhabitants; 2, slave inhabitants; 3, persons who died during the year ending June 1, 1850; 4, productions of agriculture; 5, products of industry; 6, social statistics. This C. proved to be a great improvement on its predecessors, the general statistics gained in regard to agriculture and manufactures being of the highest importance. The censuses of 1860 and 1870 were taken under the law of 1850, though the abolition of slavery required a change in the questions concerning population in 1870. In addition to place of birth, questions were also asked about the parentage of persons, and an inquiry was made concerning the public debts of states, counties, cities and towns, with numerous details of industrial, educational and other relations. When the time for taking the tenth C. approached, preparations were made for a much fuller and more varied enumeration than had ever been taken before, a law being passed in 1879 which greatly changed the C. system of this country, both as to the agencies of enumeration and the subjects of inquiry. A new office of Superintendent of the C. was created, his appointment being made by the President and confirmed by the Senate; while the marshals of the several judicial districts, under whom all previous counts had been taken, were replaced by "supervisors of census," officers specifically appointed for the purpose. This appointment of officials specially chosen for the purpose, and presumably well qualified, while directly responsible to the head of the department, was a great step in advance over previous censuses, where the work of enumeration was entrusted to officials having other duties to perform. The assistant marshals formerly employed were replaced by a body of "enumerators," the number being increased from about 6,400 in 1870 to 31,265 in 1880, their added duties being proportionate

relating to the nativity of parents, the relative fecundity of native and foreign-born mothers, and the expectation of life in children of native and foreign parentage. In addition there were gathered facts concerning naturalization and the ability of citizens and others to speak and write the English language. To facilitate the counting of the immense number of figures gathered, an electric tabulator was employed, which did its work with great accuracy and despatch. The C. bureau of 1890 was originally organized in 23 divisions, including Appointments; Disbursements and Accounts; Geography; Population; Vital Statistics; Church Statistics; Educational Statistics; Pauperism and Crime; National and State Finances; Farms, Homes, and Mortgages; Agriculture; Manufactures; Mines and Mining; Fish and Fisheries; Transportation; Insurance; Printing and Stationery; Statistics of Special Classes; Supervisors' Correspondence; Alaska; Indians; Social Statistics of Cities; Revision and Results. On April 1, 1892, these divisions were reduced to 9, including Population; Manufactures; Agriculture; Farms, Homes, and Mortgages; Vital Statistics; Social Statistics; Wealth, Debt, and Taxation; Printing and Stationery; Revision and Results.—*Published Results.* The publications giving the results of the various censuses preceding 1880 consisted of one or a few volumes, that of 1860 embracing 5 volumes, covering the various subjects of enumeration. The much greater scale of the census of 1880 called for a far more extended and elaborate series of volumes, and, in addition to the *Census Bulletins*, which were issued from time to time as special lines of investigation were completed, there were published no less than 22 large volumes, containing an immense series of facts concerning almost every important interest of the United States. In addition two octavo volumes, of 1,771 pages, were issued, entitled *A Compendium of the Tenth Census*,

Fig. 2777.—MEMORIAL HALL, FAIRMOUNT PARK (SEE CENTENNIAL EXHIBITION).

to this increase in numbers. In addition to the varied facts concerning population and the industrial statistics of the 1870 C., in 1880 special agents were appointed to obtain the statistics of manufacture in 279 cities and large towns to collect statistical information concerning the mining industries and the manufacture of iron and steel, woolen, silk and cotton goods, glass, coke, interchangeable machinery, etc. The statistics of the deaf and dumb, blind, insane and idiotic, criminals and paupers, never properly gathered in any previous C., were also obtained, and in addition the statistics of the factory system, of schools, colleges, museums and churches, social statistics of cities, statistics of public debts, valuation and taxation of property, &c. In this C. there were introduced several entirely new subjects of enumeration, including the statistics of railroads, telegraphs, fire, life and marine insurance, &c. In the agricultural schedule the facts gathered covered a much wider field than formerly.—*Census of 1890.* The act providing for the taking of the eleventh C., approved March 1, 1889, was substantially the same as that of 1879. No change was made in the general plan of enumeration, but, in accordance with the increase in population, the number of supervisors was increased from 150 to 175, and of enumerators from 31,265 to 47,975. Five important changes were made in the scope of inquiry:—1. The surviving soldiers, sailors and marines of the Civil War, and the surviving widows of such persons, were enumerated. 2. The colored population was classified into negroes, mulattos, quadroons, and octoroons. 3. The recorded indebtedness of private corporations and individuals was ascertained. 4. A complete C. of the Indian population was made, with various data concerning them. (In 1880 only tax-paying Indians had been counted.) 5. The statistics of population, industries and revenues of Alaska were obtained. Special steps were also taken to obtain correct information concerning the business of express companies, data

and containing a digested statement of the facts of most importance. The results of the 1890 C. have been published in 15 volumes, or sets of volumes, devoted to the following subjects: I. Population, showing characteristics, distribution, parentage, and occupation; II. Vital and Social Statistics, including those of special classes, pauperism and crime; III. Educational and Church Statistics; IV. Valuation, Taxation, Public Expenditures, and Indebtedness; V. Farms, Homes, and Mortgages; VI. Agriculture, embracing irrigation, farm products, live stock, truck farming, seed farming, floriculture, horticulture, nurseries, viticulture, and other agricultural facts; VII. Manufactures, in all their varied relations; VIII. Mines and Mining; IX. Fish and Fisheries, including the scientific and popular names of our fishes, their distribution, and other facts. X. Transportation, including railroad, canal, lake, river, and ocean traffic, and the business of express companies and street railways; XI. Insurance, including fire, life, and marine insurance; XII. Indian Statistics; XIII. Alaska; XIV. Veterans of the Civil War; XV. An Atlas of Statistics. The United States C., as has been said, differs widely from European censuses, which are confined to a count of the inhabitants, and certain particulars concerning them. When statistical information of other kinds is needed in Europe it is obtained by other agencies. The U. S. C., on the contrary, is "a C. of population, wealth, industry," and yields not only a vastly greater sum of information than is obtained by any other nation through the same agency or through any agency. Congress has always been indisposed to trouble the people too much with questions, and therefore has preferred to collect all desired information at one time, and through a single agency. The method has its advantages, but has also its defects, and it is unquestionable that if each branch of inquiry were made by a set of agents specially chosen for that purpose, and relieved from other distracting duties, the

work would be better performed and more trustworthy. —*State Censuses.* Many of the States of the Union require a *C.* to be taken at some date within the interval of two national censuses. In a number of the States there are constitutional provisions for a *C.* every five or ten years, but this provision is, as a rule, a dead letter. Only a few States take a regular *C.*, principal among them being Massachusetts, New York, Rhode Island, and Michigan. By the *C.* law, passed in 1879, the United States agrees to pay any State or territory

Fig. 2778.—STONE CARVINGS FROM GUATEMALA.

that shall take a *C.* in the years intermediate between the national *C.*,—1885-95, &c., fifty per cent. of the cost of same. The provision may have the effect of inducing more of the States to carry out the *C.* provisions in their constitutions. In addition to the States *C.* of the larger cities are occasionally taken, either of the population alone, or the manufacture, &c. These have hitherto been taken by unsatisfactory and incomplete methods, and the results have been received with more or less question.

Cental, n. A measure, chiefly of grain, of 100 lbs.

Fig. 2779.—COLOSSAL STONE HEAD, YUCATAN.

Centennial Exhibition, The. The hundredth anniversary of the declaration of American Independence, occurring in 1876, was variously celebrated in the United States by local processions and other displays, while the national celebration was held at Philadelphia, as the city in which liberty was declared, by a grand Centennial World's Exhibition of art and industry, the largest and most varied in its display of any that had up to that time been held. Under the direction of a United States Centennial Commission and a Centennial Board of Finance, a large and attractive section of Fairmount Park, Philadelphia, was chosen as the locality of the exhibition, and numerous buildings were erected, the largest being a *Main Exhibition Building*, 1,880 feet long and 404 wide, the space covered being 21.47 acres. It was constructed of iron and glass, was over 70 feet high, and had a central tower of 120 feet in height. It was

Fig. 2780.—RELIGIOUS MONUMENT, HONDURAS.

divided into longitudinal and traverse zones, the former serving for the grouping of articles by departments, the latter by countries, its cost being \$1,420,000. The other large buildings were: *Machinery Hall*, designed after the model of that of the Vienna Exposition of 1872, and covering 14 acres; the *Agricultural Building*, 10.15 acres in extent; *Horticultural Hall*, 150 acres, and *Memorial Hall*, 150 acres, the latter being 365 feet long, 110 wide, and 59 high, and designed to be kept as a permanent

art gallery. Other buildings of importance were the *U. S. Government Building*, *Women's Building*, *Judges' Hall*, and various State and foreign government edifices, the whole numbering nearly 200. The exhibition remained open from May 10 to Nov. 10, the number of visitors being 9,910,966, of whom 8,004,272 paid admission fees. The largest number was on Pennsylvania Day, 274,919. The total cost of the buildings was \$5,242,295, of which nearly the whole was supplied by the State of Pennsylvania, the city of Philadelphia, and citizens of Penn-

sylvania. Memorial Hall and Horticultural Hall remain as permanent acquisitions of Philadelphia.

Center-Board, n. (Naut.) A vertical board, pivoted or hung on a rod at the lower forward end, and enclosed in a water-tight well or slot in the bottom of a vessel, so that it can be raised or lowered at will. It is used in the U. S. largely on fore-and-aft rigged vessels, especially yachts and cat-boats. It is usually lowered when sailing in a wind to prevent leeway, and raised when sailing before the wind. In England it is sometimes called a drop-keel, or sliding keel.

Centerville, n. In Maryland, a town of Queen Anne co., on an inlet of Chesapeake Bay, 36 m. S. E. of Baltimore. In a farming district. Pop. (1897) about 1,400.

Central America, Antiquities of. The Central American states and the Mexican state of Yucatan possess some of the most striking antiquities of the world, the work of the civilized Indians of a past age, and displaying many evidences of advanced development in art and architecture. Much the most important of these were the work of a race of people known as the Mayas, whose locality lay south of that of the Aztecs, extending from the Mexican states of Chiapas and Yucatan to the republics of Honduras and Guatemala. There are also works left by Aztec or Nahuatl colonists in Central America, and numerous relics of civilized tribes who formerly inhabited the territory of Costa Rica. The Mayas appear to have possessed a considerable number of probably populous cities, now marked by remarkable groups of ruined stone edifices, while the dwellings of the people, of wood or adobe, have disappeared, and the sites have been grown over by the forest. Of these groups of ruins, Chiapas contains those of Palenque,—consisting of five massive structures—and Comacalco, a station near the coast. Yucatan possesses Uxmal, the most remarkable of all for the number and grandeur of its edifices; Mayapan, the an-

principal of which is known as the "Temple." This edifice, 624 by 809 feet in dimensions, is built of massive blocks of cut stone, its walls being 25 feet thick. Surrounding it lie a large number of obelisks, pillars, and idols, and block of stone engraved with inscriptions in the hieroglyphic alphabet of the Mayas, the key to which no one has yet found. At Uxmal are several pyramids, are about 120 feet high, while the building called the "Palace" has foundation walls of about 1,100 by 2,200 feet. Of Ixinché little beyond its solidly paved and cemented streets remain, the cut stones of both these ancient cities having been carried off by the European settlers as building materials. At the northern stations named much better preserved edifices exist. These buildings were generally erected on great artificial mounds or pyramids, usually composed of earth with external walls of stone. The sides of these are usually steep, while the steps of ascent are narrow and often two feet in the rise. On them stand massive buildings, certainly not built as residences, and probably having religious significance. The so-called "Palace" at Palenque, has an area of 260 by 310 feet, and is 40 feet high, while the "Casa del Gobernador" (Governor's House) at Uxmal, is about 600 feet on each side. In the "House of the Nuns" at Uxmal there are 88 small rooms looking on an interior paved court. These rooms

Fig. 2782.—MAYA STONE IDOLS.

are dark, rarely communicate, and probably had some religious or ceremonial purpose. The building material used is the limestone found widely throughout the country. It seems to have been shaped by stone tools and laid in a mortar which has become exceedingly hard. *Decorations.*—The edifices named are often elaborately decorated, both within and without, their decorations being usually symbolic. Carved designs extend across the whole face of the walls, sometimes in fixed patterns which often represent conventionally the figures of animals. The serpent seems to have been the favorite but the figures of other animals and of man frequently occur. The altar slabs from Palenque present several figures in ceremonial costumes, who are making offerings to a central object of the shape of a Latin cross. The stucco lining of the interior is in some cases moulded by hand into ornamental designs, and in others

Fig. 2781.—MAYA HOUSE OF THE GODS, OR PLACE OF SACRIFICE.

cient native capital of the state; and nearly 40 others within 50 miles of Mayapan, with several more distant, of which the most singular in its structures is that known as Chichen-Itza. Another group of Maya antiquities occurs in Guatemala and Honduras, the principal cities being Uxmal, the capital of the ancient Quiches; Ixinché, capital of the Cakchiquels; and Copan, in Honduras, on a river of the same name. The Quiches and Cakchiquels were powerful nations at the time of the Spanish conquest, but Copan had long been abandoned and was a mass of ruins. As at present constituted it covers an area of about 900 by 1,600 feet, inclosed by solid stone walls, and possessing various structures,

painted, scenes from life being depicted in bold free-hand drawing. This is particularly the case in Chichen-Itza. The roofs were of stone, or of wooden beams plastered with cement. The primitive substitute for arch was in use, consisting of overlapping stones that gradually approached until they met and were covered at the top with a broad flat stone. These remain evident at Palenque, but at Uxmal and elsewhere the edges of the stones have been cut away and the surface covered with stucco, so as to conceal the mode of building. Palenque there are some nearer approaches to the true arch. The antiquities attributed to the Nahuas found in Guatemala and Nicaragua, and indicate m-

skill in the art of stone cutting. The best known of these remains are at Quetzaltenango, in Guatemala, being extraordinary bas-relief carvings, of real importance. One specimen presents striking resemblance to the type. There seems good evidence that these are of Nautiloid origin. The antiquities of Costa Rica

Fig. 2750.—ROCK PAINTINGS, NICARAGUA

are found in large mounds, funereal in purpose, from which thousands of small images in gold, known as "Chiriqui ornaments," have been taken. They were probably still produced at the date of the Spanish conquest.

Central City, in Kentucky, a town of Muhlenberg co., 7 m. from Greenville. In a coal-mining and tobacco-raising section. Pop. (1897) about 1,200.

Central Park. A park occupying a central position in New York City, in which it extends from 59th to 114th streets, and from 5th to 8th avenues, being over 3½ miles long, and ½-mile wide. It has an area of 843 acres, of which 160 are in lakes and reservoirs, and 400 in woodland, over half a million trees, and shrubs having been planted. It has nine miles of roadway, 5½ of bridge paths, and 28 of walks. C. P. was originally laid out by the landscape artist, Frederick Law Olmsted and Calvert Vaux, who have very effectively developed its natural features. While much smaller than many of the city parks of the present day, it is very beautiful, presenting much of the close attention to details of a large park, rather than the broad handling of a modern park. It is adorned with numerous statues, and possesses various attractive examples of stone architecture. The Metropolitan Museum of Art occupies its northern section, on the 11th avenue side, and near it stands the ancient obelisk, brought from Alexandria, Egypt, and called "Cleopatra's Needle."

Central Province, The. One of the nine large administrative provinces into which British India is now divided, situated between Lat. 18° and 24° N., and Lon. 77° and 83° E. The territories of Nagpur, Sangli, Nanded, and Solapur, which are the immediate British possessions in this province, contain an area of 84,403 sq. m.; pop. in 1891, 1,774,730. There are besides 15 native states included in this Province, whose united area amounts to 28,804 sq. m.; pop. 1,100,000. The principal cities are Nagpur (seat of government), Jalgaon, and Sangli. The line of railroad connecting Bombay with Calcutta passes through the Central Province, and has completely altered the condition of a country which some years ago was *terra incognita*. The traffic which passes through Jalgaon is larger than that of any city in India except Bombay; and cotton, which is the chief produce, now finds an easy outlet to the markets of Europe.

Centralia, in Washington, a city of Lewis co., 94 m. N. of Portland, Ore. Has coal-mining and lumbering industries. Pop. (1897) about 3,000.

Century Plant. *Bo.* The *Agave americana*, a member of a large family of American plants, commonly called the Century Plant or American aloe, and known in Mexico as the Maguey. The name *C. P.* arose from a mistaken idea that it did not bloom until 100 years old. In temperate climates it may approach this age before blooming, but in the tropics it often blooms when less than 10 years old. The process of blooming is remarkable. In the center of the mass of thick, spiny leaves, appears a bud, which lengthens at the rate of a foot or two daily until it has attained a height of 10 or 20 feet, when it bears a panicle of greenish-yellow flowers, occasionally as many as 4,000 in number. After the seed matures the plant dies. It is a custom in Mexico to cut away the bud and scoop out the center. Into this pours an abundance of sweet sap, which they evaporate to a syrup, or cause to ferment into a beverage called pulque, a favorite drink in Mexico. A strong ardent spirit is obtained from pulque by evaporation. The leaves of the *C. P.* yield a strong medicinal resin.

Cephalodis, n. [From Gr. *kephalē*, head.] *Phagoc. A.* A term employed to designate the degree of diminution of the head over the body. In the development of species, the anterior organs of the body render more and more service to the head; as, for instance, in the lower tribes, what serve as feet in the lower orders, may do duty as jaws or other head-gears in the higher. With rise in grade the structure of the head also becomes more compacted and abbreviated, while a similar concentration shows itself posteriorly. Eventually the head extremity rises above the level of the body, attaining its limit in this direction in man, where it becomes erect. In such animals as the fishes and those of still lower rank, the form is horizontal and the head on the body level, while in the west tribes the head grows in great measure indistinguishable from the remainder of the body.

Cephalodis cus. *n.* [Zool.] A deep-sea animal, of a previously unknown form, dredged up during the Challenger dredging expedition. It is one of the most curious and interesting of deep-sea organisms, and has been variously described by naturalists; by some as a deep-sea Aspidon, by others as an animal of the vertebrate-like worm known as *Balanoglossus*, by still others as a *Pluteus*. It appears as a spreading, brownish, saucer-like body, which in some cases measures 1½ inches, and contains a great number of minute individuals, which are protected by a flexible, membranous covering. Each of these individuals resembles *Balanoglossus*, and is interesting in possessing an organization approaching that of the vertebrates, it having gill slits, a notochord-like organ, and a dorsal central nervous system. Its chief interest lies in its being apparently a new link between the invertebrate and vertebrate classes of animals, the discovery of the connecting link between which has formed so interesting a zoological problem for many years.

Ceramics. *n.* **Keram'ics.** [Gr. *keramos*, a potter.] The term applied to the department of plastic art which comprises all objects made of clay, such as cups, vases, and numerous other art earthenware products. The results of ceramic art are classed under the general title Pottery, a word derived through the French *poterie*, from the Latin *potis*, "a drinking vessel," and applied to all objects of flaked clay, useful or ornamental alike. Pottery may be looked upon as almost contemporaneous with man. Traces of it are found among the remains of very remote races, while it is now fashioned by all peoples, from the rudest to the most enlightened. There is no art simpler in its principle, the mere moulding of wet clay into any desired form and drying it in the heat of the sun or of a fire. There is none that surpasses it in its final results, it being wrought and ornamented into objects of the highest artistic finish and value.—*Manufacture.* Clay is one of the most abundant substances, though it varies greatly in its qualities and degrees of purity. Its value for manufacturing purposes lies in the fact that it can be worked with water into a dough-like consistency, susceptible of being moulded by the hand or wheel into any desired shape, while, when thoroughly dried in a fire, it attains the hardness and indestructibility of stone; its weak point, when thinly moulded, being its brittleness. Of the various clays, the commonest varieties can be used only for bricks, tiles, and the coarsest kinds of pottery. The finest potter's clay, known as china-clay or kaolin, arises from the decomposition of granite rocks, and is mainly composed of the hydrated silicate of alumina, with small quantities of lime, potash, soda and magnesia. This material is found in many localities in Europe, America and the other continents, and is employed in the manufacture of porcelain at Sevres, Dresden, Berlin, and other localities in Europe, at Trenton, Cincinnati, and elsewhere in the United States, and in various other countries, especially China. *Stoneware*, the material of jars, drain-pipes, etc., is made of several varieties of clay, mixed with felspar and sand, the materials varying much in different localities. *Earthenware*, known also as *Delft* or *Faience*, is made of clays which vary in color from yellow to white, according to the quality desired, and which are mixed with powdered calcined flint, from which the ware gains body and hardness. Calcined flint was first introduced in 1720 by a potter named John Astbury, who, upon noticing a farrier apply a fine white powder to the eyes of his horse for some ailment, and learning that it was made from calcined flint, conceived the idea of using this in his wares, and did so with great success. In the process of manufacture, the clay and calcined flint are prepared by separate processes and then thoroughly mixed, the result being, after the surplus moisture has evaporated or been drawn off by a pneumatic exhausting apparatus, a fine plastic material representing tough dough in consistency. In preparing the materials for porcelain many other operations are required, all, however, having the same object in view, the extremely minute division of materials employed. The prepared clay is then taken to the *throwing-machine*, or *potter's wheel*, in which a disk is made to revolve rapidly by suitable machinery. On this disk is placed the soft mass of clay to be moulded. The potter now, with his hands or with proper tools, fashions the swiftly revolving clay into any rounded form he desires, working from the base upwards until the vessel attains the intended shape, height and thickness of the wall. It is then set aside until partly dry, and afterward fixed on a turning lathe, where its surface is turned and smoothed by the aid of sharp steel tools. Some articles, however, are moulded in plaster of paris moulds, a method well adapted to the making of very thin articles of porcelain, since the plaster absorbs much of the moisture and dries the delicate article sufficiently to admit of its being handled. Where a handle is required it is moulded separately, and attached by the aid of a fluid clay paste, called a slip. In the case of many articles the mould and the hand are both employed. This is done in the case of deep vessels, such as tea-pots, etc., where the exterior is moulded and the interior shaped by hand.—*Burning.* When formed, the articles, whatever their character, are taken to the drying stove, where for some time they are exposed to a heat of about 55° F. When quite dry, they are next carefully packed in coarse earthenware vessels, called *seggars*, a number of which are placed in the kiln, being so arranged that the fire can ascend between and pass around them, each seggar

forming a small oven, in which one or more pieces of pottery are baked. When all is arranged, the furnaces are lighted, the fire being usually kept up for about 40 hours. It is then allowed to go out and the kiln to cool very gradually, after which the seggars are removed. The articles are now in the state called *biscuit ware*, and are ready for any ornamental pattern and for the glaze. Ordinary pottery may be glazed by throwing common salt into the oven when at its highest temperature, the sodium of the decomposed salt combining with the silica of the heated ware, and forming with it a soda glass or transparent glaze. Finer wares, or those in which the biscuit ware is painted or ornamented with any design in colors, are glazed by the use of a composition into which they are dipped, their surface becoming covered with a thin coating of the liquid glaze. They are then placed in the glazing or enamel kiln, and exposed to heat for about 14 hours, after which the furnace is allowed to cool slowly. This description applies to pottery in general; but in the case of the more costly and artistic works, special methods are employed, and in place of the huge kilns, which often hold several thousand pieces, each article is treated separately, in muffle-furnaces, alike for the biscuit, the glaze, and the painting and gilding, which in porcelain are applied in the glaze, not on the biscuit. The process of applying these colors is the same as in the painting of glass, the colors employed being colored glasses ground to powder and mixed with borax or other fluxing material.

History.—Examples of very antique pottery have been found in the tombs of prehistoric races, these consisting of rude clay vessels, urns and other objects, which are often simply ornamented with lines zigzag, lozenge shape and other geometrical forms. Some of them seem to have been moulded in woven baskets, and the basket then burned away, leaving the impress of its woven surface on the clay vessel.—*Egyptian.* The people of Egypt seem to have very early developed the art of the potter, vessels of baked earthenware having been in use at a very remote date, while glazed tiles are preserved which belong to the period of *Rameses III.* Considerable skill was attained in this art, of which we have examples in the famous red-ware the Egyptians made for holding perfumes, honey, and other delicacies, and the remarkable porcelain-like vessels which they procured from a fine sand and covered with a thick siliceous glaze. This was tinted in several colors, blue being predominant. This blue was procured by an oxide of copper which yielded tints of striking delicacy and beauty. The famous so-called Egyptian porcelain was manufactured as early as 1600 B. C., and continued to be made until the Greek and Roman period. The objects produced were vases, figures of deities, animals, scarabs, etc., and the ware seems to have been highly esteemed in all the surrounding countries. The fact that the vase had its origin in the human form is shown in unglazed bottles of Egyptian ware, as also in early Greek vases, the head, haunch, and other members of the body being traced on their upper portions of the vessel, while the body of the vase stands for the human trunk.—*Babylonian-Assyrian.* The abundance of clay in Babylonia, and the lack of other material, led to its very early use, particularly in the production of bricks, of which examples have been found which are claimed to be nearly 10,000 years old. These, like those of Egypt, were stamped with the names and titles of the kings, and the place for which they were designed. The art of glazing was understood, and glazed bricks of various colors, occasionally adorned with the figures of men and animals, were used in connection. Bricks were also at times made of special shapes, so that they might be built in geometrical patterns, colossal human figures, etc., in high relief. Large coffins of burnt clay are found abundantly at Warka, whose ruins were used by the Assyrians for burial purposes. Clay was also moulded into the forms of cylinders, hexagonal piers, tiles and tablets, on which were stamped extensive inscriptions and literary compositions, they thus forming the books of the people. Many thousands of these have been exhumed. In addition are numerous examples of Assyrian ware for domestic use, such as bottles, bowls, jars, etc. Few traces remain of the pottery of the Hebrews, but excavations in Cyprus have yielded abundant examples of Phœnician ware. This is principally of a cream color and a brick red body, its ornamentation consisting of horizontal bands, with lines in red and amber, forming concentric circles and other geometrical forms. Rude figures of deities have been found, and children's toys in the shape of animals.—*Greek.* Of ancient pottery that of Greece was far the most artistic and remarkable in character, it advancing in a few centuries from the rudeness of its Phœnician prototypes to a perfection of form and a beauty of decoration never elsewhere equalled. The invention of the potter's wheel is claimed by the Greeks, and by its aid their work rapidly advanced beyond the earlier rudeness to the triumph of the plastic art. Greek vases are made of common material, while the colors employed in decoration were few and simple, the value of the result being wholly in its beauty and variety of form and its artistic grace and dignity of decoration. Until about the 7th century B. C. the Greeks only produced a rude archaic earthenware. Afterwards they learned to cover this ware with a brown glaze, through which they cut their ornamental figures into the different color of the body of the ware. In time they abandoned geometrical ornamentation, and painted animal figures, rising later to the human figure, on their ware. A black pigment formed the body of the

figures, while the faces and limbs were expressed in white and color. In the best period of Greek art this method of vase ornamentation was changed. The figures, of men and deities, were now traced on the red and white clay surface of the vase, while the intermediate spaces were blackened, a black varnished background giving effect to the light-colored figures. Of these the details are indicated by fine lines. The faces and limbs are occasionally filled in with white, while the draperies may be parti-colored. Greek pottery had now reached its greatest loveliness of form and artistic perfection of ornamentation, the drawing being highly refined, delicate and spirited. It did not long remain so. By the 3d century B. C. an age of decadence had set in, florid ornament, crowded and confused figures and inartistic forms replacing the grace and simplicity of the earlier work. Since 1873 a great number of simple examples of Greek plastic art, of later date, have been obtained from tombs at Tauagra and various other localities. The Tanagrine figurines consist mainly of draped female figures, the subjects taken from every-day life, and treated with much grace and artistic skill. Those from Myrina, in Asia Minor, are principally representations of the deities and heroes of mythology.—*Roman and Etruscan.* Much Greek pottery has been found in Etruscan tombs. That of native origin is rarely painted, its most characteristic type being of black color with moulded ornaments on the surface, evidently modelled on oriental metal-work. From this arose the Aretine or Damian ware of Rome, the only important development in pottery during the Roman period. This ware, which originated in the island of Samos, was of the color of sealing wax, and covered with a lustrous silicious glaze. The vases, generally small, were turned on the lathe, the ornaments being moulded separately and attached to the surface. The decoration was imitated from works in metal, probably the chased cups of gold and silver then in use in Italy. It was first made by the Romans at Arezzo, but subsequently spread over the whole Roman world, its manufacture extending to Gaul and Germany. While very fine under the republic, it gradually deteriorated in artistic quality under the empire. The remaining Roman ware was made on Greek models.—*Spanish Moresque and Rhodian.* The art of the ancients was transmitted to mediæval Europe through the Arabs, Moors, and Persians, and about the beginning of the 14th century the Knights of St. John of Jerusalem set Persian potters at work in the island of Rhodes, from which locality, during the succeeding century, a large quantity of brilliantly enamelled pottery, of Persian types, was spread through the Mediterranean countries. Existing specimens of this ware are highly treasured. About the same time Moorish potters founded a similar industry in Spain and on the Balearic Islands, producing the famous enamelled faience which, under the name of Spanish- (or Hispano-) Moresque, is remarkable for the brilliantly metallic lustre of its glaze. This industry flourished until early in the 17th century, dying rapidly away after the expulsion of the Moors. A vast trade in this ware was carried on from the island of Minorca, from which came the name "Majolica," afterwards given to the more famous enamelled pottery of Italy.—*Italian.* The art of Italy undoubtedly had its instigation in that of the Persians and Moors, but there the decoration became distinctly European in character, and displayed a much greater freedom, wealth and variety than in any preceding examples. Lucca della Robbia, the celebrated sculptor, is said to have first employed tin in producing the fine white enamel glaze associated with his name. With this enamel he coated his terra-cotta figures and groups, which are now so highly prized in collections of mediæval ceramic art. The use of tin enamel from this time became common in Italy, yielding the ware to which the name Majolica properly belongs. Of the productions of this school, those of Giorgio Andreoli, or Maestro Giorgio, as he was called, are the most famous. He worked at Gubbio during the first half of the 16th century, and the examples of Gubbio ware attributed to him are distinguished by a remarkable iridescence, ruby, golden and opaline tints of striking brilliancy flashing in vari-colored light from its surface. Other famous centers of Majolica were Urbino, Pesaro, Venice, Faenza, Dürer and Castle Durante.—*French.* When Catharine de Medici left Italy for France, the art of making enamelled faience went with her, its manufacture being established at Nevers, about 1590, where it flourished for over a century. Before that time, however, the celebrated Bernard Palissy had made his famous and long-continued exertions for the discovery of an enamel glaze. This he accomplished in 1555, and applied to his rustic dishes, which he embellished with exquisitely modelled figures, in high relief, of fruits, fishes, reptiles, and other figures copied directly from nature, and with striking exactness of form and color. While Palissy was thus engaged, artistic pottery of another kind was being produced by French workmen. This, of which few examples remain, was of a very distinctive form, exceedingly rich in decoration, and elaborated with great originality of method. It is known as Henry Deux ware, from many of the pieces bearing the copper and emblems of Henry II, and is now known to have been made at St. Porchaire between 1525 and 1555. This ware consists of decorative pieces treated in our architectural manner, the body being of a creamy pipe-clay, with inlaid ornamentation in colors, beautifully modelled masks, trusses, &c., and a transparent glaze. Only 65 pieces of Henry Deux ware are now known, and when sold they command enormous prices. A candlestick, 12¾ inches high was sold in 1884 for \$18,375.—

Dutch and German. The Dutch, whose trade with the East had made them familiar with the oriental porcelain, made earnest efforts to imitate it with the materials at their command, and produced an enamelled faience which gained wide celebrity. Its manufacture began in the 17th century, and from the fact that it was principally centred at Delft, the fine Dutch pottery became to be known as Delft ware, or simply "Delft." Tin-enamel glaze was used to imitate the lustrous white of porcelain, while the decorations were blue, and at first entirely oriental in character. Of the early productions of the Germans may be named their stoneware Bellarmine or Greybeards, big-bellied, narrow-necked jugs or bottles, originally named in Flanders, and having a grotesque head, with a large, square-cut beard modelled on the short neck. The face burlesqued that of Cardinal Bellarmine. The tall beer jugs of the Germans, with moulded ornaments, medallions and inscriptions, usually called Grès de Flanders, were made in various localities of Germany. Other forms of simple pottery produced by German workmen, many of them being tiles of rich and varied coloring, decorated with coats of arms, medallions, portraits, &c.—*English.* The pottery of England continued coarse and common till the close of the 17th century; all fine ware being purchased abroad. Various steps of progress were made about the beginning of the 18th century, but the true development of English pottery was due to the great potter, Joseph Wedgwood (1730-95), who with untiring application and instituted expenditure aimed at perfection, employing artists of the highest ability and making countless experiments. His efforts alone raised the pottery manufacture of England to a position of the first importance, and placed it on a level with that of foreign artisans. Of potters of the 19th century, Sir Henry Doulton deserves special mention for the marked development made by him in the production of stoneware.

Porcelain.—In this brief summary of the history of the ceramic art, we have as yet confined ourselves to the history of pottery, as distinguished from the much finer ware known as porcelain. This term originated in Italy, being derived from *porcellana*, the cowrie shell, whose polished surface is similar in appearance to the white, glazed surface of porcelain. There are two varieties of this ware, one being soft, or artificial porcelain, the *pâte tendre* of the French, which is of the character of a chemical compound and is wholly fusible at a high temperature. The second, hard porcelain, the French *pâte dure*, is composed of natural mineral substances and is infusible. The Oriental porcelain, from which that of Europe and America was derived, is made of two substances, *kaolin*, an infusible white clay, and *petuntse*, a fusible mixture of felspar and quartz, to whose presence is due the semi-fused, translucent appearance of the ware.—*China.* The world owes the discovery of porcelain to the Chinese, who were manufacturing this fine material while the Greeks were decorating their terra-cotta vases, and claim to have been producing it as early as 2690 B. C. However that be, true porcelain was certainly made in China several centuries before the Christian era, and the art, with many developments and improvements, has continued to flourish until the present day. About 580, A. D., the city of King-te-chin, in the province of Kiang-si, became a center of the industry, and this city in the early 18th century possessed no less than 3,000 furnaces. It was ruined and its supremacy brought to an end by the Tai-ping rebellion. Chinese porcelain is endless in variety, alike of form and painted design, mythical animals, domestic fowls and other birds being favorite subjects. Of the older Chinese porcelain, that most in request is the old blue ware which led the Dutch to the manufacture of Delft. Ruby glazed ware and rich chromatic splashed glazes are also highly prized. The soft sea-green glazed ware, known as Celadon glaze, is looked upon as the oldest extant form of Chinese porcelain, and possesses a high value in collections. Crackle ware is a peculiar product of the Chinese potters. The glaze shows signs of separation from the body of the ware, cracks, large or small, being produced in it by some secret art of the Chinese.—*Japan.* The Chinese porcelain manufacture made its way to Japan as early, we are told, as 27, B. C. In the 13th century it was much developed by a Japanese potter who studied the art in China. The Japanese excel in the manufacture of egg-shell porcelain, so-called from its extreme thinness. Kaga ware, a favorite form, is ornamented by painting in a rich ruby color, usually lavishly gilt. The chrysanthemum is a favorite flower with their artists, and the crane and other birds, and figures of warriors and ladies are effectively introduced. The skill of Japanese potters is shown, however, more distinctively in their pottery than in their porcelain, their most famous productions being the Satsuma ware. This is of a pale yellowish color, covered with minute crackles in the glaze, and richly painted and lavishly gilded. The potters of Japan are remarkably skillful in finishing the surface of pottery, which in their hands is made to closely imitate other substances, such as wood of various kinds, basket work, &c.—*Persia.* The porcelain of China made its way to Persia as early as the 12th century and the art was practiced in that country, pottery and a kind of soft porcelain being made in imitation of Chinese originals. The Persians also produced pottery and enamelled tiles of original character, in which, on a fine white enameled glaze, brilliant metallic lustres were effectively employed.—*European Porcelain.* The first recorded appearance of Chinese porcelain in Europe is in 1487, when a piece was presented to Lorenzo de Medici, by the Sultan of Egypt. It was afterwards imported abundantly by the

Portuguese and Dutch, and earnest efforts were soon made to imitate it. The earliest examples known were produced in Tuscany about 1580, and nearly a century later the manufacture of soft porcelain began at Rouen and Paris, whence it extended to other French towns. In 1745 a porcelain works was founded at Vincennes, which was removed to Sèvres in 1756. Louis XV. had an interest in this establishment, and in 1760 it became entirely national property, which it continues to be to the present day. Hard porcelain was first made here in 1764, but the fame of Sèvres rests on its soft porcelain, in which the body, glaze and enamel colors blend together into a singularly smooth and lustrous whole.—*Germany.* The art of making hard porcelain in Europe was first discovered in Germany in 1709, by a potter named Böttger, the discovery of its kaolin constituent being accidentally made. Extraordinary precautions were taken to keep the process secret, but it leaked out one of the workmen taking it to Vienna, where the imperial factory, still extant, was established in 1718. The original Germany factory was at Meissen, near Dresden, but others were founded under royal protection in other cities, and soft porcelain factories arose in Italy and Spain.—*Great Britain.* British porcelain is principally of the soft variety, works having been established about 1745 at Chelsea, Bow and Derby, and in 1751 at Worcester, where the manufacture of "Royal Worcester" were still continues. Hard porcelain was first made at Plymouth in 1768. The Staffordshire porcelain, originated in 1752, became artistically fine in the hands of Thomas Minton about the close of the century, and of Joseph Spode, whose enterprise continues under the firm name of Copeland Company. The manufacture of Parian or statuary porcelain, an unglazed modification of soft porcelain, was introduced in Copeland and Minton about 1848.—*United States.* There was little pottery made in this country until after the year 1850, yet a number of preceding attempts had been made to produce porcelain, one of these in Philadelphia as early as 1770, and others in the same city between the years 1820 and 1838. A similar attempt was made in Jersey City and several at Greenpoint, Long Island between 1848 and 1862. Pottery was also produced early, and in 1795 a number of potters made some stir in Congress by their demands to have their industry protected. In 1827 a committee of the Franklin Institute gave high credit to William E. Tucker for the strength of his ware, the quality of the glaze, and the neatness of the gilding, some of the products comparing fairly with imported ware. The first successful porcelain factory in this country was begun at Greenpoint Brooklyn, in 1863, by Thomas C. Smith, being a continuation of the earlier efforts at that place. After two years spent in experiments, he began the manufacture of decorated hard porcelain, and attained much success in its production, the works having grown to large extent and employing several hundred hands. Pottery is produced in various sections of the U. S., but more largely in Trenton, N. J., and East Liverpool, O., the value of the Trenton product in 1890 being \$4,631,20 and that of East Liverpool, \$2,137,063. The Trenton product is largely white-grauite ware, but several of the potteries produce wares which compare favorably with the highest grade of foreign work. The "opaque porcelain" produced by some of them is really and in beautiful designs and very artistically decorated. Among the Trenton products is Parian ware and what is called ivory porcelain, a product which has a half semi-transparent body and a clear, smooth glaze, closely approaching the soft porcelain of the English potters. Another ware is called "American china," and is not easily distinguishable from the English or Viennese white porcelain. In Cincinnati the interest in decorated pottery begun with the efforts of Miss McLaughlin to secure effects like those of Limoges ware. Her efforts were measurably successful and led to the production of new wares of great beauty and of independent methods of decoration. Ohio clay proved adapted to various kinds of pottery, some which have qualities that approach porcelain in delicacy and translucency. The Rockwood pottery is known as a very desirable cream-bodied ware, its effects being mainly directed to artistic household objects, though has gone much further, the finest specimens of its ware being of a pale, creamy translucent body to which hammered effect has been given. The decoration modeled and applied, and its careful drawing and delicate, harmonious color place it among the best examples of the kind. Very good imitations of Doulton's Hispano-Moresque wares have been produced.

Ceratodus, n. (Ichthy.) The mud-fish of Queensland, one of the remarkable sub-class of double-breasted fish known as the *Dipnoi*. There are few existing examples of the *Dipnoi*, the only known ones being *Ceratodus*, *Lepidosiren*, and *Protopterus*, all designated mud-fishes. They were much more numerous in geological ages. *C.* belonged to a genus existing in Triassic and Jurassic times, of which only certain tooth-plates are now preserved. *C.* was discovered in 1870, being known locally under the name of *Barra munda*. It occasionally 6 feet long, its body being compressed laterally and covered with large scales, while its limbs differ from the usual fish fin in having a central jointed and lateral pieces. It lives in muddy water which contains much vegetable matter, a medium interfering with gill respiration, for which reason it often comes to the surface and gulps air into the swim-bladder, which does duty as a lung, and is greatly developed for purpose. *C.* eats leaves and twigs of plants, leaving water occasionally at night and moving along the ri-

- 7 HENRY II FLAGON (France, XVI Century).
- 8 GLAZED BAS-RELIEF, IN TILE, BY LUCCA DELLA ROBBIA
(Florence, about A. D. 1500).
- 9 MAJOLICA PLATE, FROM URBINO (Italy, XVI Century).
- 10 PORCELAIN TILE, MINTON (England, XIX Century).
- 11 CHINESE VASE.
- 12 WEDGWOOD PITCHER (England, XVIII Century).
- 13 DRESDEN COFFEE-POT, MEISSEN (XVIII Century).
- 14 GERMAN TILE, WITH COAT OF ARMS.
- 15 VENETIAN MILLEFIORI GLASS.
- 16 ROCKWOOD JAR (United States, XIX Century).
- 17 ROYAL WORCESTER PLATE (England, XIX Century).

bank. In the dry season it buries itself in the mud, where it hibernates until the rains return. Its flesh is much esteemed, and is said to resemble that of salmon.

Cerebra'tion, Uneon'seions. (*Psychol.*) A doctrine entertained by Carpenter, Laylock, and others, who hold that changes in the tissues of the cerebrum, similar to those which accompany conscious thought, may take place during unconscious periods, producing mental results of which we become conscious only when completed. The experience is common that when one has sought in vain to recall some name or incident, it will suddenly flash into the mind when it is engaged in quite a different train of thought. Carpenter maintains that the thought process set in action during consciousness goes on automatically and unconsciously, until the processes necessary to recall the name or incident are completed. It is thought, therefore, that the mind may undergo modifications unconsciously, which in time yield conscious results.

Cerebro-Spinal Fluid. (*Anat.*) A clear, almost colorless, slightly alkaline fluid, resembling lymph in composition, though with less albumin, which occupies various spaces in the brain, these spaces communicating with the lymphatics of the head and nerves and the venous sinuses in the dura mater. It acts to remove waste matter, and to equalize the pressure within the skull. As the brain atrophies, this fluid increases. In some diseases, such as hydrocephalus, it is greatly increased, and then causes atrophy of the brain.

Cer'esine. [From Lat. *cera*, wax.] (*Chem.*) A product employed in the manufacture of candles, and obtained from ozocerite or fossil wax.

Ce'reus, n. (*Bot.*) A plant of the genus *Cactaceæ*. The most remarkable species is the *C. giganteus*, found in New Mexico and Arizona, which often attains a height of 60 feet. Many flower only at night, as the *C. grandiflorus*, otherwise known as the night blooming *C.*

Cesno'la, LUIGI PALMA, COUNT DI, an Italian archaeologist, b. of an old Piedmontese family, near Turin, 1832. After serving in the war of Italian independence, he joined the U. S. Army in 1861, and was made colonel of the 4th N. Y. Cavalry, distinguishing himself by his unwavering gallantry in the field. After the close of the war he became a naturalized citizen and was appointed U. S. Consul at Cyprus. While on that island he resided at Larnaka, the chief seaport, built on the site of the necropolis of the *Chittim* of the Phoenicians. Learning of the existence of ancient coins and pieces of terra-cotta ware which had been found in the vicinity, he resolved to excavate at Dali, 20 m. N. W. of Larnaka, the site of the necropolis of Idalion, a city which flourished 2,000 years ago, and where had been erected a temple to the Cyprian Venus. Obtaining permission from the Turkish authorities, *C.* labored for three years at a great expense in making researches into the tombs of the old Italian people, and succeeded in forming quite a magnificent and unique collection of ancient statues, lamps, vases, coins, bronzes, &c. This collection he offered for sale in London, in 1872, when it was bought for the Metropolitan Museum of New York. Among the remains thus acquired is a colossal statue found at Golgos, 28 feet in height, wearing the Assyrian head-gear, and supposed to date from 1800 B. C. Besides the seltene were statues of the Greek, Roman, and Egyptian types; vases of every material, size, and shape; bronze figures, amulets, bracelets, rings, and toilet articles of various kinds; implements of war and the chase; intaglios, cameos, and inscribed gems; and a unique collection of glassware. The collection of coins, of great value, was unfortunately lost in the passage from Beyrout to England. Altogether the *C.* collection is one of almost unrivalled rarity and interest.

Ceteway'o, a noted Zulu chief, son of Panda and nephew of Chaka, who in 1812 reorganized the Zulu nation. He succeeded his father in 1872, and ruled with vigor and independence. He was finally driven into war with the British, which resulted disastrously in his capture in 1879. He was kept in captivity for several years, but restored to his kingdom in 1882, after a visit to England, where he was much lionized. He became involved in war with other powerful South African chieftains, and died in 1884.

Chad'bourne, PAUL ANSEL, LL.D., was born at North Berwick, Me., Oct. 21, 1823. He received his education at Williams College, and was also a student at the Hartford Theological Seminary. He held the professorship of Chemistry and Natural History in Williams, and afterwards in Bowdoin College. The University of Wisconsin elected him President and also appointed him Professor of Metaphysics. He is the author of *Natural Theology and Instinct in Animals and Men*. He accepted the presidency of Williams College in 1872, and of Massachusetts Agricultural College in 1882. Died in New York city, Feb. 23, 1883.

Chad'ron, in *Nebraska*, a city, cap. of Dawes co., in the N. W. section of the State. Is an important cattle shipping point. *Pop.* (1897) about 2,500.

Chad'wick, GEORGE W., musician, was born at Lowell, Mass., in 1854. He studied in Leipzig under Jadassohn and Reineke, and subsequently under Rheinberger and Abel. The highest honors were awarded his *Rip Van Winkle* overture, which he composed while a student. He is best known as a composer of orchestral scores. The music for the Columbian Ode, sung at the dedication ceremonies of the World's Fair in Chicago, was composed by him.

Chadwick, JOHN WHITE, A. M., Unitarian minister, was born in Marblehead, Mass., Oct. 19, 1840. He was educated at Exeter Academy and Harvard University, graduating at the Divinity School, 1864. His first pas-

torate was that of the Second Unitarian Church in Brooklyn, N. Y., a charge which he still held in 1897. He has made many contributions to the daily press, and is the author of *Way, Truth and Life; The Bible of To-day; The Faith of Reason*, and numerous other works. A select volume of his sermons has been translated into German under the title *Religion ohne Dogma*.

Chain-pump, n. (*Hydraulics.*) A device consisting of an endless chain, bearing transverse disks, passing over two wheels and working in a tube or channel having an internal diameter nearly coinciding with the diameter of the disks.

Challemel-Lacour, PAUL AMAND, a French statesman and publicist, born at Avranches, May 19, 1827; he graduated from the Normal School at Paris in 1846, and soon after his ardent republicanism caused his banishment from France. On his return in 1859 he became editor of the *Revue Moderne*. His ability as a debater and orator won him distinction and he received several public appointments, finally becoming, in 1883, Minister of Foreign Affairs in the ministry of Ferry. He was chief editor of Gambetta's organ, the *République Française*, and edited the works of Madame Epinay. Among other works, he is the author of *La Philosophie Individualiste*. Died Oct. 26, 1896.

Challenger Expedition. (*Hydrog.*) An oceanic scientific expedition sent out by the British government in 1872-76, for the purpose of sounding and dredging the depths, mapping the basins and determining the physical and biological conditions of the Atlantic, Pacific and Southern oceanic areas. Two similar expeditions, on a limited scale, had preceded it, that of the *Lightning* in 1868, and that of the *Porcupine* in 1870. The *Challenger*, a corvette of 2,306 tons, was furnished with every available scientific appliance for investigating the upper and under sea waters, and was in charge of a naval surveying staff under Capt. Nares and a scientific staff under Prof. Wyville Thomson. The expedition continued for three years and a half, during which it cruised over 68,900 nautical miles and made investigations at 362 stations, examining in each the depth, the temperatures of the bottom, surface and mid-sea, the currents and fauna, and the meteorological conditions. The stations extended throughout the Atlantic and Pacific, the deepest sounding, 4,575 fathoms, being between Japan and the Admiralty Islands. Only two recorded soundings surpass this, the greatest oceanic depth yet reached being about 30,000 ft. The dredging operations brought up great numbers of previously unknown animals, many of them of curious and extraordinary organization, which have been fully described in scientific monographs. The results of the expedition have been described in 37 quarto volumes, 2 of which are devoted to a narrative of the voyage, 30 to zoölogy, 2 to botany, and 3 to physics and chemistry.

Cham'ber of Com'merce. (*Com.*) An association of merchants for the promotion of the commercial interests of the city or district embraced. These associations are usually incorporated, and employ themselves in urging the adoption of measures likely to benefit trade, collecting and publishing commercial statistics, petitioning legislatures to pass desired measures, and in other work likely to prove beneficial. A *C. of C.* may form a department of a board of trade, or the two terms may be used to signify similar organizations, as in many parts of the U. S. The oldest *C. of C.* was formed at Marseilles, France, about the beginning of the 15th century, but was not fully organized till 1650. Various others were established in France early in the 18th century. These were suppressed by the National Assembly in 1791, but were reestablished in 1802, since when they have been but little disturbed. Glasgow, in 1783, organized the first *C. of C.* in Great Britain, which was followed by that of Edinburgh in 1785. Many others followed; but that of London, the most important of all, was not established until 1882. An association of *C. of C.* was founded in the United Kingdom in 1860, and has proved very useful in advancing the commercial interests of the kingdom. In the U. S. the New York *C. of C.*, founded in 1768, was the pioneer in this field. It received a royal charter in 1770, and was reorganized and received a State charter in 1784. Its membership at present is 1,000. The Boston *C. of C.* followed that of New York, and many others have since been organized, frequently under the title of Board of Trade, though differing only in name. See BOARD OF TRADE.

Cham'berlain, JOSEPH, M.P., K.B., was born in London in 1836. He was educated at University College School. His advanced radical opinions and his talent as a speaker brought him into prominent notice. In 1874 he was elected mayor of Birmingham, and was returned to Parliament in 1876, and reelected in 1880. He was president of the Board of Trade in Mr. Gladstone's cabinet in 1880, and also of the Local Government Board under the same minister in 1886. He was commissioner to the conference at Washington for the settlement of the fisheries question between the U. S. and Canada in 1887. Held the office of Secretary of State for the Colonies in Salisbury's cabinet of 1895.

Chamberlain, JOSHUA LAWRENCE, LL.D., soldier and educator, was born in Bangor, Me., Sept. 8, 1828. He was a graduate both of Bowdoin College and Bangor Theological Seminary. He held the position of teacher in Bowdoin College until he entered the army of the U. S. as volunteer in 1862. For gallantry in the assault on Petersburg, June 18, 1863, he was made brigadier general. He subsequently rose to the rank of major-general, and received the colors of Lee's army on its surrender in 1865. He was elected Governor of Maine in 1867, and major-general of Maine militia in 1876. After the expi-

ration of his term as Governor he became president of Bowdoin College, which position he still holds (1897).

Chamberlain, THOMAS CHROWDER, Ph.D., LL.D., geologist and educator, was born near Mattoon, Ill., Sept. 25, 1843. He received his education at Beloit College and the University of Michigan. *C.* has been professor of Geology in Beloit College, president of the University of Wisconsin, dean of Scientific Faculty of University of Chicago, and was made chief geologist of the Geological Survey of Wisconsin. In 1882 he accepted charge of the glacial division of the U. S. Geological Survey. Among his papers are *The Terminal Moraine of the Second Glacial Epoch, The Rock Scourings of the Great Ice Invasion*, &c.

Cham'berlin Observatory. A gift of Mr. H. B. Chamberlin to the University of Denver. It possesses a 20-inch refracting telescope, and is located some six miles from the city, on a hill about 5,000 feet above sea-level, and therefore 800 feet higher than the Lick Observatory on Mt. Hamilton, California.

Champfleury, the assumed name of JULES FLEURY HUSSON, French author, who was born at Laval, Sept. 10, 1821. He engaged in the profession of journalist, and for years produced reviews, stories, &c. Among the best of his stories is *Contes Vieux et Nouveaux Contes d'été*, &c. His satirical picture of French provincial life, *Les Bourgeois de Molinchart*, is thought to be his most notable work. Champfleury had charge of the collections of the porcelain manufactory at Sèvres, and wrote several books upon the history of pottery. Died Nov. 6, 1879.

Champ'lin, JAMES TIFT, D.D., clergyman and teacher, born in Colchester, Conn., June 9, 1811. He graduated with honors at Brown University in 1834, and for the three succeeding years held a position as instructor in that college. In the College of Waterville, Maine, he was appointed professor of languages, and afterwards president, while position he held during 1851-52. His works include *Demosthenes on the Crown; First Principles of Ethics; A Text Book of Political Economy*; also *Intellectual Philosophy*, &c.

Chan'dler, CHARLES FREDERICK, M.D., LL.D., was born in Lancaster, Mass., Dec. 6, 1836; was educated in the Lawrence Scientific School of Harvard College, at Göttingen, and Berlin. He received the degree of doctor of philosophy in Göttingen. The professorship of chemistry was held by him in a number of American colleges. In 1865 he became chemist of the Metropolitan Board of Health, New York, and subsequently president of the board. He has been elected a member of the Chemical Societies of Berlin, of London, and of Paris, and in 1874 of the National Academy of Sciences; also published with his brother, Prof. W. H. Chandler, the *American Chemist*, a monthly journal. He is the author of a number of papers on chemical subjects, most of which have appeared in the publication just named.

Chandler, WILLIAM E., lawyer and Republican politician, was born at Concord, N. H., Dec. 28, 1835; graduated at Harvard Law School in 1855, with the degree of LL.B., and was admitted to the bar. Was reporter of the Supreme Court of New Hampshire, 1859-1865; a member of the Legislature, and twice its Speaker, 1862-64; was Judge-Advocate-General for the U. S. Navy, 1865, and shortly thereafter Assistant Secretary of the Treasury; became Secretary of the Navy in 1882, and U. S. Senator 1887-1901.

Chandler, ZACHARIAH, was born at Bristol, N. H., Dec. 10, 1813. He was educated in the public schools. Subsequently removed to Detroit, Michigan, engaged in trade, and was very successful. Several public offices were held by him. In 1851, he was elected mayor of Detroit, and was sent in 1857 to the U. S. Senate, where he remained continuously until his appointment to be Secretary of the Interior, under Grant (1874-77); in 1876 was president of the Republican National Committee. Died in Chicago, Nov. 1, 1879.

Chandler, in Oklahoma, the cap. of Lincoln co. *Pop.* (1897) abt. 600.

Chan'nel Tun'nel. (*Engin.*) A proposed tunnel under the channel dividing England and France, for which experimental borings have been made. This tunnel would be 23 miles long, and would traverse for its whole length the chalk strata, which form both shore lines and extend beneath the sea. This bed is 65 per cent. chalk and 35 per cent. clay, and is therefore impervious to water. Thousands of soundings have been made, and there seems no doubt that the chalk is continuous between the two countries. The experimental works on the English side had in 1888 gone down to a depth of 950 feet, at the foot of Shakespeare's Cliff, near Dover, and extended 2,200 feet under the sea. On the French side an equal amount of work had been done. The purpose of the tunnel was for a railway between the two countries, but work on it was stopped by the British government for fear that it would too greatly expose England to invasion from the Continent. This prohibition still continues.

Chan'ning, EDWARD TYRREL, scholar and educator, born at Newport, R. I., 1790, became, in 1815, one of the founders of the *North American Review*, and afterwards its editor. From 1819 till 1851 he occupied the chair of rhetoric and oratory in Harvard University. Died 1856.

Channing, WALTER C., physician, brother of the foregoing, born in 1786, graduated in medicine at the University of Pennsylvania, and after completing his studies at Edinburgh, commenced practice at Boston, 1812. In 1815 he was appointed professor of obstetrics and medical jurisprudence at Harvard. Died 1856.

Chanpore (*shahn-poor'*), a town of British India, N.W. Provinces, district Bijnour, 80 miles N.E. of Delhi. *Pop.* 11,182.

Chanute, in Kansas, a city of Neosho co., 125 m. S. of Kansas City, in an agricultural region. Pop. (1897) abt. 3,500.

Chanzy (*shahn'ze*), AUGUSTE, a French general, born at Nœux, dep. Ardennes, 1823; left the Military School in 1848 as sub-lieutenant of zouaves. He served in Algeria, took part in all expeditions in that colony, became colonel in 1864, and general of brigade in 1868. Summoned from Tlemcen to France on the outbreak of the Franco-German war, he was appointed general of division, Oct. 21, 1870, and commander-in-chief of the 2d Army of the Loire on December 6. The most trustworthy details of this, the most remarkable period of his eventful career, are given in a work published by himself at Paris in 1871, under the title of *La Dernière Armée de la Loire*. Elected a Senator, 1875. Died January 4, 1883.

Chapman, NATHANIEL, an eminent American physician, born in Fairfax co., Va., 1780, graduated at the University of Pennsylvania in 1800. In 1813 he took the chair of Materia Medica, and in 1816 that of the Theory and Practice of Medicine, in the University of Pennsylvania. He also filled the post of president of the American Philosophical Society from 1846 till the year of his death, 1853. *Elements of Therapeutics and Materia Medica* is his chief published work.

Charbournou (*shar-bon-roo'*). [Fr.] (*Chem.*) Charcoal prepared below a red heat, by which means it retains a considerable portion of oxygen and hydrogen. Ordinary charcoal contains 90 per cent. of carbon; while C. contains only 70 per cent., the remainder being oxygen and hydrogen. Gunpowder made with this charcoal appears to inflame with greater energy than that made with ordinary charcoal. On theoretical grounds, however, it appears to be inferior to ordinary powder.

Charity Organizations. (*Sociol.*) A combination of the various societies for administering relief in cities, so as to prevent duplication of charity and avert imposture. The first association of this kind was the London Society for Organizing Charitable Relief and Repressing Mendicancy, popularly known as the Charity Organization Society. This began its work in 1869, and has proved so useful and effective in action that nearly 100 such societies now exist in British cities and perhaps as many more in Europe and the British colonies. It was first introduced into the U. S. in 1873, by Rev. Charles G. Ames, in Germantown, a suburb of Philadelphia. This was followed in 1878 by the Buffalo Charity Organization Society, and in a few years by societies in several other cities. At present there are societies of this character in all the leading and many of the smaller cities of the U. S., organized under various names, but all with the same object in view. They have been brought into close affiliation by the National Conference of Charities and Corrections, which holds annual meetings; while they are in touch with all similar institutions in the world, perhaps 300 in number. The utility of these organizations is great. Under the former individual system the societies had no knowledge of what each other was doing, overlapped one another in their work, encouraged deceit, fostered indolence and mendicancy, and had the effect of increasing the evils which they were endeavoring to cure. Under the present system each knows what the others are doing and to what persons or families they are giving aid—the C. O. being a sort of clearing-house where full information concerning the demands and the relief afforded in the city involved may be had, and appeals by the same individuals to numerous societies prevented. The C. O. also seeks to repress mendicancy, to give no alms without a previous investigation of the case, to restore the self-respect of the poor, and, as far as possible, to make them earn the aid they receive. This idea of lifting the degraded to higher social relations finds expression in such institutions as neighborhood guilds, college and university settlements, Toynbee halls, Hull houses, Andover houses, friendly visits, and similar means of awakening a feeling of sympathy between the well-to-do and the poor. C. O. has greatly advanced the work of relieving poverty, and must in time to come, as a result of advanced experience, grow still more efficacious in this direction.

Charles, ELIZABETH RUNDLE, an English writer, was born about 1826. She was married to Mr. Andrew P. Charles, of London. Her stories are historical and have been widely read. Her first novel, the *Chronicles of the Schönberg-Cotta Family*, (1863) gave a vivid sketch of the life of Luther; the *Diary of Mrs. Kitty Trevellian*, (1864) portrays the origin of Methodism in England. Her *Early Dawn*, *The Draytons and Davenants*, and *On both sides of the Sea*, belong to the list of her historical works. She has published various religious books, one of her most valuable being the *Voice of Christian Life in Song*.

Charles I. (CHARLES EITEL FREDERICK ZEPHIRIN LOUIS), Prince, Domnii or Prince-regnant of the Danubian Principalities, or United Principalities of Wallachia and Moldavia, was born April 20, 1839, being the second son of Prince Hohenzollern-Sigmaringen, head of the second of the non-reigning branches of the princely house of Hohenzollern. He was elected and proclaimed Prince-regnant of Roumania, with hereditary succession, by a plebiscite taken April 8-20, 1866, and definitely recognized on Oct. 24 in that year by the Sublime Porte and the guaranteeing Powers. The Prince had previously been a sub-lieutenant in the 2d regiment of Prussian dragoons, and it is believed that his candidature for the throne of Roumania, which had become vacant by the expulsion of Prince Alexander John, was proposed by Prussia, and supported by her diplomatic

action. His reign has been marked throughout by internal dissensions and parliamentary crises. The unwarrantable persecution of the Jews in Moldavia has often elicited indignant protests from various foreign governments. The representatives of the people, assembled at Bucharest, proclaimed Roumania's independence from Turkey, May, 21, 1877, which was confirmed by Art. 43 of the Congress of Berlin, 1878.

Charles I. (CHARLES FREDERICK ALEXANDER), King of Württemberg, was born 1823, and succeeded to the throne on June 25, 1864. He followed the policy of his father on the Schleswig-Holstein question, and formed one of the Minor States party in the Diet. His Majesty, who was colonel of a Russian regiment of dragoons, married, July 13, 1846, the Grand Duchess Olga Nicolaievna, daughter of Nicholas I., of Russia. He much contributed in making King William of Prussia emperor of Germany. Died in 1891, and was succeeded by his son, as William II.

Charles Mix, in *South Dakota*, a S. E. county, having an undulating surface and fertile soil; produces wheat, corn, flax, oats, barley, &c. Pop. (1890) 3,689. Cap. Wheeler.

Charlton, in *Georgia*, a S. E. co., largely occupied by the Okefinokee swamp and pine forests. Products are tar and turpentine, with some cotton, corn, &c. Pop. (1890) 3,335. Cap. Trader's Hill.

Chase, PLINY EARLE, educator, was born in Worcester, Mass., Aug. 18, 1820, graduated at Harvard in 1839. For many years he held a position as teacher in Philadelphia, during which time, and that of his subsequent mercantile life, he employed his leisure in metaphysical, philological, and physical studies, and became the author of many able and learned papers, published in various scientific journals, thus achieving fame as a scientist. The professorship of Physics, and later of Languages, was given him at Harvard. For his *Numerical Relations of Gravity and Magnetism* the Magellanic Gold Medal of the American Philosophical Society was awarded him. Died at Haverford, Pa., Dec. 17, 1886.

Chase, WILLIAM HENRY, was born in Massachusetts, in 1798. He was a graduate of the U. S. Military Academy and rapidly rose from his first appointment of brevet second-lieutenant of engineers to that of major, and was assigned the defence of the ports of the Gulf coast. He afterwards, as senior engineer officer, had charge of all the works of fortification and river and harbor improvements of the mouth of the Mississippi. During the Civil War his interests were with the South, and he took an active part in the seizure of the Pensacola Navy-yard, but subsequently was not engaged in the war. Died at Pensacola, Fla., Feb. 8, 1870.

Chase, WILLIAM MERRITT, artist, was born in Franklin county, Ind., Nov. 1, 1849. He was a pupil of L. E. Wilmarth, New York, and of Wagner and Piloty, Munich. He has been elected a member of several American societies of artists, and president of the Society of American Artists. His painting, *Ready for a Ride*, is in the Union League Club, New York. The Munich and Paris Expositions awarded him their second-class medals. C. is one of the chief instructors in the Art Students' League, New York.

Chasidim (*chis'e-dim*). [Heb., Pietists.] A name given collectively to a whole class of Jewish sects, but, more strictly, it is applied to a modern sect which sprang up in Poland towards the middle of last century. *Chasidim* and *Zakidim* were the names employed to designate the two great divisions of the Jewish people which arose after the Babylonian captivity; the former being in favor of certain innovations in the law of Moses, the latter being for a strict adherence to the law as it stood. From the former arose all those sects that receive traditions and explanations in addition to the law of Moses, as the Pharisees; to the latter belong the Sadducees, Essenes, &c. Of the modern sect of C., the founder was one Israel Baalsham, a Jewish rabbi. He gave himself out as having the true knowledge of the sacred name, through which he was endowed with miraculous powers and could grant to all believers forgiveness for their sins. He speedily obtained many followers, and at the time of his death, in 1760, he is said to have had 40,000 converts. This sect is very numerous in Poland, Hungary, the Danubian principalities, and in Turkey.

Chattahoochee, in *Georgia*, a W. county, bordering on Alabama; area, 250 sq. m.; surface diversified. Cap. Cassata. Pop. (1890) 4,902.

Chat'tel Mortgage. (*Law*.) A mortgage given for money loaned on the security of chattels, such as furniture or any property of a personal or movable character.

Chat'terton's Compound. (*Chem.*) A resinous and pitchy mixture, designed for making the insulator of submarine cables. It is laid on in alternate layers with gutta-percha.

Chautauqua Assem'bly. (*Educ.*) An association holding annual meetings at Chautauqua Lake, N. Y., and engaged in a system of education which extends throughout and beyond the United States. This association was founded in 1874 by John H. Vincent, D. D., and Lewis Miller to provide systematic instruction for Sunday-school teachers, and to give courses of popular lectures in literature, art and science. In 1878 was organized the Chautauqua Literary and Scientific Circle, whose purpose was "to direct the reading habits of grown people," and whose system comprehended a four years' course of home reading and study, under the supervision of the officers of the institution, who issued diplomas to those who satisfactorily completed the course. To Dr. W. R. Harper, now President of Chicago University, much credit is due for the development of

this educational work. The system of education comprises two divisions. One of these is Home Reading and Study, in which each course requires about ten hours per week for ten months, controlled by correspondence with the instructors, who are all college professors. The examinations are conducted by the University of the State of New York. The average number of readers at any one time is about 40,000, who pursue a definite four-year course in history, literature, science &c., specified books being chosen for their reading. The second division is Summer Work, which is pursued during the annual meetings at Chautauqua, there being schools covering several departments of learning and an annual attendance of from 1,000 to 1,500. The Chautauqua Assembly Grounds, situated on the northern shore of Chautauqua Lake (*q. v.*), comprise about 16 acres, on which are erected over 500 summer cottages, a hotel, a museum of archaeology, an amphitheatre with seats for over 5,000 people, several meeting halls and other appliances for combining instruction with entertainment. "Chautauquas," on the general plan of the original, have been established in various parts of the United States.

Chauvenet (*shov'n-a*), WILLIAM, an eminent American mathematician, born 1821; graduated at Yale College in 1840, and became Professor of Mathematics in the U. S. Naval Academy, and afterwards in the Washington University of Missouri, and the University of St. Louis (1868). His *Manual of Special and Practical Astronomy* (1863) is a work held in high estimation. Died 1870.

Cheese Poisoning. (*Path.*) A disease caused by crystalline ptomaine which sometimes occurs in degenerated milk products, such as cheese, ice cream, &c. I first came prominently to public notice in 1883, when some 300 persons connected with the University of Michigan suffered from this disease after having eaten cheese containing this poisonous substance, which was then named tyrotoxinon (*q. v.*) by Prof. Vaughan of University mentioned above.

Cheese Ripening of. When the cheeses, after going through the various processes of manufacture are finally taken from the press, they are insipid and, to most persons, unpalatable, being only masses of compressed curd. To gain its proper flavor and other characteristics the C. needs to be kept for a period varying from several weeks to a number of months, during which it passes through a process called curing, or ripening. A decided flavor is thus gained, which grows stronger the longer the C. is kept. The casein regains its solubility during this process and fermentations take place, differing in different cheeses, and giving to each its characteristic flavor and name. The acidity of the curd gradually diminishes, and usually in time disappears. There is also considerable loss of weight, the shrinkage having been known to reach 10 per cent. within 5 weeks after the completion of the manufacture. It is now known that this ripening process is due to the action of micro-organisms. H. W. Conn, of the U. S. Department of Agriculture, was the first (in 1875) to find bacteria in C., the species observed by him being *bacterium lactis*, but he failed to connect the ripening process with the presence of these organisms, which was done by Duclaux, in 1877, who studied closely the ripening process, and showed that it consisted essentially in the transformation of the insoluble casein into soluble albuminoids, several ferments appearing during the process. In 1880 he made a study of the bacteria of C., which he found to comprise several species, and very many individuals. Several gases, including carbonic acid, hydrogen, and sulphuretted hydrogen, appeared as results of the process, together with numerous products of decomposition, such as alcohol, oxalic acid, leucine, tyrosine, &c. He suggested that certain species of the bacteria produced ferments similar to those produced in stomach digestion, a statement which has since been confirmed. Others now took up this study, of whom Shaffer prevented the growth of bacteria by stream of carbolic acid, and found that the C. would not ripen. Beuenecke, in 1887, concluded that *bacillus subtilis* was the organism concerned in the ripening process, while Duclaux, in the same year, announced that he had found seven species of aerobic and three of anaëbic organisms present in the cheeses examined by him all of which he thought played some part in the process. The ripening mainly consisted in the transformation of the casein, the aerobic organisms acting at the surface and the others in the interior, so that the ripening affected the whole C. In 1889, Adametz proved that the ripening was due to bacteria, by the employment of a disinfecting agent which prevented their growth while not affecting the chemical character of the C. Under these circumstances ripening did not take place. He found that a gramme of cheese contained from 850,000 to 5,600,000 organisms, which gradually increase during the ripening, which his experiments indicated was due to a single species—not *bacillus subtilis*, as supposed by Beuenecke, but one not yet named. Others have reached similar results, and the study of the normal ripening of cheese now rests at this point. As for the abnormal ripening, a serious difficulty with which the cheese-maker has to contend, little is known. In spite of all precautions, cheeses are apt to pursue an abnormal development and yield a worthless product. So far as experiment has gone, this is due to the action of deleterious bacteria which have infected the C., yielding black C., bitter C., C. with red spots, and other troublesome results. It has been found that milk infected with certain bacteria, not normally present, yields a worthless C., but we cannot yet determine how far abnormal ripening is due to different species of organisms acting in the curd, and how far to different conditions of ripen-

ing. The presence of bacteria in the *C.* is inevitable, since the milk always contains them. As inclosed in the *C.*, the conditions are not favorable for their rapid growth, its density and lack of moisture preventing. This is the cause of slowness in ripening, the bacteria increasing and spreading very slowly. Thus, while the value of the *C.* as a food lies in its casein and its fat, its market value is due to the flavor, which it owes to the work of micro-organisms.

Chelalis, in Washington, a W. county, bordering on the Pacific Ocean; area, about 1,550 sq. m. It is intersected by the Chelalis river and also drained by the Satop, Illoquinn, North, Wynonchee and Wishkah rivers. Surface, diversified. Cap. Montesano. Pop. (1897) about 10,500.

Chelmsford, LORD FREDERICK AUGUSTUS, British general; born May 31, 1827. Educated at Eton; entered the army as ensign in the Grenadier Guards in 1845; served in the Crimea, receiving rapid promotion, and in 1878 was appointed to command the British troops in South Africa. He was made general in 1888; and in 1884 lieutenant of the Tower of London.

Chelney, CHARLES EDWARD, D.D., clergyman; was born at Canandaigua, N. Y., Feb. 12, 1836; was educated at Hobart College, Geneva, N. Y., and pursued his studies at the Theological Seminary of Virginia. He held a number of pastorates, but was finally deposed from the priesthood of the Protestant Episcopal Church for his refusal to yield to the authority of Bishop Whitehouse, who wished him to retain the word "regenerate" in the baptismal offices. His trial for this offence was a noted one. He was subsequently consecrated as a bishop of the Reformed Episcopal Church, by the Rev. Dr. Cummins, remaining, however, in charge of Christ (R. E.) Church, Chicago.

Cherbuliez, VICTOR, French novelist, was born July 19, 1829. His romances include: *Comte Kostin*; *Pauline Meré*; *Le Roman d'une honnête femme*; *Ladislav Bolshi*, &c. He has also written a work on *Men and Things of the Present Time*, and some studies in Spanish and German politics. He was made a member of the French Academy in 1882.

Cherryvale, in Kansas, a city of Montgomery co., 156 m. S. W. of Kansas City. Is in a farming district. Pop. (1890) 2,104.

Chesler, JOSEPH LEMUEL, LL.D., D. C. L., an American author and antiquary, was born at Norwich, Conn., April 30, 1821. He resided for some years in Philadelphia. In 1858 he went to London, where he subsequently resided. While pursuing his researches as an antiquary he made investigations of the records of the genealogy of John Rogers and Washington. The former he has given to the world in a work entitled *John Rogers, the Compiler of the First Authorized English Bible, the Pioneer of the English Reformation, with his Writings and a Genealogy of his Family*. His *Registers of Westminster Abbey* was dedicated to Queen Victoria. The merits of this last named work have been acknowledged by the highest authority.

Chesertown, in Maryland, a town, cap. of Kent co., on Chester river, 30 m. E. of Baltimore. Washington College is located here. Pop. (1890) 2,632.

Chesnut, *n.* (*U. S. slang.*) A worn-out joke, or any saying that has become stale through frequent repetition; in allusion to a worn-eaten chestnut.

Chival-vapeur. [*Fr.* horse-power.] (*Mech.*) The French unit by which the rates of work a machine is capable of are compared. One such unit represents the work performed in raising 75 kilogrammes through one metre in a second. It is nearly equivalent, therefore, to the English "horse-power," the latter being 3,000 foot-pounds per minute, and the former nearly 2,500 foot-pounds per minute.

Chivy Chase (*chiv'e chās*). (*Eng. Lit.*) The name of one of the most famous of the old English ballads, narrating a hostile encounter that took place on the Scottish border between the two warlike families of Percy and Douglas. Percy, Earl of Northumberland, had vowed to hunt for three days in the Scottish border without descending to ask leave from Earl Douglas. He had with him 1,500 men, and Douglas brought against them 2,000. In the middle of the contest the two earls meet hand to hand. After fighting for some time, Douglas is pierced to the heart by an English arrow, and Percy immediately after falls by a Scottish spear. Although the leaders are thus both slain, the fight still rages with great fury, till only 53 of the English and 55 of the Scottish remain. The event referred to in the ballad, though apparently different in the battle of Otterburn, which took place in 1388, probably the same, or, at least, the tragical circumstances attending the latter have been incorporated in the beauties of this ballad have been criticised by Alison, in the *Spectator* (Nos. 70 and 74); and Sir Philip Sidney said of it, that he never heard the old song of Percy and Douglas but his heart was moved than by a trumpet. There are two versions of the ballad, an ancient and a more modern, both of which given in Percy's *Reliques of Ancient English Poetry*.

Chivy Chase, a beautiful suburb of Washington, D. C., about six miles N.W. of that city and connected with it by an electric railway. Here are many fine residences, hotels, club-houses, &c. and the scenery is beautiful.

Chiyenne (*shī-īn'*), in Nebraska, a W. co., having the soil well adapted for grazing. Pop. (1890) 5,693. Sidney.

Chiyenne, in Oklahoma, a town, the capital of Roger's co. Pop. (1897) about 300.

Chiyenne, THOMAS KELLY, D.D., exegetical scholar and professor, was born in London, Sept. 18, 1811. He re-

ceived his education at Merchant Taylor's school, and at Worcester College, Oxford. He was ordained in 1864, and became a member of the Old Testament Revision Committee. In 1868 he became a fellow of Balliol College, and Bampton lecturer in 1889. Author of numerous works on biblical subjects, and contributed largely to the *Encyclopædia Britannica*. In 1889 he delivered the Bampton lectures on *The Historical Origin and Religious Ideas of the Psalter*, which were published in 1890.

Chib'chan Antiquities. The Chibchas were an ancient nation of semi-civilized Indians who occupied the territory about the headwaters of the Magdalena river, South America, whence branches of them widely extended through the area now known as Colombia. They are of interest from their archaeological remains, which are many and striking. Their architectural relics consist of some small stone temples, built partly underground, and with walls and roofs of neatly dressed stone, carved with figures in relief. Near by are many large stone images, short and thick in shape, carved with considerable skill, and with countenances that seem intended to excite terror. There are numerous rock paintings and carvings, containing figures of men and animals, and what may have been intended for written inscriptions, of a symbolic character. Another class of antiquities are their so-called "calendar stones," small flat stones of curious shapes and carved with figures in low relief. Their purpose is not known. Many burial monuments, from 5 to 30 feet in height, exist; these have been frequently opened, as they were found to contain an abundance of gold and silver ornaments and utensils, which had been buried with the dead. Gold was particularly abundant, being worked into figures, cups, vases, utensils and ornaments, and it is said that as much as \$50,000 worth has been extracted from a single mound. The Chibchas used tools of wood and stone, not being acquainted with copper or bronze, and their skill in working gold was considerable. They had the arts of smelting and chasing, and of relief decoration, with much taste for symmetry, and their gold vases surpassed in beauty of form and workmanship any others found in America. They used gold as money, employing flat pieces, valued by measure instead of weight. The mounds contained earthenware jars and vases in large numbers and graceful shape. Animal forms are rarely imitated, their ceramic ware in this respect differing from that of Peru.

Chicago.—Continued from SECTION I.

Mississippi river.—*Libraries, &c.* *C.* is well equipped with libraries, the Public Library having over 200,000 volumes, while there are others of value and importance. There are numerous charitable institutions, a progressing Academy of Sciences, an Art Institute which contains a splendid collection of works of art, the Field Columbian Museum (already named), the Chicago Historical Society, various medical and dental colleges, and numerous educational institutions, including the richly endowed and equipped University of Chicago (*q. v.*). There are 24 National and 26 State banks, over 650 churches, and a common school system with an enrollment rapidly approaching 200,000 pupils. The newspapers and other periodicals are over 500 in number. The city is governed by a mayor, elected biennially, and 68 aldermen. It has an effective police force and fire department. The total city debt, at a recent statement, was less than \$19,000,000. The annual expenditures are over \$32,000,000.—*Trade and Commerce.* Since 1854 *C.* has become the largest primary grain depot of the world, being the focus of the radii formed by the great cereal-producing region of the N.W. The first shipment of grain from *C.* on record was made in 1838, the venture being limited to 78 bushels. In the following year over 4,000 bushels were shipped; in 1848, over 3,000,000, while the shipments have now increased to over 300,000,000 bushels. There are 27 grain elevators with a combined capacity of over 32,000,000 bushels. The speculative grain trade of the city is enormous. There is also a large traffic in live stock and meats, the annual receipts averaging over 6,000,000 hogs, 3,000,000 cattle, and over 3,000,000 sheep. The shipments of dressed beef are over 1,250,000,000 lbs.; of lard nearly 400,000,000 lbs., and of other meat products in proportion. The trade in lumber is equally enormous, the great pine forest regions of the W. making *C.* their shipping point. It is the largest lumber market in the world, the receipts for a recent year being over 1,600,000,000 feet, while of shingles 240,000,000 feet were received. The coal receipts were nearly 7,000,000 tons.—*Manufactures.* The manufacturing interests of *C.* are very large. The 1890 census gave a total of 9,959 establishments, with a capital of \$292,477,038, and products valued at \$632,184,140. Included as manufactures were the slaughtering and meat-packing industries, with a total value of product of \$203,825,092, while clothing, which came next, aggregated \$32,517,226. Foundry and machine-shop products were valued at \$29,928,816. The census returns showed an increase over 1880 of over 400 per cent in the invested capital.—*History.* The site of *C.* had long been a place of resort and rendezvous for the Indians, and for many years before a settlement was started there voyagers and fur-traders made it a central place of resort. The government considered it of sufficient importance to treat with the Indians, in 1795, for its acquisition, "six miles square at the mouth of the Chicago river" being ceded to the U. S. by the treaty of Greenville. Here Fort Dearborn was built in 1803-04, and a small village slowly grew around it. This was laid out as a village in 1803, incorporated as a town in 1833, and incorporated as a city in 1837. The rapidity of its subsequent growth

has been already described. The Illinois and Michigan canal, begun in 1836 and completed in 1848, did much to aid the growth of the city. The first vessel was built in 1836, and *C.* became a port of entry July 16, 1846. The first railroad constructed was 10 miles of the Chicago & Galena Union R. R., on which the first train ran Dec. 15, 1848. The site of the city was so low that eventually it became necessary to raise the wooden structures, of which it was mainly composed, and entire blocks of buildings were lifted from 4 to 10 feet above their original elevation, this being necessary to provide a sufficient fall for the sewerage flow. The old city, exposed to sweeping winds, and exceedingly combustible in its materials, met with a disastrous fate in 1871. On Oct. 8 of that year a fire broke out in a barn, and fanned by a gale of wind, swept over the city with devouring fury. In a few hours the central portion was a mass of flame. On the morning of the 9th the conflagration spread to the north side, and in the afternoon destroyed the water-works, thus cutting off all hope of arrest by human exertions. The fire raged in this quarter all that day, and on the south side till 10 A. M. The result was more disastrous than in any previously recorded conflagration, the space burnt over being more than 2,100 acres in area, and the total loss nearly \$200,000,000. Out of a population of 77,000 in the burnt district, scarcely a tenth part were left with a roof to shelter them; but the people of *C.* attacked their disheartening problem with extraordinary energy, and before many years the city was rebuilt, now in brick and stone and with far more substantial structures. *C.* has been the scene of several notable riots, of which the anarchist riot of 1886 resulted in the slaughter of several policemen by the explosion of a dynamite bomb, and the execution of the leaders in the outbreak followed. In 1893 there was held here the great Columbian Exposition (*q. v.*). In the following year an extensive railroad strike took place, in which over a million dollars' worth of property was destroyed and many lives lost. U. S. troops were ordered out by President Cleveland for its suppression.

Chicago, University of. A university was chartered in Chicago in 1857, and begun operations in 1858, but was forced to struggle with financial difficulties, to which it succumbed in 1886. In 1888 an effort was made by the American Baptist Education Society to provide Chicago with a better organized and endowed institution of this character, which led in 1889 to a subscription of \$600,000 to the projected institution, offered by Mr. John D. Rockefeller, provided \$400,000 more could be secured by June 1, 1890. This was accomplished, together with books, apparatus, and a site for the institution valued at \$125,000. This site fronts on the Midway Plaisance, between Washington and Jackson Parks. The University was incorporated in June, 1890, under the title of "The University of Chicago," and Professor William R. Harper was elected its president, and entered upon the duties July 1, 1891. Since then Mr. Rockefeller has made very liberal subscriptions to the institution, the total of his gifts, positive and conditional, aggregating about \$6,000,000 up to 1897. Liberal contributions were made by others, until in 1897 the University had productive funds and property amounting to over \$7,000,000, with an annual income from interest and dues of nearly \$600,000. Its liberal endowment has enabled the University to provide itself with a corps of able instructors and to obtain a large and valuable library, with other facilities for the highest grade of university work. The graduate department, for which a large part of the endowment was given, includes some 21 schools and offers about 40 fellowships. Instruction began in October, 1892, and the University at present (1897) has 184 instructors and a class of 1,881 students.

Chickweed, *n.* (*Bot.*) The common name for *Alisne*. The well-known weed of this name is *Alisne*, or *Stellaria media*.—*C.*, BASTARD. *Buffonia ternifolia*.—*C.*, FORKED. *Anchisa dichotoma*.—*C.*, INDIAN. An American name for *Mollugo*.—*C.*, MOUSE-EAR. The common name for *Cerastium*; also specially *C. vulgatum*.—*C.*, SEA. *Arenaria peploides*.—*C.*, SILVER. *Poronichia argyrocoma*.—*C.*, WATER. *Montia fontana*; also sometimes applied to *Malachium aquaticum*, and *Callitriche verna*.

Chiff'-chaff, *n.* (*Ornith.*) The *Phylloscopus rufus*, a small species of warbler, very widely diffused, but chiefly found in the south of Europe and in the neighborhood of Calcutta. Its general color is brown, the under

Fig. 2784.—CHIFF-CHAFF.

parts lighter. It is a very sprightly little bird; but its song consists merely of a frequent repetition of two notes resembling the syllables which form its name.

Child, FRANCIS JAMES, Ph. D., LL.D., L. H. D., was born in Boston, Mass., Feb. 11, 1825. Graduated at Harvard in 1846, and was engaged there as tutor until 1849. He then went abroad and studied for six months at Göttingen. He held the professorship of Rhetoric and Oratory at Harvard during 1851-76, and then exchanged this position for that of English professor in the same college. He next engaged largely in preparing editions of the British poets, of which he issued a considerable number of volumes, his most important work being *The English and Scottish Popular Ballads*. He prepared also two anthologies: *War Songs for Freemen*, and *Poems of Religious Sorrow, Comfort, Counsel and Aspiration*. Died Sept. 11, 1896.

Child, LYDIA MARIA, an American authoress, was born at Medford, Mass., Feb. 11, 1802. Studied with her brother, Rev. Convers Francis, a Unitarian minister. Mrs. C. has been a prolific writer, her first works being novels. The *Juvenile Miscellany*, a monthly magazine, was edited by her for a period of eight years. Her pen has been used in the service of education, domestic economy, and cookery. The lives of several eminent women have been written by her, and a *History of the Condition of Women in All Ages and Nations*. Her sympathies were with the anti-slavery cause, and she published *An Appeal in Behalf of that Class of Americans Called Africans*, in which she advocated immediate emancipation. In 1841 she, with her husband, edited the *National Anti-Slavery Standard*. Her *Life of Isaac T. Hopper* is considered one of the best biographies in the language, and has been translated into German. Her donations for the support of freedmen's schools were very liberal. Died at Wayland, Mass., Oct. 20, 1880.

Childers, HUGH CULING EARDLEY, M.P., F.R.S., statesman, was born in London, England, June 25, 1827; received his education at Trinity College, Cambridge. After leaving college he went to Australia and was prominent in the Government of Victoria. He returned to England in 1857 and became a member of Parliament in 1860. C. held several public offices in England, among which were those of Chancellor of the Exchequer, and Home Secretary in the Gladstone administration, 1886. Died Jan. 29, 1896.

Children. Prevention of Cruelty to. Societies for this purpose are of American origin, the first being established in New York, where a large number of defenseless and often maltreated children called for some positive action for their protection. Acts to prevent children from being employed in factories at a tender age, and from being misused when there, had been previously passed, with other legislation of a protective nature; but this was the first attempt to defend children in their homes from the inhumanity of parents or guardians. The New York Society continues the largest and most influential, but has given rise to similar associations in other cities, of which the most important one abroad is that of London, founded in 1884. These societies have done a large amount of excellent work, and have gone far to restrain the inhuman acts of cruel parents, and to rescue neglected or ill-treated children from those unfit to have them in charge.

Childs, GEORGE WILLIAM, LL.D., publisher and philanthropist, was born in Baltimore, Md., May 12, 1829. He came to Philadelphia in his youth, engaged in the publishing business, and in 1864 became editor and proprietor of the daily *Public Ledger*, which occupation engaged his attention until his death. Among the gifts made by him to the public is the Shakespeare memorial fountain at Stratford-on-Avon, and a memorial window in Westminster Abbey to Cooper and Herbert. He also assisted in founding a home for printers at Colorado Springs. He was the author of *Recollections of General Grant*, and *Personal Recollections*. Died in Philadelphia, Feb. 3, 1894.

Chiliad (kī'lī-ad), *n.* [Gr. *chiliās*—*chiliados*, from *chilion*, a thousand.] The number one thousand; a collection or sum containing a thousand individuals or particulars; the period of a thousand years.

"Cycles and periods of years, as decades, centuries, *chiliads*." Holder.

Chimes. Electric. (*Elec.*) An electric toy used for illustrating attraction and repulsion. It consists of three bells suspended to a horizontal metallic rod. Two of them, A and B, are in metallic connection with the conductor; the middle bell hangs by a silk thread, and is thus insulated from the conductor, but is connected with the ground by means of a chain. Between the bells are small copper balls suspended by silk

Fig. 2785.—ELECTRIC CHIMES.

threads. When the machine is worked the bells A and B being positively electrified, attract the copper balls, and after contact repel them. Being now positively electrified, they are in turn attracted by the

middle bell, C, which is charged with negative electricity by induction from A to B. After contact they are again repelled, and this process is repeated as long as the machine is in action.

Chinandega (che-nān-da'gah), a town of Nicaragua, Central America, 18 m. N.W. of Leon, and 10 m. from the Pacific coast. Pop. 8,000.

Chinchilla, *n.* (*Fabrics.*) A soft, pearly-gray fur, obtained from the South American rodent of that name, and much used for cloak linings, trimmings, and similar purposes.—Also, a heavy woolen fabric used for overcoats, &c., having a short, wavy, raised nap.

Chin-chou (chīn'-chōn), *n.* A gummy or glutinous matter, much used as a glue or varnish in China and Japan, and supposed to be the product of *Plocaria tenuis*.

Chinese' Exclusion. The evils of Chinese immigration into the U. S. have been fully recognized upon the Pacific slope for many years. Welcomed at first as a unique addition to the society and a valuable ally in the development of the material resources of their new home, the Chinese, by their non-assimilating and other objectionable habits, within a short time reversed the judgment in their favor, and came to be regarded as a standing menace to the social and political institutions of the country. The State laws of California regarding them having been declared unconstitutional by the Supreme Court, it was determined to appeal to Congress, which, finally, passed a bill restricting Chinese immigration in Feb., 1879. This bill was vetoed by President Hayes, who, soon after, opened negotiations with the Chinese government for the purpose of modifying the provisions of the treaty between the two nations. These negotiations led to a treaty, signed at Peking on Sept. 17, 1880, which regulated and partly restricted Chinese immigration. By that time there were about 100,000 Chinese laborers in the U. S., who worked for lower wages than white laborers and tended to supplant them, thus rousing strong opposition to their presence among the laboring classes. In the succeeding years Chinese immigration greatly increased, and the opposition to their presence grew more decided. A new treaty was to have been made, but China was slow in ratifying it, and in 1888 Congress passed a bill absolutely prohibiting the immigration of Chinamen. Some maintained that this law was unconstitutional, as a violation of treaty obligations, but the Supreme Court sustained it, declaring that the U. S. has the right to regulate immigration and to decide who shall come to its shores. The exclusion law still holds good, and, though many Chinese have surreptitiously entered the country, still more have left it, to enjoy at home the wealth accumulated here; so that the numbers of Chinese in this country are steadily decreasing.

Chinook. (*Ethnol.*) The name given to a number of Indian tribes, speaking languages of the same type, who formerly dwelt along the Columbia river from its mouth to about 200 miles eastward, and also for some distance along the Pacific coast. They lived principally upon the salmon of the Columbia, which they bartered with other tribes for the remaining necessities of their simple lives. The special C. tribe of this family dwelt near the fur-trading settlement of Astoria, and between the whites and the Indians an intermediate form of dialect arose, which became known as the "Chinook jargon," and formed the medium of intercourse between the whites and the various tribes of the region. When Lewis and Clark visited the Columbia, these tribes numbered about 1,800 souls. Probably 600 of them remain, who are on various reservations in Washington and Oregon.—The language spoken by these tribes, being an unmusical mixture of Indian, French, English and other words.

(*Meteorol.*) A warm, northerly or westerly wind, with a dry atmosphere, which occurs along the eastern slope of the Rocky Mountain region from Colorado northward to the Peace river. It occurs when a cyclone is passing to the north of the place of observation, and may last from a few hours to several days.

Chip'ewa, in Michigan, a N. E. county, bordering on Lakes Superior and Huron and bounded E. by the river St. Mary. Area, 1,550 sq. m. The surface is hilly. Cap. Sault Ste. Marie. Pop. (1897) about 23,000.

Chippewa, in Minnesota, a S. W. county, bounded S. W. by the Minnesota river. Area, 2,445 sq. m. The surface is a rolling prairie, with a fertile soil. Cap. Montevideo. Pop. (1895) 10,805.

Chippy, *n.* A name colloquially given to any small bird, as the wren, sparrow, etc., which makes a chirruping sound.—Also (U. S. slang), a young girl, especially one who is disposed to be flirtatious, or who spends much time in idle promenading; not being necessarily a term indicative of loose character, but rather of giddiness, or somewhat undignified behavior.

Chiquichiqui (shē-kē-shē'kē). (*Bot.*) The Venezuelan name for *Attalea funifera*, which yields the piassava fibre of commerce.

Chivitanova (chē-rē-tah-nō'vah), a seaport and commercial town of central Italy, about 12 m. W. of Macerata. Pop. (1895) 5,000.

Chladni's Figures. (*Phys.*) The figures produced in sand by the vibrations of plates; so named from their first observer, E. F. F. Chladni. If a plate of metal or glass be clamped at the center, and caused to vibrate by drawing a bow across one of its edges, it yields a musical sound. If dry sand be strewn on its surface, the vibration causes it to arrange itself in well-defined lines and figures, forming symmetrical patterns, which change with every different application of the bow, and indicate the number and shape of the vibrating segments of the plate.

Chloral, *n.* [So named to indicate its origin from chlorine and alcohol.] (*Chem.*) A colorless, oily looking fluid of a peculiar penetrating odor, soluble in alcohol, water and ether. It is prepared by passing dry chlorine into anhydrous alcohol; a copious evolution of hydrochloric acid takes place, and $C_2(CCl_3)ClO$ is formed. When a small quantity of water is added to C., they unite, forming a crystalline compound of considerable stability in the air. When C., or its hydrate is mixed with caustic alkali, it is immediately decomposed into a formate and chloroform. Kept in the anhydrous state for a few days, C. gradually changes to a white mass, like porcelain, without, however, any alteration in chemical composition. Hydrate of chloral is of considerable value in medicine, and it is a very powerful hypnotic, rapidly producing sound and refreshing sleep, while it does not appear to be followed by much injurious reaction. Its use has been recommended as a means of producing sleep for a definite number of hours and thus enabling one to escape the discomforts of a short sea-passage, and perhaps even to cause the more prolonged manifestations of sea-sickness to be mitigated. The dose is from 10 to 20 grains for an adult. Much larger doses have been given without injury, yet the occurrence of certain cases of chloral poisoning indicate the necessity of caution in its use. Hydrate of C. sometimes increases hysterical symptoms and if not well diluted is irritant to the stomach. It is highly valuable in tetanus. In large doses it powerfully diminishes reflex action, and serves as an antidote in strychnia poisoning.

Chloric Acid. A compound of chlorine, hydrogen and oxygen ($HClO_3$), which occurs as a syrupy liquid setting fire to dry organic substances with which it comes in contact. With potash it forms potassium chlorate ($KClO_3$), a white crystalline salt which, in combination with sulphur, charcoal and other combustible forms highly explosive compounds.

Chlorosis, *n.* (*Bot.*) One of the most formidable diseases to which plants are subject, often admitting of no remedy, especially when it is constitutional. It is shown by a pallid condition of the plant, in which the tissues are weak and unable to contend against severe changes, and the cells are more or less destitute of chlorophyll. It is distinct from blanching, because may exist in plants exposed to a direct light on a southern border, but is often produced or aggravated by congenial weather and bad drainage. Plants may, however, be affected by this disease as soon as the cotyledons make their appearance, and the seedlings of chlorotic plants partake often of the weak constitution of the parent. The best culture will not always restore such plants to health. The most promising treatment is water them with a very weak solution of sulphate of iron. Many forms exist, of which those of clover, onion, cucumbers, and melons, are perhaps the best known. Melons have become so subject to C., from some unknown cause, that their cultivation became extremely difficult; and cucumbers are still more generally affected; the fruit even partaking of the malady, and not only losing its brilliant green, but becoming distorted from gumming and partial decay. See also CHLOROSIS, SECTION I.

Choteau (shō-tō'), in Montana, a N. co.; surface made up of rolling plains and valleys, with two small mountain ranges. Soil exceedingly fertile, especially in the lowlands; stock-raising is the chief industry. C. Fort Benton. Pop. (1897) about 4,000.

—A town, cap. of Teton co., 28 m. from Steele, connected by daily stage-line with Blackfoot and Collins. P. (1897) about 475.

Christadelphians, *n.* A sect of Christians, claiming antiquity, and to holding to the early Christian faith. Their "revival" was due to Dr. John Thomas, the son of an English Congregational minister, who came to the U. S. in 1832, and established the sect about 1855. They took their name in 1861. They are opposed to war, practice baptism by immersion, and have ordained ministers, all being called upon to take part in the work. They believe that God designs to make immortal all who love Him in this life, and to people the world with them hereafter, with Himself, while others will suffer annihilation. The denomination small in numbers, possessing, in 1897, 63 churches; 1,277 members.

Christian Endeavor. Young People's Society of. The first Young People's Society Christian Endeavor was formed Feb. 2, 1881, in Willis Church, Portland, Me., by the pastor, Rev. Francis Clark. From a small beginning in one church, it rapidly grew until now (1897), after sixteen years, there are over 48,000 societies in all parts of the world, with membership approximating three millions. For several years the growth was slow, but after a few years pushed forward rapidly, so that now more than 5,000 societies are added to the ranks every year, an average of over one hundred a week. In 1887, the first society was organized in England, and in other foreign missionary lands. The constitution of the society has been printed in over thirty different languages. In movement all evangelical denominations are represented. In America the Presbyterians are in the lead in number of societies. In England the Baptists are the leading denomination in C. E. In some of the colonies of Australia and in some parts of Canada the Methodists are in advance of other denominations, while in some of the States of the Union the Disciples of Christ, and other States the Congregationalists, claim the largest number of Christian Endeavorers. These facts prove that the society is equally adapted to all denominations in all parts of the world, and show that it is

undenominational, but interdenominational. Any society belonging to an evangelical church which adopts the leading principles of the movement, including the prayer meeting pledge, and which guarantees these principles by the name "Christian Endeavor," used either alone or in connection with a denominational name, is admitted to all the privileges of the movement. The Young People's Society of C. E. is simply an organized effort to lead the young people to Christ and into His Church, to establish them firmly in the faith, and to set them at work in the Lord's vineyard. The main point upon which the Constitution insists is the weekly prayer meeting, which each active member pledges himself or herself to attend (unless detained by some absolute necessity) and to participate in, in some way. Once each month a special meeting of re-consecration to Christ is held, at which special pains are taken to see whether every active member is faithful to his pledge and true to Christ. The society may—and, as an actual fact, often does—branch out into many other departments of Christian effort, always adapting itself to the local needs of each church. It cannot be insisted on too strongly that the Society of C. E. is first and last and always a religious society. It has social and literary and other features, but it is neither a social nor a literary society. In the Platform of Principles set forth by President Clark, of the United Society, when he accepted the position, and since very generally endorsed by the societies and adopted by their conventions, is the following: "The purely religious features of the organization shall always be paramount. The Society of C. E. centers about the prayer meeting. The strict prayer meeting pledge, honestly interpreted, is essential to the continuous success of a Society of C. E." A society thus organized among the young people has in hundreds of thousands of cases led young people into the church and set them at work for the church. It gives the young Christian something to do at once. It accustoms him to the sound of his own voice in the prayer meeting. It causes him to understand that he has a part to perform

notably Kentucky.—The *United Society of C. E.* is simply a bureau of information of which Dr. Clark is President and Mr. John Willis Baer, the General Secretary. Its headquarters are in Boston. It levies no taxes, receives no contributions, and assumes no authority over any local society, but seeks to spread the C. E. idea throughout the world.—The *World's Union of C. E.* held its first triennial convention at Washington, D. C., in July, 1896, representatives being present from every quarter of the globe. Rev. Dr. Clark was elected the President, and Rev. W. J. L. Closs, of Australia, became the first Secre-

Fig. 2787.—JOHN WILLIS BAER.

Secretary of the United Society of Christian Endeavor.

tary of the new organization.—On March 7, 1897, General Secretary Baer, of the United Society, announced the total C. E. membership to be 2,800,000, and the number of various societies as follows:

UNITED STATES:	
Young People's.....	26,959
Junior.....	10,482
Intermediate.....	166
Mothers'.....	50
Senior.....	23
CANADA:	
Young People's.....	2,934
Junior.....	427
Parents'.....	2
Mothers'.....	1
FOREIGN LANDS:	
Young People's.....	6,562
Junior.....	599
Senior.....	6
Intermediate.....	3
Mothers'.....	2
FLOATING SOCIETIES.....	89
TOTAL SOCIETIES.....	48,305

Christ'ian Sci'ence. A system of religious doctrine and of mental cure originated in 1866 by Mrs. Mary Baker Eddy, of Boston, which has grown until now it has a considerable following in America and Europe. Its members believe in a supreme Deity and take the Scriptures for their guide, accepting many of the doctrines of orthodox Christianity, though they believe that sin and suffering are not eternal. Their system of cure is spoken of as C. S. mind-healing and metaphysical healing, and is founded on the theory of the non-existence of matter. In their view, all is mind, and the universe contains but one actual mind, God, of whose mind man is but an idea. They maintain that disease is not actual, but a distorted belief, and that cure depends on discarding this belief. There are other systems of mental and mind healing in vogue, which differ in some particulars of creed or practice from C. S.

Christ'mas Cards. Illustrated or illuminated cards much in use as Christmas remembrances, in lieu of presents. The practice of giving such cards has extended to other anniversaries, particularly Easter.

Chromat'oscope, n. (Phys.) An instrument for studying the scintillations of stars. It consists of a sort of reflecting telescope, a portion of which may be rotated eccentrically, thus producing an image in the form of a ring instead of a point. The rapidity of rotation is adjusted so that each separate color in the light given off is drawn out into a large segment of the ring-like image, so that the rays may be analyzed by the spectro-cope.—A device for combining various colored rays of light into one compound ray.

Chro'mium (or Chrome) Steel, n. (Metall.) Steel in which the carbon is in part or wholly replaced by the metal chromium. It is claimed for this steel that it is capable of sustaining a greater degree of heat than ordinary steel, and, consequently, is not so liable to become oxidized or "buried" in working, and that it works as easily, and rolls much more smoothly than ordinary steel. This steel was used with great success in those parts of the St. Louis bridge where very great

strength was required, notwithstanding that anchor-bolts and staves made from the usual cast steel had, as a rule, failed to sustain the tests demanded. It has since been used for many other purposes, with varying success.

Chrouom'eter, n. An instrument used in assaying, whereby the intensity of the color of the bead when an oil is fused with borax is compared with the color given by a stated quantity of the metal.—Also, a device for determining and differentiating the color of oils.

Chro'mosphere, n. [Gr. *chromo*, Eng. *sphere*.] (Phys.) A gaseous layer which is believed to surround the body of the sun, resting on its photosphere, or incandescent body. The C. is only directly visible at the beginning or ending of a solar eclipse, but its presence and the uprising of vaporous masses through it can be detected at other times by astronomical means.

Chro'nograph, n. [Gr. *chronos*, time; *graphein*, to write.] (Phys.) An instrument employed in recording the instant in which any event, particularly an astronomical one, occurs. The C. now used employs a rotating cylinder covered with paper and turning once each minute on a helical axis. A point, or pin, governed by a clock, marks uniformly the seconds. The record is made by electro-magnetism, and can be brought into action or stopped at any instant through the manipulation of an electric key by the finger. Chronographs of a simpler form are made for less delicate purposes, as for use at horse races. These can measure intervals down to one-tenth of a second.

Chro'noscope, n. [From Gr. *chronos*, and *skopeo*, to examine.] (Electricity.) An instrument invented by Wheatstone, for the purpose of determining the duration of the electric spark, and the velocity of electric discharge. It is founded on the optical effect known as persistence of the image on the retina; that, in fact, which gives rise to the appearance of a line of light when a stick with a burning point is whirled in the air. In Wheatstone's instrument a small mirror was caused to rotate with enormous angular velocity round an axis in its own plane, and the image of the spark or other luminous object was observed in it. Under these circumstances, if the illumination be instantaneous, the image will appear as a mere spot of light, precisely the same as if the mirror were at rest; but if it lasts for any time, then the mirror, moving on in the interval, gives rise to an image extended out into a line of light. This may readily be observed by any one who takes a mirror in his hand, and either waves it about or makes it revolve in front of a candle. It is easily shown by geometry that, in the case of a revolving mirror, the angular displacement of the image is twice that of the mirror. It then, the length of the line of light be measured, and if the velocity of rotation of the mirror be known, the duration of the spark is calculable. By means of the C., Professor Wheatstone showed that an ordinary spark from an electric machine, or from a Leyden jar, discharged in the common way, lasts less than the millionth of a second; but that, in the latter case, if the discharge takes place through half a mile of copper wire, the spark lasts for a sensible time. The instrument has also been employed to demonstrate the discontinuity of certain flames.

Church, RICHARD WILLIAM, D. L. C., Dean of St. Paul's, London, was born in Lisbon, April 25, 1815. He received first classical honors at the University of Oxford, subsequently became fellow of Oriel College. In the position of Dean of St. Paul's, an appointment bestowed upon him Sept. 6, 1871, he showed much executive ability. He is the author of *Civilization and Religion; The Beginning of the Middle Ages; Dante, Spenser and Bacon, in English Men of Letters*, &c. Died in London, Dec. 9, 1890.

Church'll, LORD RANDOLPH HENRY SPENCER, M.P., English statesman, was born Feb. 13, 1849. He received his education at Merton College, Oxford. He was twice returned to Parliament, in the years 1874 and 1893, but became prominent in politics about 1880. In Lord Salisbury's first administration he held the office of Secretary of State for India. This period was marked by the annexation of Burma. Subsequently he became Chancellor of the Exchequer and leader of the House of Commons. His attacks on Mr. Gladstone's policy were of great value to the Conservative cause of which he was a leader. At one time he was regarded as the coming Tory leader and Beaconsfield's successor in office. As correspondent of a London newspaper, he traveled for some time in Southeast Africa. Died Jan. 24, 1895.

Chut'nee. [Native Hindostanee name.] (*Cookery*.) A condiment very largely consumed in India and Great Britain. There are many varieties, but it generally consists of a compound of mangoes, capsicum or chilies, and lime-juice, flavored with garlic and eschalots.

Cinderella, n. [Cinder-girl. Fr. *Cendrillon*.] The heroine of a popular fairy tale, condemned by a cruel step-mother to drudgery (*sitting in the ashes*), while her sisters dressed in finery. The story tells how C., by a fairy's help, gains the love of a young prince, much to the chagrin of her sisters; how, when pursuing her, he lost her, and how he discovered her by means of a glass shoe or a golden shoe, a gift of the fairy, which she had dropped, and which would fit no other foot but hers, and their final marriage. The story is of great antiquity and was probably derived from the East.

Cine'matograph, n. [Gr. *kinema*, a motion, and *grapho*, to write.] A device for displaying pictures of men, animals, &c., in motion; a variation of the kinetograph (*q. v.*) and the kinetoscope (*q. v.*).

Cin'gular, a. Resembling or pertaining to a cingulum (*q. v.*).—Circular; forming a circle.

Fig. 2786.—REV. FRANCIS E. CLARK, D.D.
Founder Christian Endeavor Movement.

in the activities of the church, as well as the oldest Christian. A generation of Christians trained from early boyhood and girlhood in this way—patiently, persistently, kindly—would be a generation of working Christians.—The first Junior society was organized March 27, 1884, at Tabor, Iowa, by Rev. J. W. Cowan and Miss Belle Smith. This movement was a natural outgrowth of the original work, and the idea spread rapidly. The Junior societies are intended for the children of the churches, to prepare them for the more active work of the regular organizations and ultimate church membership. In many large churches the Juniors have increased in numbers faster than they could properly be graduated into the Young Peoples' societies. This has rendered necessary the formation of *Intermediate* societies, the first of which was organized by Rev. A. Z. Conrad, D.D., of Worcester, Mass. *Senior* societies, as advocated by Dr. Clark, in 1881, also exist, but not as yet to any considerable extent, except in South Australia, where the idea is warmly endorsed. The first of the *Mothers' societies*, as suggested by Mrs. Amanda B. Fellows, of Chicago, was organized by Mr. F. C. Barton, at Topeka, Kansas, in April, 1893, since which time many have been formed not only in the United States but elsewhere. In some localities *Parents' societies*, including both fathers and mothers, are in successful operation.—among the important special branches of C. E. work is that among the *Life-Savers*, which was instituted by Rev. Edward Young, at the U. S. Life-Saving Station at Asbury Park, N. J.; the *Travellers' C. E. Union*, organized at Philadelphia on Nov. 14, 1892, for work among commercial travelers; the *Floating societies*, for work in the U. S. Navy and among seamen generally; and various special societies whose field of labor reaches the Chinese, the Indians, convicts in prisons, &c. A society was formed at the Wisconsin State Prison, at Waupun, in 1890, which rapidly grew in membership from 93 to over 300; and similar efforts are being made in other States,

Cirrhosis (*sir-ro'sis*), *n.* [From Gr. *kirros*, yellow.] (*Path.*) A term applied to a morbid condition in which yellow coloring matter is formed in the tissues. It is undoubtedly owing to deficient action of the liver, in connection with a plethoric or cachectic state of the whole system. A tepid abluition daily, a spare and simple dietary, the hip-bath once or twice a day, and the wet-girdle, are useful remedies.

Cis'co, in Texas, a town of Eastland co., 155 m. from Waco. It is in a farming and stock-raising district, and is central to a large but undeveloped coal and iron belt. *Pop.* (1890) 1,063.

Cisne'ros-Betancourt, SALVADOR, Cuban patriot and statesman, born in Puerto-Principe, in 1832, having the hereditary title of Marquis of Santa Lucia. Was President of the Cuban House of Representatives during the ten years' war, 1868-78, and in that capacity signed the decree of emancipation of the slaves. He was subsequently made President of the Cuban Republic of that period, and was also elected president of the present Republic in September, 1895. Señor C-B. is of the bluest Spanish blood, but a Cuban patriot of dauntless courage and determination, which qualities make up for whatever lack of dash and brilliancy his career may have shown.

Civ'ies, *n.* The science that treats of citizenship and the relations between citizens and the government. It embraces ethics, or social duties; civil law, or governmental methods; economics, or the principles of finance and exchange; and the history of civic development. The study of *C.* is now actively pursued by political and social economists, and has been widely introduced into the schools of this country, where it must exert a very beneficial effect upon the minds of the growing generation if the instructions given therein shall be based upon facts rather than personal prejudices, which, unfortunately, is not the case.

Civil Service Reform. The civil service of a nation or smaller organized community comprehends the whole body of officials who manage the civil affairs of its government, in distinction from those engaged in the military and naval service of the nation. In modern civilized governments it comprises three branches, the legislative, the executive, and the judicial, though the duties of these, as likewise of the civil, military and naval, may at times partly merge into one another. Legislative and judicial officials are usually chosen by election, but in the executive service there is a large body of civil functionaries who cannot conveniently be thus selected—more than 175,000 in the civil service of the U. S., between the grades of the heads of departments and that of mere laborers. Nearly one-half of these are postmasters, under whom there are many thousands of clerks and carriers, while the official duties of the departments of the government at Washington demand another great host of employees. Minor officials of this character have hitherto been appointed to their positions in this country. At first they were retained, if their duties were satisfactorily performed, from one administration to another, being removed only for sufficient cause; so that during the early administrations very few removals from office took place. This wholesome custom was completely changed by President Jackson, who advanced the political dogma that those of his own party deserved reward for their allegiance, and thereupon proceeded to make an almost complete change in the body of office-holders under the government. Thence arose the pernicious doctrine that "to the victors belong the spoils," and it became the established custom, with each change of party in the administration, to dismiss all the minor officials of the former administration and replace them by others belonging to the dominant party. This custom proved advantageous to many legislators, who, by their influence with the executive, were able to reward their partisans for political services; but it was decidedly disadvantageous to the government, in the frequent removal of tried and able officers and their replacement by inexperienced successors, whose only preparation for public service lay in their ability to control votes, and who often proved very inefficient and neglectful in the duties of their offices. This system of affairs was long felt to be not only highly unwise but hurtful, aside from the strain made upon the President by the solicitations of office-seekers and their friends, and the consumption of his valuable time and strength in listening to such demands. The system of appointment had elsewhere been replaced by a better one. In China, for ages past, all appointments had been made through competitive examinations. A similar system was adopted in part in Great Britain more than fifty years ago; beginning with an inferior system of what were known as "pass-examinations," and in which a recommendation from an influential person necessarily preceded the examination, and developing into nearly a complete system of competitive examinations. A reform of this character in the civil service of the U. S. was long urgently needed, but it had to contend with powerful counter-influences. The first steps taken in the direction of reform were in 1853 and 1855, when acts of Congress were passed requiring an examination of applicants for positions in the four great classes of clerkships at Washington. The next step was taken by President Grant, who, between 1872 and 1874, enforced a system of competitive examinations in the departments at Washington. He was aided in this by a favoring clause in an appropriation bill, and appointed a civil-service commission to take charge of these new duties. Congress, however, refused to pass an appropriation to support these examinations, and they were in consequence suspended. The reform sentiment in the

country was meanwhile growing, and during the next decade made itself strongly felt, particularly after Garfield's strenuous advocacy of the reform principles and his death at the hands of a disappointed office-seeker. As a result, Congress passed a Civil Service Act in 1883, which contained stringent provisions for the suppression of political assessments and provided for a system of competitive examinations. Under it President Arthur promulgated a series of rules and appointed a civil service commission in whose hands the management of the new system has since remained. The original law applied to about 14,000 places, but its scope has since been extended, and new classes of the service brought under the control of the commission by executive order, a very large number being added by President Cleveland near the close of his second term. In 1897, of the 178,717 positions in the civil service of the U. S. government, 87,107 were in the classified list, to be filled by competitive examination. Of the remaining 91,610, more than two-thirds (66,725) were fourth-class postmasters, whom it has not yet proved convenient to place on the classified list. Aside from these, therefore, only about 25,000 remain on the unclassified list. The removals from the classified list have been less than two per cent., from the unclassified more than six per cent.; proving the much greater efficiency of the former class of public servants. Civil service laws have been passed in some of the States, and are in action in a number of cities. Wherever adopted they have proved in various respects advantageous, and this reform is likely to become generally observed throughout the country before many years.

Clai'borne, or Cle'borne, WILLIAM, first Secretary of State of Virginia, born about 1583. Appointed Secretary of State 1626, Treasurer of Virginia 1642, and Parliamentary Commissioner in 1651. He owned, purchased, and planted Kent Island, in the Bay of Chesapeake, of which he was deprived by the charter granted to Lord Baltimore. Smarting under a sense of injustice, and the king failing to redress his wrongs, he refused to acknowledge the claims of Calvert, seized Annapolis, and drove the "Lord Proprietor" from the Province. He has been styled the "Evil genius of Maryland" and "The Champion of Virginia." Died about 1677.

Claiborne, WILLIAM CHARLES COLE, governor of Louisiana, born in Virginia in 1775, descended from Wm. Cleborne, first secretary of the colony of Virginia. When quite a youth he wrote in his Latin grammar the noble sentiment:—*Cara patria, carior libertas; ubi est libertas, ibi est mea patria.*—"Dear my country, dearer liberty; where liberty is, there is my country." He was appointed Judge of the Supreme Court of Tennessee at the age of 22. At 23 he was elected to Congress from Tennessee. Appointed governor of Mississippi in 1801; governor of New Orleans Territory, 1805; governor of Louisiana, 1812-16; elected senator from Louisiana in 1817. He was an able lawyer, a distinguished orator, and a true patriot, and occupied the gubernatorial chair of Louisiana at the time of its invasion by the English. Died 1817.

Clare, in Michigan, a village of Clare co., 50 m. N. W. of East Saginaw. Has hardwood lumber and agricultural interests. *Pop.* (1894) 1,392; (1897) abt. 1,550.

Clar'et. [Fr. *clair*, from *clair*, clear.] A term used in England and America to denote the red wine of Bordeaux, and a term generally applied to the light red wines of France. *Claret*, in France, signifies the wines which are red or rose-colored; but the word, as used by us, and employed to describe every kind of light-red wine, is not used in France.

Claretic, ARSÈNE ARMAND (called JULES), French littérateur, was born in Limoges, Dec. 3, 1840. His works are numerous, comprising novels, plays, criticisms, historical essays, &c. In 1885 he was appointed general administrator of the *Comédie Française*. His books include *Pierrille*, *Mlle. Cucuivre*, *Un Assassin*, and *Derniers Montagnards Histoire de l'insurrection de Prairial*. Also biographies of Victor Hugo, Alphonse Daudet, &c.

Clark, ALONZO, M. D., LL. D., physician, was born in Chester, Mass., Mar. 1, 1807. He graduated A. B. at Williams College in 1828, and took the degree of M. D. in the College of Physicians and Surgeons of New York in 1835. Several professorships have been held by him, also the position of dean of the New York College of Physicians and Surgeons. The New York State Medical Society elected him president in 1853. He was the author of valuable professional papers. Died in New York, Sept. 13, 1887.

Clark, ALVAN, A. M., was born in Ashfield, Mass., Mar. 8, 1804. He was employed as an engraver for calico printing in the Lowell works, Mass. Subsequently he became successful as a portrait painter, an art which he subsequently resigned to engage in the manufacture of astronomical instruments. He was the first American who was successful in making large achromatic lenses, and won great fame, both at home and abroad, in the field of astronomical observation. He invented a double eye-piece for measuring small arcs. Died in Cambridge, Mass., Aug. 19, 1887.

Clark, ALVAN GRAHAM, astronomer; son of Alvan C., was born in Fall River, Mass., July 10, 1832. Russia awarded him a medal for a 30-inch refractor which was used in the St. Petersburg Observatory. He formed one of the solar eclipse expeditions of 1870 and 1878 to Spain and Wyoming, and in 1872 received from France the Lalande gold medal for resolving the companion star of Sirius.

Clark, DANIEL, physician and alienist, was born at Granton, Inverness-shire, Scotland, Aug. 29, 1836. He went to Canada in 1841. After graduating at Victoria

College, he took a course at Edinburgh University, and subsequently became an assistant in the Surgeon-General's department of the U. S. Army in 1864. He has devoted his life to the care and interests of the insane, and holds the office of Superintendent of the Asylum for the Insane at Toronto. He is president of the Association of Medical Superintendents of the American Institutions for the Insane, and is professor of Psychology and Mental Diseases in Toronto University. He has published *John Garth* and *Pea Photographs*.

Clark, FRANCIS EDWARD, D. D., founder of the Christian Endeavor Movement, was born at Aylmer, Quebec, Sept. 12, 1851. He received his education at Kimball Union Academy and Dartmouth, graduating in 1873; also studied at Andover Theological Seminary. His first pastorate was a Congregational Church at Portland, Maine. Here, among the young people of his church, he organized the first Young People's Society of Christian Endeavor, Feb. 2, 1881. In 1887 he accepted the presidency of the United Society of Christian Endeavor, and the editorship of the *Golden Rule*, the official organ of the society, and later became President of the World's Union of Christian Endeavor. Dr. Clark's home is at Amherst, Mass. See CHRISTIAN ENDEAVOR.

Clark, LEWIS GAYLORN, author, was born at Otisco, Onondaga co., N. Y., in 1810. He edited the *Knickerbocker Magazine* for many years. It was the father of the modern popular magazine. His writings comprised but two works, the *Knickerbocker Sketch-book*, and *Knickerbocks*. Died Oct. 3, 1873.

Clark, WILLIAM GEORGE, English littérateur, was born in England, March, 1821; educated at Trinity College, Cambridge, and ordained in 1853. In his pamphlet, *The Present Dangers of the Church of England*, he explains the cause of his withdrawal from the church, having resigned his orders in 1869. In collaboration with others he issued the *Cambridge Shakespeare* (9 vols., 1863-66). In 1862, he published *Lectures on the Middle Ages and the Revival of Learning*. Died at York, Nov. 6, 1878.

Clark University, an educational institution chartered in 1887, at Worcester, Mass., and devoted exclusively to post-graduate work in the sciences; its branches including mathematics, physics, chemistry, morphology, anatomy, physiology, neurology, psychology, anthropology, and pedagogy, great prominence being given to original investigation. It was founded by Jonas G. Clark, who, with his wife, has founded a system of 30 fellowships and scholarships for meritorious students. It is under the presidency of G. Stanley Hall, LL. D.

Clarke, SIR ANDREW, lieutenant-general in the British Army, was born at Southsea, England, in 1824. He was educated at Woolwich Military Academy, and entered the Corps of Royal Engineers, June 19, 1844. His promotion was rapid, he attaining in 1886 the appointment of lieutenant-general. He was made executive councillor and member of the first cabinet in the colony of Victoria, and for his wise administration during the excitement attendant upon the discovery of gold the English government created him a Knight Commander of St. Michael and St. George. While occupying the position of director of works of the navy, an appointment received in 1864, he designed and executed the great docks at Malta and Bermuda, also the extensive new works at Portsmouth. Among the offices held by him was that of Minister of Public Works and member of the Council of the Governor-General in India. Died Nov. 6, 1893.

Clarke, JAMES FREEMAN, D. D., Unitarian preacher, editor and author, was born in Hanover, N. H., April 4, 1810, and studied at Harvard University and Cambridge Divinity School. In 1841 he founded the Church of the Disciples at Boston. The chair of Natural Theology in Harvard was held by him from 1867-71. His works are many, and chiefly religious; they include *Ten Great Religions*, *Self Culture*, *Events and Epochs in Religious History*, &c. Died in Boston, June 8, 1888.

Clarke, JOHN, one of the founders of the present State of Rhode Island, was born in England in the early part of the 17th century. In 1628 he emigrated to New England, and became pastor of a Baptist Church founded by him at Newport. In conjunction with Roger Williams, he acted as agent in procuring a new charter for the colony, and died in 1676.

Clarke, JOHN SLEEPER, comedian, was born in Baltimore, Md., in 1835. He made his first appearance at the Howard Athenæum in Boston in 1851, afterwards came to Philadelphia and became leading comedian and finally joint lessee of the Arch Street Theatre where he attained a high reputation in several comedy parts. He subsequently formed a partnership with his brother-in-law, Edwin Booth, and they purchased the Walnut Street Theatre, Philadelphia. He finally became proprietor of the Charing Cross Theatre, London. Two of his sons have become prominent and favorite players.

Clau'sius, RUDOLF JULIUS EMANUEL, physician, mathematician and thermodynamicist, was born in Koslin, Prussia, Jan. 1, 1822. He was educated in the schools of Berlin and in the University, and held several professorships in Natural Philosophy, the last being in the University of Bonn, a position filled by him till his death. His most remarkable work was the construction of the science of thermodynamics upon the modern basis, the doctrine of the equivalence of heat and work as forms of energy-effect. Several learned societies made him a member, and he received decorations from several European governments.

Clavus. (*Bot.*) The disease which produces ergot in grasses; so called because it causes the young grain to grow into the form of a nail or club.

Samuel L. Clemens

1835-

Clay, CASSIUS MARCELLUS, an American statesman, son of Green C., born in Madison co., Kentucky, 1810; as a member of the Legislature of that State, 1835-41, distinguished himself as a warm opponent of slavery, and also of the annexation of Texas to the Union. In 1845, as editor of the *True American*, a journal published at Lexington, he suffered much persecution on account of the anti-slavery character of its tone. Served with distinction as Captain during the Mexican War, and in 1850 seceded from the Whig party, with which he had heretofore politically identified himself. In 1861 he became general of volunteers, and from 1863 to 1871 was U. S. Minister at St. Petersburg.

Clay, GREEN, an American pioneer, born in Powhatan co., Virginia, in 1757; after emigrating to Kentucky, in 1787, became one of the earliest members of its Legislature. In 1813 he successfully defended Fort Meigs when besieged by a combined force of English and Indians. Died in 1826.

Clay City, in Indiana, a town of Clay co., 8 m. S.W. of Bowling Green. In a coal and lumber region. Pop. (1897) about 1,200.

Clay-eaters, *n. pl.* (*Anthrop.*) The practice of eating clay and various other earths has existed from the earliest days and in all quarters of the globe. The myths of the Cingalese relate that the Brahmins once fed upon earth for a period of 60,000 years. Pliny tells us that the Romans had a dish called "frumenta," or "alica," which was made from the grain "zea," mixed with a sort of chalk obtained from the hills of Puteoli, near Naples. According to Smyth, the aborigines of West Australia subsisted on the root of the "mene," pounded and mixed with a kind of unctuous earth. In Java, small cakes of reddish earth are regularly sold for food in all the villages, analysis of which shows that this earth consists for the most part of the remains of microscopic animals and plants that had lived and been deposited in fresh water. In parts of Japan the practice of eating earth exists, the Ainos in particular being given to this habit. In the valley called Tsic-tonai (meaning "eat-earth valley"), on the north coast of Yesso, there is a bed of clay several feet in thickness which furnishes an almost inexhaustible supply. This clay is fine in substance, of a light gray color, and is eaten with the pulverized leaves of an aromatic plant which grows luxuriantly on the island. The Ainos, however, eat clay because they consider it beneficial to health, not because they lack other food. It is frequently made into a soup, several pounds of it being boiled with roots of the native lily, and then strained, making a dish which greatly tickles the Ainos palate. Certain Silerian tribes carry a small bag of native earth on all their travels, believing that an occasional taste of it will preserve them from all evils of a foreign sky. The Tunguses consume a clay known as "rock marrow," which, when mixed with animal marrow, provides a dish of which they are very fond. Near the Ural region, powdered gypsum, commonly termed "rock meal," is sometimes mixed with bread and eaten with evident relish. The Jukabiri people, of northeastern Siberia, are partial to an earth which has a sweetish taste and slightly astringent quality, possessing various apocryphal sanitary powers. In the Sikkit valley of the Himalayas a certain red clay is often chewed as a medicinal prophylactic, and especially as a remedy for gonorrhea. The Guinea negroes of western Africa have a yellowish earth which they call "caouac," of which they seem to be extremely fond. It is said to cause no gastric inconvenience when eaten in moderation; but the habit seems to have a force equal to that of inebriation as developed under a higher "civilization," and to hold its victims in as firm a grasp. In fact, it is asserted that no punishment is severe enough to prevent a Guinea negro from indulging his clay-eating passion when it has once possessed him. When imported to the West Indies as slaves, these people sought a substitute for their favorite earth, but the American clays proved very injurious to health; so much so that their use was strictly prohibited, and it has finally died out, although for a long time a species of red earth, or yellowish tuff, was secretly sold in the markets of Martinique. Cart-loads of "bread meal," a kind of edible earth, are annually consumed in northern Europe, especially in the remote portions of northern Sweden. Much of this is simply chewed, and it is generally used in connection with some other and more edible substance. The Swedish clay, also that of Finland, is largely composed of the vacant shells of very minute *infusoria*; being therefore practically destitute of the ordinary elements of nutrition. In South America the practice of clay-eating prevails more or less widely among the Indians of Brazil, on the mountains of Peru and Bolivia, and along the Orinoco. The ancient Mexicans observed the practice as a religious ceremonial as well as a gastric necessity. Edible earths have been publicly sold in the markets of Mexico, and were listed on a catalogue of foods prepared by Gomara. The native devotee reverently ate a small piece of clay picked up in the Temple of Tezcatlipoca, and swore by the sun and the earth while religiously munching a fragment of esculent earth. In that country the custom has been followed in all ages, from grim need to superstitious ceremonial. We have been told by de Vaca that the Indians of Florida ate a mixture of mesquit beans and clay. Travellers and traditurs fix a corresponding habit upon the aborigines of California, where the Tatu Indians add a clay to their acorn cakes to make them sweeter and more numerous. An unctuous mud found along the banks of the Mackenzie river furnishes a sort of milky lime much relished by the Tinnah tribes during their frequent seasons of famine, and not entirely eschewed

at other times. The Apaches and Navajos of the great Athabaskan family, are said to have employed clay as an article of food, the latter as a condiment to modify the bitter quality of the wild potato; but the practice, which was never general, may now be considered obsolete. Among our own people, at the present day, the practice of clay-eating prevails to a limited extent, being chiefly confined to the lower classes in Georgia and the Carolinas. The favorite substance is an unctuous earth of generally light color, which is chewed, or even wholly consumed in small quantities, and frequently in combination with other substances of vegetable origin, as corn-meal, hoe-cake, &c. The habitual clay-eater develops a characteristic complexion of unmistakable appearance, and is always of low mentality and sluggish habits. These people are not infrequently encountered in the backwoods of the States named, and to some extent elsewhere. It must not be supposed that clay forms the principal, or even an important, part of their dietary. As in other parts of the world, and at all times, the practice is more of a bad habit than anything else, resulting, perhaps, from a scarcity of natural food, or from an abnormal craving, which originally proceeds from some digestive disorder, as sometimes observed in animals. There is no evidence that the occasional and moderate eating or chewing of fine earths is particularly detrimental to health; in fact it may, under certain circumstances, be beneficial as believed by some of the peoples above mentioned, who avowedly follow the practice for sanitary reasons. Certain mineral waters have undoubted merit as medicinal agents because of the earth-salts they hold in solution. Possibly a similar effect may be produced by the crude method of masticating earths containing these same remedial agents.

Clearing-House Association. (*Finance.*) A combination of banks, or other financial or trading departments of business, constantly dealing with each other, for convenience in settling accounts and exchanging obligations. The clearing-house system was established in London early in the 19th century, and was introduced into this country in 1853, by the formation of the New York Clearing-House Association. It has now spread throughout the country, and without its aid the extensive banking business of to-day could hardly be performed. Each bank, in its operations, daily receives bills of and checks on other banks, usually in large amounts, so that at the close of the day's business each holds various obligations due it by other banks, while it is owing much to these banks, who hold its obligations in turn. Formerly, each bank was obliged every morning to make up its account with the neighboring banking institutions, and send an employee to present these obligations for payment. This grew to be so complicated and dangerous an operation that it became customary to settle the balances weekly instead of daily. The clearing-house has obviated this difficulty and enormously simplified the process of exchange. It is a central place at which the messengers of the several banks meet at a fixed hour each morning and exchange with each other their various securities, the whole being done so expeditiously that in ten minutes' time an amount of work is performed that under the old system would have taken 6 or 8 hours. Settlement of the final balance found to be due from any one bank to another is made during the day, and the indebtedness of each bank to its fellows closed before the expiration of the business hour. The amount of transfers thus made annually is enormous. The exchanges each year through the New York clearing-house alone are nearly \$30,000,000,000, while throughout the whole country they are nearly double that sum. The clearing-house principle is not confined to banks, a railway clearing-house having been established for the settlement of debts due by the roads to each other, owing to the sale of through tickets or payments for through freight. A British railway clearing-house was established in 1842 and incorporated in 1850, and now regulates the through traffic accounts of nearly the entire railway system of the United Kingdom. The attempt to inaugurate a similar system in the U. S. has been less successful, its most satisfactory result being in the working of the clearing-house system of the Southern Railway and Steamship Association, established in 1875. In 1892 a stock-exchange clearing-house was established in New York, for the purpose of an expeditious transfer of stocks or settlement of cash balances after the business of the day.

Cleburne, PATRICK ROMAYNE, a Confederate general, was born in Ireland about 1828. He was a lawyer in Arkansas before the Civil War, in which he served with distinction, and won the surname of the "Stonewall Jackson of the West." He commanded a division at Stone River (Dec. 31, 1862-Jan. 2, 1863,) and at Chickamauga, September, 1863; was killed at the battle of Franklin, Tenn., Nov. 30, 1864.

Cleburne, in Alabama, a N. E. co., bordering on Georgia, and watered by the Tallapoosa river; area, 700 sq. m. Cap. Edwardsville. Pop. (1890) 13,218.

Clemens, SAMUEL LANGHORNE, an American humorous writer, born at Hannibal, Missouri, in 1835; received but a meager education, and early became apprenticed to a printer. Between the ages of 17 and 24 he worked as a pilot upon the Mississippi steamboats. In 1862 he became editorially connected with the Nevada press, and published in the columns of *The Virginia City Enterprise* his first sketches, under the pseudonym of MARK TWAIN. After obtaining some repute as a lecturer, he published in New York (1867), *The Jumping Frog of Calaveras*, and other sketches—a work which had a great success, and was republished in England.

His other works include *The Innocents Abroad*; *Roughing It*; *Adventures of Tom Sawyer*; *A Tramp Abroad*; *The Prince and the Pauper*; *Huckleberry Finn*, and other works of fiction and description. In collaboration with Charles Dudley Warner he wrote a novel, *The Gilded Age*, which was successfully dramatized. As a writer he possesses a remarkable fund of humor, to which the great success of his books is due; and he displays the same quality as a lecturer. Mr. C. was a member of the firm of Charles L. Webster & Co., who published the *Memoirs of Generals Grant, Sherman and Sheridan*, but his experience as a publisher ended in disastrous failure after a period of seemingly great prosperity. Shortly after this misfortune C. started on a lecturing tour around the world, as a means of reconquering his lost fortunes, and in 1897 was in London, engaged in writing a new book.

Cle'o, in Oklahoma, a village of Woods co., 35 m. from Alva. Pop. (1897) about 180.

Clepsydra, *n.* (*Horology.*) An ancient contrivance by which water was used to measure time. If we suppose a float placed in a vessel where water accumulates itself, it is evident that in its continual and regular rising it will be able to give motion to a mechanical contrivance noting on a scale the successive divisions of time, the correctness of which divisions can be verified by the observation of the stars; it is thus that the ancients had constructed a kind of water-clock, the shape of which had some resemblance to modern clocks, and was more accurate than the clepsydra described in section I. Fig. 2788 represents a clepsydra of this kind. The float A is fastened to the extremity of a chain which winds itself round a cylinder B, and bears a con-

Fig. 2788.—CLEPSYDRA.

terweight C at its other extremity. The axis of the cylinder bears a handle which, as it moves, runs on a dial, and so indicates the successive divisions of time. In more recent times, one Capt. Kater devised an instrument on the same principle as the clepsydra, to obtain exact measure of fractions of a second. Pure mercury, kept at a constant level in the funnel, is the fluid issuing from the aperture; and the stream is caused to flow into a small receiver at the moment of commencement of an observation, and to be turned away at the instant when the phenomenon observed ceases. If then it be known how many grains of mercury issue from the aperture in one second, and the weight of the mercury issuing from the funnel during a given observation can be exactly ascertained, we obtain a very accurate measure of the duration of the observation. Of course, no device of this character is now of the slightest practical utility, infinitely better and more accurate instruments being in use.

Cleveland, (STEPHEN) GROVER, 22d and 24th President of the U. S., was born at Caldwell, N. J., March 18, 1837, the son of Rev. Richard F. Cleveland, a Presbyterian clergyman. The father receiving a call to Fayetteville, near Syracuse, N. Y., the son was educated there and at Clinton, and in 1853 went to New York city, where he became a teacher in an institution for the blind. Not relishing this work, he went West in 1852, and in Buffalo obtained a clerkship in the office of a legal firm, where he embraced the opportunity to study law. He was admitted to the bar in 1859, but continued his clerkships for several years, being in 1863 made assistant district attorney for Erie co. In 1865 he entered into a law partnership with Isaac V. Vanderbilt, and in 1869 became a member of the firm of Lansing, Cleveland & Folsom. Hitherto he had taken no active part in politics, but in 1870 began his remarkable political career in an election to the position of sheriff

of Erie co., which he held for three years. After the expiration of his term, he renewed successfully his law practice, but eight years afterward, in 1881, he was nominated for mayor of Buffalo. The reputation for integrity he had gained as sheriff now stood him in good stead, and he was elected by the largest majority ever given to a mayor in that city. In that responsible post C. manifested an unusual devotion to the public interests. He became known as the "veto mayor," and by his arrest of what he deemed extravagant measures, he saved the city, in a few months, nearly \$1,000,000. As a consequence, his popularity became great; and in the Democratic State Convention of 1882, he was selected as the most promising candidate for the governorship, to which office he was elected by the immense plurality of 192,824. As governor, C. pursued the same policy of economy and official integrity that he had shown as mayor. His popularity now extended throughout the country, and in the Presidential contest of 1884 the Democratic Convention, on the second ballot, selected him as its candidate. The election which followed was an unusually close one, its result being decided by a very small Democratic majority in New York. C., however, received 219 electoral votes to 192 for Blaine, and became President of the United States. As he had done while mayor and governor, so now as President Mr. C. exercised the veto power with great freedom, vetoing 115 bills in the first Congressional session under his administration. His annual message of Dec. 1887, was devoted to an expression of his views in favor of a reduced tariff, but the Republican majority in Congress prevented the passage of any bill in accordance with those views. In the succeeding campaign the tariff issue was the most prominent feature of the contest. Mr. C. again became the Democratic nominee, but was defeated in the election by Mr. Harrison, the Republican candidate, who received 233 electoral votes to his 168. At the close of his administration, in 1889, he retired to New York city, where he resumed the practice of the law. But his name was still kept prominent before his party, and in 1892 he was again nominated for the Presidency, receiving more than two-thirds the votes on the first ballot. His opponent was Benjamin Harrison, as in 1888. In the election there proved to have been a great change in the public sentiment during the four years of Harrison's administration, C. carrying 23 States, and receiving an electoral vote of 276, while Harrison received but 145. On March 4, 1893, Mr. C. was a second time inaugurated President of the United States, he being the first who had come a second time to that office after an interval of retirement. The change in public feeling now gave him the support of a Democratic Congressional majority, and a tariff bill was passed in which the rates were considerably altered and somewhat reduced. Cleveland's second administration was marked by a great industrial depression whose effects continued throughout and beyond its term. It was marked also by the rise of a strong sentiment in favor of a return to bimetalism as a financial principle, which he opposed, but which became the leading issue in the following Presidential campaign. Throughout his career he had strongly favored civil service reform, and in the closing days of his administration he added a large number of official positions to the classified or competitive examination list. In 1896 he declined to again become a candidate, being strongly opposed to the financial and other policies which his party had adopted as the leading features of their platform; and at the close of his administration, March 4, 1897, he purchased a mansion at Princeton, N. J., and removed thither with his family. Mr. C. married Francis Folsom, daughter of his former law partner and friend, Oscar Folsom, of Buffalo, in 1886.

Cleveland, in *Oklahoma*, a S. co., generally level and having a black, loamy soil of great fertility. Pop. (1897) about 17,500. Cap. Norman.

Cleveland, in *Tennessee*, a town, capital of Bradley co., 29 miles N.E. of Chattanooga. Has various manufacturing interests. Pop. (1897) about 4,200.

Cliff Dwellers, *n.* (*Anthrop.*) A race or family of Indians, now extinct or varied in habit, who formerly resided in natural recesses in the cliffs of the valleys of the Rio Grande and Rio Colorado, and the tributaries of the latter stream, in which they built themselves dwellings at such a vertical height from the ground as to be nearly inaccessible. The dwellings, many of which remain, are skillfully constructed of stones, sometimes broken into nearly uniform blocks and rudely dressed, which are laid in clay mortar. Interiorly they are often plastered, while on the outside is laid a coat of clay, in rare cases washed over with white clay. Many of these houses are small, occupying narrow shelves in the cliffs. But where a large recess exists, the structure often becomes a communal dwelling of many rooms, whose outer walls conform to the irregular margin of the recess. They not infrequently rise to two and occasionally to three stories, the upper floors and roofs being supported by poles set in the walls. In many cases no roof is needed, the walls being carried to the top of the recess, whose mountain wall covers in the edifice. The doors and windows have wooden lintels, and were probably closed by skins, blankets or slabs of stone. At present some of the dwellings are quite inaccessible, from the breaking away of the paths that formerly led to them up the cliffs, and can generally be reached only by a difficult climb. It is supposed that they were built in such situations as places of refuge from enemies. Just how their inmates subsisted, is not very evident; for these localities are now quite incapable of the growth of food plants, being usually waterless. In former times they must have been less barren. Numerous relics of the

utensils, weapons and other belongings of the *C. D.* have been recovered from their habitations, sufficient to give us some idea of their mode of living. This life must have been a meager and primitive one, though the constructive ability displayed indicates some degree of civilized progress. The Pueblo Indians, still existing in that region of the West—possibly descendants or relatives of the *C. D.*—display much constructive skill, and possess habits probably similar to those of the vanished people here described.

Clifton, in *S. Carolina*, a town of Spartanburg co., $7\frac{1}{2}$ m. N.E. of Spartanburg. Pop. (1897) about 2,000.

Clifton Heights, in *Pennsylvania*, a borough of Delaware co. and suburb of Philadelphia. Has several textile mills and other manufactories. Pop. (1897) about 2,200.

Clingman, THOMAS LANIER, soldier, scientist and statesman, was born at Huntsville, N. C., July 27, 1827; graduated at University of North Carolina in 1832; settled in Asheville, where he practiced law. Was six times sent to Congress from the "Old North State" and twice to the U. S. Senate, resigning his place in the last named body upon the secession of North Carolina, in whose service he entered the Confederate army, rising to the rank of brigadier-general. His scientific researches made known the existence of valuable mineral treasures of his native State, and Clingman's Peak (otherwise known as Mitchell's Peak), the highest of the Black Mountains, was explored and measured by him, in whose honor it was named.

Clinician, *n.* (*Med.*) A physician who gives clinical instructions, or who is versed in that line of work.—One whose methods are based upon clinical observations. See CLINIC.

Clinton, JAMES, an American military officer, born in Ulster co., N. Y., in 1736, received a colonel's commission at the outbreak of the War of the Revolution in 1775, and became associated with Gen. Montgomery in the latter's expedition against Canada. Two years later he aided in the defence of Fort Clinton, and afterward received the command, as brigadier-general, of the Northern department at Albany. After the close of the war he occupied various important civil positions in the government of his State, and died in 1812. He was father of De Witt C.

Clintonville, in *Wisconsin*, a city of Waupaca co. Has lumbering interests. Pop. (1897) about 2,000.

Cloisome, *n.* [*Fr. cloison*, a partition.] A species of ware made in Japan. Upon the surface of the object, generally copper, which is to be enamelled, the design is worked out with tiny metal fillets, like flattened wires, of various lengths and shapes. These are fastened on with strong glue, and form the *cloisons*, or partitions, which are to separate the different colored enamels; this requires great care and skill. The design having been thus fixed, the enamels are introduced between the *cloisons*, in the form of a dry paste, by means of diminutive chopsticks. The whole is then baked, after which the various little cracks and crevices which appear in the fused enamel are filled in with fresh paste, and the article again placed in the oven. In the superior work this process is repeated again and again until the surface is uniform and without flaw, though as yet rough and lusterless; the polishing is done with a stone, and is a long and tedious operation, occupying several months in the case of articles of any size. The effect of the process is to grind down the inequalities of the enamelled surface, until the design is left clear and indelible, outlined by the *cloisons*, and with a fine vitreous luster. Fine examples of this ware are very expensive.

Cloquet, in *Minnesota*, a thriving town of Carlton co., 30 m. W. of Duluth. Has water power and lumber manufactures. Pop. (1897) about 2,750.

Closure, *n.* [*Fr. Par. Laer*.] Literally, a closure (*q. v.*). It is a parliamentary device in Great Britain, similar to the *previous question* in the U. S. Congress, to avoid the needless prolonging of debate. Under the *closure* rule the Speaker may call for the vote of the house, and if two hundred members demand the vote, or if not more than forty object, the vote shall be taken. If not less than a hundred members sustain it, the closure is declared in effect.

Clond, in *Kansas*, a N. central county, intersected by Republican and Solomon rivers; area, 720 square miles. The surface is nearly all fertile prairie land, producing large crops of corn, and other cereal and general crops. Pop. (1897) about 22,000. Cap. Concordia.

Cloud-Burst. (*Meteorol.*) A sudden and very severe rainfall over a contracted territory, the rain falling at the rate of 5 or 6 inches per hour—or even more—but being of very brief duration. Rains of this kind seem due to local conditions, are most common in the hottest season, and most frequent on mountain sides and in arid regions. During their continuance there is usually severe and continuous lightning. The rapid fall is apt to fill ravines suddenly and cause a swift and destructive downflow. What are known as "torrential rains" belong to general storms, and thus differ from cloud-bursts, whose local nature is indicated by their brevity and the sudden dispersion of the clouds after the rain. This phenomenon is ascribed to the meeting of a warm current of air, surcharged with moisture, and a cold current, the result being swift condensation and immediate precipitation of the water formed.

Cloud Chief, in *Oklahoma*, a town, the cap. of Washita co. Pop. (1897) about 360.

Clough, ANNE JEMIMA, educator, was born in Liverpool, about 1822; a sister of the poet, Arthur Hugh Clough. Her child-life and girlhood were spent in Charleston, S. C. After the age of sixteen she made England her home, and was instrumental in founding

the North of England Council for Promoting the Higher Education of Women, from which came the idea of the Cambridge higher local examinations, intended for women only, but which subsequently were opened to men. Newnham Hall and the two later buildings erected for women were due to Miss Clough's enterprise and interest in education. Her sympathy and tact did much toward making her leadership for the higher education of woman in England successful. Died Feb. 27, 1892.

Clough, ARTHUR HUGH, poet, was born in Liverpool, England, Jan. 1, 1819. He was educated at Rugby and at Balliol College, Oxford, where he took his bachelor's degree in 1841, becoming later a fellow of Oriel College and remaining at Oxford until 1848, publishing his first poem in that year, *The Bothie of Tober-na-Vuolich*; *A Long Vacation Pastoral*. In 1849 he published a series of poems under the title of *Ambarvalia*. Died 1861.

Clubs for Women. The past 30 years have been marked by a rapid development in the U. S. of women's clubs, the first of which exclusively for women, the Sorosis, was founded in New York in March, 1868. It arose from the refusal of the committee on the Dickens dinner, given by the Press club, to permit women to participate equally with men. Mrs. J. C. Croly, with twelve other ladies, founded the club, whose first president was Sarah Parton (Fanny Fern). Previous to this time there were no associated movements among women outside the churches and the slavery and suffrage movements, in all of which they were associated with and largely controlled by men. The second woman's club which attained prominence was the New Century club, organized in Philadelphia in 1876 as an outgrowth of the Centennial Exposition, and which has exerted a very beneficial influence on various social and benevolent interests in that city. From that time forward clubs for women grew rapidly, and at a convention held in 1889 there were 96 invited to participate, of which 65 sent delegates. A committee representing the Sorosis of New York, the New Century of Philadelphia and the Woman's Club of Brooklyn, drafted a constitution and devised a plan of permanent organization, which was adopted the following year, 60 clubs participating, and a general federation of woman's clubs was established on a permanent basis. At the first biennial convention, held at Chicago in 1892, the membership of the federation aggregated more than 200 clubs, their members ranging from 15 to 500, and some of them having flourishing branches or outgrowths devoted to special work. These covered 31 states, and two of them were in India. The meeting in May, 1896, showed a continuance of this rapid growth, the membership of the federation including 24 state federations and 450 clubs in 41 states. Several other foreign clubs had been added to the federation, while the total membership was considerably over 50,000. Several of these clubs have handsome club houses of their own, such as the New Century, of Philadelphia, the Athenæum of Milwaukee, the Propyleum of Indianapolis, &c., while the clubs themselves have been of the utmost advantage to women, in broadening their views of life, bringing them into active service for benevolent and other objects, teaching them how to think and speak on public themes, and, as in the case of the Civic Club of Philadelphia, making them highly useful agents in the administration of city affairs or the outworking of municipal reforms. London has several woman's clubs, but they have an aim much less broad than that manifested in this country, confining themselves largely to social interests. The Pioneer Club, composed wholly of women, takes a wider view of its duties, and follows American ideas and methods.

Cluseret (*kloo-sér-ā'*), GUSTAVE PAUL, a French general and revolutionist, born in Paris, 1823. He served in the Crimean War with distinction, and gained the rank of captain, and in 1859 served as major in the Italian campaign of Gen. Garibaldi. In 1862 he joined the National Army of the U. S., and obtained the rank of colonel, returning to France after the close of the war, and taking up the profession of a journalist in Paris. Later he became mixed up with the Fenian agitation in England and was forced to quit that country. On his return to France he suffered two months' imprisonment in St. Pelagie on account of his incendiary newspaper articles. In 1869 he became a member of the so-called International Society, and in the same year was banished from France on the charge of attempting to spread its principles among the military. After the proclamation of the Provisional Government of 1870, C. joined the revolutionists at Marseilles, Lyons and Paris, becoming general-in-chief of the Commune of Paris. He, however, soon became distrusted by the revolutionists, and being arrested, was reported to have been shot, Sept. 22-26 1871, prior to the taking of Paris by the government troops. Through this ruse he was enabled to escape and has since resided near Geneva.

Clyde, in *Kansas*, a city of Clond co., on the Republican river. Has a fine trade in grain, hogs, &c. Pop. (1897) about 1,600.

Coal in the United States. No other country in the world, so far as at present developed, compares with the United States in quantity and wide distribution of coal. Immense beds are found in a number of the States, especially in Pennsylvania, Illinois, Indiana, Ohio, West Virginia, Alabama, Colorado, Iowa and Maryland, and the annual production is rapidly growing. In 1890 the total output of the mines was 157,788,656 tons. In 1895 this had increased to 192,421,311 tons, and this rapid rate of growth promises to continue. Of this great product Pennsylvania yielded more than half (50,000,000 tons bituminous and 58,000,000 tons anthracite), while the yield of Illinois was 17,735,864; of Ohio, 13,376,137

Grover Cleveland

1837-

of West Virginia, 11,424,863; of Alabama, 5,679,775; and of various other States in gradually diminishing proportion. This coal occurs in several great fields, and other more local ones, of which the Appalachian, which at present yields the great bulk of the mining output, extends along the Appalachian mountain system from Pennsylvania to Alabama; its estimated area being 58,695 square miles, its length being over 900 miles, while it varies from 30 to 180 miles in breadth. The thickness of the coal-measures varies from 100 to 3,000 feet. Of this great area, that occupied by the Pennsylvania anthracite forms but a small fraction; but it is so rich and its coal so superior for household and various other purposes, that it is very extensively mined, yielding nearly a third of the total product of the country. The bituminous beds of this field are at present much the most largely mined in western Pennsylvania, though West Virginia and Alabama each contains vast deposits, while there are rich coal-strata in several other Appalachian states. Still more extensive is the great western bituminous field, covering much of Missouri, Iowa, Arkansas, Nebraska, Kansas, Texas and the Indian Territory, its total area being estimated at over 98,000 square miles. Iowa and Missouri yield the most coal, but that of Indian Territory ranks as the best. More important as a mining area, however, is the central field, covering over 47,000 square miles in Indiana, Illinois and Kentucky, of which area 36,800 square miles lie in Illinois alone. Sixty counties of this State are underlaid with coal, of which the seams are often of considerable thickness and easily mined, as they lie near the surface. In Virginia and North Carolina occurs a more localized field, of Triassic instead of Carboniferous origin, having 2,880 square miles area, of which 2,700 lie in North Carolina. Michigan also possesses a localized coal-field, of about 6,700 square miles area. Its coal is inferior, and is mined only for local consumption. The five fields mentioned extend over a total area of 214,000 square miles. West of them lie two other extensive fields, those of the Rocky Mountains and the Pacific coast region, whose area cannot yet be estimated. The Rocky Mountain field includes large coal-deposits in North Dakota, Wyoming, Montana, Idaho, Utah, Colorado and New Mexico, their coal largely consisting of the late variety known as lignite, though it varies to some extent into anthracite in Colorado and New Mexico. Of this field, the coal-deposits of Colorado are the most extensive and valuable, and have been the most fully developed. The Pacific coal-beds lie in the States of Washington, Oregon and California, of which those of Washington are the most extensive, these consisting of the lignite, semi-bituminous and bituminous varieties. Several important mining areas have been developed on both slopes of the Cascade mountain range. The lignites of western United States resemble the "brown coal" of Europe in holding a large amount of water, its proportion in most of them being from 12 to 15 per cent., though its full range is from 4 to 20 per cent. In color and luster they resemble the bituminous coals, with which they are, for practical purposes, almost identical. They appear to belong to the lower Tertiary age of geology. Their beds are often of great size, reaching a thickness of 27 feet on Bear Creek, Utah, and are remarkably free from impurities or from seams of slate. Alaska has also been found to possess coal of the Tertiary age, and also true bituminous. These coals, in the future, are likely to prove of great value. Cannel coal—a compact variety of bituminous, which burns with a bright flame—is found in several of the States, the bed near Greensburg, Pa., being about 8 feet thick. A very thick bed occurs in Missouri, and excellent deposits in West Virginia, Indiana, and elsewhere. In Canada, the only important coal-deposits yet known are those of Vancouver Island and Nova Scotia, of which the former aids largely in supplying the Pacific States, while the latter is of value to England.

Coal City. in Illinois, a post-village of Grundy co., 59 m. S.W. of Chicago. Coal mining is the principal industry. Pop. (1897) about 1,850.

Coal Creek. in Tennessee, a post-village of Anderson co., on Southern R.R., 10 m. N. of Clinton. Pop. (1897) abt. 2,000.

Coal Dale. in Pennsylvania, a post-village of Schuylkill co., in the anthracite mining region. Pop. (1897) abt. 2,000.

Coal Mining. In the opening of a mine, tunnels or adit-levels are driven in the lode, or so as to cut it if the contour of the country permits. In sinking shafts the workmen blast out the rock in the bottom of the pit and send the excavated material in buckets to the surface. The sides of the shaft are supported by timbers or walls. The principal difficulty met with in this operation comes from the presence of water, which is now most usually overcome by the process known as "tubbing." In this, beams of cast iron are employed, and many thousands of wooden wedges are driven into the water-bearing strata, a succession of cast-iron segments or rings being built in. The shaft is in this way sunk, and the water pumped out as it accumulates. Other methods of overcoming the difficulty from water have been devised, but all of them are uncertain, failure often following costly attempts. The average depth of coal mines, before the steam engine was brought into use, did not exceed 100 yards. At present, 400 yards is nearer the average of English mines, while a depth of as much as 3,000 feet has been reached. This is surpassed by the Calumet copper mine shaft on Lake Superior, which is 3,900 feet deep. The cutting of galleries inward from the shaft, as practiced by the ancient miners, was a very laborious process, the rock being gradually broken away by the use of wedges and hammers.

It was not until the beginning of the 17th century that gunpowder was brought into use in mining operations, and it was not largely used until the 18th century. By the blasting process now employed the galleries are rapidly excavated and are much larger than of old, the former 5 feet in height being now 7½, while they are made about 5 feet wide. The galleries excavated and the seam reached, various methods of getting out the coal are employed. Dynamite is too quick in its action, and blasting powder continues to be used, millions of tons of coal being mined by its aid. Yet the danger of causing explosions of mine gas by the use of explosives has caused the adoption of other methods of mining. Thus, a hole is bored and wedges driven in to force out the coal which has been undercut by the pick. This undercutting is very laborious work, and coal-cutting machines, worked by compressed air or electricity, have been invented to perform that part of the work. Such machines are largely used in American mines. Another method is to place cartridges of caustic lime in the bore-holes and drive water in on them by a force pump. The lime expands greatly in absorbing the water and exerts a rearing pressure on the coal. To sustain the walls when the coal has been removed is an important requisite. In America this is largely done by permitting pillars of coal to remain as columns of support. But the subsequent disposition of mine-owners to rob these pillars of their coal has led to many fatal "cave-ins."—*Fire Damp.* The greatest danger in mining operations, yet a careless opening of the accumulation of fire damp, or carburetted hydrogen, a gas which exudes from the coal. When mingled with air, the gas forms an explosive mixture to which many miners have owed their death. Modern miners use safety lamps, a device which yields light without danger of causing combustion, yet a careless opening of the lamp has often fired the gas and caused a fatal explosion. Such explosions are dangerous from several causes. The miners in their immediate vicinity are often instantly killed. The product of the combustion is an irrespirable *chokedamp*, which has slain its thousands. And the force of the explosion is apt to bring down portions of the roof and walls, and thus to imprison the miners to die a slow death from starvation and exhaustion. The only means of obviating these dangers is by a thorough ventilation of the mine, a current of air being drawn through all the workings and driving before it the dangerous gas. Enormous fans are sometimes used for this purpose, yet despite all the precautions taken, dangerous explosions and other mining accidents are of almost yearly occurrence.—*After Operations.* The coal, when broken from the seams, is placed in wagons and drawn by mules or engine power to the bottom of the shaft, or to the mouth of the mine in cases where it has horizontally penetrated the mountain side. From the shaft-bottom it is raised to the surface by the use of ropes and winding engines, which in some mines are of great power. The men are also brought to the surface in the cages provided for lifting the coal. In the Epinau collieries in France, an interesting pneumatic system for raising coal and men is employed. An air-tight, wrought-iron tube, of 5 feet 3 inches diameter, is placed in the shaft and fitted with a piston-cage containing nine coal wagons. By the exhaustion of the air above the piston, a load of 3 tons of coal can be raised at the rate of 95 feet per minute. The cost of the plant, however, is too great for its general adoption.—*Coal Breakers.* The large and hard masses in which anthracite coal comes from the mine, and the popular demand for its supply in specified sizes, suitable for domestic use, have given rise to mammoth wooden structures throughout the anthracite region, known as *coal breakers*. At first the coal was broken by hammers on plates of iron having openings a little larger than the size required. The broken coal was then thrown against screens, through whose meshes the waste and small pieces passed, while the larger pieces rolled to the front, where they were loaded into wagons. But this was so costly a process that the need of machinery to do this work became absolute, and in 1844 a satisfactory breaker was devised. This consisted of toothed rollers, geared close together and driven towards each other. The coal, passing between them, was broken into irregular sizes. Below them were a series of screens with apertures of different sizes, the largest meshes being in the first screen, and so on downward. Through these the coal of different sizes successively passed, being divided into the sizes technically known as "pea," "nut," "stove," "egg," "broken," "steambot" and "lump." The slate and other larger impurities are now generally picked out by boys, who are seated beside the troughs along which the coal from each screen passes to the chute by which it is loaded into the cars. These pieces then pass through into other troughs which carry them to the dirt and slate chutes, whence they are loaded into small dumping wagons and hauled out and dumped upon the culm banks at some distance from the breaker. The dirt or coal dust passes through a screen of very fine mesh, though a considerable portion of what was formerly known as dirt is now separated as a very small merchantable size known as "buckwheat" coal. The anthracite coal dust, thrown upon the culm banks, has accumulated until it now forms great mounds, covering acres of ground and from 25 to more than 100 feet high. This waste material often takes fire, and may burn slowly for years, no attention being paid to it unless it endangers the breaker. Many methods have been devised to make it useful as fuel, though with little effect until recently. At the present time furnaces are largely in use which directly consume this waste material.

Coaling Stations. n. (Navy.) Oceanic localities at which the naval vessels of a station may obtain a supply of coal in regions remote from the home ports, and thus be kept in condition for service in any part of the world. To this necessity the U. S. has hitherto paid little attention, and no nation has done so to anything like the extent of Great Britain, whose great fleet calls for means of keeping it always effective. In addition to the numerous colonies of Great Britain in all regions of the earth, many small localities have been obtained by purchase or seizure, at which supplies of coal are kept for use in case of need by any vessel of the navy. These outposts of the British nation are fortified and serve as bases of defence for the widespread commercial fleet of that nation, in addition to their utility in keeping a supply of the chief requisite of activity in modern war vessels. The U. S. possesses a few such stations, but the lack of colonial possessions, or of a merchant fleet comparable to that of Great Britain, has hitherto made them of minor necessity, though there are evidences of a gradually awakening sentiment in favor of the establishment of such stations for our own fleets.

Coal-ton. in Ohio, a post-village of Jackson co. Pop. (1897) abt. 1,900.

Coalville. in Utah, a town, the cap. of Summit co., on Union Pacific R.R., 22 m. N. of Park City. Pop. (1897) abt. 1,700.

Coan. Titus, missionary, was b. in Killingworth, Conn., Feb. 1, 1801. He completed his education at Auburn seminary, graduating in 1823. After his marriage, in 1824, he sailed for the Hawaiian Islands. His labors at Hilo station covered a period of forty-seven years, during which time he made 14,000 converts among the natives. The volcanic mountain, Kilauea, was in his parish. He constantly observed its phenomena, and is the author of a number of papers upon volcanic action in Hawaii. His books comprise *Adventures in Patagonia and Life in Hawaii*. Died in Hilo, Dec. 1, 1882.

Coast and Geodetic Survey. A bureau of the U. S. Treasury Department, whose purpose is the obtaining an accurate knowledge of the waters adjoining the coast of this country and of the surface conditions of the land area. This is the oldest scientific bureau of the U. S. government, the first suggestion concerning it being made by Thomas Jefferson, and the first act relating to it being passed by Congress in 1807, during Jefferson's administration. This gave him authority to inaugurate such survey of the American waters, which was to designate the islands, shoals and places of anchorage within 20 leagues of the coast. The execution of this work was assigned to Ferdinand R. Hassler, a Swiss of long experience in similar work. But the war that followed, the failure of Congress to provide the necessary funds, and other obstacles, so interfered with its beginning, that very little work was done until after 1832, in which year Congress was first induced to make an appropriation for the work, which was again placed under Mr. Hassler's direction. This was the real beginning of the survey, though after his appointment in 1807 he had instruments specially constructed for the work and made other necessary preparations. He was now authorized to employ astronomers and such other experts as were necessary, while officers of the army and navy were detailed to assist in his duties. Mr. Hassler was excellently adapted for the work, and at the start set a high standard of attainment, introducing accurate standards of length and measure, while he constructed for the government equally accurate standards of weight and measure. The work began by the measurement of a base-line near New York, from which triangulation measurements were extended east to Rhode Island and south to Chesapeake Bay. The topography and hydrography of this region were studied and many charts of its waters issued. Mr. Hassler died in 1843, and was succeeded by Alexander Dallas Bache, under whom the scope of the work greatly expanded, the system of triangulation was enlarged, and the Pacific coast was included in the survey. During the Civil War the work was practically suspended, but was immediately afterwards resumed on an enlarged scale, principally under Benjamin Pierce, Prof. Bache dying in 1867 after a long illness. Under Prof. Pierce the system of land triangulation was inaugurated, and the whole country brought under the scope of the survey. Since 1874, when Prof. Pierce's service ended, several others have filled the post of director of the survey.—*Operations.* The plan of the survey has grown and developed as the result of many years of experience, new features being added or discarded as practice proved their value or inutility. The work has two great divisions, field operations, and office registry, examination and computation, the production of charts being an important portion of the office work. In the field work a system of primary triangulation, combined with the determination of geographical position by astronomical observations, forms the basis of the whole survey. A chain of triangles has been extended from Bangor, Me., to the Gulf of Mexico, which serves as a basis for the coast triangulation, and will, when fully completed and studied, be of much value in a comprehension of the true figure of the earth. A second extensive system of triangles has been carried across the continent, following the 39th parallel. These primary base lines have formed the foundations of extensions of the system in New York and New England and in some of the western States. The longest lines drawn are those in California, Nevada, Utah, and Colorado, the most extended of all being that from Mt. Helena to Mt. Shasta, 190 miles in length. The coast survey has completed a tertiary triangulation, for topographic and hydrographic purposes along the entire

Atlantic and Gulf coasts, and more than half that of the Pacific States. Much has also been done in the survey of the Alaska coast. The topographic operations have principally been confined to a width of from 3 to 5 miles along the coast, following its harbors, bays and rivers up to the head of tide water, though in some localities it has been more extensive. The hydrographic observations have extended as far from the coast as the interests of navigation demanded, and have included harbors and other navigable inland waters. Extensive deep-sea soundings have been made, particularly in the Gulf Stream, and other highly important work done. When it is considered that the coast line of the United States thus surveyed, including Alaska, is about 30,000 miles long, we may estimate the extensive character of this work. In addition to the operations described, a system of precise or geodetic leveling, extending across the continent, nearly in the line of the chain of triangles, and checked by lines extending to the Gulf, the Great Lakes and other points, is in process of execution. The publications of the survey have been very numerous, including charts, coast-pilot's or sailing directions, tide-tables, and notices to mariners, an annual *Report*, of which about 5,000 copies are issued, two volumes descriptive of the deep-sea dredgings, and various bulletins describing special features in the progress of the work.

Coastal Plain. A title designating the lowlands of the United States between the Appalachian mountain chain and the Atlantic ocean, and also those bordering the Gulf of Mexico and extending northward in the Mississippi valley to the mouth of the Ohio. Elsewhere it is from 50 to 200 miles broad, while its full extent is from New York Bay to the State of Vera Cruz, in Mexico. These lowlands are the result of an oceanic uplift in a recent geological age, its formations resting against older and more elevated land, from which its streams usually descend in cataracts. A line connecting these cataracts is known as the "Fall Line," and considered the boundary of the C. P.

Coatbridge, a thriving mining and manufacturing town of Scotland, co. Lanark, 8 m. E. of Glasgow. Immense quantities of iron are smelted here. *Pop.* 16,200.

Cobb, HOWELL, an American politician, born in Jefferson co., Ga., in 1815. In 1843 he was returned to Congress by the Democratic party, and after being twice reelected, was nominated Speaker of the House of Representatives in 1849. In 1851-2 he held the governorship of Georgia, and in 1857 was appointed Secretary of the Treasury, by President Buchanan, which post he resigned in 1860. In Feb., 1861, he became president of the Confederate Congress, and afterwards a major-general of the Confederate army. Died in 1868.

Cobbe, FRANCES POWER, a rationalistic writer, was born in Dublin, Ireland, Dec. 4, 1822. She gave much of her time to charitable work, and for several years was associated with Mary Carpenter in the ragged schools near Bristol. The practice of vivisection being condemned by her, she founded a society in London to restrain it. Her works are numerous, and include *The Scientific Spirit of the Age, and Other Pleas and Discussions; An Octave of Essays; Papers on Vivisection, &c.*

Cochran, JOHN, general, was born at Palatine, Montgomery co., N. Y., Aug. 27, 1813. He was educated at Hamilton College, Clinton, N. Y., graduating in 1831. Subsequently was admitted to the bar. He has filled at succeeding periods a number of public offices, and performed active service in the Civil War. After his resignation from the army in 1863 on account of ill health, he was nominated for Vice-President on the Fremont ticket. Subsequently was appointed Attorney-General of N. Y. Served in the city councils and was Mayor of New York city during the investigations which disclosed the iniquities of the Tweed ring.

Cochrane, ALEXANDER DUNDAS ROSS WISHART BAILLIE, British author, son of Admiral C.; was b. in Nov., 1816, and was educated at Eton, and at Trinity College, Cambridge. He was returned to Parliament in the years 1841, 1847, 1859, and 1870. He has published *The Morea, a poem; The State of Greece; Young Italy, &c.*

Cockburn (co'burn), SIR ALEXANDER JAMES EDMUND, Bart., a British jurist; born in London in 1802. He was a student of Trinity Hall, Cambridge, was called to the bar in 1829, and was appointed Q. C. in 1841. He held at subsequent periods a number of prominent public offices, one of the last appointments being that of chief-justice of the Queen's bench in 1859. Was one of the arbitrators for the settlement of the Alabama claims, and in 1873 was created a K. C. B. He was eloquent as an orator, and prominent as a lawyer. Died in London, Nov. 21, 1880.

Cockrill, JOHN A., an eminent journalist, was born in Ohio in 1847. Served as a boy in the Union Army at the battle of Shiloh, 1862, and subsequently; and after the war began his career as a journalist at Cincinnati. He later became editor of the *St. Louis Post Dispatch*, and then of the *New York World and Advertiser*, besides filling other important editorial positions. Was for some time president of the New York Press Club. Went to Japan and China as special correspondent during the Chino-Japanese War, and died at Cairo, in Egypt, while on his way home, April 10, 1896.

Cockran, WILLIAM BOURKE, was born in Ireland, Feb. 28, 1854, and educated in France and his native country. Removed to America in 1871 and made that country his future residence. He engaged as a teacher, at the same time reading law, and was called to the bar in 1876. His oratorical powers have made him widely known. He has been a member of several Congresses, and a prominent leader in Tammany Hall.

Co'cum Oil, n. (Chem.) A solid oil or vegetable

butter, obtained from the seeds of *Garcinia purpurea*, an Indian tree of the same genus with the mangosteen. It is white, or pale greenish yellow, brittle or friable, with a faint and not unpleasant odor. It melts at 95°, but when cooled after being melted, remains liquid to 75°. It is used for mixing with ghee (butter) and also for mixing with bear's grease in the manufacture of pomatum.

Codling (or Cod'lin) Moth. (Entom.) *Carpocapsa pomonella*, a small moth whose larva is a serious enemy to the fruit grower, it being the well-known worm which is found within and near the core of the apple. The eggs are laid in the blossoms at the time of the shedding of the petals. Spraying with Paris green during blossoming season is the usual remedy.

Codrington, SIR WILLIAM JOHN, G. C. B., soldier, was born in Nov., 1804. He received his education at Harrow and Sandhurst, and in 1821 entered the army. His gallant service at Alma and Inkerman brought him distinction. He was commander of the attack on the redan of Sebastopol in September, 1855, and during the same year was appointed commander-in-chief of the army in the Crimea. In 1859 he was made Governor of Gibraltar, and subsequently was promoted to the rank of general. Died Aug. 8, 1884.

Colebogyne (se-le-bo-je'ne), n. (Bot.) A genus of plants, order Euphorbiaceae, found in the E. tropical portion of New Holland, and represented by *C. ilicifolia*, a bush which in everything but its flowers is very like the common holly. The inconspicuous green flowers are male and female on different plants. The fruit is a three-lobed capsule, about the size of a pea, with 3 cells, each of which contains one seed.

Fig. 2789.—COLEBOGYNE ILICIFOLIA.

Coffer-dam, n. (Engineering.) A structure made to exclude water, in executing works of marine and river engineering, by the use of which work may be prosecuted in areas below the water-level with nearly as much facility as on dry land. They are formed in various ways, being sometimes made with a single and sometimes with a double inclosure; in the latter case clay or chalk is rammed in between the two, to keep out the water. Generally a coffer-dam is made by driving a number of timber piles close together, in two or more rows, according to the nature of the bottom and the depth of water. The distance between the rows varies from four to ten feet, and the space is filled up with puddled clay. In some cases coffer-dams are made with only one row of piles, backed up with a bank of clay. When the bottom consists of rock, and piles cannot be driven, they are generally formed, when the depth of water allows, of two stone walls, the space between them being filled with clay or some other substance. A device invented by McKilloh is the portable coffer-dam, which provides a valuable means of thoroughly examining or repairing any part of a vessel, from her keel to her water-line while afloat, and even when submerged. The apparatus consists of a large sheet of waterproof canvas, at each end of which is a tubular bag, which is filled with air on the canvas being hauled taut under a vessel's side, when the whole is made air- and water-tight by the pressure on the outer surface. The volume of water contained in the interior of the canvas is then pumped out, and the canvas being distended by a frame-work of iron, a dry space is kept clear to allow of men repairing any damage the ship may have sustained.

Coffeyville, in Kansas, a fine city of Montgomery co., 76 m. S. S. W. of Fort Scott; the trade center of a rich farming and stock-raising district. *Pop.* (1897) about 3,900.

Coffin, CHARLES CARLETON, journalist and lecturer, was born in Boscawen, N. H., July 26, 1823. During the period of the Civil War he was war correspondent of the *Boston Journal*, and was the author of a number of popular historical books for boys, descriptive of revolutionary times. They include *Boys of '76; Story of Liberty; Old Times in the Colonies, &c.* Died March 2, 1896.

Coffin, WILLIAM ANDERSON, landscape and figure painter, was born in Allegheny City, Pa., Jan. 31, 1855. He graduated from Yale College in the class of 1874; afterwards studied with Bonnat, in Paris. He received from the Society of American Artists the Webb prize for landscape. He has been made a member of the former society and of the Architectural League, in New York. The Metropolitan Museum in N. Y., owns his picture of *The Rain*. Among his other works are the *Mandolin Player, An Examination, Close of Day, Early Moonrise, &c.*

Cohnheim, JULIUS FRIEDRICH, a German pathologist, was born July 20, 1839, at Demmin, Pomerania. He was a student in the Universities of Berlin, Würzburg, Griefswald, and Prague. He followed for a short period the medical profession in Berlin, held several professorships, and was also director of the Leipzig Institute of Pathology. He made many original researches in the fields of anatomy, histology, and pathology and was the author of *Die Tuberkulose vom Standpunkte der Infektionslehre; Vorlesungen über Allgemeine Pathologie, &c.* Died in 1884.

Coil, Primary and Secondary. (Elec.) Terms used respecting apparatus employed for electrical current induction. The wire which transmits the current from the battery—that is the inducing wire—is called the *primary coil*. The *secondary coil* is the circuit which induced current traverses. The primary coil is made of rather thick wire, and not very long, in order that the current from the battery may not be too much weakened by resistance. The secondary coil, on the contrary, is made of the finest possible wire, and of great length in order that a very large number of turns of it may be brought under the influence of the primary coil. Advantage gained by increasing the number of turns and getting them near to the coil in which the current is passing, far more than counterbalances the disadvantages arising from increasing the resistance. It is necessary that the several turns of the secondary coil should be very carefully insulated from each other, for the induced electricity will otherwise leap across, instead of passing round each turn wire. For this reason the wire, as it is coiled on, is covered with the layers of shellac or gutta-percha.

Coke, Manufacture of. Coke is the residue obtained from bituminous coal by distillation or heating with almost complete exclusion of air. It is produced in the manufacture of gas, as a by-product, and is also specially manufactured in ovens, being employed in the melting of pig-iron, and the smelting of iron, copper and lead. C. was first used with success in the production of pig-iron in England in the year 1735, and became commonly used after 1750. In the U. S. little use was made of it for this purpose until after 1837, and the attempt at its regular manufacture was made, without success, in 1841, in the Connellsville region of Pennsylvania, now the principal seat of what has become an important American industry. It was not until 1850 that the regular production of C. began in that region. In the manufacture of C. the early method resembled that used in the production of charcoal, the coal being heaped in mounds covered with earth. The works are now generally performed in brick or stone ovens, of standard or "beehive" oven being usually 5 or 6 ft. high and 11 or 12 wide in inside dimensions. A railroad track runs along a bank of such ovens, and charges them with coal through openings in their tops. The process of coking occupies from 57 to 72 hours, at the end of which time the coal is deprived of its volatile constituents. The coke is now raked from the oven through an orifice in its side, cooled by drenching with water, and loaded into railroad cars for transportation. To so great extent coke ovens of more elaborate construction are used, these being massive fire-brick chambers, with a top and bottom flues through which the waste gases are conducted to be burnt for the more rapid heating of the coke. From these ovens the coke is discharged by a machine called the "pusher," which forces it bodily into railroad cars. These ovens do much quicker work, yield more, and permit the use of inferior grades of coal, while also saving the copious by-products tar and ammonia. In Germany where these ovens are largely used, the value of the by-products more than pays the expenses of the manufacture. In the U. S., in 1890, there were about 33,000 coke ovens, yielding nearly 9,000,000 tons of coke from about 13,000,000 tons of coal. C. is most largely manufactured in Pennsylvania, which yields three-fourths of all the coke made, more than one-half the total product being made in the Connellsville district. Here is a large field of coal suitable for coking, forming a basin 3 miles wide and 50 miles long, whose beds hold from 8 to 10 feet of workable coal. West Virginia, Alabama, Tennessee follow in succession, and C. is also made in Colorado for the use of local lead and copper smelters.

Colby University. (Educ.) An institution under Baptist supervision, situated at Waterville, Me. Chartered by Massachusetts in 1814, it began operation in 1818, and was chartered in 1820 by the first Maine legislature, under the name of Waterville College. Its present name was adopted in 1867, in recognition of a large endowment made by Gardner Colby, a Boston merchant. There are here six large college buildings, besides a gymnasium and observatory. In 1891 "education of men and women" was changed into "ordinate colleges." Men and women pursue identical courses under the same instructors, if they so elect, but are separate in their studies and recitations. The president is Rev. Nathaniel Rutter (1897). There are 100 instructors and 225 students, and an endowment of nearly \$500,000.

Colchester, in Illinois, a thriving town of McDonough co., 53 m. N. E. of Quincy, on C., B. & Q. R. R. Coal extensively mined, the annual output averaging about 100,000 tons. *Pop.* (1897) abt. 2,100.

Cold Storage. (Com.) A method of preserving perishable food materials by keeping them in a low temperature until needed for consumption. This is done by the aid of freezing machines similar in principle to those used in the manufacture of artificial ice, but in this case employed in reducing the temperature of air to the required degree. Cold storage warehouses now exist in all our principal cities, in which meats, fruits may be kept in an unchanged condition for indefinite period, and the fruits and game of summer easily preserved for use on midwinter tables. They are also used in connection with large markets to keep unsold material from one market day to another, and also largely in transportation of perishable material by ship or car. Meats thus preserved need to be thawed immediately on being thawed out, as they show a disposition to spoil much more quickly than unfrozen meats, and may, from unobserved putrefactive changes, in some instances, prove injurious.

old Wave. (*Meteorol.*) The name given to spells of severe depression of temperature in the United States, these being due to persistent winds from the north-west, which spread over the country the chill conditions of the great plains of western Canada. The chill seems to be due to anti-cyclonic conditions, which bring down to the surface the cold air of the upper atmosphere, and cause it to flow out over the southern and eastern U. S. These spells of severe cold usually continue for about three days, sometimes longer, and are attended with clear skies and sunny weather.

oles. COWPER PHIPPS, a British naval officer and inventor, born in co. Hants, 1819. In 1855 he was employed by his government to devise a new system of armored ships, on the turret plan, which should be adapted to render them sea-going vessels rather than simple harbor defences. He succeeded in producing two of the finest sailing-ships that ever floated—the *Captain* and the *Monarch*; but the former, though in other respects perfect, had the radical defect of being unmanageable in very heavy weather, so that she foundered in the Bay of Biscay in Sept., 1870, with all hands, including her constructor, who was on board.

o'leus. n. (*Bot.*) A genus of African and East Indian plants of the mint family (*Labiata*), containing numerous species and widely cultivated for ornamental purposes on account of their attractive and often variegated foliage.

ol'fax. in *Washington*, a fine town, the cap. of Whitman co., on the O. R. & Nav. Co. R. R., 85 m. N. E. of Walla Walla. Has planing mills, flour mills, and machine shops, and is the trading center of a farming and lumbering region. Pop. (1897) abt. 2,000.

ollege de France. (*Educ.*) Originally a *College de Trois Langues*, founded by Francis I. in 1530, now a very important educational institution, with a wide field of instruction in literature, science, and history. Its professors have included some of the most distinguished scholars and scientists of France, such as Renan, Laboulaye, Gaston de Paris, and Brown-Sequard.

ollege Fraternities. A class of secret organizations instituted among the students of American colleges, whose secrecy, however, amounts to little more than a knowledge of grips and pass-words. These fraternities, which are usually named from the letters of the Greek alphabet—whence they are known as "Greek-letter Societies"—extend often through many colleges, their lodges being called "chapters," of which no college can have more than one. Some of the larger colleges, however, have as many as 25 chapters of different fraternities. The first of these fraternities, the *Phi Beta Kappa*, was organized at William and Mary College, Virginia, in 1776. It ceased to exist in 1786, on account of exigencies arising from the Revolutionary War; but chapters had been organized at Harvard and Yale, which established branches elsewhere. It soon ceased to be a secret organization, and became a literary society, requiring high scholarship for admission to its ranks. It still exists as an honorary society, having been revived in 1881. Of the existing general fraternities, the first, the *Kappa Alpha*, was founded at Union College, in 1825. It was opposed by the faculty and students, from its small membership and secret meetings, but was followed in 1827 by two others in the same college—*Sigma Phi* and *Delta Phi*—and in 1832 by *Alpha Delta Phi*, at Hamilton College. From this time on the system spread with such rapidity, so that at the present time there are 28 such fraternities in the U. S., with 650 active and 350 inactive chapters and a membership of 100,000. They own 70 houses or halls in the various college towns. Roman students have also their fraternities, of which now exist, the oldest being the *Pi Beta Phi*, founded at Monmouth in 1867. The aim of the members of these societies is purely social, though the chapters may occupy themselves with any work or exercises which they think likely to prove of benefit. They possess a considerable literature, in the form of catalogues, histories, song-books and magazines, and publish numerous fraternity journals, the oldest still extant being the *Theta Pi*, issued by the society of that name in 1827, and still published as a monthly. The women's societies have a number of similar periodicals, the oldest being the *Golden Key* (1882), now called the *Key*.

Colleges for Women. (*Educ.*) Collegiate education for women is of very recent institution, it being generally held, until about half a century ago, that women were incapable of grasping the higher subjects of education and that an effort to do so was likely to fit them for their duties in life. This theory is still tant in a measure, but its inadequacy has been proved by many striking examples of high scholarship in women and by lack of evidence to prove that education fits women for their life-duties. Within the period mentioned many colleges for women have been founded, and co-education of the sexes has been adopted by various collegiate institutions, so that the opportunity for man to obtain an education equal to that obtainable by woman somewhat widely exists. The seminary for men at Mt. Holyoke, Mass., founded in 1837, was for many years regarded as the foremost institution for the education of women in this country. But with the advance of years higher conceptions arose, and in 1855 Vassar College took its stand as the first college organization founded and generously equipped exclusively for the education of women. Others of high grade followed; Vassar College in 1861, Wellesley College in 1863, Smith College in the same year, and Bryn Mawr College in 1885. These, though nominally and properly colleges, are higher in grade than many of the so-called universities of this country, some of them placing their

standard so high as to be difficult of attainment by either sex. This is particularly the case of Bryn Mawr, which is specially organized for the needs of graduate students, and has a severe admission requirement. The degrees conferred in these colleges are the same as those given in colleges for men. The opportunities offered to women for higher education are by no means confined to these special institutions, since many of the other colleges of the country have opened their doors to them. In 1834 Oberlin College, Ohio, the pioneer among the larger colleges in this work, was founded for the education of "both sexes and all colors." Co-education has since been adopted in many other colleges. The University of Iowa offered equal advantages to men and women in 1860. The Universities of Michigan and other States quickly followed, and the institutions founded on a denominational basis have so generally adopted a similar regulation that co-education may now be regarded as the general rule in the newer institutions west of the Alleghenies. The Leland Stanford, Jr. University of California, and the University of Chicago, the two most richly endowed educational institutions in the U. S., make no distinction between men and women scholars. This has not been the case with the older and more conservative institutions of the East, which have resisted this modern innovation on their long established standard, though certain opportunities for advanced education have been given to women in some of the most prominent of these institutions, such as Harvard University and the University of Pennsylvania. Several of the newer Eastern universities, however, have placed women in the same rank with men. In professional education, women have given their attention to medicine, the Woman's Medical College of Philadelphia being the pioneer in this field of instruction. Opportunities for education in medicine, law and theology have been offered somewhat widely to women in other collegiate institutions, and large numbers have taken up the study of medicine, with the result of giving this country an extensive corps of women physicians. To the other professions named less attention has been paid. The rapid advance thus made in the higher education of women in the U. S. has been followed, though more slowly, in Europe. The great English colleges of Oxford and Cambridge have, while refusing to confer academic degrees upon women, founded special colleges for their instruction, in which they receive education from professors of the highest standing. Women are admitted to lectures at Paris and in a few of the German universities, though not examined for degrees. The higher degrees, however, are conferred upon women at a few of the European institutions of learning, of which the University of Zurich stands highest.

Colleges in America. The first American college was Harvard, founded at Cambridge, Mass., in 1636. William and Mary College, Virginia, and Yale College, Connecticut, followed during that century, and in the succeeding century a considerable number were organized, all following the mediæval model of the British colleges, and giving preponderating importance to the study of the classical languages and literature and mathematics. This system continued until well into the 19th century, being adopted by the many colleges instituted during the first half of that century, though an organized movement against the narrowness of college studies had begun, led by Presidents Wayland and Nott, of Brown University and Union College respectively. Shortly after 1800 President Barnard, of Columbia College, proved by statistics that there was a steady decrease, in comparison with the population, in the number of students going to American colleges, a fact which he ascribed to dissatisfaction with the limitation of studies. He was followed by President Tappan, of Michigan University, in 1852, with the bold declaration that science and modern languages and history should have at least equal attention with ancient languages and mathematics, and remodeled the course of studies in the college under his charge on this theory. The change added so much to the prosperity of the university that other State institutions adopted it, and before many years the colleges founded on the old model found it necessary to remodel their classes and studies in accordance with the new spirit and demands. Greek, Latin, and the mathematics retained their prominence in the first two years of the course, but in the later years science, history, economics, modern literature, &c., received a recognition never accorded them before. In addition, technical studies were introduced, colleges of engineering, architecture and agriculture were established, and the higher institutions of learning in the country gradually adapted their courses of study to the live needs of the present day, no longer insisting on inordinate attention to dead issues and abstruse erudition, of no use in practical life. One natural result of this change has been conservatism in some instances, radicalism in others, and a resulting lack of uniformity in the requirements for admission to colleges, the studies pursued and the requisites for graduation. It may be said, however, that, as a rule, the standard of requirement for admission has advanced and that the average age of admission is two years greater than a half century ago. Meanwhile the number of colleges has greatly increased, their growth being greater than that of the population; this being due to the growing demand for a higher education and the rapidly increasing endowments of many colleges, which has enabled them to reduce the cost of tuition and to offer many free scholarships. One somewhat distracting feature in the United States is the absence of any legislation or regulations control-

ling the grade of educational institutions, so that the titles of academy, college, and university have become largely interchangeable, and there are institutions bearing the lofty title of "University" to which that of "high school" would be more applicable. Of so-called "universities" in the United States there are not less than 120; of real ones there is less than a tenth of this number. Of institutions claiming rank as universities and colleges in the United States at the beginning of 1897 there were in all 476, with a total of 10,897 professors and instructors and 143,632 students, productive funds amounting in all to nearly \$100,000,000, and a total income from interest, tuition fees and appropriations of \$15,365,412.

Collier. JOHN PAYNE, a Shakespearian commentator and bibliographer, born in London, 1789; was descended from the famous Jeremy Collier. He abandoned the bar for a more congenial pursuit of literature. He wrote many essays, among them the following: *Political Decameron* (1820), *Political Pilgrimage* (1822), an edition of *Dobson's Old Plays* (1825); *New Facts Regarding the Life of Shakespeare* (1836), followed by *New Particulars*, and in 1839 by *Further Particulars*. His *Life of Shakespeare* (1842-4) was the result of twenty years' research. A fierce controversy arose because of his advocating the authenticity and value of certain marginal notes found in an early folio copy of Shakespeare. His last production was a *Bibliographical Account of Rare Books* (1865). C. drew a pension from the government for his services in literature, and was vice-president of the Antiquarian Society. Died in 1883.

Col'ingwood. FRANCIS, civil engineer, was born at Elmira, N. Y., Jan. 10, 1834. He graduated from the Rensselaer Polytechnic Institute in 1855. A number of positions either as assistant or chief engineer have been held by him. His writings comprise numerous important papers on the subject of engineering. He was awarded the Telford premium and the Telford medal by the Institution of Civil Engineers of Great Britain, for his paper on repairs to the Allegheny Suspension Bridge. Several engineering societies of this country and of Europe have elected him a member; he is also fellow of the American Association for the Advancement of Science, a member of the New York Microscopical Society, and of the Academy of Science of New York.

Coll'yer. ROBERT, D.D., Unitarian clergyman, was born in Keighly, England, Dec. 8, 1823. He came to America in early manhood. Previous to his adoption of the Unitarian belief in 1859 he had been a Methodist lay preacher, at the same time laboring as a mechanic. His first pastorate was Unity Church in Chicago, 1859. In 1879, he accepted a call to the church of the Messiah in New York, where he still remains (1897). He is the author of *A Man in Earnest*; *Talks to Young Men*; *The Simple Truth*, &c.

Colonies of Europe. Within recent years there has been so marked an extension of the colonial system of Europe, that some attention to this subject seems here called for. Spain alone has fallen off in the extent and importance of her colonial possessions. The rapid growth of the colonies of the other leading nations of Europe can be readily made evident by a comparison. Twenty years ago the colonies of Great Britain covered 7,600,000 sq. miles, with a population of 200,000,000. To-day the British Empire covers 11,000,000 sq. miles, of which only 120,000 are in the United Kingdom. The population of the colonies is 340,000,000. This immense accession of territory is largely due to a great extension of the British colonial possessions in Africa. France in 1776 had foreign possessions, exclusive of Algeria, of 460,000 sq. miles, with 2,500,000 population. She now has 2,900,000 sq. miles, with 21,000,000 population. This accession has been in Indo-China and Africa, in which latter country the area of French territory is rapidly extending. Germany in 1776 had no colonies. This country now has possessions in Africa of over 800,000 sq. miles in area, with about 6,000,000 population, and extensive claims in New Guinea. The colonies of the Netherlands then covered 666,000 sq. miles, which have now increased to 760,000, with an increase in population from 24,000,000 to 29,000,000. Belgium then had no colonies. Its dependency of the Congo Free State now covers 800,000 sq. miles, with 8,000,000 or more population. Italy has gained in the interval about 300,000 sq. miles, but has lost nearly the whole of it through her unfortunate Abyssinian war. The other nations remain with little change, Denmark having about 86,000 sq. miles of colonies in Iceland, Greenland and the West Indies; Norway and Sweden one small island; Portugal 848,000 sq. miles in Africa and Asia, and Spain maintaining a precarious hold on Cuba and the Philippines. Russia has greatly increased by Asiatic accessions; these, however, are not maintained as colonies, but made a constituent part of the empire.

Colorado Beetle. (*Entom.*) *Chrysomela* or *Doryphora decemlineata*, a beetle of North America which is exceedingly destructive to the potato plant. It was first discovered by Thomas Say in 1824, near the upper Missouri, but was not known in the East until 1873, when it made its way from Nebraska and Iowa, reaching the Atlantic by 1876, and everywhere causing great ravages to the potato crops, by consuming the leaves of the plant. It is now kept in a degree of subjection by the free use of Paris green. The insects are of small size, oval in shape, and of orange color, marked by black lines and spots. They pass the winter underground, but in the spring the female lays her eggs on the under side of the potato leaves, while a second and even a third generation may be produced in the same summer. They multiply, therefore, with great rapidity.

Colorado City, in *Colorado*, a city of El Paso co., on the D. & R. G. R. R., 2 m. from Colorado Springs. Pop. (1897) about 2,250.

Colorado College. (*Educ.*) An institution for higher education, situated at Colorado Springs, Col. Its location in the Rocky Mountain region offers excellent opportunities for the study of geology, mining, metallurgy and similar branches, and much attention is paid to scientific work. It was opened in 1874 and was completely reorganized in 1888, adopting a high standard of work. In 1897 there were 32 instructors and 267 students.

Colorado Desert. (*Geog.*) An arid basin of the Southwest U. S., adjoining the lower Colorado river, including the Coahuila Valley and the Yuma Desert. The lower part of the Coahuila Valley, an area of 17,000 sq. m., lies below the ocean level, and formerly composed a northern section of the Gulf of California, from which it has been cut off by the delta deposits at the mouth of the Colorado river. This delta extended from east to west until it finally shut out the sea, converting the valley into a fresh-water lake, which finally disappeared, leaving the present arid space. Occasionally, during flood, a part of the waters of the river overflow into the Coahuila Valley. Such was the case in 1891, when a portion of it was converted into a shallow pool called Salton Lake.

Colorado Springs, in *Colorado*, a fine city, cap. of El Paso co., on 4 lines of R. R., 75 m. S. of Denver. The medicinal springs and fine scenery at Manitou Springs, 5 m. distant, have made this place a famous and fashionable health resort, especially for those suffering from pulmonary diseases. Colorado College and a Deaf Mute Institute are here located. Pop. (1890) 11,140; (1897) about 15,000.

Colorado, University of. (*Educ.*) A State institution of learning, situated at Boulder, Col., 28 m. N.W. of Denver, where it was founded in 1876. This institution is supported by the State and offers tuition free, students being only at the cost of self-support. It has a medical department—the Denver Medical College—a course in law, and collegiate and post-graduate courses leading to the master's and doctor's degree in art, science and letters. Its instructors numbered 69, and its students over 600, in 1897.

Color-line, *n.* A distinction social, political, or otherwise, made between white persons and those wholly or partly of negro blood.

—*n. pl.* A series of parallel lines on a heraldic device, whose direction denotes the tincture.

Colorphobia, *n.* An unusual expression denoting aversion to colored persons.

Colton, in *California*, a town of San Bernardino co., 3 m. S. of San Bernardino. Marble, lime, and brick are produced in large quantities; there are also flour mills, cannery, &c. In a fruit-growing region. Pop. (1897) about 1,600.

Columbian Exposition, World's. An international exposition of industry and science, held at Chicago, in 1893, in commemoration of the 400th anniversary of the discovery of America by Columbus. Chicago having been chosen as the city of the exhibition, a site was selected at Jackson Park, 6 m. S. from the central portion of the city and fronting on Lake Michigan for $1\frac{1}{2}$ miles. To this was added a broad avenue extending to Washington Park, a mile westward, and known during the Fair as the Midway Plaisance, the whole area included being 613 acres. As it was found impossible to have the proposed buildings constructed in time to hold the Fair in 1892, the true anniversary, elaborate and imposing dedicatory ceremonies were held on Oct. 23, of that year (corresponding to Oct. 12, old style, the date of discovery by Columbus). These ceremonies took place in the presence of 130,000 people, the Vice President of the U. S. performing the ceremony of dedication. The formal opening of the Exposition took place May 1, 1893, President Cleveland declaring the Fair open and setting in motion the great Allis engine. The architectural preparations for the Fair were on a grand scale, and presented a most imposing effect, the buildings being largely of classical architecture and covered externally by a white coating, called staff, which at a distance gave them the effect of white marble edifices. In this respect the Exposition was a marvellous success, so imposing and beautiful an architectural group having never before been brought together. The main exhibition building, that of Manufacturers and Liberal Arts was of enormous dimensions (787 by 1,687 feet). The other principal edifices included those for Machinery, Agriculture, Electricity, Mining, Transportation, Fisheries, Horticulture, Fine Arts, Forestry, Woman's Work, and Administration, while there were numerous State, national and other edifices, the whole numbering about 150. The effect of the buildings was largely added to by the landscape preparations, in which artificial canals and lagoons played a prominent part, the adjoining lake lending easy aid to an effective use of its waters. In truth, it was the out-door aspect of the Exposition that attracted most particularly the admiration of visitors, it being pronounced unrivalled for unity of effect and combined architectural and landscape beauty. It is doubtful if anything has ever been seen equalling the Court of Honor, the space fronted by the imposingly beautiful Administration Building, flanked by those of Liberal Arts and Agriculture, and faced on the lake-front by the grand Peristyle, with its Music Hall and Casino; the center being occupied by a broad Basin, adorned with animal sculpture, and displaying at its two ends of the colossal statue of the Republic and the grand McMonnies fountain. Of the class of exhibits, that of electricity was the most novel, nearly everything shown

having had its development since the Centennial Exhibition of 1876, while the Midway Plaisance, with its many amusing and instructive exhibits, seemed to afford most pleasure to visitors. Midway in this rose the gigantic revolving Ferris Wheel, the one especial novelty of the Fair. Of other special exhibits of importance may be mentioned the reproductions of the La Rabida convent, of the flag-ship of Columbus, and of an ancient Viking war-vessel. The spectacular effects of the exhibition were largely due to the electric lights, which were profusely displayed, while electric barges traversed the waters and an electric elevated railroad carried visitors about the grounds. The closing day was Oct. 30, the paid admissions during the 6 months of the Fair having been 272,712 daily, and the greatest attendance on Chicago Day, Oct. 9, when 716,887 persons visited the grounds. The total cost of the Exposition proper was about \$25,500,000, which the expenditures of the State and U. S. governments and of foreign countries, raised to over \$40,000,000. The total receipts were \$28,151,168, and the profit on the Fair about \$1,850,000. Most of the large buildings were destroyed by incendiary fires after the Fair. The Fine Arts Building has been preserved as a permanent memorial, and here is installed the Field Columbian Museum, richly endowed by Marshall Field and others, and opening with a collection whose value is estimated at \$2,000,000.

Columbiana, in *Ohio*, a fine town of Columbiana co., on P., F. W. & C. R. R., 23 m. E. of Alliance. Has various manufacturing interests and abundance of coal near by. Pop. (1897) about 1,700.

Coma, *n.* [Abbreviated from *Coma Berenices*, *Berenice's Hair*.] (*Astron.*) One of Ptolemy's northern constellations. Doubtless this star-group originally belonged to the constellation Leo. It consists of a somewhat widely dispersed cluster of small stars.

Comet, *n.* [Lat. *cometa*; Gr. *komētēs*, from *komē*, hair]. (*Astron.*) Comets are heavenly bodies distinguished from all other such bodies with which we are familiar by the apparently irregular character of their visits to our sky, their erratic motions and, when visible to unaided vision, their extraordinary and portentous aspect. Comets are generally visible for only a few weeks or, at most, for two or three months, when they slowly fade away and disappear from view. In these respects they are so different from the stars and planets, which endure from age to age, that they were formerly looked upon as supernatural visitors, sent to warn mankind of the approach of great calamities. But modern science has removed every cause of alarm by showing that their motions, notwithstanding their seemingly erratic character, are governed by the law of gravitation. Comets visible to the naked eye have occasionally appeared since the beginning of recorded history. Roughly speaking their number has generally ranged between fifteen and thirty in a century, so that they have appeared, on an average, at intervals of a few years. Only a few, say two or three in a century, have been so bright as to excite universal attention and give rise to widespread alarm. But, with the aid of the telescope, it is now found

Fig. 2790.—COMET OF 1819.

that comets invisible to the naked eye are almost constantly visiting our system in such numbers that one, at least, is generally within reach of a large telescope, while not infrequently the astronomer may be able to observe two, or even three, on a single evening. Thus comets are divided into two classes, viz.: bright ones, visible to the naked eye, which appear with comparative rarity, and telescopic comets, which are visible only by the aid of a telescope.

When a comet first becomes visible in a telescope, it generally appears as a faint nebulous or cloud-like patch of light, generally, but not always, with a bright central nucleus. As it approaches the sun, the nucleus becomes brighter and better defined and a tail is gradually formed. The latter is invariably turned away from the sun. The large majority of comets, seen in the telescope, swing around the sun and pass out again into space without becoming visible to the naked eye. The cases are quite exceptional in which a comet becomes so large and bright as to be visible to the naked eye and attract universal attention. The division of a comet into the three parts—the central or star-like nucleus, the cloudy or foggy appearance around this nucleus (called the coma), and the tail the latter sometimes

extending over a large part of the heavens—is so well known to most readers as not to need a detailed description. We shall therefore confine ourselves to a statement of what is known respecting the origin, revolution and constitution of these bodies.

We remark in the first place that comets are to be regarded as belonging to our solar system, and not, as was formerly supposed, as visitors from the far distant wilds of space, or from other stars. This conclusion follows from the fact that the orbits are never hyperbolic, as they would be in the case of an object flying through space with sufficient velocity ever to reach our system. But the large majority of comets, and perhaps all of them, originally move in orbits so eccentric that the portion visible from the Earth cannot be distinguished from a parabola, and a revolution of the comet requires thousands, tens of thousands, or even hundreds of thousands, of years. It has, however, been known for two hundred years that all comets do move in these nearly parabolic orbits. As far back as 1682 Halley showed, by historic records and by calculations of the orbit, that the bright comet of that year had returned at fairly regular intervals of from 75 to 76 years for many centuries. The correctness of this conclusion was shown by the return of the comet in 1835 and again in 1835. This most celebrated of all periodic comets will probably again return between 1910 and 1912, the exact time not having yet been calculated, and will doubtless excite great interest.

Since Halley's time, especially during the past century it has been found that a great many telescopic comets move in regular orbits in periods of a very few years generally between three and nine. Thus a division of comets into other two classes is now recognized, periodic and non-periodic. A periodic comet is one which returns at intervals so short that its appearance can be predicted with more or less certainty. A non-periodic, or aperiodic, comet is one which moves in an orbit so eccentric that it is scarcely possible to determine when, if it will reappear. More than twenty comets of the periodic class have been known. But, for reasons that we shall presently set forth, the number is quite uncertain. Recent investigations make it likely that a comet becomes of the periodic class only by the accident of passing near a large planet. When a comet moving in a very eccentric orbit, and returning only at intervals of many thousand years, swings around the sun at perihelion, and returns back into space without passing near any of the large planets, it will continue its journey in its original orbit without material change, not to reappear for many ages. But, if it passes near a large planet, especially the giant Jupiter, one of two things may happen: If Jupiter, moving in its orbit, passes in front of the comet as the latter is approaching, he will, by his attraction, accelerate its motion. The result of this acceleration will be that the comet will be thrown into a hyperbolic orbit, and pass out into space, never to return. But if Jupiter passes behind the comet, it will retard its motion, change its orbit into an elliptic one of short period. The closer it passes to the comet, the greater will be the effect thus produced, and the smaller will be the period of the comet.

Thus it happens that new comets are from time to time added to the list of those known as "periodic." Unfortunately, the addition of a comet to the system in this way cannot be actually observed; it can only be inferred from the fact that the comet passed very near Jupiter, and is periodic. There is, however, a recent and very remarkable case in a comet known as "1861 V," discovered by Brooks, of Geneva, N. Y. Soon after its discovery it was found to be moving in an orbit of a period of only about seven years. Yet it had never before been observed. An explanation was soon found in the fact that the comet had just come in from a distance almost a collision with the planet Jupiter, having passed among its satellites. In computing how it must have moved before this approach to Jupiter, the comet was found to have been entirely outside of the influence of Jupiter, so that the comet could never have come within the reach of the most powerful telescopes. It is readily understood that a comet thus thrown into a new orbit by Jupiter must, for a long time, in moving round and round the same orbit, pass very near the orbit of Jupiter at every revolution, because the orbits will then intersect. But nothing will happen to the comet in consequence, unless Jupiter should happen to be passing the intersection at the time that the comet is trespassing on his domain. Then the latter will again be thrown into a different orbit, as if sent on a new errand into space on a route which no one can predict. A case of this kind occurred in the nineteenth century. A comet discovered by Lexell, and then known under his name, was found to be a periodic comet, made two revolutions around the sun, and then disappeared. The explanation was found to be that the comet passed so near the planet Jupiter as to be thrown into a new orbit, which did not admit of calculation. At one time it was supposed by Chandler that the Brooks comet, just described, was identical with the comet of Lexell. This, however, is no longer regarded as probable; and Prof. Lewis Swift now believes that it to be identical with the Lexell comet.

A remarkable fact respecting these bodies, which is recently become evident, is, that periodic comets, probably all comets, are of so thin and tenuous a nature that their parts are liable to become scattered, like a puff of smoke in the air. Nearly every one of the periodic comets is found to grow gradually faint at successive revolutions. This appears to be the case even with a comet of such long period as that of Halley.

At its earlier returns, several centuries ago, it was described as of enormous size, the tail extending over a large portion of the heavens. But at its return in 1835 it was a comparatively inconspicuous object. Another remarkable case is that of Biela's comet, of which the disappearance is well authenticated. It was first seen in 1772. The very fact of its discovery at that time shows that it must have been a comparatively bright comet. It was observed at a number of returns, up to and including 1852. In 1846 it was found to be divided into two parts; at the next return, in 1852, the two parts were further apart than before, and from that day to this nothing has ever been seen of Biela's comet. Its orbit passed very near the earth's orbit, so near, in fact, that some of its outlying portions might come in contact with the earth. The consequence was that, after the comet had disappeared, it gave remarkable evidence of the material existence of its scattered parts by the production of a meteoric shower. That is to say, as the earth passed in the neighborhood of where the comet had formerly moved, a number of meteoric particles appeared in the air as shooting stars, and on calculating the movement which these particles must have had, it was found to correspond with that of the comet.

To the question "What is a comet?" science has not yet been able to return an entirely definite and satisfactory answer. From the spectrum we should suppose it to be composed of some form of gas, containing carbon and hydrogen. Vogel made a noteworthy experiment on the subject by putting particles of meteoric iron into a vacuum tube and sending a powerful electric current through the tube. The spectrum thus produced bore a remarkable resemblance to that of comets. But it is difficult to explain how a gas of any sort could be so luminous as to shine by its own light in the celestial space so far from the sun.

The most curious feature of a comet is its tail. This is not an appendage which the comet carries with it, as

g. 2791.—BROOKS' PERIODICAL MULTIPLE COMET OF 1889.

an animal carries its tail, but it is rather in the nature of a stream of vapor, which the comet is constantly sending off as it approaches the sun. Through some agency, not yet established, probably by magnetic or electric repulsion, this stream of vapor constantly rising from the comet is repelled by the sun, and thus driven off into space. The inevitable result is that every comet which has a tail, as every large comet has, is continually losing a part of its substance, and must, in the course of ages, slowly evaporate. But, as this evaporation occurs principally in the neighborhood of the sun, a comet of very long period moving at very great distances from the sun evaporates very slowly, and may endure through any period of time. But those of shorter period, which return to perihelion every few years, evaporate more rapidly, and, as we have just mentioned, are thus subject to continual dissipation. All those we know nothing about will doubtless disappear in the course of few centuries. But new ones are from time to time being brought in by Jupiter to take their places, so that here is no danger of the breed becoming extinct. It is, however, a curious fact that some comets appear to evaporate much less than others. Thus the celebrated Encke's comet, although it performs a revolution in a little more than three years, and passes nearer the sun than most other such comets, does not seem to be fading at any such rate as Biela's comet faded. This fact suggests the conclusion that a comet is a combination of substances, some of which are volatile and others not so. The former are continually being evaporated and form the comet's tail. This view gains strength from the fact that the faint periodic comets show little or no sign of a tail. The nucleus is so very faint, and may, in fact, scarcely be visible at all. The view most generally held in recent times is that such comets are a cloud of minute particles, probably of the nature of meteorites, and that the nucleus is only a part in which these meteorites are thickest. It is doubtful whether the nucleus is a solid body, or a tenuous one of a cloud-like character. An interesting observation, which would have settled this point,

was attempted by Gill at the Cape of Good Hope in 1882. The great comet of that year passed between the earth and the sun, so as to make an actual transit over the sun's disc. The occurrence seems, however, to have been overlooked by astronomers generally in the northern hemisphere. At Gill's station the sun set behind Table Mountain a few minutes after the comet was found, by calculation, to be projected on the solar disc. But no appearance of a black spot could be seen. While the observation suggests that the nucleus may have been so rare as to allow the sun's rays to pass through it, there is still enough doubt on the subject to leave the question open.

A relation between comets and meteoric showers has been well established for thirty years, and gives color to this meteoric view of the constitution of such bodies. It is now known that shooting stars are caused by the earth encountering small meteoric particles which are moving around the sun in orbits generally unknown. But when a meteoric shower occurs, it is sometimes possible to make a calculation of the orbit in which the bodies are moving. It has been found in several instances that the orbits then coincide with those of known comets. Thus the celebrated meteoric shower of November 14th, which recurs about that date at intervals of about one third of a century, has been found to arise from particles moving in an orbit similar to that of a faint comet which appeared in 1866, just before the remarkable meteoric showers of that and the following years. The comet may be expected in 1898 and the showers in the following two years.

Another curious fact lately discovered is that several comets, which cannot possibly be identical, sometimes move in nearly the same orbits. This was the case of the comets of 1843, 1880 and 1882, all so bright as to be visible to the naked eye. The latter is, in fact, the last brilliant comet which has appeared up to the date of the present article. These comets were all remarkable for their very close approach to the sun. On this account it is impossible to predict their return, but all calculations show that each of them must have a period of at least several centuries.—*Periodic Comets.* The following table includes all those comets which, by a return to perihelion, have demonstrated their periodicity:

Name.	Period in Years.	Name.	Period in Years.
ENCKE'S	3.30	D'ARREST'S.....	6.39
TEMPEL'S II.....	5.20	*BIELA'S (north)...	6.59
BARNARD'S I.....	5.40	*BIELA'S (south)...	6.63
SWIFT'S I.....	5.50	BROOKS' I.....	7.10
BROSEN'S.....	5.56	FAYE'S.....	7.41
WINNECKE'S.....	5.64	TUTTLE'S.....	13.78
TEMPEL'S II.....	6.00		

Halley's, next appearance, A.D., 1912.
Pons-Brooks', next appearance, A.D., 1955.
Alber's, next appearance, A.D., 1960.

* Lost since 1852.

The following table includes all those comets which are computed as periodic, but which have not been so proven by a subsequent return:

SWIFT'S II (now due)	BROOKS' II
BARNARD'S II	DEMING'S
DE VICO'S	BROOKS' III
E. SWIFT'S	FINLAY'S
LEXELL'S	WOLF'S
SWIFT'S III	PERRINE'S
BARNARD'S III	GIACOBINI'S

De Vico's comet, discovered fifty years ago, had a computed period of $5\frac{1}{2}$ years, but was not again seen until 1895. The elements of this comet are so nearly identical with those of the Edward Swift comet as to leave no doubt that they are one and the same. So, also, the Lexell comet, lost for 125 years, though its period is only $5\frac{1}{2}$ years, is thought to be identical with that of Swift III, discovered in 1895, the elements being very similar. It will be noticed that all of the comets of established periodicity, except the three last named, have short periods. Barnard's second comet was undoubtedly seen once in 1895.—References: Guillemin's *World of Comets.*

Comet Eye-piece, n. (*Astron.*) An eye-piece for comet-seeking telescopes, with lenses of long focus, and field-lens of large diameter.

Comet-Seeker or Comet-Finder, n. (*Astron.*) A small telescope of low magnifying power and wide field of view, employed in the search for comets. It has usually an aperture of 3 to 5 inches, and is of short focal length. The telescope, in its best form, is bent at a right angle, with the eye end horizontal, thus enabling the observer, without leaving his seat, to sweep the sky from the zenith to the horizon.

Com'fort, GEORGE FISK, L.H.D., educator, was born Sept. 20, 1833, at Berkshire, N. Y. He was a graduate of Wesleyan University, and began his career as a teacher. From the period of 1866-68 traveled in Europe and the East. On his return to the U. S. he was appointed professor of Modern Languages and Aesthetics in Alleghany College, afterward holding, in 1872-87, the same professorship in Syracuse University. He received the appointment of Dean of the College of Fine Arts of the Syracuse University in 1873, and was made president of the Southern College of Fine Arts, La Porte, Tex., 1892. He is the author of *Aesthetics in Collegiate Education*; *Art Museums in America*; *The Land Troubles in Ireland*, &c.

Com'ic, a. Exciting or raising mirth; fitted to cause merriment; diverting; sportive; ludicrous; as, a *comic* song, a *comical* adventure.

"Stately triumphs, mirthful, *comic* shows."—*Shaks.*

Comical'ity, n. That which is mirthful, comical, or ludicrous; as, the *comicalities* of a buffoon.

Com'ically, adv. In a comical, or mirth-provoking manner.

Com'icalness, n. State or quality of being comical.

Com'icry, n. Comicality; art or power of exciting merriment; as, "Cheerful *com'icry*."

Comines', PHILIPPE DE, a French statesman and historian, born at the castle of Comines, near Lille, 1445. He entered the service of Charles the Bold, Duke of Burgundy. In 1472 he was sent by Charles to the French Court, entered the service of Louis XI., and remained in it till the king's death, in 1483. Litigation then arose respecting some estates given him by Louis, and he was imprisoned. On his release he was made a councillor by Charles VIII., whom he followed in his invasion of Italy. He retired in 1498. His *Mémoires* present a very vivid and authentic portraiture of the court of Louis XI., and of the principal events and general character of the age in which he lived. Died in 1509, at his domain of Argenton.

Com'ing-in, n. That which comes, as revenue or income.

"What are thy rents? what are thy *comings-in*?"—*Shaks.*

Commen'sal, a. [Lat. *com* (*cum*), together, *mensa*, table.] Eating at the same table with another or others.

—In the biological sense, associated with another, as described under COMMENSALISM.

—n. A table companion; one who eats at the same board.

—In biology, a commensal organism.

Commen'salism, n. [Literally, "at the same table."] (*Biol.*) A term indicating the close, but not parasitic, association of two organisms, for the benefit of one or both. Numerous examples of this association have been observed in the animal and plant world. There are many accidental combinations, of no special advantage to either side, as when a sea shell is covered externally by sponges, worm tubes, acorn shells, and the like. But in cases where a crab is covered by such organisms the advantage is mutual, the crab being masked and able to approach its prey unobserved, while the sedentary organisms are benefitted by being carried about. There is a higher grade of commensalism where the partnership is deliberate, the bearer of the external form aiding the operation. This is seen in the case of certain hermit crabs, which carry about sea anemones in the sea-shells they inhabit. When these crabs change their homes, leaving one shell to take up a residence in another, they make efforts to induce the anemones to also change their place of residence, and are ill at ease until provided with partners. Here the stinging powers of the anemone are a benefit to the crab, while they, in a measure, divide the spoil between them. In other cases commensals are associated without being attached. Small fishes are sometimes found habitually dwelling within sea anemones, while little crabs make their homes within bivalves or sponges, and many worm types are found in constant free association with other animals. So many of the insects which frequent plants are commensals, not feeding on the plant but on other visitors. They, in some cases, protect the plant from injury by other forms. Commensalism differs both from *parasitism*, in which one organism preys upon the other, and *symbiosis*, in which the partnership is much more intimate, as when an alga and a fungus combine to form a lichen, or algae are internal associates of certain worms and other animals.

Com'mentry, a mining town of France, dept. Allier, on the (Euil. 8 m. S.E. of Montlucon. It is seated in the midst of one of the largest of the French coal-fields. Pop. (1895) 9,316.

Com'merce, n. [Lat. *commercium*, from *com* (*cum*), together, and *mercis*, goods, wares, merchandise.] (*Polit. Econ.*) In general, the exchange or interchange of commodities; specifically, exchange on a large scale, particularly between nations.—Primarily, *C.* took the form of barter, one class of goods being directly exchanged for another, and the field of operations being therefore restricted. The invention and development of monetary systems naturally led to the widening of *C.*, so that, within the period of authentic history, it has generally consisted of the exchange of goods for money. The latter, however, in the forms that alone can be used in the international exchanges (i. e., gold and silver) is itself a commodity, and is transferred from one country to another by weight, and frequently uncoined, the mint stamp being simply a guarantee of fineness. Strictly speaking, therefore, international *C.* consists wholly of an exchange of commodities, the shipment of coin or bullion to settle so-called "balances" being actually a transfer of merchandise. [See MONEY.]—*C.* began in a remote prehistoric period. Of this we have evidence in the fact that sea shells from the Florida coast have been found in Indian burial mounds as far north as Ohio and Illinois, indicating an ancient barter between the two sections. Similar evidences have been found elsewhere. As regards historical *C.*, it first appears to us in the form of caravan traffic between the peoples of Egypt and southwestern Asia. This in time grew into great activity and gave rise to a number of important commercial cities, such as Petra and Damascus. The oldest record of ocean *C.* comes to us from Babylonia, from whose cities on the Persian Gulf, such as Ur, ships appear to have made their way to the ports of Arabia and India, exchanging

the diverse wares of these several countries. From this locality the ancestors of the Phœnician people migrated some 4,000 years ago to the shores of the Mediterranean, engaged there in the commercial enterprises to which they had been accustomed in their original home, and in time developed a very active ocean C., extending throughout the Mediterranean basin, and beyond the Straits of Gibraltar. A number of commercial colonies were founded, and one of these, the city of Carthage, succeeded to the Phœnician C. after the destruction of Tyre and Sidon. From this time forward the history of C. is principally confined to sea traffic. Doubtless an active land traffic existed, which we know to have been the case between Europe and Asia down to a comparatively recent period; but little of this enters into history, while, on the contrary, ocean traffic and the wars to which it gave rise play a most important part in the annals of the nations. Men have fought as fiercely to win or hold the commercial dominion of the sea as for any other purpose known in history. A summary of the later progress of oceanic C. will here suffice. The ancient Greeks became a very active commercial people, sending their ships to every part of the Mediterranean and the Black Sea, and building numerous commercial cities which became the centers of an active overland traffic. In Rome there was much less of true C., the produce of the provinces being largely brought to the imperial city as tribute, and of foreign lands as the spoils of war, exchange of products being thus greatly reduced. After the fall of the empire, the most active centers of C. were Venice, Genoa, Pisa and other Italian cities, whose ships dealt with the East, and brought to Europe the commodities of distant Asia, transported by caravans. The Arabs also entered actively into C., while the taking of Constantinople by the Turks and the closing of the port of Alexandria to European ships put an end to the commercial prosperity of Venice and Genoa. In the West, commercial development made itself felt in the formation of the Hanseatic League, composed principally of trading cities of northern Germany, which for several centuries controlled the trade of the north of Europe from Russia to the British islands. The closing of the ports of Egypt and the Black Sea, and the loss of the rich trade of Asia, drove the nations of southern Europe to efforts to reach eastern Asia by sea, the Portuguese making the attempt to circumnavigate Africa, the Spaniards, at the instigation of Columbus, seeking to reach Asia by crossing the Atlantic. The result of the effort of Portugal was a rich traffic with the East Indies. That of Spain was the discovery of America, which, however, gave rise to a system of tribute and spoliation rather than commercial exchange. The commercial eminence of Portugal and Spain did not long continue. Holland soon came into active rivalry with them, France became an active commercial power, and eventually England rose into eminence as the supreme commercial center of the world. This eminence it retains, though in the latter part of the 19th century the U. S. and Germany became its active rivals in oceanic traffic.—*Inland Traffic.* Internal C., while not making so great an appearance in history as oceanic, has been no less great, since most of the goods carried in ships had first to be transported overland to maritime ports and subsequently distributed overland to localities of consumption. During the mediæval period, much of the internal C. of Europe was performed through the medium of great markets, or fairs. Important cities arose through the location of fairs in their midst, to which merchants brought their goods in quest of customers. Such market towns still exist in Europe and parts of Asia, of which the most famous is Nijni-Novgorod, on the Volga, in Russia, whose annual fair brings buyers and sellers from all lands between Germany and China. The slow and inefficient method of internal traffic in the past, by the aid of pack animals and wagons, was in a measure superseded in the early 19th century by canals and steamboats, and has now been very generally replaced in civilized lands by the use of railroads. And this new and efficient means of carriage is rapidly penetrating Asia, for untold centuries the home of the caravan. For ages the policy of governments did not tend to the fullest expansion of C. Imported or exported goods furnished such convenient subjects for taxation that much of the revenue of cities and nations was raised by this means, while internal trade was also hampered by a system of taxes of which remnants still exist in Europe in the *octroi*, the municipal tax levied on articles of food which enter the gates of cities. For many centuries the development of C. was hindered also by piracy on the ocean and robbery by baronial castles on the land, and by privateering assaults on the C. of nations during war. Navigation laws were also passed, particularly by England, for the restriction of trade to the ships of that nation. These navigation laws, as applied to the American colonies, so greatly hampered colonial C. as to form one of the leading causes of the rebellion of the colonies. In the Constitution of the U. S., internal restrictions to C. by taxation are expressly prohibited, and throughout the interior of that great country the exchange of commodities is absolutely free. In regard to external traffic, an important question has been long considered, whether it would prove most advantageous to the country to follow the practice now adopted in Great Britain and known as Free Trade, or continue to tax imports, both as a means of revenue for the government and for the protection of American manufacturers. The controversy between the advocates of Free Trade and Protection has gone on for nearly a century, and seems as far from a satisfactory solution as

ever. Despite the restriction of taxation on imports and the higher price of exported goods due to the protective policy, the U. S. enjoys a very large ocean C., the value of exports during the year 1896 aggregating \$863,200,487, and of imports \$779,724,674. It specie be looked upon as a commodity, which commercially it is, the exports aggregated \$1,036,152,104 and the imports \$842,026,925, leaving a debt of nearly \$200,000,000 due from foreign countries to the U. S. The question of how the payment of this debt was provided for belongs to the subject of finance, and need not be considered here. It is sufficient to say that, inasmuch as all international C. is made up of exchange of commodities, the imports of any nation cannot for any considerable period or in the aggregate largely exceed its exports, without the creation of either a temporary or bonded debt, of equivalent proportions, which must eventually be settled by the products of the debtor country, or not at all.—A striking feature of the recent development of our own domestic C. is the almost total extinction of the middleman, or "jobber," in certain lines, the tendency being stronger every day to bring the manufacturer and the consumer into immediate contact. Many large manufacturers now dispose of their products at retail, sometimes by the establishment of branch stores, and frequently by means of extensive advertising and mail orders. The practice of sending out solicitors, or "drummers," for many years confined to wholesale and jobbing concerns, has now extended very largely to the retail trade. There is also a growing disposition to sell goods on partial periodical payments, known as the "instalment plan," with a view to increasing sales through making it apparently easier to pay for goods. How far this evolution may extend cannot now be foreseen.

Commercial Agencies. See MERCANTILE AGENCIES.

Commercial Crises. (*Com. and Fin.*) Periods of depression in trade, of which numerous examples exist in the history of commerce. Commercial business has rarely proceeded uniformly, but has been subject to seasons of prosperity and adversity; the former due usually to speculative activity, in which merchants sought to extend the sphere of their operations beyond their means; the latter to a loss of confidence in the industrial situation, contraction of operations, fall in prices, discharge of workmen, and the ruin of many seemingly flourishing lines of business. Such a crisis usually begins with a financial panic, leading to numerous failures in financial and other institutions. The panic, which is temporary in effect and confined to speculators, is followed by an industrial depression, which affects the whole business and working community, and whose effects often extend over years. History records several such crises of great severity. One of the greatest was that of 1720, due to the operations of John Law in French securities and a wild fever of speculation in Mississippi lands. About the same time a great crisis arose in Great Britain from the collapse of a speculative movement in Pacific lands, known after its failure as the "South Sea Bubble." Another interesting example was that known as the "Tulipomania," due to an active speculation in tulip bulbs, then raised largely in Holland and commanding extravagant prices. A somewhat similar commercial trouble arose from a speculative movement in the sale of the mulberry tree for the rearing of silk-worms, with the idea of a great development of the silk industry. The disastrous effects of this were felt severely in many parts of the U. S. Various later examples of the commercial crisis might be quoted from European history, of which one of the most disastrous in England was that arising from the speculative activity that followed the Napoleonic wars. The U. S. has experienced various commercial depressions, of which the first of striking importance was that which began in 1837, due to the unsound condition of the financial institutions of the country, and a speculative fever in the purchase of Western lands and other insecure enterprises. Twenty years after, in 1857, came another severe period of depression, due to a variety of causes, which cannot easily be stated, and whose effects were felt throughout the civilized world. The old system of banking in this country had much to do with the severity of the results, which continued until after the breaking out of the Civil War in 1861. In 1873 began the third great commercial crisis of the U. S. Its causes, like those of the last mentioned, were too varied to be here enumerated, the inflation in prices and the speculative activity which had continued since the Civil War, having much to do with them. A financial panic preceded, the first event being the failure of the great banking house of Jay Cooke & Co., in Sept., 1873. Other failures followed rapidly and ruin spread widely, though the improved condition of the banking institutions prevented their becoming involved to the same extent as in 1837 and 1857. The commercial crisis that followed was of extended duration, and prosperity did not return to the country till 1879. A panic on a smaller scale took place in 1884 and depression continued during the succeeding two years, while Europe was seriously affected in 1890 by the failure of a series of wild operations in Argentine and African securities, and of French speculations in copper. The crisis was precipitated by the failure of the great London house of Baring Brothers, a concern which had long maintained the highest standing. This European trouble did not particularly affect the U. S., but in that country a fourth great commercial crisis began in 1893, the resulting depression continuing until 1897. By good fortune, or sound measures of finance, the banks were not seriously involved, the panic not coming in an unforeseen man-

ner, affording the banks an opportunity to prepare. But the contraction of loans which this preparation involved proved serious to the commercial world, and a depression ensued equal to, if not greater than, any the country had previously experienced, and whose effects continued with little mitigation for the succeeding four years. The causes of this crisis are as difficult to formulate as in the case of those that had gone before. Each political party charged the other with producing it. The Democrats attributed it to the extravagance of the preceding Republican administration. The Republicans held that it was due to fears of Democratic lowering of the tariff. The Silver Democrats and Populists claimed that its cause was an undue contraction of the circulating medium, beginning in the demonetization of silver in 1873, and accentuated by the repeal of the Sherman silver purchase bill in 1893. The Socialists declared that it was the natural result of the individual system of business, resulting in trusts and monopolies, and that the only remedy for commercial crises was governmental ownership of the means of transportation and production, and a general co-operative system of industry. An advanced school of economists, well represented by Mr. Arthur Kitson in his *Scientific Solution of the Money Question* (Boston, 1894), ascribes financial panics to the employment of metallic monetary standards, asserting that, the nature and functions of money being ideal efforts to maintain a material standard must inevitably result in periodical panics due to a readjustment of the currency to its metallic basis; and, further, that without such periodical readjustment, whose invariable concomitant is panic and subsequent commercial and industrial depression, the so-called "standard of value" would soon pass out of recognizable existence. In other words, that the "standard of value" causes the panic, and that without the panic the "standard of value" must speedily become a nonentity.—Which of the theories advanced is most nearly correct, or to what an extent all these and other influences were concerned in the result, it is not our purpose to discuss here at length; a perfectly satisfactory solution of the problem is yet wanting. In conclusion it may be said that we have not here attempted to give a complete history of commercial crises in the U. S., but have confined ourselves to those of leading importance and magnitude.

Commercial Travellers. (*Commerce.*) Persons whose occupation is to transact business, as the agent of a trading house or manufactory, with business firms throughout the country, a method of conducting business which began in England early in the 19th century, but much later in the U. S. Not many years have passed since it was the custom for the merchants of town and country to seek the great cities and personally order their goods from the large wholesale trading houses. Competition between these houses inaugurated the custom of sending travelling agents to the small merchants, and this has grown into so extensive a system that the annual visits of merchants to central cities have in great measure ceased. The "drummer," as the C. T. is commonly called in the U. S. ("bagman" or "rider" in England), is a recognized institution, with out whom the active business of to-day could hardly be performed. In 1890 there were probably 300,000 of such travellers in the U. S., and the number is steadily on the increase. Among them have been formed several benevolent associations, including the Commercial Traveller Association of New York; the Northwestern Traveller Men's Association of Chicago; the Order of Commercial Travellers, a secret society; the Travellers' Protective Association, &c. An extensive and magnificent honor for C. T. has been erected at Binghamton, N. Y.

Common Schools. See SCHOOL.

Commune, n. (*Fr. Hist.*) See FRANCE.

Compass-plant, n. (*Bot.*) A variant name for the Polar plant, *Silphium laciniatum*. It is said to possess the remarkable tendency to have the plane of its leaves directed north and south, so that these points of the compass can readily be determined from their examination. Mr. Meehan, of Philadelphia, states that this peculiarity is only appreciable in young plants when they first come up; after becoming large and heavy they are moved out of place by the wind and rain, and are unable to regain their original position.

Compressed Air Bath. (*Hygiene.*) A strong chamber of riveted iron plates, large enough to contain two or more persons, into which air can be driven by engine power at any required pressure, valves regulating the inflow of fresh and the outflow of foul air. These baths patients remain from one to three hours under a pressure of about one and a half atmospheres. The air can be rarefied if desired. Another apparatus for the same purpose consists of a mask tightly covering the mouth and nose, and connected with an apparatus for compressing or rarefying the air. The general effects of compressed air are to lessen the frequency of the lung movements and the heart and pulse beat, while allowing more oxygen to be absorbed and increasing the tension of the blood. Rarefaction produces the contrary effects. Compressed air is considered useful in cases of asthma, chronic bronchitis and catarrh, and rarefied air in emphysema, while the treatment aids in increasing the power of the respiratory muscles and the vital action of the lungs.

Compressed Air Motors. As a means of the transmission of motive power, the value of compressed air has been fully tested in certain railroad tunnels, in those of Mont Cenis, Italy, and the Hoosac Mountain, Mass. In these cases the air was compressed by the aid of water power at Mont Cenis, and by steam at Hoosac Mountain, and was then transmitted through

tubes to the interior of the tunnel, where it operated the rock drills by means of pistons working in cylinders. The value of compressed air as a motive power has long been recognized, the main difficulty in utilizing it being that of providing means whereby the full power contained in the air under compression can be employed economically and at serviceable pressures. The construction of the Beaumont engine, an English invention, is based upon the principle of utilizing the entire power stored up in compressed air, no matter how high the pressure may be. This is effected by admitting the air into successive cylinders, having different areas, commencing with the smallest, and in making provision by which, as the pressure falls in the reservoir, the consumption of air can be increased. In other words, the elasticity and the expansive properties of air are taken full advantage of in this engine, just in the same way as the corresponding properties in the vapor of steam are utilized in the compressed steam engine; that is, in each case the jars are expanded from the small and high pressure cylinders into the large and low pressure cylinders. American inventors have of late years been busily at work in this field, availing themselves of the useful results obtained by their predecessors, and have achieved an important measure of success, compressed air being now employed as a source of power for the moving of street cars. Cars equipped with compressed air motors were tried in 1896 and 1897 on some of the lines in New York, with fair but not fully satisfactory results. In the working of these the air is compressed in receivers at central stations, transferred to the car—an operation very quickly performed—and gives out its power gradually to the motor, the car being carried a considerable distance before renewal becomes necessary. Compressed air is also employed in the working of pneumatic tubes by which letters are sent through tubes from a central to branch post-offices in cities, and for various other purposes.

Compressibility of Liquids. (*Phys.*) For a long time it was supposed that liquids were absolutely incompressible. The experiment known as the *Florentine Experiment* was held to point to this conclusion. A hollow metallic globe said to be of gold, and also of lead, was filled with water and perfectly soldered. This was submitted to great pressure. Since of all solids, for the same surface, a sphere has the greatest contents, it follows that if none of the water escape, any flattening of the globe must be attended either by a diminution of the volume of the contained water, showing its compression, or by a stretching of the metal. It was found that the water was forced through the metal, appearing as dew on the outside. This was viewed as a proof that the water was incompressible. That water, mercury, and several other liquids are compressible, and their compression measurable, was shown by Ørsted. A great number of liquids were examined by Colladon and Sturm, with somewhat different results. The apparatus used for measuring the compressibility of liquids has been named the *piezometer*. That shown in the accompanying illustration is the form invented by Ørsted, as improved by MM. Despretz and Saigey; it consists of a strong glass cylinder with very thick sides and an internal diameter of about $3\frac{1}{4}$ inches. The base of the cylinder is firmly cemented into a wooden foot, and on its upper part is fitted a metallic cylinder closed by a cap which can be unscrewed. In this cap there is a funnel, R, for introducing water into the cylinder, and a small barrel hermetically closed by a piston, which is moved by a screw, P. In the inside of the apparatus there is a glass vessel, A, containing the liquid to be compressed. The upper part of this vessel terminates in a capillary tube, which dips under mercury, O. This tube has been previously divided into parts of equal capacity, and it has been determined how many of these parts the vessel A contains. The latter is ascertained by finding the weight P, of the mercury which the reservoir A contains, and the weight, p, of the mercury contained in a certain number of divisions, n, of the capillary tube. If N be the number of divisions of the small tube contained in the whole

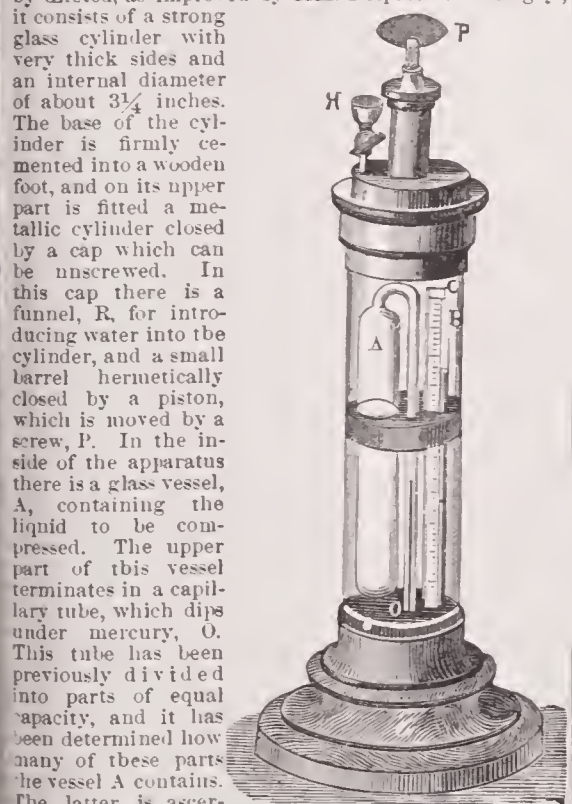

Fig. 2792.—PIEZOMETER.

reservoir, we have $\frac{N}{n} = \frac{P}{p}$, from which the value of N is obtained. There is further a *manometer*. This is a glass tube, B, containing air, closed at one end, and the

lower extremity of which dips under mercury. When there is no pressure on the water in the cylinder, the tube B is completely full of air; but when the water within the cylinder is compressed by means of the screw P, the pressure is transmitted to the mercury, which rises in the tube, compressing the air which it contains. A graduated scale fixed on the side of the tube shows the reduction of volume, and this reduction of volume indicates the pressure exerted on the liquid in the cylinder. In making the experiment, the vessel A is filled with the liquid to be compressed, and the end dipped under the mercury. By means of the funnel R, the cylinder is entirely filled with water. The screw P being then turned, the piston moves downward, and the pressure exerted upon the water is transmitted to the mercury and the air; in consequence of which the mercury rises in the tube B, and also in the capillary tube. The ascent of the mercury in the capillary tube shows that the liquid in the vessel A has diminished in volume, and gives the amount of its compression, for the capacity of the whole vessel A in terms of the graduated divisions on the capillary tube has been previously determined. In his first experiments, Ørsted assumed that the capacity of the vessel A remained the same, its sides being compressed both internally and externally by the liquid. But mathematical analysis proves that this capacity diminishes in consequence of the external and internal pressures. Colladon and Sturm have made some experiments allowing for this change of capacity, and have found that for a pressure equal to that of the atmosphere, mercury experiences a compression of 0.000005 parts of its original volume; water a compression of 0.00005, and ether a compression of 0.000133 parts of its original bulk. For water and mercury, it was also found that within certain limits the decrease of volume is proportional to the pressure. Whatever be the pressure to which a liquid has been subjected, experiment shows that as soon as the pressure is removed, the liquid regains its original volume, from which it is concluded that liquids are perfectly elastic.

Com'stock, ANTHONY, was born March 7, 1844, at New Canaan, Conn.; received his education at the academies of New Canaan and New Britain, Conn. During the Civil War served in the Union Army from 1863-65. Since March, 1873, he has held the office of post-office inspector, and that of secretary and chief special agent of the New York Society for the Suppression of Vice. In the interest of good morals, Mr. C. with his associates, has destroyed some 50 tons of obscene matter and 17 tons of gambling materials. His books include: *Frauds Exposed; Traps for the Young; Gambling Outrages*, &c. He has contributed various papers to the *North American Review* and other magazines.

Con'ant, THOMAS JEFFERSON, D.D., was born at Brandon, Vt., Dec. 13, 1802. He was a graduate of Middlebury College, Vt., and also studied in Germany. He held several professorships, his subjects being language, or Biblical literature and criticism. Under the auspices of the American Bible Union he prepared a revised English Bible. He was afterward engaged in assisting in the revision of the authorized version of the Old Testament, and was the author of annotated translations of the books of *Job; Proverbs; Psalms; Matthew*, and *Genesis*. Died 1891.

Concor'dia, in *Kansas*, a thriving city, cap. of Cloud co., on four lines of R. R., 155 m. W. of Atchison. Has large flour mills, foundry, &c. Coal and building stone are plentiful in the vicinity. Pop. (1890) 3,011; (1897) about 4,000.

Con'crete, n. (*Masonry.*) The *Béton Coignet* is a concrete of great value and importance, invented by M. Coignet, a French engineer. The process of preparing this concrete consists simply in mixing a large quantity of sand with a small quantity of hydraulic lime, to which has been added a minute portion of Portland cement. This mixture, slightly moistened with water, is subjected to an energetic trituration, with compression, so as to produce a pasty or pulverulent powder. This pasty powder is then thrown in thin layers into moulds, where it is agglomerated vigorously by the blows of a hammer, causing it to set almost instantaneously. In less than eight days the concrete becomes so hard as to allow of the removing of the centering from arches twelve feet in diameter, a thing which could not be properly done in the same time with the best masonry. This concrete is applied in France to a great variety of subjects—palaces, private residences, churches, archways, reservoirs, sewers, water-pipes, &c.—all capable of being formed out of a single piece; of the greatest solidity; of perfectly smooth exterior, and susceptible of embellishment with every variety of adornment; impervious to water; secure against the action of frost; and all at an expense very appreciably less than that of ordinary masonry.

Condens'ery, n. A term applied locally, but not without philological warrant, to a factory where condensed milk is made.

Confed'rate States or Southern Confederacy. (*Am. Hist.*) The name adopted by the Confederacy formed by the eleven Southern States which seceded from the American Union in 1860-61 and established a government which continued until the close of the Civil War in 1865. These States consisted of South Carolina (seceded Dec. 20, 1860), Georgia, Alabama, Mississippi, Florida, Louisiana and Texas, which seceded during January and February, 1861, and Virginia, North Carolina, Tennessee and Arkansas, which joined the Confederacy later. On February 4, 1861, a convention of delegates from the seceded States met at Montgomery, Ala., and formed a Confederacy on a consti-

tution modeled on that of the United States, except that it asserted the right to take slaves into any State or Territory of the Confederacy and hold them there as property. Jefferson Davis was made President and Alexander H. Stephens Vice-President *pro tem.*, and they were afterward elected without opposition for a regular term of six years. Montgomery was chosen as the capital and the first Congress of the Confederacy was held there. After the secession of Virginia, Richmond, the capital of that State, was made the capital of the Confederacy, and continued the seat of the Government until its termination on the surrender of General Lee.

Conges'tive Fever. (*Pathol.*) A term that has been applied to various forms of low fever of the intermittent, remittent, and continued type, in which there are congestion and disproportionate disturbances of the brain and lungs.

Con'go Free State. A country organized by the International Congo Conference held at Berlin, in 1885, and placed under the sovereign control of the King of the Belgians. By his will, in 1889, he bequeathed all his rights over the State to Belgium, and by a convention held in 1890, the territories of the State were declared inalienable, but the right was reserved to Belgium to annex it in 1900. The C. F. S. owes its origin to the exploration of the Congo River, by Stanley, in 1876-77, and the subsequent formation of companies for trade and exploration in that region. One of these, the International Association of the Congo, sent Stanley up the great river in 1879, for a fuller exploration and to take steps for the development of the country. His explorations were extensive, roads were made, stations built, and treaties made with over 400 chiefs. These treaties conveyed the limited sovereignty of the chiefs to the International Association, which appealed to the great powers to combine these small powers, into a single state. The U. S. took the first step in this, recognizing in 1884 the International Association of the Congo as a sovereign power, under the title of the C. F. S. Other nations followed, and on Feb. 26, 1885, the state was finally constituted, as above mentioned, by the International Congo Conference at Berlin. The convention declared the State to be neutral and free to the commerce of all nations, provided for the free navigation of the Congo and its affluents, proclaimed religious freedom and equality of treatment to settlers of any nationality, and declared in favor of the abolition of slavery, suppression of the slave trade, and the educating and civilizing of the natives. In 1890, by an International Conference held at Brussels, the C. F. S. was authorized to levy duties on certain imports, as a means of raising revenue. The State, as at present constituted, is officially named the Independent State of the Congo.—*Area.* The State, in its lowland portion, comprises the Congo river (which is bounded on the South by Portuguese territory) and a small strip of land north of that river, from its mouth to Manyanga. From Manyanga it is bounded on the N. by the Congo (north of which lies French Congo) to the Mobangi or Ubangi River. Thence its boundary follows the latter stream to 4° N. Lat., thence runs E. for about 10 degrees of longitude to 30 E. Lon., thence S. to Lake Bangweulu, and westward to the sources of the Kassai River, thence by an irregular line to the the Kwango, and from there to the Congo at Nokki, from which point it follows the Congo to its mouth. It is estimated to have an area of 900,000 sq. miles, being nearly one-twelfth of all Africa. This great area is traversed throughout by the Congo and its affluents, is tropical in climate, and possesses a population estimated at 30,000,000 to 40,000,000. Its exports consist of palm oil, caoutchouc, ivory, orchilla, copal, peanuts, camwood, coffee, &c. Wild coffee, tobacco, rice, maize and sorghum are cultivated on the upper river; and bananas, pineapples, mangoes and other tropical fruits abound.—*Inhabitants.* The inhabitants of the Congo basin belong to the Bantu race, a happy, inoffensive people, less dark in color than the Fan or Ethiopian race. They are divided into many small tribes, and are naturally disposed to trade. Their religion is fetichism, and domestic slavery is universal, but is a slavery of a very different type from the cruel system of the Arabs.—*Government.* At present civilized occupancy extends but a short distance up the main stream, and most of the natives of the interior are free from control. The government consists of an administrative bureau at Brussels, comprising three departments, Control, Finance, and Foreign Affairs, with an administrator on the Congo, whose headquarters are at Zoma, 60 miles from the mouth of the river. The income is derived from an endowment of \$200,000 a year by the King of the Belgians, a loan from the Belgian State, taxes, dues, and the sale or rent of lands, the annual revenue being about \$1,000,000. The main original purpose of the formation of the State was the suppression of the slave trade, and this has been measurably accomplished, though not without warlike conflicts with the Arabs. This suppression has been in great measure due to the watchful care of the British, German, French and Portuguese authorities in the surrounding territory. There is kept up an armed force of blacks, with white officers, while the Congo and its affluents are patrolled by vessels, of which there are a number on the river. Navigation of the Congo is impossible from Vivi to Stanley Pool, on account of the rapids, and a railway 250 miles long is being constructed around these rapids, of which nearly 100 miles are open for traffic. The completion of this road will be of the greatest advantage to the State, and aid immensely in its development.

Congress of Religions. A meeting of representatives of the various Christian denominations and other religious bodies of the world, held at Chicago during the World's Columbian Exposition of 1893.

Buddhism, Mohammedanism, and other Asiatic forms of faith were represented, and despite the diversity of faiths much harmony prevailed, while there was a free statement of the tenets of the different religions and of their claims to consideration, and a liberal interchange of opinion. The result was, doubtless, beneficial to the members of the Congress, though it exerted little influence on the country at large.

Congressional Apportionment. The number of people apportioned by act of Congress to be represented by one Representative in Congress. In the first article of the Constitution of the United States it is provided that the number of members of the House of Representatives shall not exceed one for every 30,000 of the population, but that each State shall have at least one Representative. As the population has increased, the ratio of representation has been correspondingly increased, so as to prevent the number of Representatives in the House from becoming unwieldily large. After each census Congress has passed an act fixing the ratio for the succeeding ten years. The successive ratios since the formation of the Government have been as follows:

From 1789-1792, as provided by the Constitution,	30,000
" 1792-1803, based on the Census of 1790,	33,000
" 1803-1813, " " 1800,	33,000
" 1813-1823, " " 1810,	35,000
" 1823-1833, " " 1820,	40,000
" 1833-1843, " " 1830,	47,700
" 1843-1853, " " 1840,	70,680
" 1853-1863, " " 1850,	93,420
" 1863-1873, " " 1860,	127,381
" 1873-1883, " " 1870,	131,625
" 1883-1893, " " 1880,	151,912
" 1893-1903, " " 1890,	173,901

Conine (*kō'ne-in*), *n.* (*Chem.*) This alkaloid, noticed in SECTION I of this work under its other spelling, *conine*, has been artificially prepared by Ladenburg by heating alcohol and ammonia at 210°, together with butyraldehyde, precipitating with platinum salt, and distilling the product. The artificial alkaloid is entirely similar in its reaction and physical properties to the native, and possesses like poisonous qualities. *C.* (also known as conine, conicine, and cicutine) is an oil of disagreeable odor, extracted from the water-hemlock. It is violent in its poisonous action, producing paralysis of the motor nerves. It is closely related chemically to *piperidine*, an alkaloid obtained from pepper, which in its turn closely approaches *pyridine*, a substance obtained from bones through heating.

Conkling, ROSCOE, LL.D., statesman, was born in Albany, N. Y., Oct. 30, 1829. Studied and practiced law. In 1848 he settled in Utica and was elected Mayor in 1858. He was four times elected a member of Congress, and three times a U. S. Senator from New York. During the war he was a warm advocate of the Northern cause and took an active part in the reconstruction of the Southern States. Not approving of President Garfield's assumption of the control over appointments in New York State, he resigned his senatorship May 16, 1881. He declined the office of Associate Justice of the Supreme Court which was tendered him March 2, 1882. Died in New York, April 18, 1888.

Connasau'ga River, in Georgia, rises in Fanning county, and touches the southern boundary of Tennessee, from which it runs in a south southwesterly direction and unites with the Coosawattee river at a point about three miles east of Resaca, Georgia. The stream formed by this union is known as the Oostenaula river.

Con'ner, JAMES, was born in Charleston, S. C., Sept. 1, 1829. In 1849 graduated at South Carolina College, and was admitted to the bar in 1852. Received the appointment of U. S. District Attorney to South Carolina in 1856, an office which he resigned in 1860. He entered the Confederate army in 1861 as captain, and was promoted to the position of acting major general. In 1876 he was elected attorney general on the ticket with Hampton for governor; resigned in 1877. Died June 26, 1883.

Con'nor, SELDEN, was born Jan. 25, 1839, at Fairfield, Me. He graduated from Tufts College, Medford, Mass., in 1859; was a student of law. He entered the army as a private, but arose to the rank of brigadier general. Was mustered out of service April, 1866. Received the appointment of assessor of internal revenue in 1868, and that of collector two years later. Was governor of Maine from Jan., 1876 to Jan., 1879. Also, U. S. pension agent.

Conscience, HENRI, born at Antwerp, Dec. 3, 1812. His name became famous as that of a writer of patriotic songs, for which he often composed the music. After leaving the Belgian army, which he had entered as a private, he had difficulty in making a living, but in 1838 he commenced writing for the Anti-French League, an association which had for its object the adoption of the Flemish language in Belgium and the expulsion of the French language. He was appointed tutor to the children of King Leopold, in the Flemish language and literature, and before his death a statue was erected in his honor by the city of Antwerp. He was one of the noted novelists of his day, and his works were translated into several languages. The originals were in Flemish. They include: *The Lion of Flanders*; *Jacob van Artevelde*; *Valentin*, &c. Many of his novels are partly historical. Died in Brussels, Sept. 10, 1883.

Conservation of Energy. (*Mech.*) This principle applies either to a machine or body left to itself, or to the universe as a whole, and asserts that the sum

of the different kinds of energy in the body, and the total amount of energy in the universe, remain always the same. The foundation of this principle was laid by Newton in his *Comments on the Third Law of Motion*; but recent discoveries have raised it to the position of the grandest of known physical laws. The statement of Newton may be thus translated:—"When energy is expended on any system of bodies, it has its equivalent in work done against friction, molecular forces, or gravity, if there be no acceleration; but if there be acceleration, part of the energy expended is spent in overcoming the resistance due to the acceleration, and the additional kinetic energy developed is equivalent to the work so spent." When part of the work is done against molecular forces, as in bending a spring, or against the force of gravity, as in lifting a weight, the recoil of the spring and the fall of the weight are capable at any time of reproducing the energy originally expended. The kinetic energy becomes potential. In Newton's day it was supposed that the energy spent in overcoming friction was absolutely lost; but Joule's investigations have proved that, in all such cases, a quantity of heat is generated which is an exact and definite equivalent for the kinetic energy lost. Moreover, in every case in which energy is developed, it can be accounted for by the disappearance of an equal amount elsewhere. Hence it is concluded that if a part of the universe could be so isolated that it could neither receive energy from, nor give energy to, the parts of space external to it, then its total amount of energy would remain unchanged. Further, if we consider the motions of the molecules of matter which constitute light, heat, magnetism, and electricity, and the action of the forces due to chemical activity, as well as the motions and forces of which we are cognizant by direct observation, then we may state the law in its most universal form—namely, that the total amount of energy in the universe is the same at all times.

Considerant, VICTOR, French socialist, was born at Salins, Oct. 12, 1808. He was a member of the National Assembly in 1848. He is the author of *Destinée Sociale*, also edited the *Démocratie Pacifique*, and founded a colony called Reunion, near San Antonio, Tex. *C.* was one of the chief disciples of Fourier. Died in Paris, Dec. 27, 1893.

Con'stantine, in Michigan, a town of St. Joseph co., on St. Joseph river, and L. S. & M. S. R. R. 10 m. S. W. of Centerville. Has fine water and extensive manufactures of furniture, farm implements, flour, &c. Pop. (1897) about 1,500.

Con'tact, *n.* (*Astron.*) A term used in describing an eclipse of the sun or moon, or a transit of an inferior planet. It is used to indicate the moment when the two limbs of the sun and moon just touch, either interiorly or exteriorly, in a solar eclipse; or when the outline of the earth's umbra or penumbra just touches the moon's limb in a lunar eclipse; or, lastly, when a transit of either planet is in progress.

Contractura (*kon-trakt-ū'rah*), ENTASIA, or STIFF JOINT, *n.* [From Lat. *contractio*, contraction.] (*Path.*) Permanent rigidity of the flexor muscles which prevents or limits the action of the extensor muscles. The affected muscles form hard cords beneath the skin. It is a frequent sequel of rheumatic affections, and mercurial or other mineral medicines are its most common causes. Hot fomentations, attended with the cool or cold douche, the vapor-bath and friction are the remedial measures.

Convert'er, *n.* (*Metallurgy*.) The vessel which is used to hold the iron or carbide of iron which is to be converted into steel, in the Bessemer process. See STEEL.

Con'way, MONCURE DANIEL, writer, was born in Stafford co., Va., March 17, 1832. He was educated at Dickinson College, Carlisle, Pa.; subsequently attended the Harvard Theological School. Before his attendance at Harvard he had for a short time officiated as a Methodist preacher. After his graduation he adopted the Unitarian faith. The influence of his *Rejected Stone* was, according to Charles Sumner, greater than that of any other published work toward hastening the emancipation of the slave. He spent a number of years in London, advocating the Union cause, and preaching in the South Place Chapel, London. His books include: *Thomas Carlyle*; *Life of Thomas Paine*; *Emerson at Home and Abroad*; *Sacred Anthology*; &c. He contributed numerous articles to the magazines and newspapers.

Con'way, in Arkansas, a town, the capital of Faulkner co., 31 m. N. W. of Little Rock. Ships cotton and cotton-seed oil. Pop. (1897) about 1,850.

Cook, ALBERT STANBROUGH, Ph.D., LL.D., was born at Montville, N. J., March 6, 1853, graduated from the Scientific School of Rutgers College in 1872. Studied at Göttingen and Leipzig; also in London, with Henry Sweet, and at Jena, with Professors Sievers and Delbrück. He was appointed in 1882 Professor of English in the University of California. In 1889 accepted the same position at Yale with the addition of English Literature. He has edited an edition of Stever's *Old English Grammar*; *Judith, an Old English Epic Fragment*, and Sidney's *Defense of Poesy*, &c., works which are valued as standards. His contributions to such periodicals as *Modern Language Notes*, *American Journal of Philology*, &c., have been numerous.

Cook, CLARENCE CHATHAM, was born at Dorchester, Mass., Sept. 8, 1828. He was a graduate of Harvard, and adopted the profession of teacher, which he continued for many years, at the same time writing art criticisms for the *Tribune*. In 1869, he resigned his position and went to Paris as correspondent to the *Tribune*. Dissolved his connection with the *Tribune* on the outbreak of the

Franco-Prussian war, but on his return to the U. S.—after spending some time in Italy—he again took up his former work on the *Tribune*. He published *The Central Park* and *The House Beautiful*, and edited a new translation of Lubke's *History of Art*.

Cook, JOSEPH, lecturer on religions and social topics; born at Ticonderoga, N. Y., Jan. 26, 1838. He graduated at Harvard and Andover. After preaching for several years he studied in Germany. In 1873, he commenced his series of Monday Lectures, in Boston, which became very popular. In 1880-82, he lectured in Europe and Asia. Resumed his Boston lectures in 1883. He founded a monthly periodical called *Our Day*, and has published works on the subjects of *Biology*, *Heredity*, &c.

Cooke, GEORGE FREDERICK, an English actor, born in Westminster, 1755, made his entrance upon the London boards at the Haymarket Theater, in 1778, and in course of time rose to the very highest rank as a tragedian, dividing with John Philip Kemble the scepter laid down by Garrick. His greatest rôles were *Richard the Third* and *Othello*. In 1810 he visited the U. S., and died in New York, 1812.

Cooke, JAY, financier, was born in Sandusky O., Aug. 10, 1821. Coming to Philadelphia in early life, he started as clerk in the banking house of E. W. Clarke & Co., becoming a partner at the age of twenty-one. The firm of Jay Cooke & Co. was established in 1861. Their failure in 1873 was largely the cause of the financial panic of that year. He did much toward bringing the affairs of the Northern Pacific R. R. to a profitable issue.

Cooke, JOSIAH PARSONS, an eminent American chemist born in Boston, 1827, graduated at Harvard in 1848. In 1851 he became professor of chemistry and mineralogy in that university, and has since held that position with distinguished honor. He is author, besides other works of *Elements of Chemical Physics* (1860), and *Principle of Chemical Philosophy* (1870). Died Sept. 3, 1894.

Cooke, PHILIP ST. GEORGE, U. S. military officer, was born in Berkeley co., Va., and graduated at West Point in 1827. He served in the Black Hawk War, also in the Mexican, and subsequently in the Civil War. He was engaged in Virginia and Louisiana; was appointed brigadier general U. S. Army in 1861, and brevet major general March 13, 1865. He was a student of law, and became a member of the bar. He wrote *Scenes and Adventures in the Army, and Conquests of Mexico and California*. Died in Detroit, Mich., March 21, 1895.

Cooke, ROSE (Terry), poet and story writer, was born at West Hartford, Conn., Feb. 17, 1827. After her marriage she removed to Winstead, Conn. An edition containing all her poems was published in 1888. She was the author of *Somebody's Neighbors*, and other stories, which contain great literary merit, and are said to be studies of rural life in New England. Died in Pittsfield, Mass. July 18, 1892.

Coo'ley, THOMAS M., LL.D., jurist, was born in Attica, N. Y., Jan. 6, 1824. He subsequently made his home in Michigan, and entered the bar in 1846. He held the offices of professor of law in Michigan University, justice of the Supreme Court, and that of chief justice. President Cleveland appointed him an interstate commerce commissioner, and he afterward became chairman of the commission. He is the author of *Law of Tonnage*; *General Principles of Constitutional Law in the United States*, &c.

Coolgardie, (*Geog.*) A town in the S.W. of Western Australia, the headquarters of the rich gold fields recently discovered in that country, and the enormous yield which during 1895 resulted in the opening of a railroad from C. to Perth, the capital, on March 23, 1896.

Coop'er, GEORGE H., rear-admiral U. S. Navy, was born in New York, July 27, 1822. He was a midshipman in the navy, entering the service in 1837. He served both the Mexican and Civil Wars, commanding in the war of secession, the South Atlantic blockading squadron, and the monitor *Saugamon* during the bombardment of Fort Sumter, in 1863. He held the position of commandant of the navy yards of Norfolk, Pennsylvania and New York, and in 1882-84 the command of the North Atlantic station. Died in Brooklyn, N. Y., Nov. 17, 1891.

Cooper, PETER, manufacturer and philanthropist, was born in New York city February 12, 1791. He engaged in various commercial pursuits during early life, and in 1828 went to Baltimore and erected the Canton Iron Works, where, two years later, he constructed from his own designs, the first locomotive engine built in the U. S. He subsequently returned to New York, where he built other iron works, and in 1841 erected several blast furnaces at Phillipsburg, Pa. *C.* was later much interested in ocean cable lines, and was president of the New York Newfoundland and London Telegraph Co. In all these ventures Mr. C. was successful, and he devoted his riches very largely to enterprises of a philanthropic character, chief among which was the founding of Cooper Institute, for instruction of the industrial classes, for which he erected the fine stone building at the junction of Third and Fourth avenues, New York. This institute comprises free schools of art, science, practical engineering, and has departments for women; has also a fine reading room and free library. Mr. C.'s devotion to the poor and their interests led to his nomination for the Presidency by the Independent Party in 1876, and he received nearly 100,000 votes. The degree of LL.D. was conferred upon Mr. C. on the occasion of a reception in honor of his 84th birthday; on his 90th birthday, he gave the institute an additional fund of \$10,000. Died in New York, April 4, 1883.

Cooper, THOMAS, Chartist poet, was born in Leicester, England, March 28, 1805. He was self-educated. Began teaching in 1827, and became the leader of the Leicester Chartists in 1841. During an imprisonment of two years to which he was sentenced for lecturing during the riots of Aug., 1842, he wrote *The Purgatory of Suicides* and *Wise Saws and Modern Instances*. In 1849, he edited a radical journal, the *Plain Speaker*, also, *Cooper's Journal*, a skeptical periodical. He lectured on history, poetry and literature. Died in Lincoln, England, July 15, 1892.

Co-op'orative Stores. (*Com.*) Stores whose stockholders are their customers, to whom are sold the articles of daily consumption at low prices. Of late years the C. S. system has made great progress in England, particularly in London and the other large cities. Many of the trades and professions have their own C. S., to which the general public may become subscribers. Among the most important of these are the Army and Navy Stores, for the use of the families of officers, soldiers and sailors. These establishments have greatly injured the business of London tradesmen. In their operations goods are bought in quantities at the lowest market rates, and no purchases are sent home, the only expenses being rent and the wages of salesmen and clerks. Consequently the prices charged are little more than the wholesale rate, while the profits, if any, are divided among the members. Stores of this kind have been tried in the U. S., but without much success. A form of co-operation, however, exists in some of the large retail and certain manufacturing establishments. In this, known as "profit-sharing," a portion of the annual profits is divided among the employees.

Coote, SIR EYRE, a British general, born in Ireland, 1726. He early won his way to high command in India, was Lord Clive's right hand in gaining the victory of Plassey, 1759, took Pondicherry by storm in 1760, and twenty years later, while commander-in-chief of the Anglo-Indian army, utterly defeated Hyder Ali, Rajah of Mysore, at Porto Novo, and thus completed the conquest of the Carnatic. Died 1783.

Cope, EDWARD DRINKER, a distinguished paleontologist and comparative anatomist, was born in Philadelphia, Pa., July 23, 1840, being the descendant of a family of Friends long eminent for enterprise and philanthropy. He was educated in private schools, and afterward studied medicine in the University of Pennsylvania, but a native taste for science turning his attention strongly in that direction, he was led to accept the chair of Natural History in Haverford College. At a later date he became the geologist and paleontologist of the Wheeler U. S. Survey of the West, and subsequently paleontologist of the Hayden Geological Survey of the Territories. In connection with these expeditions he made extensive explorations in the fossil-bearing region of the West, and afterward sent exploring expeditions at his own expense to the Western United States, Honduras, Peru and Brazil. The result of these labors was a very large and unique collection of vertebrate fossils, by the study of which Prof. C. won an exalted position among the world's scientists, being at the time of his death the foremost paleontologist of America, if not of the world. He was a member of the National Academy of Sciences and numerous other scientific bodies of Europe and America; was President of the American Association of Science during its 1896 session; proprietor and editor of the *American Naturalist*, and Professor of Geology in the University of Pennsylvania. He was a voluminous writer, earnestly advocating in his works the theory of evolution from the Neo-Lamarckian point of view, and tracing the philogenetic history of several branches of the animal kingdom throughout the Tertiary geological period. Died at Philadelphia, April 12, 1897.

penha'gen, n. A child's game, in which a rope is rasped by a revolving circle of players, while one on the inside tries to touch the hand of some player of the opposite sex in the circle.

ppée', FRANÇOIS EDOUARD JOACHIM, poet, was born in Paris, Jan. 12, 1842. During the Franco-German war he endeavored by his poems and plays to encourage the French to deeds of heroism. He became a member of the Académie Française, Feb. 21, 1884. His works include *Les Humbles*; *Madame de Maintenon*; *Les Mois*, &c.

ppée', HENRY, LL.D., soldier and author, was born Savannah, Ga., Oct. 15, 1891. Graduated at West Point in 1845. Served in the war with Mexico, and as lieutenant of artillery till his resignation in 1855. He was Professor of English Literature and History in the University of Pennsylvania, and later President of the University of Bethlehem. He wrote *Elements of Logic*; *Grant and his Campaigns*; *Distinguished Poets*; &c. Died March 21, 1895.

Copra, n. (*Com.*) The prepared kernel of the coconut. The C. trade in the South Pacific is a source of considerable present, and of greater prospective, profit. C. is the chief export of the Fiji and some other South Sea Islands. The best is that which is dried whole before breaking the nut. A floored shed in which to dry the nuts is necessary; if they are allowed to touch the ground, they will germinate instead of drying. The tough husk which envelopes the shell must not be moved, else the *kaluh*, a sort of cockroach, makes its way through the one vulnerable point or eye in the shell, and regales itself upon the water contained in it. It takes three months for the water to disappear. Meanwhile the kernel has become dry and as tough as glue. The husk and the hard shell are now removed, and the low shrunken shell of kernel is broken up into fragments to reduce its bulk. In this state it will keep over. C. is also cured by opening the fresh nuts and

sun-drying the meat for three days, or more if the weather is cloudy. The article thus prepared is never, however, equal to that which is dried in the husk, the process being too rapid. Besides this, rain injures it, and if artificial heat is used in the drying, the C. always breeds animalcules which destroy it. Coconut oil, in much demand as a lubricator, is extracted from C., and the refuse is worked up into coconut biscuits or used to enrich cattle food. The fiber has of recent years been used in the manufacture of cellulose (*q.v.*). The trees in the South Pacific bear all the year round. Each tree will average 100 nuts per annum; about 6,000 nuts go to make a ton of C.

Coquelin, BENOÎT CONSTANT, was born at Boulogne, France, Jan. 23, 1841. Studied at the Conservatory in Paris, and under Regnier. In classical comedy he has acted the characters of *Scapin*, *Don Juan*, *Figaro*, &c., and has also played in the modern drama. He has appeared both in London and the U. S. He endeavored by his acting during the siege of Paris in 1870 to inspire the people of France with courage.

Corcoran, MICHAEL, brigadier general of U. S. volunteers, was born in Carrowkiel, Ireland, Sept. 21, 1827. In 1849 he sailed for America and took up his residence in New York city. He was captain of the Sixty-ninth regiment of New York, and was taken prisoner. On being exchanged after a year's confinement, he organized the Corcoran Legion, and was made a brigadier general of volunteers, to date from the time of his capture July 21, 1861. Died Dec. 22, 1863.

Corcoran, WILLIAM WILSON, LL.D., banker, was born at Georgetown, D.C., Dec. 27, 1798. He was educated at Georgetown College. His business was that of a banker. Having accumulated great wealth, he gave liberally to charities and to the public. The Corcoran Gallery in Washington and the Louise Home for Indigent Women were founded by him. He also gave to Georgetown Oak Hill Cemetery. Died Feb. 24, 1888.

Cordele', in Georgia, a town of Dooly co., in a timber and agricultural region. Pop. (1897) about 3,000.

Cord'er, FREDERICK, musician, was born in London, Jan. 26, 1832; studied at the Royal Academy of Music, and having the Mendelssohn scholarship awarded him, went to Cologne, studying under Ferdinand Miller for a period of four years. After his return to England he gave himself wholly to teaching and the composition of music. Received the position of conductor at the Brighton Aquarium. His musical works include *In the Black Forest*; *Evening on the Seashore*; *Philomel*; *The Storm in a Teacup*, &c.

Corder, in Missouri, a town of Lafayette co., on C. & A. R. R., 20 m. S. E. of Lexington. Has flour mills, brick and tile works, and fine stock farms. Pop. (1897) about 1,350.

Cord'ite, n. An explosive compound made of nitroglycerin and some kind of dope; chiefly used in place of gunpowder as a propellant.

Core'a.—Continued from SECTION I, page 684.

The first event to bring C. within the notice of civilized nations was an embargo with the United States in 1867. In October of that year an American vessel, the *General Sherman*, visited C. for the ostensible purpose of entering into trading relations with the natives. The vessel's true character, however, is believed to have been little other than piratical. Her advance up the Pinyang river being opposed by the Koreans, hostilities ensued, ending in the destruction of the vessel and the summary execution of her crew. Upon the news of the affair reaching China, the U. S. steamers *Wachusett* and *Shenandoah* were sent to C. to make investigations, and, if need be, demand reparation. Arrived there, and while engaged in surveying the river-approaches to the interior, the Koreans made a treacherous attack upon the two vessels. The American commander, besides declining gifts which were subsequently sent him as peace-offerings, demanded an apology from the government for the insult to his flag, and no answer being returned within the ten days allotted for the reply, he at once proceeded to inflict chastisement upon the "barbarians." The result was the destruction of several of their forts, together with magazines and stores, and the sacrifice of some three hundred Korean lives, besides a cost to the Americans of a lieutenant and three men killed and twelve wounded. Subsequently troubles occurred with Japan. In 1892 the Japanese had invaded and overrun the country, and compelled the Koreans to conclude a treaty of peace by which C. was declared a province of Japan, and bound to pay her a certain yearly tribute, besides becoming Japan's ally in offensive and defensive concert with respect to attack made upon either country by other powers. For a number of years this treaty held good, but the increasing strength of the Korean people, and their unaltered resolve to seek recovery of their independence, led, in course of time, to the cessation of the annual tribute, although without formal renunciation of the terms of the treaty forced upon them. So far from repudiating the Japanese alliance, it would appear that in 1893 the Koreans offered their aid to Japan for expelling the Americans from the coasts of the latter; and in their turn demanded, later, Japanese help against French aggression in C., a demand that was altogether ignored. It followed that, indignant at the disdain evinced by the Japanese to treaty stipulations, and incensed at their reception of foreigners and adoption of many of the manners and customs of civilization, the Koreans only needed an opportunity to throw off the Japanese connection altogether. This was afforded them when the Mikado officially informed the Korean government of the abolition of the Tycoonate, and demanded the long-delayed payment of tribute. The Japanese com-

mission was received with indignity, and an official communication addressed to the Mikado declared the treaty void, and threatened immediate war, though no war followed. In 1882 Admiral Shutehdt visited C., and made a treaty between C. and the U. S., and in the year following the U. S. sent a minister to reside at the capital, Seoul. In the same year the first embassy from C. arrived in the U. S. In Nov., 1884, a postal system was inaugurated in C.; in December following, a disturbance arose between the Party of Progress, those wishing to conform more to the advanced European idea, and the seclusionists, or those opposed to these innovations. Many persons were killed, and some among the Japanese residents, who became involved in the disturbance. The treaties with Japan and the U. S. were followed by a treaty with China in 1882, Germany and Great Britain in 1883, Italy and Russia in 1884, France in 1886, and Austria in 1892. The three ports of Chemulpo, Fusan and Gen-san were opened to foreign trade.—The opening of C. to foreign trade and alliance, and especially the influence which Japan had gained in that land, led to important events in 1894. China had for centuries claimed suzerainty in C., and directed its foreign policy. The internal affairs were administered, under the king's direction, by the Nei Wa Fu, or the 6 governmental departments of Civil Affairs, Revenue, Ceremonies, War, Justice and Works. But in the management of these departments so many abuses prevailed that in June, 1894, Japan proposed various reforms, and offered to carry them out jointly with China. This offer China declined. Meanwhile a native revolt, as it was called—really an uprising against official despotism and oppression—had broken out, and continued through 1893-94 despite the efforts of the native troops. Troops were dispatched from China to aid the corrupt administration, whereupon Japan sent a force to assist the reform party, and in a brief time hostilities began between these two foreign armies, various engagements being fought. They all resulted in favor of Japan, and in a short time the Chinese were driven out and the war carried into Chinese territory. Seoul was occupied by a strong Japanese force and a treaty of alliance with Japan signed in August, 1894. C. at length, after centuries of subjection to Chinese officialism, became an independent nation, China at the end of the war relinquishing her claim to suzerainty and acknowledging Korean independence, while Japan, now in full control, instituted a series of administrative reforms. But affairs continued greatly disturbed, the anti-reform party instituted various intrigues, and on October 8, 1895, a party of conspirators forced their way into the palace, killing all who opposed them, and in the end murdering the queen, who had been energetic in the governmental changes. Russia now took a hand in affairs, insisting that Japan should withdraw her troops from the country. This was promised to be done when the Korean government could maintain order, but meanwhile troops were necessary to protect the subjects and consuls of Japan. The king, however, was greatly irritated by the Japanese reforms, and efforts were made by his supporters to overthrow the reform cabinet. In the end the king, who had been virtually a prisoner in his palace, escaped, several members of the cabinet being killed during the tumult, and fled to the Russian legation, where he obtained protection. A new ministry was appointed, a force of 200 Russian soldiers landed at Chemulpo and marched to Seoul to protect the legation, and Russia succeeded Japan as the predominant power in C. The troops of Japan evacuated the country in October, 1896, and a Korean embassy was afterward sent to St. Petersburg. Thus C. has passed from the suzerainty of China to the virtual suzerainty of Russia, whose power there must grow more declared when Russian railways traverse the country, as they probably will on the completion of the Trans-Siberian road.

Cor'inth, in New York, a post-village of Saratoga co., on Adirondack R. R., 17 m. N. of Saratoga Springs. Has manufactures of paper, leather and lumber. Pop. (1897) about 1,400.

Cor'liss, GEORGE H., a mechanical engineer and manufacturer, was born in Easton, Washington co., N. Y., June 2, 1817. His education was completed in an Academy in Castleton, Vt. His first invention was the constructing of a machine for sewing heavy leather, and this was the only indication he gave of inventive talent up to the age of twenty-four. In 1844 he settled in Providence, R. I., and soon after entered into the manufacture of steam engines. Associated with him were John Barstow and Edwin J. Nightingale, the firm taking the name of Corliss, Nightingale & Co. In 1848 the present works of the Corliss Steam Engine Co. in Providence were commenced. The worth of Mr. Corliss' inventions has been recognized by eminent authorities and he has received the highest awards for merit. His invention known as the Corliss engine has a world-wide reputation. The American Academy of Arts and Sciences awarded him the Rumford Medals, the Vienna Exhibition the Grand Diploma of Honor, and the Institute of France the Montyon Prize, which is the highest award bestowed for mechanical achievements in the old world.

Corn, n. (*Agric.*) See CEREALS.

Corn'cob, n. A spike on which the kernels of corn, or maize, grow.

Cornell', ALONZO B., son of Ezra Cornell, founder of Cornell University, was born at Ithaca, N. Y., Jan. 22, 1832, and educated at the academy of Ithaca. He began his career as a telegraph operator, and in 1855 became manager of the principal telegraph office in New York City, from which he eventually rose to be first vice-

president of the Western Union Telegraph Co. Meanwhile he occupied several official positions, became speaker of the N. Y. Assembly in 1873 and subsequent years, and in 1879, was elected governor of N. Y., for three years, from Jan. 1, 1889.

Cornell College. (*Educ.*) An institution of learning, at Mt. Vernon, Iowa, under the direction of the Methodist Church. It began in 1852 and was organized as a college, in 1857. The faculty consists of 30 professors and instructors, and there are more than 550 annual students. An army officer, detailed by the Government, gives military instruction to the students.

Cornell University. (*Educ.*) An institution of learning, at Ithaca, N. Y., founded by a gift of \$500,000 from Ezra Cornell, and chartered by the New York legislature, in 1865 and 1867, which secured to it the entire income of the Government land grant to schools, of which New York's share was 990,000 acres. At that time the price of land script was very low, but Mr. Cornell was empowered to purchase such script at market rates, on condition of using it for the benefit of the college. He located the grant mainly in the pine-lands of Wisconsin, which were held till 1881, when they had become of great value, the sales during the next ten years realizing \$5,000,000. Large gifts have also been received from private benefactors. The University was opened in 1868. From the first it was well attended, but after 1881 its progress was great. The number of students in 1882 was 382; in 1892, it was 1,549; in 1896, it was 1800, with 175 professors and instructors, and a productive endowment of \$6,276,974. The University includes Colleges of Agriculture, Mechanical and Electrical Engineering, Civil Engineering, a School of Law, and courses of Architecture, Arts, Philosophy, Science, and Letters, the equipment being very extensive in some of these departments. The grounds comprise 270 acres, situated about 450 feet above Cayuga Lake.

Corning, in Iowa, a thriving town, the cap. of Adams co., on C. B. & Q. R.R., 81 m. S.W. of Des Moines. Here are rich coal mines. In the center of a fine farming and stock-raising region. Pop. (1897) about 2,100.

Corning, in Ohio, a post-village of Perry co., 10 m. S.E. of New Lexington; in a coal mining region. Pop. (1897) about 2,000.

Corona, in New York, a town of Queens co. Pop. about 2,000.

Coronium, *n.* (*Astron.*) A supposed gaseous constituent of the corona of the sun, whose presence is indicated by a line in the coronal spectrum that has not been identified, as yet, with any known element.

Corrigan, MICHAEL AUGUSTINE, D.D., Roman Catholic ecclesiastic of the diocese of New York. was born in Newark, N. J., Aug. 13, 1839. He received his education at St. Mary's College, Wilmington, Del., and at Mt. St. Mary's, Emmetsburg, Md. In 1863 he was ordained to the priesthood at Rome. After holding a number of subordinate positions he was ordained Archbishop of New York. On the death of Cardinal McCloskey, in 1885, he became metropolitan of that diocese.

Corson, HIRAM, scholar, was born in Philadelphia in 1828. Followed the profession of a teacher. Has been a professor in Girard College, Philadelphia; St. John's College, Md., and Cornell University; his specialties being history, rhetoric, and English language and literature. He is the author of *Hand-book of Anglo-Saxon and Early English*; *Introduction to the Study of Browning*; *Primer of English Verse*, &c.

Corthell, ELMER LAWRENCE, civil engineer, was born at South Abington, Mass., in 1840; educated at Brown University, Providence, R. I. Subsequently he studied engineering and has made it his life work. Of the many bridges constructed by him, that of Cairo, Ill., is the longest steel structure in the world. He was placed in charge of important work in Western U. S.; made chief engineer of the New York, West Shore, and Buffalo R. R., and at the same time chief engineer of the ship-railway in Mexico. He has held the office of vice-president in several societies, and is the author of *A History of the Jetties at the Mouth of the Mississippi River*.

Corvus, *n.* (*Astron.*) The Crow, one of Ptolemy's southern constellations. It consists of a group of stars near Hydra, and is by some astronomers regarded as a portion of that constellation. The figure of the group somewhat resembles that of a crow, but not in the attitude usually depicted on maps and charts. The head should be near the star Eta, not near Alpha.

Cos'tigan, JOHN, Canadian cabinet minister, was born at St. Nicholas, Levis co., P. Q., Feb. 1, 1835. Received his education at St. Ann's College, and has been many times elected to Parliament. He was appointed minister of inland revenue in 1882, and was brought into prominence by his advocacy of home rule for Ireland.

Cothen, or Kothén (*koh'ten*), a handsome and thriving town of Central Germany, formerly capital of the duchy of Anhalt-Cothen, on an affluent of the Saale, 22 m. S.W. of Dessau. Pop. 18,215.

Cotta, BERNHARD VON, German geologist, was born in Kleinen-Zillah, in the Thüringerwald, Oct. 24, 1808. Studied in the academy at Tharand and afterwards in the mining school at Freiberg and at Heidelberg. He was appointed professor in Freiberg in 1842. His works include *Deutschlands Boden*; *Geologie der Gegenwart*; *Geologische Bilder*; &c. Died at Freiberg, Sept. 14, 1879.

Cottage City, in Massachusetts, a town and township of Dukes co., in the N.E. part of Martha's Vineyard island, 25 m. S.E. of New Bedford with which it has steamboat connection. A favorite summer resort and camping-ground. Pop. of township, about 1,100, which is temporarily increased to several thousands during the summer season.

Cotton Manufacture. (*Fabrics.*) The production of textile fabrics from cotton fiber is of very remote origin, the art being practiced in all quarters of the world in prehistoric times, and reaching a considerable development in Egypt, India and China centuries before the Christian era. In those periods the rudest implements were used in the weaving process, and the application of machinery to the preparation, spinning and weaving of cotton began less than 150 years ago. The fly-shuttle, invented about 1750, added greatly to the efficiency of the hand-loom. Some ten years afterwards James Hargreaves, a Lancashire weaver, invented a method of carding cotton, and in 1767 he produced the spinning jenny, by which 8 threads could be spun at once. In 1769 a spinning frame was invented by Richard Arkwright, and ten years afterwards the ideas of these two inventors were combined by Samuel Crompton in the mule jenny. The power loom was invented in 1785 by Dr. Edward Cartwright, a clergyman. The machinery for the rapid production of cotton cloth was now at hand, but the fiber continued scarce and expensive, on account of the difficulty of separating it from the seed. This was overcome by the cotton-gin of Eli Whitney, invented in 1792, while the steam engine, then recently invented, supplied the power necessary to put all these devices into effective operation. From that time forward C. M. continued to progress with great rapidity, while the crudeness of the original inventions has been overcome by later mechanics, and their performance largely increased. The speed of the spindles in Arkwright's frame was from 3,000 to 4,000 turns a minute. The spindles now in use make 9,000 turns. C. M. has its chief seat in Great Britain, the importation of cotton into that country having increased from about 22,000,000 pounds in 1790 to 1,650,000,000 pounds in 1890, while the value of cotton goods exported in the last named year was over \$370,000,000. Of late years there has been a rapid development of the cotton industry on the continent of Europe and in India and the United States, so that the supremacy of Great Britain is being rapidly overcome.—*United States Manufacture.* The successful production of cotton cloth in factories began in the U. S. in 1790, in an establishment founded by Samuel Slater, at Pawtucket, R. I. The progress long continued slow, not more than 10,000 bales being consumed in 1810 in all the factories of the country. In 1815 there were 90,000 bales consumed, the war with England stimulating production at home. The value of all products of the C. M. reached in 1850, \$61,869,184; in 1870, \$177,489,739; and in 1890, \$267,987,724. The ratio of increase here shown, however, is far from representing the actual state of the case, since there has been a great reduction in the price of yarns and cloth, so that the growth of the industry has been very much greater than the above figures indicate. The census of 1890 gives the following figures: Number of spindles, 14,188,103; pounds of cotton consumed, 1,193,584,641; square yards of woven goods produced, 3,002,761,037; capital invested \$354,020,843; hands employed, 221,585; wages paid, \$69,489,272. In the U. S. the whole manufacture, from raw cotton to woven cloth or sewing thread, is usually completed in the same establishment. In Europe, on the contrary, spinning and weaving are separated, and constitute distinct industries. New England is the chief seat of the American manufacture, it containing, in 1896, 76 per cent. of all the spindles of the country, and among the New England States Massachusetts stands first, it having, in 1896, 41 per cent. of all the spindles in operation. The most important centers of the manufacture are the cities of Fall River in Massachusetts, and Providence in Rhode Island. Since 1880, however, there has been a great growth of C. M. in the South, particularly in the States of North Carolina, South Carolina and Georgia; and the growth in that region, stimulated by cheap labor and low freights, still continues rapid.

Cotton-Seed Oil. During thousands of years in which the cotton plant was known and utilized, no value was attached to any of its products other than the fiber until within a comparatively recent period. The seed, beyond that required for sowing, was rejected as useless. It has long been known, however, that it contained a valuable oil, and this has grown to be an important article of commerce. Cotton-seed oil was produced more than a century ago, but not on a commercial scale. The first attempts in the U. S. to extract it as a mercantile product were made at Natchez, Miss., in 1834, and at New Orleans in 1847, but both proved unsuccessful, and it was not until after 1855 that the difficulty in its production was overcome by the introduction of Knapp's decorticating machine, which separated the hulls from the kernels of the seeds. In the present manufacture of the oil, the lint, or short fiber surrounding the seed, is removed by extra ginning, and the hulls removed by the decorticating machine. The kernels are then, after being crushed between iron rollers, subjected to hydraulic pressure, and yield from 15 to 20 per cent. of their weight of crude oil. This is a thick and turbid liquid, of deep brown-red color, which deposits a slimy sediment on standing. It is clarified by heating and agitating with dilute alkaline lye, which carries the impurities to the bottom, where they form what is known as "cotton-oil soap stock," while there remains above a clear golden-yellow oil. This may be whitened by further processes, the market grades of oil being the crude, the summer yellow and summer white, the winter yellow and winter white.—*Properties and Uses.* Cotton-seed oil consists chiefly of palmitin and olein. The palmitin may be crystallized out, the remainder constituting the "winter oil." The refined oil is almost odorless and has a slight nutty

flavor. It has some of the properties of the drying oils, but is far inferior to linseed. It is largely used as an adulterant of or a substitute for linseed, sperm, lard, almond, and olive oil, and is extensively used in cooking as a substitute for lard and butter. It is also employed in treating leather, in dressing wool, as a lubricator, an illuminant, and in soap-making, while its use has been recommended in pharmacy. Of the salad oil consumed in the U. S. it is said that nine-tenths of the whole is cotton-seed oil. The total value of the process does not consist in the oil yielded. The "cake," which remains after pressure, is largely used as fodder for cattle, and is also employed as a fertilizer. From the lint excellent paper is made, the hulls are used for fuel, and the residues from clarifying the oil are used in soap-making. There is still another valuable product of the cotton plant which may here be named. Its stalks yield a fiber which is considered equal to jute in the manufacture of gunny and similar cloths. In the census year (1890) there were crushed in the U. S. 1,058,200 tons of cotton seed, yielding 41,287,300 gallons of crude oil; 383,759 tons of cake; 63,519 bales of lint, and 529,375 tons of hulls—of use for fuel, or ground in with the meal for fodder.

Couch, DARIUS NASH, U. S. military officer, was born July 23, 1822, in Putnam co., N. Y., was graduated at West Point. He was engaged in the war with Mexico, also in the Civil War, rising in the last named to the position of major-general of U. S. volunteers. His name was on the ticket of the Democratic party for governor of this State in 1865. He held various political offices, was collector of the port of Boston, adjutant-general of Connecticut, &c.

Coues (*kouez*), ELLIOTT, A. M., M.D., Ph.D., naturalist, born at Portsmouth, N. H., Sept. 9, 1842; graduated in 1861 from Columbian University, Washington, D. C.; served in the Civil War, and later was surgeon and naturalist to the U. S. northern boundary commission. He was professor of anatomy in the Columbian University, and of biology in the Virginia Agricultural and Mechanical College, and filled other positions with credit. The most numerous of his published works are those on ornithology and mammalogy, including: *New Key to North American Birds*; *Birds of the Northwest*; *Fur Bearing Animals*, &c. Prof. C. was associate editor of the *American Naturalist*, member of many scientific societies here and abroad, president of the American Board of the Theosophical Society in India. Died in 1897.

Coulter, JOHN MERLE, Ph.D., LL.D., American botanist, was born in Ningpo, China, Nov. 20, 1851. He was educated in Hanover College, Indiana, and Harvard University. From 1874-79 was professor of natural sciences in Hanover College, of biology in Wabash College, 1879-91, and president of Indiana State University from 1891 to 1893. He has published: *Synopsis of the Flora of Colorado* (a joint publication); *Manual of Rocky Mountain Botany*; *Hand-book of Plant Dissection*, &c.

Courbet (*koor-ba'*), GUSTAVE, a French artist, born at Ornans, dept. Doubs, 1819. Destined for the bar by his father, he was sent to Paris in 1839 to study law. This, however, he neglected, and devoted himself to painting. C., whose works are very numerous, obtained a second class medal at the Exhibition in 1849, and other honor at those of 1857 and 1861. After the capitulation of Paris, in 1871, he became one of the leading members of the Commune, for which he was tried by court martial at Versailles on Sept. 2 in that year and condemned to six months' imprisonment and to pay a fine of 500 francs. Died Dec. 1877.

Couture, THOMAS, artist, was born at Senlis, Oise, France, Dec. 15, 1815. He studied under Delaroche and Baron Gros; was awarded the Prix de Rome in 1837 received from the Salon of 1847 and the Paris Exposition of 1855 first-class medals. In 1848 he was decorated with the Legion of Honor. His picture of *The Decadence of the Romans* is in the Louvre Gallery. The Boston Museum of Fine Arts owns his painting of *The Volunteers of 1793*. Died at Villiers-le-Bel, Seine-et-Oise, March 31, 1879.

Cowen, FREDERICK HYMEN, musician, was born Jan. 29, 1852, at Kingston, on the island of Jamaica. Since early youth his home has been in London. Studied at the Leipzig and Berlin Conservatories; after his return to England following the profession of a conductor and composer. His principal works include: *The Sleeping Beauty*, a cantata; the oratorio *Ruth*; the cantata *St. John's Eve*, &c. The Philharmonic Society of London appointed him conductor in 1888.

Cox, SIR GEORGE WILLIAM, Bart., M. A., Greek scholar, was born in 1827, and educated at Rugby and Trinity Colleges, Oxford. He took orders in 1850 and subsequently became rector of Scrayingham, Yorkshire. His work on History and Mythology are numerous and include his *History of Greece*; *The Mythology of the Aryan Nation*; *Lives of Greek Statesmen*, &c.

Cox, JACOB DOLSON, LL.D., statesman, was born in Montreal, Canada, Oct. 27, 1828. After the removal of his family to Ohio, he studied at Oberlin College, and was admitted to the bar. He has held several public offices, including those of member of the State Senate, major-general of the Union volunteers and that of governor of Ohio. From 1877-79, he was representative in Congress. In 1881, received the appointment of dean of the law school of Cincinnati University and was afterwards made president of the University.

Cox, KENYON, figure painter, was born at Warren, O., Oct. 27, 1856. He began the study of art in Cincinnati; afterwards went to Paris, studying with Gerome and Carolus Duran. He has been elected a member of several Art Societies and Leagues. Is noted as a draughtsman and illustrator, and in the writing of criticisms and review.

has a facile pen. Among his best works are: *Jacob Wrestling with the Angel*; *Vision of Moonrise*; *Flying Shadows*, &c. His designs for the poem of the Blessed Damozel, by Rossetti, are counted as worthy a place among the best works of the kind.

COX, SAMUEL, D.D., was born in London, England, April 19, 1826. Graduated from the Stepney Baptist Theological College, London, in 1851. He was appointed pastor of Nottingham church, in 1863, a charge that he retained until his death. He was the greatest Bible expositor that modern England has produced. His works include: *The Pilgrim Psalms*; *The Quest of the Chief Good*; *Ruth*, &c. Died at Hastings, March 27, 1893.

COX, SAMUEL SULLIVAN, LL.D., was born at Zanesville, Ohio, Sept. 30, 1824. Graduated at Brown University. Was several times elected to Congress, and in 1885, became U. S. Minister to Turkey. Much of his work was done in the field of lecturing and literature. Among his books are: *Eight Years in Congress*; *Three Decades of Federal Legislation*, &c. Died, Sept. 10, 1889.

Coxalgia or Coxitis. (Pathol.) An inflammation of the hip-joint, (technically *Morbus coxarius*, or hip-joint disease), sometimes rapid, sometimes slow and insidious. It may begin with the head of the thigh-bone or the socket of the hip-bone, or in the lining membrane, but finally extends to all the adjoining parts. In the treatment of this disease there are about 50 per cent. of recoveries, yet in many cases, although the inflammation is arrested and life is saved, ankylosis of the joint results and the patient becomes permanently lame.

COZZENS, FREDERICK SWARTWOUT, was born in New York, March 5, 1818. Adopted the business of a wine merchant. He devoted much of his time to writing, contributing to *Putnam's Magazine* and the *Knickerbocker Magazine*, also published a periodical called *The Wine Press*. He is the author of: *Prismatics*; *Sparrowgrass Papers*; *Acadia*, &c. Died December 23, 1869.

CRAFTS, WILBUR FISK, B.D., born in Fryeburg, Me., Jan. 12, 1850. He was graduated from the Wesleyan University, Conn., and the School of Theology, Boston University. At successive periods he filled the pulpits of Methodist churches up to 1889, then became secretary of the American Sabbath Union, and subsequently editor of the *Christian Statesman*, Pittsburg, Pa. He is a prominent member of the National Temperance Society, the International Law and Order League, &c. He is the author, with his wife, of: *Through the Eye to the Heart*; *The Coming Man is the Present Child*; *The Sabbath for Man*, &c.

CRAFTS BURY, in Vermont, a post-village of Orleans co., 1 m. N. E. of Montpelier. Pop. (1897) about 1,500.

CRANE, DINAH MARIA (MISS MULOCH), was born at Stoke-upon-Trent, England, in 1826. In 1857 she published the novel which brought her fame, *John Halifax, Gentleman*. This work had been preceded by several others, including: *The Ogilvies*; *Agatha's Husband*, &c. Her story of *John Halifax* has been translated into the French, German, Italian, Greek, and Russian languages. The scene of this work is laid at Tewkesbury, England, where a marble medallion has been placed to her memory in the church. Her works comprise forty-two volumes, including poems, essays, novels, &c. Died October 12, 1887.

CRANE, GEORGE LILLIE, Scottish author, was born in Inverness, Scotland, in 1799; educated at St. Andrew's university. He was appointed Professor of History, and of English Literature in Queen's College, Belfast, 1849. His works, which are numerous, include: *Sketches of the History of Literature and Learning in England*; *Spenser and his Poetry*; *Bacon, his Philosophy and Writings*; *The Romance of the Peerage*, &c. Died June 1, 1866.

Cranbrook, GATHORNE-HARDY, EARL, English statesman, was born at Brialford, England, October 1, 1814. He received his education at Oriel College, Oxford, and entered the bar in 1840. He has been prominent in English politics, and was elected to the House of Commons in 1856. Defeated Mr. Gladstone in the Oxford University election of 1865. He held the office of Secretary of State for the Home Department; was also in 1874 appointed Secretary of War, and in 1878 Secretary of State for India. In 1885 he was made Lord President of the Council in Salisbury's Cabinet.

Cranck, CHRISTOPHER PEARSE, artist and poet, was born at Alexandria, Va., March 8, 1813. He graduated at Columbian College, Washington, D. C. In 1846 went to Europe, remaining for a number of years, devoted his brush to the painting of landscape, and pen, with a few exceptions, to the writing of poems. Died Jan. 20, 1892.

CRANE, STEPHEN, novelist, was born in New York in 1822; studied at Lafayette College and Syracuse University, but did not graduate, having no taste for study, preferring outdoor exercise to books. At the age of 18 he wrote newspaper sketches, and at 20 began the writing of novels. His first was *Maggie, a Girl of the Streets*, which was not very well received. At 21 he won his *Red Badge of Courage*, finishing it some months after his 22d birthday, and through it leaping to great popularity. *Black Riders* was written in the same year. C's home is among the hills of Sullivan Co., New York.

CRANE, THOMAS FREDERICK, scholar, born in New York July 12, 1844; educated at the public school, Academy of Ithaca, N. Y., and Princeton College. Received the degrees of A.B., A.M. and Ph.D. At subsequent periods he has been Prof. of Modern Languages, Prof. of Spanish and Italian, and Prof. of the Romance Languages in Cornell University. He was one of the founders of the American Folk-lore Society and has published a large number of articles on folk-lore and

kindred subjects in the *North American Review*; *The Nation*; *Harper's Magazine*, &c.

CRANE, WILLIAM II., actor, was born in Leicester, Mass., in 1845. His first appearance on the stage was in *The Child of the Regiment*. In 1876 he formed a partnership with Stuart Robson, the comedian. In Bronson Howard's play of *The Henrietta* they made a conspicuous success but subsequently dissolved partnership. C. on his first starring tour alone played *The Senator* in 1889, and added to his ability by his admirable personation of Senator Hannibal Rivers.

CRAYEN, ALFRED WINGATE, civil engineer, was born in Washington, D. C., Oct. 20, 1810. He graduated with distinction at Columbia College, New York, afterward studying engineering. He planned the system of sewerage now in use in New York city, and was prominently connected with the Croton aqueduct in the same city. He was finally appointed engineer-in-chief and commissioner, and took complete charge of all the public works. He was the first president of the American Society of Civil Engineers. Died in Chiswick, England, March 29, 1879.

Craven, THOMAS T., rear-admiral U. S. Navy, was born in Portsmouth, N. H., Dec. 30, 1808. He entered the service as midshipman. During the Civil War he served with distinction and rose to the position of rear-admiral. From 1866-68 he was in command of the navy yard at Mare Island, Cal. Died in Boston, Mass., Aug. 23, 1887.

Craven, TUNIS AUGUSTUS MACDONOUGH, U. S. naval commander, born in Portsmouth, N. H., in 1813. He entered the naval service in 1829. In 1857 he was given command of the Atrato expedition for the survey of the Isthmus of Darien, and afterward commanded the *Mohawk*, engaged in trying to suppress the slave trade. In the early part of the Civil War he was in command of the *Tuscarora*, sent in search of Confederate cruisers. Later he commanded the monitor *Tecumseh* and was attached to the Gulf Squadron under Admiral Farragut. In an attack on Mobile, Aug. 5, 1864, the *Tecumseh* was sunk by striking a torpedo and 335 men were lost, among them the brave commander. In his eagerness to engage the ram *Tennessee* he had run his vessel on the torpedo, of the position of which he had been warned. He might have saved his life, but meeting his pilot at the foot of a ladder, he stepped back, saying "After you, pilot," and the pilot climbed up to safety, while the noble commander sank with the ship.

Crawford, FRANCIS MARION, American novelist. He was born at the Baths di Lucca, Italy, Aug. 2, 1854. He studied at Cambridge (England), Harvard, and Heidelberg Universities. He was selected by the government committee to write the National ode at the centennial of the American Constitution Sept. 17, 1887. During 1879-80 he edited a newspaper at Allahabad, and it was there that he was received into the Catholic church. He is the author of: *Mr. Isaacs*; *Pietro Ghisleri*; *Sarcinesca*; *Paul Patoff*; *The Story of a Lonely Parish*, *Dr. Claudius*, *A Roman Singer*, and many other popular novels. He resides at Sorrento, Italy.

Crawford, MARTIN JENKINS, was born in Jasper co., Ga., March 17, 1820; educated at Mercer University. He entered the bar, where he rose to distinction, and was elected both to the Legislature of his State and to the House of Representatives, withdrawing from the latter body on the secession of Georgia. He was a member of the Congress of the Southern States which met at Montgomery, Feb. 4, 1861. After the war he resumed the practice of his profession, and at the time of his death was associate justice of the Supreme Court of Georgia. Died July 22, 1883.

Crawford, SAMUEL WYLIE, U. S. military officer, was born in Franklin co., Pa., Nov. 8, 1829. He graduated from the University of Pennsylvania. Entered the U. S. Army in 1851 and served throughout the Civil War, receiving the appointment of brevet major-general. Retired on account of wounds, Feb. 19, 1873. Died in Philadelphia, Nov. 3, 1892.

Cream'ery. *n.* A factory for the production of butter. These factories, often run on the cooperative plan, are widely distributed through the U. S., being most numerous in Illinois, Wisconsin, Iowa, and Minnesota, but abundant in other sections. In these the cream is received from many farms, and worked into butter by the aid of the most improved machinery and the exercise of the highest skill. As a result the farmer and his family are relieved of a considerable amount of hard work, the cost of production is reduced, and the product is more uniform and of a higher quality than that made on most of the farms. In some of the factories the milk is received and the cream separated by centrifugal machines; in others the milk is skimmed at home and only the cream delivered, wagons going from farm to farm to collect it. In the factories not conducted on the cooperative principle, the custom was at first to pay for the milk, but this was unjust to those who supplied the richest milk, and various means were employed to determine the butter-making quality of each delivery. In 1890 a method, partly chemical, partly mechanical, was devised by Dr. Babcock, and since known as "Babcock's test," by which the percentage of fat in milk can be easily and accurately determined. This is now largely employed, each patron being paid in accordance with the quantity of fat in his milk. Creamery butter is not necessarily better than that produced on the farm, and not always as good as that made by careful and skillful farmers, but as such skill and care are lacking on the large majority of farms, the creamery product is better and more uniform in quality than that received from the farms in general, while the greater economy of production is an item in its favor.

Crea'sy. *SIR EDWARD SHEPHERD*, English historian and lawyer, was born in Bexley, Kent, in 1812. Educated at Eton; eldest scholar of King's College, Cambridge, in 1832; fellow of the same college in 1837; and subsequently professor of History in University College, London. In 1860 he was appointed chief-justice of Ceylon. His works include: *Fifteen Decisive Battles of the World*; *History of England*, &c. Died Jan. 27, 1878.

Creighton, MANDELL, LL.D., an English ecclesiastic, was born at Carlisle, 1843. His education was received at Durham Grammar School and at Oxford. He was ordained deacon and subsequently priest. Various preferments were held by him, and in 1885 he became canon of the Worcester Cathedral. He published a *History of the Papacy During the Period of the Reformation*; *Premier of Roman History*; *The Age of Elizabeth*, &c.; and was editor of the *English Historical Review*.

Cremation. *n.* [Lat. *cremo*, I burn; *crematio*, consuming by fire.] The act of burning, or consuming by heat; specifically, this method of destroying the human body after death, a practice which prevailed in prehistoric days and is now being revived in many civilized countries. [See BURIAL CUSTOMS.] In ancient times the corpses were only partly consumed by C., most of the bones being preserved along with the ashes; but by modern methods the incineration is more nearly complete, the body being entirely reduced to ashes by the action of superheated air and combustible vapors.—The crematory of today has a receiving chamber with a flat bottom, open at each end, one passage leading from the upper chamber of the furnace, the other to the lower part of the chimney. The furnace is capacious, so that wood fuel only need be used, and pours heated air into the receiver at a temperature of some 1,400° F. The sectional area of the high chimney is great enough to take up the gaseous products of combustion from the receiver as well as from the furnace. Near its base a grate is placed, in which a coke fire is kindled; the products of animal combustion, at a very high temperature, pass from the receiver through the burning coke, where such organic matter as may have escaped or survived the heat in the receiver is effectually destroyed while passing through the grate. By this system, all the gases arising from the C. of a body pass harmlessly into the air at considerable distance above the ground, so that no offensive odors are perceptible either around the base of the crematory or in its vicinity. The body is first placed in a wire crib, then wrapped in a sheet saturated with alum. The door of the receiver is opened, and the crib quickly thrust into the chamber. Peep-holes are so placed as to enable the operator to observe the progress of incineration. The alum-soaked sheet retains its original position for some time, shielding from view the body that is crumbling to ashes beneath its folds. In less than an hour the operation is complete, and nothing remains but to collect and inurn the ashes after the furnace has cooled. The average weight of ashes is four pounds if the subject be a woman, six pounds if a man. The cost of C. varies in different localities, but under favorable conditions should not exceed \$10 to \$12. A C. society in Denmark proposes to reduce the cost to \$2 or less. Extension of the practice would naturally result in a saving.—Interest in C. in the U. S. dates from about 1874, when the subject was taken up and energetically pushed by Dr. F. Julius Le Moynie, of Washington, Pa. The result was the erection of a crematory at that place, in which the first incineration was performed on Dec. 6, 1876, the body being that of Baron de Palm. Since that time crematories have been established at Mt. Olivet, Long Island, St. Louis, Philadelphia, and several other places in the U. S. Cremation societies have been formed, the members paying a small annual fee, in return for which the societies provide for and pay the cost of C.—Contrary to prevalent belief, C. is not distinctively a heathen custom; in fact, most of the heathen practice earth-burial. It is difficult to understand why the thought of incinerating the body of a dear friend should be more painful than that of committing it to the earth for gradual decomposition; and the thoroughly irrelevant question of the resurrection should be disposed of to the satisfaction of all believers by recollection of the fate of the Christian martyrs, Polycarp, Huss, Latimer, Ridley and others who suffered death by incineration. The process of C. preserves every atom of the body that can resist decomposition, and would therefore seem to be the best possible method of preparing for a physical resurrection, if the whole subject, in this connection, were not so completely foreign to intelligent discussion.

Crematory. *a.* Of or pertaining to cremation.

—*n.* A furnace or building constructed for performing cremation of the human body.

Cresafulli, HENRI, French dramatist, was born at Naples, in 1827. He received his education in Paris. He was associated with others in the writing of many of his works which include: *The Postillions of Fougères*; *The Wolves and the Lambs*; *Lord Harrington*, &c.

Cresol. *n.* (Chem.) See CRESYLIC ACID.

Cres'ton, in Iowa, an important city, cap. of Union co., 114 m. S.W. of Des Moines; on the Chic. Burl. & Quincy R.R., whose extensive repair shops are located here. The trade center of a rich farming district; has large stock-yards with extensive shipments of cattle. Pop. (1897) about 8,450.

Creswick, THOMAS, an English landscape-painter, born at Sheffield in 1811. He became a Royal Academician, and, if we except Turner, the most distinguished artist of his time in the department of English painting. His pictures, which are innumerable, are remarkable for their exceedingly close fidelity to nature. Died in 1870.

Crete, in Nebraska, a fine city of Saline co., 20 m. S.W. of Lincoln, on the Missouri Pacific and C. & N. W. R.Rs. Has large flour mills and nurseries. Doane College (Congregational) is here located. Pop. (1897) about 3,200.

Creuzot (kroo-zô'), **Le**, in France, a town in the department Saône-et-Loire, 12 m. S. E. of Autun. Here are the most extensive iron and steel works in France, producing cannon, heavy machinery, anchors, &c., on a large scale. Pop. (1897) about 20,000.

Crichton-Brown, **SIR JAMES**, M.D., LL.D., F.R.S., a noted physician, was born in Edinburgh in 1840; educated at Trinity College and University of Edinburgh; also attended the medical schools of London and Paris. The West Riding Asylum, of which he was appointed the head, has become celebrated under his wise direction. He is a member of many learned societies, and vice-president and treasurer of the Royal Institution of Great Britain. He has written a number of papers on physiology and pathology of the nervous system.

Crisp, **CHARLES FREDERICK**, lawyer, jurist and statesman, was born at Sheffield, England, on Jan. 20, 1845, his parents being Americans temporarily sojourning in England, from which country they returned in 1846, taking up their residence in Georgia, where the son was educated in the common schools. He entered the Confederate army in 1861, attained the rank of lieutenant, and in May, 1864, was taken prisoner by the Federals and confined for a time in Fort Delaware. After the war he studied law; was admitted to the bar in 1866; became Attorney-General of the southwestern judicial district of Georgia in 1872, and Judge of the Supreme Court, by appointment, in 1877. He was afterward elected by the State Assembly to the latter office, and re-elected in 1880 for a term of four years; but in 1882 he resigned to become a member of Congress, where he remained until his death, being Speaker of the 52d and 53d Congresses. Died at Atlanta, Ga., Oct. 23, 1896. His son, Charles F. Crisp, Jr., was shortly afterward appointed to fill the Congressional vacancy thus created.

Crispi, **FRANCESCO**, Italian statesman, was born at Ribera, Sicily, on Oct. 4, 1819. Was one of the leaders of the Palermo insurrection of 1848, after the failure of which he became an exile. In cooperation with Garibaldi, he organized another insurrection in 1859-60, landed at Palermo, and became a member of the provisional government of the revolutionists. Was a member of the first parliament of United Italy, and became president of the Chamber of Deputies in 1876; subsequently served as Minister of the Interior, and was President of the Council, 1887-91 and again in 1893, which post he still retains (1897), although his position seems to have been greatly weakened by the disastrous results of the Abyssinian campaign of 1895-96.

Critical Temperature, (*Phys.*) The temperature below which a substance may be liquefied by pressure alone, while above this temperature it cannot be so liquefied. Thus, carbon acid below 30.9° C. can be easily made liquid if sufficient pressure be used, while above that temperature it resists liquefaction under the highest pressure yet applied.

Criticism, Higher. A detailed inquiry into the origin, integrity and authority of literary and historical documents, the *H. C.* dealing with their historical and literary features, while the *lower criticism* confines itself to a study of the text. The *H. C.* has been of late years applied by German and other students of literary history to a study of the Hebrew Scriptures, with the result that important changes are claimed to be necessary in the date of origin, authorship, and other features of the books of the Old Testament.

Crittenden, **GEORGE BIBB**, soldier, was born at Russellville, Ky., March 20, 1814. Graduated at West Point in 1832, and achieved distinction in the Mexican War. At the outbreak of the Civil War he resigned his commission as lieutenant-colonel in the U. S. Army, and joined the Confederate forces, in which service he became a major-general. His conduct on the occasion of his defeat at Mill Spring, in Kentucky, on Jan. 19, 1862, was censured by the Confederate authorities, and he was under arrest till Nov., 1863. Soon after this time he resigned his commission, but continued to serve in the army as a volunteer. Died Nov. 27, 1880.

Crittenden, **THOMAS LEONIDAS**, lawyer and soldier, son of John J. C., was born at Russellville, Ky., May 15, 1815; studied law with his father, and became (1842) Attorney-General of Kentucky. He served in the Mexican War, under General Taylor, with conspicuous gallantry; and upon the outbreak of the Civil War he espoused the Union cause, becoming major-general in command of a division in the Army of the Tennessee, 1862. He was later a corps-commander under Buell and Rosecrans, his force being disastrously routed at Chickamauga. Resigned his commission in the volunteer army in 1864, and in 1866 entered the regular army as colonel of the 32d Infantry; was assigned to the 17th Infantry in 1869, and served on the frontier until his retirement in May, 1881. Died Oct. 23, 1891.

Crockett, **DAVID**, an American backwoodsman, remarkable for his adventurous life and eccentric habits, was born in Tennessee in 1786. He became a member of Congress in 1827, and was twice re-elected. He held a command in the insurgent Texan ranks in their struggle against Mexico in 1836, and was one of those devoted few who perished in the massacre at Fort Alamo, after slaying ten times their number of Mexican "greasers." His *Autobiography*, published in 1834, is highly interesting.

Croft, **WILLIAM AUGUSTUS**, Ph.D., editor and author, was born in Redding, Conn., Jan. 29, 1836. Began life

as a teacher. He has edited a number of papers, and was executive officer of the U. S. geological survey in 1888-91, when he took charge of the editorial division of that bureau. The degree of Ph.D. was conferred upon him by Union College. He has written: *The War History of Connecticut*; *A Helping Hand*; *The Prophecy, and other Poems*, &c. A poem composed by him was read at the opening of the Columbian Exposition at Chicago.

Crofton, **SIR WALTER FREDERICK**, C.B., was born at Courtrai, Belgium, in 1819, and received his education at Woolwich Military Academy. His interest in and labors for prison reform have done much toward bringing about a change in prison management, the system of treatment introduced by him having been attended with excellent results. Part of his plan was the introduction of intermediate prisons, such as cottages on farms, where convicts were taught the proper way of using their freedom. His plan for the reformation of prisoners has been commended by the highest authorities in Europe and America, and he has received several tokens of honor from foreign countries.

Crofts, **ERNEST**, artist, was born in Leeds, Eng., Sept. 14, 1847; studied with A. B. Clay, of London, and Hunt, in Düsseldorf. He has been elected Associate of the Royal Academy in London, and his picture of *Marlborough after the Battle of Ramillies*, won for him the third-class medal at the Paris Exposition in 1889.

Croker, **RICHARD**, politician, was born at Black Rock, Ireland, Nov. 24, 1843, but has resided in the U. S. since early childhood; served in the Civil War; has been three times elected Alderman of New York, and during 1889-90 occupied the office of city chamberlain. His resistance to the power of the Tweed ring brought him into prominence, and he was for some years the head of the Tammany Hall organization.

Croker, **THOMAS CROFTON**, an Irish novelist, born at Cork, 1798. His *Fairy Legends of the South of Ireland*, and *Legends of the Irish Peasantry*, are works which have been several times reprinted. Died 1854.

Croll, **JAMES**, LL.D., F.R.S., geologist and philosopher, was born in Whitefield, Perthshire, Scotland, in 1821. He has devoted most of his time to the study of geology and was for some years connected with the official geological survey of Scotland. His works include: *Climate and Time in their Geological Relations*; *Physical Characters of the Change of Climate During the Glacial Epoch*; *Climate and Cosmology*; *The Philosophic Basis of Evolution*, &c.

Croly, **DAVID GOODMAN**, journalist, was born in New York, Nov. 3, 1829; studied at the New York University; subsequently taught phonography; was engaged as editor or managing editor of several papers, including the *New York World* and *Graphic*. He was the author of a *History of Reconstruction*, &c., and was the first to introduce the subject of minority representation to the American public, in the *Galaxy*, in 1866. Died April 29, 1889.

Croly, **JANE CUNNINGHAM** (*nom-de-plume*, **JENNIE JUNE**), was born in Market Harborough, Leicestershire, England, Dec. 19, 1831. She has resided in the U. S. for many years and in 1866 married David G. Croly, of N. Y. The first Woman's Congress in New York was organized by her, and in 1868 she inaugurated the Sorosis, Rutgers Female College, New York, conferred on her the degree of Doctor of Literature and appointed her to the chair of journalism and literature in that college. The New York Woman's Press Club, of which she was the founder in 1889, elected her as its president. She has contributed largely to various periodicals for many years, and was editor of the *Home Maker*, a monthly magazine published in New York.

Crook, **GEORGE**, soldier, was born near Dayton, O., Sept. 8, 1828. After graduating from West Point, he joined the 4th Infantry and entered active service (1852) in California. From that time until 1861, he participated in various expeditions against the Indians; and at the outbreak of the Civil War became colonel of the 36th Ohio Infantry, soon rising to the command of the 3d Provisional Brigade, operating in W. Virginia. Served in that State and in Virginia and Maryland until 1863, when he was transferred to the 2d cavalry division and took part in the battles of Chickamauga and Tullahoma, having been previously brevetted lieutenant-colonel in the regular army. In 1864 he joined Sheridan in his famous Shenandoah campaign; in March, 1865, was brevetted major-general of volunteers, and had command of the cavalry forces of the Army of the Potomac until the end of the war. Being mustered out of the volunteer service in 1866, C. soon rejoined the regular army as lieutenant-colonel of the 23d Infantry and was sent to Idaho to quell the existing Indian outbreaks. For six years thereafter he rendered incalculable service in his various campaigns against the Putes and Apaches in Arizona, and the Sioux and Cheyennes in the northwest, completely subduing the latter. In 1882 he raided the squatters who had encroached on certain Indian lands, and in 1883 compelled the Chiricahuas to cease their troublesome depredations. C. became brigadier-general, U. S. A., in 1873; major-general in 1888, being soon thereafter assigned to the command of the Department of the Missouri, with headquarters at Chicago. His record as an Indian fighter is unsurpassed, and his suggestions as to their management have been observed with profit by the government, being humane but effective. Died in Chicago in 1890, and is buried at Arlington National Cemetery, Va., where a beautiful monument has been erected by his old comrades.

Crookes, **WILLIAM**, F. R. S., chemist and physicist, was born in London in 1832, and received his education at the Royal College of Chemistry. He founded and

edited the *Chemical News*, and was also editor of the *Quarterly Journal of Science*. In his researches he discovered, in 1861, the metal thallium. He gave some time to the investigation of modern spiritualism, and was convinced of the existence of power exerted by an intelligent disembodied agency. His attention has also been given to chemistry applied in the arts, and he has studied and written upon the subject of sanitation. Treatises have been written by him on *The Manufacture of Beet-Root Sugar in England*; *Dyeing and Calico Printing*, &c. He is the translator of German and French works on chemical subjects, and has also published *Researches in the Phenomena of Spiritualism*, &c. His experiments with air in states of very high vacuum have been of the greatest importance, and led to a theory that there is a "fourth state of matter" more highly attenuated than, and with properties differing from, those of gaseous state. The exhausted tubes he devised in this inquiry are now used in the study of the X-ray phenomena. The Academy of Science of Paris awarded him (1880) a special gold medal for his important discoveries in physics and chemistry.

Fig. 2793.—PROF. WILLIAM CROOKES.

Crookes Tube. See **GEISSLER'S TUBE**.

Crookston, in Minnesota, a thriving city, cap. of Polk co., on Great Northern and Northern Pacific R.Rs., 6 m. N. of Glyndon. In a wheat and lumber region. Pop. (1895) 3,670.

Crop Reports. Weekly reports issued by the Weather Bureau of the United States describing the condition and prospects of the various agricultural staples during the planting and growing season.

Crosby, **HOWARD**, D.D., LL.D., educator and theologian, was born in New York city, Feb. 27, 1820. After his graduation from the University of New York he became professor of Greek in that institution, and subsequently took a similar position in Rutgers College, N. J. (1859). He was pastor of the First Presbyterian Church in New Brunswick, and of the Fourth Avenue Presbyterian Church in New York city. Received the appointment of Chancellor of the University of New York in 1870; and was one of the revisers of the New Testament. He was active as a reformer, especially president of the N. Y. Society for the Prevention of Crime. His works include: *Bible Manual*; *Life of Jesus*; *The Christian Preacher*, &c. Died in New York March 29, 1891.

Crosby, **PIERCE**, rear-admiral U. S. Navy, was born near Chester, Pa., Jan. 16, 1824. He entered the navy as midshipman in 1838 and served in the Mexican War during the Civil War—in which he enrolled in 1861—his services were most important. In 1882 he became rear-admiral and retired in 1883.

Cross, **MARY ANN EVANS**, better known by her pen-name, **GEORGE ELIOT**, was born at Griff House, near Nuneaton, in Warwickshire, England, Nov. 22, 1812. Her father was Robert Evans, a master carpenter, whose death in 1849 she went abroad with friends and spent some time in Geneva, where she continued the diligent study she had carried on in her father's house. After her return to England, she contributed a few articles to the *Westminster Review*, among the best of which productions are: *Woman in France*; *Madame de Sévigné*; *The Natural History of German Life*, &c. Her translation of Fenerbach's *Wesen des Christenthums* appeared in 1853. Novel writing was not attempted by her till after her acquaintance with Mr. George Eliot, a gentleman with whom she afterward lived his wife, but without the tie of the marriage service. It was at his suggestion that she undertook the writing of fiction, her first work being *Scenes of Clerical Life*, which was published in *Blackwood's Magazine* before appearing in book form. Following this came: *Adam Bede*; *The Mill on the Floss*; *Silas Marner*; *Romola*; *Fe Holt*; *Middlemarch*, generally regarded as the greatest of her works; and *Daniel Deronda*. The *Spanish Gypsy* a poem; *The Legend of Jubal*, and a collection of social essays, *The Impressions of Theophrastus Such*, and a translation of Strauss' *Leben Jesu*, which she made

George Eliot

[MARY ANN CROSS]

1819-1880

1846, complete the list of her works. George Eliot was a realist in method. Her characters are not drawn from those who live in the midst of wealth, or in high places, nor does she represent the romantic or fashionable side of life. She has depicted, for the lovers of human nature, life as it is to the masses from the rising to the setting of each day's sun. Human life, as described by her, is seen in the present, but is also the life of the past, and will for many years to come represent the life of the future. Her characters belong to no particular period and are of little social importance, but she has vividly portrayed their life as it really is—imperfect, neither wholly good nor bad. They are the everyday men and women of all time living the ordinary life that thousands experience. This greatest of recent English novelists has shown us the joys, sorrows and poetry which exist in commonplace lives, with their actual surroundings, trials and temptations. Her marriage with Mr. Cross seemed to the world an acknowledgment that her former disregard of social conventionalities was a mistake, and the consequences of her defiance of custom and law must have caused her much suffering, hers being especially a temperament that needed the comradeship, respect and love of her kind. The sorrow with which her life must have been darkened seems shown in her works, which, despite their occasional rich sense of humor, are invariably sad in conception and handling. The shadowy side of life alone seemed to appeal to her deep, reflecting mind, while her earnest, philosophical spirit makes itself continually felt in injected paragraphs of thoughtful deduction. These occur so frequently in some of her later works as to make them, to many persons, rather heavy reading. Died Dec. 22, 1880.

Croton Aqueduct. (*Hydraul. Eng.*) An aqueduct for conveying water from Croton river to New York city, a distance of about 40 miles. This, built originally in 1837-41, was the first large aqueduct in the U. S. It is a masonry chamber 7 ft. 5 in. wide and 8 ft. 6 in. high, of horseshoe form. It proving insufficient, an additional aqueduct on a much larger scale was built in 1855-90. This is 33 miles long, following a direct line from the river to the city, and was constructed chiefly by tunneling. In the tunnel portions it is circular and 12 ft. 3 in. diameter. The other sections are horseshoe shape, 13 ft. 7 in. by 13 ft. 6½ in. in dimensions. The Harlem river is passed by an inverted siphon of masonry lined with iron, in a tunnel 150 feet below the river bed.

Crotch, FREDERICK WILLIAM NICHOLLS, musician, was born in London, July 31, 1808. Studied with William Watts, Hawes, Atwood, Crevalli, and at the Royal Academy of Music. In 1849 came to the U. S., where afterward resided. At the commencement of the Civil War he joined the Confederate army. He is the author of the famous song *Kathleen Mavourneen*, and has written other songs and some church music. Died Aug. 18, 1896.

Crows, or Crow Indians. (*Ethnol.*) A division of the Dakota family of American Indians, comprising those known as the Ahwahaways, Allakawehs, and Katsas, for many years located in the region of the Blackstone, Tongue, and Big Horn rivers. Originally they were probably closely allied to, if not identical with, the Minitarees, or Gros Ventres. The C. have made treaties with the U. S. Government in 1825, 1851, 1866, and 1868. They are of a naturally peaceful disposition, and yield readily to civilizing influences. In 1838 the remnant of the race, not 3,000 in all, was removed to the Crow reservation, in the valleys of the Big and Little Horn rivers, where they are largely engaged in agriculture. Many hold their lands in severalty. The C. are remarkable for their long hair, skill in hunting, and cleanliness of habits.

Cruciality to Animals. Societies for the prevention of cruelty to A. originated in England, the original society being organized in 1824, while the first in Scotland dates from 1839. In 1879 the Fellowship of Animals' Friends was organized, under the presidency of the Earl of Shaftesbury. A similar organization was founded in the U. S. in 1866, of which numerous branches now exist. Legislation has been procured, prescribing penalties for ill-treating horses or other draught animals, working them with sores, and other forms of inhuman conduct to animals. Homes for stray dogs and cats have been provided, and severe punishment has been prescribed for torturing, wounding or maiming of any domestic animal.

Cruiser. (*Navy.*) In the modern sense, a ship of war armored or unarmored, designed for cruising, and possessing an armament inferior to that of a battleship. It is a rule, with a relatively higher rate of speed.—As early as 1880, there was a clear line of demarcation between the armored and the unarmored C.; but since that time these types have been gradually merged until the distinction has lost much of its significance in recent construction. The modern C. is a steel vessel of the highest development. Wooden vessels of this class have almost disappeared, and sails have now practically given way to steam as a method of propulsion. These changes have compelled an increase in the size of cruisers in order to afford room for coal and for the power-motors which modern speed requirements have brought into use. The single-propeller type was first supplanted by the twin-screw, and now the triple-propeller model is in vogue for cruisers of the largest form.—*of the U. S. Navy.* There are now (1897) two first-class armored cruisers in the U. S. Navy, the *New York* and the *Brooklyn*. The former was begun in 1890 and completed three years later. Its dimensions follow: length, 380 feet, 6 inches; breadth, 64 feet, 10 inches;

mean draught, 23 feet, 6 inches; displacement, 8,200 tons; coal capacity, 1,290 tons; horse-power, 17,401; speed, 21 knots. This fine vessel has two three-bladed propellers of manganese bronze, each 16 feet in diameter and 20 feet pitch. A steel protective deck extends the whole length of the vessel, its side edges being 4½ feet below the water line, curving to a foot above amidships. This deck is 2½ inches thick at the edges, 6 inches on the slopes, and 3 inches on the central flats. An armor belt of 5-inch steel, between the protective and main decks, serves as a shield for the machinery. Extending all around the vessel is a cellular structure, 3 feet, 6 inches deep, next to the outer plates, filled with cellulose (q. v.) for protection in case of perforation of the hull below the water line. Two sets of three cylinder engines of the triple expansion type furnish the motive power for each propeller, making in all four complete sets of engines. The propellers may be worked independently. There are three smoke-pipes and two military masts. The armament of the *New York* consists of six 8-inch rifles, two of which are mounted in a 10-inch steel barbette forward, two similarly mounted aft, and one amidships on either side; twelve 4-inch rapid-fire rifles in 4-inch steel sponsons on the main deck; and eight 6-pounder rapid-fire guns in 2-inch sponsons, also on the main deck. There are two torpedo tubes on each broadside; also one forward and another aft—six in all. The 4-inch guns are 16½ feet and the 8-inch guns 25 feet above load water-line. The *New York* has shown a capacity to sustain a sea-speed of over 18 knots under ordinary conditions, and is therefore one of the most formidable warships afloat of the C. class.—The *Brooklyn*,

Minneapolis, and *Olympia* are of the first class; the *Baltimore*, *Chicago*, *Philadelphia*, *Charleston*, *Newark*, *San Francisco*, *Atlanta*, *Boston*, *Raleigh* and *Cincinnati* are of the second class; and the *Detroit*, *Montgomery*, and *Marblehead* are of the third class. These are otherwise known (except the third class) as *protected cruisers*. The *Vesuvius* is of a special class, known as the *dynamite C.*; the *Dolphin* is a *dispatch boat*; and the *Yorktown*, *Concord*, *Castine*, *Bennington*, *Machias*, *Helena*, *Nashville* and *Wilmington*, are more properly classified as *gun boats* (q. v.) Of our first-class cruisers, the *Columbia* was first completed, being closely followed by her sister ship, the *Minneapolis*. These vessels are almost identical in design and armament, and therefore closely resemble each other in appearance, except that the former has four smokestacks and the latter only two. A curved steel protective deck covers the machinery space, 2½ inches thick on the flats and 4 inches on the slopes. The cellulose belt, for excluding water, is 5 feet thick, extending all around the hull. The engines are of the vertical, triple expansion type, and having developed 18,509 and 20,862 horse-power on the *Columbia* and *Minneapolis* respectively, drive three propellers, the location of which is shown in Fig. 2794. These mammoth screws may be worked independently if desired. Cruisers of this type are designed chiefly for offensive operations, and are known as "commerce destroyers;" their armament, therefore, is light, consisting of 18-inch rifle aft, 2 6-inch guns on the spar deck, forward, and 8 4-inch rapid-fire guns, mounted in 4-inch steel sponsons on the main deck, besides 12 6-pounder, 4 1-pounder, and 4 gatlings variously distributed at vantage points

Fig. 2794.—U. S. CRUISER "COLUMBIA" IN DRY DOCK, SHOWING TWO OF THE TRIPLE PROPELLERS.

begun in 1893 and finished in 1896, is somewhat larger than the *New York*, being 400½ feet long, with 64 feet, 8 inches beam, 24 feet draught, and 9,271 tons displacement, with 16,000 horse-power. A speed of 20 knots was required by contract, but, on her official trial trip, Aug. 27, 1896, this noble vessel covered 83 nautical miles at an average speed of 21.92 knots, a portion of which was made at the rate of 22.9 knots an hour. The *Brooklyn* differs from the *New York* in having three very high smoke-pipes, towering 100 feet above the grate bars; and in having a much higher fore-deck and fore-board, by means of which the pair of 8-inch rifles forward are carried some eight feet further above the water than the corresponding guns of the *New York*. These peculiarities detract somewhat from the beauty of the vessel; but, since the lofty smokestacks serve the same purpose as that attained by the more expensive forced draught, and the greater elevation of the forward rifles guarantees them greater efficiency in the pursuit of an adversary, especially when steaming against the wind, the loss of symmetrical beauty will doubtless be compensated by economy and increased usefulness. The *Brooklyn* carries 8 8-inch rifles, in 8-inch steel barbettes—two forward, two aft, and two on each broadside; 12 5-inch, 4 6-pounder, and 4 1-pounder rapid-fire guns, and 4 gatlings. There are two torpedo tubes on either side and one at the bow. A protective steel deck, from 3 to 6 inches thick, is worked throughout the vessel, as in the *New York*; and the cellulose lining is also a valuable adjunct. The contract price of the *New York*, including machinery and hull, but not the speed premium, was \$2,985,000; of the *Brooklyn*, \$2,986,000. *Unarmored C.*—Our new navy has three classes of C. of the so-called unarmored type. Of these, the *Columbia*,

on the deck, bridges and military tops. The *Columbia* made a speed record of 22.8 knots on her government trial-trip, and this was exceeded by the *Minneapolis*, with 23.7 knots. On July 26–August 2, 1895, the *Columbia* made a memorable trip from Southampton to New York, covering the 3,000 miles in seven days less eleven minutes—an average of 18.41 knots an hour—which is believed to be the fastest ocean voyage ever made by any warship. The general dimensions of these two cruisers are as follows: Length, 412 feet; breadth, 52.2 feet; mean draught, 22.5 feet; coal capacity, about 2,000 tons; displacement, 7,375 tons. The contract price of machinery and hull was \$2,725,000 for the *Columbia*, and \$2,690,000 for the *Minneapolis*; the former has a crew of 40 officers and 429 men, while the latter has 40 officers and 456 men. The *Olympia* is of a somewhat different model, being only 340 feet long, with 53 feet beam, a mean draught of 21.5 feet and a displacement of 5,870 tons. There are only two screws, yet a speed of 21.6 knots was developed on official trial, with 17,313 horse-power—only 13,500 horse-power having been required by contract. The main battery consists of 4 8-inch and 10 5-inch rifles, all located on the main deck, besides a secondary battery of 14 6-pounder rapid-fire guns stowed in 4-inch steel sponsons (5 on each broadside) with 6 1-pounders and 4 gatlings on the bridges and in the fighting tops. The 8-inch guns are mounted in pairs in two 3½-inch turrets (fore and aft) which revolve within barbettes of 4-inch nickel steel. Having an axial height of 22 feet, and firing through an arc of 280°, these 8-inch guns have a great range of action and are remarkably well protected from return fire. The disposition of the 5-inch guns is such that four out of the five on each side can be trained at once on an object

either fore or aft within a radius of 180°. The 6-pounders on the berth deck are so placed as to be free from the flash of the main battery above, and are able, collectively, to maintain a complete belt of fire around the ship. This vessel is considered by many experts to be the greatest fighting craft of her tonnage afloat. Cost of hull and machinery, \$1,796,000.—*Second Class C.* The list is as follows:

Name.	Keel Laid.	Displacement, Tons.	Length, ft. in.	Breadth, ft. in.	Mean Draught, ft. in.	Speed, Knots.	Contract Price.
ATLANTA	1883	3,000	271 3	42 1	18 10	15.6	\$617,000
BOSTON	1883	3,000	271 3	42 1	16 10	15.6	619,000
CHICAGO	1883	4,500	325 0	48 2	19 0	15.1	889,000
BALTIMORE	1887	4,413	327 6	48 7	19 6	20.09	1,325,000
PHILADELPHIA	1888	4,324	327 6	48 7	19 2	19.6	1,350,000
NEWARK	1888	4,098	310 0	49 2	18 9	19.1	1,248,000
CHARLESTON	1887	3,730	312 0	46 2	18 7	18.2	1,017,500
SAN FRANCISCO	1888	4,098	310 0	49 2	18 9	19.5	1,428,000
CINCINNATI	1890	3,213	300 0	42 0	18 0	19.1	1,100,000
RALEIGH	1889	3,213	300 0	42 0	18 0	19.1	1,100,000

The main batteries of the *Atlanta* and *Boston* consist of two 8-inch and six 6-inch rifles; the *Chicago* and *Baltimore* have each four 8-inch guns; the former has eight 6-inch and two 5-inch guns, and the latter six 6-inch guns in addition. The *Philadelphia*, *Newark* and *San Francisco* have main batteries of twelve 6-inch rifles, with no higher calibers, while those of the *Cincinnati* and *Raleigh* embracing ten 5-inch and one 6-inch guns, and the *Charleston* two of 8-inch and six of 6-inch caliber. The secondary batteries include 1-, 3- and 6-pounder rapid-fire guns, Hotchkiss revolving cannon

Seminary on account of his color, he became a student in the University of Cambridge, England, graduating with the degree of B.A. Previous to his entering Cambridge he had been ordained deacon by Bishop Griswold, and was admitted to the priesthood in Philadelphia by Bishop Lee, of Delaware. He subsequently became professor in the Liberian College, West Africa, and also rector of a church in Liberia. After his return to

America he was appointed rector of St. Luke's Church, Washington, D. C. From Lincoln University, Pa., he received the degree of D.D. His works comprise: *The Future of Africa; Greatness of Christ, and other Sermons, &c. Crust of the Earth.* (Geol.) That small portion of the exterior of our planet which is accessible to human observation. It comprises not merely those portions of which the structure is laid open in mountain precipices, or in cliffs overhanging rivers or the sea, or whatever the miner may reveal in artificial excavations; but the whole of that outer covering of the planet on which

Fig. 2795.—U. S. THIRD-CLASS CRUISER "MONTGOMERY."

and gatlings, from 14 to 18 on each ship. Some of the earlier types, as the *Atlanta* and the *Newark*, are arranged for the use of sails; but, as already stated, sail-power is now seldom considered in naval architecture, except for small gunboats.—*Third Class C.* These are among the most valuable vessels in our navy, being relatively economical as to first cost and maintenance, and having sufficient speed and sea-endurance to render them capable of performing the duties of a *C.* most acceptably. At this date there are only three in commission, viz.:

Name.	Keel Laid.	Displacement, Tons.	Length, ft. in.	Breadth, ft. in.	Mean Draught, ft. in.	Speed, Knots.	Contract Price.
DETROIT	1890	2,089	257 0	37 0	14 7	18.7	\$612,500
MARBLEHEAD	1890	2,089	257 0	37 0	14 7	18.4	674,000
MONTGOMERY	1890	2,089	257 0	37 0	14 7	19.5	612,500

These are sometimes termed "partially protected" *C.* but possess very little defensive power except their speed. Each carries nine 5-inch rapid-fire rifles of high power, in addition to six 6-pounder, two 1-pounder and two gatlings, making a very formidable armament except in use against armored antagonists. The *Montgomery*, completed in 1893, is probably the most effective vessel of the three.—All our *C.* of recent build are well provided with torpedo tubes, are models of marine construction, have proved themselves entirely seaworthy, and have, in nearly every case, more than met contract requirements. Electrical appliances for lighting, inter-ship communication, steering, hoisting, &c., have been fully utilized. Specific reference to the *C.* of other nations is hardly required here, for the vessels of our own navy, already described, represent everything that is new or useful in the art of building and equipping warships of this class.

Crummell. ALEXANDER, D.D., a noted colored scholar and divine of the Protestant Episcopal church, was born in New York, March 3, 1819, and was educated at Canaan, N. H., and Oneida Institute, New York. Unable to procure the education he sought in the U. S., having been refused entrance to the General Theological

we are enabled to reason by observations made at or near the surface. These reasonings may extend to a depth of several miles, but even then it may be said that such a thickness is but a small part of a fraction of the distance from the surface to the centre. This remark is just; but although the dimensions of such a crust are in truth insignificant when compared to the entire globe, yet they are vast and of magnificent extent in relation to man, and to the organic beings which people our globe. The materials of this crust

are not thrown together confusedly; but distinct mineral masses, called *rocks*, are found to occupy definite spaces, and to exhibit a certain order of arrangement. The term *rock* is applied indifferently by geologists to all these substances, whether they be soft or stony, for clay and sand are included in the term, and some have even brought peat under this denomination. Our older writers endeavored to avoid offering such violence to our language, by speaking of all the component materials of the earth as consisting of rocks and soils. But there is often so insensible a passage from a soft and incoherent state to that of stone, that geologists of all countries have found it indispensable to have one technical term to include both, and in this sense we find *roche* applied in French, *rocca* in Italian, and *felsart* in German.

Cruz. JOSÉ MARIA, DE LA, Chilean general, born at Concepcion, April 21, 1801. He joined the revolutionary army as a cadet in 1811, and received rapid promotion. In 1831 he was appointed minister of war, and subsequently became chief of staff of the army which invaded Peru. In 1839 he was made general of division. He was again made minister of war and marine in 1841, and in the same year became governor of Valparaiso,

and commandant general of marine. He was the leader of a revolt in the Southern provinces, but was defeated in the battle of Lonyamilla, Dec. 8, 1851. Died Nov. 23, 1873.

Cryptograph. n. [Gr. *kryptos*, secret, and *graphō* to write.] A secret writing.—A skiagraph (*q. v.*).

Cryptography. n. The art of writing or telegraphing in cipher, or so that the matter written cannot be deciphered without the aid of a prearranged key. Most systems of cryptography are decipherable by those skilled in the solution of literary puzzles, and very ingenious cryptographic methods have been invented with the hope of rendering them undecipherable.

—The art of making cryptographs.

Cryptoscope. n. Same as SKIASCOPE (*q. v.*).

Crys'tal. in Minnesota, a post-village of Hennepin co. Pop. about 1,200.

Crys'tal. in Missouri, a city of Jefferson co. Pop. 1,190.

Cuba.—Continued from SECTION I, page 723.

Marshal Campos was succeeded by General D. V. Weyler, who had won a reputation as a hard fighter and also as a brutal soldier, and from whom Spain hoped for speedy success. He was supported by all the power of the kingdom. By the end of April, 123,32 soldiers had been sent to *C.*, a larger number than an nation had ever before sent a distance of 3,000 mile. Yet they were sent with remarkable ease and rapidity. With them went 150,000 Mauser and Remington rifle 60,000,000 cartridges, and other war supplies in proportion. In the autumn of 1896, they were reinforced by 40,000 additional men. Yet despite this extraordinary effort on the part of Spain the insurgents remained unsubdued, Weyler failing as signally as his predecessor had done.—*Sympathy in the U. S.* During this struggle much sympathy for the insurgents was manifested in the U. S., and resolutions were passed by convention and legislative bodies calling for their recognition as belligerents. On March 26, 1896, the U. S. Congress declared that, in its opinion, a condition of war existed between Spain and the proclaimed government of Cuba, which this country should maintain a strict neutrality and desired that the friendly offices of the U. S. should be offered to the Spanish government for the recognition of Cuban independence. In May, President Cleveland demanded a fair trial for the crew of the *Competitor*, filibustering schooner which had been taken and crew sentenced to death by court-martial. The U. S., said, would regard their execution as an unfriendly and a covert threat that induced Spain to reconsider her hasty action. But the open sympathy manifested throughout the U. S. aroused hot indignation in Spain and threats of war with this country were freely uttered by the populace and papers. This indignation, however, was a popular ebullition not shared in by the Spanish government, which recognized that the United States government had maintained a neutral attitude and taken active steps to check filibustering expeditions, a that it could not be held responsible for the utterances of individuals, even if these were members of Congress.—*Weyler's Methods.* The campaign of 1896 was inaugurated by a striking act of daring on the part of the insurgents, which placed the whole interior of the island in their hands. General Maceo led his troops into the western province of Pinar del Rio, from which he threatened Havana from the west, while an important new field of subsistence and recruiting fell into his hands. General Weyler at once took steps to confine him in this contracted area, hoping to destroy him and his followers, and thus signally reduce the numbers of the enemy. The island of *C.* narrows in the meridian of Havana, and this offered an excellent opportunity for the Spanish commander to throw a cordon of troops based on a line of military posts, across the island at that point, with the hope of cutting the Cuban forces definitively in two and of dealing with them piecemeal. In this hope he failed. The famous trocha, or line of posts, failed to check the Cuban excursions, while Maceo, though he could readily have escaped to the east, remained defiantly in Pinar del Rio, and defied the efforts of Weyler to entrap or defeat him. Unfortunately the Cuban cause, this able commander was drawn into an ambush in Havana province in December and killed. His death, however, though raising high hopes in Spain did not seem to discourage his followers, who continued to defy their foes in the mountains and forests of the west. Meanwhile the planters and people of *C.* suffered severely. General Weyler did his utmost to protect sugar planters in grinding their cane. General Gothe threatened those with ruin who ventured to do so, in several instances showed his power and intention making good his threats. As a result, little or no sugar was made and the industries of the agricultural district came to a virtual standstill. As for the peasantry, their sufferings were severe, and there is reason to believe that many of this and the superior class fell victims to the brutality of the soldiers, while the prisoners were filled with men seized on suspicion of being Cuban sympathizers, who seem to have been treated with shameful regard of justice and humanity. At the close of the second year of the rebellion, therefore, the interests were in an exceedingly depressed condition and its people reduced to a pitiable destitution. Yet, despite strenuous and unprecedented efforts of Spain, the insurgents kept the field and seemed to be steadily pressing towards eventual success, despite the very large army under General Weyler's command. In Sept., a paper currency was issued, with strict orders from the captain-general that no one should refuse to receive these orders, however, it was at a considerable discount within a short time, and Weyler was forced to acknowledge that financial affairs could not be controlled.

U. S. CRUISERS.

1. Atlanta. 2. Columbia. 3. Newark. 4. Pivot gun, deck of Columbia. 5. New York. 6. Deck of New York, looking aft; turret with two 8-inch rifle, military mast, etc. 8. Baltimore.

by orders from headquarters. In the following month the Spanish government announced a loan of \$200,000, which was promptly taken. The number of troops in the island also continued to increase until fully 200,000 had been sent, though many of these had perished from disease or in the field. Yet, despite all that Spain could do, the insurgents remained unsubdued, and continued to struggle for freedom from Spain with undiminished courage and energy and apparently growing success.

Cullera (*kul-lá'rah*), a fortified seaport of Spain, at the mouth of the Xucar, and 23 m. S. S. E. of the city of Valencia. It has considerable coasting trade. Pop. (1897) 12,500.

Cullman, in Alabama, a town, the cap. of Cullman co., on Louis. & Nashville R. R., 35 m. S. of Decatur. Has some manufactures, and is in a good fruit-raising region. Pop. (1897) about 1,250.

Cullom, SHELBY M., a lawyer and statesman of the Republican party, was born in Wayne co., Kentucky, Nov. 22, 1829; studied law and began its practice at Springfield, Ill., in 1848; was elected to the State Legislature in 1856 and again in 1860, when he became its Speaker; was member of the War Commission at Cairo, Ill., in 1862; in Congress from Dec. 1865 to March, 1871; again in the State Legislature, 1872-74, and Speaker in 1873; became governor of Illinois in 1877, and again in 1881, but resigned on Feb. 6, 1883, to succeed David Davis in the U. S. Senate, where he still remains (1897) his present term expiring in 1901. Mr. C. may be regarded as the father of the Interstate Commerce Laws, and has been a prominent figure in national politics for many years. In 1892 and again in 1896, his name was freely mentioned in connection with the Republican presidential nomination. In personal appearance and habits he is thought to resemble Abraham Lincoln.

Cullum, GEORGE W., an American general and engineer, born in New York city, about 1812, graduated from West Point in 1833, and was engaged for the next 25 years in engineering labors—the construction of forts, bridges, and poutou-trains, and acting as instructor at West Point of practical military engineering. During the Civil War he became Chief of Staff to the General-in-Chief, from Nov., 1861, to Sept., 1864, Superintendent of the Military Academy, West Point, from Sept., 1864, to Aug. 28, 1866, and after that time, a member of the Board of Engineers for Fortifications, &c. Gen. C. published the following works: *Military Bridges with India-rubber Pontons*; *Register of Officers and Graduates of the U. S. Military Academy from 1802 to 1850*; a translation of Duparc's *Elements of Military Art and History, with Notes, &c.*; *Systems of Military Bridges*; *Biographical Register of the Officers and Graduates of the U. S. Military Academy from its Establishment in 1792 to the Army Reorganization of 1866-67*. Died Feb. 28, 1892, leaving a large portion of his estate for the erection of a memorial hall at West Point, and the continued publication of his *Biographical Register*.

Culna (*kool'nah*), a flourishing town of India, British pres. of Bengal, dist. Burdwan, on the Hooghly, 47 m. S. of Calcutta. It is a place of extensive commerce, and connects by steam-navigation with Calcutta as well as the upper provinces.

Cumberland, in Wisconsin, a city of Barron co., on C., St. P., M. & O. R. R., 18 m. N. W. of Barron. Has extensive lumbering interests and several large saw-mills. Pop. (1897) about 1,600.

Cumberland Presbyterian Church. See PRESBYTERIANISM.

Cum'ing, ROALEYN GEORGE GORDON, Scottish traveler and "Lion-hunter," born March 15, 1820. Educated at Addiscombe, entered the East Indian service, and subsequently joined the Cape Mounted Rifles, which commission he resigned, and thereafter distinguished himself by his exploits in killing wild beasts. He was the author of *Five Years of a Hunter's Life*. Died March 4, 1896.

Cummings, JOSEPH, D.D., LL.D., born at Falmouth, Me., March 3, 1817. He graduated at Wesleyan University in 1840 and entered the ministry of the Methodist Episcopal Church. He became president of Genesee College, of Wesleyan University, in Connecticut; and of the Northwestern University, Evanston, Ill. Died May 1, 1890.

Cum'ins, GEORGE DAVID, D.D., clergyman, was born near Symrna, Del., Dec. 11, 1822. He was educated in Dickinson College and preached in the Methodist Episcopal Church before his ordination. In 1846 he took orders in the Protestant Episcopal Church and held successive rectorships in several churches. In 1866 he was elected assistant bishop of Kentucky, a position which he afterward resigned, becoming a leader of the Low church party. He was made presiding bishop of the reformed Episcopal Church, Dec. 2, 1873. Died at Annapolis, Md., June 26, 1876.

Cumins, MARIA SUSANNA, novelist, born at Salem, Mass., April 10, 1827. Her first and most successful novel was the *Lamp-lighter*. The sale of this work in America alone has exceeded 120,000 copies, 40,000 being sold in the two months following its publication. Her work has been translated into both French and German. Her other novels include: *Mabel Vaughan*; *Wanted Hearts*, &c., besides contributions to the *Atlantic Monthly* and various magazines. Died in Dorchester, Mass., Oct. 1, 1896.

Cumulative Vote. See REPRESENTATION OF MINORITIES.

Cunduran'go. (*Bot.*) The name given in Ecuador a plant found in the province of Loya, and said to be the same species called *guaco* in Colombia (*Mikania guaco*). It is claimed to be useful in the cure of cancer, scrofula, and other blood diseases. Its virtues are said

to have been first discovered by accident. An Indian had been suffering for a long time from internal cancer, and his wife undertook to relieve him by shortening his life with poison. For this purpose she selected the *C.*; but, not being able to obtain it at the time of its fruit-bearing, she made a decoction of the bark. To her astonishment, the first application appeared to benefit the patient rather than otherwise, and by a continuance of this remedy he was completely cured in a short time. Much controversy has arisen as to the real virtue of the plant, and its actual value has yet to be clearly demonstrated.

Cun'liffe-Ow'en, SIR PHILIP, director of the South Kensington Museum, was born June 8, 1828. He was appointed deputy general superintendent of the South Kensington Museum. In the London and Paris Exhibitions of 1862 and 1867, also in the Vienna Exhibition of 1873, and in the Centennial Exhibition of 1876, he held important positions. In the last named he was presented with one of the four silver medals awarded by the Centennial Commission. Died in Lowestoft, England, March 23, 1894.

Cun'ningham, ALEXANDER, an English archaeologist, second son of Allan Cunningham, the Scottish poet, was born at Westminster, Jan. 23, 1814. His education was received at Christ Church Hospital, and at the Military College, Addiscombe. Among other important offices to which he was appointed as engineer, was that of chief engineer of the northwest provinces of India. In 1870, he was made surveyor-general of Indian archaeology, and subsequently a member of the order of the Star of India. In the army his rank is that of major-general. His works comprise: *An Essay on the Aryan Order of Architecture*; *The Khalsa Temples, or Buddhist Monuments of Central India*, &c.

Curare (*koo-rah'ra*). A very energetic vegetable poison, employed by the South American Indians to poison their arrows. It is said to be obtained from the bark of a species of convolvulus, called *Fejuco de Maracure*, but is referred by Martins to *Strychnos graniensis*, and by Dr. Schonburg to *S. toxicaria seu toxicifera*. Dr. Brainard thinks it contains the venom of serpents as its main ingredient.

Curci (*koor'-chee*), CARLO MARIA, Italian theologian, born in Naples, in 1810. His education was received at the Jesuit College in Rome, and at the age of 15 he entered the Society of Jesus. His oratorical powers brought him popularity and he became noted by his controversy with Gioberti, who had attacked the society of which he was a member. He distinguished himself by his opposition to the autocratic rule of the Pope, believing if the church would grow in power it must adopt a simpler and more spiritual method of conducting its work. He was the founder and editor of *La Civetta Cattolica*, but the opinions expressed by him in this paper not being approved by the Society of Jesus, he retired from the management of it. He is the author of *Lezioni esegetiche e morali sopra i quattro Evangelii*, a work which brought upon him ecclesiastical censure and his expulsion from the Society of Jesus.

Cur'lew, *u.* (*Ornith.*) A gallatorial bird, belonging to the *Scelopacidae* or Snipe fam., all of which inhabit the vicinity of water and marshes, and feed upon worms. The Long-billed Curlew, *Numenius longirostris* of all temperate North America, measures about two feet in length, and in breadth from tip to tip above three feet. The bill is about seven inches long, of a regular curve, and blunt at the end; the upper mandible is black, gradually softening into brown toward the base; the under one flesh-colored. The head, neck, and wing-

Fig. 2796.—LONG-BILLED CURLEW.

coverts are streaked with brown; the back and scapulars are nearly black in the middle, edged and deeply indented with light gray. The breast, belly, and lower part of the back are of a dull white, spotted with black; the quill-feathers are black, the inner webs crossed with white; tail barred with black, on a white ground tinged with red; thighs bare about half-way above the knees, of a bluish color; the toes are thick, and slightly membranous. The female makes her nest upon the ground, in a dry tuft of rushes or grass, and lays four eggs of a greenish cast, spotted with brown.

Cur'ling. (*Games*.) The national winter game of Scotland. It is played upon the ice with polished stones, of circular form, weighing from 35 to 50 pounds. The object of the game is to plant the stone, which is caused to slide over the ice, as nearly as possible to the "tee," the center of a circle about 40 yards distant, and to drive out the stone of an opponent already planted

there. Handles project from the upper surface of the stone, by whose aid the throw is effected. This game is of ancient origin. A stone has been found bearing the date 1551, and others much older and rude in finish, yet bearing the significant handle. The Dudhings Curling Society of Edinburgh, instituted in 1795, is the oldest in existence. The game has been introduced into the northern U. S. and Canada, where it is extensively played in the winter season. Four players on each side make a game, each using two stones, the principal purposes of the players being to plant their stones near the tee, to guard them there by other stones, and to drive away the stones of the opposing side. *C.* is called the "roarin' game," on account of the roaring noise made by the stones as they slide swiftly over the ice.

Cur'rents, *Ocean'ic*. (*Hydrog.*) The currents of the ocean arise from various causes, either occasional or constant. They may be caused by difference of temperature in different parts of the sea, by inequality of evaporation, by the melting of polar ice, or, in short, any cause tending to disturb the hydrostatic equilibrium. It is believed that a great vertical circulation exists in the ocean, similar in cause and character to that which causes the trade winds in the atmosphere. Thus the heated waters of the tropics expand and rise; the chilled waters of the frigid zones contract and sink. The surface level is in this way disturbed and a steady set of equatorial waters takes place north and south to restore the equilibrium. On the ocean bottom a reverse movement takes place. The dense polar waters flow toward the equator to restore the equilibrium of pressure. This movement is not strong enough on the surface to be very evident, but it has been shown by deep-sea thermometrical observations of wide extent. To it is probably due much of that warming of the western coast of the continents usually attributed solely to the Gulf Stream and similar currents. These surface currents—"the rivers of the ocean," as they have been called—next claim attention. There are five of these currents which flow in great curves from the equatorial to the temperate zones, known respectively as the Gulf Stream and the Brazilian Current, of the Atlantic; the Kuro Siwo, of the North Pacific; the East Australian Current, of the South Pacific; and the Mozambique Current, of the Indian Ocean. Several theories as to the cause of these great ocean streams have been promulgated, but investigators now believe them to be due to the trade winds, which exert a steady pushing force upon the tropical waters, and keep them continuously in motion in a westward direction. This steady surface movement in the waters of the tropical Atlantic causes a heaping up of sun-heated waters against the coast of South America, where they are divided by Cape St. Roque, the greater volume flowing north to form the Gulf Stream (*q. v.*), and the remainder flowing south as the Brazilian Current. This is much smaller in volume and less important than the Gulf Stream, and flows southward to the mouth of the La Plata, about 35° S. lat., where it is deflected by a cold current from the south frigid zone. Deep fogs and severe gales are caused by the meeting of these currents of different temperatures, while the combined streams flow eastward, some of the water being deflected northward by the African coast, the remainder passing the Cape of Good Hope, and forming part of the great polar flow, which makes the circuit of the earth in the region south of the continents. In the north frigid zone the ocean is land-locked and its currents broken. In the south a zone of oceanic waters encircles the globe, over which the anti-trade winds blow in a steady and strong

current, causing an easterly set of the waters. This flow of air from the cold upper atmosphere has the effect of keeping the waters of the southern seas at a lower temperature than those of the same latitude in the north, while icebergs have been brought by the polar flow as far north in latitude as the Cape of Good Hope. The currents of the Pacific have been much less studied than those of the Atlantic. The drift current of the equatorial Pacific, deflected to the north by the numerous islands north of New Guinea, becomes a strong northeast stream of warm water, possessing, according to the estimate of Dr. Haughton, nearly three times the volume of the Gulf Stream, but of less velocity, its waters not being confined, like those of the latter, in a narrow channel, but occupying a wide space. It flows past the islands of Japan, where it is known as the Kuro Siwo, or "Black Stream," from the deep-blue color of its waters. Thence its waters are deflected eastward toward the American coast, part of them perhaps passing through Bering Strait, but the greater portion of them following the coast southward and greatly mitigating its temperature. No Sargasso sea, similar to that of the Atlantic, has yet been found in the North Pacific, but one may exist in some part of that vast and little traversed expanse. The South Pacific presents no such strongly marked currents. The south-flowing portion of the equatorial flow mainly makes its way to the eastern coast of Australia, where it meets the Antarctic current from Bass's Strait. The combined currents flow easterly between Australia and the northern island of New Zealand, where they sometimes attain the great velocity of 100 miles a day. Part of the flow is deflected,

to the south of New Zealand. Further on, their course is not well marked until they reach the South American coast, where they are known as Humboldt's Current, and bring fogs and cold winds to the coasts of Chile and Peru. In the northern part of the Indian Ocean the currents vary in direction from the variation in the monsoons, flowing westward during the winter and eastward during the summer. In the southern region of this ocean the trade winds make themselves felt, setting up a strong westerly current, which is turned southward by the African coast, and that of Madagascar, which divides it into two branches. One of these moves along the eastern coast of Madagascar, part of it flowing up the West Australian coast, but the great body of the current moving south to join the South Pacific flow. The other division passes west of Madagascar through the Mozambique Channel, continuing southward until it reaches the Agulhas bank which lies south of Africa. This is the most important of the southern streams. Under the name of Agulhas Current it displays near Cape Corrientes a volume greater than that of the Gulf Stream and a velocity of six miles an hour. Its waters are warm and its region of junction with the cold Antarctic current is marked by violent storms and rapid changes of temperature. The total volume of these five great currents is estimated by Dr. Haughton at $6\frac{1}{2}$ times that of the Gulf Stream, while they are estimated to carry away more than half the solar heat of the tropics for redistribution in the temperate zones. The Polar currents, on the contrary, bring much of the polar chill to the same zones, so that the O. C. vigorously aid the equalization of terrestrial temperatures.

Curry, DANIEL, D.D., LL.D., Methodist divine and journalist, born near Peekskill, N. Y., Nov. 26, 1809. He was a graduate of Wesleyan University, Conn. After his admission to the ministry and previous to the threatened disruption of the Methodist church, he occupied pulpits in Athens, Savannah and Columbus, Ga. On his return to the North he had pastoral charge of churches in New York, Brooklyn, New Haven and Hartford. In 1854 he was appointed president of the Indiana Asbury University. From 1864 to 1876 he was editor of the *Christian Advocate*, the principal newspaper of his church. Besides his editorship of other papers, he was the author of a *Life of Wyclif*; *Platform Papers*; *Fragments, Religious and Theological*, &c. Died in New York, Aug. 17, 1887.

Curry, JABEZ LAMAR MONROE, D.D., LL.D., educator, statesman, and diplomat; born in Lincoln co., Ga., June 5, 1825. He graduated from the University of Georgia and the Dane Law School of Harvard College. He was elected to the Alabama Legislature, and from 1857-61 was a member of the House of Representatives from Alabama. In the Civil War he served as an aid to General Johnson, with the rank of lieutenant-colonel of cavalry. After the war he became president of Howard College in Alabama, and occupied other positions in the same State. In 1855 he was appointed minister to Spain, and in 1881 general agent and honorary trustee of the Peabody education fund, also trustee and chairman of the John F. Slater fund. He is the author of: *Constitutional Movement in Spain*; *William Ewart Gladstone: a Study*; besides numerous addresses.

Curtin, ANDREW GREGG, the famous "war governor" of Pennsylvania, was born at Bellefonte, Pa., April 22, 1817, his parents being of Scotch descent; studied law and was admitted to the bar in 1839, achieving speedy success and a prominent place in politics, supporting Harrison in 1840 and Clay in 1844. In 1854 he was appointed Secretary of the Commonwealth of Pennsylvania, and ex-officio superintendent of public schools, devoting much attention to public instruction during this term of office. Was elected governor of Pennsylvania in 1860, and was a staunch supporter of the Lincoln administration; organized and equipped the 15 full regiments called the Pennsylvania Reserve Corps, which went to the front July 21, 1861, the night of the first battle of Bull Run, for a service of three years. The invasions of Pennsylvania in 1863-64 were actively resisted by C. who displayed great vigor in bringing the State troops into service. His second term as governor expired in 1867, and two years later C. was appointed U. S. minister to Russia, which position he held until 1872. Was elected to Congress in 1881, and served three terms, after which he retired to private life, residing quietly in his native town until his death, Oct. 7, 1894.

Curtis, GEORGE TRENOR, lawyer, author, and eminent legal authority, was born at Watertown, Mass., Nov. 28, 1812; graduated at Harvard in 1832; admitted to the bar (1836) and practiced law in Boston until 1862, when he removed to New York, and continued his law practice and literary work until his death, March 28, 1894. Many of his legal digests are regarded as among the very highest authorities of their class, and his biographies of American statesmen—*Daniel Webster* (1870); *James Buchanan* (1883), &c.—have been very favorably received.

Curtis, SAMUEL RYAN, U. S. Military officer, born near Champlain, N. Y., Feb. 3, 1805. Graduated at West Point in 1831. He was engaged in the Mexican War, and attained the rank of major-general of volunteers during the Civil War. He was appointed U. S. commissioner for the negotiation of Indian treaties. He had from the beginning been closely identified with the Union Pacific Railway, and in 1865 he was appointed commissioner to examine its affairs. Died at Council Bluffs, Ia., Dec. 26, 1866.

Curtius (koor'tsi-us), GEORG, a German philologist, born at Lubeck, April 16, 1820. Pursued the study of philology at Bonn and Berlin Universities. In 1842 a doctor's degree was conferred upon him. He held a number of professorships, the last being that of classical phil-

ology in the University of Leipzig. He was the author of a *Greek Grammar*; *Grundzüge der Griechischen Etymologie*, &c. Died at Hermsdorf, Aug. 12, 1885.

Curve Pitching. (Baseball.) The art and practice of pitching or throwing a ball in such a manner that it will be deflected from its apparently natural course, upward, downward, or sidewise; the object being to deceive the batsman and render it difficult to hit the ball when it passes over or near the home plate.—This practice originated about 1876, and rapidly developed into a science, the principles of which were not at first

Fig. 2797.

Fig. 2798.

well understood, but are now fully established and easily explained. Two main factors govern this art; first, the resistance exerted by the air upon a body passing through it, and second, the rotary motion of that body on its own axis. A curve cannot be artificially imparted to the flight of a ball that is not in a state of rapid rotation. The extent of the curve depends on the amount of resistance developed by the speed of propulsion and the rate of rotation; and the direction of the curve depends upon the inclination of the axis of rotation, as will be more fully explained hereafter.—*Resistance of the Air.* No one need be told that the atmosphere,

Fig. 2799.—OUT-CURVE.

though an almost invisible fluid, offers great resistance to a body passing through it at any considerable speed; and the higher the speed the greater the resistance. In order to demonstrate this resistance, one has but to wave a fan or other object having a large surface through the air and observe the pressure developed by the motion at different speeds. The same result will be reached by standing still in a high wind, or riding a bicycle rapidly in the face of even a moderate breeze. Resistance occurs just the same, whether the air is at rest and the body in motion, or the reverse. A ball pitched directly

Fig. 2800.—IN-CURVE.

against the wind will encounter a resistance corresponding to the speed of the ball plus the speed of the wind; while one pitched with the wind will meet with the resistance developed by the speed of propulsion less the speed of the wind. These conditions have an important effect upon the width, or extent, of the curve attained, which, with the influences of crosswise winds, will be considered later. Figure 2797 represents a ball leaving the pitcher's hand without a rotary motion. The air pressure is exerted equally upon the forward side of the

Fig. 2801.—DOWN-CURVE.

ball, being, of course, greatest where it is most direct—i.e., at the extreme front-center of the sphere (C.), and diminishing toward its vertical circumference, where the quarters 1, 2, join the quarters 3, 4. There is no resistance upon the after surface of the ball. Figure 2798 shows the same ball delivered while rotating rapidly upon an imaginary vertical axis (E), the direction of rotation being shown by the arrows. The direct resistance exerted by the air upon the quarter 1 is now supplemented by that resulting from the advancing

rotary motion of the ball, while the direct pressure upon quarter 2 is diminished by its retreating rotary motion. The effect is to drive the ball from its direct course toward the side of least resistance, i.e., toward the quarters 2, 4; or, to be more explicit, if the ball is being pitched from the south toward the north, with a rotation from right to left, as shown in the engraving, the ball will be swerved toward the west, constituting an "out-curve." If the direction of rotation be reversed, the extra resistance will be exerted upon quarter 2, and the line of flight will trend toward the east, constituting an "in-curve." These terms are applicable to balls

Fig. 2802.—UP-CURVE.

delivered to a right-handed batter, or one who stands with his right hand toward the home plate; in the case of a left-handed batter the "out-curve" would become an "in-curve," and vice versa. To produce the out-curve or the in-curve, the axis of rotation must be vertical; for an up-curve or a down-curve the axis must be horizontal. Intermediate or combination curves can be made by varying the inclination of the axis of rotation between these two positions and applying the "twist" to the side of the ball opposite the direction of the curve desired.—*Out-Curve.* To throw the out-curve, the ball is firmly grasped by the first two fingers and thumb, the

Fig. 2803.—PATH OF THE HIGH DOWN-CURVE.

Fig. 2804.—PATH OF THE LOW DOWN-CURVE.

Dotted line shows the natural course of the ball; C, pitcher; A and B, batsman's shoulder and knee.

remaining fingers being closed upon the palm; the middle finger should press against the seam of the ball, so as to exert a greater whirling influence. At the instant of delivery (preferably by the underhand throw, more than waist-high), the hand should be palm upward, the ball being released by withdrawing the thumb, allowing the ball to roll around the outside of the forefinger. For a strong, wide curve, a snap of the wrist inward at the instant of delivery will be of service. (See Fig. 2799.) This same procedure by a left-handed

Fig. 2805.—PATH OF THE OUT CURVE.

Dotted line shows natural course of the ball; P, pitcher; B, batsman; H.P., home plate; C, catcher. (For a left-handed batsman this would be an in-curve.)

pitcher will, of course, produce an in-curve.—*In-Curve.* This may be thrown by a motion exactly the reverse of that just described. A favorite method of some pitchers is to use a straight side throw, holding the ball firmly with all the fingers and thumb, the seam of the ball being gripped by the finger tips; at the moment of delivery the hand is in a vertical position, palm to the left; a snap of wrist inward adds to the speed of rotation, and the result is a curve to the right if the pitcher be right-handed, to the left if left-handed. For a high in-curve the ball is usually delivered from a point above

George Armstrong Custer

1839-1876

the shoulder; for a low in-curve the point of delivery is about the waist.—*Down-Curve*. The ball is grasped with all the fingers and the thumb, as for the in-curve, but at the moment of delivery the palm is facing upward and the ball rolls off the finger tips, receiving a "twist" as shown in Fig. 2801. Some pitchers use only the thumb and last three fingers. The arm movement is commonly an underhand throw for a low down-curve; but the down-curve is often used on high balls, passing the batsman at or near the shoulder, this delivery being very deceptive when under high speed.—*Up-Curve*. This delivery is particularly difficult because it opposes the natural law of gravity, which force must be overcome by the influence of rotation. The usual method of delivery for a right-handed pitcher, is to stand in a

Fig. 2806.—PATH OF THE UP-CURVE.

position facing third base, the ball being grasped as for an out-curve; the hand is brought from above the shoulder to near the knee with a rapid and very forcible jerk, when, with palm facing outward, the ball passes out under the edge of the forefinger, its "twist" being accelerated by a thumb motion. (Fig. 2802.)—The principles governing the curves described apply to all their variations—the upward in-curve, the "out-drop," &c. the direction of deflection being determined by the inclination of the imaginary axis of rotation. The manner of handling the ball is also subject to variation; for example, in the delivery of the out-curve, some pitchers grasp the sphere by the first two fingers only, the ball passing over the thumb instead of the forefinger. This gives a more pronounced curve, but renders control of the direction of the ball very uncertain and difficult.—A ball pitched directly against the wind at a given speed and rate of rotation will have a much wider curve than if pitched at similar speeds with the wind, or even in a still atmosphere. If an out-

Fig. 2807.—PATH OF THE IN-CURVE.

Dotted line shows natural course of the ball; P, pitcher; B, batsman; H.P., home plate; C, catcher. (For a left-handed batsman this would be an out-curve.)

curve (to the left) be pitched from south to north in an east wind, the width of the curve will be sensibly increased by the force of the breeze; if in a west wind, the curve will be lessened and may be entirely overcome. The greater the forward velocity of the ball and the faster its rotation, the wider will be the curve; simply because the air-pressure will be greater.—The path of a rotating ball is not that of the arc of a circle, but rather that of a parabola; the initial forward impetus generally carries the ball about two-thirds of the distance between the pitcher and the batsman before the effect of its rotation becomes clearly evident; from that point the "curve," "rise," or "drop" begins, and, very naturally, that pitcher is most proficient who can produce the sharpest and widest curve at a point near the batsman, or who is able to vary the speed of his delivery so that the curves will be of uncertain extent, thus preventing the batsman from "locating" the ball and causing him to "strike out" or hit ineffectively.

ur'wen. JOHN, founder of the Tonic Sol-fa system of music, was born at Hecmoudwike, Yorkshire, Eng., Nov. 14, 1816. He was educated for the ministry, began in 1841 the study of music, which he made his life-work. The Tonic Sol-fa Association and the Tonic Sol-fa College were founded by him, the former in 1853 and the latter in 1879. He was the author of a number of works on the subject, and devoted himself wholly to teaching the system. Died June 26, 1880.

ur'zon. RT. HON. GEORGE NATHANIEL (LORD ZOUCH), statesman and author, eldest son of the 4th Baron Scarsdale, born Jan. 11, 1859. Educated at Eton, and Balliol college, Oxford, (B.A., 1884, M.A., 1886). Fellow of 11 Souls' and President of the Union, Justice of the Peace and Deputy Lieutenant for Derbyshire; private secretary to the Prime Minister (Marquis of Salisbury), 1885-6; Under Secretary of State for India, 1891-2;

Under Secretary for Foreign Affairs, 1895. Member of the House of Commons from Lancashire (Southport Division) since 1886. Appointed Privy Councillor, 1895. Married, in 1895, Mary Victoria, daughter of L. Z. Leiter, of Washington, D. C. Has travelled extensively and is one of the best living authorities on Eastern topics. Author of: *Russia in Central Asia*; *Persia and the Persian Question*; and *Problems of the Far East*. Awarded the Gold Medal of the Royal Geographical Society in 1895.

Curzon. PAUL ALFRED, DE, artist, born at Moulins, near Poitiers, Sept. 7, 1820. He studied with Drolling and Cabat. From the Paris expositions of 1878 and 1889 he received second-class medals, and in 1865 he was decorated with the Legion of Honor. His paintings have been landscape and genre. *Dominicans Decorating their Chapel*, and his painting of *Ostia*, are in the Luxembourg Gallery, Paris. Died in Paris, July 22, 1895.

Cush'ing. FRANK HAMILTON, ethnologist, born at Northeast, Pa., July 22, 1857. In his boyhood he began the collecting of Indian relics, and when sixteen excavated a number of camp sites in Central New York, and was appointed commissioner to make surveys and collections for the National Museum. He became a student of natural science in Cornell University, though continuing his surveys and explorations. In the service of the Bureau of Ethnology he accompanied an expedition to the pueblos of New Mexico and Arizona, remaining for three years, adopting the Zuñis' habits and mode of life, and making himself acquainted with their language. He was in charge of the Heminway expedition among the pueblos of the Southwest, and was the discoverer of the ruins of the Seven Cities of Cibola, the excavating of which he conducted in the summer of 1888. Besides other offices, he was curator of ethnology at the National Museum and a member of the Anthropological Society at Washington. Among his articles written for periodicals are: *Study of Pueblo Pottery as Illustrative of Zuñi Culture Growth*; *My Adventures in Zuñi*, &c.

Cushing. WILLIAM BARKER, was born at Delafield, Wis., on Nov. 4, 1842; entered the Naval Academy at Annapolis, in 1857, but resigned before graduation, having been declared "deficient in his studies;" reentered the Navy in 1861 as lieutenant, and immediately began a career which for brilliancy and intrepidity may well be compared to that of our older naval hero, Decatur. C. captured the first prize taken by the U. S. Navy during the Civil War, while attached to the *Blackwater*, cruising in the N. C. sounds; but his most brilliant exploit was the destruction of the Confederate ram *Albatross*, at Plymouth, N. C., Oct. 27, 1864. This feat was accomplished by means of an extemporized torpedo boat, in the face of a heavy fire, the explosion destroying not only the ram, but also the assailing craft. Of C.'s party only one escaped besides the commander, who swam ashore and regained the Union lines in safety. For this daring act C. was advanced to the rank of lieutenant-commander, and received the official thanks of Congress. Was made commander in 1872, being the youngest officer of that rank in the service. Died Dec. 17, 1874.

Cushing. in *Oklahoma*, a village of Payne co., 45 m. E. of Mulhall. Pop. (1897) about 200.

Cush'man. CHARLOTTE SAUNDERS, actress, was born in Boston, Mass., July 23, 1816; early exhibited musical talent, and aided in the support of her widowed mother's family by singing in church choirs and concerts, having developed a contralto voice of great excellence. Her operatic debut was made (1835) in *The Marriage of Figaro*, the effort being successful; but an attempt to sing soprano rôles resulted in the partial loss of her voice, and she then turned her attention to the dramatic stage, appearing first as *Lady Macbeth*. After ten years of unbroken success, chiefly at the Bowery Theater, New York, the Park Theater, Albany, and (1842-44) the Walnut Street Theater, Philadelphia, Miss C. visited England, where she duplicated her American triumph in higher tragedy, being aided by her gifted sister Susan, to whose *Juliet* Charlotte often played *Romeo*. She returned to the U. S. in 1849, and made a tour of the country; again visited England (1852-57) and then, after a short engagement in the U. S., went to Rome, returning in 1860 to give several performances for the benefit of the Sanitary Commission. After several years spent in the "Eternal City," Miss C. came back to her native land (1871), and gave a series of dramatic readings in addition to her stage performances. Her public career ended in Boston, May 15, 1875, when she retired to her handsome villa at Newport, R. I., where she died on Feb. 18, 1876.

Cuspa'ria (*küs-pa'ri-ah*) **Bark**, or **ANGOSTURA BARK**. (*Bot.*) The bark of *Galipea officinalis*, adopted in the pharmacopœia of the United States for its tonic, stimulant and aromatic properties. Its odor is peculiar, taste intensely bitter and slightly aromatic, pieces thin, externally gray and wrinkled, internally yellowish-fawn, fracture short and resinous.

Cus'pidor. n. A spittoon.

Custer. ELIZABETH BACON, author, shared the campaigns of her husband, George Armstrong Custer, when he was engaged on the Western frontier, and since his death has published several volumes of reminiscences: *Boots and Saddles*; *Tenting on the Plains*; and *Following the Guidon*.

Custer. GEORGE ARMSTRONG, soldier, was born at New Rumley, Ohio, Dec. 5, 1839. He graduated at West Point. He became distinguished in the Civil War, and rose to the rank of brigadier-general. It is said that throughout the war he never lost a gun or a flag. At the close of the Civil War he received the appointment of lieutenant-colonel with brevet rank of major-general.

He was one of the company sent to explore the Black Hills. His reports were so favorable that they greatly stimulated white immigration. He wrote a series of magazine articles entitled *My Life on the Plains*. He was killed by Indians during a battle on the Big Horn, June 25, 1876, nearly his whole command being massacred. Buried at West Point in 1877.

Cut'ter. n. (*Naut.*) The name given to two kinds of small vessels. The cutters which are used by yachtsmen, pilots and revenue officers, are small vessels with one mast and a bowsprit, which is capable of being housed inboard in rough weather. They are rigged like a sloop, the distinction being that the jib of a cutter has no stay to support it. These vessels are built with special reference to speed, the hull being very deep and narrow, so much so as to be almost V-shaped, showing an almost perpendicular rise from floor to bulwarks. The keel is heavily weighted with lead. The C. shows to best advantage when working to windward in heavy weather. There are several instances of cutters crossing the Atlantic; while one made a voyage from England to Australia in 108 days. The other form of cutter is a clinker-built boat about 25 feet long, belonging to a ship of war.—In the U. S. very long sleds for coasting are called cutters.

Cuy'ter. THEONORE LEBYARD, D.D., was born at Aurora, Cayuga co., N. Y., Jan. 10, 1822. He studied and graduated at Princeton College and Princeton Theological Seminary. He has been pastor of several churches, and founded the Lafayette Avenue Presbyterian Church, of which he officiated as pastor for 30 years, retiring in 1890. Is a noted advocate of total abstinence. The works of Dr. C. include: *Cedar Christian*; *Heart Life*; *Empty Crib*; *Light on Dark Clouds*; a volume of travel, *Nile to Norway*, &c.

Cy'cloid. n. (*Geom.*) A plane curve generated by a point in the plane of a circle when the latter is rolled along a straight line. Several names are given to the C. in accordance with the position of the generating point. If this be on the circumference it yields a *common C.*; if outside the circumference, a *curtate C.*; if within the circumference, a *prolate or inflated C.*

—a. Resembling a circle; somewhat circular; approaching the true circle in shape.

Cy'clone. n. (*Meteorol.*) If we examine weather charts which represent a large part of the western hemisphere, there will be perceived two distinct systems of pressure, whose forms and positions on the earth's surface change from day to day. One set of these are systems of low pressure, which are indicated by concentric isobars, or lines of equal barometric reading, the pressure indicated growing successively lower until the center of the circular area is reached. The outer set are systems of high pressure, marked, as above, by concentric isobars, whose pressure grows higher inwardly until the central area is reached. The former of these systems are known as cyclones, the latter as anti-cyclones. It is to the cy-

Fig. 2808.—CYCLONE OF NORTHERN HEMISPHERE.

The arrows indicate the course of the wind in various portions of the storm area. As the cyclone approaches (A) the wind is moderate, from the E., but gradually increases until the storm center (B) is reached, when there is a comparative calm, succeeded by S. W. to N. W. winds as the cyclone passes off.

clonic condition that we owe the condition of weather known as storms,—this word being taken in its broad sense, as indicating great and long continued disturbances of the atmospheric conditions. The areas of low pressure are distinguishing characteristics of the hurricanes and typhoons of the tropics, and the storms, generally less violent, of higher latitudes. The concentric character of the areas of equal pressure and the steadily lower temperature toward the center, are significant of the movement of the winds in a C., which are never in direct, but always in curved lines, though these curves are usually so great that they can be detected only by widely-extended observations. The movement of the winds is not in a circle, nor is it directly inward toward the center of the cyclonic area, but it is in a

spiral or vortice direction, curving inward toward the center; the direction of wind motion, in the northern hemisphere, being opposite to that of the hands of a watch. Where the isobars are closer together the winds are stronger, since in this case the decrease of pressure is more rapid. It is a conclusion very naturally reached, that an area of low pressure, indicating a rarefaction of the atmosphere, due probably to an upflow of air, will cause a surface wind, the heavier air from a distance naturally flowing in to restore the equilibrium. And it follows also that in this inflow from all directions interference between the crowding currents takes place, and the winds are deflected from a direct into a curvilinear course. This curved direction of movement is, however, principally due to the rotation of the earth on its axis, by which also its direction is controlled. This may be a little difficult to make clear. The earth rotates from west to east, making a complete rotation in

As a result, striking changes take place in the direction of the winds during *C.*, due to the fact that these themselves have an onward motion, of from 20 to, in extreme instances, 70 miles an hour—though occasionally they remain stationary. The consequence is, that as a cyclone approaches, moving north, a place in the line of its center will at first feel winds setting westerly and increasing in violence as the center of the cyclone approaches, while rains grow heavy at the same time. In the immediate center the weather grows calm and the clouds may break. But as the storm moves onward the rains begin again, and the winds set to the east, at first violent but gradually diminishing in force till the cyclone has passed. In places not in the line of the center the conditions of the storm will correspondingly vary. These facts, as ascertained by repeated observation, have proved of the greatest advantage to captains of ships when finding themselves within the limits of a tropical

Fig. 2809.—SHOWING THREE POSITIONS IN THE PATH OF A MISSISSIPPI VALLEY CYCLONE TRAVELLING NORTHEAST.

24 hours. But as the circles of latitude are longest on the equator and diminish toward the poles, it follows that, as we go north or south from the equator, points on the surface move more and more slowly, diminishing from 24,000 miles a day at the equator to less than a mile near the poles, and to nothing at the exact poles. This decrease of speed has an important effect on the winds. Those moving northward, and having the speed of rotation of the place they leave, when they reach regions of less speed are deflected to the east. Those moving southward pass from areas of slow to those of more rapid movement, and consequently lag behind, or are deflected towards the west. The result is that winds blowing from north and south toward the center of a cyclonic area are caused to move in curves; those on the southern edge blowing east and those on the northern west or opposite to the movement of watch hands. In the southern hemisphere this direction is reversed, and the movement is the same as that of watch hands.

storm, since the direction of the wind warns them in what direction to steer to escape its greatest fury. Lack of this knowledge, in past times, caused the destruction of many a noble ship. *C.* are usually of great extent. Their diameter is seldom less than 600 miles, and occasionally exceeds 3,000 miles. The temperature and humidity increase as the center approaches, and diminish as it recedes, or, in other words, they rise as the pressure falls, and fall as the pressure rises. The chief points of difference between the hurricanes and typhoons of the tropics and the *C.* of higher latitudes are these: tropical *C.* are of smaller dimensions, so that the fall of pressure from the exterior to the center is more rapid, and the strength of the wind is correspondingly greater. Often more dangerous than the winds is the storm wave which is occasionally produced. This, hurled on a low-lying coast with great force, is apt to be frightfully destructive. The wave attending the Bakarganj *C.* of 1876 covered the low lands lying east of the Ganges delta with water

from 10 to 45 feet deep, and drowned more than 100,000 human beings. Much more recently a similar wave caused great destruction on the Carolina coast of the country, though, fortunately, without serious loss of life.—*Track of United States Cyclones.* Of the cyclonic storms which visit the United States, the greater number originate in the region of the great plains west of the Mississippi, whence they move northeastward, frequent following the line of the Great Lakes, and making their way to the Gulf of St. Lawrence. Less frequent but much more violent, are those of tropical origin which enter the States from the Gulf of Mexico or the West India region, sometimes taking an inland course at others following the coast, and at others having the centers out at sea. Those are far the most violent and destructive storms, and those to which ruinous visitations are occasionally due. Others originate at various points in the Atlantic and make their fury felt on the British Isles, or elsewhere on the European coast. The passage of a cyclone is often attended with local storms of great severity. Thunder and hail storms are frequent accompaniments, and the terrible Tornado (*q.v.*) is frequent incident of the cyclone of the West.—*Anti-Cyclones.* The anti-cyclone is opposite in its characteristics to the cyclone. As the latter is due to an upflow of warm humid air, and a consequent surface diminution of pressure, the former is due to a downflow of cold air, and a consequent surface increase of pressure. The result is that the winds flow outward from the center of the anti-cyclone, while the weather attending it is dry, clear, and cold. The cold wave is one of frequent resultants, but its winds never attain the destructive violence of those of the cyclone. It is probable that a close connection exists between the opposite species of phenomena. The upflowing from the center of the cyclone spreads outward through the upper atmosphere, and may cause increased pressure in some distant region, resulting in a downflow of the upper air, cold and dry from the effect of high atmospheric conditions, and the subsequent outflow of dry winds from the anti-cyclonic center.

Cyclosis, *n.* (*Biol.*) A name employed to design certain movements of the protoplasmic contents of plant cells. The semi-liquid protoplasm circulates slowly but constantly within the cell, the cause of motion being as yet unknown.

Cypriote Art. The art of the ancient inhabitants of the island of Cyprus, of which many interesting examples have been found within recent years. Ruins and tombs were seen there by 18th century travellers, but the Turks would not permit excavation. At least a number of silver bowls were found, one of which in the collection of the Duc de Laynes, closely resembles those which Layard found at Nineveh. A black basalt bas-relief, found in 1845, had on it the figure of Sargon, king of Assyria. Gen. Louis P. de Cesnaye, U. S. consul in Cyprus, obtained permission to excavate in 1870, and succeeded in laying bare the sites of several ancient temples and other edifices, and in collecting a great number of rudely shaped statuettes and other objects in considerable variety. These were purchased for the Metropolitan Museum in New York, where they now are. The art displayed is primitive in character and seems to have had its original inspiration in that of the Assyrian and Babylonian region.

Cytitis, *n.* [*Gr. kytos*, skin, suff. *itis*, inflammation] (*Path.*) Inflammation of the skin.

Cyzicenus, *n.* [*Gr. Kyzikos*, an ancient city, Mysia.] (*Antiq.*) A large apartment, overlooking a garden, and used as a banquet-hall.

Czar'evitch, *n.* A Russian title, formerly applied to any son of the Czar; now applicable only to the eldest son, or heir-apparent.

Czarism, *n.* Absolutism in government or political authority.

Czech (*ch'ek*), *n.* (Bohemian.) Any individual belonging to the Slavic peoples now living in Bohemia and in parts of Hungary and Moravia.—The language spoken by these people.

Czechic (*ch'ek'ik*), *n.* The language of the Czechs.—*a.* Of or pertaining to the Czechs or their language.
Czerny (*ch'er'ny*), KARL, musician and composer; born at Vienna, Feb. 21, 1791; became famous as a teacher and composer of musical exercises. Died 1857.

D.

DACC

The fourth letter in the Hebrew alphabet, and those derived from it. In Arabic it is the eighth; in Russian, the fifth; and in the Ethiopic, the nineteenth. The Greek name is *delta*, the Hebrew *daleth*; and our form of the letter, which is the same as the Latin, is evidently derived from the Greek character, *delta*, by rounding off the right-hand angle into a curve. The Hebrew *daleth* signifies a door, and in its earlier form it bore a manifest resemblance to the door or opening of a tent. *D* is the medial letter of the order of dentals or palato-dentals. It is the sonorous counterpart of *T*, and is produced by applying the tip of the tongue to the superior incisive teeth, and to their gum, while the tongue, obliquely rising, obstructs the passage of the breath; then, by suddenly withdrawing this obstruction, while the larynx resounds during the passage of the air through the glottis, the sound in question is exploded. *D* readily interchanges with letters of the same order, as, Ger. *tief*, deep; *tramm*, dream; *du*, thou; *dein*, thine. It also readily interchanges with the letter *t*; as, Greek *dapsiles*, Latin *lapsilis*; Latin *canda*, Spanish *cola*. (See *L*.) The Latin *D* is frequently changed into *t*, *s*, or *ss* in German; as, *duo*, *zwei*, two; *decem*, *zehn*, ten. *D* also seems to manifest a kind of affinity for the letter *n*, and is drawn by it into a number of words to which it does not radically belong, as, Latin *tener*, English *tender*. *Di*, followed by a vowel, is sometimes changed into *j*; as, *diurnal*, *journal*.—As a numeral, *D* represents 500; with a dash over it, 5000. As an abbreviation, *D* stands for doctor; as, M.D., doctor of medicine; D.D., doctor of divinity; D.D.S., doctor of dental surgery, &c. Among Roman writers, *D* is used for Divus, Decimus, Devotus, Diebus, &c. *D. M.*, in the Roman epitaphs, signifies *Dis Manibus, Deo Magno, or Diis Magnis*. As a sign, it is one of the Dominical letters. In Music, *D* is the second note of the diatonic scale, same as the *re* of the French. In Oklahoma, a W. central co., watered by Canadian river, having a rolling surface and fertile soil. Pop. (1897) about 8,000. Cap. Taloga.

Dal'der, *n.* [Du.] A Dutch coin, value about 50 cents.

D. r. a. [Fr. *dauber*, to drub, to bang, to cuff; Goth. *rupjan*, to dip; allied to Gr. *dypto*, to duck, or dive; ax. *dyphan*. See *Dip*.] To strike gently with the hand; to slap; to box; to strike gently with some soft moist substance.

A slight thrust with something pointed; a gentle blow with the hand; a small lump or mass of anything soft or moist; something moist or slimy thrown on one; a dab of mortar.

(Zool.) A small flat fish, fam. PLEURONECTIDE (*q. v.*).

Dabble, *v. a.* [Dimin. of *dab*; Belgic, *dabben*, or *dabben*.] To dip a little or often; to wet; to moisten; to utter; to wet by little dips or strokes; to sprinkle.

i. To play in water; to dip the hands, throw water, splash about; to play in mud and water; to do anything in a slight or superficial manner; to tamper; to touch here and there; to meddle; as, to dabble in art literature.

Dab'ler, *n.* One who dabbles; a superficial meddler; a dabbler in politics.

Dab'ling, *p. a.* Playing or meddling in.

— Act of meddling or dipping superficially into.

Dab'lingly, *adv.* In a dabbling manner.

Dach'iek, *n.* (Ornith.) The little grebe, a water-fowl of the family *Colymbidae*, that keeps constantly dipping under water. It is commonly found about lakes and ponds.

— extension, a fledgeling; hence, a young or delicate bird.

Dac'erath. (Anc. Geog.) A Levitical town in the borders of Zebulun and Issachar. Its site is probably that of the modern Debrueh, a small village at the N.W. of Mount Tabor.

Dac'ster, *n.* An adept; one who is skilled or expert in anything (colloq.).

Dac'pa, in Wisconsin, a post-office of Sheboygan co.

Dacapo, or **D. C.** (*da-ka'po*), *adv.* [It., from the Venetian, again.] (*Mus.*) An expression placed at the end of a piece, to indicate that the performer is to return and end with the first part.

Dacca, and **Dac'ea Jelalpo're'**, two districts of Hindostan, prov. of Bengal, chiefly between Lat. 23° and 24° N., and Lon. 89° 30' and 91° E. Area. That of Dacca, 2,154 sq. m. Soil fertile; and once a dead flat, inundated during the wet seasons. Products. Rice, sugar, cotton, indigo. Manufactures. Linen, diapers, and damask linens. Chief towns. Dacca, Nairraingunge, &c. Pop. about 1,100,000 one-half of whom are Hindoos, and the rest Mohammedans.

Dacca, an inland city of Hindostan, district Dacca, prov. Bengal, formerly very extensive, populous, and still one of the chief cities of the presidency. It tends, with its suburbs, for six miles along a river which unites with the Ganges on the one hand, and the

Brahmapootra on the other, thus affording great facilities for commerce; Lat. 23° 43' N., Lon. 90° 26' E., 155 m. N.E. of Calcutta, with which it connects by railroad. It is built, generally, of mud-brick and thatched houses, and with narrow and crooked streets. The vicinity of *C.* is very fertile, and healthy for India, and grows a considerable quantity of cotton. *D.* was, from 1608 to 1630, the metropolis of Bengal, but declined with the disorders following the irruptions of Nadir Shah. Pop. (1895) 81,212.

Dace, *n.* [Dn. *daas*.] (*Ichth.*) The *Cyprinus leuciscus*, a small fish of the carp family, found in clear and quiet streams. Its head is small, muzzle pointed; back slightly elevated, and tail forked. It is gregarious. Its food is worms and other soft animal substances.

Dach, SIMON, a German poet, born 1605. He was the author of some religious odes, lyrics, and plays. D. 1659.

Dacheet' River, in Arkansas. See *DACHITE*.

Dachs'hund, *n.* [Ger.] A small dog, called in Germany the badger-hound, having a long body and short, crooked legs.

Dacia. (Anc. Geog.) A large tract of the Roman empire beyond the Danube; now comprising Moldavia, Wallachia, and portions of Transylvania and Hungary. Prior to Constantine the Great, the whole tract was divided into *Trojan D.* and *Aurelian D.* The former, or *Dacia proper*, was situated north, the latter south, of the Danube. The country was inhabited by the *Daci* or *Dacæ*, a warlike nation of German origin, who, after a heroic resistance, continued for upwards of 75 years, were finally conquered by Trajan (A.D. 105), whereupon the entire region became a Roman province. In 453, Ardaric, king of the Gepidæ, seized the country, and in 566 it was conquered by a colony of Scythians. The latter were subdued by Charlemagne, and the Magyars overran *D.* in the 9th century.

Dacian (*da'shan*), *n.* A native or inhabitant of Dacia.

— *a.* Relating or pertaining to Dacia.

Dacier (*dä'se-ä'*), ANNE, a French philologist, born 1651. He published an edition of *Pompeius Festus*, and translations of Horace, of Aristotle's *Poetics*, of Epictetus, of Marcus Antonius' *Reflections*, of Plutarch's *Lives*, &c. Died 1722.—His wife ANNE, daughter of the celebrated Professor Le Fèvre, born in 1654, was likewise distinguished for her literary attainments. She translated into French Homer's *Iliad* and *Odyssey*, the *Clouds* of Aristophanes, &c. Died in 1720.

Dac'nis, *n.* (Ornith.) A genus of small and elegant birds, of the Insectores order, inhabiting Mexico. The color of the body is cerulean blue; the forehead, shoulders, wings, and tail are black, and it has a sharp, conical bill.

Dacoit', Dakoit', *n.* [Hind. *dák*.] In India, a member of a gang of robbers.

Dacoi'ty, Dakoi'ty, *n.* A Hindoo gang of robbers or marauders.

Dactyl (*dak'til*), *n.* [Gr. *dactylos*, a finger, probably like Lat. *digitus*, from Sansk. *dic*, to show, found in Gr. *deiknūmi*, Lat. *indico*, to show.] (*Pros.*) In Greek and Latin poetry, a poetical foot consisting of three syllables, the first long and the others short, like the joints of a finger—as in *cārminū, ōmībūs*. Dactylic verses are hexameters which end in a *D.* instead of a spondee. In the English and German languages, where accent determines quantity, the word dactyl means an accented followed by two unaccented syllables, as in *quan'tity*.

Dactyl'ograph, *n.* [Gr. *dactylos*, a ring and *grapho*, to engrave.] One who engraves gems and stones for finger-rings.—The autograph or inscription of the artist's name upon a finger-ring.

Dactyl'ography, *n.* The art of gem-engraving.

Dac'tylic, Dac'tylar, *a.* (*Pros.*) Pertaining to, or consisting chiefly or wholly of dactyls.

— *n.* A verse consisting chiefly or wholly of dactyls.

Dac'tylis, *n.* [Gr. *dactylos*, a finger.] (*Bot.*) A genus of plants, order *Graminaceæ*, having the panicle of flowers much on one side of the stem, its secondary branches so short that the spikelets are much crowded into clusters; the glumes unequal, the larger one keeled; each spikelet containing 2 to 7 florets, each of which has 2 lanceolate, scarcely awned paleæ. *D. glomerata*, the orchard grass, called in England cock's-foot grass, is a native of Europe, Asia, N. America, and the N. of Africa. It forms an important part of almost all the best natural pastures, is much relished by cattle, and grows with great rapidity after it has been cut, yielding a large quantity of herbage, and succeeding well on most kinds of soil, and in situations too shady for many grasses; it is therefore generally sown along with other grasses. An improved variety, of greater size than the ordinary one, has been introduced into cultivation.

Dactylon'omy, *n.* [Gr. *dactylos*, and *nomos*, from *nemo*, to deal out.] The art of numbering with the fingers.

DAFF

Da'cussville, in South Carolina, a township in Pickens county, about 120 m. N.W. of Columbia.

Dad, Dad'dy, *n.* [W. *tad*; Hind. *dada*, formed from the sound of father.] A term used by young children. (Synonymous with *papa*.)

“Fine child, as like his *dad* as he could stare.”—Gay.

Dad'dle, *v. a.* To move about like a child or aged man; to toddle; hence, to perform anything in a slow and unsteady manner.

— *n.* In some parts of England, a colloquialism for the hand or fist.

Dad'dock, *n.* The rotten trunk of a tree.

Dad'dy-longlegs, *n.* (*Entom.*) See *TIPULA*.

Dade, in Florida, a S. co., washed on the S. and E. by the Atlantic ocean, and bounded on the W. by Monroe co. Area, about 5,636 sq. m. Surface level; mostly occupied by the Everglades, a name given to vast expanses of shallow water, studded with innumerable small islands. The principal village and cap. is Miami. Pop. (1890) 861.

Dade, in Georgia, a N.W. co., adjoining Tennessee and Alabama. Area, about 187 sq. m. It is traversed by Lookout creek, and surrounded by high mountains. Iron ore, bituminous coal, and other valuable minerals abound. Cap. Trenton. Pop. (1890) 5,707.

Dade, in Missouri, a S.W. co. Area, about 498 sq. m. It is intersected by the Sac river, Horse, and Cedar creeks. The surface is varied. Soil, fertile. Cap. Greenfield. Pop. (1890) 17,526.

Da'do, *n.* [It. a cube, a die.] (*Arch. and Decor.*) The flat surface between a base-moulding and surbase; in interiors, a skirting, sometimes several feet in width, and variously ornamented.—The die, or square part, of a pedestal.

Da'dyl, *n.* (*Chem.*) Same as CAMPHENE (*q. v.*).

Dæ'dal, Dæda'lian, *a.* [From Lat. DÆDALUS, *q. v.*] Performed with art or constructive skill; ingenious; as, “the dædal hand of nature.”

Dæ'dalus. (*Myth.*) The fabulous representative of the most ancient Grecian art. According to Greek history, *D.*, son of Erechtheus, king of Athens, was the most inventive designer, accomplished artist, and mechanical genius the world had ever seen. His statues in wood were regarded as so admirably perfect that they are reported to have moved, and looked like life; his skill in the mechanical arts was so universal that science is reported to owe to him the invention of the wedge, the axe, saw, plummet, and the auger; and he also discovered the adhesive qualities of glue, besides inventing sails for ships. His pupil and nephew, Talus, promised even to eclipse his teacher, so remarkable was his ingenuity; a fact that so distracted *D.* with envy, that he hurled the youth through a lofty window, and killed him on the spot, an act that compelled him immediately to fly, with his son Icarus, to Crete for safety, where Minos, the king of the island, welcomed him with delight. Here he exercised his mechanical genius in constructing a wonderful labyrinth for his friend Pasiphaë, the queen and wife of Minos, where, undiscovered, she might carry on her revolting amours. In revenge for his perfidy, Minos, when he heard of the use to which the labyrinth was put, confined both father and son in its intricate passages. To escape the fate this imprisonment threatened, *D.* made for himself and Icarus wings of feathers, attaching them to their bodies by glue and wax; and they, being thus furnished, soared aloft out of the labyrinth, and fled from Crete across the Ægean Sea, directing their course in the track of Cuna, and finally for Sicily, where the prudent and more experienced navigator arrived in safety; but his rash son, elated with the possession of a new motive power, audaciously mounted the empyrean, before pursuing his course, to show the gods his plumage; when, approaching too near the indignant Phœbus, his artificial wings were scorched by the sun, the wax melted, and the feathers becoming loose, the discomfited and humiliated boy fell into that part of the Ægean Sea near the island of Samos, where he was drowned; thus giving the name of the *Icarian Sea* to that portion of the Mediterranean washing the isles of Greece. This pretty fable is easily and more rationally explained by supposing that the father and son, escaping the vigilance of Minos, fled to the shore, and leaping into two boats, put off, *D.* hoisting his mantle on the oars as a sail, and escaping the pursuit; while the son, less skillful, or more intent on watching the effect of the wind on the rude sail than the direction of his course, ran his bark on the island of Samos, and was drowned in the wreck.

Dæ'mon, *n.* See *DEMON*.

Daff, *v. i.* To daunt; to intimidate. (Used in some parts of England.)

— *v. t.* To play or sport with; to fondle; to toy; to trifle.

Daff'le, *v. i.* To evince forgetfulness; to show short memory.

Daffodil, *n.* (*Bot.*) See *NARCISSUS*.

Daft, a. Out of one's proper senses; insane; hence, besotted; crazy; silly; foolish.—Sportive; sprightly; mirthful. (Originally used in Scotland.)

Dag, n. [See DAGGER.] A dagger.—A kind of handgun or pistol, formerly used.

—[A. S. *dag*.] A leather string, or latchet.
—*c. a.* [From DAGGLE.] To daggle; to benire. (Vulgar.)
—*v. n.* To become cloudy, misty, or opaque. (n.)

Dag'ger, n. [Fr. *dague*; D. *dagge*; Ir. *duigear*; Arm. *dager*; Swed. and Goth. *dagert*; probably allied to Heb. *dakar*, to stab.] A short sword, or long knife. This weapon was in use among the Franks as early as the sixth century. In the twelfth century it is mentioned as a "*cultellus qui dicitur dagger*," and Walsingham in the 15th century calls it *coustel*, or *dagger*. Toward the close of the 13th century, it was used as part of the knightly equipment; and about this time it was called the *misericorde* because in the last struggle the uplifted *D.* caused the discomfited fighter to sue for mercy. Towards the end of the 14th century, knights always wore a *D.* suspended by a cord or chain to the right side, and it was even sometimes used as a missile weapon. At this time it was carried by citizens, yeomen, sailors, and even ladies.

(Printing.) A mark of reference used in printed works, in the form of a dagger, thus †. (Sometimes called *obelisk*.)

To look or speak daggers, to look or speak angrily or fiercely, as if with hostile intent.

"I will speak daggers to her, but use none."—Shaks.

—*v. a.* To use a dagger; to stab with a poniard or dagger.
Dag'ger's-drawing, n. Act of drawing daggers. Hence, approach to a quarrel, an open attack, or violence.

"I have heard of a quarrel in a tavern, where all were at dag'ger's-drawing."—Swift.

Dag'gers, in Virginia, a post-village of Botetourt county.

Dag'gett, in Pennsylvania, a post-village of Tioga co., about 150 m. N. of Harrisburg.

Dag'gle, v. a. [From Swed. and Goth. *dagg*, dew.] To trail in mud or wet grass; to befoul; to dirty, as the lower end of a garment; to dip in mire.

—*v. n.* To run through mire, or mud and water.

"Like a puppy dagged through the town."—Pope.

Dag'gle-tail, n. A slattern; a person of slovenly or unclean habits.

Daghl, a word which, in the Tartar language, signifies *mountain*; thus, *dagh-stan* (Daghestan), a mountainous country; *keshish-dagh*, the actual name of Mount Olympus.

Daghestan, (dah-ges-tān'), a region of W. Asia, comprising all the country lying W. of the Caspian Sea to the Caucasus, in Lat. 41° to 43° N., Lon. 46° to 50° E.; the greater part of which forms a prov. belonging to the Russian govt. of the Caucasus, while the rest is peopled by independent tribes. Area, abt. 17,500 sq. m.; of which Russian territory absorbs 10,600. Surface. Very mountainous, being traversed by outlying spurs and offshoots of the Caucasus range. Soil. Productive in the valleys; yielding grain, tobacco, hemp, saffron, and timber. Cattle, horses, asses, camels, and sheep are extensively reared. Min. Iron, lead, and sulphur. *D.* is almost entirely populated by nomadic Tartar tribes, the principal of which is the Lesghians, who have hitherto maintained their independence of Russia. Pop. Estim. at 2,000,000, of which abt. 440,000 are included in the Russian portion of the country.

Dag-lock, n. [Swed. and Goth. *dagg*, dew, and Eng. *lock*.] A soiled or bemired lock of wool on a sheep's body.

Dago, DAGÖE, or DAGDEN, a Russian island in the Baltic, near the entrance of the Gulf of Finland, N. of the island of Ezel; pop. 10,000.

Dag'obert I., a Frankish king of the Merovingian line, son of Clothaire II., B. in 602. He subdued the Saxons, Gascons, and Bretons, but tarnished the lustre of his reign by his cruelty and licentiousness. D. in 638, and was buried in the abbey of St. Denis, which he had founded.

DAGOBERT II., succeeded to the throne of Austrasia in 656; assassinated 679.

DAGOBERT III., succeeded his father, Childebert II., 711, and D. 715.

Dagon, (dai'gon,) was the national god of the Philistines. Its most famous temples were at Gaza and Ashdod. The latter temple was destroyed by Jonathan in the Maccabean War. Traces of the worship of *D.* likewise appear in the names Capbar Dagon (near Jannia), Beth-Dagon in Judah (*Josh. xv. 41*), and Asher (*Josh. xix. 27*). *D.* was represented with the face and hands of a man, and the tail of a fish. In the Babylonian mythology, the name *D. (Odakon)* is applied to a fish-like being who rose from the waters of the Red Sea as one of the great benefactors of men. Niebuhr appears to identify this being with the Phœnician god, but Rawlinson regards them as fully distinct. In *1 Samuel v.* we have an account of the fall and destruction of *D.*, before the ark of the Lord.

Dagsborough, in Delaware, a hundred of Sussex co., on Pepper Creek, abt. 50 m. S.E. of Dover; pop. 2,599.

Dag-swain, n. A coarse woollen stuff formerly made of dag-locks, or soiled wool.

Daguerre, LOUIS JACQUES MANDÉ, (da gair') whose name is associated with one of the most refined applica-

tions of science to the arts, was B. at Corneille, France, 1789. From an early period he had been engaged in making chemical researches; but the Daguerreotype process, with which his name is identified, was first made known in the autumn of 1839. The whole of Europe was astonished at the beauty and novelty of the pictures produced by his process; and the French government granted him a pension of 6,000 francs for his discovery, on condition of his publishing his method. *D.* was celebrated as a dioramic painter, and by ingenious contrivances he had succeeded in producing many very extraordinary effects in his pictures. D. 1851.

Daguer'rean, Daguer'reian, a. Relating, or pertaining to, Daguerre, the inventor of the daguerreotype, or to the art itself.

Daguerreotype, (da-gair'-o-tip,) n. [From *Daguerre*, *q. v.*, and Gr. *typos*, an image.] (*Fine Arts*.) A process by which images are impressed on a silver plate. A perfectly polished silver plate is exposed in the dark to the vapors of iodine and bromine, by which a mixture of iodide and bromide of silver, exquisitely sensitive to light, is obtained. The plate is then exposed to the action of the image formed by light in the camera obscura, varying from a few seconds to several minutes, according to the intensity of the light. A latent impression is formed on the film of bromo-iodide of silver, giving this substance the property of combining with the vapor of mercury, in those parts where the light has struck. This latent impression is brought out or developed by being exposed for a few seconds to the vapor of mercury in a heated box. On withdrawing the plate, the mercury will be found to have fixed itself to the silver in exact proportion to the effect of the light on the different portions of the image; the deposit being white and brilliant on the lightest portions, more or less gray on those parts constituting the half-tones, and absent altogether in the deep shadows. It is then washed with a weak solution of hyposulphite of soda, which dissolves out the bromo-iodide of silver, that has remained unaltered by the light. The last process consists in laying on a fine film of metallic gold, by pouring over the plate a solution of the double hyposulphite of soda and gold, or *sel d'or*, as it is commonly called. There are few questions which have given rise to greater controversies among chemists, than the nature of the *D.* image, many supposing it to be mercury only, others thinking that it is an amalgam of mercury and silver. It is unfortunate that the quantity of material formed is so very minute, that it becomes impossible to subject it to analysis. This curious and ingenious process has been almost entirely superseded by other photographic processes. — See PHOTOGRAPHY.

Daguerre'otyper, Daguerre'otypist, n. One who practises the art of daguerreotype.

Daguerreotyp'ic, Daguerreotyp'ical, a. Relating, or pertaining, to the daguerreotype.

Daguerreotypy, n. Art or practice of taking pictures by means of photography.

D'Aguesseau. See AGUESSEAU, D'.

Dahl, JOHAN KRISTIAN KLAUSEN, (dal,) a Norwegian landscape-painter, famous for his magnificent views of mountain-scenes; B. at Bergen, 1780; D. 1857.

Dahl, VLADIMIR IVANOVITCH, one of the most popular Russian authors of the present day; B. about 1800, in St. Petersburg. He collected and published a great many popular tales (similar to Grimm's collection of German *Völkemährchen*), and wrote several novels, in which Russian life and manners are faithfully depicted. D. 1872.

Dahlbom, ANDERS GUSTAF, (dal'bome,) a Swedish entomologist, B. March 3, 1806. He wrote several volumes on insects, the most important of which is *Hymenoptera Europæ præcipue Borealia*. D. 1859.

Dahlgren, JOHN A., a commander in the U. States navy, B. in Pennsylvania, in 1809, entered the navy in 1826, and served on the Brazilian coast and in the Mediterranean in 1827-8. On his return, he went through a course of naval study, and was engaged in the coast-survey in 1835-6. At an early age he acquired a taste for constructing ordnance, and was appointed to that department in 1847, when he invented and perfected the well-known Dahlgren shell-gun, then the most powerful missile of the kind in existence. In 1855 he was appointed to the command of the gunnery-ship *Cumberland* at Plymouth, engaged in testing the velocity and power of artillery, &c.; and in 1859 he was removed to the navy-yard at Washington, to the command of which he was appointed at the outbreak of the Civil War. On the death of Admiral Foote, in 1863, he succeeded to the command of the fleet before Charleston, when he co-operated with Gen. Gilmore in some attempts to capture Fort Sumter. D. 1871.

Dahlgren Gun. (Ordnance.) A gun of heavy calibre, invented in 1847 by the American commander J. A. DAHLGREN, *q. v.* The breech is extremely strong, being very much thicker than the breech of an ordinary cannon; while the part between the trunnions and the muzzle is lighter, and contains less metal than a common gun of the same calibre. It is still used in our navy, and fires shells as well as solid shot.

Dahl'mann, FRIEDRICH CHRISTOPH, a German historian; B. at Wimar, 1785. He published a *History of Denmark, Histories of the English, and of the French Revolutions*, and also a work entitled *Forschungen auf dem Gebiete der deutschen Geschichte*. He also took a conspicuous part in politics, having been a member of the German parliament in the revolutionary year 1848. Subsequently he was appointed professor of history at the university of Bonn. D. 1860.

Dahlia, (dāl'yā,) a. [In honor of A. Dahl, a Swedish botanist.] (*Bot.*) A gen. of perennial herbaceous plants, order *Asteraceæ*. All the varieties in cultivation in our

flower-gardens, of which not fewer than 2,000 have been carefully enumerated, are derived from two species, *D. variabilis* and *D. coccinea*, natives of Mexico. Few plants manifest so strong an inclination to sprout and produce new varieties as the *D.*; and florists have also obtained many by the artificial fecundation of one with the pollen of another. They have coarse and roughish leaves, resembling those of the common *elder*, but the flowers are large and beautiful, sporting into innumerable varieties, single and double, of every conceivable shade of scarlet, crimson, purple, red, rarely yellow, and blooming from July until arrested by frost. The Dahlias are generally cultivated by the divisions of the tuberous roots, which, as soon as the frost blackens the tops, are to be taken up and preserved through the winter in a dry place, free from frost.

Fig. 762. — DAHLIA.

Dahline, (dāl'in,) n. (*Chem.*) See INULINE.

Dahlon'ega, in Georgia, a township and post-village, cap. of Lumpkin co., about 141 m. N.N.W. of Milledgeville.

Dahlon'ega, in Iowa, a post-village and township of Wapello co., about 65 m. S.W. of Iowa City.

Dahme, (dah'mey,) a Prussian town, on the river of the same name, 14 m. S. of Berlin, and strongly fortified. Here the French were defeated by the Prussians in 1713. Pop. 5,000.

Dahomey, or DAHOME, a country of W. Africa, on the coast of Upper Guinea. Its limits are far from being well defined, but they are supposed to extend from between about 6° and 8° or 9° N. Lat., and from 1° to perhaps 3° E. Lon.; having W., Ashantee; E., Yari and Benin; and S., the Atlantic Ocean. This region, far as it has been explored, consists for the most part of an immense plain rising gradually from the coast to the Kong Mountains, from 150 to 200 miles inland. The principal rivers are the Volta and Loka, which bound on the W., and the surface, comprising as it does marshes, may be considered as well watered. *D.* has alluvial soil of unsurpassed vigor and richness, a luxuriance of vegetation diffused over its face. — *Pro* Oranges, limes, guavas, and other tropical fruits; melons, pine-apples, and yams, grow wild; and maize, mill and other grains, potatoes, indigo, cotton, sugar, tobacco, and various gums and spices are successfully cultivated. In some parts the country is covered with dense forests, the retreat of lions, hyenas, leopards, elephants and monster serpents. Deer, and animals of the domestic species are plentiful. Previous to the early part of the last century this territory was divided into a number of petty states, and is represented as having been populous and well cultivated. The Dahomans, by whom it was overrun and laid waste, came from the interior of the continent. They are said to be hospitable to strangers, brave and resolute; and these traits would appear to make up the sum-total of their good qualities. The disposition seems to be a compound of that of the tiger and the spaniel — blood-thirstiness and untamed ferocity coupled with the most abject servility. All most arbitrary forms of savage despotism appear to be mild and free when compared with that established in this country. It is singular, too, that this despotism not founded upon force and terror, nor is it connected with anything timid or effeminate in the character of the people. It rests on a blind and idolatrous veneration for the person of the sovereign as for that of a superior being. He is the absolute master of the life and properties of his subjects, and disposes of them at pleasure. It is accounted a crime in the latter to propose that the king eats, drinks, sleeps, or performs any of the functions of an ordinary mortal. The great lords can only approach the monarch lying flat on the faces, and rolling their heads in the dust. The Dahomans rush to battle in obedience to the royal mandate, with a blind, unthinking, brute confidence. In the construction of the palaces and temples, human skulls form a favorite ornament. The king's sleeping-room has a floor paved with the skulls, and the roof ornamented with the jaw-bones of chiefs whom he has overcome in battle. Every year a high festival is held, which lasts for several weeks, and during which the king waters the graves of his ancestors with the blood of hosts of human victims. The bodies of those unhappy men are not interred, but are suspended by the feet to walls or scaffolds, and left hanging till they putrefy. This custom is known as the *grand custom*. A curious characteristic of this barbarous people was that the sovereign monopolized all the women. No subject might take a wife except by gift of, or purchase from, the king; whatever the likes or dislikes of the subject so favored, the wife bestowed must be accepted without question. The main reliance of the king during war was on a female soldiery, the so-called Amazons (see Fig. 763). These famous petticoat troops number rather more than 2,500, of whom but about 1,700 are fully armed. The women are, generally speaking, ugly, and many of them old and vixenish. In battle they fight with courage.

Fig. 761. — DAGON.
From Khorsabad.
(Layard.)

amounting to desperation, and, in fact, they surpass in this respect their masculine fellow soldiers. The corps is reinforced from the daughters of the land. Before a

Fig. 763.—AN AMAZON.

girl can marry she is shown to the king; if he likes her looks, she is enlisted as a soldier, and that is the end of the proposed match. They are in size larger than the men, and more able to bear fatigue, and, Capt. Burton thinks, more muscular, and in every way fit for powder.—The tiger is the fitting *jetich* or object of religious worship, among the Dahomans. Christianity is, however, a recognized religion, and the king, in former days, frequently sent a bottle of rum to the trading-post of Whydah, to propitiate the God of the whites. Abomey is the principal town, and all commercial traffic is conducted through Whydah.—*Recent History.* The coast of *D.* was placed under a strict blockade by Great Britain in 1876, on account of an outrage to a British subject. The country, however, being recognized by Britain as within the French sphere of influence, was not invaded; but in the autumn of 1892, a French force under Colonel Dodds met and utterly defeated the Dahomean army. The country was not annexed by France, and war again broke out in 1893 and continued till Jan., 1894, when King Behanzin surrendered and was dethroned. A new king, Guthili, was chosen, but a considerable part of the country was annexed as a French colony and the remainder made a French protectorate. Pop. estimated at about 250,000.

Daily, *a.* [See *DAY*.] Happening every day; done day by day; bestowed or enjoyed every day; diurnal.

Dain'gerfield. See *DANGERFIELD*.

Daintily, *adv.* In a dainty manner; nicely; delicately; fastidiously; deliciously.

"Those young suitors had been accustomed to . . . sleep well and fare daintily."—*Broome*.

Daintiness, *n.* State or quality of being dainty; delicacy; deliciousness; nicety; fastidiousness; as, *daintiness* of the palate.

Dainty, *a.* [W. *dantaeth*, from *dant*, a tooth; Lith. *dantis*; Lat. *dens*, *dentis*; Gr. *odon*, *odontos*; Goth. *tunthus*; O. Ger. *zant*, *zand*; Sansk. *dala*, a tooth, from *ad*, to eat.] Toothsome; pleasing to the palate; delicious to the taste; as, a *dainty* dish.

—Nice; delicate; of acute sensibility; fine and elegant in form or manner; luxurious.

"This is the slowest, yet the *daintiest* sense."—*Davies*.

—Ceremonious; squeamish; over-nice; scrupulous; as, a *dainty* speaker.

"Let us not be *dainty* of leave-taking."—*Shaks*.

—*n.* Something nice or delicate to the taste; that which is exquisitely pleasing to the palate; a delicacy; a tit-bit.

"Be not desirous of his *dainties*, for they are deceitful meat." *Prov.* xxiii. 3.

Dair el Ka'mar, a town of Syria, and capital of a community of Druses, 12 m. from Beyrout; pop. 30,000.

Dairy, (*dā're*), *n.* [L. Lat. *dayeria*, a place for keeping milk; O. Eng. *dey*, a milk-maid; Swed. and Goth. *dæg-gia*, to suckle an infant; Goth. *daddjan*.] The occupation or department of farming duty pertaining to the making of butter and cheese; as, *dairy*-produce.

The place, room, or building where milk is set for cream, managed, and converted into butter or cheese.

In the successful management of the dairy very much depends upon the quality of the cows, and the food with which they are supplied. The construction of the house where the milk is stored, &c. is of the highest importance. It should be situated on a dry spot, somewhat elevated, having, if possible, a northern exposure. A high roof and free ventilation are necessary; and the proximity to pig-sties, sewers, or offensive smells, must be avoided. Coolness is essential during the summer, and an equable temperature in the winter. As the milk suffers from being agitated or too much cooled before it is set for the cream to rise, the cow-house should be as near as possible to the dairy. The milk should be brought direct from the cows, without being exposed to the outer air, if possible. No substances except milk, butter, and newly-made cheese, should ever be allowed to come into a *D.* The floor and shelves, which are generally of stone or slate, should be carefully washed every day, and any spilled milk should be removed im-

mediately. Scrupulous cleanliness, indeed, is the first rule in all dairies. After being brought into the *D.* the milk is run into shallow dishes, made of earthenware, tin, or wood. The layer of milk run into each vessel should be shallow, in order to promote the formation of cream. The cream removed at the first skimming is the richest and best. For the methods employed in the *D.* for converting milk into cheese and butter, see the articles under those heads. Nearly all the manipulations of the *D.* are now done with the aid of machinery.

Dai'ry, **Dai'ry-farm**, *n.* A farm devoted to the production of dairy produce; grass-land or pasturage for feeding cows.

Dairy Grove, in Iowa, a post-office of Jasper co.

Dai'ry-house, *n.* A house or out-building in which dairy operations are carried on.

Dai'ring, *n.* Operations performed in a dairy.

Dairyland, in New York, a post-office of Ulster co.

Dai'ry-maid, *n.* A female servant who manages, or assists in, a dairy.

Dais, *n.* [O. Fr. *dis*; Fr. *dais*; from Lat. *discus*, a quoit, a dish, so called because shaped like a quoit; L. Lat. a table.] In the common acceptance of the word, *D.* means the raised flooring at the upper end of a hall, on which the high table stands, and where the most distinguished guests are seated; or the platform on which a throne, or chair of honor, is placed. This also seems to be the meaning of the term when it occurs in the works of old English poets and prose-writers. In France it means the canopy erected over a raised platform occupied by the sovereign at any reception or public ceremonial, as well as the platform itself; and the canopy carried over the sacred wafer when the priests are bearing it to the bedside of a dying man, is so called.

Daisied, (*dā'zid*), *a.* Full of daisies; decked with daisies; as, "the daisied sward;" and, "the prettiest daisied plot."—*Shaks*.

Daisy, (*dā'ze*), *n.* [A. S. *dæges-egge*.] (*Bot.*) The common name of the genus *Bellis*, order *Asteraceæ*. The common *D.*, *Bellis perennis*, native of Europe, but nearly naturalized in some parts of N. England in cultivated grounds, gives flowers almost all the year. In the days of chivalry, it was the emblem of fidelity in love, and was frequently borne at tournaments both by knights and ladies. What are called *double varieties*, with flowers of various and often brilliant colors, are very commonly cultivated in gardens, the flowers consisting entirely of florets of the ray. A variety called the *Hem-and-chickens D.*, frequent in cottage-gardens, has the flower (head of flowers) surrounded by smaller ones, the short stems of which grow from the summit of the *scape* or leafless stem.

Dāk, **Dawk**, *n.* [Hind. *dāk*.] In India, a post-man; a letter-carrier.—*To travel dāk*, to travel by means of relays of post-wagons. (*India*.)

Dāk-bun'galow, (*dāwk-n*). In Hindostan, a house of rest and entertainment for *dāks*, or letter-carriers.

Dak'el, (*EL*), or **EL DAKLEH**, (*dah-kel-dah-lay*), an oasis in Egypt, 28 m. long and 15 m. wide. Lat. 25° 30' N., Lon. 29° E. It produces dates, olives, and other fruits in abundance, and contains several villages. Pop. abt. 7,000.

Daker-hen, *n.* (*Zoöl.*) A provincial English term for the bird called CORN-CRAKE, *q. v.*

Dakot', *n.* [Hind.] See *DAKOT*.

Dako'ta, a former territory of the U. S., lying bet. Lat. 42° 30' and 49° N., Lon. 96° 30' and 103° W., bounded E. by Minnesota, S. by Nebraska, W. by Montana and Wyoming and having for its N. frontier the Assiniboin region of British N. America. The surface of this territory is elevated, yet not mountainous; forming, on the whole, an extensive plateau, varied in the N. E. by wide, grassy plains, and S. W. by high rolling prairies. It is excellently well watered, being intersected by the Missouri, Nebraska, Niobrara, and Cheyenne rivers, and innumerable smaller streams. A vast lake-system also drains the face of the country. The soil is, on the whole, excellent; more particularly is this the case as regards the valleys of the great rivers, which are highly fertile, and notably adapted to the production of cereals. A great breadth of the surface is admirably timbered. The Black Hills on the W. border of *D.* are rich in gold and silver, as well as coal, iron, and copper. *D.* originally formed part of the province of Louisiana, and was organized as a Territory by an Act of Congress, passed March 2, 1861, its name being derived from the Dakota Indians, whose tribes extended over this area, which they had conquered from the Mandan Indians, who inhabited it all near the middle of the century. As originally organized it included a large section lying west of the N. and S. forks of the Cheyenne River, which was subsequently (by an Act of Congress, July 25, 1868), separated from *D.* and organized into the Territory—now the State—of Wyoming. A cession of about 25,000 sq. miles, in the S. E. corner of the Territory, was made by treaty to the whites in 1858. The discovery of gold in the Black Hills, led to an inroad of miners, and in 1877, a treaty was made which ceded the rich mineral region of this section to the government. To many of these adventurers the fertility of the country became apparent, and many secured farming lands in the south, while later stories of the golden wheat fields of the north attracted thousands in that direction. In consequence the population increased rapidly. In 1861 it amounted to only 1,786; in 1870, it had reached 14,181; and in 1880, largely owing to the gold and wheat booms, had advanced to 135,180. An agitation was soon started for its division into two communities, on the 7th standard parallel, this movement finally leading into its organization into two states, by Act of Congress, Feb. 22, 1889,

called respectively North Dakota and South Dakota (*q. v.*).

Dako'ta, in Ill., a township of Stephenson county.

Dako'ta, or **Dakotah**, in Iowa, a post-village, the capital of Humboldt co. Pop. (1897) about 400.

Dako'ta, in Minnesota, an E. S. E. co., area about 550 sq. m. The Mississippi river bounds it on the N., as does the St. Peter's, or Minnesota, on the N. W., and the Cannon on the S. E. It is also drained by the Vermillion river. Surface undulating; soil fertile. Cap. Hastings. Pop. (1895) 21,345.

—A village of Dakota co., on the Vermillion river, about 24 m. S. of St. Paul.

—A village of Fillmore co., on the Mississippi river, about 143 m. S. E. of St. Paul.

—A village of Winona co., on the Mississippi river, 11 m. above La Crosse, Wisconsin.

Dako'ta, in Nebraska, an extreme N. E. co., bordering on Iowa. Area, about 400 sq. m. The Missouri river bounds it on the N. and N. E., and it is also drained by Elk creek. The surface presents a variety of rolling prairie, bottom-lands, and groves of hard timber. Soil, excellent. Cap. Dakota City. Pop. (1890) 5,386.

—A post-village, cap. of the above co., on the Missouri river, about 95 m. N. by W. of Omaha, generally called DAKOTA CITY. Pop. (1897) abt 5000.

Dako'ta, in Wisconsin, a post-village and township of Waushara co.

Dako'ta City, in South Dakota, a post-village of Remington county.

Dakota Indians. See *SIOUX*.

Dakota River, *RIVIERE A JACQUES*, or *JAMES RIVER*, in Dakota, rises in the N. E. part of N. Dakota, and flowing S. enters the Missouri near Yankton, in S. Dakota. Length about 603 m.

Dak'rumm, in Ohio, a post-office of Franklin co.

Dalamow, (*dal-a-mou*), a city of India, territory of Oude, 60 m. from Allahabad; pop. 12,000.

Dal'berg, KARL THEODOR ANTON MARIA, B. in 1744. He was the last archbishop-elect of Mentz, and arch-chancellor of the German empire. When the empire was dissolved, in 1806, Napoleon appointed him prince-primate of the Rhenish Confederation, and grand-duke of Frankfurt on the Main. After the fall of Napoleon he was deprived of all his territories, but retained his archbishopric. D. 1817.

Dalberg, EMERICH JOSEPH, (*dal'baig*), DUKE OF: B. at Mentz, 1773. As ambassador of Baden to Paris he gained the favor of Talleyrand, and was employed as a diplomatic agent by Napoleon. In 1814 he exerted his influence in behalf of the Bourbons, and was sent to the Congress of Vienna as French plenipotentiary. After the second restoration he was appointed minister of state, and also created a duke and peer of France. D. in 1833.

Dalbergi'ceæ, *n.* (*Bot.*) A tribe of plants, order *Fabaceæ*, distinguished by having filaments monadelphous, or diadelphous; legume continuous, generally indehiscent; cotyledons fleshy; leaves usually pinnate. The genus *Andira*, one of the principal in the tribe, contains the Cabbage-tree or Cabbage-bark of the W. Indies. *Andira Inermis*. It is a tree of considerable height, and its bark, called *cabbage-bark* or *worm-bark*, is a powerful anthelmintic.

D'Albert, CHARLES, a popular composer of dancing-music, B. near Hamburg, in 1815. He was educated in England, and studied music at the Académie Royale, Paris. His waltzes, polkas, and gallopes are almost innumerable, and too widely known to need mention here.

D'Albret, (*JEANNE*). See *ALBRET*.

Dale, *n.* [A. S. *dæl*; Ger. *thal*; O. Ger. *tal*; Goth. *dal*, *dals*, a deep chasm, ravine, or cleft; Fris. *del*, *dail*; Icel. *dalr*; Armor. *dâl*; Gael. *dail*. The root is found in Albanian, *thelë*, deep.] A vale or valley; a dell; a low place among hills.

Dale, RICHARD, an American naval officer, B. in Virginia, 1756, was sent to sea at 12 years of age, and at 19 had the command of a merchant-vessel. While serving as a midshipman on board of the American brig of war *Lexington*, he was taken by a British cutter; but, after being confined a twelvemonth in Mill Prison, he effected his escape into France, where he joined the celebrated Paul Jones, then commanding the American ship *Son Homme Richard*, and was the first man that boarded the English frigate *Serapis*, which was captured. In 1801 he had the command of an American squadron, and hoisted his pennant on board the *President*. He was a brave, honorable, and intelligent seaman. The adventures of his early days were of the most romantic and perilous kind; but his latter years were passed in the peaceful enjoyment of a competent estate at Philadelphia, where he d. in 1826.

Dale, in Alabama, a S. E. co., adjoining Florida; area, about 660 sq. m. It is drained by the Choctawatchee River. Surface, uneven. Soil, poor. Cap. Ozark. Pop. (1890) 17,225.

Dale, in Illinois, a thriving township of McLean co.

Dale, in Indiana, a post-office of Spencer co.

Dale, in Kentucky, a post-office of Campbell co.

Dale, in New York, a post-office of Wyoming co.

Dale, in Pennsylvania, a post-office of Berks co.

Dale, in Wisconsin, a township of Outagamie co., about 15 m. W. of Appleton.

Dalecar'lia, [*Swed. Dalarne*.] An ancient Swedish province, now forming the district of Kopparberg-Stora the region is very mountainous and rugged, but rich in wild and picturesque scenery. It derives its name from the river *D.*, by which it is watered. The inhabitants of this ancient province have always been noted for their bravery, patriotism, and hospitality. Her in 1520, Gustavus Vasa found a refuge from the persecu-

tion of Christian II. of Denmark, who had ascended the Swedish throne.

Fig. 764. — COSTUMES OF DALECARLIA. (Sweden.)

Dale City, in Iowa, a post-office of Guthrie co.

D'Alembert. See ALEMBERT, (D.)

Dal-Elf, a river of Sweden, formed by the junction of the Oster- and Wester-Dal. It falls into the Gulf of Bothnia, 10 m. from Gefre, after a course of 250 m.

Dalesman, *n.* A dweller in a dale; specifically, an inhabitant of the valleys of Cumberland and Westmoreland, England.

Daleville, in Alabama, a post-village of Dale co., abt. 70 m. S. E. of Montgomery.

Daleville, in Indiana, a post-village of Delaware co., about 40 m. N. E. of Indianapolis.

Daleville, in Mississippi, a post-village of Lauderdale co., about 100 m. E. of Jackson.

Daleville, in Pennsylvania, a post-village of Lackawanna co., about 13 m. S. E. of Scranton.

Dalhousie, in Missouri, a post-office of St. Charles co.

Dalhousie, JAMES ANDREW BROUN-KAMSAI, MARQUIS OF, a descendant of an old Scottish family, B. 1812; succeeded his father as 10th EARL OF D., 1838. He was an ardent Tory, and took an active part in the debates on the Scottish Church. After having occupied various important positions at home, he was appointed (1847) Governor-General of India, where he had spent several years of his childhood, his father having been commander-in-chief of the British forces in that country. Soon after his arrival in India, the second insurrection in the Punjab broke out; the rebels, however, were defeated in the battles of Chillianwallah and Goojerat, (1849,) and the Sikhs were effectually subjugated. Though D. had not taken an active part in these operations, he received a vote of thanks from the British parliament, and was elevated to the rank of marquis. In 1851 he subdued the Burmese, and returned to Europe in 1856. D. 1860.

Dalhousie, in New Brunswick, a port of entry, cap. of Restigouche co., on the Restigouche River at its entrance into the Bay of Chaleur, and about 200 m. N. of St. John. It is an important center of the fishing and lumbering interests, and annually ships large quantities of salmon, lobster, and timber.

Dalia, an ancient Swedish province in western Gothland. It forms now portions of the districts of Elfsborg, and Göteborg.

Dalilah. See DELILAH.

Dalin, OLOF VON, (*da-leen'*) a Swedish author, B. in 1708. He wrote a history of Sweden; also poems, fables, and satires. D. 1763.

Dalkey, in Ireland, a maritime village and parish, co. Dublin, abt. 8 m. S. E. of the city of Dublin, on the Irish sea, immediately outside of Dublin Bay. Pop. 5,500.

Dallem's Creek, in Kentucky, a post-office of Logan co.

Dallas, ALEXANDER JAMES, an American statesman, of British extraction, B. at Jamaica, 1759. He was educated in London, lived some time in Jamaica, and in 1783 went to the United States, where he became a citizen of Pennsylvania, and embarked in the practice of the law. In 1791 he was appointed secretary of state for that commonwealth, and in 1814 secretary of the treasury in Pres. Madison's cabinet. In this capacity he was distinguished by the vigor and usefulness of his financial policy. He resigned office in 1816, and D. at Trenton, N. J., in the following year.

Dallas, GEORGE MIFFLIN, an American statesman and diplomatist, B. in Phila., 1792. He graduated at Princeton College in 1810, and three years later was called to the bar. He soon afterward accompanied Albert Gallatin to St. Petersburg as his private secretary. He was subsequently appointed secretary to the American commissioners at the treaty of Ghent in 1814, which closed the war between this country and Great Britain. In 1823 he became mayor of Philadelphia, and was elected to the United States Senate in 1831. In 1837 D. was appointed minister to Russia, which post he held till 1839. After his return, in 1844, he was elected vice-president of the United States, under the administration of Mr. Polk. In this position he gave the casting-vote for the

annexation of Texas to the Union. In 1856 D. was appointed minister to the English court. D. Dec. 31, 1864.

Dallas, ROBERT CHARLES, an English author, brother of Alex. Jas. Dallas, B. at Jamaica, 1754. He is best remembered as the intimate friend and correspondent of Lord Byron, and as the author of *The History of the Maroons* (1803-4), and *Recollections of the Life of Lord Byron*. D. 1824.

Dallas, in Alabama, a S. W. co., drained by the Alabama River, which intersects it, and which receives the Cahawba and smaller streams. Area, abt. 890 sq. m. Surface, diversified. Soil, excellent, and in fine cultivation, producing heavy crops of cotton, Indian corn, oats, and garden stuff. Cap. Selma. Pop. (1890) 49,350.

Dallas, in Arkansas, a central county, watered by the Ouachita and Saline rivers, which forms its W. and E. frontiers respectively. Area, about 860 sq. m. Surface, undulating. Soil, fertile, growing large quantities of cotton and maize. Cap. Princeton. Pop. (1890) 9,296. — A post-village, cap. of Polk co., about 170 m. W. S. W. of Little Rock. The neighborhood is very rich in minerals wealth; including silver, lead, zinc, iron, and stone-coal.

Dallas, in Georgia, a township of Paulding co.

Dallas, in Indiana, a township of Huntington co., on the Wabash river.

Dallas, in Iowa, a central county, drained by Racoon river and Beaver creek. Area, 576 sq. m. Soil, highly fertile, and very generally under cultivation. Prod. Wheat, maize, and other agricultural products. Cap. Adel. Pop. (1897) about 24,500.

— A township in the above county.

— A post-village and township of Marion co., abt. 10 miles S. W. of Knoxville.

— A township of Taylor county.

Dallas, in Kentucky, a post-village of Pulaski co. In its vicinity, from May 25 to June 1, 1864, took place a series of desperate but indecisive skirmishes, between the National troops under Gen. Sherman, and the Confederates under Gens. Hood and Hardee.

Dallas, in Louisiana, a village of Madison parish, on Bayou Texas, about 15 m. W. of Richmond.

Dallas, in Mississippi, a post-office of Lafayette co.

Dallas, in Missouri, a central co., divided by the Niangua river, and traversed by other and minor streams. Area, 576 sq. m. Surface, level, prairies and forests predominating. Soil, good. Products, cereals and cattle. Cap. Buffalo. Pop. (1897) about 14,000.

— A post-village, of Jackson co., about 100 m. S. by E. of St. Louis.

— A village of Greene co., abt. 16 m. E. N. E. of Springfield.

— A township of Holt co., on the Missouri river, about 32 m. above St. Joseph.

— A township of Webster co., about 18 m. E. N. E. of Springfield.

Dallas, in N. Carolina, a township and village, cap. of Gaston co., about 170 m. W. by S. of Raleigh.

Dallas, in Ohio, a thriving township of Crawford co.

— A village of Darke county.

— A post-office of Highland county.

Dallas, in Oregon, a post-village and township, cap. of Polk co., on the Rickreal river, about 15 m. W. of Salem.

Dallas, in Pennsylvania, a post-township of Luzerne county.

Dallas, in Texas, a county in the N. E. part of the State, irrigated by the forks of Trinity river. Area, 900 sq. m. Surface, variegated. Soil, good, and well timbered. Large yields of cotton, cereals, and dairy products are customary. Cap. Dallas. Pop. (1890) 67,042.

— A city, cap. of above co., on Trinity river, 315 m. N. of Galveston. It has a university controlled by the denomination called Christians and an Episcopal college. It is an active manufacturing place, and is surrounded by extensive wheat and cotton belts. It is the trade center for an immense agricultural region, and is one of the most flourishing cities of the South. Pop. (1897) about 47,500.

Dallas, or BARRON, in Wisconsin, a N. W. co. Area abt. 1,200 sq. m. It is intersected by the Red Cedar (or Menomonee), Vermillion, Hay, and Apple rivers, all of which, except the first, rise within its limits. Surface, mostly elevated timber-lands, interspersed with numerous lakes. In 1888, the name Barron was legally substituted for that of Dallas for this county. Pop. (1897) 21,270. Cap. Barron.

— A village of Iowa co., on the W. branch of Pekatonica river, a few miles from Mineral Point.

Dallas, in W. Virginia, a post-office of Marshall co.

Dallasburg, in Kentucky, a village of Owen county, on Eagle creek, about 34 miles N. of Frankfort.

Dallas Centre, in Iowa, a post-office of Dallas co.

Dallas City, in Illinois, a post-village of Hancock co., on the Mississippi river, about 5 m. below Burlington Iowa.

Dallas City, in Illinois, a village of Henderson co., on the Mississippi river.

Dallastown, in Pennsylvania, a post-village of York co., about 7 m. S. E. of York.

Dalles, The, in Oregon, a city, cap. of Wasco co., on the Columbia river, about 120 m. E. of Portland. Has important shipping interests, handling grain, stock, and wool, and considerable manufacturing. Pop. (1897) about 4,000.

Dalles (*dalz*), of the Columbia, form a limited portion of the Columbia river, about 20 m. above the Cascades. The whole volume of the river here flows between two walls of basaltic rock, which at one place are only 58 yards apart. The word *dalles* (from *dalle*, a flag-stone) appears in the language of the French hunters, to be applied to a narrow gorge or cañon.

Dalliance, *n.* A dallying; a lingering; acts of fondness; interchange of caresses.

Dallier, *n.* A trifler; a procrastinator; one who toys, fiddles, or caresses.

"Daily dalliers with pleasant words." — Ascham.

Dally, *v. n.* [Icel. *dalleiki*, *dallegleiki*, freedom, familiarity, from *dæl*, affable, and *leik*, *leika*, to play, to sport.] To play or sport in an affable or familiar manner; to toy and wanton; to sport; to interchange caresses. — To delay; to linger; to loiter; to procrastinate; to waste one's time in trifles.

"He cried . . . 'tis now no time to dally,
The enemy begin to rally." — Hudibras.

— *v. a.* To put off; to delay; to defer till a proper opportunity shall arrive.

"Dallying off the time with often skirmishes." — Knolles.

Dalmanutha, (*Anc. Geog.*) a town, or village, of Palestine, near the city of Magdala, on the W. shore of the sea of Galilee, N. of Tiberias. Its exact situation is unknown.

Dalmanutha, in Iowa, a former post-office of Guthrie co., about 5 m. W. of Des Moines.

Dalmatia, a country forming a part of the Austrian monarchy, and stretching along the Adriatic Sea, between 42° 30' and 44° 28' N. Lat., and 14° 59' and 19° 9' E. Lon. It includes numerous islands, and is bounded N. by Croatia, E. by Herzegovina, and S. and W. by the Adriatic. Area, exclusive of the islands, 4,668 sq. m. D., in general, is mountainous and rugged, yet it contains many fertile valleys. In the N. W. rise the Dinaric Alps, the highest peaks of which are the Diana, 5,675, the Biokovo, 5,530, and the Soilaya, 4,750 feet above the level of the sea. Rivers, *dc.* The Narenta, Kerka, Zernmagna, and Cetina. The lakes, with the exception of that of Vrana, are periodical; that is, they usually dry up in summer. Prod. Maize, grapes, olives, wheat, and some silk. The country abounds with marble, and gypsum, and also in iron. Manuf. The industry of this region is as yet rather at a low ebb: the main articles of export are wine and distilled liquors. The building of ships, however, is carried on to a considerable extent. The inhabitants are principally of Slavonic origin, though there are many Italians. The Dalmatians speak the Servian language, whilst Italian is the official language of the country. Rd. The Roman Catholic religion is predominant; the number of Protestants, Greeks, and Jews being but small. Govt. The country, though bearing the title of a kingdom, is a constituent crown-land of the Austrian empire. It has its own legislature, but sends representatives to the imperial parliament at Vienna. Hist. In olden times, D. formed a part of the Roman prov. of *Illyricum*, having been conquered in the reign of Augustus. After the decline of the Western Empire, it was successively subjected by the Goths, Hungarians, Venetians, and the Turks. In 1797, it was incorporated with Austria. In 1805, Napoleon united it with the kingdom of Italy, but, in 1814, it again reverted to Austria, in whose possession it has since remained. It is now divided into 4 departments: *Cattaro*, *Ragusa*, *Spalatro*, and *Zara*. Cap. *Zara*. Pop. 468,781.

Dalmatia, in Pennsylvania, a post-village of Northumberland co., about 40 m. N. of Harrisburg.

Dalmatian, *n.* A native or inhabitant of Dalmatia.

— *a.* Relating, or pertaining, to Dalmatia.

Dalmatic, **Dalmaticæ**, *n.* [L. Lat.] (*Ecol.*) A long, white gown with sleeves, worn by deacons in the Roman Catholic Church over the *alb stole*. It was imitated from a dress originally worn in Dalmatia, and imported into Rome by the Emperor Commodus, where the use of it gradually superseded the old Roman fashion of keeping the arms uncovered. A similar robe was worn by kings in the Middle Ages at coronations and other solemnities.

Dalry, a town of Ayrshire, Scotland, 15 miles from Paisley; pop. 5,987.

Dalrymple, DAVID, (LORD HAILES,) a Scottish lawyer and historian, B. at Edinburgh in 1726. He was appointed a judge in 1766, and wrote several works referring to English and Scottish history; also *Remains of Christian Antiquity*. D. 1792.

Dalrymple, a harbor, with light-house, in an estuary, at the mouth of the Tamar, in Tasmania; Lat. 41° 3' 5" S., Lon. 146° 7' 5" E.

Dal Segno, (*dal sán'yo*), *n.* [It., from the sign.] (*Mus.*) A direction to the performer to recommence from that

part of the piece to which the sign $\text{\$}$ is prefixed.

Dal'son, in Illinois, a twp. of Clarke co.

Dal'ston, a district of London, 4 m. from St. Paul's Cathedral.

Dalton, JOHN, an English mathematician and natural philosopher, B. at Eaglesfield, 1766. In his 27th year he became professor of mathematics and natural philosophy in the new college in Moseley Street, Manchester; and made his first appearance as an author in a volume of *Meteorological Observations and Essays*, in 1793. In 1808 he published *A New System of Chemical Philosophy*, and a second and third part in 1810. He also frequently contributed to the memoirs of the Literary and Philosophical Society of Manchester, of which, for half a century, he was an active member, and latterly the president. In 1826 he was presented with a gold medal by the Royal Society for his scientific discoveries; and in 1833 the sum of \$10,000 was raised by his friends and townsmen for the erection of a statue (by Chantrey) to perpetuate his remembrance. His *Atomic Theory* must ever render his name memorable. Contemporaneously with Gay-Lussac, with whose researches many of his own run parallel, he discovered the general law of the expansion of gases; and his contributions to mete-

ology were also of the most important kind. A severe attack of paralysis, in 1837, considerably impaired his powers, and he d. 1844. *D.* was a man of thorough independence of mind, entire truthfulness, and almost childlike simplicity of life. He was a member of the Society of Friends, and a constant attendant at their meetings.

Dal'ton (formerly CROSS PLAINS), in *Georgia*, a city, the cap. of Whitefield co. Was headquarters of Johnston's army in 1864. Has various manufactures and a large shipping trade in cotton, grain and fruit. In a mineral belt. *Pop.* (1897) about 3,500.

Dalton, in *Indiana*, a post-village and township of Wayne co., about 20 m. W. N.W. of Richmond.

Dalton, in *Massachusetts*, a town of Berkshire co., about 146 m. W. of Boston. Has woolen, cotton, paper and other factories. *Pop.* (1897) 3,050.

Dalton, in *Michigan*, a township of Muskegon co.

Dalton, in *Missouri*, a post-office of Charlton co.

Dalton, in *New Hampshire*, a post-township of Coos co., on the Connecticut river, 90 m. N. by W. of Concord.

Dalton, in *Ohio*, a post-village of Wayne co., about 100 m. N. E. of Columbus.

Dal'tonism, *n.* Color-blindness;—from John Dalton (*q. v.*), who suffered therefrom. See COLOR-BLINDNESS.

Dalton's Corners, in *Michigan*, a P. O. of Wayne co.

Dam, *n.* [From *dame*, from *Lat. domina*, the mistress of a family.] A female parent; used chiefly of beasts.—A human mother;—used in contempt, reproach, or derision.

(*Games*.) In draughts, a crowned piece.

Dam, *n.* [*D. dam*; *Ger. damm*; *Lith. tama*.] That which stops, confines, or obstructs: a mole, bank, or mound of earth, or any wall, or a frame of wood,—raised to obstruct or hinder the passage of a body of water.

(*Law*.) The owner of a stream not navigable may erect a dam across it, provided he do not thereby materially impair the rights of the proprietors above, or below, to the use of the water in its accustomed flow. When one side of the stream is owned by one person, and the other by another, neither, without the consent of the other, can build a dam which extends beyond the *filum aquæ*, thread of the water, without committing a trespass. If a mill-dam be so built that it causes a watercourse to overflow the surrounding country, when it becomes stagnant and unwholesome, so that the health of the neighborhood is sensibly impaired, such dam is a public nuisance, for which its author is liable to indictment.

Dam, *v. a.* [*A. S. dammen*; *Ger. dämmen*; *O. Heb. atam*, to shut, to close, to stop; *Ar. atima*, to cover a window with a curtain; allied to *dumb*.] To stop up; to confine or obstruct; often preceding *up*.

"My doors are . . . filled and dammed up with gaping creditors." *Otway*.

—To restrain; to shut in; to stop the progress of a stream of water by a bank of earth, or by any other work; to confine water within certain limits;—generally with *up* or *in*.

"I'll have the current in this place dammed up." — *Shaks.*

amage, (*dam'aj*.) *n.* [*O. Fr.*: *Fr. dommage*, from *Lat. damnum*; *Sansk. dambh*, to hurt, to injure, to deceive.] Hurt; harm; injury; detriment; loss; mischief; as, sea-damage.

(*Law*.) The loss caused by one person to another, or to his property, either with the design of injuring him, or from negligence and carelessness, or by inevitable accident. He who has caused the *D.* is bound to repair it; and if he has done it maliciously, he may be compelled to pay beyond the actual loss. When *D.* occurs by accident without blame to any one, the loss is borne by the owner of the thing owned; as, if a horse runs away with his rider, without any fault of the latter, and injures the property of another person, the injury is the loss of the owner of the thing.

(*pl.*) The recompense awarded by a jury to a plaintiff, in certain forms of action, for the loss or damage he has sustained by the injury committed by the defendant. At common law, *D.* are recoverable in personal and mixed actions. In actions upon the case, trespass, &c., a certain amount of *D.*, sufficient to cover all the hurt really sustained by the plaintiff, is alleged or laid in the declaration; and it is the duty of the jury to inquire the real amount of *D.*, and assess it accordingly. In an action of debt, where the amount due is something certain, the damage laid is now merely nominal or the injury supposed to be done by the detention of the debt; the jury, therefore, award a nominal sum only. *D.* are also allowed in actions upon a variety of statutes, and sometimes double or treble *D.*; in which use the plaintiff is entitled to twice or three times the amount awarded by the jury.

amage, *v. a.* To hurt or harm; to injure; to impair; to lessen the soundness, goodness, or value of; as, to be *amaged* in purse or reputation.

—*n.* To receive damage or detriment; to become injured or depreciated in value; as, sea-damaged goods.

amageable, *a.* That may be damaged, injured, or impaired; susceptible of damage.—Mischievous; pernicious; calculated to hurt or injure.

amagan, or ZINDER, a province of Bornou, N. Africa, situate between Lake Tchad and the Quorra, &c. Fertile; a soil producing indigo, cotton, the castor-oil plant, with various fruits. Its principal traffic is in slaves. *Lat.* between 13° and 14° N., *Lon.* between 4° and 10° 50' E.

man, a Portuguese town of India, on the coast of northern Concan, 100 m. from Bombay, and within at presidency. It contains the celebrated temple of Parsis. *Pop.* of district (1890) about 28,000.

Da'man, *n.* (*Zoöl.*) See HYRAX.

Damanhour, (*da-man-hoor'*.) a town of Lower Egypt, 38 m. from Alexandria. It has manuf. of both cottons and woollens.

Dam'ar, **Dam'mar**, **Dam'mara**, *n.* [*Malay.*] A resinous secretion obtained from the *Dammara* (*q. v.*), and used in the manufacture of varnish.

Dam'ar, a town of Arabia, in Yemen, 120 m. N.N.W. of Aden. It has 5,000 houses, is the residence of a governor, and has a college attended by numerous students.

Damar'as, a country comprising wide plains and grassy slopes, situate at the foot of mountains with an elevation of 1,000 feet, in S.W. Africa. It abounds with lions, rhinoceroses, and zebras, and is peopled by two distinct nations—the Damaras of the hills and the Damaras of the plains. *Lat.* between 21° and 24° S.

Damariscot'ta, in *Maine*, a town and township of Lincoln co. The town is about 45 m. N. E. of Portland, on Damariscotta river and on the Knox and Lincoln R. R. *Pop.* (1896) about 1,050.

Damariscotta River, in *Maine*, traverses Lincoln co., and enters the Atlantic Ocean, of which it appears to be a sort of an arm, being only 16 m. in length, and navigable for vessels of any size.

Damas'cenus, JOANNES, a saint of both the Roman Catholic and the Greek churches, b. in Damascus abt. 675; served as chief secretary under caliph Ali, governor of Damascus, but resigned his office and joined the hermits of St. Sabas in Palestine. He wrote the *Accurate Summary of the Orthodox Faith*, and various other works. His authority as a doctor of the Church is very high, especially in the East. *D.* in 750 A. D.

Damascene, (*dam'as-en*.) *n.* [*Lat. damascenus*, from *Damascus*.] A kind of plum: now called DAMSON, *q. v.* (*Geog.*) A district of ancient Syria, having Damascus as its capital.

Damas'cius, an ancient philosopher, b. abt. 480 at Damascus. Proceeding to Athens, he there became a teacher of the Neo-Platonic philosophy, and wrote *Difficulties and Solutions of First Principles*, and commentaries on Plato and Aristotle. The time of his death is not known.

Damas'covie, in *Ohio*. See DAMASCUS.

Damas'ens, [*Gr. Damaskos*; *Heb. Damasek*, and called by the natives *Es-Sham*.] A large and ancient city of Syria, cap. of an important Turkish pashalic of the same name, and the virtual metropolis of Syria, situate in a plain at the E. foot of the Anti-Libanus range, 180 m. S. by W. of Aleppo; *Lat.* 33° 27' N., *Lon.* 36° 25' E. This city is remarkable for the picturesque

Fig. 765.—RIVER ABANA, (NOW BARADA,) AND DAMASCUS.

beauty of its location, and for its many mosques, bazaars, and monuments of past splendor. *D.* is essentially a commercial emporium, its manufactures comprising almost every branch of artistic and mechanical industry. In former times it was pre-eminently famous for the fabrication of arms and sword-blades; a department of skilled handicraft, that, though it has declined in local celebrity, still bears a good name. Saddlery, carpets, cabinet-work, jewelry, and silk, are now the staple industries. *D.* connects by caravan with the leading cities of Persia, Arabia, and Asia Minor, and through its seaport, Beyrout, with the European world. The fertility of the country round about is unsurpassed; and the city is literally buried in foliage and floral luxuriance, forming quite a network of gardens and groves. The climate is mild and salubrious. *D.* is one of the chief cities of Islam (its inhabitants being remarkable for their religious fanaticism), and forms the one grand

Fig. 766.—DAMASCENE LADY.

exception among the great cities of the East, which has not decayed from its former importance. *D.* is very ancient; it is mentioned as existing 1,913 years B. C. (*Gen. xiv. 15*), and was then, probably, the cap. of an independent Syrian kingdom. It was subdued by David (2 *Sam. viii. 6*), but recovered its independence, if not earlier, at least during the reign of Solomon. (1 *Kings xi. 24*.) It then became the cap. of the kingdom of Ben-hadad and his successors (1 *Kings xv. 18*), and remained so till its subjugation by Tiglath-Pileser, abt. 742 B. C., a little before the downfall of its rival Samaria. (2 *Kings xvi. 9*.) From this time it followed the fortunes of the rest of Syria, falling successively under the power of the Persians, Greeks, and Romans. As a Roman city it attained great eminence, and figures very conspicuously in the history of the Apostle Paul. (*Acts ix.*) *D.* was taken by the Saracens in 632, after a 7-months' siege, and was for many years the cap. of the Eastern caliphate. It was unsuccessfully besieged by the Crusaders in 1148, and by Tamerlane in 1400; and, in 1516, fell into the hands of the Turks, who retained it till 1832, when it was captured by Ibrahim, Pasha of Egypt. *Pop.* (1897) estimated about 210,000.

PASHALIC OF DAMASCUS. This territory, forming the Turkish *eyalet* of Sham, comprises all the region between the Lebanon chain and the river Euphrates, or between *Lat.* 31° to 36° N., and *Lon.* 35° to 41° E. *Surface*. Generally level. *Soil*. Rich; producing the cereals, hemp, flax, tobacco, silk, cotton, madder, and the choicest fruits. This is esteemed the most important govt. of Asiatic Turkey. *Pop.* Estimated at 600,000.

Damas'ens, in *California*, a village of Placer co., abt. 38 m. E.N.E. of Auburn.

Damas'ens, in *Illinois*, a P. O. of Stephenson co.

Damas'ens, in *Maryland*, a post-village of Montgomery co., abt. 70 m. N.W. of Annapolis.

Damas'ens, in *Mississippi*, a post-office of Scott co.

Damas'ens, in *Ohio*, a post-village of Columbiana co., abt. 160 m. N.E. of Columbus. The name of the post-office is Damascoville.

—A post-village and township of Henry co., on the Maumee River, 135 miles N.N.W. of the city of Columbus.

Damas'ens, in *Oregon*, a post-office of Clackamas county.

Damas'ens, in *Pennsylvania*, a post-village and township of Wayne co., on the Delaware River, abt. 178 m. N.E. of Harrisburg.

Damas'ens, in *S. Carolina*, a village of Spartanburg district, abt. 75 m. N.W. of Columbia.

Damas'ens Blades, *n. pl.* The name of those famous steel-blades, formerly manufactured in Damascus, and used for swords, sabres, and scimitars. They were remarkable for their great elasticity, and extraordinary hardness. A blade of this kind would cut through iron as easily as through wood, and could readily be coiled round the arm. The highly-polished surface exhibited delicate lines in the form of black, silvery, or white veins, running either parallel, or interlaced so as to show curious figures. They were first made known in Europe through the Crusaders, and have ever since, until very recently, baffled every effort to imitate them successfully. To M. Bréant, and to the Russian general Anossoff, the honor is due of having finally discovered the true process by which those wonderful blades were wrought. Gen. Anossoff, at his works in Siberia, produced blades equal in every respect to the genuine Damascus article; and latterly, Prof. Crivelli, of Milan, has also succeeded in manufacturing them. Imitations, resembling the genuine blades, but far inferior to them in quality, are manufactured at Sheffield, England; Solingen, Germany; and Eskilstuna, Sweden. Knives, scissors, and sword-blades are now frequently made by this imitative process, and are often beautifully inlaid with gold.

Damask, *n.* [*It. dammasco*, from *Damascus*.] (*Manuf.*) A kind of wrought linen chiefly made in Flanders, so called because its large flowers resemble those of damasks, which were a sort of silk stuff, having some parts raised above the ground, representing flowers or other figures. They obtained this appellation from their having been invented at Damascus. *D.* linen is chiefly used for tables. A table-cloth and a dozen of napkins of this material are called a *damask service*.

—*a.* Of the color of damask, or of the rose so called; as, a "damask cheek." (*Shaks.*)—Pertaining or relating to the city of Damascus, or to its textile productions.

—*v. a.* To form flowers or foliage on woven stuffs.

—To diversify; to variegate; to embellish.

"Damasking the ground with flowers." — *Fenton*.

Damask-color, *n.* A hue or color resembling that of the damask rose.

Damasken, *v. a.* [*Fr. damasquiner*. See DAMASCENE.] To inlay and adorn steel with incrustations, or etchings, in gold, silver, &c.; as, to damasken a sword-blade.

Damasken'ing, *n.* [*Fr. damasquinure*.] The art of inlaying metals with scroll-work and other ornamentation in gold and silver; so called from *Damascus*, celebrated during the Middle Ages for the skill of its manufactures in this class of ornamental art. In more modern times Milan has been distinguished for its damasked armor; this mode of decoration is very commonly applied to swords.

Damaskin, *n.* [*Sp. damasquino*.] A kind of ornamented, inlaid sword;—originally forged at Damascus.

Damask-plum, *n.* (*Bot.*) See DAMSON.

Damask-rose, *n.* (*Bot.*) See ROSA.

Damask-silk, *n.* A kind of rich, figured silk. See DAMASK.

Dam'ask-steel, *n.* A superior kind of steel, formerly used, at Damascus, in the manufacture of sword-blades, &c.

Damasse', Dam'assin, *n.* [Fr.] A Flemish and French variety of damask.

Dam'asus I., (POPE.) B. 304, in Portugal; he was elected to the Pontifical chair in 366. The Arians were opposed by him in several councils. D. 384.

DAMASUS II. became Pope in 1048, and died three weeks after his election.

Dame, *n.* [Fr., from Lat. *domina*, the mistress of a family or household.] A matron; a mother; a mistress of a household or family; a lady in position and honor.

"Sovereign of creatures, universal dame."—Milton.

—In England, the legal title pertaining to the wife of a baronet. (Called colloquially *my lady*, or *your* or *her ladyship*.)

—The mistress or female head of a family, household, or school, in the lower order of life; as, a village dame.

"Where sits our sullen, sulky dame."—Burns.

Dam'eron, HEINRICH, a German psychologist, B. at Stettin, 1798. He occupies the position of superintendent of the insane asylum at Halle, and is regarded as one of the first authorities on subjects pertaining to insanity, on which he has written several excellent works, among others: *Die Elemente der nächsten Zukunft der Medizin* (1829); *Sefeloge, eine Wahnsinnstudie* (1853). He is also the editor of the *Zeitschrift für Psychiatrie*.

Dames' Quarter, in Maryland, a post-office of Somerset co.

Dame's-violet, **Dame'wort**, *n.* (Bot.) See HESPERIS.

Damia'ni, PIETRO, CARDINAL, bishop of Ostia, B. at Ravenna, abt. 988. He became abbot of Font-Avellana in 1041, rendered important service to several popes, and was created cardinal, against his will, in 1057. His influence was very powerful, and he induced Benedict X., who was irregularly elected pope, to resign in favor of Nicholas II. He was sent as legate to Milan to condemn the simoniacal practices then causing much agitation; supported Alexander II. against the emperor; and then retired, resigning his dignities. He was, however, several times drawn from his cell and sent on important missions to France, to Germany, and finally to Ravenna, to re-establish order after the excommunication of the archbishop. The fatigue of this mission was too much for his diminished strength, and he d. at Faenza soon after his return, in 1072. His works consist of Biographies of Saints, Sermons, and Letters.

Damia'nist, *n.* (Ecccl. Hist.) A follower of Damianus, the Monophysite Patriarch of Alexandria, founder of a religious sect which arose in the 6th century. This sect made a distinction between the Divine essence and the three persons in the Godhead. Certain nuns of the order of St. Clare were also called *Damia'nists*.

Damia'nsville, in Illinois, a post-office of Clinton co.

Damiens, ROBERT FRANÇOIS, (*da'me-ang*), tortured and quartered in Paris, March 28, 1757, for attempting to assassinate Louis XV. B. 1714, near Arras.

Damietta, (*da-me-et'ta*), a city of Lower Egypt, on the E. branch of the Nile, 8 miles above its mouth, and 100 m. N.N.E. of Cairo; 31° 25' N. Lat., 31° 49' E. Lon. The city is situated on a narrow neck of land between the Nile and the Lake Menzaleh. It was formerly famous for the manufacture of leather and dimity cloth.—OLD DAMIETTA, abt. 5 m. N. of the present city, was repeatedly conquered by the Crusaders, and is now a heap of ruins.

Dam'mar, **Dam'mara**, *n.* See DAMAR.

Dam'mara, **Dam'mar-pine**, *n.* (Bot.) A genus of trees, order Pinaceæ. The Kaurie, Kauri, or Cowdie Pine of New Zealand is a species of this genus, and is called *D. Australis*. It yields a hard, brittle, resin-like copal, largely used in the preparation of varnishes. *D. orientalis*, the Amboyna Pine, yields the fine transparent resin called *Indian Dammar*. Several of the species furnish valuable timber. They have broad, leathery leaves, and great, oblong cones.

Dammoodah, (*damm-moo-dā'*), a river of India, rising in the British district of Ramghur, in the Bengal presidency, and, after a course of 350 m., falling into the Hooghly, in Lat. 22° 15' N., Lon. 88° 7' E.

Dam'ni, (*dam'*), *v. a.* [Ger. *verdammen*, to sentence, doom, condemn; Lat. *dammō*, from *dammum*, hurt, harm, damage; Fr. *dammier*.] To condemn or sentence to future punishment; to doom to eternal punishment in hell; to orally send to perdition.—To condemn; to decide to be wrong, or worthy of denunciation or punishment; to censure.—To decide to be bad, mean, or displeasing, by hissing, or any other mark of disapprobation; as, to *damn* a play.—To execrate; to curse; to utter a malediction; as, to *damn* a person's eyes.

—*n.* An execration; an oath.

Damnability, *n.* State or quality of meriting denunciation; damnableness.

Dam'nable, *a.* That may be damned or condemned; deserving damnation.—Odious; detestable; pernicious. (Vulgar.)

"Thou hast damnable iteration."—Shaks.

Dam'nableness, *n.* State or quality of meriting damnation.

Dam'nably, *adv.* In a damnable manner.

—Detestably; odiously; hatefully; perniciously. (Vulgar.)

Damnation, *n.* [Lat. *dammatio*.] (Theol.) Sentence or condemnation to everlasting punishment in the future state. This is now the sense of the word damnation, in our language; but at the time when the Bible was translated, it signified the same as condemnation. The words *damn* and *damnation* ought therefore to be

still so understood, in such passages as Romans xiii. 2; xiv. 23; 1 Cor. xi. 29.

Damnatory, *a.* Containing a sentence of condemnation.

Damned, (*dam'ned*, colloquially pronounced *damd*), *p. a.* Condemned; sentenced to everlasting punishment in a future state.

"Better be damned than mentioned not at all."—Wolcot.

—Hateful; detestable; abhorrent; odious.

"Falsehoods of most base and damnd contrivance."—Rowe.

Damnific, *a.* [Lat. *dammificus*.] Procuring or producing loss; mischievous.

Damnify, *v. a.* [L. Lat. *dammificare*.] To damage; to injure; to induce or occasion loss; to hurt; to impair.

Dam'ocles, a sycophant at the court of Dionysius of Syracuse in the 4th century B. C. When he was one day extolling the happy condition of princes, the tyrant invited him to a sumptuous entertainment, but caused a naked sword to be suspended over his head by a single hair; a sufficiently significant symbol of the fear in which tyrants may live.

Dam'on, a Pythagorean philosopher, memorable for his friendship with Pythias, or Phintias. Dionysius of Syracuse having condemned Damon to death, he obtained leave of absence to go home and settle his affairs, Pythias pledging himself to endure the punishment in his stead if he did not return at the appointed time. Damon was punctual; and this instance of friendship so pleased the king, that he pardoned him, and begged, but in vain, to be admitted to their friendship.

Damp, *a.* [Dan. and L. Ger. *damp*; Ger. *dampf*, vapor; O. Ger. *dampf*; Mid. High-Ger. *tampf*; Icel. *dampi*; Swed. and Goth. *damma*; Lith. *dīm*. The Ger. is from *dampfen*, to smoke; Sansk. *tap*, to make warm or hot, and hence, to cause to ascend in vapor.] Moist; humid; being in a state between dry and wet; as, *damp* weather.

"O'erspread with a damp sweat and holy fear."—Dryden.

—Dejected; depressed; sunk in mind or spirits.

"All these and more came . . . with looks Downcast and damp."—Milton.

—*n.* Moisture; moist air; humidity; fog.—Dejection; depression of spirits; mental chill.

—(*pl.*) Noxious exhalations issuing from the earth, in coal-mines, &c. See CHOKE-DAMP; FIRE-DAMP.

—*v. a.* To moisten as with vapor; to make humid or moderately wet; as, to *damp* the hair.—To chill: to dispirit; to deject; as, to have one's expectations *damped*.

"Dread of death damps all his jollity."—Atterbury.

—To dull; to deaden; to weaken.

"A soft body dampeth the sound much more than a hard." Bacon.

—To restrain, discourage, or check; to hebetate.

"Usury damps and damps all industries."—Bacon.

Damp'en, *v. a.* To make or render damp, moist, or humid.

Damp'er, *n.* (Mech.) The *D.* of a furnace, or fire-place, is a door or valve, which, by rising, falling, sliding, or otherwise, lessens the passage for air, and thus damps or checks the intensity of the combustion.—The *D.* of a pianoforte also acts as a check; it is in the form of a small level, which presses against a string soon after it has begun to sound, and thus stops the vibration. An apparatus which communicates dampness is also called a *D.*; thus, damping-machines have been invented for the purpose of moistening postage and other stamps.

—A cake of flour kneaded with water, unleavened, and baked on the embers. (Used in Australia.)

—Anything which chills, obstructs, discourages, or disheartens. (Used metaphorically.)

Dampier, WILLIAM, (*dāmp'peer*), an English navigator, was B. at East Coker, Somersetshire, in 1652, and became a mariner at an early age. During many years of active service in privateers and trading-vessels, he several times visited the South seas; and the results of his observations were given to the public in a work entitled *A Voyage round the World*, which for accuracy and interest, as well as for professional knowledge, possesses considerable merit. He d., as is supposed, in 1712, but the exact time is not known.

Damp'ier ARCHIPELAGO, and STRAIT, named after the above navigator. The strait, which is 35 m. wide, separates the island of Waygion from the N.W. extremity of Papua or New Guinea, lying almost immediately under the equator, and about Lon. 131° E.; so as to be, as nearly as possible, the antipodes of the mouth of the Amazon. The archipelago, again, is off the N.W. coast of Australia, in abt. Lat. 21° S., and Lon. 117° E. The principal islands of the cluster are Enderby, Lewis, Rosemary, Legendre, and Depuch.

Damp'ish, *a.* Moist or damp to a certain degree.

Damp'ishly, *adv.* In a dampish manner.

Damp'ishness, *n.* Tendency to wetness; state of being dampish; slight humidity; a moderate degree of dampness or moistness.

Damp'ness, *n.* State of being damp; moisture; fog-giness; moistness; moderate humidity.

Damsel, **Damosel**, (*dā'm'zēl*), *n.* [O. Fr. *damoiseau*, *damoisel*; Fr. *demoiselle*; It. *damigella*, from *dama*, a dame, a lady, from Lat. *domina*.] A young unmarried woman; a girl; a lass.

"One mad damsel dares dispute my pow'r."—Prior.

Damson, (*dā'm'zn*), *n.* [Contracted from *damascene*.] A small black plum, originally brought from Damascus, Syria.

Dan, [Heb., judgment,] a son of Jacob by Billah, the servant of Rachel, and the father of the warlike tribe of Dan, one of the twelve tribes of Israel, which was second only to that of Judah in numbers before entering Canaan. A territory was assigned to Dan, extending S.E.

from the sea-coast near Joppa. It bordered on the land of the Philistines, with whom the tribe of Dan had much to do. Their territory was fertile, but small, and the natives were powerful. A part of the tribe therefore sought and conquered another home. (Josh. xix.: Jud. xviii.)—11. A city, originally called Laish, (Jud. xvii. 29.) at the N. extremity of Israel, in the tribe of Naphtali. "From Dan to Beer-sheba," denotes the whole extent of the land of promise, Dan being the N. city, and Beer-sheba the S. one. Dan was seated at the foot of Mount Hermon, 4 m. W. of Paneas, near one source of the Jordan, on a hill now called Tell-el-Kady. Laish at one time belonged to Sidon, and received the name of Dan from a portion of that tribe who conquered and rebuilt it. It was an idolatrous city even then, and was afterwards the seat of one of the golden calves of Jeroboam. Only slight remains of it now exist.

Dan, *n.* [From Lat. *dominus*.] An appellation of honor formerly used in a sense synonymous with the term *master*; as, "Dan Cupid."

(Mining.) A small truck or sledge used in coal-mining.

Dan, a river of N. Carolina and Virginia, rises in Patrick co. of the latter State, and after a generally S.E. course, turns E., and then crosses and recrosses the boundary of the two States no less than five times; till, finally returning into Virginia, it unites with the Staunton, or Roanoke, in Mecklenburg co. Length, about 200 m.

Dana, FRANCIS, an American jurist, B. 1743, at Charlestown, Mass., graduated at Harvard College in 1762, and was admitted to the bar in 1767. Early in 1775 he sailed for Europe, charged with confidential letters to Dr. Franklin on the critical state of affairs, by the elder Quincy, Warren, and other American patriots. In 1776 he returned, and reported to Gen. Washington, whom he assured that the colonies had nothing to expect from Great Britain. *D.* was now elected by the Massachusetts Assembly a member of the Executive Council, and in 1777 a member of the Congress which formed the Confederation. From that time to the close of the war he occupied various offices of trust, and, in 1781, he was appointed American minister to Russia. After his return, he was again elected a member of Congress, and in 1786 he went as a delegate to the Annapolis convention. In Nov., 1791, he was appointed chief-justice of Mass. for a term of 15 years. After the expiration of this term, he kept almost entirely aloof from politics. During his long public life he was highly esteemed, by his political opponents no less than by his personal and party friends. As a judge, he frowned upon all manner of chicane and low quibbling, and won golden opinions by his strict impartiality, his great learning, and calm dignity. D. 1811.

Dana, JAMES DWIGHT, LL.D., an American naturalist, born at Utica, N. Y., Feb. 12, 1813, graduated at Yale College, 1833, where the elder Silliman had been his teacher of mathematics and natural sciences. After leaving college he was appointed teacher of mathematics to the midshipmen in the U. S. Navy. In this capacity he embarked in the ship-of-the-line Delaware for the Mediterranean. After his return, in 1835, he acted as assistant to Prof. Silliman at Yale College until 1838, when he joined an expedition sent out by the U. S. government for the exploration of the Southern and Pacific oceans. This squadron, under Com. Wilkes, sailed in 1838, returning home in 1842. Mr. *D.* now set to work preparing the various reports of this expedition for publication, not neglecting, in the meantime, other scientific labors. His first publication with regard to the observations he had made in Com. Wilkes' expedition, was a *Report on Zoöphytes* (1846, Washington, 740 pp. 4to, with an atlas), containing a new classification of the whole department of the polyps. Next he issued his *Report on the Geology of the Pacific* (1849, Washington, 756 pp. 4to, with an atlas). Then came a *Report on Crustacea* (1852-4, Washington, 1,620 pp. 4to, with an atlas). In 1845 *D.* married the daughter of his teacher and friend, Professor Silliman, and afterward resided at New Haven. On the resignation of Prof. Silliman, *D.* was appointed professor of natural history and geology in Yale College. Besides the above named reports, he published his *System of Mineralogy*, which first appeared in 1837, and has since gone through several editions being considered a work of authority in both Europe and America. For many years *D.* was the editor of the *American Journal of Science*, and published, in 1862, a *Manual of Geology*, which is one of the most valuable works on the subject. He wrote also *Coral Reefs and Islands*, and was a member of many learned societies in America and Europe. Died April 14, 1895.

Dana, RICHARD HENRY, an American poet and essayist, B. Nov. 15, 1787, at Cambridge, Mass. He was educated at Harvard College, and devoted himself to the study of the law, but soon abandoned this pursuit and applied himself to literature. His first poem was *The Dying Raven*, followed by *The Buccaneer* and other Poems 1827. He also wrote numerous tales and essays, which are characterized by a terse and vigorous style, and sound, practical reflections. D. Feb. 2, 1879.

Dana, JAMES FREEMAN, an American chemist, B. in 1811, 1793. In 1819, he was appointed Professor of Chemistry at Dartmouth Coll., and, in 1825, to a similar position in the New York Coll. of Physicians. He was a thor. (conjointly with his brother, Dr. S. L. Dana) of work on the *Mineralogy and Geology of Boston and its Vicinity*. D. 1827.

Dana, RICHARD HENRY, JR., an American lawyer and a thor. B. at Cambridge, Mass., Aug. 1, 1815, and graduated at Harvard College in 1837. He made a voyage to California, which he has described in his *Two Years before the Mast*. Subsequently he studied law under Judge Story and Prof. Greenleaf, and was admitted to the bar in 1840.

He became one of the most eminent advocates in Boston, and also gained considerable reputation as an author, having published *The Seaman's Friend* (1841), besides various biographical sketches, and contributions to the leading magazines. Died Jan. 7, 1882.

Dana, SAMUEL LUTHER, an American chemist, brother of James Freeman Dana, B. at Amherst, N.H., in 1795. He graduated at Harvard College in 1813. He served as lieutenant in a regiment of U. S. artillery, until the close of the war which then raged between this country and Great Britain. He then studied medicine, and having received his diploma, practised as a physician at Waltham, Mass. He founded the Newton Chemical Company, of which he was the chemist for several years. He assisted his brother in writing *Mineralogy and Geology of Boston and its Vicinity*, and wrote various treatises on chemistry. He is chiefly noted for his discovery of a new process of manufacturing oil of vitriol, and bleaching-salts. D. March 11, 1865.

Dana, in *Massachusetts*, a post-village and township of Worcester co., abt. 65 m. W. of Boston.

Danae, (dā'nai-e.) (*Myth.*) The daughter of Acrisius, king of Argos. She was confined in a brazen tower by her father, to whom it had been predicted by an oracle that he would be slain by his daughter's son. Jupiter, however, introduced himself into the tower in the guise of a golden shower. Perseus was the offspring of their amour; and he, together with his mother, was exposed to the fury of the waves by Acrisius. He was saved, however, and ultimately killed his grandfather by accident.

Danea'ceae, n. pl. (*Bot.*) The Danaeae, an order of plants, alliance *Filicales*. — *Diag.* Ringless, dorsal spore-cases, combined in masses, and splitting irregularly by a central cleft. This order forms the transition between the Acrogens and Rhizogens, having all the habits of dorsiferous ferns, and nearly approaching the Adider's-tongues.

Danaides, (dā-nai'e-dees.) (*Myth.*) The fifty daughters of Danaus, king of Argos. Egyptus, king of Egypt, their uncle, who had fifty sons, desired them to marry their cousins, but the Danaides, warned by an oracle, opposed this marriage. Egyptus sent his sons to Argos, backed by a powerful army, in order to enforce his wishes. Danaus, being too weak to resist, consented to the marriage, but concerted with his daughters that they should kill their husbands on the night of their nuptials. This horrible project was executed, Lynceus alone escaping through the mercy of his bride, Hypermnestra. In order to punish these murderous wives, Jupiter cast them into Tartarus, and condemned them to fill eternally with water a vessel full of holes.

Dana'is, n. (*Zool.*) A genus of lepidopterous insects, family *Nymphalidae*, having the knob of the anteune

goclose in dolomite at Danbury, Connecticut. It may be recognized by its pyrognostic characters.

Dan'bury, in *Connecticut*, a city and semi-capital of Fairfield co., about 18 m. N. N.W. of Bridgeport. It was incorporated in 1696. In 1777 the American commander Gen. Wooster was killed here, and the town burned by the British. Here are 26 extensive hat factories and other industries. Pop. (1897) about 19,000.

Danbury, in *N. Carolina*, a post-village, cap. of Stokes co., about 112 m. W. N.W. of Raleigh.

Danbury, in *New Hampshire*, a post-village and township of Merrimack co., about 39 m. N.W. of Concord. The township is hilly and mountainous.

Danbury, in *Ohio*, a post-village of Ottawa co.

Dan'by, FRANCIS, R.A., an Irish historical painter, born at Wexford, Ireland, 1793. His principal paintings are: *Sunset at Sea after a Storm*; *Delivery of Israel out of Egypt*; *The Holy Family*; *Departure of Ulysses from Ithaca*, &c. Died 1861.

Danby, in *Illinois*, a post-village of Du Page co., about 23 m. W. of Chicago.

Danby, in *Kansas*, a post-office of Ness co.

Danby, in *Michigan*, a post-township of Ionia co.

Dan'by, in *New York*, a post-village and township of Tompkins co., abt. 7 m. S. of Ithaca.

Dan'by, in *Vermont*, a post-village and township of Rutland co., about 70 m. S.S.W. of Montpelier. *Manf.* Carriages, leather, and cheese.

Danby Four Corners, in *Vermont*, a post-office of Rutland co.

Dance, v. n. [*Fr. danser*; *L. Sax. danzen*; *Ger. tanzen*; *Icel. dansa*; *O. Ger. tanz*, a dance; *Heb. datz*, to leap, to skip; *Ch. dutz*, contracted from *danatz*.] To leap or move with measured steps, regulated by a tune sung or played; as, to dance a jig. — To leap, and frisk about; to move nimbly, or up and down; to caper.

"Shadows in the glassy waters dance." — *Byron*.

To dance upon nothing, to undergo the operation of being hanged by a rope.

—v. a. To make to dance: to move up and down, or back and forth; to put into a lively motion; to dandle.

To dance attendance, to wait upon another obsequiously; to attend with servility, in order to ingratiate another's favor.

"Thus dance attendance for a word of audience." — *Dryden*.

—n. A leaping, curvetting, or stepping with motions of the body of the measure of a tune.

"On with the dance! let joy be unconfined." — *Byron*.

—A tune or measure by which dancing is timed and regulated; as, a morris-dance.

Dance of Death. (*Hist.*) See MACABRE DANCE.

Dan'cer, n. One who practises dancing, or is skillful in the performance thereof.

Dan'ceress, n. A female dancer. (Rarely used.)

Dancette, n. (*Her.*) A line of partition, consisting of a zigzag line, the indentations of which are of great size, and limited to three in number, (fig. 768.)

Dan'cing, n. [*Ger. tanzen*.] The art of moving in measured steps, or adapting the movements of the body to the sounds of music. — *Fig. 768.—DANCETTE.*

Among all ancient peoples the dance formed an integral part of their religious ceremonies, and it is still similarly employed by some of the Eastern Christians. The first mention made of *D.* in the Scriptures occurs (*Exod. xv. 20*), where we read that "Miriam the prophetess, the sister of Aaron, took a timbrel in her hand, and all the women went out after her with timbrels and with dances." Among the Hebrews, the performers were usually females, of whom the regular chorus of the Temple seems to have consisted (*Psal. cxlix.*); but occasionally men assisted in the solemn act, as in the well-known instance of David's *D.* before the ark. The sanction given to the practice by this conduct of the Hebrew monarch, no doubt influenced the later Jews to adopt the dance as a fitting close of the joyous occasion of the feast of Tabernacles, when the rulers of the synagogues, the doctors of the schools, and even the members of the Sanhedrim, accompanied the sacred music with their voices, and leaped and danced with torches in their hands for the greater part of the night. When males and females assisted at the same religious ceremony, the ancient Jews did not mingle in the dance, but each sex kept in a separate body. Among the Greeks, dancing was ennobled into an art. Plato ranges the different dances practised into three classes, *military*, *domestic*, and *mediatorial or religious*. The most ancient of the latter was the Bacchic, in honor of Bacchus; the most graceful, that instituted by Theseus, which circled round the altars of Apollo. The Greek religious dance consisted of three parts — the *strophe*, in which the movement was from right to left; the *antistrophe*, which reversed the movement; and the *stationary*, or, properly speaking, grave and slow movement, when they danced in front of the altar. Of their military dances, the Spartan or Pyrrhic was the most celebrated. This dance is supposed to be preserved by the modern Greeks:

"You have the Pyrrhic dance as yet,
Where is the Pyrrhic phalanx gone?

Of two such lessons why forget
The nobler and the manlier one?" — *Byron*.

Among the Romans, and, as they extended their sway, throughout the Roman empire, the dance was a favorite recreation, as well as a religious ceremony; but the better class of Romans, in proportion as it came to be cultivated as a profession, and rose to the height of

pantomimic art, as in the modern opera-ballet, thought it so much beneath their dignity to unbend themselves by its exercise personally, that Cicero remarks, "No one dances unless he is either drunk or mad." It is presumable that it was to honor the condescension of Herodias' daughter Salome, as princess, in dancing before him, that Herod made the fatal vow which cost John the Baptist his life. Throughout the East, *D.* is almost universally restricted to the exhibitions of professional dancers; and European balls in India provoked, until quite recently, the contempt of the natives. But in all other parts of the globe, whether among the inhabitants of the numerous islands which stud the Pacific, the tribes of Africa, or the N. and S. American aborigines, the dance is commonly found as it existed among the ancient Greeks, connected with religion, with war, and with moments of festive exhilaration. At the present day, and among civilized nations in Europe and America, *D.* is a favorite amusement as a social custom and healthful exercise. Almost every country can boast of national dances peculiar to the inhabitants; which are rarely so well performed when adopted by others. Of these, the best known to us are the *tarantella* of the Neapolitans, the *bolero* and *fundango* of the Spaniards, the *mazurka* and *cracovienne* of Poland, the *cosack* of Russia, the *redowa* of Bohemia, the *quadrille* and *cotillon* of France, the *waltz*, *polka*, and *gallopade* of Germany, the *reel* and *sword-dance* of Scotland, the *minuet* and *hornpipe* of England, the *jig* of Ireland, &c. See BALLET.

Dan'cing-ma'nia, n. (*Hist.*) An epidemic disorder among susceptible subjects, in which imitation is brought about under high excitement. It is closely allied to hysteria, and principally occurs among persons who are desirous of notoriety or sympathy. During the Middle Ages, epidemics of this class were common in Germany; and in Italy they were ascribed to the bite of the tarantula spider. Towards the close of the 14th century, a number of men and women appeared at Aix-la-Chapelle, on the festival of St. John, dancing and screaming in a frantic manner in the streets. Many foamed at the mouth, and danced till they fell down insensible; others dashed their brains out against the walls. While dancing, they were unresponsive to outward impressions, but were haunted by visions. The epidemic spread over the Low Countries, and bands of wretched, ignorant people traversed the country, and, excited by wild music, danced themselves into convulsions, singing all the time in derision of the priests. At the beginning of the 17th century, *St. Vitus's dance*, as it was then called, was on the decline, and it is now only heard of in isolated cases. See CHOREA, TARANTISMUS.

Dan'cing-master, n. One who teaches the art of dancing.

Dan'court, FLORENT CARTON, a French actor and dramatic poet, b. 1661, at Fontainebleau. He produced an immense number of plays, and was particularly successful in introducing actual occurrences, which gave to his comic pieces great piquancy. D. 1726.

Dan'cyville, in *Tennessee*, a post-village of Haywood co., about 190 m. W.S.W. of Nashville.

Dan'de, a river of S.W. Africa, which, after a course of 200 m., enters the Atlantic 60 m. N. of the mouth of the Coanza.

Dan'delion, n. [*Fr. dent de lion*.] (*Bot.*) See TARRAXACUM.

Dan'der, n. [*From dandruff*.] The dandruff or scurf on the human head. — Anger; excitement; passion; irritation.

To raise one's dander, to excite or put into a burst of anger or passion. (Vulgar.)

—v. n. To mumble; to speak or act without method or coherence.

Dan'dify, v. a. [*Dandy*, and *Lat. facio*, to make.] To make or form like a dandy; as, a dandified fellow.

Dan'diprat, n. [*From dandy*, and *sprat*, a small fish; anything small of its kind.] A little, conceited fellow; an urchin; — used sometimes in fondness, and at other times in contempt.

Dan'dle, v. a. [*Ger. ländeln*, from *tand*, a toy or trifle; *L. Sax. lantern*; *It. dandolare*, to swing, to shake or toss to and fro, from *dandola*, a toy, a plaything.] To toss, shake, or jolt on the knee; to move up and down in the hand; to fondle; as, to dandle a baby.

"Kiss'd and dandled on thy father's knee." — *Donne*.

—To treat as a child; to toy, play, or trifle with.

Dan'dler, n. One who dandles or plays with young children.

Dan'dolo, a patrician family of Venice, which traced its origin to the Roman aera. Its most celebrated members are:

D., ENRICO, Doge of Venice, to which high office he was chosen in 1192, when in his 87th year. He carried on the war with the Pisans, and closed it by an advantageous peace. In 1201 the Crusaders applied to him for assistance, and on their promise to reduce the town of Zara, which had revolted, he agreed to help them. He accordingly undertook with them, in 1203, the siege of Constantinople, at which he greatly distinguished himself, and was the first who leaped on shore. It is said that *D.* had the offer of the imperial crown, and refused it. He was created despot of Romania, and b. 1205, at the age of 97.

D., GIOVANNI, Doge from 1280 to 1289, distinguished by a long war against the patriarch of Aquila.

D., FRANCESCO, Doge from 1323 to 1339, surnamed *The Dog*, for having humbled the republic to Pope Clement V.

D., ANDREA, Doge from 1342 to 1354; he sustained a long war against Hungary, and wrote the *Chronicles of Venice*.

Fig. 767.—ARCHIPPUS BUTTERFLY.

(*D. erippus*.)

long and curved. The Archippus butterfly (*D. erippus*) expands from 3 to 4 inches; the wings are tawny-orange above, nankeen-yellow beneath; veins black, and have black border, spotted with white. It flies in the latter part of summer. The caterpillar lives upon the flk-weed.

Dana'ite, n. (*Min.*) Same as ARSENOPIRYTE (*q. v.*). **Danakil** (da'na-kil), a country lying in the N. E. part of Africa, and stretching along the W. coast of the Red Sea, between 12° and 15° N. Lat. and 40° and 43° E. Lon. The country is very fertile and inhabited by roving Kabyles and other Mohammedan tribes. Pop. unknown.

Dan'aus (dā'n'a-us), son of Belus, governed, together with his brother Egyptus, in Lower Egypt; but having tempted the life of his brother, he fled, and arrived at Argos about 1570 B. C. Here he usurped the throne of Peloponnesus. (According to others, Gelanor abdicated in his favor.) Fable gave to Danaus 50 daughters. (See DANAIDES.) His son-in-law Lynceus succeeded him.

Dan'borough, or DANVILLE, in *Pennsylvania*, a post-village of Bucks co., about 4 m. N. of Doylestown.

Dan'burgh, in *Georgia*, a post-village of Wilkes co., 5 m. N. E. of Milledgeville.

Dan'bite, n. (*Min.*) A triclinic mineral. Angles approximate; crystals imbedded, and often an inch long. Color pale yellow, whitish; luster vitreous, but rather weak. Translucent to subtranslucent. Very brittle. *Sp. gr.*, 2.05. Occurs with orthoclase and oli-

D. VINCENZO, a Venetian chemist, descended from Henrico D., b. 1758. At all times zealous for the independence of Italy, he became a member of the council of the Cisalpine republic, after the treaty of Campo Formio. D. 1819. Among his works are, *Fondamenti della Scienza, Fisico-Chemica*, &c.

Dandridge, in Tennessee, a post-village, cap. of Jefferson co., on French Broad River, about 30 m. E. of Knoxville.

Dan'driff, Dan'druff, *n.* [A. S. *tan*, a sprout, a shoot, a tetter; Goth. *tains*, a twig, a sprout, and A. S. *drof*, dirty, filthy.] (*Med.*) See PITYRIASIS.

Dan'dy, *n.* [Fr. *dandin*; probably allied to *dandle*; It. *dandola*, a toy, a plaything.] A fop; a coxcomb; a beau; an exquisite; one who affects a special characteristic of dress or manner.

"Each out-at-elbow peer, or desperate dandy."—Byron.

Dan'dy, Dan'dy-roller, *n.* A machine used in the fabrication of paper.

Dan'dy-cock, Dan'dy-hen, *n.* A fowl of the bantam kind, male and female respectively.

Dan'dyish, *a.* Like a dandy; becoming a dandy; after the manner of a dandy; as, a *dandyish* air.

Dan'dyism, *n.* Poppishness; manners, dress, or style of a dandy; fastidiousness in costume.

Dan'dyize, *v. a.* To make into a dandy; to dandify; to invest with the appearance and character of a fop.

Dan'dyling, *n.* A make-believe dandy; a fopling.

Dane, *n.* (*Geog.*) A native or naturalized citizen of Denmark.—a Northman.

Dane, in Wisconsin, a S. central co.; area, abt. 1,235 sq. m. The Wisconsin River washes part of its N.W. border, and it is intersected by the Catfish and Sugar rivers. The surface is undulating and hilly; soil fertile. Cap. Madison.

—A post-township of the above co., abt. 15 m. N.N.W. of Madison.

Dane'brog, *n.* (*Her.*) See DANNEBROG.

Dane'gelt, *n.* [A. S. *dane-geld*.] (*Eng. Hist.*) A tribute exacted by the Danes in their invasions of England. It was first paid by Ethelred II., 991. The last recorded payment of D. took place in 1175.

Danemo'ra, in New York, a township of Clinton co., abt. 10 m. W. by N. of Plattsburg;—more commonly written DANEMORA, *q. v.*

Danemo'ra, in Ohio, a village of Darke co., abt. 110 m. W.N.W. of Columbus.

Dane'wort, *n.* (*Bot.*) See SAMBUCUS.

Dan'forth, in Illinois, a village of Tazewell co., on the Mackinaw River, abt. 21 m. S. by E. of Peoria.

Dan'forth, in Iowa, a post-office of Johnson co.

Dan'forth, in Maine, a township in Washington co., 88 m. N.E. of Bangor.

Dan'forth Station, in Illinois, a post-office of Iroquois co.

Dangean, PHILIPPE DE COURCHON, MARQUIS DE, (*dan'-zho*), b. in 1638. He was a favorite courtier of Louis XIV., whom he accompanied in all his campaigns as aide-de-camp. He wrote a *Journal de la Cour de Louis XIV.*, a very curious work, which faithfully portrays the manners and morals of that monarch's court. D. 1720.

Danger, (*dän'jér*), *n.* [Fr., from Lat. *damnum*, hurt, harm, damage, and *gero*, *germo*, to bear, to bring.] Exposure to injury; peril; jeopardy; risk; hazard; insecurity; loss, pain, or other evil.

"She loved me for the dangers I had passed."—Shaks.

—Extent or duration of power to injure, hazard, or jeopardize.

"Till danger's troubled night depart."—Campbell.

—*v. a.* To endanger; to imperil; to put to hazard. (*R.*)

Dan'gerfield, or DAIN'GERFIELD, in Texas, a post-village, cap. of Morris co., 30 m. W.N.W. of Jefferson.

Dan'gerfully, *adv.* In a manner calculated to produce danger; dangerously.

Dan'gerless, *a.* Without risk or hazard; exempt from danger. (*R.*)

Dan'gerous, *a.* Full of danger, risk, or jeopardy; hazardous; perilous; insecure.

"All delays are dangerous in war."—Dryden.

—Threatening or foreboding danger.

Dan'gerous Islands, a group in the Pacific, comprising Hays, Resolution, Palliser, and other islands; Lat. 21° S., Lon. 140° W.

Dan'gerously, *adv.* With danger; with exposure to injury or ruin; hazardingly; perilously; as, to be *dangerously* sick.

Dan'gerousness, *n.* State of, or liability to be exposed to, hazard, danger, risk, or peril.

"Judging of the dangerousness of diseases by the nohleness of the part affected."—Boyle.

Dangle, (*däng'gl*), *v. n.* [Icel. and Sw.-Goth. *dingla*; Dan. *dingler*.] To hang and swing; to hang on any one; to follow about officiously;—preceding *on*, *after*, or *about*; as, to *dangle* after women.

"The sword hung dangling o'er the shield."—Prior.

—*v. a.* To carry suspended loosely; as, to *dangle* the body.

Dan'gler, *n.* One who dangles; a man who hangs about or follows women.

"A dangler is of neither sex."—Ralph.

Dan'jean, *n.* See PHILIPOR.

Daniel, (*dän'yel*), called *Belteshazzar* by the Chaldeans, a prophet descended from the royal family of David, who was carried captive to Babylon, when very young, in the 4th year of Jehoiakim, king of Judah, b.c. 606. He was chosen, with his three companions, Hananiah, Mishael, and Azariah, to reside at Nebuchadnezzar's court, where he received a suitable education, and made great progress in all the sciences of the Chal-

deans. At the end of their three years' education, D. and his companions excelled all others, and received honorable appointments in the royal service. Here D. soon displayed his prophetic gifts in interpreting the dream of Nebuchadnezzar, by whom he was made governor of Babylon, and head of the learned and priestly class. He seems to have been absent, perhaps on some foreign embassy, when his three companions were cast into the fiery furnace. At a later period he interpreted another dream of Nebuchadnezzar, and afterwards the celebrated vision of Belshazzar—one of whose last works was to promote D. to an office much higher than he had previously held during his reign. After the capture of Babylon by the Medes and Persians, under Cyaxares and Cyrus, D. was continued in all his high employments, and enjoyed the favor of these princes until his death, except at one short interval, when the envy of the other officers prevailed on the king to cast him into the lions' den, an act which recoiled on his foes to their own destruction. During this period he earnestly labored, by fasting and prayer as well as by counsel, to secure the return of the Jews to their own land, the promised time having come. (*Dan.* 9.) He lived to see the decree issued, and many of his people restored; but it is not known that he ever revisited Jerusalem. His prophecies are written partly in Hebrew and partly in Chaldee. They form the 27th in order of the books of the Old Testament. This book, which bears his name, is partly historical and partly prophetic. The first six chapters are historical, and speak of D. in the third person; the last six contain visions, which D. relates in the first person. In the first six chapters we have recorded a variety of events which occurred in the reigns of Nebuchadnezzar, Belshazzar, and Darius; and, in particular, the second chapter contains Nebuchadnezzar's prophetic dream concerning the four great successive monarchies, and the everlasting kingdom of the Messiah, which dream God enabled D. to interpret. In the last six chapters we have a series of prophecies, revealed at different times, and extending from the days of D. to the general resurrection. The Assyrian, the Persian, the Grecian, and the Roman empires, are all particularly described under appropriate characters; and it is expressly declared that the last of them was to be divided into ten lesser kingdoms; the time at which Christ was to appear is precisely fixed; the rise and fall of Antichrist, and the duration of his power, are exactly determined; and the future restoration of the Jews, the victory of Christ over all his enemies, and the universal prevalence of true religion, are distinctly foretold as being to precede the consummation of all things. The book abounds with the most exalted sentiments of piety and devout gratitude; its style is simple, clear, and concise; and many of its prophecies are delivered in terms so plain and circumstantial, that many have been led to deny their authenticity, and to maintain they were written after the events had taken place. Porphyry, who lived in the 3d century, affirmed that the book was composed as recently as the time of Antiochus Epiphanes, and that therefore it narrated only past events; and he has had many followers in more recent times, and even at the present day. The arguments, however, advanced against the authenticity or genuineness of the book are too frivolous to prevail against the testimony of Christ himself, when he says, "When ye, therefore, shall see the abomination of desolation, spoken of by Daniel the prophet, stand in the holy place," &c. (*Matt.* xxiv. 15.)

Daniel, the 2d son of David, (also called *Chileab*), a descendant of Ithamar, the 4th son of Aaron, was one of the chiefs who accompanied Ezra from Babylon to Judea.

Daniel, (GABRIEL), a French Jesuit, author of a *History of France*; and a *Voyage to the World of Descartes*, a severe satire on the system of that philosopher. B. 1649; d. 1728.

Dan'iel, JOHN FREDERICK, a celebrated English chemist and meteorologist, b. in London, 1790. He was the author of *Meteorological Essays*, *Essay on Artificial Climates*, and an *Introduction to Chemical Philosophy*, and, also, the inventor of the hydrometer and the pyrometer. D. 1845.

Dan'iel, (*Port.*) a small bay of Lower Canada, on the S. side of the dist. of Gaspé, near the entrance to Chaleur Bay.

Dan'ielsonville. See WEST KILLINGLY.

Dan'ielsonville, in Georgia, a post-village, cap. of Madison co., about 87 m. N. of Milledgeville.

Dan'ielsonville, in Pennsylvania, a post-office of Northampton co.

Dan'ielsonville, in Virginia, a village of Spottsylvania co., about 90 m. N. of Richmond.

Dan'ish, *a.* (*Geog.*) Pertaining or relating to Denmark, or to its people the Danes, or their language.

Danish Language and Literature. The D. L. is the most changed of the languages derived from the old Norse; the Swedish and Norwegian being less so, and the Icelandic least of all. The political union of the Danes with the Anglo-Saxons under Canute the Great, and the intercourse between the two nations that resulted therefrom, had a considerable influence upon the D. language to which the other branches of the old Norse tongues were not subjected. Much more important and considerable was the influence exerted upon it at a later period from contact with the Germans. The Reformation introduced another era in the history of the D. language; and the translation of the Bible into it gave it a fixed character, and raised it to the rank of a written tongue. As in Germany, so also in Denmark, a rage for everything French prevailed for a time, and many Gallic terms were introduced. A reac-

tion, however, took place in the latter half of the 18th cent.; and since the beginning of the 19th, much has been done to restore and maintain the purity of the D. tongue, by the establishing of a taste for Old Norse studies, and by the writings of such men as Baggesen, Ehlerschläger, Grundtvig, and others. Since the union of Norway with Denmark, towards the end of the 14th cent., the D. has been the literary language of Norway and it is also the language of the educated classes, as well as that generally spoken in the towns. The modern D. is one of the softest languages now spoken in Europe. When a foreigner hears it spoken for the first time, he hardly perceives any sounds in it except the vocalic, the consonants being so much softened in pronunciation that they scarcely appear. The vocalic system is hence very perfect; and philologists have distinguished ten vowels, the sounds of which are all quite distinct. The inflections are few and simple, and the language is one that may be easily mastered. Although Denmark can scarcely be said to have possessed an national literature, properly so called, prior to the 18th cent., yet its origin may be carried back to the time of the Reformation. The oldest remains of the D. language do not ascend higher than the 12th cent., and consist of laws of the early kings; as the *Slaanske Lov* the *Sjellandske Lov*, &c. To the 12th cent. belong the works of the historians Saxo Grammaticus, and Sven Aagesen, which, however, are in Latin. In the 13th cent. we meet with what seems to be the oldest of the D. heroic songs, or *Kjæmperiser*, and which are still more numerous in the 14th, (collected by Nyerup, Abrahamson, and Rabhek, 5 vols., Copenhagen, 1810-14, supplement by Rasmussen and Nyerup, 2 vols., 1821.) Like the German, the D. owes its character as a written language to the Reformation. The greatest writer of this period in Denmark, and in a certain sense the founder of the modern D. literature, was Christen Pedersen (1480-1554), who, besides a number of other works, had a principal hand in the translation of the Bible. The literature which thus received a stimulus from the Reformation at first specially took a direction towards history, as well as to investigations connected with northern antiquities. There appeared in the 16th and 17th cents. not only a number of works of the first importance on the history of the country, both in D. and Latin, but there were begun, even in the 16th cent. investigations into the northern antiquities, which have been so successfully followed up by Ivaldersen, Olavsen, Magnussen, Rask, Rafor, Müller, Thomsen, Peterse, and others. The period of D. poetry may be said to have commenced immediately after the Reformation. At first the subjects were generally of a sacred nature, as we see in the works of Raach, E. Pontoppidan, and others. Arreboë, who was the first of their epic poet describes, in his great work, the *Hexameron*, the events of the first six days of creation. D. poetry reached its first culmination during the time of the lyric poet Thomas Kings (1634-1723), and his contemporary, Jørgen Sorterup. A new epoch commenced with the genial and versatile Ludwig von Holberg, the creator of the D. stage. He, in the first half of the 18th century, and Ewald in the second, are considered to mark the golden age of D. literature. The first truly national tragedy was Ewald's *Rolf Krage*; and beside him, as dramatists, stand Samsøe, Sander, and Thaarup. Among the other poets belonging to this period, are Jens Baggesen, Tullin, Falster, Friman, Brunn, Zetlitz, the brother Trojel, Pram, and others. A new impulse was given to poetic literature by Ehlerschläger (1779-1851), who had as contemporaries in the same field, Stoffel Ingeman, Grundtvig, Heiberg, Overskou, and others. Among the most recent poets are Herz, Blicher, Hol Rosenhof, Wintler, Von Houch, P. L. Möller, and Mebech. In the region of history are the names of P. Müller, N. M. Petersen, H. Englestoft, J. Möller, Mebech, Werlauff, Knudson, Estrup, and Worsaae; while important historical works have also been produced by G. L. Bader, F. L. John, L. C. Müller, R. Allen, Nathansen, and Wegner. As publicists are distinguished Dircknick-Holmfeldt, and Oswald; as statisticians, Baggesen, Bergsøe, Nathansen, Ruff, and Ansen. The services rendered by Schouw to physical geography, as by Ersted to physics and chemistry, are well known and acknowledged far beyond the limits of their native country. Among the theologians are Martensen, Mynt Clausen, Nielsen, and Scharling; and among jurists, S. Ersted, and Algreen-Ussing, occupy a front rank as a philologist and critic, Madvig has made himself European reputation; while Westergaard, from his knowledge of the languages of India and Persia, at Brondsted and Petersen, from their knowledge of classical antiquity, have rendered good service to learning. The works of Thorwaldsen, presented by the artist to his countrymen, have created a taste for sculpture and the fine arts generally among them, and given new direction to their mental culture.—Modern Danish literature of the lighter class has been especially enriched by the many admirable novels of Hans Christian Andersen (*q. v.*), whose works are held in high estimation in this country. In 1869 was published, at Oxford the first part of a very valuable Icelandic-English dictionary, compiled by Richard Cleasby.

Dan'ish Waltz, *n.* (*Dancing*.) A waltz, borrowed from the Danes, now much in vogue in the U. States. It consists of three movements: the first two are alike being four steps forward, and a light *glissade* back; the third movement consists of a gallop to the end of the strain, and so on.

Dank, *a.* [From Ger. *tncken*.] Damp; humid; moist; wet.

—*n.* Water; in contradistinction to dry ground. (*R.*)

Dante Alighieri

1265-1321

ankali, (*dan'ka-le*), an independent state of Africa, bounded by the Red Sea on the N.E., and on the S.W. by a range of mountains. It is 250 miles long, by 56 broad, excessively hot, unfertile, ill-watered, and inhabited by a treacherous race of a barbarous disposition. Estimated pop. 70,000.

ank'ish, *a.* Somewhat dank; humid.

ank'ishness, *n.* Dankness; dampness.

an'nebrog, **Dan'ebrog**, *n.* (*Hist.*) A Danish order of knighthood, founded by Waldemar II., 1219, in commemoration of a miraculous standard which descended from heaven and rallied his troops when they were on the point of fleeing before the Livonian pagans. In the 15th cent., the order fell into decay, but it was revived by Christian V. in 1671, and received new statutes in 1793. The constitution of the order was extended by Frederick VI., who issued letters-patent to that effect in 1803.

annecker, JOHANN HEINRICH VON, (*dän'nek-ker*), a celebrated German sculptor, b. at Waldenbach, near Stuttgart, 1758. He was a pupil, first of Pajou, and then of Canova, and spent several years in Italy. His most celebrated works are: a colossal statue of Schiller; a monument to Count Zeppelin; *Sappho*; *Ariadne*; *Christ*, &c. D. in 1841.

annemo'ra, in *New York*, a village and township of Clinton co., about 14 m. W. by N. of Plattsburg. A state prison is located here.

an'memorie, *n.* (*Mn.*) A yellowish-brown to greenish-gray variety of AMPHIBOLE, *q. v.*

an'newerk, **Dan'newirke**, or **Dan'ewirke**, the name of a strong wall or bulwark, built in the 9th century to protect S. Jütland in Denmark, and strengthened in 937 by the Queen-consort Thyra. Here, in 1848, Prussian force under Wrangel, 30,000 strong, defeated 0,000 Danes after a battle of 8 hours duration. In the Schleswig-Holstein war of 1864 the Danes were forced to abandon the D. to the allied Austrian and Prussian troops.

an'nock, *n.* An oat-cake. See **BANNOCK**.

in England, a thick, heavy, leathern glove, worn by a man employed in hedging, ditching, fencing, &c.

an's Fork, in *Missouri*. See **BLACK RIVER**.

an'sker, *n.* [*Dan.*] A Dane.

an'sville, in *Michigan*, a post-village of Ingham co., in *New York*, a thriving town of Livingston co., in the grape region. Has important manufactures and a large trade. Pop. (1897) about 4,000.

an'sville, in *New York*, a township of Steuben co.

an'tan, JEAN PIERRE, a French sculptor, b. in Paris, 800. He has produced many works of importance, but is chiefly celebrated for his statuettes, styled *charges*, in which any peculiarity in physiognomy or form is exaggerated; not to such a degree as to destroy the likeness, but to render it more striking. D. 1869.

ante, [*Contracted from DURANTE*], ALIGHIERI, (*dan'-u*), the foremost among Italian poets, and one of the reatest that the world has ever produced. B. in May, 255, at Florence. His father, a jurist, died early, and he duty of educating the young boy devolved upon the mother, who was greatly assisted in this task by Brunetto Latini, the distinguished statesman, poet, and scholar. His first education he received at Florence, but he subsequently completed his studies at the universities of Bologna and Padua. At a later period, while in Paris, he applied himself to the study of theology, but his studies did not prevent him from serving his country in her hour of need, for he fought in the victorious battle of Campaldino against the Aretines (1299), and took an active part in storming the fortress of

erty confiscated. D. shared their fate and left his native city, never to return. For many years he was doomed to bear the sorrows and hardships of an exile. In 1304 he left Verona, and went to Paris. When the Emperor Henry VII. invaded Italy, D. returned to Verona, and employed his powerful pen to further the imperial cause. It was probably at this time (1310) that he wrote the work *De Monarchia*. The fruitless siege of Florence, and the sudden death of the Emperor (1313) demolished his last hope, and he spent the remaining years of his life under the kind protection of Guido Novello da Volenta, in the city of Ravenna, where he d. Sept. 14, 1321. Many cities of Northern and central Italy claim the honor of having harbored D. within their walls. His remains were buried in a chapel of the *Frati Minori*, in Ravenna. They were, however, subsequently removed, and in 1865 were discovered in the Braccioforte Sepulchral Chapel of the same city. In 1830 only, a marble cenotaph was consecrated to his memory in the church of Santa Croce at Florence; and thus his native city rendered tardy justice to the manes of her greatest son. When about 9 years old, D. beheld, for the first time, Beatrice Portinari, then 8 years of age, and the love then evoked in the heart of the tender boy remained forever the inspiration of his life. How pure and chaste this passion was, may be seen from the poet's first work, *Vita Nuova*, which consists of a collection of poems referring to his early love; each of these poems is accompanied by a history of its origin, and an accurate analysis. Beatrice was married to the cavaliere Simone de Bardi, but died at an early age. A few years after her death, D. married the daughter of an old and noble family, by whom he had six or seven children. In his work *De Monarchia* he advocated the supremacy of the emperor in temporal, and that of the Pope in spiritual affairs. He wrote several other works in Latin, besides many canzones, sonnets, and lyrics in Italian; most of the latter were collected in his *Convito*. But his greatest work—one of the most sublime productions which has ever emanated from the genius of man—is *La Divina Commedia*, a poem of world-wide fame, written while D. was a poor, wandering exile. It consists of three distinct poems, or acts: *Inferno* (Hell), the *Purgatorio* (Purgatory), and the *Paradiso* (Heaven). The poet, describing the fate of departed souls, places in hell and purgatory all those who were remarkable, either for their crimes or vices (especially those who were the authors of his misfortunes), and in paradise those who had done good and noble deeds on earth. In company with Virgil, the representative of human reason, he descends to the infernal regions, and there describes, in sublime verse, the various punishments of sinners; whilst in company of his lost love, Beatrice, the representative of revelation, and finally with St. Bernard, he views the glory of the celestial paradise. *La Commedia* was the first poem ever written in the Italian language; prior to it, all books were composed in Latin. This great work has found in every country a host of translators and commentators. The best English translations of the complete poem are those of Cary, and of Longfellow. The translation of the *Inferno* by T. W. Parsons, is both faithful and elegant.

Dan'ton, GEORGES JACQUES, a French revolutionist, b. at Arcis-sur-Aube, 1759. He was an advocate by profession, but became one of the most active among the demagogues of the revolutionary period. After the imprisonment of Louis XVI. at Varennes, he took the lead in the meeting of Champ-de-Mars, which paved the way to the dethronement of the king; and ended in those scenes of blood and cruelty that have forever rendered execrable the name of Jacobin. Well qualified for the position he assumed, by his colossal figure, stentorian voice, and fierce demeanor, he became one of the executive council, and prepared measures for the defence of the capital when it was threatened by the Prussian invaders under the Duke of Brunswick. He was afterwards a member of the Convention and of the Committee of Public Safety, and was a chief promoter of all the sanguinary acts of that terrible period. At length a struggle for supremacy took place between him and Robespierre, in which the latter was successful, when D. was sent to the guillotine, 1794.

Dantzic, **DANZIG**, or **DANTZIC**, (*dan'zig*), a government in the prov. of W. Prussia, bounded in the N. by the Baltic, S. by Marienwerder, E. by Königsberg, and W. by Küstrin. Area, 2436 sq. m. Pop. 515,222, mostly Protestants. — *See* **PRUSSIA**.

DANTZIG, a prosperous city and seaport of Prussia, and cap. of the above govt., situate on the Vistula, about 4 m. from its mouth, in 54° 21' N. Lat., and 18° 39' E. Lon. The city is traversed by 2 small rivers, the Radaune and the Mottlau, which unite a little below it, and fall into the Vistula. Both the town and the harbor are strongly fortified. The principal public buildings are the cathedral (one of the finest in Germany), the exchange, two city-halls, the arsenal, a museum, and an observatory; besides many churches, charitable institutions, and monasteries. *Manuf.* Silks, jewelry, fire-arms, liquors, chemicals, sugar, tobacco. *Exp.* Grain, flour, biscuit, timber, flax, hemp, spirits, leather, tallow, wax, potash, wool, &c. *Imp.* Woollen and silk stuffs, colonial produce, and manufactured goods. *Hist.* The city is very ancient, having been the cap. of Pomerania in the 10th century. In 1295 it passed with that prov. into the possession of Poland, but was ceded, in 1308, to the Teutonic Knights, who held it till 1454, when it was re-united with Poland. From 1560 to 1641 it was one of the chief towns of the Hanseatic League. In 1734 it was occupied by the Prussians, and taken by the French in 1807, but reverted to Prussia in 1814. D. is the birth-place of

Fahrenheit. It is connected by railroads with Berlin and Königsberg. Pop. (1895) 121,883.

Dant'zig, **Gulf of**, an inlet of the Baltic Sea, 60 m. wide at the entrance. On it are the towns of Hela, Pila, and Putzig.

Dan'ube, [*Anc. Danubius, and Ister; Ger. Donau; Hung. Duna.*] A celebrated river of central Europe, and, next to the Volga, the largest of that continent; extending W. to E. between Lon. 8° 10' and 29° 40' E. (its extreme N. point of Lat. being 48° 2', and its S. limit 43° 38' N.), from its rise in the Black Forest, in Baden, in a course of from 1,750 to 1,800 m. to its embouchure on the W. coast of the Euxine, or Black Sea, where it forms a delta of several mouths. After traversing Würtemberg, Bavaria, Austria, Hungary, Wallachia, Moldavia, Roumania, and Bulgaria, — a course of more than 2,400 m. — it enters the Black Sea by several mouths, the principal of which are the Sulina, the Kilia, and the St. George. The principal cities on its banks are: Sigmaringen, Ulm (here the river becomes navigable), Ratisbon, Passau, Linz, Vienna, Presburg, Gran, Pesth, Buda, Peterwardein, Belgrade, Nicopolis, Ismail, and Galatz. Its principal tributaries are, 1. on the right: the Iller, Lech, Inn, Enns, Leitha, Raab, Drave, Save, Morava, Isker; 2. on the left: the Brenz, Wernitz, Altmühl, Nab, Regen, Ilz, Morava (the second river of that name), Gran, Theiss, Aluta, Sereth, and Pruth. The D. formed for a long period the boundary of the Roman Empire. From Hungary upward its banks are bordered with immense marshes, and navigation becomes very difficult. Serious obstructions to navigation long existed at the point known as the Iron Gate, but the dangerous rapids here have been avoided by a lateral canal, opened to traffic in 1896.

Danube, (*Circle of the*), one of the 4 circles, or provinces, into which the kingdom of Würtemberg is divided, watered by the Danube, and by some of its tributaries. Area, 2,606 sq. m. Cap. Ulm. Pop. 427,280.

Dann'bian, *n.* (*Geog.*) Pertaining, or belonging, to the neighborhood of the river Danube.

Dann'bian Principalities, a name given to the provinces of Moldavia and Wallachia, in S.E. Europe. *United area*, 44,500 sq. m. *United pop.* 4,605,510. (See **MOLDAVIA**, and **WALLACHIA**.) — These provs. were, in 1853, invaded by the Russians. The Czar, who hitherto, conjointly with the Sultan of Turkey, had the power of appointing the hospodars, then took upon himself to appoint a governor for both provs. This assumption of sovereign powers, together with the occupation of the principalities by a Russian army, led to the Crimean war, in which France, England, Italy, and Turkey united against Russia. By the treaty of Paris, 1856, the D. P. were placed under the sole suzerainty of the Porte. In 1861 the D. P. united themselves under the name of *Roumania*, and their prince, Charles I., was acknowledged by Turkey in 1866.

Dan'vers, in *Illinois*, a twp. of McLean co.

Dan'vers, in *Massachusetts*, a town and township of Essex co., about 18 m. N. by E. of Boston. The State Insane Asylum, located here, cost nearly \$2,000,000. It has extensive manufactures of shoes, leather and bricks. D. formed a part of Salem until 1756. Pop. (1897) about 7,500.

Dan'vers, in *Massachusetts*, a post-office of Essex co.

Dan'ville, a village of Lower Canada, co. of Sherbrooke, about 9 miles south of Richmond.

Danville, in *Alabama*, a township of Morgan co.

Danville, in *Arkansas*, a village of Pope co.

—A post-village, cap. of Yell co., on the Petit Jean River, about 80 miles W. N. W. of Little Rock.

Danville, in *California*, a post-village of Contra Costa co., about 16 miles south of Martinez.

Danville, in *Georgia*, a township of Twiggs co., on Flint River, about 75 miles southeast of Columbus.

Danville, in *Illinois*, a city and R. R. center, cap. of Vermillion co., on Vermillion River, 125 miles east of Springfield. Here are car-shops, numerous factories, and several coal mines. Pop. (1897) about 12,500.

Danville, in *Indiana*, a town, cap. of Hendricks co., about 20 m. W. of Indianapolis. Pop. (1897) abt. 2,600.

Danville, in *Iowa*, a post-village and township of Des Moines co., about 13 m. W. N. W. of Burlington. Considerable cheese is made here.

Danville, in *Kentucky*, a post-town, cap. of Boyle co., about 42 miles south of Frankfort. It is the seat of Center College, and of the State Deaf and Dumb Asylum. *Manuf.* Carriages, brick, &c.

Danville, in *Maine*, a post-village and township of Androscoggin co.

Danville, in *Minnesota*, a post-vill. of Blue Earth co.

Danville, in *Mississippi*, a post-village of Alcorn co., about 7 miles south of Corinth.

Danville, in *Missouri*, a township, cap. of Montgomery co., about 50 miles E.N.E. of Jefferson City.

Danville, in *New Hampshire*, a post-township of Rockingham co., about 30 miles S. S. E. of Concord. *Manuf.* Lumber, &c.

Danville, in *New Jersey*, a post-village of Warren co., about 12 miles northeast of Belvidere.

Danville, in *Ohio*, a village of Highland co., about 7 miles southwest of Hillsborough.

—A post-village of Knox co., about 60 miles northeast of Columbus.

—A village of Madison co., some miles south of London.

Danville, in *Pennsylvania*, cap. of Montour co., on the Susquehanna River. The iron works here were the earliest, and are among the most extensive, in the country. D. was first settled in 1768.

Danville, in *Tennessee*, a post-office of Houston co.

Danville, in *Texas*, a township of Montgomery co., about 15 miles north of Montgomery.

(From the famous picture by Giotto.)

prona (1290). Having been twice entrusted with an embassy, he was chosen one of the *priori*, or chief-magistrates of Florence, in 1300, when the struggle between the Guelphs and the Ghibellines was at its height. D. espoused the cause of the Guelphs, or Imperialists, who, being the weakest numerically, were overcome in the struggle by the Ghibellines, or adherents of the Pope. The Guelphic leaders were banished and their prop-

Danville, in *Vt.*, a town and twp. of Caledonia co., abt. 20 m. E. N. E. of Montpelier. *Manuf.* woolen goods. — In *Va.*, a fine city and railroad center of Pittsylvania co., on the Dan R., 236 m. S. S. W. of Washington, D. C. Has immense tobacco and cigarette factories and leaf-handling establishments, and does a very large trade in tobacco products. *Pop.* (1897) about 12,500.

Daondnagar (*da-oud-na-gur'*), a town of Hindostan, in Behar, 90 m. from Benares. *Manuf.* woollen and cotton goods. *Pop.* (1895) 9,980.

Daon'ria, a country of Asia, partly in the Russian govt. of Irkutsk, and partly belonging to the Chinese territory of Mantchouria. Its limits are not exactly defined. The Daourian Mountains, offsets of the Yablonoi chain, traverse it from N.E. to S.W., and separate it from the region of Lake Baikal.

Daphne, (*dä'fne*). [*Gr.*] (*Myth.*) A nymph beloved by Apollo. To escape his pursuit, she besought the aid of the Earth, which opened to receive her; and a laurel, called after her name, grew up on the spot. The name is identified with the Sanskrit *Dahanâ*, the Dawn.

Daphne, *n.* [*Gr.*, the laurel.] (*Bot.*) A gen. of plants, order *Thymelacææ*. The species are mostly shrubby evergreens of great beauty, with leaves of a peculiar velvet texture, and very fragrant flowers. The root-bark of *D. Mezereum*, the Mezereon, or Spurge-olive, is official in the British pharmacopœia. It may be used as a vesicatory, and as a masticatory in tooth-ache; but it is principally employed as a stimulant, diaphoretic, alterative, and diuretic. It owes its properties to an acrid resin and an acrid volatile oil. The stem-bark has similar virtues, but is generally considered to be less active. The fruit is acrid and poisonous. The bark of *D. laureola*, the Spurge-laurel, is sometimes substituted for the official bark. The inner barks of *D. canabina* and other species are used in some parts of the world for making paper.

Daphnia, *n.* (*Zoöl.*) A genus of molluscs, belonging to the order *Brachiopoda*. The most common species and type of this genus, *Monoculus Pulex* of Linnæus (fig.

Fig. 770. — DAPHNE MEZEREON.

Fig. 771. — DAPHNIA.

771), is a favorite and interesting microscopic object. — See BRACHIPODA.

Daphnine, *n.* (*Chem.*) A crystalline non-azotized substance found in the bark of certain species of *Daphne*. It is bitter, astringent, and slightly acid. When heated, it yields a crystalline product, *Daphnetine*.

Daphnis, (*dä'fnts*). (*Myth.*) A Sicilian shepherd, the son of Mercury and of a nymph, and the inventor of bucolic poetry, was instructed in music by Pan.

Daphnomancy, *n.* [*Gr.* *daphnê*, laurel, and *manteia*, divination.] Divination by the laurel; — practised by the ancients.

Dap'ifer, *n.* [*L. Lat.*] Formerly, in royal households, an officer who carried meat to the chief table.

Dap'per, *a.* [*Ger.* *tapper*; *D. dapper*, brave, valiant, strenuous; Slav. *dobry*, good.] Little and active; neat; lively; smug; as, a dapper young fellow.

"The pert fairies and the dapper elves." — Milton.

Dapple, *a.* [*Etymol.* uncertain; perhaps allied to *dab*, or *daub*.] Marked with spots; spotted; variegated with spots of different colors or shades of color; as, a dapple pony, dapple-gray.

—*n.* A spot or streak on a dappled animal.

—*v. a.* To spot; to variegate with spots.

"Oft on the dappled turf at ease
I sit, and play with similes." — Wordsworth.

Darabgherd, or **DARAB**, a town of Persia, prov. of Farsistan, lat. 29° N., lon. 54° 30' E. It is situated on a small river in the midst of an extensive plain, and is surrounded by lemon and orange groves. At one time it was a place of great extent and importance, but most of it is now in ruins.

D'Arblay, FRANCES, an English novelist, b. 1752, was the daughter of Charles Burney, the author of the *History of Music*, and, in 1793, married a French emigrant artillery officer, with whom she afterwards went to France, and who, on the restoration of the Bourbons, attained the rank of general. After the termination of

the war, they returned to England, and settled at Bath, where her husband died in 1818. She continued to reside at Bath up to the time of her death. Madame D'Arblay, under her maiden name, FRANCES BURNES, gained considerable celebrity by her literary productions. These were mostly in the paths of fiction, in which she produced four novels, *Evelina*, *Cecilia*, *Camilla*, and the *Wanderer*. She wrote several other works, among which were *Memoirs of Dr. Burney*, which, in 1832, she published in 3 vols. D. 1840.

D'Arbonne, in *Louisiana*, a bayou formed by South Fork, Middle Fork, and Corneille Creek, which unite in Union parish. Flowing S.E., it enters the Washita abt. 6 m. above Monroe.

Darboy, GEORGES, Archbishop of Paris, b. at Fayl-billot, 1813. In 1854, he went to Rome to take part in the definition of the dogma of the Immaculate Conception; was named by the emperor to the episcopal see of Nancy in 1859, and was promoted to the archiepiscopate, 1863. He is known as the author of *Les Femmes de la Bible*, *L'Introduction à l'imitation de Jesus Christ*, and other works. Shot by the Communists, 1871.

Dar'by, *n.* (*Masonry*.) A tool used by plasterers to float a ceiling; it is about 3 feet or 3 feet 6 inches long, by 7 inches in width, and has two stout handles fastened on the back, to enable the workmen to hold it.

Dar'by, in *Ohio*, a township of Madison county. It includes the v. of Pleasant Valley.

—A township of Pickaway co.

Dar'by, in *Pennsylvania*, a suburb of Philadelphia, in Delaware co., on Darby creek, the Penna. and B. & O. R. Rs. and trolley lines. Has cotton, woolen and carpet mills. *Pop.* (1897) about 3,500.

Dar'by, in *W. Va.*, a post-office of Wyoming co.

Dar'by Creek, in *Ohio*, rises in Logan co., flows S. E. and joins the Scioto river, near Circleville.

—A post-office of Madison co.

Darby Creek, in *Pennsylvania*, flows into the Delaware river 8 m. below Philadelphia.

Dar'by's, in *Georgia*, a village of Columbia co., about 94 m. E. N. E. of Milledgeville.

Dar'byville, in *Iowa*, a post office of Appanoose co.

Dar'byville, in *Ohio*, a post-village of Pickaway co., about 40 m. S. of Columbus.

Dardanelle, in *Arkansas*, a village of Pope co., about 14 m. S. of Dover.

—One of the capitals of Yell co., about 72 m. N. W. of Little Rock. *Pop.* (1897) about 1,550.

Dardanelles (The), or STRAIT OF GALLIOLI, (*dar-dan-ellz*). (*Anc. Hellespont*.) The name of a narrow channel which separates Europe from Asia, extending between the Sea of Marmora and the Grecian Archipelago; Lat. from 40° to 40° 30' N., and Lon. from 26° 10' to 26° 40' E. Length 40 m., width from 1 to 4 m. The coast on the western, or European, side is rugged; but on the eastern, or Asiatic, side, the scenery is very beautiful and romantic. As this channel is the key to Constantinople, it is strongly fortified on both sides with castles, batteries, and forts. The name of Hellespont is derived from Helle, daughter of Althamas, king of Thebes, who was drowned in its waters; the name of Dardanelles is referable to an ancient city called Dardanos, situated in the province of Troas. It was Xerxes who threw a bridge of boats across this channel, B.C. 481. The bridge was destroyed by a storm. In consequence of this disaster, the water received 300 lashes, and the next bridge remained secure. Alexander III. crossed the straits, B.C. 334, with an army of about 35,000 men. The Saracens, under Solyman, the son of Orchan, crossed the channel in 1360, and first raised the Mohammedan crescent in Europe. In 1465 Mohammed II. erected two forts to defend the passage; and in 1659 two more, named Sestos and Abydos, were added by Mohammed IV. By the secret article of the treaty of Unkiar-Skelessi, between Russia and Turkey, signed at Constantinople July 8, 1833, the latter power agreed to close the Dardanelles against vessels of war belonging to foreign powers. The straits were passed by the allied fleets of France and England at the commencement of the Russian war, Oct. 14, 1853. The ancient rule of excluding all ships of war in time of peace, recognised by the treaty of Paris, 1856, was abrogated in 1870, and there is no longer any restriction on the navigation of the strait.

Dardanelles, in *Oregon*, a village and township of Jackson co., abt. 10 m. N.W. of Jacksonville. — A p.v. of Lake co.

Dardams. (*Myth.*) One of the most ancient kings of Troy, a son of Jupiter and Electra. Having killed his brother Jasius, he fled to Asia Minor, where he married Batia, the daughter of the king of Leucra. After the death of his father-in-law, he ascended the throne, and reigned from 1568 to 1537 B. C. He is said to have been the founder of the kingdom of Troy, and to have erected the *Palladium*, the great statue of Pallas, an idol of the Trojans.

Dardenne, in *Mo.*, a twp. of St. Charles co.; also a sta. on the St. L., Kansas City & N. R. R., 32 m. from St. Louis. — A village of St. Charles co., abt. 29 m. W.N.W. of St. Louis.

Dardenne Creek, in *Missouri*, traverses St. Charles co., and enters the Mississippi River above the mouth of the Illinois River.

Dare, *v. n.* (*imp.* DURST. OF DARED; *pp.* DARED.) [*A. S.* *dear*, pret. *darste*; *L. Ger.* *darren*; *D. durren*; *Ger.* *dürfen*; *Ice.* *thora*; *Goth.* *gilaursan*; *Sansk.* *dhr*, to hold, to hold out, to endure, *pp.* *dhrsta*, daring, akin to *Gr.* *thrasus*, bold; *tharreo*, to be bold; *Lat.* *fortis*.] To have boldness, bravery, or courage; to be ready to face or defy danger; to be bold enough; not to be afraid; to venture; to be adventurous.

"What man dare I dare." — Shaks.

—*v. a.* (*imp.* and *pp.* DARED.) To challenge; to provoke to defy.

"I dare thee but to breathe upon my love." — Shaks.

—To brave; to venture on; to pluck up courage for.

"All cold, but in her breast, I will despise;

And dare all heat but that in Celia's eyes." — Roscommon

To dare larks, to lure such birds by means of a reflection caused by a mirror; or by making use of a falcon &c., to hold them in the air till caught by the force of fascination.

"As larks lie dar'd to shun the hobby's flight." — Dryden

Dare, *n.* (*Zoöl.*) Same as DACE, *q. v.*

Dare-devil, *n.* A daring, bold, venturesome fellow.

Dar'ent, a river of England, rising near Bradsted, Kent, and falling into the Thames near Erith, after a course of 20 m.

Dar'er, *n.* One who dares, challenges, or defies.

Dare'town, in *New Jersey*, a post-village of Salem co., abt. 25 m. S.S.W. of Camden.

Darfour, DARFOOR, DARFUR, DAR-FUR, DAR-EL-FÜR, (*dar-foor*), a country of Central Africa, occupying a large portion of the territory between lat. 11° and 15° N. and Lon. 26° and 29° E. On the E. it has Kordofan and the country of the Shelloos, which separate it from Sennaar and Abyssinia; on the W., Bergoo, which divides it from Begharmi and Bornou; while the region to the S. are inhabited by barbarous nations, who races extend to the Mountains of the Moon, and the early course of the Bahr-el-Abiad. Its commerce is extensive with Egypt and Nubia, being carried on entirely by the African system of caravans. The caravans going to Egypt consists often of 2,000 camels and 1,000 men. *Exp.* The most important are: slaves, male and female, taken in the negro countries to the south; camels, ivory, the horns, teeth, and hides of the rhinoceros and hippopotamus; ostrich-feathers, gum, pimento, parrots in abundance, and a small quantity of white copper. *Imp.* Extremely various; comprising beads of all sorts, toys, glass, arms, light cloths of different kinds, chiefly made in Egypt, with some of French manufacture; red Barbary caps, small carpets, silk wrought and unwrought, &c. *Pop.* variously estimated from 200,000 to 3,500,000. The Darfour was annexed to Egypt in 1875.

Dar'ic, *n.* [From *Darius*, a king of Persia.] Any gold coin of extra purity.

(*Antiq.*) An ancient Persian gold coin, having on one side the stamp of an archer.

Dar'ien, in *Connecticut*, a town and township of Fairfield co., on Long Island Sound, about 35 m. S. W. of New Haven. *Pop.* (1897) about 2,500.

Dar'ien, in *Georgia*, a village of Hancock co., a few m. E. of Milledgeville.

—A city, port of entry, and cap. of McIntosh co., on the Altamaha river, about 12 m. from the sea, and 60 m. S. W. of Savannah. *Pop.* (1897) about 2,000.

Dar'ien, in *Missouri*, a post-office of Dent co.

Dar'ien, in *New York*, a post-village and township of Genesee co., about 26 m. E. of Buffalo.

Dar'ien, in *Wisconsin*, a post-village and township of Walworth county, about 19 miles N. E. of Beloit, on the W. Union R. R.

Dar'ien Center, in *New York*, a post-village of Darien township, Genesee county, about 26 miles E. of Buffalo.

Dar'ien City, in *New York*, a village of Darien township, Genesee county.

Dar'ien, in *Connecticut*, a post-village of Fairfield co., about 35 m. W. S. W. of New Haven.

Dar'ien', Gulf of, an arm of the Caribbean sea, Colombia, S. A.; Lat. 9° N., Lon. 7° W., having the Isthmus of Darien, or Panama, on the W. The river Atrato empties into an inlet called the Bay of Choco, at its extremity.

Dar'ien (dah're-én'), Isthmus of, a narrow neck of land connecting the Continents of North and South America. Generally called the ISTHMUS OF PANAMA. See CANAL.

Dar'ing, *a.* Bold; courageous; intrepid; fearless; adventurous; rashly brave; audacious; impudently bold and defying; as, a daring act, a daring intruder.

"Judicious drank, and greatly daring din'd." — Pope.

—*n.* A bold or rash act; a hazardous attempt; a Quixotic enterprise.

Dar'ingly, *adv.* Boldly; courageously; imprudently; fearlessly.

"Your brother, too daringly upon the foe did press." — Lord Halifax

Dar'ingness, *n.* Boldness; audacity; fearlessness.

Dar'iole, *n.* A kind of rich cake.

Dar'ins the Mede, (*dä're-us*). (*Script.*) He was son of Astyages, king of the Medes, and brother of Mandan, mother of Cyrus, and of Amytis the mother of Evil-merodach and grandmother of Belshazzar; thus, he was uncle, by the mother's side, to Evil-merodach and Cyrus. The Hebrew generally calls him *Darius*; the Septuagint, *Artaxerxes*; and Xenophon, *Cyaxares*. Darius dethroned Belshazzar, king of the Chaldeans, and occupied the throne till his death, two years after, when he reverted to the illustrious Cyrus.

Dar'ins I., king of Persia, was the son of Hystaspes. He entered into a conspiracy, with six others, against the usurper Smerdis, and having slain him, they agreed that he should have the crown whose horse would neigh first in the morning. By a well-concerted plot of his groom, the horse of Darius neighed immediately after he came to the spot where they were to meet, in consequence of which he was saluted king. He took Babylon after a siege of twenty months, gave permission for the rebuilding of the temple of Jerusalem, and sent the captive Jews to their own country. The revolt

the Greek cities in Ionia was the occasion of the famous Persian war. The army of Darius, under the command of Mardonius, invaded Greece, but accomplished nothing. A second invasion was undertaken, and the Persians were defeated by the Greeks at Marathon; on which he resolved to carry on the war in person, but died in the midst of his preparation, B. C. 485.

Fig. 772. — DARIUS PASSING JUDGMENT ON CRIMINALS. (From an ancient sculpture.)

Darius II., surnamed **OCHUS**, or **NOTHUS** (bastard), was an illegitimate son of Artaxerxes. He ascended the throne of Persia after the assassination of Xerxes, and married Parysatis, his sister, a licentious and cruel woman, by whom he had Artaxerxes, Mnemon, Amisus, and Cyrus the Younger. D. 405 B. C.

Darius III., surnamed **CODOMANUS**, the last king of Persia. His kingdom being invaded by Alexander the Great, he met him in person at the head of an army of 100,000 men. At the battle of Granicus the Persians were defeated, but met the Greeks again near Issus. Here they were totally routed. Upwards of 100,000 Persians were killed, and Alexander took, among the prisoners of war, the mother, wife, and children of Darius. D. himself escaped in disguise and under cover of night. Not discouraged by his reverses, he ventured on another battle at Arbela, but was again defeated, and fled towards Media. Bessus, the governor of Bactriana, seizing his throne, attempted his life, and D. was aided by the Macedonians, in his chariot, covered with wounds and expiring. D. 330 B. C.

Dar'k, *a.* [A. S. *deorc*; Gael. *dorch*; It. *dorcha*; Icel. *dr*; Scot. *daurk*; Pers. *tarik*.] Destitute of light; obscure; dim; clouded; black, or blackish; dusky; gloomy; gloomy; as, a dark night, a dark skin, a dark eye.

"Lovely . . . as the light of a dark eye in woman." — *Byron*.
Involved in obscurity, secrecy, or mystery; unenlightened by mental perception; secret; hidden; concealed; as, a dark meaning.

"And his affections dark as Erebus." — *Shaks*.
Destitute of understanding and comprehension; ignorant; without culture; unrefined; as, the Dark Ages. Gloomy; not cheerful; dismal; pregnant with evil; suspicious; as, dark memories.

"All men of dark tempers . . . may find convents fitted to their hours." — *Addison*.

Hiding evil designs in concealment; betraying foul and evil or turpitude; as, a dark conspiracy.
Blind; without the perception of light.

"Thou wretched daughter of a dark old man." — *Dryden*.
Darkness; obscurity; deprivation of light.

"Clouds and ever-during dark surround me." — *Milton*.

Dark Corner, in Georgia, a township of Campbell co. about 110 m. W.N.W. of Milledgeville.

Dark'ce, in Ohio, a W. co., bordering on Indiana. Area, 609 sq. m. Rivers, Greenville, Stillwater, and Franklin creeks. Surface, mostly level; soil, fertile, and well timbered. Cap. Greenville.

Dark'ce, in Ohio, a post-office of Darke co.

Dark'en, (*dark'n*), *v. a.* [A. S. *adeorcan*.] To deprive of light; to obscure; to make dark or dim; as, to darken a room.

"Surrounding forests darkened all the flood." — *Addison*.

To deprive of the faculty of optical vision.

To render the mind opaque, ignorant, or stupid; to perplex; to cloud.

"His confidence did seldom darken his foresight." — *South*.

To make less clear, definite, or intelligible. — To over-

whelm with gloom, apprehension, or depression; as, to darken a day's enjoyment. — To befoul; to sully; to soil.

"The lusts and passions of men do sully and darken their minds." — *Tillotson*.

To grow dark, or darker; to grow less white and clear.

Dark'ener, *n.* The person who, or thing which, darkens.

Dark'ish, *a.* Dark in a minor degree; dusky; gloomy.

Dark'ling, *a.* Being in the dark; without light.

Dark'ly, *adv.* Used poetically.)

"Darkling stands
The varying shore o' the world." — *Shaks*.

Dark'ly, *adv.* Obscurely; dimly; blindly; uncertainly; with imperfect light, perception, or knowledge.

"Darkly, deeply, beautifully blue." — *Byron*.

Dark'ness, *n.* State or quality of being dark; absence of light; obscurity; blackness; gloom.

"No light, but rather darkness, visible." — *Milton*.

Ch lessness; gloominess; want of clearness, or perceptibility; as, the darkness of a theory.

—State of concealment; secrecy; privacy.

—State of intellectual cloudiness; ignorance; error; uncertainty; — principally applied in a religious sense; as, the darkness of scepticism.

"Dawn on our darkness, and lend us thine aid." — *Bishop Heber*.

—Hell; state or condition of infernal and eternal gloom and misery; as, the power of darkness.

"The instruments of darkness tell us truths." — *Shaks*.

—State of perplexity, trouble, distress, or calamity.

Dark'some, *a.* Gloomy; obscure; dark.

Darks'ville, in Wisconsin, a former post-office of Randolph co.

Darks'ville, or **Darkes'ville**, in W. Virginia, a post-village of Berkeley co.

Dark'y, or **Dark'ey**, *n.* (pl. **DARKIES**.) A colloquial term for a negro.

D'Ar'lan, in Indiana, a village of Gibson co., abt. 20 m. N. of Evansville.

Dar'ling, *n.* One who is much beloved; a pet; a favorite; as, a mother's darling.

—*a.* Dearly beloved; favorite; dear; regarded with great kindness and tenderness.

"And the devil did grin, for his darling sin
Is pride, that apes humility." — *Coleridge*.

Dar'ling, a considerable river of Central Australia, traversing a sterile country, and joining the Murray near Lat. 34° S., and Lon. 142° E. Its waters are mostly salt.

Dar'ling, (**Fort**.) See **FORT DARLING**.

Darling Mountains, a range in W. Australia, 250 m. in length. Its highest peak is 3,500 feet above the level of the sea.

Dar'lingston, in Pennsylvania, a village of Pike co.

Dar'lington, a town and parish of England, on the Skerne, 45 m. N. of York. It contains an ancient cathedral, a handsome town-hall, and a mechanics' institute. *Manuf.* Linen, woollen, and cotton goods. There are also several foundries.

Dar'lington, in Indiana, a village and post-office of Montgomery co., located on Sugar creek and the Terre Haute and Indianapolis R. R.; 8 m. N. E. of Crawfordsville, 25 m. S. S. E. of Lafayette. *Pop.* (1897) 530.

Dar'lington, in Louisiana, a village of E. Feliciana parish.

—A post-office of St. Helena parish, about 75 m. N. E. of Baton Rouge.

Dar'lington, in Maryland, a post-village of Harford co., about 32 m. N. E. of Baltimore.

Dar'lington, in Ohio, a post-office of Richland co.

Dar'lington, in Pennsylvania, a post-borough and township of Beaver co., about 39 m. N.W. of Pittsburg. Canoeing is largely mined here.

Dar'lington, in S. Carolina, a N. E. co. Area, about 800 sq. m. Rivers, The Great Pedee (which bounds it on the N. E.), Lynch's, and Black creeks. Surface, undulating; soil, generally fertile. Cap. Darlington. *Pop.* in 1890, 28,215.

—A town, the cap. of Darlington co., about 78 m. E. S. E. of Columbia. *Pop.* (1897), 2,475.

Dar'lington, in Wisconsin, a city, the cap. of Lafayette co., on the Pecatonica river, about 50 m. S.W. of Madison, in a rich farming district; has shipping trade in produce. *Pop.* (1897) about 2,000.

Dar'lington, WILLIAM, M.D., a distinguished American botanist, b. in Chester co., Pa., 1782; author of *Flora Cestrica*, &c. D. 1863.

Dar'lington Heights, in Virginia, a post-office of Prince Edwards co.

Darmabab, (*dar'ma-ba*), an island in the Red Sea, off the African coast, Lat. 12° 15' N., Lon. 42° 55' E. It is 20 m. in circumference, low, and mostly covered with jungle.

Darmstadt, (*darm'stat*), the capital of the grand-duchy of Hesse, Germany, situated on the small river Darm, at the N.W. extremity of the Odenwald, 58 m. N.E. of Carlsruhe; Lat. 45° 50' N., Lon. 35° 40' E. It consists of an old and a new town, both enclosed by walls. The principal buildings are the palace of the grand-duke, the palace of Prince Louis, the city-hall, a public library with 250,000 vols., a cabinet of natural history (containing many curious fossils), the house of assembly of the states, an opera-house, a college, and several fine churches. *Manuf.* Paper, silver articles, carpets, starch, wax-candles, and tobacco. D. is the birth-place of Liebig.

Darn, *v. a.* [W. and Armor. *darn*, a piece, a patch, a fragment; O. Fr. *darne*, a slice, a thin broad piece.] To mend a rent or hole, by imitating the texture of the stuff with yarn, or thread and a needle; to sew together with yarn or thread; as, to darn a stocking. — A vulgarism for the expletive word *damn*. (American.)

—*n.* A piece or place repaired by darning.

Darn'er, *n.* One who darns, or mends by darning.

Darnes'town, in Maryland, a post-village of Montgomery co., abt. 55 m. W. by S. of Annapolis.

Darnetal, (*darn'tal*), a town of France, dep. Seine Inferieure, 2 m. W. of Rouen. *Manuf.* Woollen goods, and paper. *Pop.* 7,000.

Darn'ley, HENRY STUART, EARL OF B. 1545, was the 1st husband of Mary Queen of Scots. He was married to her in 1565, and 2 years after, with the connivance of Bothwell, and perhaps also of the queen, was blown up by gunpowder, in a house in which he was lying sick, at Kirk o' Field, near Edinburgh.

Darn'stadt, in Illinois, a post-office of St. Clair co.

Daroo', *n.* (Bot.) See **FICUS**.

Darr'town, in Ohio, a post-village of Butler co., abt. 30 m. N. by W. of Cincinnati.

Dart, *n.* [Fr. *dard*, probably from Armor. *darad*, a dart; A. S. *darath*, *daroth*; W. *tarad*, a striking through; *tarade*, a piercer; *taraden*, to pierce, to penetrate; Heb.

tarad, to thrust; Lat. *trudo*, with the same radical letters; Ar. *tarad*; Syriac and Ch. *terad*.] A pointed missile weapon, to be thrown by hand; a javelin; a short lance; — hence, by implication, anything which pierces, penetrates, or wounds.

"Time shall throw a dart at thee." — *Ben Jonson*.

—*v. a.* To throw a pointed instrument with a sudden thrust; to launch by the hand.

"Th' invaders dart their javelins from afar." — *Dryden*.

—To throw suddenly or rapidly; to send out; to shoot; to emit; as, flames darted forth.

—*v. n.* To let fly or shoot, as a dart; to fly rapidly; as, a darting arrow. — To start suddenly, and run; as, he darted off.

Dart, *n.* Same as **DACE**, *q. v.*

Dart'ars, *n.* [Fr. *dartre*.] An ulcerous disease in lambs.

Dart'er, *n.* He who, or that which, darts; one who hurls darts.

(Zool.) See **PLOTIDE**.

Dartford, (*dar'furd*), a town and parish of England, co. Kent, on the Darent, 15 m. S.E. of London. *Manuf.* Paper, oil, gunpowder, and steam-engines. *Pop.* 7,000.

Dart'ford, in Wisconsin, a post-village of Green Lake co., abt. 65 m. N.N.E. of Madison.

Dart'ingly, *adv.* Rapidly, like a dart.

Dart'moor, in England, a tract of land belonging to the Duchy of Cornwall, and occupying the larger portion of the S. W. district of Devonshire. Length, 20 m.; average width, 10 m. Its pastures abound with sheep and cattle, and it contains tin and copper mines. There are many granite peaks called *tors*, rising to about 2,000 feet, amidst its wild scenery.

Dart'mouth, a seaport-town of Devonshire, England, 35 m. S. of Exeter, near the mouth of the River Dart. It has a good harbor, with deep water, and is defended by a battery. The inhab. are engaged in ship-building, rope-making, and in the Newfoundland trade. *Pop.* 6,102.

Dartmouth, a seaport of British America, in the N. part of Prince Edward Island, in Prince co., ou Richmond Bay; Lat. 46° 33' N., Lon. 63° 54' W.

Dartmouth, in Massachusetts, a post-village and township of Bristol co., on the N. side of Buzzard's Bay, abt. 50 m. S. by E. of Boston.

Dartmouth, a seaport of Nova Scotia, co. of Halifax, opposite the town of Haliuax. *Pop.* 4,058.

Dart're, *n.* [Fr.] (*Med.*) A vesicular disease of the skin. See **HERPES**.

Dart'rons, *a.* [Fr. *dartreux*.] Relating or pertaining to **DARTRE**, *q. v.*

Darn', PIERRE ANTOINE NOEL BRUNO, COMTE, a French statesman, poet, and historian. b. at Montpellier, 1767. At the age of 16 he entered the army, and at the breaking out of the revolution adopted its principles; but though engaged in active service, he devoted much of his time to literary pursuits. He attracted the notice of the First Consul, and, in 1802, became a member of the Tribunate. In 1805 he was made a councillor of state, and general intendant of the imperial household. This last office he hesitated to accept. "I have spent my life among books," said he, "and have not had time to study the arts of the courtier." "Of courtiers I have plenty," said Napoleon I., "they will never fail; but I want a minister, at once enlightened, vigilant, and firm." He subsequently became the confidential friend of the emperor, and his prime minister. In 1812 he opposed the expedition to Russia, as he did several other of the emperor's schemes. On the abdication of Napoleon, he retired from public life, and, although exiled by the first government of the restored Bourbons, was recalled in 1819, and made a peer of France. He afterwards wrote a *Life ofully*, and a *History of Venice*. D. 1829.

Dar'win, CHARLES ROBERT. See **SECTION II**.

Darwin, FRANCIS, M.A., F.R.S., son of Charles Robert D.; born Aug. 16, 1848; joint author with his father of *The Power of Movement in Plants*; author of *Papers on Physiological Botany*.

Darwin, GEORGE HOWARD, M.A., F.R.S., LL.D., son of Charles Robert D.; born in 1845; has contributed important papers to *The Royal Society Transactions*, and has been engaged in scientific studies in several fields. His *Remote History of the Earth* is a striking study of former astronomical conditions.

Dar'win, in Illinois, a post-village and township of Clark co., on the Wabash river, about 20 miles below Terre Haute.

Darwin Mount, and **Sound**, on the S. W. side of King Charles' South Land, Terre del Fuego. The mountain is about 6,800 feet high.

Da'sent, SIR GEORGE WEBBE, D.C.L., an English author and philologist, born at St. Vincent, West Indies, in 1820. Graduated from Oxford in 1840; practiced law in London, was assistant editor of the *Times*, and in 1871 became editor of *Frazer's Magazine*. He is considered one of the ablest Norse and Icelandic scholars of the century; has translated *The Younger Edda*, and is the author of several works in this field of scholarship. He was made civil service commissioner in 1870, and was knighted "for public services" in 1876.

Dash, *v. a.* [Icel. and Swed.] Gith. *daska*, to strike through; Dan. *dasker*; Sansk. *dac*, to strike, to wound, to kill; Heb. *dash*, *dosh*, to beat, to pound, to bruise in pieces.] To strike suddenly or violently; as, to dash one's head against a wall. — To strike and bruise or break; to break, as by collision; to demolish; to frustrate; to ruin; as, a ship is dashed to pieces, to dash one's hopes. — To throw water suddenly, or in separate portions; to bespatter; to sprinkle; as, to dash tears away. — To mix or adulterate; to mingle; to throw or fling in or on in a hasty, careless manner; as, to dash paint on a picture, to dash brandy with water.

—To form or sketch out hastily and carefully; as, to *dash* off an editorial article. — To erase by a stroke; to strike out; to obliterate; to expunge; — preceding *out* or *over*.

"To *dash* this over with a line will deface the whole copy." — Pope.

—To strike with surprise, astonishment, shame, or fear; to daunt; to abash; to confuse; as, to *dash* pride.

"The nymph, whom nothing could Narcissus move,
Still *dash'd* with blushes for her slighted love." — Addison.

—*v. n.* To strike, break, scatter, and fly off; to rush, strike, and break or scatter; to rush with violence, and break through; as, to *dash* through a river.

—*n.* Collision; abrupt clashing; a violent striking of two bodies.

"The *dash* of clouds, or irritating war." — Thomson.

—Admixture; infusion; intermingling; as, sherry with a *dash* of bitters, he has a *dash* of vice in his composition, hair with a *dash* of gray, &c. — A rushing or onset with violence; a sudden stroke, blow, or act; as, to make a *dash* at the enemy. — A flourish, or act of ostentations show or parade; as, to cut a *dash*. (Vulgar.) — Aptitude for vigorous action in any bold enterprise; as, a man of courage and *dash*.

(Gram.) A mark, thus (—), noting a break, pause, parenthesis, or stop in the sentence.

(Mus.) A small mark, thus (|), denoting that the note over which it is placed is to be performed *staccato*, i. e. in a short, detached, distinct manner; or an oblique line drawn through the figures of thorough bass, to show that certain tones are to be sharpened.

—*adv.* An expression of the sound of water dashed.

"Hark, hark, the waters fall,
Dash, dash, upon the ground." — Dryden.

Dash, CISTERNE DE COURTERAS DE ST. MARS, VICOMTESSE, a French novelist, b. in Paris, 1805. Owing to pecuniary reverses, she adopted literature as a profession, and has written many novels, some of which were for a time very popular. D. 1872.

Dash-board, *n.* A dasher; same as SPLASH-BOARD, *q. v.*

Dash'er, *n.* Anything which dashes, intermixes, or agitates; as, the *dasher* of a churn; — a dash-board. — Any one who makes a vain parade, or ostentations show; as, that girl is a *dasher*.

Dash'ism, *n.* Quality or practice of making a blustering exhibition, or ostentatious show. (R.)

Dashkoff, or DASHKOW, EKATARINA ROMANOVNA, PRINCESS, (*dash'ko*), one of the most learned women of Russia, and an intimate friend of the Empress Catharine II., b. 1744. In 1784 she was appointed president of the Academy of Sciences, and of the Russian Academy, which had just been established. She wrote several works, and took an active part in the compilation of the *Dictionary of the Russian Academy*. D. 1810.

Dash'-pot, *n.* (*Mach.*) A cylinder partly filled with fluid, and having a loosely-fitting piston, to ease the blow of any falling weight.

Das Mortas, a river in Brazil. See RIO DAS MORTAS.

Das'sel Station, in Minnesota, a post-office of Meeker co.

Dastard, *n.* [A. S. *adastrigan*, to discourage, dismay, frighten — *astrican*, to strike, to smite, and *ad*, for a intensive; Icel. *strikti*, to bend with rods; from the root of *dash*, used figuratively.] A person easily dashed or intimidated; — hence, a coward; a poltroon; one who is infamous for his fear of danger.

—*a.* Cowardly; meanly shrinking from danger.

"Curse on their *dastard* souls!" — Addison.

—*v. a.* To terrify; to intimidate; to dispirit. (R.)

Dastardize, *v. a.* To cause to become a dastard; to make a coward of.

"Such things would *dastardize* my courage." — Dryden.

Dastardly, *a.* Cowardly; meanly timorous; sneaking.

Dastardness, *n.* Poltroonery; state of being a dastard; cowardliness.

Dastardy, *n.* Cowardice; mean poltroonery.

Dasytoma, *n.* [Gr. *dasys*, hairy, and *stoma*, mouth.] (Bot.) A genus of plants, order Scrophulariaceae, having lower leaves opposite, upper generally alternate and entire; corolla large, yellow, villous within as well as the stamens. The Downy Dasytoma, *D. pubescens*, found in woods throughout the U. S., is a tall and very showy perennial plant; stem 2—3 feet high, erect, pubescent; lower leaves variously pinnatifid, or cut and toothed; upper ones very entire or toothed, not tuse; flowers large, yellow,

Fig. 773. — DOWNY DASYSTOMA.
(*D. pubescens*.)

opposite, axillary, trumpet-shaped. The Oak-leaved Dasytoma, *D. quercifolia*, and the Lousewort Dasytoma, *D. pedicularia*, are also natives of N. America.

Dasy-meter, *n.* [Gr. *dasys*, dense, and *metron*, measure.] (Phys.) An instrument for testing the density of gases, consisting of a light and thin glass, which is weighed successively in different gases.

Dasyuridae, *n. pl.* [Gr. *dasys*, hairy, *oura*, a tail; — hairy-tailed.] (Zool.) The Dasyurus family, including the largest of the rapacious marsupials. The largest of the species, *Dasyurus ursinus*, measures about 18 inches in the body, and is covered with long thick hair, of a black color. It is a native of Van Diemen's Land, where it is commonly known as the *devil*. It is chiefly destructive among sheep, and despite its small size, is capable of doing immense mischief among the penned flocks. The feet of the *D.* are formed for terrestrial progression; the anterior have 5 toes, and the hind ones 4, all perfectly separate, and armed with curved claws. The deficient toe of the hind feet is sometimes represented by a sort of tubercle, which, however, does not reach the ground. The teeth are usually 46 in number; the form of the molars in the upper jaw is, usually, irregularly triangular, with 3 points. The *D.* are evidently analogous to the ordinary carnivorous quadrupeds, not only in their ferocity and carnivorous propensities, but also more or less in form.

Data, *n. pl.* [Lat. *data*, *pl.* from *datum*, a thing given, from *do*, to give.] Quantities, principles, or facts given, known, or admitted, by which to find things or results unknown.

Data'ria, *n.* [It.] (Eccl.) The name given to the papal chancery at Rome, from which all bulls, &c. are promulgated.

Data'ry, *n.* [L. Lat. *datarius*.] (Eccl.) An officer of the papal chancery, whose function it is to affix to the papal bulls the expression *Datum Roma*; i. e. "given at Rome."

—Office or vocation of a datary.

Date, *n.* [Fr.; Lat. *datum*, from *do*, to give.] Any given, fixed, or settled time; the date when any event happened; period; era; age; epoch; as, the *date* of the Christian Era, the *date* of an historical occurrence, &c.

—That addition to a writing which specifies the year, month, and day when it was given or executed; the number which marks the time when any writing, instrument, coin, picture, &c., was executed.

"Bonds without a *date*, they say, are void." — Dryden.

—Duration; continuance.

"Ages of endless *date* founded in righteousness." — Milton.

Bearing date. Said of a letter, or legal writing, when the date appears on the face of it.

—*v. a.* To write, or note, the date of a book, or writing, or official or legal instrument; as, to *date* a letter.

"To all their *dated* backs he turns you round;
These Aldus printed, those Du Sacil has bound." — Pope.

—To note or fix the time of anything; as, to *date* the maturity of a bill.

—To assign a certain time as a starting-point; as, to *date* the cause of a misfortune.

—*v. n.* To reckon; to begin; to have origin.

"'Tis all one . . . whether we begin the world so many millions of ages ago, or *date* from the late era of about six thousand years." — Bentley.

—To bear a date; — preceding *on* or *at*; as, *dated* at Washington.

Date, *n.* [Fr. *datte*, from Lat. *dactylus*, a finger; Gr. *dactylos*. See DACTYL. (Bot.) The fruit of the Date Palm, &c. See PHENIX.

Dateless, *a.* Bearing no date; without any fixed time.

"The *dateless* limit of thy dear exile." — Shaks.

Date'-palm, **Date'-tree**, *n.* (Bot.) See PHENIX.

Date'-plum, *n.* (Bot.) See DIOSPYROS.

Dater, *n.* One who, or that which, dates; as, a ticket-dater.

Dathan. (Script.) A conspirator against Moses.

Datiseaceae, *n. pl.* (Bot.) An order of plants, alliance Cucurbitales. DIAG. Apetalous flowers, strictly parietal placentæ, and dry fruit. — The whole order includes but 4 species, which are widely distributed over the world. The only noteworthy plant is *Datina canabina*, the root of which is employed in Cashmere for dyeing yellow.

Dative, *n.* [Lat. *dativus*, from *do*, *datus*, to give.] (Gram.) It is, in most languages, the name of the third case in the declension of nouns, and serves to denote participation by the noun in the action of the verb which accompanies it; — usually expressed in English by *to*, or *for*.

—*a.* (Law.) That which may be given or disposed of at will and pleasure.

(Gram.) That relates or belongs to the dative.

Datolite, *n.* (Min.) A boro-silicate of lime, found in various parts of the world in oblique rhombic prisms. It also occurs in botryoidal forms, when it receives the name of *botryolite*. It is found rather abundantly near Lake Superior, where it is profitably employed in the manufacture of boracic acid. It is also used as a flux for copper ores.

Data'm, *n.*; Lat. *pl.* DATA, (*q. v.*) Something given or admitted.

Data'm-line, *n.* (Land-Surveying.) The horizontal line of a vertical section, from which heights and depths are calculated.

Datu'ra, *n.* [Ar. *tatorah*.] (Bot.) A genus of plants, order Solanaceae. The Thorn-apple, *D. stramonium*, is a well-known plant, about 3 feet high, growing among rubbish, in vast plains, and possessing extraordinary narcotic properties. It is much employed in medicine as an anodyne and antispasmodic, its effects resembling

those of belladonna. In spasmodic asthma, smoked the herb, or inhalation from its infusion in hot water frequently gives great relief; but in some instance when thus used, the herb has produced fatal results. strong decoction of the leaves in water is used in (chin-China as a remedy in hydrophobia, in which terrible disease it is reputed to be very efficacious. Stramonium owes its principal activity to the presence of narcotic alkaloid called *daturia*, which much resembles *hyoscyamia* and *atropia*. the alkaloids of *Hyoscyamus niger* and *Atropia Belladonna*. The *daturia* is especially abundant in the seeds; it is a powerful poison and strongly dilates the pupils. *D. tatula*, *metel*, *fer fastuosa*, and *sanguinea*, have similar properties to *stramonium*. The fruit of *D. sanguinea*, the red th apple, is used by the Indians of the Andes, and of Central America, for preparing a narcotic drink which produces a peculiar kind of intoxication, and is supposed to put those who partake of it in communication with the spirits of their ancestors. — Johnston's *Chemistry Common Life*. SEE THORNAPPLE.

Data'turine, DATA'INA, DATU'RIA, *n.* (Chem.) A poisonous principle of *Daturia stramonium*. It belongs to the class of crystallizable alkaloids, and is identical with *Atropine*. Form. C₃₄H₂₁NO₈.

Daub, (*düb*), *v. a.* [W. *dwbiau*, to plaster, to daub, fr. *dwb*, mortar, cement.] To plaster; to cover with slime, grease, or other soft substance. — To paint coarsely; to lay colors on gaudily or ostentatiously; to *daub* a face with rouge.

"If a picture is *daubed* with many bright and glaring colors the vulgar admire it as an excellent piece." — Watts.

—To disguise; to conceal; to cover with a specious disguise.

"He *daub'd* his vice with show of virtue." — Shaks.

—To flatter grossly and glaringly.

"His conscience, he may be sure, will not *daub* nor flatter." — So

—*n.* A viscous adhesive application; a smear.

(Painting.) A coarse, gaudy, ill-executed picture (Masonry.) A rough kind of plastering, thrown cast upon a wall, and also applied to the clay which thrown upon the surface of the wattles, or sticks, rough farm-buildings.

Daubenton, LOUIS JEAN MARIE, (*do'bon* (*g*)-*ton*), French naturalist and anatomist, was b. at Mont Burgundy, in 1716. He was the friend and coadjutor of Buffon in his *Natural History of Quadrupeds*; anatomical articles of which were prepared by with great clearness and accuracy. He held for years the office of keeper of the Cabinet of Natural History at Paris, and was for some time professor of mineralogy at the Museum of Natural History. He author of *Instructions to Shepherds*, *A Methodical History of Minerals*, and other works; and at the time of death, in 1800, was a member of the Senate and the institute. His wife was the author of a popular novel called *Zélie dans le Désert*. She d. in 1825.

Dauber, *n.* One who daubs or smears; an artist who paints coarsely; a gross flatterer.

"A sign-post *dauber* would disdain to paint
The one-eyed hero on his elephant." — Dryden.

Daub'ery, **Daub'ry**, *n.* Anything specious or artful.

"Such *daubry* as this is beyond our element." — Shaks.

D'Aubigné, JEAN HENRI MERLE, (*do-been'yai*), a Swiss theologian, b. at Geneva 1794, who, from the French church in Hamburg, of which he was pastor, removed to Brussels, where he acquired great popularity as preacher. He is chiefly known by his *History of the Reformation of the 16th Century*. D. 1873.

D'Aubigné, THEODORE AGRIPPA. See AUBIGNE, (D.)

D'Aubigny, a village of Lower Canada, in the parish of Pointe Lévi, opposite Quebec.

Daub'y, *a.* Slimy; viscous; glutinous; adhesive; "daub'y wax." — Dryden.

Danechite, or DORCHEAT, in Arkansas and Louisiana, a bayou, which, rising in Columbia co., in the former State, and flowing S. into Louisiana, traverses Claib Parish until it falls into Lake Bistineau, about S.W. of Minden.

Daucus, *n.* [Gr. *dankon*; Lat. *daucum*, a carrot.] (Bot.) A genus of plants, order Apiaceae, distinguished by involucre pinnatifid, involucres of entire or 3-lobed bracts, and central flowers abortive. The principal species is *C. carota*. See CARROT.

Daughter, (*daw'tr*), *n.* [A. S. *dohter*; Ger. *tochter*; O. Ger. *tohter*; Scot. *dochter*; Goth. *dauhtar*; Gr. *gater*; Sansk. *duhitri*; Pers. *dokhter*; Zend. *dugh*.] The female offspring of a man or woman; a female child of any age.

"Adah sole *daughter* of my house and heart." — Byron.

—A female descendant; as, a *daughter* of Israel.

—daughter-in-law; a son's wife.

—Any woman or female inhabitant, in general.

"Dinah . . . went out to see the *daughters* of the land." — Gen. xx. 1.

—The female penitent of a confessor.

Daughter-in-law, *n.* The wife of a person's son.

Daughterliness, *n.* State or position of a daughter; condition of, or becoming, a daughter.

Daughterly, *a.* Becoming a daughter; dutiful.

Daule, in Ecuador, a considerable river, rising at San Miguel, in Lat. 35° S., Lon. 80° 38' E., and flowing S. to Guayaquil, where it joins the Guayaquil River. — A village about 32 m. N.N.W. of Guayaquil.

Dammer, GEORG FRIEDRICH, (*dow'mer*), a German and philosophical writer, b. at Nuremberg, 1800, studied under Hegel, and subsequently under Schelling, and became professor at the gymnasium of Nuremberg from 1822 to 1830. After his resignation he devoted himself exclusively to literary labors. His works

a striking boldness, especially in their rationalism, which is deeply tinged with the doctrines of his above-named masters.

Damm, LEOPOLD MARIA, COUNT, (*down*), a field-marshal of Austria, under the empress Maria Theresa, b. at Vienna, 1705. During the Seven Years' War he acted as generalissimo of the Austrian army, and defeated Frederick the Great in the battle of Kolin, 1757, and again in the battle of Hochkirchen, 1758. In 1760 he captured Dresden, but was defeated in the following year at Torgau. D. 1766.

Danng, (*dawng*), a tract of country in Hindostan, pres. of Bombay, inhabited by several tribes who pay tribute to the rajah of D. Area, about 1,000 sq. m. Lat. between 20° and 21° 5' N., Lon. between 73° 28' and 73° 52' E. Pop. about 100,000.

Daunt, (*dawnt*), v. a. [Fr. *dompter*, from Lat. *domitare*, frequent, from *domo*, *domitum*; Gr. *damaō*; Sansk. *dam*, to tame or subdue.] To repress or subdue the courage of; to terrify; to dispirit; to intimidate; to discourage; to dishearten; to depress; to damp the ardor of.

"Rumours loud which daunt remotest kings."—Milton.

Daunt'er, n. He who daunts.

Daunt'less, a. Undaunted; bold; intrepid; not timid, repressed, or discouraged; as, a dauntless hero.

"The dauntless spirit of resolution."—Shaks.

Daunt'lessly, adv. In a fearless, or dauntless manner.

Dauntlessness, n. Boldness; courage; intrepidity; fearlessness.

Dauphin, (*do'fan(g)*), n. [Lat. *delphinus*.] The title borne by the heir-apparent to the crown of France, before the Revolution. It was originally held by the counts or lords of Vienne, in the prov. of Dauphiné. Humbert III., the last of these seigneurs, died without issue, in 1349, and bequeathed his possessions to Charles, the grandson of Philip of Valois, on condition that the heir-apparent to the throne of France should bear the title of Dauphin of Vienne. The rights conferred by Louis IX. upon the D. were almost regal; but after his reign they were generally lessened, and the title became a mere honorary distinction.

Dauphin, an island in the Gulf of Mexico, near the coast of W. Florida; Lat. 30° 18' N., Lon. 85° 12' W. It is 14 m. long.

Dauphin, in Pennsylvania, a S.E. central co.; area, about 530 sq. m. Rivers. The Susquehanna, (which forms its W. and S.W. border,) Swatara, Mahantango, Wiconisco, Powell's, Clarke, and Paxton creeks. Surface, mountainous. Soil, extremely fertile in the valleys. Min. Coal and iron. Cap. Harrisburg. P. (1890) 96,977. A post-borough of Middle Paxton township, Dauphin co., on the Susquehanna River, abt. 10 m. N. by W. of Harrisburg. Pop. (1897) abt. 925.

Dauphiné, (*do'fe-nai*), an ancient province of France, formerly peopled by the Allobroges, passed, about the year 438, into the hands of the Burgundians. In 568 it was seized by the Lombards, and in 733 was invaded by the Saracens, from whom it was delivered by Charles Martel. It was subsequently annexed to Burgundy, and split up into a number of small territories, the most important of which, named Albon, passed, in 889, into the hands of Count Guy I., the founder of a long race of rulers. Guy IV., who died in 1142, assumed as his rest the *dolphin*, from the French word for which his country took its name of Dauphiné. This province was united to France in 1349. (See DAUPHIN.) It was ravaged by the Duke of Savoy, and by Prince Eugène, in 1693. It is now divided into the 3 depts. of ISÈRE, DAËME, and HAUTES ALPES, q. v.

Dauphine, **Dauphiness**, (*dō'fēn*), n. [Fr. *dauphine*.] The wife or consort of the dauphin.

Dauria, (*daw're-a*), a district of N.E. Asia, in Mantchouria, separated from Lake Baikal by the extensive range of the Daurian mountains.

Da'rite, n. (*Mtn.*) A variety of Tourmaline.

De'vant, Sir WILLIAM, an English poet, who flourished in the days of Ben Jonson and Milton, b. in 1605. In 1637, he succeeded Ben Jonson as poet-laureate. D. 1683.

De'venport, in Iowa, a city, capital of Scott co., on the right bank of the Mississippi, just below the Upper Rapids, 55 m. E. of Iowa City, and opposite to Rock land, with which it is connected by a magnificent railroad bridge across the river. D. is regularly laid out at the foot of a bluff rising from the Mississippi, and the centre of a rich farming region. It has also numerous manufactories, and is the seat of Iowa College. Pop. (1897) abt. 31,000.

De'venport, in New York, a post-village and township of Delaware co., about 13 miles N. of Delhi; pop. 187.

De'ventry, a town of England, co. Northampton, 5 m. W. of Weedon; pop. 4,051.

De'venport Centre, in New York, a post-village of Delaware co., about 65 m. W.S.W. of Albany.

—e CENTAE.

David, king and prophet of Israel, b. at Bethlehem, c. 1085, was the 8th, youngest son of Jesse of Bethlehem. He was keeping his father's flocks when he was elected and anointed by the prophet Samuel, at the age of 15, to succeed Saul. Having been brought to the court of Saul to soothe the melancholy of the king by harp, he first signalized himself by slaying Goliath, a gigantic Philistine. He won the friendship of Jonathan, and the love of his daughter Michal, but the same time drew upon himself the jealousy, and all the fury of the unhappy king, who repeatedly attempted to kill him. D. fled into the wilderness, con- cealing himself in caverns. At the head of a band of laws, and malcontents, he baffled every attempt of

Saul to capture him, and even found opportunities of taking revenge on his pursuer, but on each occasion dismissed him without injury. When Saul fell, D. was acknowledged king by the tribe of Judah; but the other tribes, at the instigation of Abner, placed Ishbosheth,

Fig. 774. — CAVES OF EN-GEDI.

(One of the retreats of David when pursued by Saul.)

the younger son of Saul, on the throne, thus occasioning a civil war. On the death of Ishbosheth, however, the contending parties united in submission to D., who reigned with great glory for 30 years. He took Jerusalem from the Jebusites, and gained considerable victories over the Philistines and other neighboring nations; but tarnished his glory by taking Bathsheba from Uriah, her husband, and putting him to death. He also suffered by causing the people to be numbered. A rebellion was excited against him by his son Absalom, which was quelled, and Absalom slain. When the news of this was brought to D., he lamented the untimely fall of his son in affecting terms. At the close of his life, he abdicated in favor of his son Solomon. D. 1015 B. C. —A considerable portion of the Book of Psalms was composed by him, and is both a pathetic and sublime collection of devotional poetry.

David I., (often called St. DAVID,) king of Scotland, b. about 1080, succeeded his brother, Alexander the Fierce, in 1124. He married Maud, grand-niece of William the Conqueror; and was earl of Northumberland and Huntingdon when called to the Scottish throne. On the death of Henry I., king of England, he maintained the claim of his daughter Maud against King Stephen, and seized Carlisle, but was defeated at the battle of Northallerton in 1138. D. 1153.

DAVID II., succeeded his father Robert Bruce. See BRUCE, (DAVID.)

David Comne'nus, the last emperor of Trebizond, usurped the throne upon the death of his brother John. In 1458 he ceded his empire to Mohammed II., on condition that the latter should marry his daughter. This condition the Sultan observed, but caused D. to be put to death, with seven of his sons, 1462.

Da'vid, JACQUES LOUIS, one of the most distinguished painters of France in modern times; b. at Paris, 1748. He went to Rome in 1775, returned to Paris in 1780, and in 1783 he was elected a member of the French Academy of Painting; his presentation picture was *Andromache deploring the Death of Hector*. D. now visited Rome, and painted his celebrated picture there, *The Oath of the Horatii*. He then returned to France, and executed some great works for Louis XVI.; but this did not prevent his voting for the death of the king, as a member of the National Convention, in 1792. His strong republican spirit was further shown in the representation of two exciting political subjects at this time. *The Death of Lepelletier*, and *The Death of Marat*; but personal dangers, and other party difficulties, finally induced D. to give up politics entirely for the arts, to which, during his short political influence, he had been of considerable service. He became in a few years the favorite painter of the emperor Napoleon, and his principal works have direct reference to Napoleon's eventful career. At the restoration of the Bourbons, however, in 1815, D. was banished, and retired to Brussels, where he survived his exile ten years. D. was an excellent draughtsman, after the ideal of the Greeks, but his imitation amounted to the servile; and the majority of his naked figures are of such rigid uniformity of character, that they appear to be painted rather from ancient marbles than from nature. He completed the revolution in taste commenced by Vien, and antique mannerism was carried to excess by Guérin, and some others of his principal scholars. D. 1825.

Da'vid, FÉLICIEN CESAR, a distinguished musical composer, b. in Vancluse, France, in 1810. He studied his art at the Conservatoire under Cherubini, and in 1844, after three years' travel in the East, produced his *Melodies Orientales*, which achieved success throughout Europe. This was followed by his ode *The Desert*, and by a few romances, of which *Les Hirondelles* is the most popular. The opera of *Christophe Colomb* next met a

flattering reception by the public, and D.'s celebrity was further sustained by the comic operas *La Perle du Brésil* and *Lalla Rookh*, and by the grand opera *Hercule l'aveugle*. The latter was brought out in 1859. D. 1876.

Da'vid, (d'Angers.) JEAN PIERRE, a celebrated French sculptor, b. at Angers, 1789. From his earliest years he showed a predilection for art; and, after his preliminary studies were finished, he came to Paris, where he found favor with his namesake, the great painter, who was then all-powerful at the Tuileries, and by whose counsels his studies were regulated. In 1811 his relief, *The Death of Epaminondas*, won him the first prize for sculpture in the School of Arts, and along with it a pension, to finish his artistic education in Italy. In 1826 he became member of the Institute and professor at the School of Arts; in 1828 he went to Weimar, where he modelled *Gaethe's bust*, which, executed in marble, has found a place, since 1831, in the grand-ducal library at Weimar. In 1834 he made his second tour through Germany, modelling on his way, at Munich, *Schelling*—at Dresden, *Tieck*—and at Berlin, *Rauch*. From 1835 to 1837 he was busy with his sculptures for the *Pantheon*, the great work of his life. His monuments of the great men of France are almost innumerable. In 1848 he was member of the Constituent Assembly. D. 1856.

Da'vidsburgh, in Pennsylvania, a village of Blair co., about 125 m. W. of Harrisburg.

Da'vidsburgh, in Pennsylvania, a P. O. of York co.

Da'vidson, JOHN, an Irish traveller, b. at Dublin, and murdered in an attempt to reach Timbuctoo, 1836.

DAVIDSON, LUCRETIA MARIA, an American poetess, b. at Plattsburg, 1808. It is said that at the remarkably early age of 4 years she began to write verses, and as she grew up, she continued to cultivate her fine poetical talents. In 1823 she finished her longest poem, *Imir Khan*, which, together with her other productions, was published, after her death, by Miss Sedgwick, and spread her name far and wide. D. of consumption, 1825.

DAVIDSON, MARGARET MILLER, an American poetess, sister of the above, b. in 1823. She began to write at the age of 6 years. Her poems even surpass those of her sister in fervor of sentiment, and flight of imagination. They were published after her decease, with a memoir written by Washington Irving, and met with warm applause both in America and England. D. of consumption, 1838.

DAVIDSON, in Indiana, a village of Harrison co., about 205 m. S. of Indianapolis.

DAVIDSON, or DAVIDSON, in Michigan, a village of Genesee co., about 10 m. S.E. of Flint.

DAVIDSON, in N. Carolina, a W. central co.; area, abt. 630 sq. m. Rivers. Yadkin, which bounds it on the W., and Abbott's and other creeks. Surface, generally hilly; soil, fertile. Min. Gold, &c. Cap. Lexington. Pop. (1890) 21,702.

DAVIDSON, in N. Carolina, a post-village of Mecklenburg co., about 120 m. W. by S. of Raleigh. Here is located Davidson College, founded in 1838.

DAVIDSON, in Pennsylvania, a township of Sullivan co.

DAVIDSON, in South Carolina, a post-office of Hampton county.

DAVIDSON, in Tennessee, a N. central co.; area, about 750 sq. m. Rivers. Cumberland, Harpeth, and Stone. Surface, undulating; soil, fertile. Min. Limestone. Cap. Nashville. Pop. (1890) 108,174.

DAVIDSON, Mount. See MOUNT DAVIDSON.

DAVIDSONITE, n. (*Mtn.*) Same as BERYL, (q. v.).

DAVIDSON'S CREEK, in Texas, traverses Burleson co., and enters the Yegua creek.

DAVIDSON'S FERRY, in Pennsylvania, a former post-office of Fayette co.

DAVIDSON'S RIVER, in N. Carolina, a post-village, cap. of Transylvania co.

DAVIDSONVILLE, in Maryland, a post-village of Anne Arundel co., about 12 m. W. of Annapolis.

DAVIDSVILLE, in Pennsylvania, a post-village of Somerset co., about 18 m. N. by E. of Somerset.

DAVIE, in N. Carolina, a W. central co. Area, about 250 sq. m. Rivers. The Yapkin, and Hunting Creek. Surface, elevated and broken. Cap. Mocksville. Pop. (1890) 11,621.

DAVIES, in Minnesota, a post-office of Otter Tail co.

DAVIES, CHARLES, LL.D., an eminent American mathematician, b. in Litchfield co., Conn., 1798. He was educated at West Point, where, in 1823, he was appointed professor of mathematics. He subsequently held a similar position in the university of New York, and at Columbia Coll. His many works on arithmetic, mathematics, &c., are too widely known and appreciated to need mention here. D. 1876.

DAVIES, in California, a village of Yolo co., about 10 m. W. by S. of Sacramento.

DAVISS, in Indiana, a S.W. co.; area, about 423 sq. m. Rivers. East and West forks of White River. Surface, level; soil, generally fertile. Min. Bituminous coal. Cap. Washington. Pop. (1897) abt. 33,000.

DAVISS, in Kentucky, a N.W. co., bordering on Indiana. Area, 550 sq. miles. Rivers. Ohio, and Green. Surface, nearly level; soil, fertile. Min. Coal. Cap. Owensborough. Pop. (1890) 33,120.

DAVISS, in Missouri, a N.W. co. Area, about 576 sq. m. Rivers. Grand river and the Cypress; Big and Honey creeks. Surface, undulating; soil, fertile. Cap. Gallatin. Pop. (1890) 20,456.

Davila (*da'vee-la*), ENRICO CATTARINO, an Italian historian, born 1576. He wrote the celebrated *History of the French Civil Wars*, a work which has been translated into many languages. Assassinated, near Verona, 1631.

DAVIS, THOMAS, an Irish poet, born at Mallow, 1814. He was author of many exquisite lyrics and ballads, an

edition of which was published at New York, in 1860. D. 1845.

Davis, CHARLES HENRY, an American mathematician, b. in Boston, 1807. He entered the U. S. navy in 1823, and was commissioned commander in 1854. He made several coast-surveys, partly in conjunction with Prof. A. D. Bache, and partly with others. He wrote *Memoir upon the Geological Action of the Tidal and other Currents of the Ocean*; and *The Law of Deposit of the Flood-Tide*. He is also one of the founders of the *American Nautical Almanac*. D. 1877.

Davis, JOHN, an eminent English navigator, was b. near Dartmouth in Devonshire, and went to sea at an early age. In 1585 he was sent out with two vessels to find a N.W. passage, when he discovered the straits which still bear his name. He afterwards explored the coasts of Greenland and Iceland, proceeding as far as Lat. 73° N. In 1591 he went, as second in command, with Cavendish, on his unfortunate voyage to the South Seas. After this he made five voyages to the East Indies, on the last of which he was killed in an engagement with some Japanese pirates off the coast of Malacca, 1605. He wrote an account of his voyages, and invented a quadrant.

Da'vis, in *Illinois*, a post-village of Stephenson co., abt. 14 m. E. of Freeport.

Da'vis, in *Indiana*, a township of Fountain county, bounded N. by the Wabash river.

—A township of Stark co.

Da'vis, in *Iowa*, a S.E. co., bordering on Missonri; area, about 480 sq. m. Rivers, Fox River, and Soap Creek, and also the head-waters of the Wyaconda and Fabius rivers. Surface, Undulating; soil, Fertile. Cap. Bloomfield. Pop. (1897) abt. 17,200.

Da'vis, in *Kansas*, a N.E. central co., now called GEARY co.; area, about 500 sq. m. It is drained by the Kansas and Republican rivers.

Da'vis, in *Texas*, a co., formerly called CASS, (q. v.).

Da'vis, in *Utah*, an E. co., bordering on the Great Salt Lake; area, abt. 550 sq. m. Cap. Farmington. Pop. (1890) 7,480.

Da'visborough, in *Georgia*, a village of Washington co., about 122 m. N.W. of Savannah.

Da'visburgh, in *Michigan*, a post-village of Oakland co., about 15 m. N.W. of Pontiac.

Da'vis Corners, in *Iowa*, a P. O. of Howard co.

Da'vis, or DAVIS'S CREEK, in *Missouri*, enters Current river from the right at Van Buren in Ripley co.

Da'vis Creek, in *Alabama*, a post-office of Fayette co.

Da'vis Inlet, a bay formed by the Atlantic on the E. coast of Labrador, about 80 m. S.E. of Nain. Lat. 55° 37' N., Lon. 60° 20' W. It extends 57 m. inland, averaging 6 m. in breadth.

Da'vis Junction, in *Illinois*, a post-office of Ogle co.

Da'vis Mills, in *Louisiana*, a post-office of Vernon par.

Da'vis' Mills, in *S. Carolina*, a village of Barnwell dist., about 60 m. S.W. of Columbia.

Da'vis' Mills, in *Tennessee*, a village of Bedford co.

Da'vis' Mills, in *Virginia*, a post-village of Bedford co., about 130 m. W. by S. of Richmond.

Da'vison, in *Michigan*, a post-township of Genesee county.

Da'visonville, in *Indiana*, a post-village of Jasper co., on the Iroquois River, about 100 m. N.N.W. of Indianapolis.

Da'vis' Store, in *Virginia*, a post-office of Bedford co.

Da'vis' Strait, between Greenland and British N. America, connects Baffin's Bay with the Atlantic Ocean. Length abt. 750 m., and from 220 to 600 m. wide.

Da'viston, in *Georgia*, a village of Talbot co., about 42 m. E.N.E. of Columbus.

Da'viston, in *Indiana*, a post-village of Clay co., abt. 60 m. S.W. of Indianapolis.

Da'vistown, in *Pennsylvania*, a post-village of Green co., abt. 220 m. W. by S. of Harrisburg.

Da'visville, in *Indiana*, a post-office of Shelby co.

Da'visville, in *Michigan*, a post-office of Sanilac co.

Da'visville, in *Pennsylvania*, a post-village of Bucks co., abt. 13 m. S.S.E. of Doylestown.

Da'visville, in *Rhode Island*, a P. O. of Washington co.

Da'visville, in *W. Virginia*, a post-office of Wood co.

Da'vit, n. (*Naut.*) A spar, with a roller or sheave at its end, used for fishing the anchor;—called technically, a fish-davit.

—(*pl.*) Pieces of timber or iron, with sheaves or blocks at their ends, projecting over a vessel's sides or stern, for hoisting and lowering the boats. (Sometimes called boat-davits.)

Da'vite, n. (*Min.*) Same as ALUNOGEN, q. v.

Davoust, LOUIS NICOLAS, (dā-vōst') a celebrated marshal of France, b. at Annonx, in 1770.

He studied with Napoleon at Brienne, and entered the army in 1785. He took sides with the revolutionists, fought several battles under Dumouriez, and was made a brigadier-general in 1793. He accompanied Napoleon in his Italian campaigns and in his expedition to Egypt. In 1804 he was made a marshal of the empire.

The victories of Ulm and Austerlitz were mainly due to him, as also those of Eckmühl and Wagram. For these meritorious services he was created Duke of Auerstadt and Prince of Eckmühl. He joined the Russian expedition, and was wounded at Borodino. After the retreat from Moscow he defended Hamburg against all the forces of the allies, and surrendered only after the peace of 1814. When Napoleon returned from Elba,

D. was appointed his minister of war. After the battle of Waterloo he lived in retirement until 1819, when he took his seat in the Chamber of Peers. D. in 1823.

Davy, (da've.) SIR HUMPHRY, BART., a celebrated English chemical philosopher, b. at Penzance, 1778. He was apprenticed to a surgeon, and at the age of 20 became assistant at the Clifton institution, which had been established by Dr. Beddoes to determine the influence of different gases in the treatment of diseases. It was here that he discovered the remarkable action of nitrous oxide, or laughing-gas, on the system, and thus paved the way to the application of those means now in use for alleviating pain in severe operations. In 1801 he was appointed assistant lecturer at the Royal Institution, London, where he speedily acquired great popularity and fame. In 1806 he made the important discovery that the combinations and decompositions by electricity are referable to the law of electrical attraction and repulsion; thus demonstrating the intimate connection between electricity and chemistry. His most brilliant discovery was, however, that of (in 1807) the composition of the alkalies, which he proved to be combinations of oxygen with metals. In 1810 he found chlorine to be a simple body, in accordance with the view of Scheele announced in the previous century. His other discoveries were that of the Safety-Lamp, exhibiting a fine example of inductive reasoning; and his mode of preventing the corrosion of copper sheathing by the protecting influence of zinc. Sir Humphry Davy was distinguished by a poetical imagination, which would undoubtedly have made him a poet if his time had not been absorbed by science; and, as evidence of his descriptive powers, he has left behind him two works, *Salmonia*, and *The Last Days of a Philosopher*, which are not surpassed in their peculiar department by any compositions in the English language. D. at Geneva, 1829.

Davy Jones, n. (*Naut.*) A term for the devil;—used by sailors.

Davy Jones' Locker, n. (*Naut.*) The ocean;—a metaphor used by seamen to denote the burial-place of those who die on shipboard.

Davy Safety-Lamp, n. (*Mining.*) A lamp invented by Sir Humphry Davy to obviate the fearful explosions liable to take place in coal-mines from carrying naked lights into places containing fire-damp, a light carbureted hydrogen. This great philosopher found, that, when a lamp is surrounded by wire gauze, the meshes of which were under the 1-40th of an inch, any explosions taking place from the passage of fire-damp into the lamp, are not communicated to the gaseous mixture outside; in fact, that the heat of the flame passing through the wire-net was so much diminished as to be harmless. This may be readily demonstrated by bringing a piece of fine wire-net down on the flame of a candle, when it will be found that the flame will not pass through it. The former reliance upon the safety of the D. lamp, has recently been proven to be a mistake.

Da'vyne, n. (*Min.*) Same as NEPHELITE, q. v.

Da'vyt, n. (*Min.*) Same as DAVITE, and ALUNOGEN, q. v.

Dawdle, v. n. [*See DANDLE.*] To waste one's time while doing anything; to loiter; to trifle; to go about a thing leisurely.

—v. a. To consume by trifling or frivolous occupations; as, to dawdle away the best part of one's time.

—n. A trifter; one who dawdles, or takes his time about anything.

Daw'dier, n. A person who wastes his time heedlessly; a trifter; an idler; a poco-curante.

Daw'ish, a. After the manner of a daw; like a daw.

Dawk, n. [*Hind. dāk.*] See DAK.

Dawk, n. (*Carp.*) A cant word used by carpenters to denote a hollow, rupture, or incision in boards or thick-stul.

—v. a. To cut or distinguish with a groove or incision.

Daw'lish, a town of England, co. Devon; pop. 12,236.

Dawn, n. In India, a copper coin equivalent to 3 annas, and 5 pie, or 1-40th of a rupee.

Dawn, v. n. [*A. S. dagain*, to become day, from *dag*, day; *L. Sax. dagen*; *Ger. tagen*.] To begin to grow light in the morning; to grow light; to glimmer luminously, as the daybreak.

"Dawning day new comfort hath inspired."—*Shaks.*

—To begin to open, blossom, or expand; to glimmer obscurely; to begin to open or appear; as, a truth dawns upon the mind.

"Life awakes, and dawns at every line."—*Pope.*

—n. The break of day; the first appearance of light in the morning; cock-crow; the TWILIGHT, q. v.

—First opening or expansion; beginning; rise; first appearance or promise; first incipient beams of light or perception; as, the dawn of life.

Dawn, in *Missouri*, a post-village of Livingston co., abt. 42 m. N.N.E. of Lexington.

Dawn, in *Ohio*, a post-office of Darke co.

Dawn, in *Georgia*, a N. co.; area, about 200 sq. m. It is intersected by the Etowah River. Surface, uneven; soil, generally good. Cap. Dawsonville. P. (1890) 5,612.

—A town, cap. of Terrell co., about 70 m. S.S.E. of Columbus. Has car factory and is the seat of the South Georgia Male Institute. Pop. (1897) abt. 2,500.

Dawn, in *Nebraska*, a central co.; area, abt. 1,450 sq. m. The Platte River washes its S. border, and it is also drained by the S. Branch of the Loup Fork. Surface, generally level; soil, fertile. Pop. (1897) abt. 12,500.

Cap. Lexington.

Dawn, in *Pennsylvania*, a post-village of Fayette co., abt. 50 m. S.E. of Pittsburg.

Dawn, in *Texas*, a S.W. co.; area, abt. 900 sq. m. It is traversed by the Nueces river.

Daw'son Island, a considerable island of Terra del

Fuego, in the middle of the Straits of Magellan. Lat. 54° S., Lon. 70° 30' W.

Daw'son's Station, in *Pennsylvania*, a post-office of Fayette co.

Daw'sonville, in *Georgia*, a post-village, cap. of Dawson co., abt. 48 m. N.E. of Marietta.

Daw'sonville, in *Maryland*, a post-village of Montgomery co., abt. 60 m. W. by N. of Annapolis.

Daw'sonville, in *Virginia*, a post-village of Greene co.

Dax, a town of France, dep. Landes, on the Adour, 25 m. N.E. of Bayonne; pop. 9,469.

Day, n. [*A. S. dag, dag, dah*; *Fris. di, dei, dach*; *D. dag*; *Ger. and O. Ger. tag*; *Icel. dagr*, day, light; *Goth. dags*; *Armor. deiz, dez*; *Lat. dies*; *All. dig, dyeg*; *Hind. dewus*, from Sansk. *div, dank*, to shine, or *dah*, to turn.] The time between the rising and the setting of the sun; the time from noon to noon, or from midnight to midnight;—hence, light, sunshine.

"The day is done, and the darkness falls."—*Longfellow.*

—Time specified; any period of time distinguished from other time; age; time with reference to the existence of a person or thing; as, men of former days.

"Sweet childish days, that were as long As twenty days are now."—*Wordsworth.*

—The contest of a day; battle, or day of combat or victory as, "to win the day."—*Dryden.*

—Anniversary; the same day of the month in any future year; as, to celebrate a birth-day.—An appointed or fixed time; as, a seven days' bill.

(*Astron.*) In its most common acceptation, day denotes the interval of time during which the sun remains above the horizon; and is opposed to *night*, which denotes the time the sun is below the horizon. In this sense it is sometimes called the *artificial day*. But the term *day* is also generally used to denote the time in which the earth makes a complete revolution with respect to the celestial bodies; and consequently expresses different intervals, according as the body with which the earth's rotation is compared is fixed or movable.—The *Astronomical* or *Solar day*, called also the *Apparent day*, is the time that elapses between two consecutive returns of the same terrestrial meridian to the centre of the sun.

Astronomical days are not of equal length, for two reasons: 1st, the unequal velocity of the earth in its orbit in consequence of which the apparent daily motion of the sun is greater in winter than in summer; and 2d, the obliquity of the ecliptic, in consequence of which the sun's apparent daily motion in right ascension (that is in the plane of the earth's equator) is less at the equinoxes than at the tropics. The astronomical day commences at noon, and is counted on through the twenty-four hours.—The *Civil day*, or *Mean solar day*, is the time employed by the earth in revolving on its axis, as compared with the sun, supposed to move at a mean rate in its orbit, and to make 365.2425 revolutions in a mean Gregorian year. In this mode of reckoning time, the days are all of the same length; and noon, or any given hour of the civil day, sometimes precedes and sometime comes after apparent noon, or the corresponding hour of the astronomical day. Most nations, at least in modern times, have agreed in placing the commencement and termination of the civil day at mean midnight.—The *Sidereal day* is the time that elapses between two successive culminations of the same star. This interval of time has always within historical memory remained of the same invariable length, as is proved by the most ancient astronomical observations. It is divided into 2 sidereal hours; and these are again subdivided into sidereal minutes and seconds. This mode of reckoning time during the day, is now universally adopted by astronomers in their observatories. See TIME.

(*Law.*) A day in law includes the whole twenty-four hours, without reference to light or darkness. Unless there is some agreement stating otherwise, an obligation to pay on a certain day is discharged if the money is paid before twelve o'clock at night. A *lawful day* is a day on which a writ can be executed without legal impediment.

All days, except Sundays and fast-days appointed by government, are lawful days. Criminal warrants, however, can be granted and executed both on Sundays and fast-days. All contracts entered into by persons in their ordinary calling are void if made on a Sunday.—*Days of grace.* When a bill becomes due, in general three days are allowed for its payment beyond the time marked on the face of it. These additional days are allowed by mercantile custom, and protected by the laws in all the States; they are called *days of grace*. When the third day of grace falls on a Sunday or fast-day, the bill is considered due the day before.

From day to day, without certainty of continuance.—*Day by day*, daily; every day.—*Day's-work.* (*Naut.*) The daily reckoning of the distance traversed by a ship taken from noon to noon.—*One day*, or *one of these days*, on any particular day to come;—generally implying an early date.—*To-day*, this day; on the day of the time being.

Day, in *New York*, a post-village and township of Saratoga co., abt. 50 m. N. by W. of Albany.

Dayaks, DAYAKS, (dā'yaks,) the collective appellation of several native tribes of the island of Borneo. They are scattered over the entire island, but are principally to be found in the South. Though an industrious people and skilled in many pursuits of civilized life, they still cling to various barbarous customs, such as human sacrifices. Pop. abt. 1,800,000, mostly of Malay origin.

Day-anville, in *New York*, a village of Lewis co., abt. 140 m. N.W. of Albany.

Day-bed, n. A bed or couch for repose during the day.

Day-book, n. (*Com.*) A book in which merchants traders, &c., make entries of their daily business transactions; a journal of accounts.

Fig. 775. — DAVITS.

Sir Humphrey Davy

1778-1829

Day Book, in *N. Carolina*, a post-office of Yancey co.

Day-break, *n.* The dawn, or first appearance of light in the morning.

Day-coal, *n.* (*Mining*.) That stratum of coal which is found nearest the surface.

Day-dream, *n.* A vision to the waking senses; a reverie.

Day-flower, *n.* (*Bot.*) A name commonly applied to many species of the genus *Commelyna*, order COMMELYNACEÆ, *q. v.*

Day-fly, *n.* (*Zoöl.*) See EPHEMERA.

Day-labor, *n.* Labor done by day; — in contradistinction to night-work; labor paid for by the day.

Day-laborer, *n.* One who performs labor paid for by the day.

Day-light, *n.* The light of the day; — in contradistinction to moonlight, starlight, or artificial light.
"Will you murder a man in plain daylight?" — *Dryden*.
To burn daylight. To keep a lamp or candle burning during the day; — hence, to do something needless and unnecessary.

Day-lily, *n.* (*Bot.*) See HEMEROCALLIS.

Day-maid, *n.* A contraction of DAIRY-MAID, *q. v.*

Day-mare, *n.* (*Med.*) A species of incubus occurring during wakefulness.

Day-net, *n.* A net used for catching small birds.

Day-peep, *n.* Peep of day; daybreak; early morning. (*Poetical*.)

Day-sight, *n.* (*Med.*) A condition of the eye in which vision is clear in the day, but dull and confused at night. It is said to be common in some parts of Russia. In Canada it is termed *night-blindness*, and is attributed to the effect of snow on the eyes.

Days-man, *n.* One who sits as judge on a day fixed or appointed; an umpire or arbitrator; a mediator.

Day-spring, *n.* The dawn; the opening of the day.

Day-star, *n.* The star that ushers in the day; Lucifer, the morning-star.
"Than she, the day-star should not brighter rise." — *Ben Jonson*.
The sun, as the luminary of day. (*Poetically* used by Milton.)

Day's Store, in *Pennsylvania*, a P. O. of Greene co.

Daysville, in *Connecticut*, a village of Killingly township, Windham co., abt. 45 m. E. by N. of Hartford.

Daysville, in *Illinois*, a post-village of Ogle co., on Rock River, abt. 174 m. N. by E. of Springfield.

Daysville, in *Kentucky*, a post-office of Todd co.

Daysville, in *New York*, a post-office of Oswego co.

Daysville, in *Virginia*, a post-office of Loudoun co.

Dayton, in *Alabama*, a twp. and village of Marengo co., abt. 76 m. S. of Tuscaloosa.

Dayton, in *California*, a village of Butte co., abt. 22 m. W. by N. of Oroville. The name of the post-office is Greenland (*q. v.*).

Dayton, in *Colorado*, the former cap. of Lake co.

Dayton, in *Illinois*, a village of Adams co., abt. 35 m. W. by N. of Springfield.

A post-township of La Salle co.

Dayton, in *Indiana*, a post-village of Tippecanoe co., abt. 10 m. S.E. of La Fayette.

Dayton, in *Iowa*, a village of Appanoose co., abt. 27 m. S.W. of Ottumwa.

A post-township of Bremer co., abt. 6 m. S.W. of Lansing.

A township of Chickasaw co.

A village of Fremont co., abt. 245 m. W.S.W. of Iowa City.

A township of Iowa co.

A township of Webster co.;

A village of Webster co. See WEST DAYTON.

Dayton, in *Kansas*, a post-office of Dickinson co.

A village of Shawnee co., abt. 11 m. S.S.E. of Topeka.

Dayton, in *Maine*, a township of Aroostook co.

A village and township of York co., on the Saco River, abt. 18 m. S.W. of Portland.

Dayton, in *Maryland*, a post-office of Howard co.

Dayton, in *Michigan*, a post-village of Berrien co., abt. 31 m. W. by S. of Detroit.

A township of Newaygo co.

A township of Tuscola co.

Dayton, in *Minnesota*, a post-township of Hennepin co., on the Mississippi River, abt. 4 m. W. of Anoka and 2 m. N.N.W. of Minneapolis.

A village of Wright co., on the Mississippi River, about 2 m. N.N.W. of St. Anthony.

Dayton, in *Missouri*, a post-village of Cass co., abt. 50 m. S.S.E. of Kansas City.

Dayton, in *Nebraska*, a village of Nemaha co., on the little Nemaha river, about 18 m. S. S. W. of Nebraska City.

Dayton, in *Nevada*, a post-town, cap. of Lyon co., on the Carson River, 12 m. E. S. E. of Virginia City.

Dayton, in *New Jersey*, a post-office of Middlesex co., about 20 m. N. E. of Trenton.

Dayton, in *New York*, a post-village of Dayton township, Cattaraugus co., about 447 m. W.N.W. from New York. *Manf.* Staves. Pop. of twp. (1897) about 2,000.

Dayton, in *North Carolina*, a post-office of Durham co.

Dayton, in *Ohio*, one of the most important cities of the State, cap. of Montgomery co., at the confluence of the State and Great Miami rivers, 66 m. N.N.E. of Cincinnati. *D.* is regularly laid out on the E. bank of the Great Miami; its streets are large, and lined with generally tasteful private residences. Some of the public buildings are magnificent, and among them must be mentioned the County Court-House, planned on the model of the Parthenon, and built of white marble quarried in the neighborhood. *D.* is connected by railroads and the Erie Canal with all parts of the Union; its trade is very large, and it contains many important manufac-

tories. For many years its importance and trade have been steadily increasing. Pop. (1880) 38,677; (1890), 61,225; (1897), about 76,000.

Day-ton, in *Oregon*, a post-village of Yam Hill co., on the Yam Hill river, about 21 miles N. of Salem.

—A township of Yam Hill co.

Dayton, in *Pennsylvania*, a post-village of Armstrong co., about 18 miles E.N.E. of Kittanning.

Dayton, in *Virginia*, a post-village of Rockingham co., about 20 miles N.N.E. of Staunton.

Dayton, in *Wisconsin*, a post-village of Green co., on Sugar river, about 20 miles S.S.W. of Madison.

—A township of Green Lake co., about 30 miles W. of Fond du Lac; — now merged in neighboring townships.

—A township of Richland co., about 5 miles W. of Richland Centre.

—A township of Waupaca co., 5 m. S. W. of Waupaca.

Dayton Bayon, in *Arkansas*, a village of Desha co.

Dayton Centre, in *Iowa*, a former post-office of Chickasaw co.

Dayton City, in *Mo.* a former P. O. of DeKalb co.

Day-work, *n.* Work done or imposed, and paid for by the day.
"Ere prime thou hast th' imposed day-work done." — *Fairfax*.

Daze, *v. a.* [*A. S. dwæz*, dull, stupid; *D. dwaas*, foolish, silly; Scot. *dozen*, to stupefy, to benumb.] To dazzle; to overpower by too brilliant a light; to confuse.

—*n.* (*Mining*.) A glittering stone found in tin and lead mines.

Dazzle, *v. a.* [*As if dwæzle*, from *A. S. dwæz*. See DAZE.] To stupefy, confound, or overpower with excess of light; to hinder distinct vision by intense light; to strike or surprise with a too vivid light; as, the sun dazzles the eyesight. — To dim, blind, or bewilder by lustre, splendor, or brilliancy; to awe or captivate the senses by unwonted vividness of display; as, a dazzling meteor.

—*v. n.* To be overpowered with excess of light; to become temporarily blinded. — To shine with overpowering lustre; to command attraction and admiration by superior brilliancy.
"That hath so well been taught her dazzling fence." — *Milton*.

—*n.* Splendor or brilliancy of light; lustre.

Dazzling, *n.* (*Med.*) A momentary disturbance of sight, occasioned either by the sudden impression of too powerful a light, or by some internal cause — as plethoria.

Dazzlingly, *adv.* In a dazzling manner.

De, a Latin prefix signifying a sundering, a going from; as in *decease*. Sometimes it denotes a negative, and at others intensifies the sense, as in *destruction*.

Deacon, (*de'kon*), *n.* [*Lat. diaconus*; Gr. *diakonos*, from *diakono*, to serve — *dia*, and *konō*, from *konis*, dust, to raise a dust, as by swift running, to be busy, to hasten.] (*Ecl.*) A person in the lowest degree of holy orders. *D.* were first appointed by the apostles to superintend the daily ministrations to the poor, in 31, (Acts vi. 1-6.) The original number was 7; viz., Stephen, Philip, Prochorus, Nicanor, Timon, Parmenas, and Nicolas. — In the Roman Catholic Church, the *D.* assists the priests in the celebration of mass; he may preach and baptize with the permission of the bishop; but he is bound to celibacy. In the Church of England, he is allowed to exercise all priestly functions, except consecrating the Eucharist, and pronouncing absolution. The Presbyterians give this name to officers elected by the church to distribute the bread and wine to communicants.

— In Scotland, an overseer of the poor. — Also, the master of an incorporated company; as, the *deacon* of a trade guild.

Deaconess, *n.* (*Ecl.*) A female deacon in the Primitive Church. The order has been abolished in the Latin Church since the 11th century.

Deaconhood, *n.* Office of a deacon; deaconship.

Deaconry, **Deaconship**, *n.* Office, dignity, or ministry of a deacon.

Dead, (*ded*), *a.* [*A. S. dead*; Ger. *tot*; Goth. *dauths*. See DIE.] Deprived of life; exanimated; put to death; reduced to a defunct state; as, *dead matter*. — In a state of spiritual death; void of grace; lying under the power of sin; as, a *dead conscience*. — Without vegetable life; destitute of the power of vegetation; as, a *dead branch* — Imitating or resembling death; without apparent sense or vitality; breathless; as, a *dead sleep*. — Perfectly still; motionless; inactive; as, a *dead calm*.
"They cannot bear the dead weight of unemployed time." — *Locke*.

— Empty; vacant; unemployed; useless; unprofitable; unproductive; as *dead stock* in trade. — Dull; gloomy; without animation; frigid; obtuse; spiritless; tasteless; as, a *dead color*, a *dead liquor*. — Unvaried; heavy to the sight; without change; monotonous; as, a *dead wall*. — Perfect; complete; unerring; sure as death; as, a *dead shot*.

—*adv.* Thoroughly; completely; entirely; — used colloquially; as, to be *dead tired*.

—*n.* State of the dead, or death; the time when there is a deathlike stillness, or a deep gloom; depth, as in the midst of winter, or of night. — (*pl.*) Persons who are defunct; those no longer living; the departed.

Dead-ahead, (*Naut.*) Directly in front; heading; as, a wind *dead-ahead*.

Dead-born, *n.* Born lifeless; still-born; as, a *dead-born* infant.
"All, all but truth, drops dead-born from the press." — *Pope*.

Dead Color, *n.* (*Paint.*) A color is said to be dead when it has no gloss upon it; this is generally effected by the use of less oil and more turpentine than in ordinary paints.
Dead coloring, is the first layer of colors, consisting

usually of some shade of gray. Its design is to receive and preserve the finishing colors; and it is called *dead* because it is not seen when the work is completed.

Dead-door, *n.* (*Ship-building*.) One of the doors fitted to the outside of the quarter-gallery doors, in case the quarter-gallery should be carried away.

Dead-drunk, *a.* So drunk as to be incapable of self-exertion, or assistance.

Deaden, (*ded'n*), *v. a.* [*D. dooden*; *A. S. adeadan*.] To deprive of a portion of vigor, force, or sensation; to abate vigor or action; to blunt; as, *deadened* faculties.
"By a soft answer *deaden* their force by degrees." — *Bishop Burnet*.

— To retard in motion; to reduce the speed or momentum of; as, to *deaden* the crankness of a ship. — To make rapid, dull, inert, or spiritless; as, to *deaden* the volatility of certain liquors. — To remove glaring tints, glossiness, or undue prominence of colors; as, to *deaden* lights in a picture.

Dead-eye, *n.* (*Naut.*) A circular block of wood, with three holes through it, for the lanyards of rigging to reeve through without sheaves, and with a groove round it for an iron strap.

Dead-flat, *n.* (*Naut.*) One of the bends of a ship, amidships.

Dead-freight, *n.* (*Mar. Law*.) The unsupplied part of a cargo.

Dead-ground, *n.* (*Fortif.*) Ground which cannot be seen or defended from behind the parapet of the work.

Dead-head, *n.* One who travels with a free ticket on railroads, &c.; or, one whose admission to a place of amusement, &c., is franked by the proprietor. (*Colloquial*.)

Dead-hearted, *a.* Having a faint, slow heart.

Dead-heartedness, *n.* Want of energy and courage; faint-heartedness.

Dead-heat, *n.* (*Sporting*.) A term used to denote a tie between the running of two or more horses, in which the heads of the animals are parallel when passing the winning post; as, they ran a *dead-heat*.

Dead-ish, *a.* Resembling what is dead; inert; dull.

Dead Lake, in *New York*, in the S.W. part of a ranklin co. Length about 5 m.

Dead Language, *n.* A language that is no longer spoken by any people or nation, as the Hebrew, Latin, &c., in contradistinction to such as are so spoken, and are known as *living languages*.

Dead-letter, *n.* A letter which lies for a certain period uncalled for at the post-office, and is then sent to the general post-office to be opened, and, in most cases, returned franked to the writer. — That which has become obsolete by default of usage, or by non-observance; as, the regulation is now a *dead-letter*.

Dead-letter Office, *n.* That department of a chief or general post-office devoted to the reception, return, or destruction of dead-letters.

Dead-level, *n.* A perfect or complete level.

Dead-lift, *n.* A lift requiring main strength, in extreme exigency.
"And have no power at all, nor shift.
To help itself at a *dead-lift*." — *Hudibras*.

Dead-light, *n.* (*Naut.*) A port, or strong wooden shutter, with a glass bull's-eye in the centre, made to suit a cabin window, in which it is fixed, to prevent the water from entering a ship in a storm.

Dead-lihood, *n.* The state of dead or defunct persons.

Deadliness, *n.* Quality of being deadly or antagonistic to life.

Dead-lock, *n.* A lock having no spring-catch. — A complete stand-still caused by some obstruction or counteracting influence; as, matters are at a *dead-lock*.

Dead-ly, *a.* That may cause or occasion death; mortal; fatal; destructive.
"Shot from the *deadly* level of a gun." — *Shaks*.

— Sanguinary; murderous; implacable; as, a *deadly* wrong.

"The Numidians are *deadly* enemies unto the Turks." — *Knolles*.

—*adv.* In a deadly manner; mortally; as, "a *deadly* wounded man." — *Ezek.* xxx. 24.

— In a manner resembling death; as, *deadly* pale.
"So coldly sweet, so *deadly* fair." — *Byron*.

— Destructively; implacably; murderously.

— Exceedingly; extremely; decidedly.
"Mettled schoolboys . . . though *deadly* weary." — *Lord Orrery*.

Dead-ly-carrot, *n.* (*Bot.*) See THAPSTA.

Dead-ly-nightshade, *n.* (*Bot.*) The *Atrapa Bella-donna*. See ATROPA.

Dead man's-eye, *n.* (*Naut.*) A small block or pulley, with many holes, but no shivers for running lanyards.

Dead man's Head, *n.* promontory on the coast of Cornwall, in the English Channel. Lat. 50° 30' N., Lon. 4° 48' W.

Dead-march, *n.* (*Mus.*) A piece of solemn military music, played at the interment of the dead; as, the "*Dead-march* in Saul."

Dead-ness, *n.* State of being dead; want of natural life, vital power, or animation; coldness; frigidity; rapidness; flatness; barrenness; indifference; mortification of the natural desires; as, the *deadness* of a tree, or human limb; *deadness* of society; *deadness* of eyesight; *deadness* of spirits.
"Your gloomy eyes betray a *deadness*." — *Lee*.

Dead-nettle, *n.* (*Bot.*) See LAMNUM.

Dead-pay, *n.* (*Mil.*) A soldier's pay drawn after his demise, by fraudulently keeping his name on the muster-roll.

Dead-plate, *n.* (*Mech.*) A flat iron plate, sometimes fitted before the bars of a furnace for the purpose of allowing the bituminous coal to assume the character of coke before it is thrust back upon the fire.

Dead-pledge, *n.* See MORTGAGE.

Dead'-reckoning, n. (*Naut.*) A reckoning kept by observing a ship's courses and distances by the log, to ascertain her position, making due allowance for lee-way.

Dead'-rising, n. (*Naut.*) Those parts of a ship's floor, throughout her entire length, where the floor-timber is terminated upon the lower futtock. (Sometimes called *rising-line*.)

Dead River, in Maine, rises in Franklin co., and enters Kennebec River about 20 m. below Moosehead Lake.

Dead River, in Maine, a post-office of Somerset co.

Dead River, in New Hampshire, rises in Coos co., and joins the Margalloway River near the E. boundary of the State.

Dead-rope, n. (*Naut.*) A rope which does not run through any block or pulley.

Deads, n. pl. (*Mining.*) The earth, or other substances, which enclose the ore on every side.

Dead Sea, (anc. *Lacus Asphaltites*, lake of bitumen,) called by the Arabs *Bahr Lout*, or "Sea of Lot," a lake of Palestine, in Lat. 31° 10' to 31° 47' N., Lon. 35° 30' in its centre, abt. 18 m. E. of Jerusalem. It is about 35 m. long, with an average breadth of from 10 to 12. Five cities, including Sodom and Gomorrah, situate on this spot, were, according to Scripture, all swallowed up, to satisfy divine vengeance for their iniquity. The neighborhood of the lake abounds with volcanic products. The depth of the lake is about 220 fathoms, and its ordinary surface is 1,381 feet below that of the Mediterranean. The properties of the waters of the *D. S.* are remarkable and well-known. They are: 1. Great specific gravity, amounting to 1.22, or one fourth greater than pure water, so that many substances float in it which sink at once in a pond, or the sea; and, 2. Intense saltiness, nearly seven times that of the sea, but varying extremely at different seasons, being sometimes only about 22 per cent., and at other times more than 44 per cent. of the whole. About 24½ per cent. may be considered the average proportion by weight. The chlorides of sodium, magnesium, and calcium are the most abundant salts, and there is also some chloride of potassium. — From the E. side, some 8 m. from the S. end, a low promontory projects three fourths of the way towards the W. cliffs, and sends up a point 5 m. towards the N. Below this point the lake becomes suddenly shallow, the southern bay not averaging more than 12 or 15 feet in depth. This low part is believed to cover the sites of the destroyed cities. The *D. S.* has no perceptible outlet, and the waters poured into it in the N. by the Jordan, are probably evaporated by the intense heat of the unclouded sun. It is thought by some that the northern and principal part of the bay was the product of some convulsion of nature long before that which destroyed Sodom and formed the south bay; that the Jordan at first flowed into the Red Sea through the remarkable crevasse which extends from its sources to the gulf of Akabah; and that at some period beyond the reach of history, its bed and valley sunk down to their present level and formed the *D. S.* Lieut. Lyuch, of the United

Fig. 776.

THE DEAD SEA, AND THE CONVENT OF SANTA SABA, ON THE BROOK KEDRON.

States navy, who surveyed the sea of Sodom in 1848, discovered, in landing, a ravine in the bed of the sea, corresponding to the bed of the Jordan in its valley N. of the sea. It has been affirmed that no animal can live in the waters of this lake; nevertheless, in a message addressed to the French Academy of Sciences, Mr. Farrell, who accompanied the Duke of Luynes to Palestine, in 1865, affirms that he "distinctly saw a number of small fish, that seemed to thrive very well."

Dead-set, n. A fraudulent conspiracy formed against a player at cards or dice.

—(*Sports.*) The rapt or fixed attitude assumed by a pointer when marking its game.

—Any resolute or unflinching effort: as, to make a *dead-set* at an heirress.

Dead-shot, n. A perfect, never-failing, or unerring marksman; as, a *dead-shot* with the rifle.

Dead-struck, a. Struck or confounded with terror, pain, or astonishment.

Dead'-wall, n. A blank wall; a wall which has nothing to relieve its monotonous aspect.

Dead'-water, n. (*Naut.*) The eddy under a ship's counter.

Dead'-weight, n. A heavy or burdensome load or incumbrance.

(*Naut.*) The heaviest part of a ship's cargo, laid at the bottom of the hold to maintain her proper equilibrium and hold of the water.

Dead'-well, n. A well through which the refuse waters of certain industries, or even cess-pools, are allowed to infiltrate into the subjacent strata, which are usually of a permeable nature.

Dead'-wind, n. (*Naut.*) A head-wind; a wind blowing right in the ship's face.

Dead'-wood, n. (*Naut.*) Blocks of timber laid upon each end of a vessel's keel, where her sheer narrows.

Dead'-works, n. pl. (*Naut.*) Those parts of a ship's hull which appear above water-line when she is fully laden.

Deaf, (def,) a. [*A. S. *deaf*; D. *doof*; Ger. *taub*; L. Sax. *doov*; Icel. *dauf*, fatuous, deaf; Goth. *daubs*; Swed. and Goth. *döf*, stupid; Dan. *dör*, deaf; Icel. *deyfa*, deafness. The root is found in Slav. *tap*, to dull, to blunt; and in Sansk. *dubh*, to become fixed or immovable.] Wanting the sense of hearing; incapable of perceiving sounds.*

"Come on my right hand, for this ear is *deaf*." — *Shaks.*

—Deprived of the power of hearing; stunned; deafened; stifled with sound.

"*Deaf* with the noise, I took my hasty flight." — *Dryden.*

—Imperfectly heard; blunted; dulled; deadened.

"A *deaf* noise of sounds that never cease." — *Dryden.*

—Not listening; wilfully disregarding; not moved, persuaded, or convinced; determinedly indifferent or inattentive; as, *deaf* to argument or entreaty; preceding to.

"I will be *deaf* to pleading and excuses." — *Shaks.*

—Without taste, virtue, or flavor; withered; decayed; as, a *deaf* nut. (*R.*)

Deaf, v. a. To deprive of the power of hearing.

"Hearing hath *deaf'd* our sailors." — *Donne.*

Deaf and Dumb. Persons who can neither hear nor speak. A person who is born deaf, or who loses his hearing at a very early age, is dumb also; but the primary defect is deafness; dumbness is only the consequence of it. Children ordinarily hear sounds, and then learn to imitate them; that is, they learn to repeat what they hear other persons say. It is thus that every one of us has learned to speak. But the deaf child hears nothing; cannot therefore imitate, and remains dumb. There can be no doubt, however, that there exists some connection between the physical conditions of a country and deafness. In mountainous districts it is generally found to be more prevalent than in plain and flat districts, and in rural parts than in cities or towns. A marshy district, or an impure atmosphere, undoubtedly tends to render it more common. The greater number of these unfortunate persons are to be found among the poorer classes; and hence there is reason to believe that the defect is frequently caused by the want of necessary supplies and attention during infancy and childhood. Among the other causes that doubtless tend to produce deafness, are intermarriages among near relations, hereditary predisposition, and certain conditions of life. In some of the cantons of Switzerland the proportion is as high as one to every 500 of the population; while it is only 1 in 1,600 in Great Britain; 1 in 1,200 in France; 1 in 2,100 in Saxony; and 1 in 2,996 in the United States. It is remarkable that the defect is seldom transmitted direct from deaf and dumb parents to children. "We can show," says the principal of the New York Institution, "that it is much the most common for the children of deaf mute parents to possess the faculties of which their parents were deprived." This fact is clearly established, and there is thus no sufficient reason why the deaf and dumb should not marry. The education of the deaf and dumb has only recently been beginning to receive a due amount of attention. We are told by Bede that a deaf man was taught to repeat words and sentences by John, bishop of Hagulstad (Hexham), who flourished in the latter half of the 7th century; but eight centuries elapse before we read again of any attempt to instruct this unfortunate class of persons, when Rodolphus Agricola, a native of Groningen, mentions a deaf mute that he had known having been taught to note down his thoughts. Half a century later, the learned and versatile professor of Pavia University, Jerome Cardan gave to the world the theoretical principles upon which the instruction of the deaf and dumb is founded. He says: "Writing is associated with speech, and speech with thought; but written characters and ideas may be connected together without the intervention of sounds, as in hieroglyphic characters," and asserts that on this principle the instruction of the deaf and dumb is possible though difficult. Soon after this time, Father Ponce (1520-84), a Benedictine monk, acquired a great reputation for teaching the deaf and dumb to speak and write. In 1620 Juan Paulo Bonet, a Spanish like Ponce, and a monk of the same order, wrote a book on the instruction of deaf mutes, and invented a one-handed alphabet. From that time the subject came to receive more attention, a number of works were published, and various systems proposed. Among the persons who more particularly distinguished themselves by their labors in this field, were Heeneke in Germany; John Conrad Hanman, in Holland; Rodrigue Pereire, in France; John Bulwer and John Wallis, in England. The first schools established for the education of deaf

mutes were those of the Abbé de l'Épée in Paris, 1771, and Mr. Braidwood in Edinburgh, 1760. The system of De l'Épée was much improved by Sicard, his pupil and successor in the Paris institution, and who entitled to rank with him as one of the greatest benefactors of the deaf and dumb. In 1817 the first asylum called the American Asylum, was founded in this country, at Hartford, under the superintendence of Mr. Gallaudet, *q. v.*, who is the promoter of a system just styled the American system, and which widely differs from the system of the Abbé de l'Épée, as improved by Sicard. In 1818, the New York Asylum, the largest of the country, and equal in size to any in Europe, was organized. Since that time, numbers of similar institutions have been founded, among the earliest of which are those of Philadelphia (1820); Danville, Ky. (1823); Columbus, O. (1829); Staunton, Va. (1839), &c. It is very difficult for one who has not given some attention to the subject to form anything like a true conception of the helpless condition of one that is born deaf and dumb. He is not only destitute of all ideas connected with sound, but he is deprived of the means by which instruction and information are usually conveyed to the mind. The voice of speech is to him a nonentity, and he is entirely ignorant of the power of words. He holds no communication with his fellow-men, except by means of a few imperfect natural signs. His ideas are very much limited to the objects and events he witnesses, and the exterior relations of things, and he is shut out from all the knowledge derived from history and tradition. Conceptions of past ages, distant countries, a future world, or a deity, are all beyond his reach. In regard to the combination and application of the ideas which he acquires, he is still in the state of nations in the very infancy of society, and cannot be aided or rected by others in his efforts or reason. The objects to be accomplished in the education of a deaf mute are to teach him an entire language, and to give him all the mass of moral, religious, and ordinary knowledge that is necessary for him as a social and immortal being. This has to be done by signs, and the meaning contained in the signs has also to be conveyed to him. The first and most important operation in instructing the child, that written words have a meaning, and suggest all persons of education the same idea. It is necessary to begin by instructing him in the names of external objects, beginning with those which are best known to him, and most frequently presented to his view. The name of any object, such as a knife, may be written in large letters upon a board, and the attention of the child directed alternately to the name and to the object which is presented to him at the same time, until he gradually brought to understand that a certain relation exists between them. After he has been taught the relation between the names of objects and the objects themselves, he has next to be taught the analysis of words into the letters of the alphabet and the particular gesture which he is to attach to each word as its distinctive sign, together with the meaning of collected words, as distinguished from those denoting individual objects or parts of objects. General terms, as applicable in common to a number of individuals, and to general names comprehending a number of species, are next to be explained; and lastly, the most general and abstract terms, such as *being*, *object*, &c. The qualities, expressive of the accidents, variations, and modifications of objects, and which are expressed by adjectives, next taught. The master must endeavor to make the pupil conceive these qualities, in the first place, as inherent in the objects themselves, and next as capable of being detached by a mental operation from such objects, though in fact they have no existence but as united with them. The means employed in the instruction of the deaf and dumb are: 1. The visible language of pictures, signs, and gestures; 2. The finger alphabet or dactylology, and writing; and 3. Articulation and reading on the lips. The first is the earliest and most simple mode of communicating instruction. Dactylology, the manual alphabet, is a mode of denoting the different letters of the alphabet by means of the fingers. There are two kinds in use: in the one only one hand being employed, in the other both; the latter is generally in this country. Writing is another important means in the education of deaf mutes, and is useful not only in enabling them to fix their lessons in the mind, but being also the chief medium by which they can be intercourse with strangers. Articulation is the teaching of the pupil to express his ideas in speech. In order to this, the sense of touch, as well as the eye is employed. The pupil is made to notice the movements of the external organs of speech of the teacher, to imitate with his own hand the vibrations which sound creates in the trachea, and also to feel those emissions of breath which are caused by the production of certain sounds. He is made to imitate such utterances, and by means of patience and ingenuity on the part of the teacher will at length succeed in imitating what he observes and in expressing himself by speech. Reading on the lips, as it is called, is intended to enable the deaf mute to understand what is said to him by others, from observing the motion of their lips. This system, known as the *labial* method, was invented in 1848 by A. D. Bell, and perfected by him in 1864, reveals to the eye the position of the visible vocal organs in the formation of any sound which man can utter. It was applied in 1869 in England in the Institution of Deaf Mutes, and in 1872 was introduced by A. Graham Bell, son of its inventor, into the Clarke Institute at Northampton, Mass. It has proved very successful and is coming into more extended use.

Deafen (*def'n*), v. a. To make deaf; to deprive of

power of hearing; to stun; to render incapable of perceiving sounds distinctly.

"From shouting men, and horns, and dogs, he flies,
Deafened and stunned with their promiscuous cries."—Addison

(Arch.) To render impervious to sound, as a floor or wall.

deafly, *adv.* Obscurely heard; without true sense of sound.

a. Solitary; remote; lonely; alone. (Used in some English districts.)

deaf-mute, *n.* A deaf and dumb person; one who has lost both the faculty of speech, and the sense of hearing.

deafness, *n.* State of being deaf; incapacity of perceiving sounds; the state of the organs which prevents the impressions which constitute hearing.

"Those who are deaf and dumb, are dumb by consequence from their deafness."—Holder.

Want of ability or will to hear; unwillingness to hear or regard.

"I found such a deafness that no declaration from the bishops could take place."—King Charles I.

(Med.) An imperfection of the sense of hearing arises from a variety of causes, some of which are inexplicable and incurable, and others ascertainable and susceptible of relief or entire removal. When the organ of hearing is imperfect in its functions, either at birth or in childhood, dumbness or imperfect articulation attends it. (See DEAF AND DUMB.) The external ear, though tending by its form and situation to improve and perfect the sense of hearing, is in no way necessary; for it may be cut off without producing *D.* A common cause of *D.* arises from imperfections or obstructions in the passage leading from the external ear down to the membrane of the tympanum. This passage is partly cartilaginous and partly bony; and from its oblique direction it is difficult so to see into it as to ascertain the seat or cause of obstruction. In some persons, however, when placed in a proper position so that the sunshine or other strong light may be properly directed into it, a little management enables us to examine nearly its whole extent. In some cases of congenital *D.* this passage is closed by a membrane, which, if near the external orifice, is easily detected, and may be divided or removed; but, if deeply seated, it may escape observation till the child attains a certain age, or should begin to talk; for till that time the *D.* of infants often passes unobserved. Under these circumstances, and where the malformation exists in both ears, and the child is dumb as well as deaf, a timely operation may effect the double benefit of giving both hearing and speech. Where the passage to the tympanum is more extensively obliterated or malformed, the cases become, of course, more complicated, but yet often admit of cure by a skilful and timely operation. The presence of foreign bodies in the aural passage is a common cause of imperfect hearing, and sometimes it is obstructed by accumulations of hardened wax. These causes of *D.* may in most cases be relieved or removed by syringing the ear with warm water, which should be forcibly injected, and so directed as to reach the membrana tympani. Insects or worms in the ear may be washed out in the same way, or killed by the introduction of a few drops of live oil, or of camphorated oil. Another cause of *D.* is deficient secretion of wax, occasioning a dryness of the tube of the ear. It is relieved by greasy applications, and by the cautious use of stimulants, such as live oil, to which a few drops of oil of turpentine, or of compound camphor liniment, or spirit of ammonia, are being added. In cases of inflammation of the tympanum followed by suppuration, more or less *D.* ensues, dependent upon the extent of the mischief going on, and requiring prompt and generally antiphlogistic treatment; the pain, especially at the outset of the disorder, is often intense, and the discharge purulent and offensive. The *D.* that attends a violent cold is frequently dependent upon obstructions in the Eustachian tube, and goes off when the secretions of the part return to their natural state. Lastly, hardness of hearing often appears to depend upon imperfection in the functions of the auditory nerves, in which case, constitutional, rather than local treatment, must be resorted to.

DEAK, FRANCIS, (*dai'ak*), an Hungarian statesman and jurist, b. in 1803. He received his education in the colleges of Raab and Komorn, and then applied himself to the study of the law. In 1832 he became a member of the Hungarian diet, and was soon recognized as the leader of the opposition party. In 1848 he was appointed minister of justice, but retired from public life when Countess assumed the dictatorship. In 1860 he was influential in bringing about a reconciliation with the imperial government. Though firmly wedded to the opposition, he always deprecated extreme measures and unrelenting moderation. Hungary is indebted to him for many important reforms, especially in the administration of justice. *D.* 1876.

dal, *n.* [A. S. *dæl*, *géal*; Ger. *theil*; Goth. *dails*. a part; a portion; Icel. *dæla*; Dan. *dèle*, to divide; Gael. *da*; Corn. *dal*, a part; Lith. *dalis*; W. *de*; Sansk. *dā*, part, to separate; allied to Gr. *daiō*, to divide.] A division, part, share, or portion; an indefinite quantity, agree, measure, or extent; as, a *deal* of trouble, a *deal* space, a *deal* of sickness. — Art or practice of dealing playing-cards; as, to cut for *deal*. Also, the quantity of cards dealt out. — The division of a piece of timber made by sawing; a plank of pine timber; as, a *deal* board. — Fir or pine timber; as, a table made of *deal*.

a. (imp. and pp. **DEALT**.) [A. S. *dælan*, *bedælan*, *gedælan*; D. *deelen*; Ger. *theilen*; Goth. *dailjan*.] To portion out; to separate; to distribute; to divide.

"And *deal* damnation round the land."—Pope.

—To scatter; to throw about; to throw or give out in succession; as, to *deal* out a pack of cards.

v. n. To share or participate in the concerns of business; to traffic; to trade; to carry on a retail business; — in contradistinction to *produce* or *manufacture*; as, to *deal* in fancy goods, fair-dealing, &c. — To negotiate; to act, intervene, or negotiate between man and man.

"Sometimes he that *deals* between man and man raises his own credit with both."—Bacon.

—To behave well or ill in any transaction; to act; to conduct one's self in relation to others; as, to *deal* honestly, to *deal* impartially, to *deal* shabbily, &c. — To distribute promiscuously; as, the cards require *dealing*. — To treat by way of control, check, correction, or opposition; as, a difficult man to *deal* with.

To *deal* by, to treat; to behave towards, either ill or well; as, to *deal* by an associate or servant. — To *deal* in, to have to do with; to be engaged in; to practise; as, to *deal* in political matters. (Addison.) — To *deal* with, to treat in any manner; to use well or ill.

"If a man would have his conscience *deal* clearly with him, he must *deal* severely with that."—South.

Deal, a sea-bathing town of England, on the coast of Kent, lying between the two Forelands, 6 miles from Sandwich, 8 from Dover, and 16 from Canterbury. Deal is divided into the *Upper* and *Lower* towns, and is situated opposite the submerged estate of the Saxon earls of Kent, now known as the *Goodwin Sands*. Pop. (1895) 8,250.

Deal Beach, in *New Jersey*, a post-village of Monmouth co., about 3 m. S. of Long Branch.

Deal Island, in *Maryland*, a post-office of Somerset co.

Dealer, *n.* One who has to do with anything, or has concern with; a trader; a shopkeeper; a trafficker; a merchant. (In a commercial sense it is opposed to *producer*.) — The person who deals a pack of cards.

Dealt, imp. and pp. of **DEAL**, *q. v.*

De'amonds, in *Georgia*, a village of De Kalb county.

Dean, *n.* [Fr. *doyen*; Sp. *dean*; Lat. *decanus*, from *decem*, ten. Literally, a head or chief of ten men.] (Eccl.) In the Church of England, an ecclesiastical dignitary in cathedral and collegiate churches, and the head of a chapter, originally said to consist of *ten* canons or prebendaries; whence the origin of the term. — The presiding head of the faculty in some of the English and Scottish universities. — In the universities of Oxford and Cambridge, Eng., an officer deputed to compel the attendance of students at prayers in the chapels of the colleges, and, generally, to supervise their conduct at religious service.

—In the U. S., a clerk or secretary of a faculty of theology, law, or medicine.

Dean of a guild, the president of a trades-guild.

Dean, (Forest of,) a regal forest of England, in Gloucestershire, formerly of considerable extent, but now reduced to 11,000 acres. The inhabitants enjoy certain privileges, and are much employed in coal-mines and iron-works.

Dean'ery, *n.* The office, revenue, or residence of a dean.

Dean'field, in *Maine*, a township of Hancock co., abt. 80 m. N.E. of Augusta.

Dean, in *Minnesota*, a post-office of Rice co.

Dean's Corner's, in *Illinois*, a former P. O. of Lake county.

Dean's Corners, in *New York*, a P.O. of Saratoga co.

Dean'ship, *n.* Office or dignity of a dean.

Deansville, in *New York*, a post-village of Oneida co., about 15 m. S.W. of Utica.

Deansville, or **Deanville**, in *Wisconsin*, a post-village of Dane co., about 22 m. W. of Watertown.

Dear, *a.* [A. S. *dyre*, *deor*, *dior*, precious, beloved; Ger. *theuer*; O. Ger. *tuere*; Swed., Goth., and Icel. *dyr*; Sansk. *dr*, with prefix *d*, to regard, to value, to tend, to take care of.] Scarce; not plentiful; characterized by exorbitant price; as, a *dear* year. — Costly; bearing a high price in comparison to the usual price; valuable; expensive; of a high price and requiring large outlay; as, a *dear* purchase.

"He has paid *dear*, very *dear* for his whistle."—Franklin.

—Highly valued in estimation; much beloved; fondly regarded; as, a *dear* girl.

"*Dear* as the light that visits these sad eyes;

Dear as the ruddy drops that warm my heart."—Gray.

—*adv.* Dearly.

—*adv.* Dearly; a word denoting tender affection or endearment.

Dearborn, *n.* A light four-wheeled carriage.

Dearborn, HENRY, an American general, b. at Hampton, N. H., 1751. He distinguished himself chiefly, in 1778, by a gallant charge at the battle of Monmouth, and in 1813 by the capture of Yorktown and Ft. George in Canada. *D.* 1829.

Dearborn, in *Maine*, a township of Kennebec co., about 20 m. N. of Augusta.

Dearborn, in *Illinois*, a post-office of McHenry co.

Dearborn, in *Indiana*, a S.E. co., bordering on Ohio. Area, about 291 sq. m. Rivers, Whitewater and Ohio. Surface, diversified. Soil, generally fertile. Min. Limestone. Cap. Lawrenceburg. Pop. (1895) about 25,000.

Dearborn, in *Montana*, rises in the Rocky Mountains and enters the Missouri river about 130 m. above the Great Falls. Length about 150 m.

Dearborn, in *Michigan*, a post-village of Dearborn township, Wayne co., on the Rouge river, about 10 m. W. of Detroit. It has some manufacturing interests. Pop. (1897) about 850.

Dear-bought, *a.* Purchased at a high price, or at a price above its intrinsic value; as, *dear-bought* experience.

Dear'dorff's Mills, in *Ohio*, a former post-office of Tuscarawas co.

Dear-loved, *a.* Much beloved.

Dear'ly, *adv.* With great fondness or affection. — At a high price; exorbitantly.

"He buys his mistress *dearly* with his throne."—Dryden.

Dear'man's, in *New York*, a village of Westchester co., on the Hudson River, opposite Piermont.

Dear'ness, *n.* State of being dear; fondness; nearness to the heart or affections; preciousness; tender love; as, the *dear'ness* of home to the absent. — Scarcity; state of being dear; costliness; exorbitance of price; as, the *dear'ness* of bread.

Dearth, (*dérth*), *n.* Scarcity, which makes food dear.

"There have been terrible *dearths* of corn."—Swift.

—Privation; want; need; famine.

"Eat freely with glad heart; fear here no *dearth*."—Milton.

—Barrenness; sterility; as, "*Dearth* of plot."—Dryden.

Deary, *n.* A term of endearment or fondness; a dear; a pet; a darling.

Dease Inlet, in *Alaska*, an arm of the Arctic Ocean S. of Point Barron. Lat. 71° 13' N., Lon. 75° 20' W. It is about 5 m. wide.

Dease River, in British N. America, rises in the Coppermine Mountains, and empties into Great Bear Lake.

Dease Strait, a channel of the Arctic Ocean, communicating with Coronation Gulf, and having Melbourne Island at its E. extremity. Lat. 69° N. It is about 120 m. long, with an average width of 23 m.; numerous small islands obstruct its widest part.

Dea'sonville, in *Mississippi*, a P. O. of Yazoo co.

Death, *n.* [A. S. *death*, from *deadian*, to die; *adeadan*, to fail, to decay, to lay waste, to destroy; Ger. *tod*; O. Ger. *töd*; O. Sax. *dod*; Goth. *dauthus*; Icel. *daudi*.] Extinction of life; entire loss of vitality; mortality; decease; demise; departure from this world; separation of the soul from the body.

"How wonderful is *Death*!
Death and his brother Sleep."—Shelley.

—Cause of death; agent of extinction of life.

"He caught his *death* at the last county-sessions."—Addison.

—A skeleton, as the symbol of mortality; typical representation of vital extinction; as, a *death's-head*.

—Entire loss, privation, or extinction; as, the *death* of hopes.

—Manner of dying.

"Man makes a *death* which Nature never made."—Young.

—Act of unlawfully taking away life; murder; as, "A man of *death*."—Bacon.

—State of being under the power of sin or its consequences; damnation.

"Keep us . . . from everlasting *death*."—Book of Com. Prayer.

—The instrument of death. (Used in poetry.)

"The clamorous lapwings feel the leaden *death*."—Pope.

(Physiol.) How organized bodies perish, and how the organic force is transferred from the producing parts of organic beings to the new living products, while the old producing parts perish, is one of the most difficult problems of general physiology, and has never yet met with a satisfactory solution. In every part of a living organism there is a continual destruction of old particles, and the formation of new ones going on; and, generally, the more active the vital activity of the part, the more rapidly do these changes take place. Even the most solid portions of the animal frame are not free from this change, though in them it goes on less rapidly than in the softer tissues. Every movement of the body, nay, even every thought of the mind, is attended with the *D.* and disintegration of a certain amount of muscular or nervous matter as its necessary condition; hence, in the performance of each of those functions whose aggregate makes up the life of man, the particular organ which ministers to that function undergoes a certain loss by the decline and *D.* of its component particles; and this the more rapidly in proportion to the activity of the changes which are effected by their instrumentality. If the regenerative processes be performed with due vigor, no deterioration of the organ takes place; but with the advance of years this regenerative power diminishes, and the entire organism progressively deteriorates, until at last *D.* supervenes. We have thus two kinds of *D.*: *molecular*, or that which is constantly taking place among the molecular particles of the body, and which is, in fact, essential to its life and well-being; and *systematic* or *somatic*, which is the *D.* of the body as a whole. Somatic *D.* may result either from the general failure of the vital powers, as in old age, or from some disease or injury in some of the vital organs, which extends itself to the organism in general. It may be due to failure in the propulsive power of the heart, which constitutes *syncope*; and this may occur either in consequence of the heart losing its irritability, and so ceasing to contract, or being affected by clonic spasm, and so remaining rigidly contracted. In both cases *D.* is instantaneous; the subject turns suddenly pale, and falls back, or drops down, expiring with one gasp. Or *D.* may take place by the gradual cessation of the action of the heart; in which case it is termed *asthenia*. Somatic *D.* may also be occasioned by an obstruction to the flow of blood through the capillaries of the lungs, or to the entrance of air to these organs, thus constituting *asphyxia*, or *apnea*. *D.* by *coma*, or beginning at the brain, is caused by various influences, which primarily destroy the functions of the superior masses of the nervous system. The chief of these are obstruction to the circulation of the blood through the brain by pressure, and the effects of certain narcotic poisons, as opium, &c. As the ordinary act of breathing

depends upon the nervous action of the medulla oblongata and spinalis, it is quite evident why *D.* may result from an impaired state of these organs; and this mode of *D.* is of the nature of apnoea. *D.* may also be occasioned by a disordered condition of the blood itself, which at the same time weakens the power of the heart, impairs the activity of the nervous system, and prevents the performance of those changes in the capillaries which afford a powerful auxiliary to the circulation; this is termed *D.* by *necromia*, and occurs in typhoid fever, and other diseases of a malignant or pestilential kind. *D.* may also result from the direct agency of cold stagnating all the vital operations of the system. It is to be borne in mind, that *D.* is frequently produced by a conjunction, or by the rapidly following results, of two or more of these modes; indeed, the perfect distinction of these different modes of *D.* is almost exclusively confined to cases where the dissolution is speedy or sudden. The signs of approaching *D.* are necessarily various, and depend, in a great measure, upon the nature of the disease. We shall notice some of those that are common to most diseases and to natural decay. In some cases there is a dulness of the senses, inactivity of the muscles, vacancy of the intellect, and extinction of the sentiments, as in *D.* resulting from old age. There is, also, frequently some degree of delirium, which is often of a most interesting and pleasing character, resembling dreaming more than any other form of derangement; sometimes, again, the dying fancies of the individual are of the most dreadfully distressing character; but it is presumptuous, as many do, to hazard much upon the various modes of terminating the career of life. In the delirium the reproduction of visual sensations often bears a considerable part; and frequently the victim of typhus is seen catching at something in the air, or picking at it on the bed-clothes. The sense of hearing is frequently also affected, and imaginary voices, and sounds of tolling bells, &c., are heard. *Demencia*, or mental debility, sometimes comes on shortly before *D.*, and for the most part manifests itself in an incapacity of concentrating the ideas upon any one object, and by an all but total failure of the memory; this mental weakness often painfully manifests itself in the apparent pleasure which the sufferer takes in some of the most childish amusements. The voice generally becomes low and weak as *D.* approaches; but sometimes it has a shriller pitch than natural; sometimes it is husky and thick; and not unfrequently it dwindles to a mere whisper. The muscular system generally becomes feeble and relaxed; the pulsations of the heart gradually feebler, but more frequent; the respiration sometimes hurried and panting, sometimes ceasing gradually; and sometimes slow, laborious, and stertorous. There is frequently, also, an accumulation of fluids—mucous, serous, or purulent, in the bronchial tubes. What is known as the *death-rattle* is produced by the passage of the air from the lungs through the fluid collected in the trachea and upper respiratory passages. The moribund are often impatient of any kind of clothing, throwing off the bed-clothes, and lying with chest bare, the arms extended, and the neck as much exposed as possible. Among the other signs of approaching dissolution, are the sunken eye, the hollow temple, the sharpened nose, the forehead dry, tense, and harsh, the complexion sallow, livid, or black; the lips cold, flaccid, and pale, or of a leaden hue. We believe that the opinion which generally prevails of the great amount of suffering that immediately precedes *D.*, and which is expressed by such words as the *death-struggle* or *agony of D.*, is very erroneous. There is every reason to believe that as *D.* approaches, the sensibilities are gradually deadened, and that in most cases consciousness has ceased before the struggle commences. The muscular spasms—the slow, gasping, or jurgling breathing—the collapsed or distorted features, though in some cases accompanied by feeling, are altogether independent of it. Convulsion is not, as superficial observers often imagine, a sign of pain; it is an affection of the motile, not of the sensitive part of the nervous system. Those who have made the nearest approaches to actual *D.*, as in drowning, have described their feelings as being of an extremely pleasurable kind; and a late eminent physician told his attendant friends on his death-bed, that “he wished he could be at the trouble to tell them how pleasant a thing it was to die.” We believe that dying is not less truly than beautifully described in Scripture as being a “falling asleep;” an idea which was also entertained by the ancient Greeks, who regarded *D.* as the twin-brother of sleep. The consequences of *D.* first become apparent in the organs of sense and motion; the eye loses its brightness, and the flesh its elasticity; the muscles become stiff, and coldness and paleness spread over the whole body. Yet it is often a very difficult matter to distinguish between real and apparent *D.* The most reliable test is afforded by the condition of the muscular substance; for after real *D.* this gradually loses its irritability, so that it can be no longer excited to contraction by any kind of stimulation; and this loss of irritability is succeeded by the appearance of cadaveric rigidity. The most satisfactory proof, however, is given by the occurrence of putrefaction, which usually first manifests itself in the blue-green discoloration of the cutaneous surface, especially of the abdomen, but which speedily extends to other parts.

(*Myth*) It is remarkable that the Greeks, whose conceptions of an after-life were so gloomy, should have represented *D.* as a pleasing, gentle being; while the Christians, whom religion teaches to look upon *D.* as a release from bondage—a change from misery to happiness, give him a most frightful and disgusting shape.

According to the theogony of Hesiod, the god of *D.* was the offspring of Night, and the twin-brother of Sleep. During the most flourishing period of the arts in Greece, *D.* was represented on tombs as a friendly genius with an inverted torch, and holding a wreath in his hand; or as a sleeping child, winged, with an inverted torch resting on his wreath. Sleep was represented in the same manner, except that the torch and wreath were omitted. According to an idea originating in the East, death in the bloom of youth was attributed to the attachment of some particular deity, who snatched his favorite to a better world. It was ascribed, for instance, to Jupiter, if occasioned by lightning; to the Nymphs, if by drowning; to Aurora, if happening in the morning, &c. The representations of *D.* by the Romans were less pleasing than those by the Greeks; and among their later poets we find *D.* represented under some horrible shape, gnashing his teeth and marking his victims with bloody nails, a monster overshadowing whole fields of battle. The Hebrews had also a fearful angel of *D.*, called *Samael* and *Prince of the World*, and coinciding with the devil.

(*Theol.*) There are three kinds of *D.*: 1. *Temporal*, or the death of the body; 2. *Spiritual*, or the natural condition of the soul under the power of sin; 3. *Eternal*, or the everlasting perdition of the wicked. As Adam introduced *D.* into this world, so Christ, by his sufferings and *D.*, has brought life.

To be the death of. To be the cause of taking away the life of another.

Death-bed, *n.* The bed on which a person dies, or to which he is confined in his last sickness.

“A death-bed’s a detector of the heart.”—*Young*.

Death-bell, *n.* A bell tolled to announce a demise.

Death-damp, *n.* The cold perspiration preceding the approach of death.

Death-doing, *a.* Occasioning death.

Deathful, *a.* Causing death; full of slaughter; murderous; destructive.

“Blood, death, and deathful deeds!”—*Milton*.

—*Mortal*.

Deathfulness, *n.* Aspect of death.

Deathless, *a.* Immortal; not subject to death, destruction, or extinction.

“Deathless laurel is the victor’s due.”—*Prior*.

Deathlike, *a.* Resembling death; gloomy; still; calm; quiet; peaceful; motionless.

“A deathlike slumber, and a dead repose.”—*Pope*.

Deathliness, *n.* Deadliness.

Deathly, *a.* Deadly; fatal; mortal.

Death-rattle, *n.* A rattling in the throat of one who is dying.

Death’s-door, *n.* A near approach to death; the gates of death; as, sick to death’s door.

Death’s-head, *n.* A representation of a skeleton-head.

Death’s-head-moth, *n.* (*Zoöl.*) See *ACHERONTIA*.

Death’s-man, *n.* An executioner; a hangman; a headsman; one whose duty it is to carry out the penalty of death.

Death-token, *n.* That which indicates approaching death.

Deathward, *adv.* Tending to death; approaching death.

Death-warrant, *n.* (*Law.*) An order for the execution of a criminal.

—Anything which debars or frustrates one’s hopes, wishes, or expectations.

Death-watch, *n.* (*Zoöl.*) See *ANOBIIUM*.

Deat’souville, in *Virginia*, a post-village of Amelia co., about 52 m. S.W. of Richmond.

Deave, *v. a.* A Scottishism for to deepen; to stuu with noise.

Dea’vortown, in *Ohio*, a post-village of Morgan co., about 16 m. S. of Zanesville.

Deba’cle, *n.* [*Fr. débacle*, from *Lat. baculus*, a stick.] An impetuous outburst of pent-up waters; a tumultuous rout or confusion.

Debar, *v. a.* [*de* and *bar*.] To bar or shut out from; to cut off from entrance; to hinder from approach, entry, or enjoyment; to prevent; to exclude; to deprive.

“Countries debarred from commerce.”—*Raleigh*.

Debark, *v. a.* [*Fr. débarquer*—*de*, and *barque*, a vessel. See *BARK*.] To land from a ship or boat; to disembark.

—*v. n.* To disembark; to go ashore.

Debarka’tion, *n.* Act of disembarking.

Debar’meut, *n.* Exclusion; a shutting out.

Debase, *v. a.* [*de*, and *base*, low, mean, vile.] To lower; to sink; to cast down; to reduce; to depress; to abase; to degrade; to adulterate; to vitiate; as, to debase money, to debase the mind by cruelty or meanness.

“It is a kind of taking God’s name in vain, to debase religion with such frivolous disputes.”—*Hooker*.

Debasement, *n.* Act of debasing or degrading; vitiation; as, *debasement* of the currency.

—State of being debased; abasement; degradation.

Debas’er, *n.* He who, or that which debases, degrades, or vitiates.

Debas’ingly, *adv.* In a debasing, or adulterating manner.

Debat’able, *a.* That may be debated; disputable; open to dispute or controversy; as, a *debatable* topic.

Debate, *n.* [*Fr. débat*. See the verb.] A personal quarrel, altercation, or hostile contest. (*R.*)—A beating down by words or arguments; contention in words or arguments; verbal contest; disputation; discussion; controversy; as, a *debate* in Congress.

“That haughty chief . . . the Rupert of debate.”—*Bulwer-Lytton*.

—Ground, or subject of argument or discussion. (*R.*)

—*v. a.* [*Fr. débattre*, from *battre*, to beat.] To contend for in words or arguments; to strive to maintain a cause by reasoning; to dispute; to discuss; to argue; to contest; to controvert.—To contest or strive for by force of arms. (*R.*)

—*v. a.* To deliberate; to discuss or examine different arguments in the mind; to dispute;—generally preceding on or upon.

“Your several suits

Have been consider’d and debated on.”—*Shaks.*

Debate’ful, *a.* Contested; occasioning debate or contention.

Debate’meut, *n.* Deliberation; discussion; controversy.

Debat’er, *n.* One who debates; a disputant; a controvertist; as, an able *debater*.

Debat’ingly, *adv.* In the manner of a debate; contentiously.

Debat’ing Society, *n.* A social assembly met to practise the art of debate and public speaking.

Debauch’, *v. a.* [*Fr. débaucher*; *O. Fr. desbaucher*—*des*, *de*, and *baucher*, to rank, order, array, or lay in position evenly, from *bauche*, a rank, row, or course.] To lead out of the right way; to seduce; to corrupt or vitiate; to pollute; to defile; to pervert; to mislead; as, to *debauch* a woman.

“A conscience thoroughly *debauched* and hardened.”—*South*.

—*n.* [*Fr. débauche*.] Excess in eating or drinking; intemperance; drunkenness; gluttony; sensuality.

“The first physicians by *debauch* were made.”—*Dryden*.

—An act of debauchery; a fit of intemperance; as, a night’s *debauch*.

Debauch’edly, *adv.* In a corrupt or abandoned manner.

Debauch’edness, *n.* Debauchery; sensuality; intemperance.

Debauchee, (*deb-o-shé*), *n.* [*Fr. débauché*.] A person addicted to debauchery; one habitually lewd; a sensualist; a rake; a libertine; a rone.

Debauch’er, *n.* One who corrupts others; one who seduces women.

Debauch’ery, *n.* Seduction from duty or allegiance; corruption of fidelity.—Excess in the pleasures of the table; gluttony; intemperance; gross sensuality; lewdness.

Debauch’meut, *n.* Act of debauching or vitiating corruption.

De be’ne es’sé. [*Lat.*, formally, conditionally (*Law*).] A technical phrase applied to certain acts deemed for the time to be well done, or until an exception or other evidence. It is equivalent to *promissorily*. For example, a declaration is filed or delivered, special bail is put in, a witness is examined, &c., *de be’ne es’sé*, or provisionally.

Debell’, in *Wisconsin*, a former P. O. of Vernon co.

Deben’ture, *n.* [*Fr. débenture*; *Lat. debentur*, they are owing, 3d pers. pl. pres. indic. of *debeor*, pass. c. *debeo*, *debens*, to owe.] (*Law*). In a general sense, an writing which acknowledges a debt; but it is more particularly applied to custom-house certificates entitling the exporter of goods to a drawback or bounty; and the acknowledgments given by railroad companies for special loans, as distinguished from ordinary shares. The term also signifies an instrument in use in some government departments, by which government is charged to pay to a creditor or his assignees the sum found due on auditing his accounts.

Deben’tured, *a.* Entitled to the benefit of a drawback; as, *deben’tured* goods.

De Bernard’, CHARLES, one of the most graceful and lively writers of modern French fiction, b. 1805. His works, *La Femme de Quarante Ans*, *Gerfaut*, &c., are chiefly illustrative of French domestic life. He was a shy and reserved disposition, and many curious anecdotes are told of his abstraction and absence of mind. *De B.* was a member of the Academy, and an officer of the Légion d’honneur. D. 1850.

Debilitate, *v. a.* [*Fr. débilitier*; *Lat. debilito*, *debilitatum*, from *debilis*—*de*, and *habilis*, fit, apt, suitable.] To bring down or impair the strength of; to make faint or languid; to weaken; to enfeeble; to enervate; as, a *debilitated* constitution.

Debilita’tion, *n.* Act of debilitating, relaxing, weakening.

“The weakness cannot return anything but a *debilitation* a ruin.”—*King Charles I.*

Debility, *n.* [*Fr. débilité*; *Lat. debilitas*.] Relaxation of the solids; languor of the body; weakness; feebleness; enervation; imbecility.

Deb’it, *n.* [*Lat. debitum*, from *debeo*. See *DEBT*.] (*Com.*) A recorded debt; money due for what is sold on credit (*Book-keeping*). The left-hand page of a ledger; opposed to *credit*; as, to enter a payment to a person *debit*.

—*v. a.* To charge with a debt; as, to *debit* a custom with goods bought on credit.

(*Book-keeping*.) To enter an account on the debt side of a book or ledger.

Debitumiza’tion, *n.* Act or process of freeing from bitumen.

Debitu’minize, *v. a.* [*De* and *bitumen*.] To remove bitumen from.

Déblai, *n.* [*Fr.*] (*Fort.*) The quantity of earth excavated from the ditch to form the parapet. See *REMBLAIS*.

Deblois’, in *Maine*, a post-township of Washington co.

De’bo, (*Lake*), in Central Africa, abt. 140 m. S.W. Timbuctoo. It is traversed by the Joliba, and has a town of the same name on its shore.

Deb’orah, [*Heb.*, a bee.] A Hebrew prophetess, the wife of Lapidoth, who lived in the time of the Judges.

Stephen Decatur

1779-1820

She dwelt in Mount Ephraim, and uttered her judicial oracles from her tent under a palm-tree between Beth-el and Ramah. To deliver her land from the oppressive yoke of the Canaanites, under which it had groaned for twenty years, *D.* called to her aid Barak, son of Abinoam, probably a man of heroic temper. An army was raised among the tribes of Naphtali and Zebulun, and a battle took place in the plain of Esdraelon, where the Canaanitish host was completely routed, and Sisera during his flight, as *D.* had predicted, was murdered by a woman. This victory secured to the Israelites a peace of forty years' duration. The "Song of Deborah" (as it is generally called, though its composition is not ascribed to her in the Book of Judges) is a choice fragment of primitive Hebrew poetry.

Debonair', a. [Fr. *débonaire*.] Gentle; gracious; kind; affable; civil; courteous; complaisant; elegant; well-bred; as, "a discreet and debonair."—Dryden.

Debonair'ly, adv. In a genteel or complaisant manner; gently.

Debonair'ness, n. State or quality of being debonair; gentleness.

Debosh', v. a. To debauch; to corrupt; as, "a deboshed youth."—Thackeray.

Debouch, (de-bōsh'), v. a. [Fr. *déboucher*.] To emerge from a narrow or confined place.

Debouché, (dā-bōō-shā'), n. [Fr.] An opening; demand or market for goods.

Debouchure, (dā-bōō-shur') n. [Fr.] The mouth or opening of a river or strait.

Debreczin, (dai-bré'tzin') n. one of the largest cities of Hungary, 116 m. E. of Pesth. It has several large churches, monasteries, and hospitals, a town-hall, and a celebrated Calvinistic college. *Manuf.* Tobacco, soap, pipe-bowls, combs, and furs. In 1684 the city was captured by the Turks, who, however, abandoned it in the same year. *Pop.* 43,517, of whom 32,000 are Magyars.

Debris, (dā-brīē'), n. [Fr., from *de*, and *bris*, wreck, from *brasier*, to break; Gael. *bris*, to break.] (*Geol.*) Fragments of rock and other substances, detached from the summit or side of a mountain, and piled up below. Rubbish; ruinous remains of anything broken to pieces or destroyed; as, the debris of a dinner.

De Bruce, in New York, a post-office of Sullivan co.

De Bruin, in Missouri, a post-village of Pulaski co., abt. 33 m. W. S. W. of Rolla.

Debruised', a. (Her.) A term used to indicate the grievous restraint of an animal, and its being debarred of its natural freedom by having any of the ordinaries laid over it.

Debt, (det,) n. [Lat. *debitum*, from *debeo*—*de*, and *habeo*, to have or hold.] That which is due from one person to another; that which one person is bound to pay or perform to another; due; obligation; liability.—That which any one is Fig. 777.—DEBRUISED, obliged to do or to suffer.

"He that dies pays all debts."—Shaks.

Debt: crime; trespass; sin; fault.

(Law.) A species of contract whereby a *chase* in action, or right to a certain sum of money, is mutually acquired and lost; usually divided into debts of record, debts by special contract, and debts by simple contract.

A *D. of record* is a sum which appears to be due by the evidence of a court of record; such as *D. of judgment* or *recognizance*. ***D. by specialty*** is where a sum is acknowledged to be due, or becomes due, by instrument under seal; such as a covenant, bond, &c. Both these species of debts, being contracted by a man for himself and his heirs, attach on his lands and tenements, and bind them in the hands of his heir or devisee. ***D. by simple contract*** is either by parol or by written obligation unsealed; within which class fall bills of exchange and promissory notes. *D.* is also a personal action of contract, in which the plaintiff seeks the recovery of a *D.*; i. e., a liquidated or certain sum of money alleged to be due to him. See ACTION.

Debt, (National.) See NATIONAL DEBT.

Debtor, n. (Law.) A creditor; one to whom a debt is owing.

Debtor, n. (Law.) A creditor; one to whom a debt is owing.

Debtor, n. (Law.) A creditor; one to whom a debt is owing.

Debtor, n. (Law.) A creditor; one to whom a debt is owing.

Debtor, n. (Law.) A creditor; one to whom a debt is owing.

Debtor, n. (Law.) A creditor; one to whom a debt is owing.

Debtor, n. (Law.) A creditor; one to whom a debt is owing.

art belonging to a school which had passed the period of its highest excellence before they were produced. In Greece, art in all its forms reached its acme in the time of Pericles; and though there are many exquisite works which were produced at a later period, they all belong, more or less conspicuously, to the *D.* of Greek art. In Rome, again, both art and literature culminated in the time of Augustus, and from that time we have a *D.*, which soon becomes very obvious and rapid. The school of the *Renaissance*, again, came to perfection with Raphael; even the Caracci belong to its *D.*; and the decline was continuous through the *rococo* of Louis Quinze, till art became almost extinct all over Europe.

Decadent, a. Deteriorating; falling to pieces; decaying.

Decagon, n. [Gr. *deka*, and *gonia*, an angle.] (*Geom.*)

A figure having ten angles and ten sides.

Decagram, n. [Fr. *décagramme*, from Gr. *deka*, ten, and *gramma*, a scribble.] A French weight of ten grammes, equal to 154.34 grains troy.

Decagyn'ia, n. [Gr. *deka*, and *gynē*, a female.] (*Bot.*) A class of plants in the Linnæan system, including those which have ten pistils.

Decagyn'ian, Decagynous, a. [Fr. *décagynique*.] (*Bot.*) Possessing ten styles.

Decahed'ral, a. Having ten sides.

Decahedron, n.; pl. DECABEDRA. [Gr. *deka*, and *hedra*, a side.] (*Geom.*) A solid figure or body having ten sides.

Decalcification, n. Deprivation of calcareous matter.

Decalcify, v. a. To remove, or free of, calcareous matter.

Decalitre, n. [Fr.] A French measure; one of the litres. See LITRE.

Decalogist, n. An expounder of the Decalogue.

Decalogue, n. [Gr. *deka*, and *logos*, treatise.] (*Script.*) The ten commandments or precepts given by God to Moses.

Decameron, n. [Gr. *deka*, ten, and *emera*, day.] (*Lit.*) The name given by Boccaccio to his celebrated collection of tales; they are supposed to be narrated in turn, during ten days, by a party of guests assembled at a villa in the country to escape from the plague which raged at Florence in 1348.

Decametre, n. [Fr., from Gr. *deka*, and *metron*, measure.] A French measure of ten metres. See METRE.

Decamp, v. n. [Fr. *décamper*—*de*, and *camp*.] To march off; to depart hurriedly; to take one's self away; as, the fellow decamped with all he could lay hands on.

Decampment, n. [Fr. *décampement*.] Departure from a camp; a marching off.

Decamps, GABRIEL, (da-kong'), a French painter, b. at Paris, in 1803. He was a pupil of Pujol, and distinguished himself early by the originality of his productions. Subsequently he paid a visit to the Holy Land, Syria, and Egypt; spending some time in Greece and Constantinople. His best works are, *Souvenir de la Turquie*; *Le Café Turc*; *Moïse saur des eaux*; *Joseph vendu par ses frères*, &c. *D.* in consequence of a fall from his horse, 1860.

Dec'anal, a. Same as DIACONAL, *q. v.*

Decandria, n. [Fr. *deka*, and *andros*, a male.] (*Bot.*) A class of plants in the Linnæan system, including those which have ten stamens.

Decandrian, Decandrous, a. [Fr. *décandrique*.] (*Bot.*) Characterized by ten stamens.

Decan'gular, a. [Gr. *deka*, and Eng. *angular*.] Having ten angles.

Decant, v. a. [Fr. *décanter*; Sp. *decantar*; It. *cántara*, a narrow-mouthed pitcher, from Lat. *cantharus*; Gr. *kanthāres*, a large drinking-vessel with handles; a tankard.] To pour off liquor gently from a vessel; to pour from one vessel into another.

Decantation, n. (Chem.) The pouring off a clear liquid from its subsidence or residue; it is often resorted to in the chemical laboratory instead of filtration, the clear supernatant liquor being poured or siphoned off from precipitates, which may thus be repeatedly washed or edulcorated, so as to free them from all soluble matters.

Decant'er, n. A vessel used to decant liquors, or for receiving decanted liquors; a vessel, or bottle, used for holding wine or other liquors; as, to pass the decanter around.

—The person who decants a fluid from one vessel into another.

Decaphyllous, a. [Gr. *deka*, and *phylon*, a leaf.] (*Bot.*) With ten leaves.

Decapitate, v. a. [Lat. *decapito*, *decapitatum*—*de*, and *caput*, the head.] To take the head off; to behead; as, to decapitate a criminal.

Decapitation, n. Act of beheading.

Decapodal, Decapodous, a. Having ten feet, like the lobster.

Decapolis, n. [Gr. *deka*, ten, and *polis*, a city.] A country in Palestine, which contained ten principal cities, on both sides of the Jordan. According to Pliny, they were, Scythopolis, Philadelphia, Raphanæ, Gadara, Hippos, Dios, Pella, Gerasa, Canatha, and Damascus. Josephus inserts Otopos instead of Canatha.

Decapoda, Decapods, n. pl. [Gr. *deka*, and *pous*, *podos*, a foot.] (*Zool.*) An order of Crustacea, containing those in which we find the highest general organization. They usually have nine cephalic segments, and but five foot segments, each of the latter bearing a pair of so-called feet. They embrace BRACHYURANS, MACRURANS, and GASTRURANS, *q. v.*

Decarbonate, Decarbonize, v. a. To free from carbonic acid; to deprive of carbon.

Decarbonization, n. Act or process of depriving of carbon.

Decarbonize, v. a. See DECARBONATE.

Decar'dinalize, v. a. To remove from the degree of cardinal.

Dec'astich, n. [Gr. *deka*, and *stichos*, a line, a verse.] (*Lit.*) A poem consisting of ten lines or verses.

Dec'astyle, n. [Gr. *deka*, and *stylos*, a column.] (*Arch.*) A portico having ten columns in front.

—*a.* Presenting ten columns in front; as, a *decastyle* colonnade.

Decasyllab'ic, a. Having ten syllables.—In the German and English languages the ordinary heroic verse is *D.*; but a short syllable is sometimes added at the end by way of variety, and this, in consequence of the structure of those languages, takes place more frequently in the former than in the latter. In the Italian heroic verse the eleventh syllable is almost uniformly added, and hence it is more properly to be termed an *hendecasyllabic*. In French versification the *D.* line is appropriated to light composition, especially tales.

Decatur, STEPHEN, a distinguished American naval officer, b. in Maryland, 1779. Entering the U. States navy at an early age, he was promoted to a lieutenantcy in 1799, and served on the W. India station during the temporary war with France. He subsequently served under Commanders Dale, Morris, and Preble, in the Mediterranean. In 1803, the U. S. ship *Philadelphia* having been captured by a Tripolitan cruiser, *D.* formed a plan for cutting her out from the enemy's harbor; which exploit he successfully accomplished. He subsequently shared in the bombardment of Tripoli. In 1804, *D.* received his captain's commission, and, upon war with England being declared, in 1812, *D.*, while commanding the *United States*, 44 guns, fell in with the British frigate *Macedonian*, Capt. Carden. An action ensued which resulted in the capture of the *Macedonian*, which was forthwith taken into New York, as a prize. For this service, *D.* received a gold medal. Next year, *D.* sailed from New York in command of a squadron, and ran through the enemy's blockade; but was almost immediately afterward blockaded himself in the harbor of New London. In 1814, his flag was transferred to the *President*, 44 guns, and he again ran the blockade out of New York harbor. This time he was chased by the British frigate *Endymion* (40 guns), the *Pomona* (of 38), and the *Tenedos*. After a short running fight, *D.* surrendered, and, with his ship, was taken to Bermuda. *D.* was afterward tried by court-martial, but honorably acquitted. In 1815, hostilities broke out between this country and Algiers, and *D.* was dispatched thither. He speedily brought the Dey to reason, and ample redress was obtained for past Algerine misdeeds. *D.* was killed in a duel, fought March 22, 1820, near Bladensburg, Md., with Com. James Barron, U.S.N.

Fig. 778.—DECATUR.

Decatur, in Alabama, a city, the cap. of Morgan co., on the Tenn. river, 30 m. W. S. W. of Huntsville. *Pop.* (1897) about 3,000.

Decatur, in Georgia, a S. W. co., bordering on Florida. *Area*, about 1,062 sq. m. *Rivers*, Flint river, Chattahoochee river, and Spring creek. *Surface*, broken. *Soil*, fertile. *Pop.* (1890) 19,949. *Cap.* Bainbridge.

—A town, cap. of De Kalb co., 6 m. E. N. E. of Atlanta, on the Georgia R. R. *Pop.* (1897) about 1,250.

Decatur, in Illinois, a flourishing city and R. R. center, cap. of Macon co., 40 m. E. of Springfield. Has extensive manufacturing and coal-mining interests. *Pop.* (1897) about 19,500.

Decatur, in Indiana, a S. E. co.; *area*, about 372 sq. m. *Rivers*, Laughery, Clifty and Sand creeks. *Surface*, slightly undulating. *Soil*, a rich loam. *Min.*, limestone. *Pop.* (1897) about 4,000. *Cap.* Greensburg.

—A city, the cap. of Adams co., on St. Mary's river, about 22 m. S. S. E. of Fort Wayne. *Pop.* (1897) about 3,800.

—A township of Marion co.

Decatur, in Iowa, a S. co., bordering on Missouri; *area*, about 528 sq. m. *Rivers*, Weldon, and Crooked Fork of Grand river. *Surface*, undulating. *Soil*, fertile. *Pop.* (1890) 15,643. *Cap.* Leon.

—A post-village and township of Decatur co., about 5 m. W. of Leon. *Pop.* about 300.

Decatur, in Kansas, a post-office of Decatur.

Decatur, in Michigan, a fine town of Van Buren co., 24 m. S. W. of Kalamazoo. *Manuf.* Iron, leather, flour, staves, sash, &c. *Pop.* (1894) 1,336.

Decatur, in Mississippi, a village, cap. of Newton co., about 76 m. E. by N. of Jackson.

Decatur (or DECATURVILLE), in Missouri, a post-village of Cole co., about 50 m. W. of Rolla.

Decatur, in Nebraska, a post-village of Burt co., on the Missouri river, about 60 m. N. of Omaha.

Decatur, in New York, a post-village and township of Otsego co., about 60 m. W. of Albany.

Decatur, in North Carolina, a post-village of Polk co.

Decatur, in Ohio, a post-village of Brown co., about 100 m. S. by E. of Columbus.

—A township of Lawrence co.

—A township of Washington co.

Decatur, in Pennsylvania, a township of Clearfield co.

—A post-township of Mifflin co., about 42 m. N. W. of Harrisburg.

Decatur, in Tennessee, a W. central co.; *area*, about 325 sq. m. *Rivers*, Tennessee river, which forms its

E. boundary, and Beech River. *Surface*, generally even. *Soil*, fertile. *Pop.* (1890) 8,995. *Cup.* Decaturville.
—A post-village, cap. of Meigs co., about 140 m. E. S. E. of Nashville.

Decatur, in *Texas*, a town, the cap. of Wise co., 65 m. W. N. W. of Dallas. *Pop.* (1897) about 2,100.

Decatur, in *Wisconsin*, a village and township of Green county, on Sugar River, about 87 miles W. S. W. of Milwaukee.

Decaturville, in *Ohio*, a P. O. of Washington co.

Decaturville, in *Tennessee*, a township and village, cap. of Decatur co., 5 m. W. of Tennessee River, about 110 m. W. S. W. of Nashville.

Decay, *v. n.* [Fr. *déchoir*; Lat. *de*, and *cadere*, to fall.] To pass gradually from a sound, prosperous, or perfect state to a less perfect condition, or toward destruction; to become weaker; to waste; to decline; to diminish; to wither; to fade; to fall; as, a *decayed* tooth.

"So dies his love, and so my hopes decay." — *Pope*.

—*v. a.* To impair; to bring into a diminishing or falling state.

"He was of a very small and decay'd fortune." — *Clarendon*.

—*n.* A falling off; decline; gradual failure; loss of strength by degrees; decline of health, wealth, rank, excellence, or perfection; corruption; putrefaction.

"Trade's proud empire hastes to swift decay." — *Johnson*.

—Origin of decay; cause of decline.

"He that plots to be the only figure among ciphers, is the decay of a whole age." — *Bacon*.

(*Arch.*) The gradual destruction of building-materials is known in works upon architecture by this name. It differs from decomposition, inasmuch as *D.* may take place without any change in the nature of the constituent elements of the stone; whereas decomposition always implies that a change of some kind has taken place.

Decayedness, *n.* State of being decayed or impaired.

Decayer, *n.* That which causes decay. (*R.*)

"Your water is a sore decayer of your whoreson dead body." — *Shaks.*

Decan, (*Sansk. dakshina*, the south.) A term, rather of historical interest than of actual use, applied sometimes to the whole peninsula of Hindostan to the S. of the Vindhya Mountains, which separate it from the basin of the Ganges; and sometimes restricted to that portion of the same which is rather vaguely bounded on the N. by the Nerbudda, which falls into the Gulf of Cambay, and on the S. by the Kistna or Krishna, a tributary of the Bay of Bengal.

Decase, (*dē-sēs'*) *n.* [Lat. *decessus*, *decedo* — *de*, and *cedo*, to go.] Death; departure from this life; mortal exit.

—*v. a.* To depart from this life; to die; to become defunct.

"He tells us Arthur is deceased to-night." — *Shaks.*

Decabalus, a king of the Dacians, who fought against the Romans in the reign of Domitian. He entered the prov. of Moesia, defeated and slew Oppius Sabinus, the Roman commander, and took a number of places. He was, afterwards, himself defeated, but still resisted till Domitian agreed to pay him a yearly tribute, which was continued by Nerva, but refused by Trajan, who subdued Dacia, on which *D.* killed himself, A. D. 105.

Decedent, *n.* A person deceased.

—*a.* Departing from this life.

Decelt, (*dē-sēl'*) *n.* [O. Fr. *decepte*, from Lat. *deceptio*, from *decipio*, *deceptus* — *de*, and *capio*, to take.] An ensnaring or entrapping; deception; fraud; a stratagem; artifice; guile; duplicity; art; cunning; wile.

(*Law*) A fraudulent misrepresentation or contrivance by which one person deceives another, who has no means of detecting the fraud, to the injury and damage of the latter. The remedy for a *D.* is by an action of trespass on the case.

Decetful, *a.* Full of deceit; tending to mislead, deceive, or ensnare; fraudulent; fallacious; delusive; insidious; false; hypocritical; hollow.

Decetfully, *adv.* In a deceitful manner.

Decetfulness, *n.* Quality of being deceitful; state of being fraudulent; tendency to deceive or delude; as, the *deceitfulness* of riches.

Decetless, *a.* Without deceit.

Decettable, *a.* Subject to deceit or imposition; capable of being cajoled, misled, or entrapped; exposed to imposture.

"He received nothing but fair promises, which proved *deceivable*." — *Hayward*.

Decetvableness, *n.* Liability to be deceived; capability of deceiving others.

Decetvably, *adv.* In a deceivable manner.

Decieve, (*dē-sēv'*) *v. a.* [Fr. *décevoir*; Lat. *decipere* — *de*, and *capio*. See *D. CEIT.*] To ontrap; to ensnare; to mislead; to conduct into error; to defraud; to delude; to circumvent; to bamboozle; to fail; to deprive by stealth; as, to *decieve* expectations. — To beguile.

Deciever, *n.* One who deceives; a cheat; an impostor.

Decem'ber, *n.* [Lat., from *decem*, ten.] It was the tenth month in the year of Romulus, B. C. 753; and became the twelfth when Numa Pompilius placed the months of January and February before March, B. C. 713.

Decemden'tate, *a.* [Lat. *decem*, ten, and *dens*, *dentis*, tooth.] With ten teeth.

Decem'fid, *a.* [Lat. *decem*, and *findere*, to split.] (*Bot.*) Split into ten parts.

Decemloc'ular, *a.* [Lat. *decem*, and *loculus*, from *locus*, place.] (*Bot.*) Having ten cells for seeds.

Decem'pedal, *a.* [Lat. *decem*, and *pes*, *pedis*, a foot.] Of a length of ten feet.

Decem'vir, *n.*; Eng. *pl.* DECEMVIRS; Lat. *pl.* DECEMVIRI. [Lat. *decem*, and *vir*, a man.] (*Rom. Hist.*) One of the supreme council of ten, appointed at Romo B. C. 451, who compiled the laws of the ten tables the same year, and at first governed so as to win the respect of

their fellow-citizens. The decemvirate was renewed B. C. 450, when two tables were added, making the *Laws of the Twelve Tables*. The *D.* were deposed in consequence of the tyranny of Appius Claudius towards Virginia, and the consular government was restored B. C. 449.

Decem'viral, *a.* Pertaining or relating to the Roman decenvirs.

Decem'virate, *n.* [Lat. *decemviratus*.] (*Rom. Hist.*) Office, or term of office, of the decenvirs. See DECEMVIR.

—Any body of ten men holding official authority.

Decency, *n.* [Fr. *décence*; Lat. *decentio*, from *decens*. See DECENT.] That which is fit, suitable, seemly, comely, or becoming in words or behavior. — Propriety of form or manner, in social intercourse, in actions, or discourse; decorum; proper formality; becoming ceremony; suitability to character; propriety in speech; modesty.

"Want of decency is want of sense." — *Earl of Roscommon*.

Decenn'ia, (*Rom. Hist.*) Festivals which were instituted by the Emperor Augustus, B. C. 24, in acknowledgment of the prosperity of his administration during the preceding 10 years. They were continued by the emperors every tenth year of their reign, with games, sacrifices, and largesses to the people. The last was celebrated by Theodosius II. in 411.

Decenn'ary, *n.* [Lat. *decennis*, *decennium* — *decem*, and *annus*, a year.] A period of ten years.

(*Feud. Law.*) A district originally containing ten men with their families. King Alfred divided England into counties, the counties into hundreds, and the hundreds into tithings or decennaries.

Decenn'ial, *a.* [Lat. *decenalis*.] Continuing for ten years; happening every ten years; consisting of ten years.

Decenn'ium, *n.* [Lat.] A period of ten years.

Decenn'oval, **Decenn'ovary**, *a.* [Lat. *decem*, and *novum*, nine.] Relating to the number 19; comprising a period of nineteen years; as, the *decennovary* progress of the arts.

Decent, *a.* [Fr.; Lat. *decens*, from the imper. verb *decel*, it is seemly, comely, or becoming; probably akin to *dignus*, Gr. *deiknumi*, to show; root *dic*.] Becoming; seemly; fit; suitable; comely; decorous; proper; as, a *decent* appearance. — Not gaudy or ostentatious; modest; free from extravagance or immodesty. — Sufficient; moderate; competent; respectable; as, to make a *decent* livelihood.

Decently, *adv.* In a decent, seemly, or becoming manner.

"Let all things be done *decently*, and in order." — 1 Cor. xiv. 40.

Decentness, *n.* State or condition of being fit or decent.

Decen'tralize, *v. a.* To remove from the centre.

Deception, *n.* [Fr.; Lat. *deceptio*. See DECEIT.] Act of deceiving, enjoining, or misleading; as, self-deception. — State of being deceived or misled; artifice practised.

"Reason . . . may . . . fall into deception unawares." — *Milton*.

—Duplicity; guile; fraud; cajolery; imposition; delusion; double dealing; as, a person capable of *deception*.

Deception Island, a volcanic island in the Antarctic ocean, consisting of layers of ashes and ice.

Deceptions, (*de-sēp'shūz*), *a.* Apt to deceive; deceitful; as, "*deceptions* functions." — *Shaks.*

Decept'ive, *a.* [O. Fr. *déceptif*.] Tending to deceive, or mislead; misleading; deceitful; false; delusive; fallacious; as, a *deceptive* appearance.

Decept'ive Cad'ence, (*Mus.*) A cadence in which the final close is avoided by varying the final chord.

Decept'ively, *adv.* In a manner calculated to deceive.

Decept'iveness, *n.* Tendency or aptitude to deceive.

Decept'ory, *a.* Possessing powers to deceive.

Deception, *n.* The act of cropping or plucking off. — That which is cropped or taken off.

Decertation, *n.* Strife or contention for power or supremacy. (*R.*)

Decharm, *v. a.* To counteract the influence of a charm; to disenchant.

"He was suddenly cured by *decharming* the witchcraft." — *Harvey*.

Dech'enite, *n.* (*Min.*) A vanadate of lead and zinc. *Sp. gr.* 5.6.

Dech'erd, in *Tennessee*, a post-village of Franklin co., abt. 83 m. S. S. E. of Nashville.

De Chien Bayou, in *Kentucky*, traverses Hickman and Fulton cos., and empties into the Mississippi.

Dechristianize, *v. a.* [De and *Christianize*.] To take away Christian belief from; to prevent the dissemination of Christianity.

Decid'able, *a.* That may be decided.

Decide, *v. a.* [Lat. *decido* — *de*, and *cedo*, to cut.] To cut short; to terminate; to end; to determine; to settle; to resolve; to fix the event of; as, to *decide* a wager. — *v. n.* To determine; to form a definite opinion; to come to a conclusion.

"Who shall *decide* when doctors disagree?" — *Pope*.

Decid'ed, *a.* That implies decision; determined; fixed in purpose; as, a *decided* will. — Unequivocal; unquestionable; not ambiguous; as, a *decided* inclination to go wrong.

—Clear; unmistakable; undeniable; as, *decided* proof.

Decid'edly, *adv.* In a decided or determined manner; clearly; unquestionably; indisputably.

Decid'er, *n.* One who decides or determines anything in question or abeyance, as a contest or quarrel.

"Thou grand *decider* of dusty and old titles." — *Beaum. and Fl.*

Decid'n'ity, *n.* State of being deciduous. (*R.*)

Decid'nous, *a.* [Lat. *deciduous*, from *decido* — *de*, and *cedo*, to fall.] (*Bot.*) Applied to plants whose leaves fall off in the autumn, in contradistinction to *evergreens*.

(*Zool.*) Applied to parts which have but a temporary existence, and are shed during the lifetime of the animal, as certain kinds of hair, horns, and teeth.

Decid'nousness, *n.* Quality of falling off every year; want of permanence; aptness to fade and fall away.

Dec'igram, *n.* [Fr. *décigramme*.] A French weight, being the tenth part of a gramme, or 1-5432 grains.

Dec'ilitre, *n.* [Fr.] The tenth part of the French litre, or 0-176 pint.

Decill'ion, *n.* [From Lat. *decem*.] (*Arith.*) A number involved in the tenth power.

Decill'ionth, *a.* Relating or pertaining to a decillion. — *n.* One of the equal parts of a decillion.

Decimal, (*des'e-mal*) *a.* [Fr. *décimal*; Lat. *decemus*, from *decem*, ten.] Numbered or reckoned by ten; increasing or diminishing by ten; as, a *decimal* fraction; a *decimal* currency.

—*n.* (*Arith.*) Any number expressed in the scale of tens; — usually applied to a *decimal fraction*, q. v.

Dec'imal Arith'metic, *n.* The common system of arithmetic, in which the scale of numbers proceeds by tens.

Decimal Frac'tion, *n.* (*Arith.*) A fraction whose denominator is a *decimal* or power of ten. Thus $\frac{1234}{100}$ is

$$\frac{1000}{100} + \frac{200}{100} + \frac{30}{100} + \frac{4}{100} \\ = 10 + 2 + \frac{3}{10} + \frac{4}{100}$$

By an obvious extension of the method of local values,

where each digit has ten times the value of the like

digit which immediately succeeds it, the above *D. F.* may

clearly be written more concisely in the form 12.34

where the *decimal point* after the 2 merely serves to

indicate which digit represents *units*. In this abbrevi-

ated form a *D. F.* is termed a *decimal*. For the purpose

of indicating the unit's place, other and less objection-

able methods have been proposed. Sir Isaac Newton's

method, however, of using a point, placed for distinction

near the top of the figures, is the one most commonly

employed. The operations of addition, subtraction, mul-

tiplication, and division may be applied to decimals in

exactly the same manner as to integers; hence their

great utility. They present, nevertheless, this disad-

vantage, that comparatively few fractional quantities or

remainders can be exactly expressed by them; in other

words, the greater number of common fractions can ne-

be *reduced*, as it is called, to *D. F.*, without leaving a

remainder. Common fractions, such as 1-2, 2-3, 1-4, 3-7

9-25, for instance, can be reduced to *D. F.* only by mul-

tiplying the numerator and denominator of each by such

a number as will convert the denominator into 10, or

100, 1000, &c. (The common process is merely an abridg-

ment of this.) But that is possible only when the de-

ominator divides 10, or 100, without remainder. Thus

of the above denominators, 2 is contained in 10, 5 times

4 in 100, 25 times; and 25 in 100, 4 times; therefore

$\frac{1}{2} = \frac{1 \times 5}{2 \times 5} = \frac{5}{10} = .5$; $\frac{1}{4} = \frac{1 \times 25}{4 \times 25} = \frac{25}{100} = .25$; $\frac{9}{25} = \frac{9 \times 4}{25 \times 4} = \frac{36}{100} = .36$. But neither 3 nor 7 will divid-

10, or any power of 10; and therefore these number

cannot produce powers of 10 by multiplication. In

such cases we can only approximate to the value of the

fraction.

Dec'imal Notat'ion, *n.* (*Arith.*) See NOTATION.

Dec'imalism, *n.* A decimal system, as of currency

weights, measures, &c.

Decimalization, *n.* Act of reducing or convertin-

to the decimal system.

Dec'imalize, *v. a.* To reduce to decimal numbers; to

establish a decimal system.

Dec'imally, *adv.* By means of tens; according to

decimals.

Dec'imal System, *n.* See METRICAL SYSTEM.

Dec'imate, *v. a.* [Lat. *decimo*, *decimatus*, from *decem*,

To read what is obscurely written, or partially obliterated; to unfold; to unravel; to explain; to interpret; as, to decipher an ambiguous speech, to decipher a badly written manuscript. — To stamp; to characterize; to mark. (R.)

Decipherable, *a.* That may be deciphered.

Decipherer, *n.* One who reads and explains anything written in cipher.

Decipheress, *n.* A female expert in deciphering.

Decipherment, *n.* Act or art of deciphering.

Decision, (*dě-siz'h'un*), *n.* [Lat. *decisio*. See DECIDE.] A termination; determination of a difference, doubt, or event; final judgment; conclusion; settlement; adjustment.

"More deaf than adders to the voice of any true decision." *Shaks.* Firmness and stability of will or purpose; determining; putting an end to question, doubt, or controversy; as, a man of prompt decision.

Report made of an adjusted difference, or matter of legal dispute; terms of adjudication or award; as, the decision of an umpire, a decision of the Court of Chancery, &c.

Decisive, *a.* Having the power or quality of bringing to a decision, or determination; convincing; final; absolute; conclusive; as, a decisive battle.

Characterized by decision, determination, or prompt settlement; as, a person of decisive character.

Decisively, *adv.* In a determinate, decisive, or conclusive manner.

Decisiveness, *n.* State or quality of exhibiting decision; marked by decision; conclusiveness; as, the decisiveness of an argument.

Decisory, *a.* Competent to decide, determine, or adjust.

Decius, (*dě'shūs*), a Roman emperor, b. in Pannonia, and succeeded Philippus, whom he defeated, in 249. He distinguished himself by an expedition against the Goths, and by persecuting the Christians. In his march against the Goths he entered a morass, where he and his army perished in an attack of the enemy, A. D. 251.

Decius, a celebrated Roman consul, who, after many glorious exploits, devoted himself to the gods' manes or the safety of his country, in a battle against the Latins, by throwing himself into the midst of the ranks of the enemy, and dying, covered with wounds, 337 B. C. — His son and grandson also imitated his devotedness in the same manner; the first in a battle with the Gauls and Annites, 296 B. C.; the second, in the war against Pyrrhus, 270 B. C.

Deck, *v. a.* [A. S. *decan*, *thecan*, *gedecan*, to cover, hatch; L. Ger. and D. *deken*; Ger. *decken*; O. Ger. *dejan*, *dechen*; Icel. *dekja*; Dan. *tække*; Sp. *téjar*, to cover with tiles; Lat. *tego*; Gr. *stígo*; Heb. *daga*, to cover; Ar. *daga*, to cover over, to be dark; Sansk. *tvae*, to cover.] To cover; to canopy; to overspread.

"Deck with clouds th' uncoloured sky." — *Milton*.

to paint on; to clothe; to dress elegantly; to embellish; to array; to adorn; to decorate; to ornament.

"Sweet ornament! that decks a thing divine." — *Shaks.*

to supply or furnish with a deck; as, to deck a ship.

(*Naut.*) A platform of planks laid upon a ship's beams and carlings, forming a flooring for those above, and shelter for those below. In addition, it is the support of guns, cargo, &c.; and, when the hatches are battened down, the means of keeping the waves out in tempestuous weather. To make them watertight, the planks are caulked and pitched between. In large vessels there are several decks, as the upper, main, lower, and top (or cable) decks.

— pack of cards piled regularly one upon another.

"The king was slyly fingered from the deck." — *Shaks.*

Deck-cargo, *n.* (*Naut.*) Goods carried on a ship's deck, owing to want of room in the hold; extra cargo.

Deck'er, *n.* A coverer; the person or thing which decks, arrays, or adorns. Largely used in compounds; as, a double-decker, a three-decker; referring to vessels having two or three decks, or similar structures.

Deck'er (or **DEKKER**), THOMAS, an English dramatist, contemporary with Ben Jonson, who satirized him in his *Poetaster* under the name of *Crispanus*; D. retorted in his *Satiromastix*; or *Unrussing of a Humorous wit*. He wrote several plays, some of which possess merit. Died about 1638.

Deck'er, in Illinois, a township of Richland co., bounded S. W. by Little Wabash.

Deck'er, in Indiana, a township of Knox co.; has the Wabash on the west, and White River on the S. E.

Deck'er (formerly **DECKER STATION**), in Indiana, a post-office of Knox co.

Deck-hand, *n.* (*Naut.*) A term given to a sailor who principally employed on deck, and who has not learned to go aloft.

Deck-passenger, *n.* (*Naut.*) A passenger restricted to the fore and midship decks of a ship; a steerage passenger; — used in contradistinction to cabin passenger.

Deck-stopper, *n.* (*Naut.*) A stopper used for securing the cable forward of the windlass or capstan, while being overhauled. See **STOPPER**.

Decker Point, in Pennsylvania, a post-office of Indiana co.

Deertown, in New Jersey, a town of Wantage township, Sussex co., on Deep Cove Creek, 66 m. N. W. New York City. Pop. (1897) about 1,300.

Declaim, *v. n.* [Lat. *declamo* — *de*, and *clamo*, to call, cry out. See **CLAIM**.] To speak or plead loudly, vehemently, or earnestly, to an audience or public assembly, to harangue, to make a formal speech or oration.

"Declaim aloud on the praise of goodness." — *Watts*.

— inveigh; to rant; to make a stilted or theatrical display of rhetoric.

"You declaim

Against his manners, and corrupt your own." — *Ben Jonson*.

— *v. a.* To speak or deliver one's self in a set rhetorical manner; to make an oratorical display.

Declaim'ant, **Declaim'er**, *n.* One who declaims in public; a public speaker; one who attempts to convince by haranguing.

"A perpetual declaimer against jealousy." — *Addison*.

Declama'tion, *n.* [Fr., from Lat. *declamatio*.] (*Rhet.*) Among the ancients, D. was the art of speaking indifferently upon both sides of a question. In modern times the meaning of this word is variable in different countries. In Germany, and in most parts of the continent of Europe, it is often used in a sense nearly synonymous with recitation. In France, in England, and in this country, it is sometimes applied to any grand oratorical display, either in the pulpit, at the bar, in the senate, or on the stage. But it is employed most usually in a disparaging sense, to indicate the use of forced emphasis and inflated language, to withdraw the attention of the hearer from the weakness or fallacy of the logic or reasoning. — See **ELOQUENCE**.

Declam'atory, *a.* [Lat. *declamatorius*.] Treated in the manner of a rhetorician; relating to the practice of declamation; as, a "declamatory theme." — *Wotton*.

— Appealing to the passions; noisy; pretentious; rhetorical; without solid sense or argument.

Declar'able, *a.* That may be declared or proved; as, goods declarable at the custom-house.

"This is declarable from the best writers." — *Brunne*.

Declar'ant, *n.* One who makes a declaration. (*n.*)

Declaration, *n.* [Lat. *declaratío*.] Act of declaring, asserting, or publicly testifying; proclaiming by explicit announcement; as, a declaration of political faith. — That which is declared or affirmed to; proclamation; publication; manifestation; affirmation; annunciation; decided assertion; open statement.

"A plain and full declaration of mercy and love." — *Tillotson*.

— An explicit and authentic document, deed, or instrument recording the authorization and verification of any public act, measure, or arrangement; as, the Declaration of Independence. — An asseveration made in place of an oath. — See **ASSEVERATION**.

(*Law*.) A legal specification on record of the cause of action by a plaintiff against a defendant. The D. should correspond with the process in the names and descriptions of the parties; for if there be a material variance, the court will set aside the proceedings. The plaintiff may declare as soon as the defendant has appeared in answer to the writ of summons, or, where the summons is not specially indorsed, on failure of the defendant to make appearance. The D. must state clearly the plaintiff's case in one or more counts, each count generally setting forth a separate cause of action. All irrelevant matter is struck out at the cost of the plaintiff; and if no appearance is made by the defendant after the D. has been delivered to him or his attorney, the plaintiff may proceed to claim judgment by default.

Declaration of Independence, (*Hist.*) A state paper issued by the Congress of the U. States, in the name and by the authority of the people, on the fourth day of July, 1776, declaring, "that the United Colonies are, and of right ought to be, free and independent States; that they are absolved of all allegiance to the British crown, and that all political connection between them and the States of Great Britain is and ought to be dissolved." The said act concluded with a pledge by the representatives to each other of their lives, their fortunes, and their sacred honor.

Declaration of War, (*Pol.*) The public proclamation of the government of a State, by which it declares itself to be at war with a foreign power which is named, and which forbids all and every one to aid or assist the common enemy. The power of declaring war is vested in Congress by the Constitution, Art. 1, s. 8. There is no form or ceremony necessary except the passage of the act. Formerly, in Europe, it was usual to precede hostilities by a public declaration communicated to the enemy, and to send a herald to demand satisfaction; but such is not the practice in modern times.

Declar'ative, *a.* [Fr. *déclaratif*; Lat. *declarativus*.] Explanatory; making show or manifestation; announcing.

Declar'atively, *a.* In a declarative manner; in the form of a declaration.

Declarator'ily, *a.* Same as **DECLARATIVELY**, *q. v.*

Declar'atory, *a.* [Fr. *déclaratoire*.] Making declaration; free manifestation or exhibition; expository; expressive; as, a declaratory act.

Declare, *v. a.* [Fr. *déclarer*; Lat. *declaro* — *de*, and *claro* — *clarus*, clear.] To make clear, plain, evident, or manifest; to show clearly, plainly, explicitly, or openly; to make known; to manifest or communicate unmistakably; to proclaim, announce, or publish.

"Declare his glory among the heathen." — *1 Chron. xvi. 24*.

— To assert; to affirm; to testify; to make declaration of; as, to declare a person to be an impostor.

(*Com.*) To reveal; to return a true and full account of; as, to declare goods as being free of duty.

To declare one's self, to make public exposition of one's thoughts, wishes, or opinions.

— *v. n.* To make a declaration; to proclaim or announce clearly some intent, purpose, or resolution; to make known explicitly some intended step or determination; a statement, affirmation, or assertion; to protest; — generally with *for* or *against*.

"Will and understanding declaring against them." — *Taylor*.

Declar'edly, *adv.* Explicitly; openly; avowedly.

Declar'edness, *n.* State or condition of being declared.

Decla'r'er, *n.* One who, or that which, declares or makes known.

Declen'sion, *n.* [Fr. *déclinaison*; Lat. *declinatio*. See **DECLINE**.] A bending aside or downwards; an oblique inclination or direction; slope; declivity; declination; descent; as, *declension* of the land.

— A falling or declining towards a worse state; a tendency towards a less degree of excellence or perfection; deterioration; as, the *declension* of youth.

— Act of courteously declining; declinature.

(*Gram.*) The inflection or change of the termination of nouns, adjectives, and pronouns, to form the oblique cases; as, the first *declension*.

Declension of the needle. (*Naut.*) See **DECLINATION**.

Declin'able, *a.* That may be declined; changing its termination in the oblique cases; as, a *declinable* noun.

Decl'inate, **Decl'inous**, *a.* (*Bot.*) Curving downward; declining.

Declina'tion, *n.* [Lat. *declinatio*. See **DECLINE**.] A bending or leaning from; oblique direction or incline; decline; descent; slope.

"This declination of atoms in their descent." — *Bentley*.

— A bending aside or downwards; inclination; as, a *declination* of the head. — Decay; deterioration; gradual departure from excellence, superior merit, or perfection; diminution of power or vigor.

"A time of declination or decay." — *Waller*.

— Deviation from moral rectitude. — Rejection; refusal; withdrawal; non-acceptance.

(*Astron.*) The angular distance of the body N. or S. from the celestial equator. It is measured on the great circle which passes through the centre of the body and the 2 poles of the heavens, and is consequently perpendicular to the equator. The place of a star in the heavens is determined by means of its *right ascension* (see **ASCENSION**); corresponding to longitude and latitude on the surface of the earth. Speaking of celestial objects, *declination* and *right ascension* have reference to the *equinoctial*, or plane of the earth's diurnal rotation; while *latitude* and *longitude* are measured respectively from and along the *ecliptic*. The D. of a star is said to be *north* when the star is north of the equator, and *south* when the star is south of the equator. — D. circles are great circles passing through the poles of the heavens. *Parallels of D.* are small circles parallel to the celestial equator.

Declination of the Magnetic Needle.

(*Astron.*) When the magnetic needle of the mariner's compass is disturbed, it oscillates until it gradually settles, and points steadily to two points on the horizon, or to a graduated circle of the instrument representing the horizon, which are diametrically opposite to each other. A great circle passing through these points in a plane perpendicular to that of the true horizon, represents the magnetic meridian of the place, while the geographical or astronomical meridian is represented by a great circle also vertical to the horizon, the plane of which passes through its true N. and S. points. These planes intersect, and are inclined to each other at a small angle, and this angle indicates the extent of the variation or D. of the magnetic needle from the line joining the true N. and S. points of the horizon.

Thus, if N S (fig. 779) be the line of the astronomical meridian, and n s the line joining the poles of the needle, the angle N C n is the declination. The D. may be either E. or W., as the magnetic poles happen to be either E. or W. of the true N. The D. of the needle is constantly varying. In 1581 it was found to be 11° 15' E. of the true N.; in 1633 it was only 4° 5' E.; while in 1657 it was said to have pointed due N. and S.; but the authority on which this assertion rests is doubtful. In 1818 it was found to be 24° 30' W., and in 1822, 14° 12' W. It seems, then, to be a fair hypothesis that the D. varies alternately to the E. and W. to about 25° on either side, gradually returning from the maximum of variation on one side to the true meridian, and thence progressing to the maximum on the other side; and from other data given above it would appear that the rate of increase or decrease in the variation averages about 5' or 9' yearly, and that the needle takes about 170 years to arrive at either extreme of variation after pointing due N. But as very little is known, comparatively speaking, of terrestrial magnetism and its causes and effects, no hypothesis respecting the erratic movements of the needle can be received with safety, or considered satisfactory. The D. of the needle at any place is so inconstant that it varies even in the course of the day, being sometimes E. and sometimes W. of the mean variation at that place. The D. of the magnetic needle is said to have been discovered by Columbus in 1492. Whether this be true or not, it is certain that the discovery was made about the close of the 15th century. — The variation is ascertained or measured either by the **DECLINOMETER**, or the **DIPPING-NEEDLE**, *q. v.*

Fig. 779.

Thus, if N S (fig. 779) be the line of the astronomical meridian, and n s the line joining the poles of the needle, the angle N C n is the declination. The D. may be either E. or W., as the magnetic poles happen to be either E. or W. of the true N. The D. of the needle is constantly varying. In 1581 it was found to be 11° 15' E. of the true N.; in 1633 it was only 4° 5' E.; while in 1657 it was said to have pointed due N. and S.; but the authority on which this assertion rests is doubtful. In 1818 it was found to be 24° 30' W., and in 1822, 14° 12' W. It seems, then, to be a fair hypothesis that the D. varies alternately to the E. and W. to about 25° on either side, gradually returning from the maximum of variation on one side to the true meridian, and thence progressing to the maximum on the other side; and from other data given above it would appear that the rate of increase or decrease in the variation averages about 5' or 9' yearly, and that the needle takes about 170 years to arrive at either extreme of variation after pointing due N. But as very little is known, comparatively speaking, of terrestrial magnetism and its causes and effects, no hypothesis respecting the erratic movements of the needle can be received with safety, or considered satisfactory. The D. of the needle at any place is so inconstant that it varies even in the course of the day, being sometimes E. and sometimes W. of the mean variation at that place. The D. of the magnetic needle is said to have been discovered by Columbus in 1492. Whether this be true or not, it is certain that the discovery was made about the close of the 15th century. — The variation is ascertained or measured either by the **DECLINOMETER**, or the **DIPPING-NEEDLE**, *q. v.*

Declina'tor, *n.* An instrument used in dialling, for taking the declination of a reclining plane.

Declin'atory, *a.* [L. Lat. *declinatorius*.] Involving a refusal of anything.

Declin'ature, *n.* Act of refusing, discarding, or withdrawing; as, the *declinature* of a nomination.

Decline, *v. n.* [Fr. *décliner*; Lat. *declino* — *de*, and *clino*; Gr. *klinō*, to make to bend, to turn aside; allied to *Armor. klin*, a bend, *glin*, the knee.] To lean or bend

from; to lean or bend aside or downwards; to make a lowering of the head.

"And with declining head

Into his bosom, bid him shed tears."—*Shaks.*

—To lean or deviate from a right line or from rectitude; to swerve; to bend aside; to take an oblique course. —To fall; to fail; to deteriorate; to decay; to sink; to droop; to diminish; to change from a better to a worse state; as, *declining* years. —To refuse; not to comply; to reject; as, to *decline* a government appointment. —*v. a.* To bend downward; to bring down, or to one side; to depress.

"With head *declin'd*, and love-dejected eyes."—*Thomson.*

—To shun; to avoid; to reject; to eschew; to be cautious not to do or interfere with; as, to *decline* a discussion, to *decline* an offer.

(*Gram.*) To change the termination of a noun, &c., for forming the oblique cases; to inflect; as, to *decline* a substantive.

—*n.* A falling off, or away from; a tendency to a worse state; diminution, deterioration, or decay; as, the *decline* of life.

"Those fathers lived in the *decline* of literature."—*Swift.*

(*Med.*) A popular name given to a slow wasting or emaciation of the body, with a corresponding loss of health, energy, and strength. This state is most frequently the result of some organic disease, that, sympathetically affecting other organs and functions, throws the whole system, as it were, out of gear, undermines the stamina of the body, and eventually proves fatal by the exhaustion it entails. Though pulmonary consumption is the disease generally understood by the term *D.*, it is equally applied to that scrofulous condition of the lymphatic glands of the bowels called *mesenteric disease*, by which the nutriment from the aliment—the chyle—is prevented from reaching the heart, when the patient, after suffering a long and serious emaciation, sinks from absolute exhaustion, consequent on the deprivation of new blood.—See ATROPHY, MESENTERIC DISEASE, PHthisis.

Decliner, *n.* One who rejects, avoids, or declines.

Declinometer, *n.* [*Eng. decline*, and *Gr. metron*, measure.] An instrument used to measure the declination of the magnetic needle. Fig. 780 represents a common form of the *D.* Upon a tripod provided with leveling screws stands the pillar *P*, to which is fixed the

Fig. 780.—DECLINOMETER.

graduated azimuthal circle *C C*. The compass-box *B*, with the vernier *V*, attached to it, moves on the azimuthal circle by means of a pivot at the pillar *P*. Two uprights, *U U*, are fixed to the side of the compass-box, on the tops of which rests the axis of the telescope *T*. A graduated arc, *A*, is fixed to the bottom of one of the uprights, and the angle of elevation of the telescope is marked by the vernier on the arm *E*, attached to the axis of the telescope. A level, *L*, is also hung on the axis of the telescope, for adjusting the instrument. Inside the compass-box is another graduated circle, *F*, the line joining the zero-points of which is parallel to the axis of the telescope. The compass-box and telescope move round as one piece on an axis passing through the centre of the azimuthal circle. When an observation is made, the telescope is pointed to a star whose position with regard to the astronomical meridian is known at the time of observation. The telescope with the compass-box is then brought the proper number of degrees on the azimuthal circle, until its axis is in the meridian of the place. If, when the telescope is in this position, the *N.* end of the needle stand at the zero-point of the inner circle, the declination would be 0° ; but if it lie *E.* or *W.* of this point, the declination is shown by the degree at which the needle stands.

Declivous, *a.* (*Bot.*) Same as DECLINATE, *q. v.*

Declivity, *n.* [*Lat. declivitas*, from *declivis*—*de*, and *clivus*, from *clino*, to bend, to incline.] Declination from a horizontal line or plane; inclination downward; descent of land,—antithetical to *acclivity*.—A downward slope; a gradual descent.

Declivous, Declivitous, *a.* Gradually descending; not precipitous; aslope; moderately steep.

Decoct, (*dē-kōkt'*) *v. n.* [*Lat. decoquo, decoctum*—*de*, and *coquo*, to boil. See COOK.] To prepare by boiling, or digesting in hot water; to extract the virtue from

by boiling; as, to *decoct* a beverage.—To digest by the heat of the stomach; as, to *decoct* food.—To strengthen or invigorate, as by boiling.

"Can sodden water, their barley broth,
Decoet their cold blood to such valiant heat?"—*Shaks.*

Decoctible, *a.* That may be boiled, or prepared by boiling.

Decoction, *n.* [*Fr.*, from *Lat. decoctio*.] Act of decocting; a boiling.

(*Med.*) A term used in pharmacy to indicate any medicine prepared by boiling, and opposed to *infusion*, by which the article is simply steeped in boiling-hot water. In a culinary sense, broth is a *D.*, tea or coffee an infusion. In preparing medicinal *D.*, the water should always be poured cold on the articles, and allowed to boil slowly. When roots, barks, herbs, or leaves are employed, the boiling should never be continued for more than ten minutes, as after that time the gummy and resinous parts are dissolved by the water, and the mixture will become thick and ropy.

Decoctive, *a.* That may be easily decocted.

Decoction, *n.* A substance or extract prepared by decoction.

Decollate, *v. a.* [*Lat. decollo, decollatus*—*de*, and *collum*, the neck.] To strike off the head from the trunk; to behead; to decapitate.

Decollated, *p. a.* (*Zoöl.*) Applied to univalve shells in which the apex or head is worn off in the progress of growth.

Decollation, *n.* [*Lat. decollatio*.] Act of severing the head from the body; a beheading;—used chiefly in reference to the decapitation of John the Baptist.

Decolor, **Decolour**, (*dē-kul'r*), *v. a.* To bleach; to take the color from.

Decolorant, **Decolorant**, *n.* Any substance tending to bleach, or eradicate colors.

Decolorate, **Decolorate**, **Decolorize**, **Decolorize**, *v. a.* [*Lat. decoloro, decoloratus*—*de*, and *color*.] To deprive of color.

Decoloration, **Decoloration**, *n.* [*Lat. decoloratio*.] Removal or absence of color.

De'complex, *a.* [*De*, and *complex*, *q. v.*] Composed of a repetition of compounds.

Decomposable, *a.* That may be decomposed; as, *decomposable* matter.

Decompose, *v. a.* [*Fr. décomposer*; *Lat. de*, and *compono, composuit*, to compose or compound. See COMPOSE.] To separate the constituent parts of a body or substance; to disunite elementary particles combined by chemical attraction; to resolve into original elements.

—*v. n.* To resolve a compound into elementary particles.

Decomposite, *a.* Compounded a second time; compounded with things already composite.

(*Bot.*) Decomposed.

Decomposition, *n.* Act of decomposing; separation of the constituents of a substance during putrefaction; separation of parts; resolution; analysis.

(*Chem.*) When compounds are resolved into their elements, or when the chemical constitution of substances is altered, they are said to be decomposed; and when, in this operation, new products are formed, such products are called the *results of decomposition*. Thus, ammonia is the result of the *D.* of certain animal substances; carburetted hydrogen gas is the result of the *D.* of pit-coal, &c. Chemists use the terms *simple* and *compound*, or *single* and *double D.*, to distinguish between the less and more complicated cases. When a compound of two substances is decomposed by the intervention of a third, which is itself simple, or which acts as such, the case is one of simple *D.*; water, for instance, is a compound of oxygen and hydrogen. When the metal potassium, which is a simple body, is thrown into it, it is decomposed; the hydrogen is liberated in the form of gas, and the oxygen combines with the potassium to form potassa. When two new compounds are produced, the result is called *double* or *complex D.* Thus, when potassa (composed of potassium and oxygen) and hydrochloric acid (composed of hydrogen and chlorine) react upon each other, chloride of potassium (composed of chlorine and potassium) and water (composed of hydrogen and oxygen) are the results.—A knowledge of the mutual decomposing powers of different substances, or, in other words, of their relative affinities, constitutes the skill of the practical chemist.—See AFFINITY, EQUIVALENTS, &c.

Decomposition of forces. (*Phys.*) See FORCES.

Decomposition of light. (*Phys.*) See LIGHT.

Decomposed, *v. a.* [*Lat. de*, and *compono*.] To compound or mix with that which is already a compound; to compound a second time; as, *decomposed* bodies.

—*a.* (*Bot.*) Decomposed; as, a *decomposed* leaf.

Decorah, in Iowa, a thriving city, cap. of Winnishiek co., on C., M. & St. P. R. R., and B., C. R. & N. R. R., 90 m. N. W. of Dubuque. The trade center of a fine farming and stock-raising region, with important manufactures and excellent schools. Pop. (1897) abt. 3,700.

Decorate, *v. a.* [*Lat. decoro, decoratus*, from *decus, decoris*, comeliness, grace, allied to *deceit*, it is seemly, becoming; Sansk. *dis*, from *dic*, to show.] To adorn; to ornament; to beautify; to deck; to embellish; as, to *decorate* a room, to *decorate* a hero, to *decorate* the person, &c.

Decorated Style, *n.* (*Arch.*) See GOTHIC ARCHITECTURE.

Decoration, *n.* Act of adorning or decorating; as, the *decoration* of the person.—That which adorns; embellishment; ornament; vesture; trappings; as, the *decorations* of a ball-room, church, &c.

(*Mil.*) A medal, cross of honor, badge of merit, &c., given for distinguished services in the field; as, he wore his *decorations*.

(*Fine Arts.*) The *D.* of any work should be confined strictly to the development of impressions which the mass itself is intended to create in strict accordance with its use; its object being merely to prevent new images which spring from the original bare design. All *D.* or ornament must be accessory, never principal, or overloading its object. The ornaments chosen should be in absolute æsthetic accordance with the object adorned.

Decorative, *a.* Fitted to embellish; adorning; ornamenting; as, a *decorative* art.

Decorativeness, *n.* Quality or capability of being decorated.

Decorator, *n.* One who beautifies, embellishes, or adorns; as, a house-decorator.

Decorous, *a.* [*Lat. decorus*, from *decus, decoris*. See DECORATE.] Seemly; suitable; becoming; decent; proper; fitting; as, *decorous* behavior, *decorous* language, *decorous* attire.

Decorously, *adv.* In a becoming manner; becomingly.

Decorousness, *n.* Decorous behavior; propriety.

Decorticate, *v. a.* [*Lat. decortico, decorticatus*—*de*, and *cortex, corticis*, bark.] To strip off bark from; to peel; to husk; to take off the exterior coat or skin of.

"Barley dried and *decorticated*."—*Arbuthnot.*

Decortication, *n.* Act of stripping off bark or husk; peeling; stripping.

Decorous, *n.* [*Lat. neut. of decorus*, from *decor, decoris*.] Seemliness; fitness; propriety of speech or demeanor; suitableness; becoming formality or gravity of order.

"He kept with princes due *decorum*,
Yet never stood in awe before 'em."—*Swift.*

Decos'ta, in New Jersey, a post-office of Atlantic eo.

Decoy, *n.* [*Duck*, and *D. koot*, a cage.] A cage, snare, or enclosure, for catching ducks or wild-fowl.—Anything intended to lead into a snare; any lure or allurement that deceives, and leads into evil, danger, or the power of an enemy.

"An old dram-drinker is the devil's *decoy*."—*Berkeley.*

—*v. a.* To catch ducks or wild-fowl by means of a duck cage or other contrivance, and also by means of a duck which is trained to lead them into the trap prepared for them; to lure into a net, cage, or snare: hence, to entrap; to entice; to allure; to seduce; as, to *decoy* a girl from her home, to *decoy* troops into an ambuscade.

Decoy-bird, *n.* A bird taught to decoy others into snare; hence, any one who seeks to entrap another.

Decoy-duck, *n.* A duck trained to allure others into a decoy.

Decoy-man, *n.* A person who practises the decoying of wild-fowl, &c.

Decrease, (*dē-krēs'*) *v. n.* [*Lat. decresco*—*de*, and *creo*, to grow.] To grow or become less; to be diminished gradually in extent, bulk, quantity, or amount, or in strength, quality, or excellence; to lessen; to diminish to subside; as, life *decreases*.

—*v. a.* To cause to become less; to lessen; to make smaller; to diminish gradually, or by small deduction.

"Nor cherished they relations poor,
That might decrease their present store."—*Prior.*

—*n.* A growing or becoming less; gradual diminution or decay.

"See thy *decrease*, and hasten to thy tomb."—*Prior.*

—The wane of the moon; the time when the visible face of the moon becomes smaller.

Decreasingly, *adv.* In a decreasing manner.

Decree, *n.* [*Fr. décret*, from *Lat. decretum*, from *dece*—*de*, and *cerno*, to decide, to judge.] An ordinance, an edict; a proclamation; an order or law; predestined purpose.—Special rule; established law or custom; decided point of any particular case.

"When he made a *decree* for the rain."—*Job xxviii. 26.*

(*Law.*) The judgment or sentence of a court of equity. (*Theol.*) The decrees of God are the settled purposes of the Almighty, whereby he hath, from all eternity, foreordained whatsoever comes to pass. See PREDESTINATION.

—*v. a.* To adjudge; to ordain; to enact; to order; to establish; to award; to appoint or fix; to determine judicially; to constitute by edict.

"Had heav'n *decreed* that I should life enjoy."—*Dryden.*

—*v. n.* To make an edict; to appoint by edict; to determine by enactment.

"The king, their father, . . . has *decreed* his sceptre to the younger Row.

Decreeable, *a.* That may be decreed.

Decreeer, *n.* One who issues a decree.

Decreet, *n.* (*Scot. Law.*) A final judgment of a court of sentence.

Decrement, *n.* [*Lat. decrementum*, from *decresco*. See DECREASE.] Decrease; waste; the state of becoming gradually less; as, *decrement* of rocks.

—The quantity lost by gradual waste.—Correlative to *increment*.

(*Her.*) *D.*, *decrecent*, and *decours*, are terms by which the wane of the moon is indicated. A moon *decrecent* is a half-moon, with the horns turned to the sinister.

(*Math.*) The part by which a variable quantity is conceived to be diminished. It is opposed to *increment*, term of frequent use in the differential calculus.

Decrepiditate, *v. a.* [*Lat. de*, and *crepito, crepitatus*—*de*, and *crepo*, to crack, to creak, to rattle.] Broken down with age; wasted or worn by infirmity or old age; in the stage of decline or decay.

Decrepiditate, *v. a.* [*Lat. de*, and *crepito, crepitatus*—*de*, and *crepo*, to crack, to creak, to rattle.] To roar or calcine in a strong heat, with a continual bursting or cracking of the substances, as salts.

—*r. n.* To crackle much or frequently; to crackle, as salts when roasting.

Decrepitation, *n.* The crackling noise which common salt and many other substances make when thrown into the fire. It is generally occasioned by the conversion into vapor of small portions of water imprisoned in the interstices of the substance, the latter being torn to pieces by the expansive force of the vapor so generated.

Decrepitness, Decrepitude, *n.* State or quality of being decrepit; the broken, crazy state of the body, produced by decay and the infirmities of old age.

Decrescendo, (*dě-kres-shen'do*), *a.* [*It.*] (*Mus.*) The reverse of crescendo, viz., a gradual diminishing of the sound. The executing of the *D.* is very difficult, whether on one or more notes. Like the crescendo, it is also frequently combined with a slight ritardando, especially in descending passages. It is frequently marked thus, >

Decrescent, (*de-kres-ent*), *a.* [*Lat. decrescens*, from *de-* + *creresco*. See *DECREASE*.] Growing less; decreasing; becoming less by gradual diminution or decay.

Decretal, *a.* [*Lat. decretalis*, from *decerno*. See *DECRETE*.] Pertaining or relating to, or containing, a decree; as, a decretal epistle.

—*n.* An authoritative order or decree; a decree of the pope.—A collection of papal decrees. See *CANON LAW*.

Decretist, *n.* One versed in the knowledge of the decretals.

Decretive, *a.* Having the force of a decree; making a decree; disposing.

Decretorily, *adv.* In a decretory manner.

Decretory, *a.* [*Lat. decretorius*, from *decerno*, *decertum*, to decide, to judge.] Judicial; definitive; established by a decree.

"The decretory rigors of a condemning sentence,"—*South*.

Critical; determining.

"The critical or decretory days of the moon,"—*Broune*.

Decrial, *n.* A crying down; condemnation by public clamor or censure.

Decrier, *n.* One who cries down, or noisily censures; one who decries another.

Decry, *v. a.* [*Fr. décrier*—*de*, and *crier*, to cry. See *CRY*.] To cry down; to censure as faulty, improper, or unnecessary; to rail or clamor against; to disparage; to detract from; to depreciate; to traduce.

Decumbence, Decumbency, *n.* [*From Lat. decumbens, decumbo*—*de*, and *cumbo*, to lie.] The posture of lying down; recumbency; prostration; act of lying at full length.

Decumbent, *a.* Lying down; declined or bending down; recumbent; prostrate.

(*Bot.*) Lying down on the ground.

Decumbently, *adv.* In a decumbent manner or posture.

Decumbiture, *n.* That time of sickness when a man takes to his bed.

Decuple, *a.* [*Lat. decuplus*, *Gr. dekaplous*—*deka*, ten, and *pleō*, to fold.] Tenfold; containing ten times as many.

1. A number ten times repeated.

2. *a.* To render tenfold; to multiply by ten.

Decurion, *n.* (*Rom. Hist.*) Among the ancient Romans, a military *D.* was a cavalry officer, who originally commanded ten soldiers, or one third of a *turma*; but afterwards the same name was preserved, though the command was extended to the whole *turma*. Municipal *D.* were magistrates in the municipal towns, answering senators at Rome. In later times, also, certain officers of the imperial household used this title; as, *D.* of the hamberlains, &c.

Decurionate, *n.* Office or rank of a decurion.

Decurrent, *a.* [*Lat. decurrens*—*de*, and *curro*, to run.] Prolonged below the point of insertion, as a leaf.

(*Bot.*) Running below the point of insertion, as a leaf.

Decurrently, *adv.* In a decurrent method or manner.

Decursive, *a.* [*From Lat. decursio*.] Running down, as a stream; decurrent.

Decursively, *adv.* In a decursive manner.

Decussate, *v. a.* [*Lat. decussus, decussatus*, from *decussis*, the number ten, from *decem*.] To intersect; to use to cross, as lines, rays, &c.; to intersect at acute angles, or in the form of an X.

Decussate, Decussated, *a.* Intersected; crossed. (*Bot.*) Applied to the arrangement of bodies in pairs, that alternately cross each other, as the leaves of many plants.

Decussately, *adv.* In a decussate manner.

Decussation, *n.* The crossing of two lines, rays, or nerves, which meet in a point, and then proceed and verge; a crossing in the form of an X.

There be decussation of the rays in the pupil of the eye."—*Ray*.

Decussatively, *adv.* Cross-wise, thus (X).

De'dalian, *a.* Same as *DEDALIAN*, *q. v.*

De'dalous, *a.* Same as *DEDALOUS*, *q. v.*

De'dan, the grandson of Cush (*Gen. x. 7*).—The son of Isham, Abraham's son by Keturah (*Gen. xxv. 3*). Both are founders of tribes, frequently named in Scripture.

De'de'orous, *a.* [*Lat. dedecorosus*.] Disgraceful; re-achful; shameful.

De'dentition, *n.* [*Lat. de*, and *dentitio*.] Loss or edding of the teeth.

"The first is de'dentition, or falling of the teeth."—*Broune*.

De'dham, in *Maine*, a post-township of Hancock co., t. 10 m. S. E. of Bangor.

De'dham, in *Massachusetts*, a town, cap. of Norfolk, on Charles river, 12 m. S. W. of Boston. Here are unfs. of woollens, pianos, brooms, cocoa and chocolate, &c. Pop. of township (1890) 7,211.

De'dham, in *Wisconsin*, a post-office of Douglas co.

De'dicate, *v. a.* [*Lat. dedico, dedicatus*—*de*, and *dico*, to proclaim, to make known.] To set apart and conse-

crate to the Divine Being, or to a sacred purpose; to devote to a sacred use; as, to dedicate a church.

—To appropriate; to give wholly to; to apportion; as, to dedicate one's life to duty.—To inscribe or address to a patron or friend; as, to dedicate a book.

Dedicatee, *a.* Devoted; consecrated; appropriated.

Dedicatee, *n.* One to whose honor anything is dedicated.

Dedication, *n.* (*Lit.*) A complimentary address to a particular person, prefixed by an author to his work. The practice arose from the slight remuneration that in early times was to be derived from literary labor. Hence authors came, in many cases, to be dependent upon wealthy patrons, to whom they dedicated their works; and hence, too, many authors sought the patronage of a powerful or wealthy individual, by dedicating their works to him. It thus came to be a common practice to acknowledge a *D.* with a sum of money. Fortunately this state of things has ceased to exist, and literary talent may be said in every case to find itself suitably rewarded by a discriminating public. *D.* have therefore, in a great measure, passed away, and where we still find them, they are generally either a token of private friendship or a mark of public esteem.

(*Ecol.*) A religious ceremony, whereby a person or thing is solemnly consecrated or set apart to the service of God and the purposes of religion. The use of *D.* is very ancient both among the worshippers of the true God and among the heathen. In Scripture we meet with *D.* of the Tabernacle, temple, altars, vessels, persons, and even of the garments of the priests. Under Christianity, *D.* is only applied to a church, and is usually called the consecration thereof.

Dedicator, *n.* One who dedicates; an author who dedicates his work to a friend or patron.

Dedicatorial, Dedicatorial, *a.* Composing a dedication; forming a dedication; as, a dedicatory epistle.

Deduce, *v. a.* [*Lat. deduco*—*de*, and *duco*, to lead.] To draw or bring from; to gather a truth, opinion, or proposition from premises; to infer something from what precedes; to infer; to trace; to collect; derive; as, to deduce a corollary.

Deduction, *n.* Act of deducing; the thing drawn from or deduced; inference; deduction; that which is collected from premises.

Deducibility, *n.* Faculty of being deducible.

Deducible, *a.* That may be deduced or inferred; inferrible.

Deducibleness, *n.* Capacity or quality of being deducible.

Deducive, *a.* Performing the act of deduction.

Deduct, *v. a.* [*Lat. deduco, deductum*. See *DEDUCE*.] To draw or take from; to subtract; to separate or remove in numbering, estimating, or calculating; as, to deduct a day's wages.

Deductible, *a.* Permitting deduction; capable of being deducted or taken from.—Inferential; consequential; deducible.

Deduction, (*dě-duk'shun*), *n.* [*Lat. deductio*.] Act of deducting or taking away from.—That which is deducted; sum or amount taken from another; subtraction; abatement; as, the deduction of taxes from a yearly income, to make a deduction in a bill, &c. Act of inferring or deducing.—An inference, conclusion, or consequence; as, "the deductions of reason."

Deductive, *a.* Deducible; that is or may be deduced from premises.

"All knowledge of causes is deductive."—*Glanville*.

Deductively, *adv.* By regular deduction; by way of inference or consequence.

Dee. There are several rivers of this name in Great Britain.—I. A river of Wales. It rises in Merionethshire, and, after a course of 100 m., empties into the Irish Sea, forming an estuary abt. 15 m. below Chester.—II. A river of Scotland, rising in the Cairngorm Mountains, which, after flowing a distance of 96 m., falls into the German Ocean, at Aberdeen.—III. Another river of Scotland, having its source in Kirkcubrightshire, and joining the Solway Frith 55 m. from its head.—IV. A river of Ireland, rising in co. Louth, and falling into Dundalk Bay, after a course of 20 m.

Deed, *n.* [*A. S. doed*, from *dōn, gedon*, to do, pret. *dyde*; *D. daad*, from *doen*, to do; *Ger. that*; *O. Ger. tat*, from *ton*, to do; *Goth. daeds*. See *DO*.] Anything done, acted, or effected; an act or action; performance; a feat, in whatsoever quantity or quality.

"Words are women, deeds are men."—*Herbert*.

—Exploit; achievement; feat; any illustrious act; as, an heroic deed.

"We live in deeds, not years."—*P. J. Bailey*.

—*n.* Reality; power of action; agency; capacity.

"With will and deed created free."—*Milton*.

(*Law*.) A formal document, on paper or parchment, duly signed, sealed, and delivered. When made by one party only, a *D.* is called a *deed-poll*; when several parties are concerned, an *indenture*. A deed poll is cut even, or polled, at the edges. The form commences in the mode of a declaration.—"Know all men by these presents, that," &c. The form appropriated to an indenture, or a *D.* among several parties, is.—"This indenture, made, &c., between, &c., witnesseth," &c. A properly arranged deed of conveyance usually consists of the following parts:—First, the date and names of the parties; secondly, the recitals in which the intentions of the parties and former transactions with regard to the same are recounted as far as necessary. Then the operative part, consisting of the *habendum*, which defines the estate or interest to be granted; the *tenendum*, usually joined with *habendum*, but it is unnecessary, since the tenure is never expressed, except on a sub-grant or lease

reserving rent; the *reddendum*, or the reservation of some new thing, such as rent to the grantor; next come the *conditions*, if any, annexed to the grant, the covenants, and the *conclusion*, which mentions the execution, &c. A *D.* must be signed and sealed by the grantor, and by the grantee also, if any agreement or covenant is entered into by him. The delivery of a *D.* completes its efficacy, and thence it takes effect. A *D.* is good although it mentions no date, or has a false or impossible date, provided the real date of its delivery can be proved. After execution, a *D.* may become void by erasure, interlineation, or other alteration in any material part; but, generally, such alterations are presumed to have been made before execution.

In deed, or indeed, in fact; actually; verily; truly; really.

—*v. a.* To transfer or convey by deed. (Colloquial.)

Deed'full, *a.* Full of deeds; active; replete with performance. (*R.*)

Deed'less, *a.* Without action; inactive; indolent; inert; not performing or without having performed deeds; exploits, or actions.

"Speaking in deeds, and deedless in his tongue."—*Shaks*.

Deed'poll, *n.* (*Law*.) See *DEED*.

Deeds'ville, in *Iowa*, a village of Jefferson co., on Skunk River, abt. 40 m. N. W. of Burlington.

Deed'y, *a.* Energetic; active; full of performance. (*R.*)

Deem, *v. a.* [*A. S. demun*, from *dom*, judgment; *Goth. domjan*, from *doms*, judgment. See *DOOM*.] To judge; to think; to consider; to suppose; to form a judgment or opinion concerning.

"Never can I deem him less than God."—*Dryden*.

—*v. n.* To judge; to consider; to think; to be of opinion; to estimate.

Deem, in *Indiana*, a post-office of Owen co.

Deem'ster, *n.* In the Isle of Man (Great Britain), a local judge who decides disputes without recourse to law.

Deep, *a.* [*A. S. deop, diop*, *deep, dypa, deop*, the deep, the sea; *dyppan*, to immerge; *L. Ger. deep*; *D. diep*; *Ger. tief*; *O. Ger. tiuf*; *Goth. diups*; *Ilind. dābna*, to dive, to be immersed.] Extending or being far below the surface or upper part; descending far downward; profound; as, a deep lake, a deep incision, a deep foundation. (Opposed to *shallow*.)—Low in situation; far beneath the general plane of surface; as, a deep glen.—Entering a great way; far from the outer part; as, a deep cavern.

"The deep and gloomy wood."—*Wordsworth*.

—Not superficial or obvious; not easily fathomed, seen through, or penetrated; secret; as, a deep mystery, a deep thought, a deep question.

"Deep malice to conceal couched with revenge."—*Milton*.

—Sagacious; penetrating; profoundly versed in anything; as, a deep intellect.

"The spirit of deep prophecy she hath."—*Shaks*.

—Artful; insidious; designing; crafty; as, a deep schemer.

"Deep, hollow, treacherous, and full of guile."—*Shaks*.

—Grave or solemn in sound; bass; low-toned; as, a deep voice.

"The bass of heaven's deep organ."—*Milton*.

—Very still; gloomy; sad; solemn; overpoweringly quiet; as, deep silence, a deep sleep.—Dark; strong-colored; intense; as, a deep tint.—Depressed; abject; cast down; sunk low; as, deep poverty or distress.—Heart-felt; penetrating to the soul; absorbing; affecting greatly; as, deep melancholy, deep despair, deep love or regard.

—*adv.* Deeply; to a great depth; profoundly.

—*n.* That which is deep, particularly the sea, the ocean; the abyss of waters; any great collection of water.

"These rites of Neptune, monarch of the deep."—*Pope*.

—That which is incomprehensible, profound, inscrutable, or not easily fathomed.

"And in the lowest deep, a lower deep."—*Milton*.

—The most still or solemn part; the midst; the centre; the depth.

"Through storms and waves, alone in deep of night."—*Philips*.

(*Script.*) The hell, the place of punishment, the bottomless pit (*Luke viii. 31*); the deepest parts of the sea (*Ps. lxi. 15*, *cvii. 26*); chaos in the beginning of the world (*Gen. i. 2*).

Deep Bottom, in *Virginia*, a former P. O. of Henrico county.

Deep Clove Creek, in *New Jersey*, rises at the S. E. base of Blue Mountain, traverses Sussex co., and enters the Wallkill river, near Deckertown.

Deep Creek, in *Iowa*, a township of Clinton co.; it is traversed by the R. R. from Anamosa to Clinton.

Deep Creek, in *N. Carolina*, flows into Tar river a few m. above Tarborough.

—A post-office of Anson co.

Deep Creek, in *S. Carolina*, traverses Anderson dist., and flows into Kiowee river a few m. from its mouth.

Deep Creek, in *Virginia*, a post-village of Norfolk co., about 25 m. S. of Norfolk.

Deep Creek, in *Washington*, a post-office of Spokane co.

Deep Cut, in *Ohio*, a village of Allen co., about 100 m. N. W. of Columbus.

Deep'drawing, *a.* Sinking deep in the water; requiring a great depth of water to float in, as a ship.

Deep'drawn, *a.* Drawn from a depth; brought forth profoundly; as, a deep-drawn sigh.

Deepen, (*dē'p'n*), *v. a.* To make deep or deeper; to sink far below the surface; as, to deepen the channel of a river.—To darken; to thicken or increase; to strengthen, or make more intense; as, to deepen the lights in a picture.—To make more profound, grave, or solemn; as, to deepen the voice.

"Her presence . . . Deepens the murmurs of the falling floods."—*Pope*.

—*v. n.* To become more deep; as, *deepening* water.

"A deepening blush o'erspread her cheek." — *Davies*.

Deep Ford, in *Missouri*, a post-office of Deut co.

Deep-laid, *a.* Laid deep; as, a *deep-laid* ocean-cable.

—Formed with profound skill or artifice; as, a *deep-laid* conspiracy or scheme.

Deep-ly, *adv.* At, or to, a great depth; far below the surface; as, so cut *deeply*, to dive *deeply*. — Profoundly; thoroughly; completely; as, to study or reflect *deeply*. Sorrowfully; solemnly; seriously; as, to sigh *deeply*. — In a high degree; to an extreme extent; as, to be *deeply* involved, to be *deeply* offended.

—Gravely; with profundity of sound or pitch; as, a *deep-ly* toned violin. — Artfully; subtly; planned with consummate craft, method, or artifice; as, a *deeply* concocted plot; a *deeply* devised scheme.

Deep-mouthed, *a.* Having a hoarse, loud, hollow voice; as, "a *deep-mouthed* welcome." — *Byron*.

Deep-musing, *a.* Contemplative; thinking closely or profoundly.

"He, *deep-musing*, o'er the mountains strayed." — *Pope*.

Deep-ness, *n.* State or quality of being deep; depth; profundity. — Craft; subtlety; insidious artifice; as, the *deepness* of an adventurer.

Deep-read, *a.* Having fully read; profoundly versed; as, a *deep-read* classic.

Deep River, in *Connecticut*, a post-village of Middlesex co., on the Connecticut River, abt. 30 m. E. by N. of New Haven.

Deep River, in *Indiana*, enters the Calumet in Lake county.

—A post-office of Lake co.

Deep River, in *Iowa*, a post-township of Poweshiek co., about 8 m. E.S.E. of Montezuma.

Deep River, in *N. Carolina*, rising in Guilford co., traverses Randolph and Moore cos. into Chatham co., where it joins the Haw to form the Cape Fear River. Length abt. 100 m. Aboriginal name, *Sapponah*.

—A post-office of Guilford co.

Deep-sea Line, (pron. *dipsey*), *n.* (*Naut.*) A line with a plummet at the end, called a *deep-sea lead*, used for taking soundings at sea in deep water.

Deep-toned, *a.* Having a very low or grave tone; as, a *deep-toned* voice.

Deep-waisted, *a.* (*Naut.*) Said of a ship when her poop and fore-castle bulwarks rise higher from the surface of the water than those of the waist.

Deep Water, in *Missouri*, a township of Henry co., abt. 110 m. W. by S. of Jefferson co.

Deep-water Creek, in *Missouri*, traverses Henry co., and enters Grand River.

Deep Well, in *N. Carolina*, a village of Iredell co., abt. 125 m. W. of Raleigh.

Deer, *n. sing. and pl.* [A. S. *dēor*; Icel. *dýr*; Swed. *djur*; Ger. *thier*, an animal; O. Ger. *tior*, allied to Gr. *thēr*, a wild beast; Goth. *dīus*.] (*Zoöl.*) A tribe of quadrupeds, forming the genus *cervus* of the family *Cervidae*. These well-known ruminants are distinguished from the antelopes by their horns, which are composed of a bony substance, caducous, or falling off annually, and again renewed of a larger size than in the preceding year. The form of these is various. Sometimes they spread into broad palms, which send out sharp snags around their outer edges; sometimes they divide fantastically into branches, some of which project over the forehead, whilst others are reared upward in the air, or they may be so reclined backwards, that the animal seems almost forced to carry its head in a stiff, erect posture; yet, in whatever way they grow, they appear to give an air of grandeur to the animal. It may, then, speaking in general terms, be said, that the easy elegance of their form, the lightness of their motions, their size, their strength, their fleetness, and the extraordinary development of those branching horns, which seem fully as much intended for ornament as defence, all contribute towards placing them in the foremost rank of quadrupeds. The *stag* or *red deer*, *Cervus Elaphus*, is a noble animal, and a native of the forests of the whole of Europe and Asia where the climate is temperate. The color is brown, the tail of moderate length, and the horns are round with branches on their inner side, which increase with age, and when full-grown will often weigh twenty-four lbs. The red deer is an ancient denizen of the forests of Europe, and is intimately blended with the old oppressive forest-laws. In winter they unite in vast

of Scotland, in some forests of France, and in Germany, they still exist in considerable numbers. The venison is coarser than that of the fallow-deer, which has in consequence usurped their place in the walled parks of the wealthy land-owners. The *Fallow-deer*, *C. vulgaris*, very much resembles the red deer, but is smaller and of more gentle disposition. Originally a native of Persia, it was brought to Europe, where it is now found in most parts in a domesticated state. Its flesh (venison) is rich and delicate, and the skin is unrivalled for durability and softness. The *Virginian deer* (*C. Virginianus*) of the U. States, E. of the Missouri River, "is one of the most beautiful and graceful species of the genus. It is very timid, and, when alarmed, bounds through the forests and over plains with almost incredible velocity. The weight of an adult is about 200 pounds; the color, light fawn in summer, reddish-gray in winter, the under part of the throat white. Its horns are slender, bent greatly forwards, and have numerous branches on the interior sides, but no brow-antlers. Its flesh is considered one of the luxuries of the table during the winter months. The *American elk*, or *Wapiti deer*, (*C. Canadensis*), is a native of the N. and N.W. portions of the U. States and northward to the 57th parallel. It is about the size of the horse. The color of the hair is red-brown, the tail very short, and the horns are round and erect, branching in serpentine curves, measuring 6 feet from tip to tip, and weighing about 30 lbs. They live in small families of 6 to 7 individuals, inhabiting clumps of wood, and feeding upon grass and the young shoots of willow and poplar trees, the hips of the wild rose, &c. The *wapiti* is described as a stupid animal, and has a peculiar voice not unlike the braying of an ass. The flesh is coarse and not much prized by the natives; but the hide, when made into leather, is said not to turn hard in drying after being wet, and therefore justly to

Fig. 782. — AMERICAN ELK, OR WAPITI.
(*Cervus Canadensis*.)

excel that made from the moose or reindeer." There are many other species of deer, which will be seen under their particular names. — The ancient customs and laws of *Venery*, that noble science which was formerly looked upon as one of the first accomplishments of the high-bred nobleman, and a knowledge of which was essential to his education, were formal and technical to a most absurd degree. A few of the terms betokening the different ages of the stag and hind are still retained, though somewhat altered. The young of either sex is called a *calf*. After a few months the male becomes distinguished by the growth of the *bossets*, or frontal protuberances on which the horns are afterwards developed, which, during the first year, are merely rounded knobs; from whence he takes the name of "Knobber." In the second year they are longer and pointed, and are called *dags*, and the animal has now the name of "Brocket." In the third year, the first, or *brow-antler*, has made its appearance, and the deer becomes a "Spayade." In the fourth the *bez-antler* is added, and he is then termed a "Staggard." He is a *stag* in the fifth year, when the third antler, or *royal*, appears; and in the sixth, the commencement of the *sur royal*, or crown, is formed, when he takes the name of *hart*, and retains it through his life. At this time he is called a *hart* or *stag* of *ten*, probably because the branches, including the *sur royal*, frequently amount to that number. After the seventh year he is said to be *croched*, or *palmed*, or *crowned*, according to the number of branches composing the *sur royal*. The female is a *calf* in the first year, a *brocket's* sister in the second, and in the third, and afterwards, a *hind*.

Deer-berry, *n.* (*Bot.*) See *VACCINIUM*.

Deer Brook, in *Mississippi*, a post-vill. of Noxubee co.

Deer Creek, in *California*, flows S.W. into the Sacramento River.

Deer Creek, or *SOUTH YUBA*, or *DOBBIN'S CREEK*, in *California*, rises in the Sierra Nevada, and enters the Yuba River about 25 m. above Marysville.

Deer Creek, in *Ill.*, a twp. of Tazewell co.

Deer Creek, in *Indiana*, rises in Howard co., and enters the Wabash near Delphi. — Another traverses Putnam co., and joins Mill Creek near its junction with El River.

—A post-township of Carroll co.

—A township of Cass co.

—A township of Miami co.

—A twp. of Perry co.; —now merged in neighboring twps.

Deer Creek, in *Maryland*, traverses Baltimore and Harford cos., and enters the Susquehanna River about 7 m. from its mouth.

Deer Creek, in *Michigan*, a post-office of Livingston co.

Deer Creek, in *Mississippi*, enters the Yazoo River in Warren co., from the N.

Deer Creek, in *Ohio*, enters the Scioto River in Ross co. —A township of Madison co.

—A post-township of Pickaway co.

Deer Creek, in *Pennsylvania*, traverses Alleghany co., and enters the Alleghany River a few m. N.E. of Pittsburgh.

—A village of Alleghany co., about 11 m. above Pittsburgh.

—A village of Mercer co., about 225 m. W.N.W. of Harrisburg.

Deerfield, in *Illinois*, a township of Fulton co. bounded W. by Spoon River.

—A post-village and township of Lake co., about 200 m. N.E. of Springfield.

Deerfield, in *Indiana*, a post-village of Randolph co. on the Mississinewa, 7 m. N. of Winchester.

Deerfield, in *Iowa*, a post-township of Chickasaw co. about 40 m. N. of Cedar Falls.

Deerfield, in *Louisiana*, a village of Carroll parish abt. 40 m. W. of Vicksburg, Miss.

Deerfield, in *Massachusetts*, a post-village and township of Franklin co., at the junction of the Deerfield and Connecticut rivers, about 100 m. W.N.W. of Boston.

Deerfield, in *Michigan*, a township of Lapeer co.

—A township of Lenawee co., about 22 miles W. by S. of Monroe, on the Lake Shore and Mich. S., where it crosses the Chicago and Canada Southern R.R. *Manuf.* Flour staves, and lumber.

—A township of Livingston co.

—A township of Van Buren co.

Deerfield, in *Minnesota*, a village of Sibley co., about 8 m. S.W. of Henderson.

—A post-township of Steele co., abt. 10 m. S.S.W. of Faribault.

Deerfield, in *Missouri*, a post-village and township of Vernon co., on the Marmion River, abt. 14 m. E. of Fort Scott, Kansas.

Deerfield, in *New Hampshire*, a post-village and township of Rockingham co., about 15 m. S. E. of Concord.

Deerfield, in *New Jersey*, a post-township of Cumberland co., on Cohamsey Creek.

—, or *DEERFIELD STREET*, a post-vill. of the above township.

Deerfield, in *New York*, a post-township of Oneida co.

Deerfield, in *Ohio*, a township of Morgan co.; it contains Triadelphia.

—A post-village and township of Portage co., about 15 m. S.E. of Ravenna.

—A township of Ross co.

—A post-village and township of Warren county, on the Little Miami River, about 32 miles N.E. of the city of Cincinnati.

Deerfield, in *Pennsylvania*, a village and township of Tioga co., on Cowanesque Creek, abt. 16 m. N.N.W. of Wellsborough.

—A township of Warren co.

Deerfield, in *Vermont*, a river rising in Windham co. and falling into the Connecticut River in Frankfort co. Massachusetts.

Deerfield, in *Virginia*, a post-village of Augusta co. about 180 m. W.N.W. of Richmond.

Deerfield, in *Wisconsin*, a post-village and township of Dane co., abt. 15 m. E. of Madison.

—A township of Waushara county, abt. 5 m. W. of Wantoma.

Deerfield Centre, in *New Hampshire*, a post-office of Rockingham co.

Deerhurst, a town of Eng., co. Glouster; *pop.* 4,200.

Deerling, in *New Hampshire*, a post-township of Hillsborough co., abt. 18 m. S.W. of Concord.

Deer Island, an island of New Brunswick, in Passamaquoddy Bay. It is about 7 m. long by 3 m. broad.

Deer Isle, in *Maine*, a post-township of Hancock co. about 54 m. E. by S. of Augusta. It comprises the island of its own name, and several smaller ones lying Penobscot Bay.

Deer Lodge, a W. co. in *Montana*, upon the summit of the Rocky Mountains. Contains the great Anaconda copper-smelting works and is rich in gold and silver mines. *Soil*, fertile in valleys; excellent for grazing. *Pop.* (1890) 15,155. *Cap.* Deer Lodge City.

Deer Lodge City, in *Montana*, a city, *cap.* of Deer Lodge co., on river of same name, 50 m. W. of Helena. *Pop.* (1897) about 2,500.

Deer-neck, *n.* A slender, deer-like neck; — as sometimes seen in the horse.

Deer Park, in *Alabama*, a P. O. of Washington co.

Deer Park, in *Illinois*, a post-village and township of La Salle co., on the Illinois River, about 7 m. below Tawata.

Deer Park, in *Maryland*, a P. O. of Alleghany co.

Deerpark, in *New York*, a township of Orange co., Neversink River, about 38 miles W. of Newburg. It is contiguous to Port Jervis.

—A post-office of Suffolk co.

Deer Plain, in *Illinois*, a post-office of Calhoun co.

Deer Ridge, in *Missouri*, a post-office of Lewis co.

Deer River, in *New York*, a village of Franklin co. on a small stream of the same name, about 160 m. N. of Albany.

—A post-office of Lewis co.

Deer-skin, *n.* The skin of a deer; — hence, the leather dressed and prepared from it.

Deer-stalker, (*dēr'stawk-er*), *n.* One who hunts deer on foot; — one who engages in deer-stalking.

Deer-stalking, (*dēr'stawk-ing*), *n.* (*Sport.*) Hunting deer on foot, by stealthily approaching to within gunshot of the animals. (This sport is extensively practiced in Scotland.)

Fig. 781. — FALLOW-DEER.
(*C. vulgaris*.)

herds of both sexes. In England, the red deer is now almost unknown in a wild state, but in the Highlands

Deers'ville, in *Ohio*, a post-village of Harrison co., about 12 m. W. of Cadiz.

Deer Walk, in *W. Virginia*, a post-office of Wood co.

Deesis, *n.* [Gr. prayer.] (*Rhet.*) An invocation to the Supreme power.

Deev, *n.* (*Pers. Myth.*) An evil genie or spirit.

Deface, *v. a.* [O. Fr. *desfacier*, same as *effacer*; Lat. *de*, and *facio*, to make.] To destroy or mar the surface of a thing; to injure the beauty or superficialities; to disfigure; to deform; as, to *deface* a building. — To injure; to destroy, spoil, or mar; to erase or obliterate; as, to *deface* an inscription.

"Pay him six thousand, and *deface* the bond." — *Shaks.*

Defacement, *n.* Injury to the surface or beauty; erasure; obliteration.

"The image of God is purity, and the *defacement* sin." — *Bacon.*

Defacer, *n.* He who, or that which, defaces, mars, or disfigures.

"That foul *defacer* of God's handiwork." — *Shaks.*

Defacingly, *adv.* In a defacing manner; in a manner calculated to destroy, mar, or injure.

De facto, *adv.* [Lat., in fact.] In fact; in reality; really; actually; veritably.

(*Law.*) A phrase directing actual possession, however acquired; while the term *de jure* indicates a right of title which may or may not be accompanied by possession.

Defalcate, *v. a.* [Fr. *defalquer*; Lat. *de*, and *L. Lat. falco*, *falcatus*, from *falx*, *falcis*, a pruning-hook.] To take away, or deduct apart; — it is almost exclusively used in relation to money.

v. n. To commit a defalcation; to embezzle; to appropriate feloniously.

Defalcation, *n.* A cutting or lopping off; a diminution, abatement, deficit, or excision. — A withdrawal or deficit of funds entrusted to the care of some one; an embezzlement; a felonious appropriation; as, amount of *defalcation*. — That which is cut off or withdrawn.

Defamation, *n.* [Fr. *diffamation*; *L. Lat. defamatio*, *diffamatio*. See *DEPAME*.] Act of defaming; slander; calumny; detraction; aspersion; libellous reproach.

(*Law.*) The speaking or writing words of a person, so as to hurt his good fame. Written *D.* is termed *libel*, and oral *D.* *slander*. The provisions of the law, in respect to *D.*, written or oral, are those of a civil nature, which give a remedy in damages to an injured individual, or of a criminal nature, which are devised for the security of the public.

Defamatory, *a.* [Fr. *diffamatoire*.] Containing defamation; calumnious; slanderous; libellous; false and injuries to reputation; as, a *defamatory* report.

Defame, *v. a.* [Fr. *diffamer*; Lat. *diffamo* — *dis*, for *di* or *dis*, asunder, in pieces, and *famo* — *fama* — *fari*, to speak; Gr. *dys-phē-meō* — *dys*, and *phēmī*, to speak, from *phōō*, to bring to light, to make known or evident by words; Sansk. *bha*, to shine, *bhab*, to speak, the *bh* corresponding to the Gr. *ph*.] To speak evil of; to speak against the fame, character, or reputation of; to accuse or blame falsely and maliciously; to calumniate; to slander; to revile; to asperse; to detract from. — To accuse; to charge with; to allege against. (*R.*)

"Defamed by every charlatan." — *Tennyson.*

Defamer, *n.* One who defames; a calumniator; a libeller; a detractor; a slanderer; a reviler.

Defamingly, *adv.* In a defamatory or slanderous manner.

Defatigate, *v. a.* [From Lat. *defatigo*.] To weary; to tire; to fatigue. (*R.*)

Defatigation, *n.* Fatigue; weariness. (*R.*)

Default, *n.* [O. Fr.; Fr. *défaut* — from *défaillir* — *de*, and *faillir*, to fail. See *FALL*.] A failing or failure; an omission or neglect of that which ought to be done; neglect to do anything required by law or duty. — Crime; default; offence.

"But thro' mine own *default*,

Whom have I to complain of but myself." — *Milton.*

Defect; want; necessity; lack.

"In *default* of the king's pay, the forces were burden'd on the subject." — *Darwin.*

(*Law.*) In a general sense, the omission of any act which a party ought to do in order to entitle himself to legal remedy. Such is, for example, non-appearance in court on a day assigned. If a plaintiff in an action make *D.* in appearance, he is non-suited; if a defendant, judgment by *D.* passes against him. Suffering judgment by *D.* is taken for an admission of the contract alleged by the plaintiff.

n. To fail in performing any agreement, stipulation, or contract; to forfeit by breaking a contract; to allow an action to pass by default.

a. To be neglectful of; to fail to execute, act, or perform. — To omit; to ignore; to leave out of reckoning. (*R.*)

(*Law.*) To enter a default against a defendant or her party not appearing on the day assigned.

Defaulter, *n.* One who makes default. — One who neglects to perform a public duty; one who fails to account for money or securities intrusted to his care; an absconder; a delinquent; one who appropriates the money of others to his own purposes.

Defeasance, (*dē-fē-zans*) *n.* [O. Fr. *defeaisance*, from *defaire*; Fr. *défaire*, to undo — Lat. *de*, and *facio*, to make; *L. Lat. defesantia*.] A defeating; a rendering null and void; the preventing of the operation of an act or instrument.

(*Law.*) A collateral deed, made at the same time with a deed of conveyance, containing conditions on the performance of which the estate created by the deed conveyance may be defeated. 2. A defeasance on a

bond, recognizance, or judgment recovered, is a condition which when performed defeats a bond, &c. (see *BOND*.) contained in or indorsed on the instrument itself.

Defeasance, *a.* (*Law.*) Liable to be forfeited.

Defeasible, *a.* That may be defeated, abrogated, or annulled.

"He came to the crown by a *defeasible* title." — *Darwin.*

Defeasibleness, *n.* State or quality of being defeasible.

Defeat, *n.* [Fr. *défaite*, from *défaire* — *de*, and *faire*, from Lat. *facere*.] Rout; repulse; overthrow; loss in battle; as, the army sustained a *defeat*. — Frustration; a rendering null and void; deprivation; prevention of success; as, a *defeat* of the opposition; the *defeat* of one's intentions.

v. a. To ruin; to break; to frustrate; to foil; to baffle; to disappoint; to render null and void; as, all my hopes are *defeated*. — To overcome in battle; to overthrow; to vanquish; to conquer; to rout; to discomfit; as, the enemy were *defeated* with heavy loss. — To successfully combat; to repel; to resist; to get the better of; as, to *defeat* one in controversy.

Defeated, *a.* Changed, or altered for the worse, in features.

Defecate, *v. a.* [Lat. *defæco*, *defæcatus* — *de*, and *fax*, *fæcis*, lees, dregs.] To clear from lees, dregs, sediment, or impurities; to refine; to clarify; to purify; to free from admixture.

"The blood is not sufficiently *defecated* or clarified." — *Harvey.*

— To clear; to brighten; to free from any extraneous substance or matter.

"We *defecate* the notion from materiality." — *Glanville.*

a. Purged from lees or feculent matter; purified; clarified.

"This liquor was very *defecate*, and of a pleasing golden colour." — *Boyle.*

Defecation, *n.* Act of separating from lees, dregs, or sediment; purification from impurities or foreign matter.

(*Med.*) The act by which the excrement is extruded from the body.

Defecator, *n.* Anything which refines or purifies.

Defect, *n.* [Lat. *defectus*, from *deficio* — *de*, and *facio*, to make.] Something not done which ought to have been done; want or absence of something necessary or useful toward fruition or perfection; fault; flaw; imperfection.

"Fine by *defect*, and delicately weak." — *Pope.*

— A falling short in moral conduct or in judgment; a blemish; imperfection; failing; error; mistake; deformity; anything unnatural or misplaced; as, a *defect* of memory, a *defect* in a picture, a *defect* in the eyesight, &c.

"Find out the cause of this *defect*." — *Shaks.*

Defectibility, *n.* State or quality of being defective; deficiency; imperfection.

"The *defectibility* of that particular tradition." — *Lord Digby.*

Defectible, *a.* Susceptible of defect or imperfection; deficient; wanting; as, a "defectible condition."

Defection, *n.* [Fr.; Lat. *defectio*, from *deficio*. See *DEFECTION*.] Want or failure of duty; a falling away; desertion; apostasy; revolt or throwing off duty or allegiance; a falling off from a cause, party, or principle.

"He was drawn from hence by the general *defection* of the whole realm." — *Darwin.*

Defectionist, *n.* An abettor of defection.

Defective, *a.* [Fr. *défectif*; *L. Lat. defectivus*.] Having a defect or defects; wanting either in substance, quantity, or quality, or in anything requisite and necessary; imperfect; deficient; incomplete; insufficient; inadequate; faulty; blamable; as, *defective* handwriting, a *defective* character, a *defective* body.

(*Gram.*) A *D. noun or verb* is a noun or verb wanting one or more cases or tenses.

Defective Fifth, *n.* (*Mus.*) An interval containing a semitone less than the perfect fifth. It is also called *semidiapente*, and *flat, lesser, false, or diminished fifth*.

Defectively, *adv.* In a defective or imperfect manner.

Defectiveness, *n.* State of being defective; deficiency; faultiness.

Defence, *n.* (Sometimes written *DEFENSE*.) [Fr. *défense*; Lat. *defensio*, from *defendo*, *defensus*. See *DEFEND*.] A defending; act of defending; a guarding against danger; protection; resistance; opposition; state of being defended.

"Millions for *defence*, but not one cent for tribute." — *Pinckney.*

— Something employed to counteract or ward off danger or injury; guard; protection; security; fortification; vindication; justification; apology; plea; counter-accusation.

"Immodest words admit of no *defence*." — *Roscommon.*

— Scheme, method, plan, or manner of defensive action; self-sustaining policy; quality of powers of resistance.

"*Defence* is better than no skill." — *Shaks.*

(*Law.*) A forcible resistance of an attack by force. A man is justified in defending his person, that of his wife, children, and servants, and for this purpose he may use as much force as may be necessary, even to killing the assailant; remembering that the means used must always be proportioned to the occasion, and that an excess becomes itself an injury. A man may also repel force by force in defence of his personal property, and even justify homicide against one who manifestly intends or endeavors, by violence or surprise, to commit a known felony, as robbery.

In *pleading*, *D.* is the denial of the truth or validity of the complaint.

Defenceless, *a.* Being without defence; unarmed; unprotected; unguarded; weak; without the power to

oppose or resist; uncovered; unsheltered; as, a *defenceless* woman.

Defencelessly, *adv.* In a manner incapable of defence; unprotectedly.

Defencelessness, *n.* State of being defenceless, or of being unarmed, unguarded, or unprotected.

Defend, *v. a.* [Lat. *defendo* — *de*, and obsolete *fendo*, to strike.] To drive from; to thrust or drive back; to repel; to guard; to fortify; to secure against attack, danger, or injury; to repel or resist a demand, charge, or accusation; to oppose; to support; to justify; to uphold; to maintain; as, to *defend* a cause, to *defend* a country, to *defend* one's good name, to *defend* one who is absent.

"Let me be foremost to *defend* the throne." — *Pope.*

(*Law.*) To deny the truth or validity of a complaint; to assert and maintain that the plaintiff has no ground of action; to contest.

In *contracts*, to guarantee; to warrant.

v. a. To make defence, resistance, or opposition.

Defendable, *a.* That may be defended; as, a *defendable* town.

Defendant, *n.* [O. Fr.; Fr. *défendeur*, a defendant, from *defendre*, to defend.] A defender; he who defends against an enemy, or against the approach of evil or danger; — used in contradistinction to *assailant*.

(*Law.*) The party against whom claim is made in an action or suit.

a. Defensive; fit for defence; making defence. (*R.*)

Defendee, *n.* The person who is defended, shielded, or protected.

Defender, *n.* One who defends by opposition or resistance; one who maintains, upholds, supports, protects, or vindicates; a champion; a protector; a guardian; an advocate or pleader.

Defensive, *n.* [See *DEFEND*.] A guard, protection, or defence, as a bandage, plaster, &c., to shield a wound from outward violence.

Defensibility, *n.* Susceptible of being defended.

Defensible, *a.* That may be defended; susceptible of being vindicated, maintained, or justified; justifiable; as, a *defensible* plea, *defensible* fortifications.

Defensibleness, *n.* State or quality of admitting of defence; defensibility.

Defensive, *a.* [Fr. *défensif*.] That serves to defend; anything competent to be used in defence, or proper for defence; as, *defensive* weapons. — Carried on in opposing attack, or resisting aggressions; as, *defensive* operations. — In a state, attitude, or position of defence or resistance; as, "the Satanic host (stood) *defensive*." *Milton.*

Defensively, *adv.* In a defensive manner; in an attitude of defence.

Defensory, *a.* [*L. Lat. defensorius*.] Defensive; tending to defend.

Defer, *v. a.* [Lat. *differo* — *dis*, and *fero*, to hear or carry.] To carry or put to a distance; to protract; to prolong; to put off to a future time; to delay; to postpone; to adjourn.

"Be wise to-day; 't is madness to *defer*." — *Young.*

v. n. To postpone; to put off; to procrastinate; to delay to act.

v. a. or n. [Lat. *de-fero*.] To defer; to yield to another's opinion; to submit to in authority or opinion; as, to *defer* to the majority.

Deference, *n.* [Fr. *déférence*.] A deferring or yielding in opinion; submission of judgment to the opinion, advice, or judgment of another; regard; respect; complaisance; condescension; submission.

Deferent, *a.* That which carries, bears, or conveys.

(*Anat.*) The excretory canal of the sperm.

(*Astron.*) In the Ptolemaic system of the universe the planets move in circular orbits, the centres of which are carried round in the circumference of other circles. These secondary circles are called the *deferents*, as carrying the orbits; those in which the planets move being the *epicycles*.

Deferential, *a.* Expressing or implying deference; respectful; as, a *deferential* manner.

Deferentially, *adv.* With deference or respect.

Deferer, *n.* One who defers or procrastinates.

Defervesence, *n.* [Lat. *defervescere*.] Act or state of becoming cool.

Defendalize, *v. a.* To take away the feudal character of.

Defand, MARIE DE VICHY-CHAMROUD, MARQUISE DU, an accomplished Frenchwoman, b. 1697. She married early the Marquis du Deffand, a man much older than herself, but was soon separated from him. Few women possessed more natural talent, and her abode was regarded as the rendezvous of wit and genius. Among the correspondents of Madame du D. were Voltaire, D'Alembert, Montesquieu, Horace Walpole, &c. Her correspondence throws much light on the times she lived in, and has been several times republished. She lost her sight in her old age, without losing her liveliness. D. 1780.

Defiance, *n.* [Fr. *défiance*, distrust. See *DEFY*.] Act of defying; a daring; a challenge to fight, or to meet in any contest; invitation to combat; a call upon any one to make any assertion or charge, or to maintain any cause or point. — Contempt of opposition or danger; readiness to quarrel, fight, or resist; contemptuous daring or resistance.

"Pride in their port, *defiance* in their eye." — *Goldsmith.*

Defiance, in *Ohio*, a N.W. co., bordering on Indiana. Area, about 414 sq. m. *Rivers*. Maumee, St. Joseph's, Auglaize and Tiffin rivers. *Surface*, generally level. Soil, fertile. Pop. (1890) 25,769. *Cap.* Defiance. — A city, the cap. of the above co., at the mouth of the

Auglaise river, on B. & O. and Wabash R. Rs. Has grain trade and manuf. interests. Pop. (1897) about 8,500.

Defiant, *a.* Full of defiance; bold; insolent; aggressive; contemptuous; as, a *defiant* attitude.

Defibrinate, *v. a.* To remove the fibre from.

Defibrination, *n.* Act or method of removing fibre from.

Deficiency, **Deficiency**, (*de-fish'en-se*), *n.* [Lat. *deficiens, deficientis*; from *deficio*. See DEFECT.] Imperfection; want; failing; a falling short; any want of completeness or perfection; something less than is requisite or necessary; as, a *deficiency* in the revenue, mental *deficiency*.

Deficient, (*de-fish'ent*), *a.* [Lat. *deficiens*.] Wanting in something necessary to make complete; defective; imperfect; falling short; failing; insufficient; not adequate; as, a *deficient* salary, *deficient* morals.—Not having a full or adequate supply; without that which is indispensable or needful; lacking; as, *deficient* means.

Deficient Number, *n.* (*Arith.*) A number which exceeds its aliquot parts. Thus, 8 is a *D. N.*, since the sum of its aliquot parts, 1, 2, 4, only amounts to 7. A *D. N.* is opposed to an *abundant number* in this respect.

Deficiently, *adv.* In a deficient manner; minus of something.

Deficit, *n.* [Lat., it wants.] A deficiency; something short or wanting; as, a *deficit* in customs-duties.

Defier, *n.* One who defies; a challenger; a champion; a contemner.

Defile, **Defile**, *v. a.* [See DEFILE.] (*Fort.*) To arrange the height of a work so that the enemy cannot see into it; so to direct its forces as that the enemy cannot enfilade them, or take them by reverse.

Defilading, *n.* (*Fort.*) The art of constructing works of defence in such a manner both as regards the direction and height of the lines of the rampart, that no portion may be enfiladed, or swept along its entire length by a fire from any eminence commanding the fortification, and that the parapet of the rampart may be high enough to prevent the interior from being exposed to the direct fire of the enemy. The former is called *horizontal*, and the latter *vertical defilading*.

Defile, *v. n.* [Fr. *défiler*—*de*, and *file*, a line or row, from Lat. *filum*, a thread.] (*Mil.*) To march off in a line, or file by file; to file off; as, the troops were *defiled* in echelon.

Defile, *v. a.* [A.S. *afylum*, *befylan*, *gefylan*. See FOUL.] To make foul, filthy, or unclean; to dirty; to befoul; to pollute.

"This pitch . . . doth *defile*."—Shaks.

—To contaminate; to corrupt; to vitiate; to taint.

"Let not any instances of sin *defile* your requests."—Wake.

—To sully; to smut; to soil; to tarnish; to blot the reputation of.

"However his character may be *defiled* by mean and dirty hands."—Swift.

—To violate the chastity of; to ravish; to debauch.

"The husband murder'd, and the wife *defil'd*."—Prior.

—To make legally or ritually unclean.

"Neither shall he *defile* himself for his father."—Lev. xxi. ii.

Defile, *n.* [Fr. *défilé*.] A narrow road, passage, or way in which troops can pass only in a line or file, or with a narrow front; a long, sinuous, narrow pass, as between mountains, &c.; a gorge; a gap.

(*Fortif.*) Act of defilading fortified works.

Defilement, *n.* Act of defiling, or state of being defiled; foulness; dirtiness; uncleanness; nastiness; pollution.

(*Mil.*) The act of DEFILADING, *q. v.*

Defiler, *n.* He who, or that which, defiles, pollutes, or taints.

Definable, *a.* That may be defined, elucidated, explained, or ascertained; as, a *definable* distinction.

Definably, *adv.* In a definable manner.

Define, *v. a.* [Fr. *définir*; Lat. *definio*—*de* and *finio*—from *finis*, end, boundary, limit. See FINITE.] To bound off; to set bounds to; to limit; as, to *define* one's wishes.

—To determine or describe the end or limit; to circumscribe; to mark the limit or termination; as, to *define* the boundaries of a State.—To express precisely; to describe fully; to declare exactly; to ascertain and elucidate clearly and perfectly, as to its true signification; as, to *define* a technical term.—To explain or describe by properties or circumstances; to determine, exhibit, and elucidate with certitude and clearness; as, the *defining* power of the microscope.

Definer, *n.* He who defines.

Definite, *a.* [Lat. *definitus*, from *definio*.] Limited; bounded; having determinate extent; as, a *definite* period.

—Certain; precise; clear; determinate in signification; as, a *definite* theory, a *definite* promise.—Fixed and settled with precision; exact; as, a *definite* conclusion.—Tending to restrict or limit; aiding to determine; as, the *definite* article.

Definite Integral, (*Math.*) The sum of a series of infinitesimal elements, whose first and last terms are given.

Definitely, *adv.* Precisely; in a definite manner.

Definiteness, *n.* Certainty; precision; state of being definite.

Definition, (*def-e-nish'un*), *n.* [Fr., from Lat. *definitio*.] Act of defining, establishing, determining, fixing, explaining, or elucidating the true and proper signification and meaning of.—A brief description of a thing by the properties it possesses; an explanation in words, which distinguishes the thing explained from other things; a statement of the exact meaning of a word by other words; as, a loose *definition*, a true *definition*.

(*Logic*.) A description which separates a term from everything else. By the schoolmen, definitions were

divided into *nominal* and *real*; the former setting forth the meaning of the word, the latter explaining the nature of a thing. There is also a division into *accidental* and *essential* definitions, the former describing by attributes, not included in the connotation; the latter by specifying the *genus* and *differentia*.

Definitional, *a.* Conveying a definition; tending to definition.

Definitive, *a.* [Fr. *définitif*; Lat. *definitivus*.] Limiting the extent; determinate; positive; express; as, a *definitive* sum;—final; limiting; ending; determining; as, a *definitive* term.

—*n.* (*Gram.*) That which defines, limits, or ascertains; a word used to define or determine the extent of the meaning of an appellative or common noun.

Definitively, *adv.* In a conclusive or definitive manner; finally.

Definitiveness, *n.* Decisiveness; conclusiveness; finality.

Definitude, *n.* State of being definite or determinate.

Deflagrability, *n.* (*Chem.*) Property of taking fire, and burning entirely away very rapidly.

Deflagrable, *a.* (*Chem.*) Burning entirely away with quick and brilliant combustion.

"The best spirit of wine . . . is *deflagrable*."—Boyle.

Deflagrate, *v. a.* [Lat. *deflagro*—*de*, and *flagro*, *flagratus*, to burn. See FLAGRANT.] (*Chem.*) To burn or consume rapidly, with a brilliant flame.

—*v. n.* To burn down with a sudden and sparkling combustion.

Deflagration, *n.* [Fr.] (*Chem.*) Sudden and rapid combustion; when a mixture of charcoal and nitre is thrown into a red-hot crucible, it burns with a kind of explosion, or *deflagrates*.

Deflagrator, *n.* (*Chem.*) A species of galvanic battery for deflagrating metals, and producing intense heat and light.

Deflect, *v. n.* [Lat. *deflecto*—*de*, and *flecto*, to bend. See FLEXIBLE.] To deviate from a true course or right line; to swerve.

—*v. a.* To turn down or aside; to turn or bend from a straight or regular course.

Deflected, *p. a.* Turned aside, or from a direct line or course.

(*Bot.*) Bending downward in the form of an arch.

Deflection, *n.* A bending downward or turning aside; deviation; a turning from the true line or regular course.

(*Naut.*) The departure of a ship from its true course.

(*Phys.*) The change of form produced in a beam when its upper surface becomes depressed below its original level line, whether caused by an extraneous weight, or merely by that of the unsupported portion of the beam itself. The laws which regulate the *D.* of beams have been thus stated by Coulomb: 1. The *D.* below the natural level is proportional to the weight; 2. The weight required to produce depression is proportional to the width of the bar, but in the ratio of the cube of the depth; 3. It is in the inverse ratio of the cube of the length.

(*Gun.*) The *D.* of a projectile, at any point of its flight, is its perpendicular distance, measured horizontally at that point, from a vertical plane passing through the prolongation of the axis of the piece from which it is fired.

(*Optics*.) Same as DIFFRACTION, *q. v.*

Deflect or, *n.* (*Mach.*) A diaphragm in a furnace, as of a boiler, to deflect and mingle air and gas, and give them time and room to burn.

Deflexed, *a.* (*Bot.*) Bent downwards.

Deflexure, (*de-flek'shur*), *n.* A deflection; a bending down or aside.

Deflorate, *a.* [Lat. *defloratus*—*de*, and *flos, floris*, a flower.] (*Bot.*) Having lost its blossoms; having cast pollen; as, a *deflorated* plant.

Defloration, *n.* [Fr.] Act of deflowering; rape; ravishment.

—A selection of that which is the rarest or most valuable.

Deflower, **Deflower**, *v. a.* [Lat. *defloro*—*de*, and *flos, floris*, a flower.] To deprive of the bloom, the prime grace, or beauty.—To ravish; to deprive of virginity; as, to *deflower* a girl or woman.

Deflowerer, *n.* One who deflours, or seduces.

Defluvinum, *n.* [Lat.] A falling off, as the bark from trees, &c.

Defluxion, *n.* [Lat. *defluxio*, from *defluo*—*de*, and *fluo, fluxus*, to flow.] (*Med.*) A term formerly used to express the discharge of tears and mucus from the eyes and nostrils, as in severe colds and influenzas.

Defoe, DANIEL, a celebrated English political and miscellaneous writer, b. at London, 1661. As a zealous Whig and Dissenter, he was frequently in trouble on account of his writings; and for his clever piece of irony, entitled *The Shortest Way with the Dissenters*, the drift of which was mistaken by both Churchmen and Dissenters, he was arrested, set in the pillory, and imprisoned. The book was ordered by the House of Commons to be burnt. It was during his imprisonment that he wrote his *Hymn to the Pillory*. Released in 1704, he began the publication of *The Review*, which he continued for 9 years. He was sent by the government in 1706 to Scotland, to prepare the way for the Union. After his return he suffered a second imprisonment on account of some of his political pamphlets. His health being seriously injured by harassing political warfare and persecutions, he found it necessary to choose a less exciting employment for his pen, and during the latter years of his life he published the works of fiction by which he is now best known. *Robinson Crusoe* appeared in 1719, and obtained immediately the popularity which it has never lost. He added a second and a third part to the

story. This famous book had been preceded by the *Family Instructor*, and *Religious Courtship*, and was followed by the *Adventures of Capt. Singleton*, *Fortunes of Moll Flanders*, *History of the Plague*, and a host of other works. D. 1731.

Defoliated, *a.* Having no leaves; deprived of leaves. **Defoliation**, *n.* [From Lat. *defoliare*; Fr.] The shedding of the leaf or leaves of a tree.—The fall, or season of the year, when trees, &c., cast their leaves.

Deforce, *v. a.* [O. Fr. *déforcer*—*de*, and *forcer*, from *force*. See FORCE.] (*Scot. Law.*) To keep by force from the rightful owner, as an estate.

Deforcement, *n.* (*Law.*) The holding by force of lands or tenements, of which another is the rightful owner.

Deform, *v. a.* [Fr. *déformer*; Lat. *deformo*—*de*, and *forma*, form.] To spoil, mar, or injure the form of; to disfigure; as, a *deformed* foot.—To make ugly or ungraceful; to render disgusting or displeasing; to disgrace; to dishonor moral beauty; to dishonor.

Deformation, *n.* A deforming; a disfiguring or degrading.

Deformed, *p. a.* Wanting natural beauty or symmetry; rendered ugly or displeasing.

Deformedly, *adv.* In an ugly or mis-shapen manner.

Deformedness, *n.* Ugliness; deformity.

Deformer, *n.* One who makes or causes deformity.

Deformity, *n.* [Fr. *diffémité*; Lat. *deformitas*.] Want of proper form or shape; ugliness; unseemliness; irregularity of shape or features; distortion; defect; disfigurement.—Irregularity; gross deviation from order or the established laws of propriety or taste; absurdity; anything inimical to grace, beauty, or propriety; as, *deformity* in architecture, *deformity* of literary style, &c. (*Med.*) See MALFORMATION.

Defraud, *v. a.* [O. Fr. *défrauder*; Lat. *defraudo*—*d* and *fraudo*, from *fraus, fraudis*, fraud. See FRAUD.] To deprive of by deception, artifice, or trick; to deprive or withhold from wrongfully; to cheat; to deceive; to rob; to beguile;—often preceding *of*.

Defraudation, *n.* [Lat. *defraudatio*.] Act of defrauding. (*R.*)

Defrauder, *n.* One who cheats, defrauds, or embezzles.

"Defrauders just, and sycophants severe."—Blackmore.

Defray, *v. a.* [Fr. *défrayer*—*de*, and *frais*, expenses. To pay; to bear; to discharge; as, to *defray* expenses.

Defrayal, *n.* Act of defraying; making payment settling expenses; as, the *defrayal* of contingent charges.

Defrayer, *n.* One who pays expenses; one who defrays.

Defrayment, *n.* Defrayal; payment of expenses.

Defreestville, in New York, a post-village of Rensselaer co., about 4 m. S. E. of Albany.

Deft, *a.* [A.S. *düft*.] Ready; dexterous; neat; spruce smart; as, a *deft* trick.

"Let me be *deft* and debonaire."—Byron.

Defterdar, *n.* [Turk.] The title borne in Turkey by the minister of finances, corresponding to *secretary of the treasury* in this country.

Deftly, *adv.* Neatly; dexterously; actively; handily; neatly.

Defunct, (*dē-fungkt'*), *a.* [Lat. *defunctus*, from *defungo*—*de*, and *fungo, functus*, to perform, to execute; *defunct*. See FUNCTION.] Having finished the course of life; dead; deceased.

—*n.* A dead person; one deceased.

Defy, *v. a.* [Fr. *défier*; Lat. *diffido*—*dis*, and *fido*, trust.] To dare; to proclaim hostility to; to challenge to provoke to combat or strife by appealing to the honor and courage of another; to brave with contempt of position; to treat with contempt; to despise; as, *defy* public opinion.

"Agis, the Lycian, stepping forth with pride,
To single fight the boldest foe *defied*."—Dryden.

Defyer, *n.* Same as DEFIER, *q. v.*

Deg, *v. a.* [A.S. *deagean*, to dye.] To scatter or sprinkle as liquor; to moisten or damp. (Used locally in Eng.)

Degarnish, *v. a.* [Fr. *dégarnir*.] To dismantle; strip the garnish from; to deprive of means of defense; protection, &c.; as, to *dégarnish* a house. (*R.*)

Degarnishment, *n.* Act or quality of degarnishing.

Degen'eraey, *n.* State of being degenerated; a growing worse or inferior; a decline in good qualities.

"The ruin of a state is generally preceded by an universal degeneracy of manners."—Swift.

—A departure from the virtue of ancestors; a decay of virtue, or goodness; meanness; effeminacy.

"There is *degeneracy* of spirit . . . in a state of slavery." Addison

Degen'erate, *v. n.* [Lat. *degenero, degeneratus*—and *genus, generis*, birth, descent, race, stock.] To unlike or inferior to one's ancestors; to become worse to deteriorate; to decay in good qualities; to pass from a good to a bad or worse state; to lose or suffer a diminution of valuable qualities, either in the natural moral world; to become vicious or degraded.

"When wit transgresseth decency, it *degenerates* into insolence and impiety."—Pittolston.

—*a.* Fallen from primitive or natural excellence, or from the virtue or excellence of ancestors or of kind; having declined in moral worth; low; base; mean; vicious; corrupt; as, a *degenerate* race.

Degen'erately, *adv.* In a degenerate or degraded manner.

Degen'erateness, *n.* Degeneracy; state of being corrupt or degenerate.

Degeneration, *n.* Act of degenerating; a degenerate state; deterioration; degradation; degeneracy. Anything changed from its pristine condition. (*R.*)

Daniel Defoe

1661-1731

Degen'orative, *a.* Causing deterioration; tending to degenerate.

Deger, (*daig'er*.) ERNST, a German painter of the Düsseldorf school, b. 1809. He is at present professor of fine arts at Munich. Among his best works are a picture of the infant Jesus, and a Madonna and child. The celebrated fresco-paintings in the chapel of the castle of Stolzenfels are his work.

Deg'endorf, a town of Bavaria, cap. of a dist. of same name, on the Danube, 18 m. N.W. of Passau; pop. 5,500.

De Glaize Bayou, in Louisiana, traverses Avoyelles parish, and empties into the Atchafalaya Bayou.

Deglu'tinate, *v. a.* [Lat. *deglutinare*.] To detach by the dissolution of glue: to unglue.

Deglutition, (*dē-glū-tish'ūn*.) *n.* [Lat., from *deglutitio*, *de*, and *gluto*, to swallow. See GLUT.] (*Physiol.*) The act of swallowing; the second stage in the function of digestion, and the sequence of the act of masticating. This operation is performed by a mechanism of the most extraordinary and complicated kind, in which the consecutive actions of the various muscles of the tongue, the soft palate, the pharynx, the larynx, and the oesophagus or gullet, are concerned, partly by voluntary, and partly by involuntary impulse. In mammals, between the buccal cavity and the pharynx, there is a movable muscular partition, the *pendulous palate*, (*fig. 783*.) which, during mastication, separates the two cavities from each other; but so soon as this is accomplished, the elementary mass or bolus being pressed backwards by the tongue, the pendulous palate is drawn upwards and backwards, so as to permit of the passage of the food or drink through the isthmus into the pharynx. At this point *D.* commences. The pharynx is the cavity immediately following the mouth, and communicating with it by the isthmus. It receives the food from the mouth, and the air passes by the same passage, when the nostrils are closed or obstructed. Seven openings lead to or from this cavity; the posterior nostrils, namely, being two; the Eustachian tubes leading to the ears, two; the opening of the mouth, one; the opening of the gullet, one; the aperture leading to the lungs through the larynx and wind-pipe, one; seven in all. The trachea is the tube leading into the chest, surrounded by the larynx. By this tube the air passes into the lungs placed in the thorax, and the oesophagus, or gullet, passes through the chest and enters the abdomen, to expand, as it were, into the stomach. By this tube also the food and drink pass into that organ. When food is properly masticated, a sufficient quantity is collected upon the tongue, which is then so pressed against the palate by a muscular action proceeding from the tip of the tongue backwards, as to propel it towards the pharynx, or upper end of the gullet: at this moment the soft palate, previously hanging like a pendulous veil at the back of the mouth, is drawn into a horizontal position, so as to form a continuation, as it were, of the rest of the palate, and at the same time to close the nasal canals. As soon as the morsel or portion to be swallowed reaches the pharynx, the base of the tongue, the os hyoides, and the larynx are raised forward to meet it, and hurry it over the opening of the glottis toward the oesophagus. The instant the larynx is raised, the glottis is firmly closed; and as soon as the morsel has passed over it, the larynx descends, the epiglottis is raised, and the glottis opens again to allow air to enter the lungs. Thus it is, therefore, that the food is limited to the direction of the oesophagus, and never passes into the nasal canals, nor into the Eustachian tubes, nor into the larynx, all the concurrent actions of this period of the act of *D.* being simultaneously and voluntarily performed. By the contraction of the larynx, the morsel is delivered into the oesophagus, and propelled by the muscular structure of that tube towards the stomach. In the upper part of the oesophagus, the fibres relax immediately after the passing of the food, but the inferior portion remains contracted for some moments after the food has entered the stomach.

Fig. 783.—VERTICAL SECTION OF THE MOUTH AND THROAT.

1. Pendulous palate; 2. Base of the cranium; 3. Pharynx; 4. Oesophagus; 5. Nose; 6. Tongue; 7. Salivary glands; 8. Lingual bone; 9. Thyroid gland; 10. Trachea or windpipe.

drawn upwards and backwards, so as to permit of the passage of the food or drink through the isthmus into the pharynx. At this point *D.* commences. The pharynx is the cavity immediately following the mouth, and communicating with it by the isthmus. It receives the food from the mouth, and the air passes by the same passage, when the nostrils are closed or obstructed. Seven openings lead to or from this cavity; the posterior nostrils, namely, being two; the Eustachian tubes leading to the ears, two; the opening of the mouth, one; the opening of the gullet, one; the aperture leading to the lungs through the larynx and wind-pipe, one; seven in all. The trachea is the tube leading into the chest, surrounded by the larynx. By this tube the air passes into the lungs placed in the thorax, and the oesophagus, or gullet, passes through the chest and enters the abdomen, to expand, as it were, into the stomach. By this tube also the food and drink pass into that organ. When food is properly masticated, a sufficient quantity is collected upon the tongue, which is then so pressed against the palate by a muscular action proceeding from the tip of the tongue backwards, as to propel it towards the pharynx, or upper end of the gullet: at this moment the soft palate, previously hanging like a pendulous veil at the back of the mouth, is drawn into a horizontal position, so as to form a continuation, as it were, of the rest of the palate, and at the same time to close the nasal canals. As soon as the morsel or portion to be swallowed reaches the pharynx, the base of the tongue, the os hyoides, and the larynx are raised forward to meet it, and hurry it over the opening of the glottis toward the oesophagus. The instant the larynx is raised, the glottis is firmly closed; and as soon as the morsel has passed over it, the larynx descends, the epiglottis is raised, and the glottis opens again to allow air to enter the lungs. Thus it is, therefore, that the food is limited to the direction of the oesophagus, and never passes into the nasal canals, nor into the Eustachian tubes, nor into the larynx, all the concurrent actions of this period of the act of *D.* being simultaneously and voluntarily performed. By the contraction of the larynx, the morsel is delivered into the oesophagus, and propelled by the muscular structure of that tube towards the stomach. In the upper part of the oesophagus, the fibres relax immediately after the passing of the food, but the inferior portion remains contracted for some moments after the food has entered the stomach.

Deglutitions, *a.* Relating or pertaining to deglutition. **Glutit'ory**, *a.* Relating to deglutition; supplying deglutition.

Dezli, (*de-nez'le*.) a city of Turkey in Asia, in N. 50 m. from Allah Shehr. In 1715 it was destroyed by earthquake, in which it is said that 12,000 inhabitants perished.

Dgradation, *n.* [Fr.] Act of degrading; removal dismissal from office; a reducing in rank or degree;

deposition; as, the *degradation* of a military officer. — State of being reduced in rank, degree, or position; debasement; humiliation; abasement; disgrace; dishonor; degeneracy. — Diminution, in respect to strength, efficacy, or value; a gradual wasting away.

(*Geol.*) The wearing away of rocks, beaches, banks, &c., by the action of water or other causes.

(*Paint.*) The lessening and obscuring of objects represented at a distance.

Degrade', *v. a.* [Fr. *dégrader*; Lat. *de*, and *gradus*, a step or degree.] To reduce from a higher to a lower rank or degree; to deprive one of any office or dignity: to strip of fame and honors; as, a *degraded* knight. — To reduce in estimation; to lessen the value of; to depress: to lower; to humble; to debase; to bring down; to depose; to dishonor or disgrace; as, to *degrade* one's name, a *degrading* act.

(*Geol.*) To reduce in altitude or in magnitude, as a mountain.

Degrad'ed, *p. a.* Reduced in rank, value, or estimation; deprived of an office or dignity; lowered; sunk; as, a *degraded* minister, a *degraded* life.

(*Her.*) Applied to a cross, when placed upon steps or degrees.

Degrad'ingly, *adv.* In a mean or degrading manner.

De Graff, in Ohio, a post-village of Logan co., abt. 9 m. W.S.W. of Bellefontaine.

Degree', *n.* [Fr. *degré*, from Lat. *de*, and *gradus*, a step.] A step in progress, promotion, or advancement; gradation; as a *degree* of civilization, a *degree* of comparison, by *slow degrees*, &c.

"Ill habits gather by unseen degrees." — Dryden.

— Step in relationship, rank, class, order, quality, or dignity: step in elevation or descent; measure; proportion; extent: as, a *degree* of excellence.

(*Learning.*) A distinction conferred on the students or members of a university, as a testimony of their proficiency in the arts or sciences, and entitling them to certain privileges. The origin of *D.*, like many other points connected with the early history of universities, is involved in obscurity. That they existed at a very early period is unquestionable, but there is no reason to believe that they were co-eval with the earliest universities. The oldest *D.* were those in arts; and the term *bachelor*, which designates the lowest *D.* in each faculty, would seem to justify us in tracing the whole system of *D.* to the university of Paris. The terms *master* and *doctor* were originally synonymous, and were commonly given to persons engaged in teaching, and not as titles conferred by authority after a prescribed course of study or a formal examination. Afterwards the term *master* was restricted to teachers of the liberal arts, and the title of *doctor* was assumed by the teachers of theology, law, and medicine. The masters and doctors afterwards adopted certain regulations, which were confirmed by public authority, to prevent unqualified persons from assuming their office: and hence these titles came to indicate a certain rank, and convey certain powers in the body scholastic. When this took place, and more especially when an initiatory stage was marked by the name of *bachelor*, the several designations were called *steps* or *degrees*, (Lat. *gradus*.) Every graduate had an equal right of teaching publicly in the university the subjects competent to his faculty up to the rank of his *D.*, and he even incurred an obligation to teach as a condition on which his *D.* was granted. *D.* are of two kinds: 1. *Ordinary*, or those which are conferred upon the members of a university after examination, and are thus certificates of attainment; and 2. *Honorary*, or those which are sometimes conferred upon persons of distinction without any examination. *D.* bear the same names, and, with some variation, the same relative academical rank, in most countries of Europe; but the mode of granting them, and their value at different universities, as tokens of proficiency, vary greatly.

(*Geneal.*) See CONSANGUINITY.

(*Arith.*) A term for three figures of three places, comprehending units, tens, and hundreds.

(*Math., Astron., and Geog.*) The circle is divided into 360 equal parts, called *degrees*; each degree into 60 equal parts, called *minutes*; each minute into 60 seconds; each second into 60 thirds, and so on. The imaginary great circles that are supposed to be described on the earth, and on the apparent surface of the heavens, are similarly divided, to aid us in effecting astronomical and geographical calculations, and in determining the position of stars and other celestial bodies on the latter, and the situation of places on the former. These divisions, according to the direction in which they are measured, are known as *degrees* of LATITUDE and LONGITUDE, *q. v.*

(*Mus.*) A name given to each line and space contained in the staff. There are nine degrees, viz., five lines and four spaces. When a greater number is required, short parallel lines, called ledger lines, are added, either above or below the staff. A melody is said to proceed by *degrees* when it ascends or descends to the next line or space. The *theoretical degree* is the difference of position or elevation between any two notes. They are of two kinds, viz., *conjunct*, and *disjunct*: they are called *conjunct* when two notes are so situated as to form the interval of a *second*, and *disjunct* when they make a *third*, or any greater interval.

(*Algebra.*) The magnitude of the greatest sum that can be formed by adding together the exponents of the facients or variables which occur in any single term of an equation or expression. Thus, $a^2x^2 + b^2y^2 + c^2z^2 + 2bcy + 2cax + 2abxy$ is said to be of the second degree in the variables x and y ; and it is also said to be of the second degree in the coefficients a, b, c . The terms *degree* and *order* are frequently used synonymously in

algebra, but have distinct meanings when applied to differential equations.

(*Meteorol.*) A name given to the spaces marked on a thermometer to indicate equal differences of temperature.

To a *degree*. To an extreme point; very much; greatly; as, cowardly to a *degree*.

Dehiscce, (*dē-his'*.) *v. n.* [Lat. *dehisco*—*de*, and *hisco*, to gape.] To gape; to open, as the capsule of a plant.

Dehiscence, (*de-his's-us*.) *n.* [From Lat. *dehiscens*.] A gaping: act or practice of gaping.

(*Bot.*) The natural opening of the valves of certain fruits for the discharge of the seeds, or of the cells of anthers for emitting pollen, &c. — The season when capsules open.

Dehisc'ent, *a.* [Lat. *dehiscens*, *dehiscens*.] (*Bot.*) A term applied to those fruits which separate regularly round their axes, either wholly or partially, into several pieces, as seen in fig. 784.

Dehors, (*de-hôrz'*.) *prep.* [Fr.] (*Law.*) Something foreign to the matter in question.

Dehor'tative, **Dehor'tatory**, *a.* Having the power to dissuade; adapted to dissuade.

Deh'manize, *v. a.* To put off or away the qualities and characteristics of humanity, feeling, or tenderness.

Dehydration, *n.* (*Chem.*) The drying of air or gases, or the abstracting of water or its elements from any body. Hydrated sulphuric acid ($\text{H}_2\text{O}.\text{SO}_3$), having a very powerful attraction for more water, is much employed in laboratories for that purpose.

De'icide, *n.* [It. *deicidio*; Lat. *deus*, and *cado*, to kill.] The act of putting to death one of divine origin and nature; specifically, the taking away the life of Jesus Christ, the Saviour.

"Earth profan'd, yet bless'd with deicide." — Prior.

— One engaged in the crucifixion of our Lord.

Deidesheim, (*dē-des'hime*.) a town of Rhenish Bavaria, 13 m. W.N.W. of Speyer, noted for the celebrated *Deidesheimer wine*, one of the most excellent kinds of white Rhenish wines; pop. 2,700.

Deif'ic, **Deif'ical**, *a.* [From Lat. *deus*, and *facio*, to make.] Making divine; divine; pertaining or relating to God, or to the gods of heathen mythology.

Deifica'tion, *n.* The act of deifying, or of exalting to the rank of a deity; treating as a deity. See APOTHEOSIS.

De'ifier, *n.* One who deifies, or venerates as a god.

De'iform, *a.* [Lat. *deus*, and *forma*, form.] Of a god-like form; resembling a god.

De'ify, *v. a.* [Fr.; Lat. *deus*, and *facio*, to make.] To make into a god; to exalt to the rank of a heathen deity; to enroll among the deities.

"Renowned on earth, and deified above." — Dryden.

— To treat as if a deity or god; to exalt to a deity in estimation; to extol and venerate as an object of chiefest regard.

"Persuade the covetous man not to deify his money." — South.

— To render divine, supreme, or god-like, as the imagination.

Deign, (*dān*.) *v. n.* [Fr. *daigner*, from Lat. *dignor*, from *dignus*, worthy.] To vouchsafe; to condescend; to think fitting; to think or deem worthy.

"Oh deign to visit our forsaken seats." — Pope.

— *v. a.* To grant or allow; to condescend to give to; to permit.

"Nor would we deign him burial of his men

Till he had disbursed ten thousand dollars." — Shaks.

De'i Gra'tia, [Lat., by the grace of God,] a formula which many European sovereigns add to their title, and which is taken from an expression of the apostle Paul in the New Testament. It was first used by the clergy in the time of Constantine the Great, as an expression of dependence upon the grace of God; and afterwards the higher clergy came to use along with it the addition, *et apostolica sedis* (by the grace of God and the apostolic see). In the time of the Carolingian race the secular princes also assumed it; and in course of time it came to be regarded as asserting something like the divine right of kings, and their independence of any earthly power.

Deil, *n.* [Scot.] A Scotticism for the devil.

Deinac'rida, *n.* (*Entom.*) A genus of the Orthoptera, belonging to the cricket family, of which a good example is the great New Zealand cricket *D. heteracanthia*,

Fig. 785.—NEW ZEALAND GREAT CRICKET. (*Deinacrida heteracanthia*.)

shown in the illustration. This has been referred to as a peculiarly formidable insect, generally inhabiting old

and decaying trees, where it secretes itself in the rents and crevices. It is carnivorous, and its bite is severe. The wonderful stories told of this insect by certain early travellers have not been substantiated by later research.

Deinotherium, *DINOTHERIUM*, *n.* [Gr. *deinos*, terrible, and *therion*, beast.] (*Zoöl.*) The name of a fossil genus of gigantic *Pachyderms* (figure 786), chiefly remarkable on account of its enormous tusks, which projected downwards from the lower jaw, instead of the upper, as in the elephant and walrus.

Fig. 786. — *DEINOTHERIUM*.

Deiopeia, (*de-i-o-pe'ya*.) (*Myth.*) The most beautiful of the 14 nymphs that attended upon Juno, who promised her in marriage to Æolus, the god of the winds, if he would destroy the fleet of Æneas, which was sailing for Italy.

(*Zoöl.*) A genus of beautiful lepidoptera, of the *Bombicidae* family. The fore-wings are deep yellow, crossed by about 6 white bands, each bearing a row of black dots; hind wings scarlet, with an irregular black border.

Deir, (*dair*.) the name of many places in the East, the principal being 10 miles from Beyrout, in Syria. It is the chief town of the Druses, whose emir lives in its citadel.

Deism, (*de'izm*.) *n.* [Fr. *déisme*.] (*Theol.*) Belief in the existence and attributes of God, coupled with disbelief in any express revelation of his will. See *THEISM*.

Deist, *n.* [Fr. *déiste*, from Lat. *deus*, a god.] (*Theol.*) One who professes deism; a freethinker.

Deistic, *Deistical*, *a.* Pertaining to deism, or to a deist; embracing deism; as, a *deistical* thinker.

Deistically, *adv.* After the manner of deists.

Deity, *n.* [Fr. *déité*; L. Lat. *deitas*, from *deus*, a god; Gr. *theos*; Lith. *dievas*; Sansk. *deva*, from *div*, to shine. See *DIVINE*.] The source of light, both natural and spiritual; the divine nature; the godhead; the nature and essence of the Supreme Being; the Supreme Being.

"An atheist's laugh's a poor exchange
For Deity offended!" — Burns.

—A fabulous god or goddess; a superior being.

"Will you suffer a temple of your deity to be razed?" — Sidney.

Dejanira, (*de'ja-ni-ra*.) a daughter of Æneus, king of Ætolia. Her father promised to give her in marriage to him only who proved to be the strongest of all his competitors. Hercules obtained the prize, and married *D.*, by whom he had three children. When Nessus, a centaur, who had offered violence to *D.*, was dying by a poisoned arrow shot from the bow of Hercules, she accepted from him the present of his tunic, which Nessus said had the power of reclaiming a husband from unlawful loves. Accordingly, when Hercules became enamoured of Iola, daughter of the king of Æthalia, she sent him the centaur's tunic, which instantly caused his death. *D.* was so disconsolate at this event, that she destroyed herself. — See *HERCULES*.

Deject, *v. a.* [Fr. *déjecter*; Lat. *dejicio*, *dejectus* — *de*, and *jacio*, to throw or cast.] To cast down the countenance, or make it sad, as with grief; to depress the spirits; to sadden; to dispirit; to dishearten; to sink; to debase; to humble.

"The lowest, most dejected thing of fortune." — Shaks.

Dejectedly, *adv.* In a sad or dejected manner.

Dejectedness, *n.* State of being cast down; depression or lowness of spirits.

Dejecter, *n.* One who causes dejection.

Dejection, *n.* Depression of mind; melancholy; lowness of spirits occasioned by grief or misfortune.

"As high as we have mounted in delight,
In our dejection do we sink as low." — Wordsworth.

—Weakness; low or frail condition of the body.

"Thirst, and a dejection of appetite." — Arbuthnot.

(*Med.*) The expulsion of the feces; a fecal discharge or stool, — generally with *alvine* prefixed; as, an *alvine dejection*; — also, depression of spirits.

Dejectory, *a.* Possessing the power or influence to cast down.

—Promoting the voiding of excrement.

Dejecture, *n.* Excrement; substance voided; as, "liquid dejecture." — Arbuthnot.

Déjeuner, **Déjeuner**, (*dā-zhō'nā*.) *n.* [Fr., to breakfast, from Lat. *de*, and *jejunium*, abstinence from food.] A term naturalized in almost all the languages of modern Europe; signifying the morning meal. It may be remarked, however, that in France itself this term is rapidly losing, if indeed it has not already lost, its original acceptance, being used as synonymous with our luncheon.

De jure, [Lat., by right.] (*Law.*) By right; by law; rightfully; — generally used in contradistinction to *DE FACTO*, *q. v.*

De Kalb, JOHN, BARON, a French officer, b. in Alsace, about 1732. He accompanied Lafayette to America, 1777; was appointed the same year major-general in the American army, and joined the main force under Washington. In the battle of Camden, Aug. 16, 1780, he was at the head of the Maryland and Delaware troops, who maintained their ground till Cornwallis concentrated his whole force upon them. He fell, pierced with 11 wounds, in the charge upon his regiment before they gave way. He died 3 days after at Camden, where a monument, of which Lafayette placed the corner-stone, was erected to his memory in 1825.

De Kalb, in Alabama, a N.E. co., bordering on Georgia. Area, about 775 sq. m. Rivers. Wills Creek, an affluent of the Coosa river. Surface, in some parts mountainous. Soil, fertile. Cap. Ft. Payne. Pop. (1890) 21,106.

De Kalb, in Georgia, a N.W. central co.; area, about 350 sq. m. Rivers. Chattahoochee (which forms its N. boundary), South river, Peachtree, Nancy's, and Utoy creeks. Surface, elevated. Soil, excellent. The famous Stone Mountain (*q. v.*) is in the E. part of this co. Min. Gold, iron, granite, and chalybeate springs. Cap. Decatur. Pop. (1890) 17,189.

De Kalb, in Illinois, a N. co.; area, about 648 sq. m. Rivers. Sycamore and Indian creeks. Surface, undulating. Soil, good. Cap. Sycamore. Pop. (1890) 27,066.

—A thriving city and railroad junction, in De Kalb co., 58 m. W. of Chicago, on the C. & N. W. Ry. and Chic. Gt. N. R.R. Has important manufactures of barbed fence wire, farming implements, shoes, mittens, &c., and a very good local trade from the surrounding farming section. Pop. (1897) about 3,200.

De Kalb, in Indiana, a N.E. co., bordering on Ohio. Area, about 346 sq. m. Rivers. St. Joseph's river, and Cedar creek. Surface, undulating. Soil, fertile. Cap. Auburn. Pop. (1890) 24,307.

De Kalb, in Mississippi, a post-village, cap. of Kemper co., about 105 m. E.N.E. of Jackson.

De Kalb, in Missouri, a N.W. co.; area, about 440 sq. m. Rivers. Blue, Grindstone, and Livingston creeks, and the Third Fork of Platte river. Surface, generally level. Soil, fertile. Cap. Maysville. Pop. (1897) 15,150.

—A post-village of Buchanan co., about 50 m. N.W. of Independence.

De Kalb, in New York, a post-township of St. Lawrence co., on the Oswegatchie river, about 15 m. S.S.E. of Ogdensburg.

De Kalb, in S. Carolina, a township of Kershaw dist., on Pinetree creek, about 1 m. from Camden.

De Kalb, in Tennessee, a N. central co.; area, about 300 sq. m. Rivers. Cauey Fork (a branch of the Cumberland), and other smaller streams. Surface, diversified. Soil, good. Cap. Smithville. Pop. (1890) 15,650.

De Kalb, in Texas, a post-village of Bowie co., about 14 m. N.W. of Boston. Pop. about 550.

De Kalb, in W. Virginia, a township of Gilmer co., on the Little Kanawha river, about 45 m. S. E. of Parkersburg.

De Kalb Junction, in New York, a post-office of St. Lawrence co.

Dekle, (*dek'l*.) *n.* An instrument used in the manufacture of paper.

Dekor'a, in Wisconsin, a post-village and township of Columbia co., on Wisconsin River, about 30 m. N. of Madison.

De la Bèche, SIR HENRY THOMAS, (*da-la-baish*.) an English geologist, b. near London, 1796. He founded the Museum of Practical Geology in London, and succeeded in establishing the School of Minerals. His best work is, *How to Observe Geology*, pub. in 1835. D. 1855.

Delacroix, EUGÈNE, one of the most celebrated French painters, member of the Institute, and head of the romantic school, b. near Paris, 1799. He early distinguished himself by audacious departure from the conventional, classic manner. His first picture was the *Dante and Virgil*, and the sensation produced by it was intensified by the *Massacre of Scio*, exhibited in the following year, 1823. In 1837 he undertook the decoration of the *Salon du Roi* at the Corps Législatif; subsequently the ceiling of the *Library*; the ceiling of the *Apollo Gallery* at the Louvre; and the chapel of the *Holy Angels* in St. Sulpice. The last-named work was executed in 1861. Among his separate works, which are very numerous, some of the most celebrated are the *Women of Algiers*; *Massacre of the Bishop of Liège*; *Entering of the Crusaders into Constantinople*; *Wreck of Don Juan*; *Medea*, and a *Prêtà*. *D.* distinguished himself especially as a colorist by his skill in vast compositions of fiery passion and imagination. His favorite among the old masters was Paul Veronese. D. 1863.

De lafield, in Wisconsin, a post-village and township of Waukesha co., about 25 m. W. of Milwaukee; the vil. is situated near several small lakes.

Delagoa Bay, (*del-a go'a*.) is situate on the E. coast of Africa, about midway between Mozambique and the Cape. Ext. 25 m. long, by 20 broad. There is a settlement supposed to be inhabited by about 10,000 natives. The bay is a good deal frequented by the South-Sea whalers, who find it safe and commodious. The most N. point, Lat. 25° 58' S., Lon. 33° 15' E. *D.*, long in dispute between Gt. Britain and Portugal, was awarded to Portugal by the French president in 1875, under arbitration.

Delambre, JEAN BAPTISTE JOSEPH, one of the most eminent French astronomers, and a pupil of Lalande, b. at Amiens, 1749. Though he did not commence the study of astronomy till he was 36 years of age, he rapidly acquired fame, and produced numerous works of great value, among which are his *Theoretical and Practical Astronomy*, 3 vols. 4to, and a *History of Astronomy*, in 5 vols. 4to. *D.* was a member of the Academy of Sciences, and succeeded Lalande as professor at the College of France. He also took part with Méchain in the measurement of a meridian, which occupied them from 1792 till 1798. D. 1822.

Delan'co, in New Jersey, a post-village of Burlington county, at the junction of Rancocas creek with the Delaware river, about 12 m. above Camden.

De Lancey, in New York, a post-office of Delaware co.

Delangle, CLAUDE-ALPHONSE, a French advocate and statesman, b. 1797. He was nominated Procureur-Général of the Cour Royale of Paris in 1847; President of the said Court, and Senator, in 1852; Minister of the Interior in 1858, and Minister of Justice in 1859, an office that he

resigned in 1863; and was elected member of the Academy of Moral and Political Sciences, 1859. *D.* has written some works on law, but owes his celebrity to his eloquence as an advocate. D. Dec. 1869.

Delano, in Pennsylvania, a P. O. of Schuylkill co.

Delan'ti, in Iowa, a post-village of Hardin co., on the Iowa River, about 9 m. S. of Eldora.

De la Palma, in Ohio, a post-office of Brown co.

Delapsation, *n.* A falling or sliding down.

Delapse, *v. n.* [Lat. *delabor*, *delapsus* — *de*, and *labor*, to fall, to slide.] To fall or slide down. — To descend by inheritance or heirship.

Delap'sion, *n.* (*Med.*) Same as *PROLAPSION*, *q. v.*

De Large Bayou, in Louisiana, traverses Terrebonne Parish, and empties into the Gulf of Mexico.

Delaroche, PAUL, one of the greatest French painters, b. at Paris, 1797. He studied landscape-painting for a short time, but applied himself afterwards to historical painting under Baron Gros. His first pictures were exhibited in 1822, the same year in which Delacroix made his début. He held from the first a middle place between the classical and the romantic schools, and was called the *Girardin* of art. Among his early works were his *Joan of Arc*, and St. Vincent de Paul. Some of his noblest works are taken from scenes in English history; among them are: *Cromwell contemplating the Dead Body of Charles I.*; *The Children of Edward IV.*; *Strafford on his way to Execution*; and the *Death of Lady Jane Grey*. In these he displayed his love of truth in art, his fine sense of dignity, and his marvellous technical skill. His *Death of the President Duranti*; *Cardinal Richelieu with Cinq-Mars* and *De Thou: Assassination of the Duke of Guise*; *St. Cecilia*; *Napoleon at Fontainebleau*; *Marie Antoinette after her Execution*; and *The Girondins*, are esteemed masterpieces. In 1837 he was intrusted with the execution of that vast work, the Hémicycle of the "Palais des Beaux-Arts," which was completed in 1841. In 1845 he suffered bitterly and profoundly from the loss of his wife Louise, daughter of Horace Vernet, whom he had married at Rome ten years previously. Her exquisite beauty is portrayed in his *Head of an Angel*. In his last years he chiefly devoted himself to religious painting, and among the last of his works are *Christ at Gethsemane*; *Christ on the Cross*; *The Young Martyr*; and a series of small pictures of the *Passion*. After a life of most faithful study and incessant work, much sorrow and victorious faith, this great artist d. at Paris, 1856. He was a member of the Institute.

Delate, *v. a.* [Lat. *delatus*, from *defero* — *de*, and *fero*, to bear, bring, or carry.] To bear, or carry away apart; to convey. — To spread; to circulate; to make common. — To bear a charge against; to accuse; to inform against. — To transact; to manage; to take charge of.

Delation, *n.* Carriage from a place; conveyance. (*R.*)

(*Law.*) Accusation; act of bringing a charge against.

Delavan, in Illinois, a thriving city of Tazewell co. 24 m. S. of Peoria. Pop. (1897) 1,750.

Delavan, in Wisconsin, a beautiful town of Walworth co., about 75 m. W. of Lake Michigan, and in one of the most fertile portions of the State. Its churches and schools are of the highest order, and it is the seat of the State Asylum for the Deaf and Dumb, the building and grounds of which are among the finest in the West. Celebrated for its valuable mineral springs, and as a pleasant summer resort, especially for the people of Chicago and Milwaukee. Pop. (1897) abt. 2,800.

Delavigne, JEAN FRANÇOIS CASIMIR, a French poet and dramatist, b. at Havre, 1794. He was received at the French Academy in 1825, and after the revolution of July, 1830, was named librarian to Louis Philippe. His principal works are the poems entitled *Messénienne*; the *Vépres Siciliennes*, a tragedy; *Les Comédiens*, a comedy; *Louis XI.*, a tragedy; and *L'Ecole des Vieillards*. He wrote a song during the revolution of July, *La Patrie*, which was immensely popular for the time. D. 1838.

Delaware, one of the original 13 of the United States and, excepting Rhode Island, the smallest in the American Union. It occupies part of the E. division of the peninsula lying between the bays of Chesapeake and Delaware, extending from Lat. 38° 28' to 39° 50' N., and between 75° and 75° 45' W. Lon.; having N. Pennsylvania, W. and S. Maryland, and E. Delaware Bay and river. In length *D.* is about 96 m., by 37 in maximum breadth. Area, 2,120 sq. m., or 1,356,000 acres. DESC. The surface of the N. portion of the State is hilly, but towards the S. it becomes more level, and low, alluvial, and swam along the coast. — Rivers, &c. The rivers are inconsiderable; the principal are the Choptank and Nanticoke, flowing into the Chesapeake; and the Brandywine and Christiana creeks, emptying into Delaware Bay. The Indian River has its outlet in the Atlantic near the extremity of the State. There are no harbors on a sea-coast, with the solitary exception of that of New Castle. — Climate. Healthy; but the degree of cold experienced in the N. is much greater, compared with that of the S., than could be expected from a difference

Fig. 787. — SEAL OF THE STATE.

Lat. of only $1^{\circ} 20'$.—*Soil*. In the N. of the State, the soil is a rich clay; in other parts, and especially along the shore, it is sandy, and of inferior fertility, but it is, on the whole, well cultivated.—*Min.* Few minerals are met with, excepting large masses of bog-iron ore and shell-marl along the banks of the smaller streams. Kaolin, or China clay, occurs in large deposits in the N. division of the State.—*Agric.* The principal crops raised in *D.* are wheat, Indian corn, rye, barley, oats, flax, and buckwheat. The statistics for the principal cereal crops for the year 1880 were as follows: Indian corn, 3,892,464 bush.; wheat, 1,175,182 bush.; oats, 378,508 bush. For the year 1895 they were: Indian corn, 4,281,291 bush.; wheat, 1,069,300 bush.; oats, 468,790 bush. The other cereals above named are produced in small quantities. The number of acres devoted to the three crops mentioned were in 1895 320,596. In addition to the crops specified may be named potatoes, sweet potatoes, and garden vegetables, which are largely produced. In the census year 1890 *D.* had 9,381 farms, embracing 1,055,692 acres, of which 782,655 were improved and 293,037 unimproved land. The valuation of land and buildings was \$39,586,080; of implements and machinery, \$1,835,370; of live stock, \$4,198,810; of farm products, \$6,481,590.—In the production of fruit *D.* stands almost without a rival. Her peach crop reaches several million baskets per annum, supplying the great markets of New York, Philadelphia, and Baltimore, and of late years shipments are made as far west as Chicago; indeed, with the introduction of and more recent improvements in refrigeratory cars, and similar contrivances also applied upon our steamships, the field for the shipment of fruit is almost unlimited; and the peaches of Delaware find their way even to Europe, where they are held in great esteem.—*Manuf.* The manufacturing industry of *D.* is extensive, consisting chiefly of cotton and woollen fabrics, iron, and flour, which latter article is much esteemed for its superior quality; paper, gunpowder, carriages, steamship and steamboat building, of steel, iron, or wood, machinery, and various products of iron, &c. The Dupont powder mills near Wilmington are the largest and oldest in the country, and the paper mills, also near Wilmington, are among the most extensive. The flour mills of *D.* have long enjoyed a great reputation. The Delaware and Chesapeake Canal connects the two great bays of the Delaware and Chesapeake, forming an excellent water transit between the great cities of Philadelphia and Baltimore.—*Polit. Div.* This State contains 3 counties, viz., Kent, Sussex, and New Castle.—*Prin. towns.* New Castle, Wilmington, Dover (the State cap.), and Lewes.—*Govt.* The State Legislature consists of a Senate and House of Representatives; the former are elected for 4, and the latter for 2 years by all male citizens above 21 years of age, who have resided in the State for a year, and paid taxes for 6 months preceding the election. The executive power is exercised by a governor chosen by the citizens, who retains office for 4 years, but is not re-eligible. Judges retain office during "approved conduct."—*Finance.* On January 1, 1890, the public debt was \$887,573, all funded at 4 per cent. In the same year the county debt was \$618,400, and the municipal debt \$1,413,111; the total debt of State, counties and towns, being thus \$2,919,084, or \$17.32 per capita. *D.* is perhaps the least taxed State in the Union, so far as the expenses of the State government are concerned.—*Out.* of a school population of 48,839, *D.* has 33,174 enrolled in the public schools, and excellent provision has been made for public instruction. Although one of the smallest States of the Union, few relatively surpass her in the essential elements of progress. Few cities have greater material prosperity than Wilmington, and the exports of the varied products of her industry from this port are very considerable, especially when one considers her proximity to the large cities of Philadelphia and Baltimore.—*Hist.* This State takes its name from Lord De la Warr, governor of Virginia, who was the first to enter the bay, in 1610. In 1627 it was colonized by the Swedes, who, in 1638, called the country *New Sweden*. In 1638 it came into the possession of the Dutch, and, in 1664, was seized by the English, who thenceforth retained possession. In 1682 William Penn obtained a grant of the territory now constituting the State, from the Duke of York (James II.). Some litigation ensued, owing to a claim asserted by Lord Baltimore, which, in 1685, was decided in Penn's favor, who thereupon annexed the country to his colony of Pennsylvania. In 1703, *D.* obtained permission from the Proprietary to secede, and set up for herself. In 1776, its inhabitants proclaimed their independence, and formed a constitution, which was amended in 1831. The State ratified the national constitution in 1787, and sends one representative to Congress. Pop. (1890) 118,403; (1897) about 180,800.

Delaware, a town of Upper Canada, Middlesex co., abt. 149 m. S.W. of Toronto.—In *Ills.*, a vill. of Jersey co., abt. 59 m. S.W. of Springfield.—In *Ind.*, an E. co.; area, abt. 400 sq. m. Rivers, White and Mississinewa. Surface, generally level; soil, fertile. Cap. Muncie.—A twp. of Delaware co.—A twp. of Hamilton co.—A p-vill. and twp. of Ripley co., abt. 36 m. N. by E. of Madison.—In *Iowa*, an E.N.E. co.; area, abt. 576 sq. m. Rivers, Muskegoeta River and Buffalo Creek. Surface, broken; soil, fertile. Cap. Delhi.—A twp. of Delaware co.—A twp. of Polk co.—In *Kansas*, a p-vill. of Leavenworth co., on the Missouri River, abt. 5 m. below Leavenworth.—In *Mich.*, a twp. of Sanilac co., on Lake Huron.—In *Neb.*, a vill. of Otter co.—In *N. J.*, a twp. of Camden co.; pop. 1,625.—A twp. of Hunterdon co., **Delaware**, in *New York*, a S.E. co.; area, about 1,550 sq. m. Rivers, Coquago and Popacton, branches of the Delaware River, the Susquehanna River, and the Olant

Creek. Surface, hilly and mountainous; soil, well adapted for grazing. The *D.* butter is noted both for quantity and quality. Cap. Delhi. Pop. (1890) 45,406. **Delaware**, in *Ohio*, a central co.; area, about 478 sq. m. Rivers, Scioto and Olentangy rivers, and the Big Walnut, Alum, and Mill creeks. Surface, level; soil, productive. Min. Principally sulphur. Cap. Delaware. Pop. (1890) 27,189.

—An important city, capital of Delaware co., on the Olentangy river, about 24 m. N. of Columbus. It is the seat of the Ohio Wesleyan University and Ohio Wesleyan Female College. Here are large railroad repair shops, foundries, flour and oil mills, a woolen factory, and manufactories of bagging, iron fences, chains, carriages, lumber, etc. The town is handsomely situated and attractive, and has in its vicinity valuable medicinal springs. Pop. (1897) about 10,000.

Delaware, in *Pennsylvania*, a S.E. co., bordering on the State of Delaware. Area, about 180 sq. m. Rivers, Darby, Cram, Ridley, Chester, and Brandywine; the latter forming the S.W., as the Delaware River does the S.E. border of the co. Surface, diversified; soil, generally good. Min. Gneiss and mica slate; the quarries of the former furnishing considerable building-material for Philadelphia; whetstones of an excellent quality are procured near Darby Creek, and exported to all parts of the Union. Cap. Media.

—A township of Juniata co.

—A township of Mercer co.

—A township of Northumberland co.

—A post-village and township of Pike co., on the Delaware River, about 40 miles north by east of Easton.

Delaware Bay, an arm of the sea between the States of Delaware and New Jersey, 65 m. in length, and abt. 30 m. wide in its centre, and 18 at its mouth, between Cape Henlopen, Lat. $38^{\circ} 47' N.$, Lon. $75^{\circ} 6' W.$, and Cape May, Lat. $38^{\circ} 57' N.$, Lon. $74^{\circ} 52' W.$ It has deep water throughout, and a line-of-battle-ship may ascend the river Delaware to Philadelphia, and 120 miles from the ocean. There is a magnificent breakwater at the entrance of *D. B.*, and Cape Henlopen forming an artificial harbor for the protection of vessels from the winds from the E. to the N.W., round by the N. and from the floating ice descending the bay from the N.W. The breakwater consists of two parts, one 1,200, and the other 500 yards in length. It was formed like the mighty pier at Dover, and the breakwaters at Plymouth and Cherbourg, by sinking blocks of granite in the sea. An even more extensive breakwater is now (1897) under construction.

Delaware City, in *Delaware*, a post-borough of New Castle co., on the Delaware river. Pop. about 1,100.

Delaware City, in *Kansas*, a town of Leavenworth co., on the Missouri River, abt. 25 m. above its junction with the Kansas.

Delaware College. See NEWARK, *Delaware*.

Delaware Grove, in *Pennsylvania*, a post-village of Mercer co.

Delaware Hill, in *Arkansas*, a village of Greene co.

Delaware River, (Ind. *Makeriskiton*), an important river of the Middle States of the American Union. Rising on the W. slope of the Catskill Mountains in New York, it flows S.W. to Deposit in Delaware co.; thence S.E. passing Hancock, where it receives the Popacton River, and becomes the boundary line between New York and Pennsylvania, to Port Jervis. Thence in a general S.W. course to Easton in Northampton co., Pa., piercing the great natural curiosity, the Delaware Water Gap, where the mountain on either side rises

Fig. 788.—DELAWARE WATER GAP.

almost perpendicularly to a height of 1,000 to 1,200 feet above the river. From Easton it flows S.E. to Bordentown, New Jersey, and thence generally S.W. to New Castle, Delaware, where it once more turns to the S.E. and enters Delaware Bay, about 40 m. below Philadelphia. It thus forms a natural boundary; first between New York and Pennsylvania, then between Pennsylvania and New Jersey, and finally divides the latter State and Delaware. It is navigable for ships of the largest size to Philadelphia, and for steamboats to Trenton, where the tide-water meets the falls. The entire length is about 300 miles. Before receiving its actual name from Lord De la Warr, the original Dutch settlers

called it the *South (Zuyd) River*, to distinguish it from the Hudson, or *North River*; and afterwards gave it, as well as the Indians inhabiting the territory, the name of *Delaware*, in honor of Thomas West, Lord De la Warr, who visited the bay in 1610, and died on his vessel at its mouth.

Delawares, a tribe of Indians. See LENAPES.

Delaware Station, in *New Jersey*, a post-office of Warren co.

Delaware Water Gap, in *Pennsylvania*, a post-office of Monroe co. See DELAWARE RIVER.

Delawarite, *n.* (Min.) A variety of ORTHOCLASE, *q. v.*

Delay, *v. a.* [Fr. *délai*, from Lat. *dilatatio*—*differo*, *dilatatio*—*dis*, and *fero*, to bear, to carry.] To defer; to put off; to postpone; to procrastinate; to prolong; as, to delay business.—To hinder; to retard; to detain; to stop; to protract; as, he delayed by an accident.

—*v. n.* To pause; to stop; to linger; to move slow, or to stop for a time;—opposed to *hasten*.

—*n.* A deferring or putting off; procrastination; postponement; as, the Law's delay.

"The conduct of our lives . . . will not bear delay."—Locke.

—A lingering; stay; stop; temporary hindrance.

"Sweet, reluctant, amorous delay."—Milton.

Delay'er, *n.* One who defers or delays; one who lingers or puts off.

Del credere, *n.* [It., of trust.] (Com. Law.) A term denoting a commission granted by a merchant to a factor to dispose of goods; the factor, for the consideration of an additional percentage, agreeing to guarantee the solvency of the purchaser.

Dele, *v. a.* [Lat. imp. of *deleo*.] (Printing.) To erase; to cancel; to expunge from type; marked thus, ∞.

Dele'ble, *a.* [Lat. *delebilis*.] That may be blotted out.

Delect'able, *a.* [Lat. *delectabilis*, from *delecto*. See DELIGHT.] That gives great joy or pleasure; delightful; affording much gratification; as, a delectable treat.

"Delectable to the intellectual faculty."—Hale.

Delectable Hill, in *Indiana*, a post-office of Pike co. **Delectableness**, *n.* Delightfulness; state or quality of being delectable.

Delect'ably, *adv.* Delightfully; in a manner affording pleasure.

Delect'ate, *v. a.* To make delectable; to afford gratification.

Delecta'tion, *n.* [Fr.; Lat. *delectatio*.] Great pleasure; lively gratification; delight.

"Tears of joy and delectation."—Sir T. More.

De'legate, *v. a.* [Lat. *delego*, *delegatus*—*de*, and *lego*, to send as envoy.] To send with power to transact business, as a representative; to commission; to depnte. To intrust; to commit; to deliver to another's care and exercise; as, to delegate authority.

—*n.* A person sent and commissioned by another or others to act as his or their representative; a representative; a deputy; a commissioner; a substitute; one sent to act as agent for another or others.

(U. S. Law.) A person elected to an occasional assembly, such as conventions and the like.—One elected by the people of an organized territory of the U. States, to Congress, where he has the right of debating, but not of voting.

—*a.* [Lat. *delegatus*.] Deputed; sent with a trust or commission to act for another; as, "de-legate judges."

Delega'tion, *n.* [Fr. *délégation*; Lat. *delegatio*.] Act of delegating; appointment of a delegate or deputy.—Persons delegated; a commission; deputation.

(Civil Law.) The act by which a debtor transfers to another person the duty to pay, or a creditor makes over to a third party the right to receive payment. See NOVATION.

Dele'nda, *n. pl.* [From Lat. *deleere*, to blot out.] Things requiring to be erased or expunged.

Delesse'ria, *n.* [Named after Baron Delessert, of Paris.] (Bot.) A genus of marine plants, order *Ceramiales*. It is

Fig. 789.—DELESSERIA SANGUINEA.

one of the most beautiful genera of the Algae, and contains about a dozen species which inhabit the temperate and warm zones of both hemispheres.

Delete', *v. a.* [Lat. *deleo*, *deletum*. See ABOLISH.] To efface; to erase; to blot out; to expunge.

Deleterious, *a.* [Gr. *diletirios*, from *deleomai*, to hurt, to injure, allied to Sansk. *dal*, to be cut.] Destructive; pernicious; poisonous; having the property of destroying life; as, a deleterious drug.

Dele'tion, *n.* Act of erasing or effacing.

Deletitions, (*dē-lē-tish'us*), *a.* Susceptible of bearing erasure from its surface, as paper.

Dele'tive, *a.* Calculated to delete; adapted to destroy.

Delf, **Delph**, *n.* A stone quarry; a large pit dug.

Delf, or **DELFT-WARE**, *n.* Earthenware covered with a white glaze, in imitation of china-ware or porcelain, made originally at *Delft*, Holland.

Delft, a Dutch town, in the prov. of S. Holland, 9 miles from Rotterdam. It is regularly built, and intersected by a great many narrow canals, which are crossed by 69 bridges. The most prominent buildings are the palace, in which William, Prince of Orange, was assassinated in 1584, now used for barracks; the town-hall, arsenal, military engineering academy, and several fine churches. *D.* is the birthplace of Grotius and Loenwenhek, who, with William the Silent, are buried here. *Manuf.* Earthenware, cloth, and carpets. *Pop.* 22,049.

Delftshaven, a small fortified town of S. Holland, 2 m. from Rotterdam, on the Maas; *pop.* 4,500.

Del'hi, a prov. of Hindostan, pres. Bengal, bounded N. by Lahore, E. by the Ganges, S. by Ajmeer and Agra, and W. by Rajpootana. Lat. between 28° and 31° N.; Lon. 75° and 80° E. *Area*, 774 sq. m. This country is generally sandy, but is made fertile by artificial irrigation. *Prod.* Cotton, wheat, barley, and pulse. In the Sepoy mutiny of 1857, the inhabitants of *D.* took a most active part. *Pop.* 450,000, of whom 325,000 are Hindoos, and the rest Mohammedans.

Del'hi, (Sansk. *Indraprast'ha*), a celebrated city, cap. of the above province, and anciently the metropolis of the Patan and Mogul empires, on the Jumna, 112 m. N.N.W. of Agra, 425 N.W. of Benares, and 830 in the same direction from Calcutta, with which city it connects by railroad. This city was in former times a place of vast size and splendor, as the ruins of its older portion sufficiently testify. The present city is about 7 m. in circumference, and is, for India, a fine, airy, and well-built place. It possesses many splendid mosques and palaces, notably that of the Emperor Shah Jehan, and the Jumna Musjid,

Fig. 790. — THE KING'S PALACE, DELHI.

the most magnificent temple of Mussulman worship in India. *D.* possesses several observatories, schools, and colleges supported by the British govt. *Manuf.* Cotton cloths, shawls, precious stones, and jewelry. In 1011, *D.* was taken and plundered by Mahmud, in 1398 by Tamerlane, in 1525 by Baber, who overturned the Patan dynasty, and inaugurated that of the Moguls, and in 1739 it was pillaged by Nadir Shah. Since 1803 it has belonged to the British. During the Sepoy mutiny of 1857, the king of *D.* was proclaimed emperor by the rebels, when the city was taken by storm by the British troops, and the massacre of their countrymen amply avenged. *Pop.* (1895) 198,750.

Del'hi, in *Illinois*, a post-village of Jersey co., about 14 m. N. N. W. of Alton.

Del'hi, in *Iowa*, a post-village and township, former capital of Delaware co., on the Maquoketa river, about 40 m. W. by S. of Dubuque. *Pop.* 600.

Del'hi, in *Louisiana*, a village of Carroll parish.

—A post-village of Richland parish.

Del'hi, in *Michigan*, a township of Ingham co.; it contains Delhi Center.

Del'hi, in *Minnesota*, a P. O. of Redwood co.;—now merged in other townships.

Del'hi, in *New York*, a post-village and township, cap. of Delaware co., on the Delaware river, about 68 m. W. S. W. of Albany. *Pop.* (1897) 1,760.

Del'hi, in *Ohio*, a village of Delaware co., about 32 m. N. N. W. of Columbus. *Pop.* (1897) about 700.

—A township of Hamilton co., on the Ohio river, about 6 m. below Cincinnati.

Del'hi, in *Wisconsin*, a village of Winnebago co., on Fox River, abt. 80 m. N. E. of Madison.

De'liac, *n.* [Lat. *deliacus*, from the island of *Delos*, in the *Ægean*.] (*Fine Arts*.) A kind of sculptured vase. — A beautiful bronze and silver.

De'lia Lake, in *New York*, in the W. part of Essex co. It is one of the sources of the Hudson River. Length about 5 m.

Delib'erate, *v. a.* [Lat. *delibero*, *deliberatus* — *de*, and *libro*, to weigh, to cause to swing. See *LIBRATE*.] To weigh well in one's mind; to consider the reasons for and against a measure; to think; to consider; to reflect; to examine with a view to make a choice or selection; to consider which is best or preferable; to judge; to consult; to debate; to hesitate; to demur; to pause; to ponder.

—*v. n.* To balance well in the mind; to weigh carefully; to consider maturely.

“The woman that deliberates is lost.” — Addison.

—*a.* Weighing carefully facts and arguments with a view to a choice or decision; carefully considering the probable consequences of a step; slowly determining; cautious; discreet; cool; circumspect; — used in relation to persons; as, a *deliberate* scoundrel, a *deliberate* adviser. — Slow; tedious; gradual; not hasty or impulsive; as, *deliberate* speech. — Formed with deliberation; well advised, weighed, or considered; — used in respect of things; as, a *deliberate* step, a *deliberate* opinion.

Delib'erately, *adv.* In a deliberate manner; slowly; cautiously; with circumspection.

“He plods on *deliberately*.” — Dryden.

Delib'erateness, *n.* Quality of being deliberate; calm consideration; judicial weighing over; circumspection; due attention to the arguments for and against a measure; caution; wariness.

Delibera'tion, *n.* [Fr.; Lat. *deliberatio*.] Act of deliberating; thoughtful consideration in order to a choice; thoughtfulness; reflection; circumspection; caution; wariness; coolness; prudence.

“Deep on his front engraven, *deliberation* sat.” — Milton.

—Mutual discussion and examination of the reasons for and against a measure; as, the *deliberations* of a council of war.

Delib'erative, *a.* [Fr. *délibératif*.] Pertaining to deliberation; acting or proceeding by deliberation; having a right or power to deliberate or discuss; apt or disposed to consider; as, a *deliberative* body.

—*n.* A discourse in which a question is discussed and deliberated. — A kind of rhetorical proof, tending to convince the minds of others.

Delib'eratively, *adv.* By or with deliberation.

Delib'erator, *n.* He who deliberates.

Delicacy, *n.* [Fr. *délicatesse*, from L. Lat. *delicatus*, delightful, from *delicia*, allurements, from Lat. *delicio* — *de*, and *lacio*, to draw gently, to allure, to entice, allied to Heb. *lakach*, to take, whence *lakach*, taking arts, fair speech, by which the mind of any one is captivated.] That which allures, captivates, attracts, or entices; something pleasing by its softness, fineness, or flavor; that which delights the senses, particularly the taste; a dainty; a tit-bit; as, to covet a *delicacy*.

“On hospitable thoughts intent,

What choice to choose for *delicacy* best.” — Milton.

—Fineness of texture or substance; smoothness; softness; elegance; tenderness or weakness of constitution; tenuity; slenderness; nicety; as, *delicacy* of the skin, *delicacy* of a flower, *delicacy* of shape, &c.

“A man of goodly presence, in whom strong making took not away *delicacy*.” — Sidney.

—Elegance or softness of manners; civility or politeness; gentle treatment; tenderness; scrupulousness; fastidiousness; susceptibility of feeling; effeminacy; as, treated with *delicacy*, having *delicacy* of manner, a person of extreme *delicacy*, &c.

“The *delicacy* of their own education.” — Temple.

—A nice perception of beauty or deformity, or the faculty of such nice perception; scrupulous susceptibility; fastidious niceness; minute accuracy; as, *delicacy* of coloring — Daintiness; self-indulgence; fondness of pleasure or luxury. — That which is choice, delicate, or rare, or which is highly pleasing to the mind or imagination; a luxury; a gratification.

“These *delicacies* . . . of taste, sight, smell, herbs, fruits, and flow'rs.” — Milton.

Delic'ate, *a.* [Fr. *délicat*; Lat. *delicatus*. See *DELICACY*.] Tender; effeminate; soft; feeble; frail; not able to endure hardship or roughness; as, a *delicate* child, *delicate* health, a *delicate* plant. — Alluring; delightful; pleasant; luxurious.

“Haarlem is a very *delicate* town.” — Evelyn.

—Nice; dainty; pleasing to the taste or senses; choice; fine; excellent; refined; elegant; of agreeable flavor; as, a *delicate* perfume, a *delicate* fruit. — Nicely interwoven; soft and smooth to the touch; of fine texture; as, *delicate* lace. — Easily hurt or injured; slender; minute; critical; requiring gentle treatment or great care in handling; as, a *delicate* subject, a *delicate* inquiry, *delicate* porcelain, &c. — Clear, pure, or fair; soft; smooth; used in reference to the skin; as, a *delicate* complexion.

—Light in hue; soft in coloring; as, a *delicate* tint. — Accurate; nice in form and punctilio; of polite and refined manners; gentle; considerate; careful not to offend or disgust; as, a *delicate* attention, *delicate* language. — Possessing voluptuous or fastidious tastes; inclined to pleasure and luxury; refined; nice and dainty in habits. — Possessing nice, critical acumen, sensitively perceptive; of refined discrimination; unsceptibly exact in judgment; as, a *delicate* touch in painting, a *delicate* ear for music.

—*n.* A person of effeminate habits, or of luxurious tastes. (*R.*)

—*pl.* Dainties; choice articles of food; delicacies.

Delic'ately, *adv.* In a delicate manner; finely; fastidiously; tenderly; effeminately; luxuriously; as, a person *delicately* reared.

Delic'ateness, *n.* Delicacy; state or quality of being fine, effeminate, or delicate.

Delicious, (*dē-lish'us*), *a.* [Fr. *délicieux*, from L. Lat. *deliciosus*, from Lat. *delicia*. See *DELICACY*.] Highly pleasing to the taste; most sweet or grateful to the senses; affording exquisite pleasure; most pleasing to the mind; charming; delightful; exquisite; gratifying.

“O, Christ! it is a goodly sight to see

What Heav'n hath done for this *delicious* land.” — Byron.

Delic'iously, *adv.* In a delightful or delicious manner; exquisitely; luxuriously; as, she sang *deliciously*.

Delic'iousness, *n.* Quality of being delicious, or very grateful to the taste or mind; delight; exquisite pleasure.

Delict, *n.* [Lat. *delictum*.] (*Civil Law*.) The act by which a person, by fraud or malignity, causes some damage or hurt to some other. — A *quasi delict* is the act of a person who, without malignity, but by an inexcusable imprudence, causes an injury to another.

Deliga'tion, *n.* [Lat. *deligatio*.] (*Surg.*) A binding up, with a bandage, &c.

Delight, *n.* [See the verb.] That which yields great pleasure, or fills with highly pleasing emotions.

“She's my *delight*, all mankind's wonder.” — Earl of Rochester.

—A high degree of pleasure or satisfaction of mind; rapture; charm; joy; gratification; extreme happiness.

“An over-payment of *delight*.” — Southey.

—*v. a.* To affect with lively pleasure; to please or gratify highly; to give or afford great joy or satisfaction to; as, beauty *delights* the eye.

—*v. n.* To have or take great pleasure; to be greatly pleased or rejoiced; — preceding *in*.

Delight, in *Pennsylvania*, a former P. O. of Greene co.

Delight'ed, *p. a.* Full of delight or pleasure.

Delight'edly, *adv.* With delight; pleasantly.

Delight'er, *n.* He who, or that which, yields or receives delight.

Delight'ful, *a.* Affording delight; highly pleasing; affording great pleasure and satisfaction; gratifying; charming; joyful; beautiful; grateful; as, *delightful* weather.

Delight'fully, *adv.* In a delightful or pleasurable manner.

Delight'fulness, *n.* Quality of being delightful, or of affording great pleasure; delight; satisfaction.

Delight'ingly, *adv.* In a rejoicing or delighting manner.

Delight'less, *a.* Yielding no delight; without pleasure.

Delight'some, *a.* Delightful; extremely pleasing.

Delight'somely, *adv.* In a delightful manner; pleasantly; agreeably.

Delight'someness, *n.* Pleasantness; delightfulness.

Delilah, [Heb., the languishing,] a Philistine woman whom Samson loved. By her flattering blandishment she obtained from him the secret that his God-given strength lay in his locks; and having cut these off while he lay asleep, she then treacherously betrayed the strengthless warrior into the hands of his enemies.

Delille, JACQUES, (*da-lēl'*), a French didactic poet, of great repute at the end of the last century, and under the empire; member of the Academy. B. 1738; became blind, and d. 1813.

Deline'ament, *n.* Delineation; sketch; representation. (*R.*)

Delin'cate, *v. a.* [Lat. *delineo*, *delineatus* — *de*, and *linea*, a line. See *LINE*.] To draw a line or lines, so as to exhibit the form of anything; to mark out with lines; to make a draught of; to paint; to sketch; to portray; as, to *delineate* the human figure in a picture. — To describe in words; to convey an oral or verbal representation; to exhibit by description; to portray to the mind or intelligence.

“To *delineate* the glories of God's heavenly kingdom.” — Abp. Wake.

—*a.* Delineated; represented; portrayed.

Delinea'tion, *n.* [Fr.; Lat. *delineatio*.] Act of delineating; outline; sketch; design; drawing. — Representation in words; description.

Delin'eator, *n.* One who delineates or describes.

Delin'eatory, *a.* Delineating; describing; presenting an outline of.

Delin'quency, *n.* [L. Lat. *delinquentia*, from La *delinquo*, *delinquens* — *de*, and *linquo*, to leave, allied to Gr. *limpāō*, late form of *leipō*, to leave.] A leaving or neglecting of duty; a failure, omission, or dereliction of duty; a fault; a shortcoming; a misdeed, and, positively, an offence; a crime.

Delin'quent, *n.* [Fr., from Lat. *delinquens*.] One who leaves, neglects, or fails to perform his duty; particularly, a public officer who neglects or abuses his duty, one who commits a fault or crime; a misdoer; an offender, criminal, or transgressor.

—*a.* Leaving, neglecting, or failing in, duty.

Delin'quently, *adv.* In a manner involving neglect of duty.

Deliquesce, (*del-i-kwes'*), *v. n.* [Lat. *deliquesco* — *de*, and *liquescere*, inceptive from *liquo*, to be fluid or liquid. See *LIQUID*.] To melt down and become liquid by attracting and absorbing moisture from the air.

Deliques'cence, *n.* [Fr.] (*Chem.*) The property which certain substances have of absorbing moisture from the air, and becoming damp, and even running into liquid. Caustic potash, and the chlorides of calcium and magnesium, are examples of substances which undergo this change.

Deliques'cent, *a.* (*Chem.*) Liable to become moist or wet.

(*Bot.*) Applied to a plant which gives off so many branches that the stem is lost in them.

Deliquiate, (*dē-lik'we-āt*), *v. n.* [From Lat. *deliquesco*.] To deliquesce.

Deliquia'tion, *n.* Act or process of deliquiating.

Deliquium, (*dē-lik'we-um*), *n.* [Lat.] (*Chem.*) A melting or dissolution in the air, or in a moist place; a liquid state.

(*Med.*) A fainting; a loss of consciousness.

Delira'tion, *n.* [Lat. *deliratio*.] State of delirium; aberration of mind. (*R.*)

Delir'ious, *a.* [Lat. *delirus*, from *deliro* — *de*, and *lir* a ridge or furrow.] Roving in mind; disordered in intellect; crazy; light-headed; raving; frenzied; temporarily insane; as, a *delirious* attack.

Deliriously, *adv.* In a delirious manner.

Deliriousness, *n.* State or condition of being delirious; delirium.

Delirium, *n.* [Lat., from *deliro*, I rave, or am furious; *delire*.] Any burst of tumultuous excitement, passion, or enthusiasm; as, the *delirium* of a national panic, *delirium* of pleasure, &c.

(*Med.*) A perturbed and disordered state of the brain, proceeding either from an excess of blood, or a great loss of vital power or augmentation of nervous irritability. It, though not a symptom, is frequently a concomitant result of fevers, inflammations of the substance or membrane of the brain, of reaction after long exposure to cold or abstinence from food, and is often a consequence of both mineral and vegetable poisons. *D.* is easily distinguished from mania, or madness, by the sense of all congruity of thought, the impossibility of fixing the patient's attention to one subject for even the shortest space of time, and by the total absence of that cunning so characteristic of madness; or the restless mutterings, incoherent and disjointed talk, in which private matters, family secrets, and long-continued events are all mingled in a confused babble. *D.* may be either violent and frantic (*D. ferox*), as in acute inflammation of the membranes of the brain; or low and muttering (*typhomania*), as in low fever. It supervenes during any part of its course. It occurs in the state of some intermittents, but rarely makes its appearance in typhoid or continued fever until the disease has reached its height. It sometimes occurs suddenly, without any previous indication; but more frequently it is preceded by headache, throbbing of the temples, a flushed and oppressed countenance, &c. The patient is at first delirious during the short and imperfect periods of sleep, or immediately after he is roused, coming, when fully awakened, more clear, and comparatively collected. By degrees this lucid interval becomes less perceptible; the individual becomes more and more incapable of reflection and mental exertion, and gradually loses the power of recognizing the persons and objects which surround him. When *D.* is about to terminate fatally, sensibility becomes more and more impaired, until all conscious feeling seems to be lost. Articulate moaning succeeds to delirious incoherence; the patient loses in a great measure sight and hearing; the mouth and tongue are dry, yet the patient no longer complains of thirst; the pupils become scarcely perceptible; black spots, like flies, appear before the patient's eyes, and the evacuations escape without consciousness. *D.* is rather a symptom of a disease than a disease itself, its treatment necessarily forms a part of that of the disease on which it supervenes.

Delirium Tremens, *DELIRIUM EBRIOSITATIS*, MANIA POTU, *n.* (*Med.*) A disease of the brain, usually caused by an abuse of spirituous liquors, but sometimes also by mental anxiety and loss of sleep; or it may result from bodily injuries or accidents, loss of blood, &c. *D.* sometimes makes its appearance in consequence of a single debauch; but more frequently it is the result of protracted or long-continued intemperance. It usually supervenes on a fit of intoxication; but it not unfrequently occurs, also, when the habitual drunkard omits his accustomed draught. The approach of an attack is most invariably preceded by the patient being remarkably irritable, with fretfulness of mind and mobility of body. He becomes very nervous and uneasy; is startled by sudden noise, the opening of a door or the entrance of a visitor; is restless; the hands and tongue tremulous; he complains of inability to sleep, and he does for a moment, he is awakened by frightful dreams. Soon delirium manifests itself: if questioned, the patient often answers rightly enough; but if left to himself, he begins to talk or mutter; he is surrounded by frightful or loathsome animals; is pursued by some one who has a design upon his life; he has terrible and ghastly visions. Though most commonly of a frightful and terrifying character, the *D.* is not always so; occasionally the appearances are droll and ludicrous, and the patient seems amused by them; at other times it turns to some matter of business, as settling of accounts or raising of money, and the patient is in a perpetual bustle, his hands are constantly full of business. The predominant emotion with the delirious patient is fear, and his efforts to escape from an imaginary enemy he may be guilty of a murderous assault, or, as is more frequently the case, may take his own life; and hence he requires to be very carefully watched. The strong features of the complaint are sleeplessness, a busy, but not angry, violent, *D.*; constant chattering, a trembling of the hands, and an eager and fidgety employment of them. The tongue is moist and creamy; the pulse, though frequently soft; the skin is perspiring, and most commonly the patient is drenched in sweat. The *D.* continues until the patient sinks into a sleep, from which he awakes comparatively rational, or dies from exhaustion. In some cases death is often sudden, the patient rising for a trivial purpose, and falling in a faint from which he never recovers; or at length, after passing many days without sleep, he sinks into a state of coma, which terminates in death. This disease, however, is rarely fatal unless where the strength of the patient has been seriously impaired by long-continued excesses. The great remedy is sleep, and the best means of inducing this is by opium, which is to be given in large doses, at frequently repeated, until the desired effect follows. Sometimes it is necessary, in order to procure sleep, if the patient is in a very exhausted state, or if the disease has been brought on by the cessation of an accustomed stimulus, to allow the patient a certain quantity of his ordinary beverage; but this should not be continued longer than he can do without it. Chloroform has also

been recommended as a means of procuring sleep when opium fails. This disease is to be carefully distinguished from inflammation of the brain, with which it has many symptoms in common; for bleeding, which is resorted to in the latter disease, would be of the utmost danger in this.

Delisle, (*de-lil'*) JOSEPH NICOLAS, an eminent French mathematician and astronomer, b. 1688. He had for his pupil the celebrated Lalande. D. 1768.

Delisle, in Ohio, a post-village of Darke co., abt. 28 m. N.W. of Dayton.

Delitescence, **Delitescencey**, *n.* [From Lat. *delitescens*.] State of being hidden or concealed.

(*Surg.*) A tumor is said to terminate in *D.* when it subsides very suddenly and unexpectedly.

Delitescent, *a.* Lying hidden, secluded, or concealed.

Delium, (*Anc. Hist.*) The Boeotians defeated the Athenians near the temple of Apollo, at Delium, B. C. 424. Socrates, and his pupil Alcibiades, took part in this battle. Here also, the troops of Antiochus (the Great) of Syria defeated the Romans, B. C. 192.

Deliver, *v. a.* [Fr. *délivrer*; Lat. *de*, and *libero*, to free. See LIBERATE.] To liberate, extricate, rescue, save, release, or free from, as danger, bondage, restraint, &c.; as, to *deliver* from captivity. — To disburden a woman of child; as, to *deliver* of twins. — To give forth in action; to exert; to send; as, to *deliver* a broadside. — To give forth in words; to utter; to pronounce; to communicate; to relate; to impart; as, to *deliver* a message, to *deliver* a lecture. — To give, offer, or present; to transfer; to cede; to yield up; to reign; to surrender; to put into the hands of another, or others; — generally preceding *up*, *over*, *to*, or *into*; as, to *deliver up* a fortress, to *deliver* a petition, to *deliver* goods.

"The constables have *delivered* her over." — *Shaks.*

Deliverable, *a.* That may be delivered; susceptible of delivery.

Deliverance, *n.* [Fr. *délivrance*.] Act of delivering, freeing, rescuing, disentangling, extricating, liberating, or manumitting; as, a *deliverance* from peril, *deliverance* of a child, *deliverance* of a speech. — State of being delivered; release, as from captivity, slavery, oppression, difficulty, or any danger, or restraint; rescue; liberation; redemption; manumission; freedom; as, a speedy *deliverance*. — An utterance or open expression of judgment, or opinion.

"One death, or one *deliverance*, we will share." — *Dryden.*

Deliverer, *n.* One who delivers, redeems, or preserves. — A relator; a narrator; one who communicates by speech, or writing.

Delivery, *n.* Act of delivering; release; rescue; surrender; a giving up; a giving or passing from one to another, or others; as, the *delivery* of a prisoner, *delivery* of letters, *delivery* of a ship, &c. — Childbirth; parturition. (See LABOR.) — Deliverance; freedom; state of being preserved, or delivered.

(*Rhet.*) The fifth and last of the several parts that go to make up the business and art of the orator; the others being invention, disposition, embellishment, and memory; — *invention*, in order to find out what to say; *disposition*, in order to arrange in a proper manner; *embellishment*, to deck it in proper language; *memory*, to retain it; and *delivery*, to give it forth with dignity and grace. The ancient masters of oratory looked upon *D.* as occupying a most important place in the art. It is said of Demosthenes that when asked what was the first point in oratory, he answered *D.*; and the second, *D.*; and the third, still *D.* "Delivery," says Cicero, "has the sole and supreme power in oratory. Without it, a speaker of the highest mental capacity can be held in no esteem; while one of moderate abilities, with this qualification, may surpass even those of the highest talent."

Dell, *n.* [From *dale*; Ger. *thal*.] A dale; a hollow place; a small, narrow valley between high hills.

"In *dells* and *dales*, concealed from human sight." — *Tickell.*

Dell, in Missouri, a P. O. of Benton co.

Delloona, or **DELONA**, in Wisconsin, a former post-office of Sauk county.

Dell Prairie, in Wisconsin, a village and township of Adams co., on the Wisconsin River, abt. 20 m. W.N.W. of Portage City.

Dellville, in Pennsylvania, a P. O. of Perry co.

Delmar, in Delaware, a post-office of Sussex co., about 97 m. S. of Wilmington.

Delmar, in Pennsylvania, a township of Tioga county.

Del Norte, in California, a N.W. co., bordering on Oregon; *area*, about 1,550 sq. m. *Rivers*, Klamath, and Smith. The Pacific Ocean washes its W. border. *Surface*, mountainous. *Soil*, good. *Min.* Gold, and copper. (*Cap.* Crescent City.)

Delolme, JEAN LOUIS, (*de-lôm'*) a political writer, b. at Geneva, 1740. He practised law for several years, in Switzerland, and went to England, where he fixed his permanent abode. Of his various political works and essays, his celebrity is mainly based upon the *Constitution de l'Angleterre*, a work which had a very large sale, and is often quoted as the best authority on the English Constitution. D. 1806.

Delorme, MARION, a Frenchwoman, b. abt. 1612, near Châlons-sur-Marne, and whose name was so prominent in the history of the 17th century, that it is impossible to avoid speaking of her in an historical work. She came at an early period of her life to Paris, where her great beauty would easily have secured for her a good match, had she not been inclined to a life of licentious intrigue. Almost all the distinguished men of the age were her "lovers." During the first disturbances of the *Frondeurs*, her house was the rallying-point of the chiefs of that party, and in consequence, Mazariu was about to

imprison her, when she suddenly died at the age of 38. Victor Hugo has made of her the subject of one of his historical dramas.

Delorme, PHILIBERT, a French architect, b. at Lyons about 1518. He studied three years at Rome, and after acquiring some reputation by works in his native city, was called to Paris through the influence of Cardinal Du Bellay, and made almoner to the king. Various works were intrusted to him, and in 1564 he was appointed, by Catherine de Medicis, one of the architects of the Tuileries. He was assisted in some of his undertakings by his brother, Jean Delorme. He left several treatises on architecture. D. 1577.

Delos, CYNTHUS ORTYGIA, now called SAILLES, SAYLLI, DELO, or DELI, is the smallest of the Cyclades, at the N. of Naxos, and was famous throughout antiquity as having been the birthplace of Apollo and Diana, and further as being consecrated to the worship of the first-named deity. According to the legend it was a floating island, but was rendered immovable in order that Latona might give birth in security to these two divinities. It was peopled by the Ionians; and, in Homer's time, was the central seat of their political and religious union. Like all ancient temples of celebrity, that of Apollo at Delos was one of the great emporia for trade; and, after the fall of Corinth, the Delians, by wisely declaring their port free, secured that vast commerce between the east and west of which that noble city had been the channel. Its commercial importance was further ensured by the peculiar sanctity which attached to the island. Even hostile fleets rode quietly at anchor in its sacred harbor. So holy was it esteemed, that no dogs were suffered upon it; and that all dying persons, and women near the time of their delivery, were removed to the neighboring island of Myconos, for fear of pollution by either births or deaths. The temple of Apollo, according to Plutarch, was one of the stateliest buildings in the universe; its altar is said to have been a perfect cube, and the doubling it was a noted mathematical problem with the ancients, which went under the name of the *problema Deliacum*, "the Delian problem." The decline of Delos dates from the Mithridatic War, when it was laid waste by one of the generals of Mithridates. It is now a mere heap of ruins.

Delphi, (*del'fi*), or DELPHOS, (now CASTRI,) a small town of ancient Phocis, in a valley to the W. of Mount Parnassus, was the seat of the most famous of all the oracles of Apollo. At this place certain exhalations, issuing from a cavern, threw all who approached it into convulsions. The responses were delivered by a priestess, called *Pythia*, who sat upon a tripod placed over the mouth of this cavern, and after having inhaled the vapor, gave utterance to the wished-for predictions, either in verse or prose, which were then interpreted by the priests. From its favorable position this oracle came to be consulted, not only by the Greeks, but even by the neighboring nations; and thus the temple was

Fig. 791. — VIEW OF DELPHI, AND MOUNT PARNASSUS.

enriched by an incredible number of valuable presents and splendid monuments. Hence, this sacred repository became frequently an object of plunder. Still the oracle continued to utter its responses long after the seat of empire had been transferred from Greece to Rome; and it was only when Constantine the Great removed the sacred tripods to adorn the hippodrome of his new city, that the responses ceased to be delivered.

Delphi, in Indiana, a city, the cap. of Carroll co., about 17 m. N. E. of Lafayette. Pop. (1897) about 2,400.

Delphi, in Missouri, a village in Gasconade co., abt. 80 m. W.N.W. of St. Louis.

Delphi, in New York, a post-village of Onondaga co., abt. 210 m. W. of Albany.

Delphi, in Ohio, a village of Huron co., abt. 17 m. S. of Norwalk.

Delphidice, in Tennessee, a village of Marion co., on the Sequatchie River, 114 m. S.E. of Nashville.

Delphian, **Delphic**, *a.* [From *Delphi*, a city of ancient Greece.] (*Anc. Hist.*) Relating, or pertaining, to Delphi, or to its famous oracle.

"The *Delphian* vales." — *Halleck.*

Delphinia, *n.* (*Chem.*) A vegetable alkaline base obtained from the seeds of the *Delphinium Staphisagria*, or staves-acre.

Delphin'ic Acid, *n.* (*Chem.*) A fat acid obtained by saponification from the oil of the *Delphinus*, or porpoise; it has also been termed *phocenic acid*. It exists in the vegetable kingdom in the berries of *Viburnum Opulus*.

Delphin'idæ, *n. pl.* (*Zoöl.*) The Dolphin family, ord. *Cetacea*, characterized by the moderate size of the head, and usually by the presence of teeth in both jaws. It includes, with the Dolphin and Porpoise, many animals which are ordinarily called Whales. They are, in general, voracious feeders; and their flesh is for the most part rank, oily, and unwholesome. The Dolphins, *Delphinus*, are a numerous genus, 22 species having been described, inhabiting both the North and South seas. The common dolphin, *Delphinus*, *Delphis*, resembles very much the porpoise, and has been often confounded with it. It inhabits the Mediterranean and Indian seas, swims swiftly, and preys upon fish. By ancient writers, the dolphin was celebrated for its supposed affection for the human race, and for the harmonious sounds of music. The fables connected with it are the poetic fictions of a classic age, and are totally opposed to the opinions of the moderns, who know it to be a predaceous animal, and consider its appearance at sea as the prelude of an approaching storm. The Bottle-heads, genus *Hyperopodon*, are natives of the Northern seas, and have no teeth in the upper jaw. The Porpoise, or porpesse, *Phocæna communis* (derived from the Italian name for this animal, *porco pesce*, or hog-fish), has numerous small sharp teeth in both jaws, and a dorsal fin in the middle of the body. It is the most common of all the cetaceans, and is found in almost all the European seas, and on the American coasts. It is about six feet in length, and is of a bluish-black color on the back, and white underneath. The whole body is covered with a layer of fat nearly an inch in thickness, while the flesh beneath is red, and resembles that of the hog. Porpoises swim in shoals (or, as they are called by sailors, *schools*), and drive the mackerel, herring, and salmon before them, as a pack of dogs do hares. They are well known to all who have been at sea, from their rolling or apparently tumbling motion in the water. They root about the

Fig. 792. — WHITE GRAMPUS, OR WHITE WHALE.

shores with their snouts, in quest of food, like hogs. Their flesh was formerly considered a great delicacy, and receipts for dressing it are to be found in ancient cookery books. The oil procured from the blubber is of the purest kind; and the skin, when carefully tanned and dressed, is used for wearing apparel, and for coverings for carriages. The Greenlanders esteem the flesh of the porpoise as a great dainty, and quaffs the oil as the most delicious of draughts. A white species occurs in China. The *Grampus*, of which there are several species, is a native of the North Sea, and is often found on the coasts of Great Britain and France. The large grampus, *Orca gladiator*, is of such an extremely fierce and predaceous nature, that it not only destroys the porpoise and dolphin, but is reported to attack even whales. It measures from 20 to 25 feet in length, and is well known from its frequent blowing. — See *BELUGA*, *MONODON*, &c.

Del'phinite, *n.* (*Min.*) A variety of *EPIDOTE*, *q. v.*

Delphin'ium, *n.* (*Bot.*) The Larkspurs, a genus of plants, order *Ranunculaceæ*, which yields many favorite garden-plants. They are annual herbs, with leaves much divided; flowers blue, red, or purple, never yellow. *D. consolida*, the Branching Larkspur, sparingly naturalized in our fields and roadsides, has numerous varieties of double and semi-double flowers, the upper sepal of which, as in the rest of the genus, is spurred. *D. exaltatum*, the American Larkspur, native of the Middle States, has a stem 3-4 feet high, and flowers of a brilliant purplish-blue.

Fig. 793. — BRANCHING LARKSPUR. (*D. consolida*.)

Delphi'nus, *n.* [*Lat.* the Dolphin.] (*Astron.*) A northern constellation, situated 13° or 14° N.E. of the Eagle. It consists of 18 stars, including 4 of the 3d magnitude, but none larger. Its mean declination is about 15° N. It comes to the meridian on the 16th of September.

(*Zoöl.*) See *DELPHINIDÆ*.

Del'phos, in *Kansas*, a post-village of Ottawa co.

Delphos, in *Ohio*, a city and R. R. center of Allen co., extending partly into Van Wert co., 14 m. N. W. of

Lima. Pop. (1897) about 5,250.

Delp's burgh, in *Pennsylvania*, a former post-office of Northampton county.

Del Rey, in *Illinois*, a post-office of Iroquois co.

Del Segno. [*It.* from the sign.] (*Mus.*) Same as *DAL SEGNO*, *q. v.*

Delta, *n.* *pl.* *DELTA*. The Greek letter Δ. — (*Geog.*) A triangular alluvial tract included between the several mouths of the river Nile, from its resemblance to the form of the Greek Δ, delta. The term is now applied to similar alluvial formations at the mouths of large rivers, subject to inundations. Thus, we speak of the *D.* of the Mississippi, the *D.* of the Danube, of the Niger, of the Ganges, &c.

Delta, in *Alabama*, a post-office of Clay county.

Delta, in *Kansas*, a post-office of Nevada county.

Delta, in *Colorado*, a post-village, cap. of Delta county.

Delta, in *Michigan*, a co. forming the S. extremity of the upper peninsula, and bordering on Lake Michigan and Green Bay. Area, about 718 sq. m. Rivers, Menominee, Ford, and Whitefish. Surface, broken; soil, good, and mostly covered with timber. Min. Limestone and sandstone. Cap. Escanaba. Pop. (1894) 19,259.

— A post-township of Eaton county.

Delta, in *Mississippi*, a village, former cap. of Coahoma co., on the Mississippi river, at the Yazoo Pass, about 60 m. below Memphis, Tenn.

Delta, in *New York*, a post-village of Lee township, Oneida co., 20 m. N.W. of Utica.

Delta, in *Ohio*, a post-village of Fulton co., about 25 m. W. by S. of Toledo.

Deltification, *n.* [*From delta*, and *Lat. facere*.] The formation of a delta or deltas.

Delta'ic, *a.* Resembling a delta; in the form of a delta; relating to a delta.

Delta-moth, *n.* (*Zoöl.*) See *PYRALIDÆ*.

Del'toid, *a.* [*Gr. delta*, the letter Δ, and *eidos*, form.] Resembling the Greek Δ (*delta*); triangular; as, a *del'toid* muscle, *del'toid* leaf.

— (*Anat.*) A short, triangular-looking muscle, situated on the front of the arm, at the shoulder.

Del'ton, in *Wisconsin*, a post-village of New Buffalo township, Sauk co., about 50 m. N.N.W. of Madison.

Deluc, JEAN ANDRÉ, (*de-look'*), a Swiss natural philosopher, b. in Geneva, 1727. He made a special study of physics and geology, endeavoring to establish the consistency of the Book of Genesis with the vast modern discoveries. He spent a portion of his life in England, and was appointed reader to the queen. His principal works are, *Theory of Barometers and Thermometers*, *New Notions on Meteorology*, *Traité élémentaire de Géologie*, *Recherches sur les Modifications de l'Atmosphère*. Some of his works were written in French, others in English. D. in 1817.

Delud'able, *a.* That may be deluded; liable to suffer imposition; as, "deludable cogitation." — *Sir T. Browne*.

Delude', *v. a.* [*Lat. deludo* — *de*, and *ludo*, to play, to mock; Sansk. *lud*, to roll one's self about; Heb. *luts*, to deride, to mock by imitation.] To impose on; to deceive; to beguile; to lead astray; to cheat; to circumvent. — To disappoint; to thwart; to frustrate.

Deluder, *n.* One who deludes or disappoints; a trickster; a beguiler; an impostor.

Deluge, *n.* [*Fr.* from *Lat. diluvium*, from *diluo* — *di*, and *lueo*, to wash.] A washing away of the earth; any great overflowing of water; a flood; an inundation; a swell of water over the natural banks or shore of the ocean.

— A sudden, sweeping, or overwhelming calamity; as, a *deluge* of trouble.

(*Script. and Geol.*) The great overflow of water narrated in Scripture, and commonly known as the Flood. This great event is ordinarily calculated to have occurred in the 1566th year after the Creation, or 2293 years before Christ. We are told in Gen. vii. that all the fountains of the great deep were broken up, and the windows of heaven were opened, and God caused it to rain 40 days and 40 nights upon the earth; that during that time the waters increased and prevailed exceedingly upon the earth, and all the high hills and mountains were covered 15 cubits and upwards; that all flesh died that moved upon the earth, and every man save Noah and those that were with him in the ark; that the waters prevailed upon the earth 150 days, and at the end of that time they were abated, God having made a wind to pass over the earth and assuage the waters; the fountains also of the deep and the windows of heaven being stopped, and the rain from heaven restrained. Noah entered the ark on the 17th day of the 2d month; on the 17th day of the 7th month the ark rested upon the mountains of Ararat; and on the 1st day of the 1st month of the year following, the waters were dried up from the earth, and about 2 months later the earth itself dried. Such is the concise account of this great catastrophe given in Sacred Writ, a subject which has given rise to much discussion, and furnished materials for the cavillers at religion. Without going into all the points connected with this subject, we may briefly allude to a few of them. We find in the legends and traditions of most of the earlier races upon the earth (the Chinese, Hindoos, Persians, Greeks, &c.), accounts of a similar catastrophe, and though sometimes they are in an allegorical form, yet they so closely resemble the account given by Moses, that they have generally been regarded as referring to the same event. Even the Mexicans, Peruvians, and other ruder nations of the new world, are represented as having their traditions of the great deluge. Numerous ingenious and fanciful theories were formerly given forth in order to explain the phenomena of the *D.*; and early geologists believed that they found in the fossil remains imbedded in the earth

unquestionable evidence of this universal destruction, but many of these were afterwards found to belong to a period vastly anterior to any historical epoch. So far as the testimony of geology goes, we have no evidence that bears directly upon this subject. The majority of the ablest scientific men and theologians are now of opinion that the Flood was only partial and not universal. It was sent as a judgment of God against impious men, and there was no reason to believe that the human race had then spread themselves over the entire surface of the globe. The word *all*, in accordance with Eastern phraseology, is not always in Scripture to be taken in a strictly literal sense; and hence, in the Mosaic account, there is nothing that can be regarded as contrary to the view of the *D.* being only partial. The object to be effected was the destruction of ungodly men, and if there be no reason to conclude that they were at that early period extensively scattered abroad, we think there is abundant evidence to show that God is always very economical of his means, and never has recourse to great measures in order to effect what may be brought about by small. Partial deluges not only may, but must have occurred; for we have unmistakable proof that many large natural reservoirs have been suddenly tapped, and their contents let loose upon low lands of vast extent, and it is not impossible that one of these events may have been recent enough to justify the tradition that man was then on the earth, and narrowly escaped destruction. — The marks of a universal *D.*, had such an event occurred, must have been evident in the valleys, caverns, and other places into which water would enter and floating objects would be drifted, but from which an exit would be difficult. Such localities contain various accumulations, but the mode in which the deposits occur proves clearly that the action of the water that moved them was not diluvial. Many successive events must have combined before even the latest changes of the earth's surface were brought about, and these changes all seem to have been gradual, and to have involved slow elevation and depression of very large areas.

Deluge, *v. a.* To cover or overflow with water; to inundate; to drown; to sink completely under water.

"Implacable, till delug'd by thy foam." — *Philips*.

— To overwhelm with any moving, spreading body; the country is *deluged* with greenbacks. — To overpour, or cause to sink under universal calamity.

"Corruption, like a general flood, shall deluge all." — *Pope*.

Delusion, (*de-lu'zhon*), *n.* [*Fr.*; *Lat. delusio*, from *ludo*.] Act of deluding or speciously deceiving; deception; mental illusion or misleading. — State or condition of being deluded, deceived, or misled. — A false belief; chimera; error; illusion; fallacy.

Delu'sive, *a.* Apt to delude or deceive; tending to mislead or wrongly bias the mind; deceptive; beguiling; illusory; as, a *delusive* appearance.

Delu'sively, *adv.* In a delusive or deceptive manner.

Delu'siveness, *n.* Quality of being delusive; tendency to deceive or mislead; illusion.

Delu'sory, *a.* Apt to delude or deceive; deceptive; illusory.

Delve, *v. a.* [*A. S. delfan*; *D. delven*; *O. Sax. biddhan*; *O. Ger. bittelhan*, to bury, probably akin to *Go del*, a valley. See *DALE*.] To dig; to open with a spade or shovel, as the ground.

"The filthy swine with delving snout." — *Philips*.

— To ferret out; to penetrate; to get at the bottom of; silt; to fathom.

"I cannot delve him to the roots." — *Shaks*.

— *v. n.* To dig, or work with a spade or shovel; hence, figuratively, to labor.

"When Adam delved, and Eve span,

Where was then the gentleman?" — *Hume*.

— *n.* A cave; a cavern; an excavated hollow; a dell; a "shady delve." (*Spenser*). — A measure of coals or in the pit. (Used in some parts of England.)

Delver, *n.* A digger; one who uses a spade or shovel.

Demades, (*dem'a-deez*), an Athenian orator, who, from a fishmonger, rose to high positions in the republic. He was captured by Philip of Macedon in the battle of Chæronea, but soon set at liberty. He afterwards exerted his influence in favor of the Macedonian party at Athens, but, betraying Antipater, he was put to death by Cassander, the son of the latter, 318 B. C.

Demagnetization, *n.* Act or process of depriving of magnetic power or influence.

Demagnetize, *v. a.* [*Lat. de*, and *Eng. magneti*.] To deprive of magnetic power; to restore from a torpid or comatose state.

Demagog'ic, **Demagog'ical**, *a.* Pertaining or relating to a demagogue; partaking of a factions nature or property.

Demagog'ism, *n.* State or practice of a demagogue.

Demagogue, (*dem'a-gog*), *n.* [*Fr.*; *Gr. dēmagōgos*, *demos*, the people, and *agō*, to lead.] A ringleader of a faction, or of the rabble; a popular or factions orator; a party leader; a teacher of sedition. — In its original acceptance, this word was considered an honorable designation; but it is now almost invariably used in a sense. The oldest and most satirical of all portraits of the demagogue is traced by Aristophanes in his play, the *Knights*, in the character of Cleon.

Demagogy, *n.* Same as *DEMAGOGISM*, *q. v.*

Demain, *n.* See *DEMESNE*.

Demand, *v. a.* [*Fr. demander*; *Lat. de*, and *manus*, from *manus*, the hand, and *do*, to give.] To claim or as due by right; to exact; to ask preceptorily, or authority; to make requisition of; as, to *demand* money.

— To require; to call for; to seek; to need; to desire.

the affair *demon's* prudence, to *demand* the value of shares. — To question; to ask; to interrogate; — sometimes used with *of*; as, a reply was *demand'd* of him. — *v. n.* To ask; to inquire; to seek; to make a demand. — *n.* An asking for or claim made by virtue of a right, or supposed right; an asking with authority; a challenging as due; exaction; as, payable on *demand*.

"He has the confidence to turn his wishes into *demands*." *Locke*.

—The asking or requiring of a price for goods offered for sale; the calling for in order to purchase; as, to *demand* the price of an article. — Desire to purchase or possess; manifested want or seeking; as, champagne was in great *demand*.

—That which is or may be claimed as due; debt; claim; as, his *demands* were paid.

(*Law*.) A claim; a challenging; a calling upon a person for anything due. It is either in *deed*, written, or verbal, as a *demand* for rent, or an application for payment of a debt; or in *law*, as an entry on land, distraining for rent, bringing an action, &c.

In *demand*, much sought after; in great request; greatly needed. — On *demand*, forthwith; on presentation; as, a bill payable on *demand*.

Demandable, *a.* That may be demanded, required, or asked for; as, *demandable* goods.

Demandant, *n.* (*Law*.) One who demands; the plaintiff in a real action; any plaintiff.

Demand'er, *n.* One who demands, exacts, or requires; a dun; one who seeks to purchase.

Demandress, *n.* (*Law*.) A female who demands. (*R.*)

Dem'ar, a fellow-laborer with St. Paul, at Thessalonica, who afterwards deserted him, either discouraged by the hardships of the work, or allured by the love of the world.

Demara'tus, king of Sparta, who accused Cleomenes before the ephori as the disturber of Greece, for which Cleomenes retorted upon Demaratus the charge of illegitimacy, and having bribed the priests of Delphi, the oracle, when consulted, confirmed the charge. *D.* then resigned the crown, B. C. 491, entered into the Persian service, and was entertained by Darius and Xerxes.

Dem arcate, *v. a.* To mark or fix the limits or boundaries of. (*R.*)

Demarec'ion Point, a cape on the Arctic coast of N. America, in Lat. 63° 45' N., Lon. 141° W. It forms the N. extremity of the boundary between Alaska and British N. America.

Demarch, (*de-m'ark'*) *n.* In modern Greece, a mayor or chief magistrate.

Demarka'tion, **Demarec'ation**, *n.* [*Fr. d'mar-cation*; Sp. *demarcacion*, from *demarcar* — *de*, and *marcar*, to mark; L. Lat. *marc'ia*, a mark, a seal.] Act of marking off, or of ascertaining and setting a limit. — The line or boundary by which one object is separated or marked off from another. The word was first introduced in 1493, when Pope Alexander VI., in order to put an end to the disputes between the crowns of Spain and Portugal, relative to their Indian discoveries and conquests; by virtue of his pontifical authority, drew through the ocean an imaginary line, by which the dominions of both parties were defined; and thus originated the expression *line of demarcation*.

Demate'rialize, *v. a.* To remove material properties from; to deprive of material qualities.

Dem'avend, the highest summit of the Elburz range in Persia, about 40 m. N.E. of Teheran. It is volcanic, and conical in shape. Height, 15,000 feet.

Dem'biel'kie, (*Hist.*) A place near Warsaw, where the Poles defeated the Russians with great slaughter, March 31, 1821.

Dem'bea, an Abyssinian province, comprising all the territory surrounding the great lake of the same name. The lake *D.* is 60 m. in length, with an average breadth of 25 m. Lat. 12° N., Lon. 37° 15' E.

Dem'bea, a river of W. Africa, falling into the W. Atlantic, in Lat. 9° 45' N.

Dembi'nski, HENRYK, a Polish general, b. at Cracow, in 1791. He joined the French campaign against Russia, in 1812, and was made a captain by Napoleon. Subsequently he rendered service during the Polish Revolution of 1830. When the revolution broke out in Hungary, in 1848, he offered his sword to the patriots, and was placed in chief command of the main army, but, owing to Görgey's machinations, he was repeatedly defeated by the Austrians and Russians. He fled to Turkey, and returned afterwards to France. *D.* in Paris, 1864.

deme, *n.* [*Gr. demos*, jurisdiction.] In ancient Greece, a subdivision of land; a township.

demean', *v. a.* [*Fr. d'mener*, to struggle, to exert one's self — *de*, and *mener*; O. Fr. *mainer*, from *main*; Lat. *manus*, the hand.] To conduct; to lead; to carry; — with the reciprocal pronoun.

"Duty requires to *demean* ourselves to God humbly and devoutly." — *South*.

To behave meanly; to debase; to lessen; — preceding the reflexive pronoun.

"Antipholus is mad;

Else he would never so *demean* himself." — *Shaks*.

demean'or, **Demean'our**, *n.* Manner of conducting or behaving one's self; behavior; carriage; deportment; conduct; as, a pleasing *demeanor*.

"His *demeanour* did rather breed disdain." — *Sidney*.

dement'ed, *a.* [*Lat. de*, and *mens, mentis*, mind. See *MIND*.] Deprived of the mind or senses; insane; crazy; infatuated.

dementia, *n.* [*Lat.*] Insanity. (*Med.*) Out of one's mind; weakness; silliness; idiocy; a term used to imply a state of mental imbecility; harmless madness. See *LUNACY*, *MANIA*.

Demem'ber, **Demem'bered**, *a.* (*Her.*) Applied

to signify that the members of an animal are cut from its body, as in *Fig. 794*.

Dem'ency, *n.* [*Lat. dementia*.] Dementia; insanity.

Dement', **Demem'tate**, *v. a.* [*Lat. dementitus*.] To make demented; to deprive of reason; to render mad.

Dement', in Illinois, township of Ogle co., about 70 m. W. of Chicago; total population in 1897, estimated at about 1,250.

Dementa'tion, *n.* Act of depriving of, or state of being without reason.

Demephitiza'tion, *n.* The act of purifying from mephitic or foul air.

Demeph'itize, *v. a.* [*Lat. de*, and *Fr. mephitiser*.] To free from foul or mephitic air.

Demerara, (*dem'a-ra'*) a river of British Guiana, which, after a course of 300 m., falls into the Atlantic, in Lat. 5° 50' N., Lon. 58° W. It gives its name to a prov. of that country. Pop. 25,500. See *GUIANA*.

Dem'er'it, *n.* [*Fr. démerité* — *de*, and *m'rité*, merit. See *ME'rit*.] That which deserves punishment or blame; vice or crime; fault. — An ill-deserving.

—*r. n.* To deserve demerit or blame.

Demersed', *a.* Plunged under water; drowned.

Demers'ion, *n.* The act of plunging under water; a drowning. — The state or condition of being overwhelmed.

Dem'esmerize, *v. a.* [*de*, and *mesmerize*, *q. v.*] To dispossess of mesmeric power.

Demesne, **Demain**, (*dé-mén'*) *n.* [*O. Fr. demaine*; *Fr. domaine*; from L. Lat. *dominium*, *domanium*, from Lat. *dominus*, a lord, a master.] A manor-house, and the land adjacent or near, which a lord keeps in his own hands, or immediate occupation.

"A gentleman of fair *demesnes*." — *Shaks*.

Dem'esnial, (*de-mé-ni-al*) *a.* Relating, or pertaining, to a demesne.

Deme'ter, (*Myth.*) The Greek name of CERES, *q. v.* In the *Theogony* of Hesiod, a daughter of Chronos and Rhea, and the mother of Persephone (PROSERPINE) and Dionysos (BACCHUS). The most prominent myth connected with her name is the rape of Persephone, who is seized by Hades while gathering flowers in the fields of Enna. In the search for her child, Demeter comes to Eleusis in Attica; and the legend thus accounts for the institution of the Eleusinian mysteries.

Deme'trins I. king of Syria, surnamed SOTER, son of Seleucus Philopater, b. 185 B.C. He was sent as hostage to Rome by his father, on whose death Antiochus Epiphanes, and after him his son, Antiochus Eupator, the one the uncle, and the other the cousin of Demetrius, usurped the throne of Syria. He applied to the Roman senate for assistance to recover his rights, but in vain. The Syrians, however, recognized him for their lawful prince, and at last he obtained the throne, B. C. 162. He then declared war against the Jews, and in this war Judas Maccabæus lost his life, bravely fighting for the liberties of his country. A confederacy of the neighboring kings was formed against *D.*, who was slain about B. C. 150.

DEMETRIUS II., called NICATOR (conqueror), was the son of the preceding. Ptolemy Philometer, king of Egypt, placed him on the throne of his father, after expelling the usurper, Alexander Balas, B. C. 146. He married Cleopatra, the wife of the same Alexander, and daughter of Ptolemy. He was subsequently taken prisoner by the king of Parthia, who gave him his daughter in marriage, which so incensed Cleopatra, that she married Antiochus Sidetes, her brother-in-law. Sidetes, however, fell in battle, and *D.* recovered his throne; but he did not retain it long, for he was once more expelled by Alexander Zebina, and was killed by the governor of Tyre, B. C. 126.

Deme'trins, surnamed PHALEREUS, a celebrated Greek orator and statesman, b. 345 B. C. He favored the Macedonia party, and held the office of governor of Athens under Cassander for ten years. The Athenians were so charmed with his eloquence and his excellent administration as to erect 300 statues to his honor. His government terminated in B. C. 307, when Demetrius Poliorcetes restored the democratic form, and the Macedonian representative retired to the court of Ptolemy Lagus, king of Egypt, whose son banished him from his dominions. *D.* is said to have died by the bite of an asp, about 283 B. C. He wrote many works which are lost, and is said to have done much towards founding the library of Alexandria.

Deme'trins, surnamed POLIORCETES, king of Macedonia, was the son of Antigonus. At the age of 23 his father intrusted him with an army against Ptolemy, by whom he was defeated near Gaza. But he soon repaired the loss, and with a fleet of 250 ships sailed to Athens, which he delivered from Demetrius Phaleræus. He next took part in the war against Ptolemy, whose fleet he destroyed. In B. C. 305 Demetrius undertook the siege of Rhodes, and constructed huge machines for the assault, but after persevering for a year was compelled to relinquish the attempt. He afterwards defeated Cassander at Thermopylae; but was called to aid Antigonus against Seleucus and Lysimachus, in Asia. The two armies met at Ipsus, B. C. 299; and after an obstinate battle, the army of Demetrius was defeated, and his father slain, but he himself fled to Ephesus. He, however, mustered a new army, and in B. C. 295 relieved Athens from the tyranny under which it groaned. He then slew Alexander, the son of Cassander, and seated himself on the throne of

Fig. 794.
DEME'BER.

Macedonia. At the end of 7 years, during which he was constantly at war, he was obliged to quit his dominions and retire into Asia, where he was reduced to great distress, upon which he went to the court of Seleucus, his son-in-law; but a difference breaking out between them, war ensued, and Demetrius was defeated. Deserted by his soldiers, he surrendered himself at length to his son-in-law, who exiled him to Pella, in Syria, where he died B. C. 283.

Deme'trins, Czar of Russia, commonly called the *False* DEMETRIUS, was, according to most historians, a native of Jaroslav, and a novice in a monastery, where he was tutored by a monk to personate *D.*, son of the Czar John Vasilowits, who had been murdered by Boris Godunow. Having learnt his tale, he went into Lithuania, embraced the Roman Catholic religion, and married the daughter of the palatine Sandomir. In 1604 *D.* entered Russia at the head of a small army, was joined by a number of Russians and Cossacks, and defeated an army sent against him. On the death of Boris, the people strangled his son, and placed *D.* on the throne; but his partiality to the Poles, and contempt of the Greek religion, occasioned an insurrection, and he was assassinated in 1606, after reigning about 11 months.

Dem'i, *a.* [*Fr.*; from Lat. *di*, for *dis*, and *medius*, middle.] A prefix, used in composition to signify *half*.

Dem'i-bain, **Dem'i-bath**, *n.* A bath permitting the immersion of only the lower half of the body.

Dem'i-bas'tion, *n.* (*Fort.*) A kind of half-bastion which frequently terminates the branches of a crown-work, or horn-work, and which is also occasionally used in other places. See *BASTION*, *CROWN-WORK*, *HORN-WORK*.

Dem'i-brigade', *n.* (*Mil.*) Half of a brigade of troops.

Dem'i-ca'dence, *n.* (*Mus.*) An imperfect cadence; the last or final sound of a verse in a chant when it falls on any other than the key-note.

Dem'i-can'non, *n.* (*Ordnance*.) A kind of ancient cannon, carrying balls from 30 to 36 lbs. weight. *Shaks*.

Dem'i-cul'verin, *n.* (*Ordnance*.) A piece of ordnance formerly used, carrying a ball varying in weight from 9 to 13 lbs.

Dem'i-de'ify, *v. a.* To worship or deify in part.

Dem'i-devil, *n.* Half a devil.

"Demand that *dem-i-devil*,

Why he hath thus ensnared my soul and body?" — *Shaks*.

Dem'i-dis'tance, *n.* (*Fortif.*) The distance between the outward polygons and the flank.

Dem'i-ditone, *n.* (*Mus.*) A minor third. See *THIRD*.

Demidov, or **Demidoff**, (*dem'e-doff*) a wealthy and influential Russian family, whose head was an armory-founder at Toula. This Demidoff was intrusted by Peter the Great with the business of casting the cannon for that prince's numerous warlike expeditions. He actively seconded all the exertions of the czar, and in 1725 discovered the mines of Kolyvan, the working of which speedily enriched him. — He left a son, NIKITA, and several grandsons, who distinguished themselves in the same career as their progenitor, and amassed colossal fortunes. — The best known of these are PROKOP DEMIDOFF, who worked with great profit the iron, copper, and gold mines of the Ural Mountains, B. at Moscow about 1750; — NIKOLAI NIKITICH, a zealous philanthropist, who introduced into his country several branches of industry, founded establishments of public utility, and carried to a great state of perfection the working of mines. He had an annual income of more than a million of dollars. His last years he passed in France and Italy, enjoying the society of learned men, and heaping benefits on all around him. B. near St. Petersburg, 1773; d. at Florence, 1828. — He left two sons, PAUL and ANATOLE, who, as well as inheriting his fortune, had also the same high taste, and benevolence. Of these, Count Anatole allied himself to the Bonaparte family, by marrying, in 1840, one of Napoleon's nieces, the Princess Mathilde, daughter of Jerome, and sister of Prince Napoleon. In 1845, however, a separation took place between them. Russia, as well as other countries, owe to him the foundation of many valuable charitable institutions. *D.* 1858.

Dem i-god, *n.* (*Myth.*) A general appellation of the inferior divinities of Greece and Rome, more particularly of such of the mixed offspring of divinities and mortals as were afterwards deified.

"Be gods, or angels, *dem-i-gods*." — *Milton*.

Dem'i-god'dess, *n.* A female *dem-i-god*.

Dem'i-gorge, *n.* (*Fortif.*) Half a gorge. See *GORGE*.

Dem'i-groat, *n.* Half a groat. (*Mint*.) 5 cents.

Dem-i-hague, (*dem'es-häk*), [*Fr.*] (*Mil.*) A small firearm in general use about the end of the 13th century. It was like a large pistol in form; but the butt was long and greatly curved. It was, as the name implies, a diminutive of the haquebut, or hook-butt, a musket the stock of which was curved, instead of being straight like that of the arquebus or hand-gun, the shape of which prevented these weapons from being held in a position which would allow the eye to be directed along the barrel towards the object aimed at.

Dem i-john, *n.* [*Fr. dem'je-john*.] A vessel of copper, earthenware, or glass, inclosed in basket-work, used for boiling liquors; as, a *dem-i-john* of whiskey.

Dem'i-lance, *n.* A half lance or pike; a javelin.

Dem'i-lune, *n.* [*Lat. luna*, the moon.] (*Fortif.*) See *RAVELIN*.

Dem'i-man, *n.* Half a man; — used in reproach.

Dem'ing, in Indiana, a post-village of Hamilton co., about 28 m. N. of Indianapolis.

Dem'i-offi'cial, *v.* Partly authorized or official.

Dem'i-prem'ises, *n. pl.* Premises in part.

Dem'i-quaver, *n.* (*Mus.*) A note in music of half the length of the quaver.

Dem'i-relie'vo, *n.* (*Sculpt.*) Half-raised figures from the plane, as if cut in two, and only half fixed to the plane.

Dem irep, *n.* [An abbreviation of *de-mi-reputation*.] A woman of dubious reputation for chastity.

Demir-His'sar, a town of Turkey in Europe, on the Struma, 12 m. N.W. of Seres; pop. 9,000.

Demisability, *n.* (*Law*.) State or condition of being demisable.

Demis'able, *a.* That may be demised or leased.

Demise, (*dē-mīz'*), *n.* [Fr. *démis*, *démise*, pp. of *démètre*; Lat. *demissio*, from *demitto*—*ae*, and *mitto*, *missus*, to send.] A laying down or removal, as of the crown or royal authority.—The death of a reigning monarch, or of any distinguished individual; as, "the demise of Queen Anne."—*Swift*.

(*Law*.) A conveyance or transfer of an estate by lease or will.

—*v. a.* To send down to a successor; to transfer or convey; to lease.

"My executors shall not have power to demise my lands to be purchased."—*Swift*.

—To bequeath; to give.

Demisem'i-quaver, *n.* (*Mus.*) A note in music equal to half a semi-quaver.

Demission, (*dē-mīsh'ūn*), *n.* [Fr. *démision*; Lat. *demissio*. See *DEMISE*.] A lowering or letting down; degradation; depression; transfer; resignation.

Demis'sionary, *a.* Relating or pertaining to a transfer or conveyance of lands or property.—Aiding to lessen, lower, deprive, depress, or degrade.

Dem'i-suit, *n.* A half-suit of armor.

Demit', *v. n.* To depress; to hang or lay down; to let fall; as, to demit a public office.—To submit to; to accept under constraint; as, to demit one's self to an unpalatable duty.

Dem'i-tint, *n.*, [*demi* and *tint*.] (*Painting*.) A half-tint; a gradation of color between positive light and determined shade; in other words, that shade seen when the sun shines on a house, or any other object, making an angle of nearly 45° on the ground-plane, or when it shines more on the front than on the end. (It is sometimes called *half-tint*.)

Dem'i-tone, *n.* (*Mus.*) A semi-tone.

Demurge, (*dēm'e-urj*), *n.* [Gr. *demiourgos*, from *demos*, people, and *ergon*, work.] (*Phil.*) Literally, a workman or handicraftsman; but employed by the Gnostics to denote a being whom they regarded as the creator of the visible world. He was, in their view, the archon or chief of the lowest order of the spirits in existence prior to the creation of this world; and it was he, they said, who, by contact with chaos, gave to this earth its form and living characters. From him man received his *psyche*, or sensuous soul; while from God, the supreme divinity, he received the higher spirit, or *pneuma*. In this way they attempted to account for the existence of a good and evil principle in man, and for the origin of evil in the world.—See *GNOSTICS*.

Demur'gie, *a.* [Gr. *demiurgikos*.] Creative; relating to a demiurge; as, "demiurgic power."

Dem'ivolt, *n.* [Fr. *démivolté*—*demi*, and Lat. *volutus*, from *volvo*, to roll.] (*Manege*.) A half-vault; one of the seven artificial motions of a horse, in which he raises his fore-legs in a particular manner.

Dem'i-wolf, *n.* Half a wolf; a mongrel dog; one crossed between the canine and vulpine species.

Dem'min, a Prussian town, district of Stettin, province of Pomerania, 29 m. S. of Stralsund, at the mouth of the Trebel and Tollense. It is a town of great antiquity, and is noted for the number of sieges it has sustained in various wars. *Manuf.* Leather, cloth, hosiery, and tobacco. Pop. 9,217.

Dem'mit, or *DIMMIT*, in Texas, a S. W. co.; area, about 1,100 sq. m. Cap. Carrizo Springs. Pop. about 1,200.

Democrat'acy, *n.* [Gr. *demokratia*—*demos*, the people, and *kratos*, to rule, from *kratos*, strength, might.] Government, rule, or authority of the people; a form of government in which the supreme power is lodged in the hands of the people collectively. (Correlative to *aristocracy*.)

—In the U. States, one of the two great political parties into which the republic is divided;—synonymous with the European term *Conservatism*.

Democracy, in Ohio, a post-office of Knox co.

Dem'ocrat, *n.* [Fr. *démocrate*.] One who adheres to democracy, or a government by the people, or favors the extension of the right of suffrage to all classes of men. (Opposed to *aristocrat*.)

"Wrinkles, the damned democrats won't flatter."—*Byron*.

—In American politics, a member of the democratic or conservative party; in contradistinction to *republican*.

Democrat, in Indiana, a township of Carroll co.; it contains Prince William.

Democrat, in N. Carolina, a P.O. of Buncombe co.

Democrat'ic, **Democrat'ical**, *a.* [Gr. *demokratikos*; Fr. *démocratique*.] Pertaining to democracy, or government by the people; popular.

"Democratical enemies to truth."—*Browne*.

Democratic Party. (*Amer. Pol.*) That party in the U. States formerly opposed to the Whigs, latterly in opposition to the Republican party.

Democrat'ically, *adv.* In a democratic manner.

Democrat'ism, *n.* The ruling principles of a democrat; democracy.

Democrat'ist, *n.* A democrat. (*R.*)

Democrat'ize, *v. a.* To make democratic. (*R.*)

Democrat'itus, the sage of Abdera, B. 460 or 470 B. C., and is said to have survived a full century. Nothing of the writings of *D.* remains save a few fragments; but, with two exceptions, there is no great man of antiquity

whose renown fills a larger space, or who seems, alike with his genius and his acquirements, to have better deserved a hold on the world's memories. Urged by thirst for knowledge, he travelled, during his youth and manhood, through India, Ethiopia, Chaldea, and Persia; he spent several years in Egypt, and seems to have visited the schools of Pythagoras and Zeno. It is said, also, that he heard Socrates, and communed with Anaxagoras concerning the phenomena of astronomy, and the physical structure of nature. Cicero tells us that in style *D.* might be the rival of Plato. The titles of his works relate to Logic, Ethics, Physics, Mathematics, Astronomy, Medicine, Poetry, Music, Grammar, and even Strategy. The Abderites are recorded to have paid loftiest honors to their sage. It is said that *D.* had spent all his substance in travelling. But the law of Abdera refused the rights of burial to any one who wasted his patrimony. To escape the penalty, the philosopher read in public his chief treatise, entitled *πυκνὰ διακασμός*; and, charmed by his eloquence, the people voted him the sum of 500 talents, or \$500,000. It is not often that a philosophical treatise reaps such a reward! The fame of *D.*, in modern times, rests on his extraordinary *prevision* of the *Atomic*, or modern physical theory of the Universe. Rising above the confined idea of the Ionian school, that all things are modifications of one element or principle, he broached the conception that bodies are made up of ultimate atoms, and that in the character of these atoms must be sought the explanation of the qualities of what we call *body*. He went off at once from all barren logomachies about the *plenum*; and, indeed, more than any other thinker of antiquity, achieved the privilege of laying down the ground of just speculation in physics. His doctrines prevailed widely, and were afterwards enshrined in noble verse by Lucretius. *D.* was certainly a materialist; the mind, he thought, like fire, consisted of the finer atoms. He had no notion of life apart from body; and the gods he deemed delusion. He had grand views of the universe: in the Milky Way, first of all, he saw the light of innumerable worlds; but he had a correspondingly mean opinion of the nature and destiny of Man.

Demogor'gon, *n.* (*Myth.*) A mysterious being, who was an object rather of terror than of worship; hence, in *Paradise Lost* (book ii.), Milton speaks of

..... the dreaded name

Of Demogorgon.

The Demogorgon is also introduced by Shelley, under a somewhat different aspect, into his drama *Prometheus Unbound*.

Demoiselle, (*dēm-waw-sel'*), *n.* [Fr. See *DAMSEL*.] In France, a young lady; sometimes, also, applied to a waiting-maid.

(*Zoöl.*) The Numidian Crane (*Anthropoides virgo*), of the family *Gruide*. It is remarkable for the grace and symmetry of its form, and the elegance of its deportment. It measures three feet three inches in length; and has a beak two inches and a half long, the base of which is greenish and the tip red; the irides are crimson; the crown of the head is cinereous; the rest of the head and neck, black; the feathers of the breast are long and drooping; the under parts of the body, from the breast, the back, and the tail, are bluish-ash; the latter and the quills are tipped with black; and the legs are

Fig. 795. — THE DEMOISELLE, OR NUMIDIAN CRANE.
(*Anthropoides virgo*.)

black. This gallatorial bird is a native of many parts of Asia and Africa; and is to be met with along the whole of the southern and eastern shores of the Mediterranean. It delights in damp and marshy places, frequenting those parts in search of small fish, frogs, &c., which are its favorite food. It is easily domesticated.

Demol'ish, *v. a.* [Fr. *démolir*, pp. *démolis*; Lat. *démolior*—*de*, and *molior*, to hurt, to cast, to throw, to remove; from *mōles*, a large, shapeless mass or structure.] To throw, cast, or pull down, as a heap or structure; to separate any collected mass, or the connected parts of a

thing; to destroy, raze, dismantle, or ruin; as, to demolish a building, to demolish an argument.

"I expected the fabric of my book would have been long since demolished."—*Tillotson*.

Demol'isher, *n.* One who, or that which, demolishes, razes, or destroys; as, his reply is a demolisher.

Demolition, (*dēm-o-līsh'ūn*), *n.* [Fr.; Lat. *démolitiō*.] Act of demolishing, or of overthrowing, pulling down, or destroying a pile or structure; ruin; collapse; destruction; as, the demolition of a house, of an argument, &c.

De'mon, *n.* [Fr. *démon*; Lat. *dæmon*; Gr. *daimon*, probably from *daio*, to divide; Sansk. *dal*, as being the divider or giver of a man's lot.] (*Myth.*) The name given by the ancients to certain spirits or genii, which they regarded as intermediate between gods and men. According to Plato, the name is derived from *damon*, knowing, in allusion to their superior intelligence. Homer and some of the earlier of the Greek writers applied the term generally to every order of being superior to man; hence the gods were sometimes called *demons*, and the adjective *daimoniakos* was used to signify divine. In Hesiod we have an express account of the demons, as spirits intermediate between gods and men, being the souls of men who had lived in the golden and silver ages, and of whom there were different orders. According to Plato, the *D.* is a middle intelligence between the gods and men, watching over, directing, and recording the actions of the latter. In the opinion of some, the celestial deities did not at all interfere in the management of human affairs, but committed it entirely to the care of the demon; and that every mortal at birth received a particular *D.*, who accompanied him through life and acted as his guiding spirit. According to their influence, demons were distinguished as good and bad, *agathodemons* and *cacodemons* (Gr. *agathos*, good, and *kakos*, bad); but in either case they were regarded as carrying out the intentions of the gods, and not as being in any degree hostile or opposed to them. Hence, in its original sense, a *D.* was not necessarily an evil spirit,—an idea which has come to us from the Jews, who were wont to regard the deities of other nations as only embodiments or emissaries of the Evil One. The genii of the Romans were analogous to the demons of the Greeks, though they differed from them in many important particulars. Every individual was believed at birth to receive a particular genius, which accompanied him through life, and conducted him through its various vicissitudes. The genius was represented as enjoying the good things of this life; hence for one to pinch his appetites was to defraud his genius. It was generally believed that each person had two genii—a good and a bad; and as the one or the other prevailed, so was his conduct good or the reverse. Places and cities, as well as men, were believed to have their particular genii. The origin of the doctrine of demons is to be sought in the East. The Hindoos associated with their supreme deity, Brahma, an innumerable host of messengers or demons, called *deitjas*; and the Persians still further develop and systematize this doctrine of subordinate spirits. In accordance with the dualistic principle of their religion, they had two kinds of demons,—those who were servants of the good principle, or *Ormuzd*, and were called *Izeds*, or genii of the Light, and those who served the evil principle, *Ahriman*, and were called the *Devi*, or genii of Darkness. The Jews, at the time of the Babylonish captivity, doubtless became acquainted with the system of the Persians; and to this may perhaps be attributed many of the popular notions that were afterwards held by them on this subject. Among Christian writers, demons are simply fallen angels, or devils, as used in the New Testament.—See *MAGIC*, *WITCHCRAFT*.

De'moness, *n.* A female demon.

Demonetiza'tion, *n.* Act of demonetizing; condition of being demonetized.

Demon'etize, *v. a.* To divest of the character of standard money. See *SECTION II*.

Demon'iac, **Demon'iacal**, *a.* [Fr. *démoniaque*.] Pertaining to demons, or evil spirits;—hence, anything fearful or horrible; as, "demoniacal laughter." (*Thackeray*.)—Influenced by demons; produced by demons or evil genii.

"Demoniac frenzy, moping melancholy."—*Milton*.

—*n.* A human being possessed by a demon or evil spirit; one whose mind is disturbed and controlled by the power of wicked and unclean spirits.

"Those lunatics and demoniacs . . . were restored to their right mind."—*Bentley*.

Demon'iacally, *adv.* In a demoniacal manner.

Demon'iacism, *n.* State of being demoniac; condition of one who is a demoniac.

Demon'ian, *a.* Devilish; of demoniac nature; as, "demonian spirits."—*Milton*.

Demon'ianism, *n.* State or quality of being possessed by a demon or devil.

De'monism, *n.* [Fr. *démonisme*.] Belief in demons; demonology.

De'monist, *n.* One who believes in demons or evil spirits.

De'monize, *v. a.* [Lat. *demonizare*.] To fill with the spirit of a demon.

—To possess by a demon.

Demonoc'racy, *n.* [Gr. *daimon*, and *kratin*, from *kratos*, strength.] The power of a devil or demon.

Demonol'atry, *n.* [Gr. *daimon*, and *latreia*, service, worship, from *latron*, pay, hire.] The worship of demons or evil spirits.

Demonolog'ic, **Demonolog'ical**, *a.* Relating or pertaining to demonology.

demonologist, *n.* A writer on, or student of, demonology.

demonology, *n.* [Gr. *daimon*, and *logos*, treatise.] A discourse on demons; a treatise on evil spirits, their nature and properties, and the superstitions regarding them. See DEMONIACAL POSSESSION.

demonry, *n.* The world of demons; demoniac power.

demonship, *n.* State or condition of a demon.

demonstrability, *n.* Quality of being demonstrable.

demonstrable, *a.* [See DEMONSTRATE.] That may be demonstrated; that may be proved beyond doubt or contradiction; capable of being shown by certain evidence.

demonstrableness, *n.* Quality of being demonstrable.

demonstrably, *adv.* In a manner to preclude doubt; beyond the possibility of contradiction.

demonstrate, *v. a.* [Lat. *demonstro*, *demonstratus*, *e*, and *monstro*, to show, to point out, from *monere*, to cause to think of, or to remember, from Sansk. *man*, to think, whence Lat. *mens*, mind.] To prove; to evince; to exhibit; to manifest; as, to *demonstrate* an inclination. — To point out or indicate; to show or prove to be certain; to prove beyond the possibility of doubt; as, to *demonstrate* a fact.

demonstration, *n.* [Lat. *demonstratio*.] A pointing out; a showing forth, or exhibition; act or process of demonstrating; the highest degree of evidence; certain proof exhibited, or such proof as establishes a fact or proposition beyond the possibility of doubt, or as shows the contrary position to be absurd or impossible; indubitable evidence of the senses, or of reason; evidence which satisfies the mind of the certainty of a fact or proposition.

demonstration, *n.* outward show; public exhibition; open manifestation of opinions or feelings; as, a loyal *demonstration*.

(Mil.) A military movement or manoeuvre, involving an exhibition of accumulated force; as, to make a *demonstration* on the enemy's flank.

(Logic.) That process by which a result is shown to be a necessary consequence of the premises from which it is asserted to follow, on the supposition that those premises are admitted, either as matter of fact, or of intuitive evidence, or of previous *D.* A *D.* is either *direct* or *indirect*; it is direct when the truth of the proposition is proved at once and directly, and indirect when it is proved by showing that the contradiction is impossible and absurd, which is usually termed *reductio ad absurdum*.

demonstrative, *a.* [Lat. *demonstrativus*.] Having the power of demonstration; showing or proving by certain evidence; invincibly conclusive; having the power of showing with clearness and certainty; as, *demonstrative* figures.

demonstrative, *a.* inhibitive; having the faculty of saying or expressing much; open-minded; candid; frank; as, a *demonstrative* man.

demonstrative, *a.* involving, or consisting of, the power of expression, whether eulogistic or vituperative; as, *demonstrative* language.

(Gram.) A pronoun directly pointing out that to which it has reference. They are, *this*, *pl. these*, and *it*, *pl. those*.

demonstratively, *adv.* In an open or demonstrative manner.

demonstrativeness, *n.* Quality of being clear or demonstrative.

demonstrator, *n.* One who demonstrates, or proves by indubitable certainty.

(Anat.) The index finger. — One who exhibits the parts of the human body; a teacher of practical anatomy.

Donate (*dai-mou-tai*), a town of N. Italy, in Piedmont, 15 m. from Coni. Pop. (1895) 6,265.

Donopolis, in Alabama, a city and township of Marengo co., on the Tombigbee river, 50 m. W. of Ma. Pop. (1897) about 2,000.

demonstration, *n.* Act of demoralizing; corruption, or subversion of morals or principles; as, the *demonstration* of a political party.

demonralize, *v. a.* [Fr. *démoraliser* — *de*, and *morale*, morals. See MORAL.] To corrupt or undermine the morals of; to destroy or lessen the effect of moral principles in; to deprave; to vitiate; as, to *demonralize* youth, a *demonralizing* example.

Donoreville, a village of Upper Canada, Prince Edward co., abt. 9 m. N.W. of Pictou; pop. abt. 350.

Donos, *n.*; *pl.* DRUM. [Gr., people.] (*Anc. Hist.*) A district or tract of land. The Attic *D.* answered to our townships; their union into one people, with Athens as their centre, is attributed to Theseus.

Donos, in Ohio, a post-office of Belmont co.

Donosville, in Kentucky, a post-village of Pendleton co. abt. 25 m. S. of Cincinnati, Ohio.

Donotie, or **Enchorial**, Characters. See ENCHORIAL.

Donotika, a town of European Turkey, on the Maritza, 24 m. S. of Adrianople. Charles XII. of Sweden found a refuge in this town after his defeat at Pultowa. Pop. abt. 9,700.

Demosthenes, *a.* [Fr. *Demosthénique*.] In the style, or manner, of Demosthenes; as, *Demosthenic* eloquence.

Demosthenes, (*de-mos'the-neez*), the most celebrated of the Grecian orators, B. in Paiania, near Athens, 385 B. C. He was the son of a wealthy Athenian armorer, died when *D.* was only 7 years of age. His guards having debauched a large portion of his estate, he defended his own cause against them, at the age of 17, and freed them to disgorge the plunder. His first attempts at oratory were not very successful, his lungs being

weak, his speech stammering, and his gestures awkward. Being firm of resolution, however, he retired for some years, and by great perseverance succeeded in overcoming these defects. In order to remove the two first-named obstacles, he would declaim in ascending steep hills, or by the side of the roaring sea, with pebbles in his mouth. To acquire elegant gestures, he practised before a mirror; and to correct a habit of shrugging up one of his shoulders, he placed a sharp-pointed sword just over it, in the place where he stood. He had cultivated his mind by attending the lectures of Plato, and had studied the principles of oratory under Isaeus. In a cave, which he inhabited for a long time, he would read and ponder on the orations of others, and store his mind with the writings of great authors. On this account, his defamers declared that his orations smelt of the lamp. At the age of 27 he returned to public life, and, in course of time, filled the highest offices of state. He was one of the foremost in arousing the Athenians to a sense of their danger, when the encroachments of Philip of Macedon began to alarm all the Grecian States. He delivered against Philip the most glowing and pungent orations, which have become famous under the name of *The Philippics*. He succeeded in prevailing on the Boeotians to assist Attica, and when Philip invaded Attica, he joined the army, and was present at the battle of Chæronea; but his courage failing him, he turned his back upon the enemy, and fled. For this cowardly conduct he was afterwards tried, but acquitted. After the death of Philip, *D.* exerted his influence against Alexander the Great, and succeeded in uniting the various Grecian States into a confederacy with the Persians. But this alliance was soon broken up by the victorious Macedonian, who inflicted terrible chastisement on the Thebans, and prepared to continue his march into Attica. In order to pacify Alexander, the Athenians sent an embassy to him, of which *D.* was a member; but apprehensive of the victor's wrath, he turned back on the road. From this time his influence waned. After the death of Alexander, the Athenians declared war against Antipater, his successor, but were defeated, and ordered to deliver up Demosthenes, who fled to Calauria, and poisoned himself in the temple of Poseidon, 322 B. C. Subsequently, the Athenians erected a statue to his memory, and educated his eldest child at the public expense. — The main characteristics of *D.*'s eloquence are majesty and vigor. His object was less to excite the passions of his hearers than to convince their understanding; and this, Cicero has declared to be the essence of true eloquence. He seldom or never spoke extemporaneously, but always prepared his speeches with the most assiduous care. They are to this day considered the purest models of oratory in existence. With regard to spontaneous force and readiness, he is, perhaps, inferior to Cicero; but he surpasses him in subtlety of thought, strength of logic, and rhetorical power. The best editions of his orations are those of Bekker and Dindorf.

Fig. 796. — DEMOSTHENES.
(From an ancient bust.)

Dempseytown, in Pennsylvania, a post-village of Venango co.

Demulcent, *a.* [Lat. *demulcens*, from *demulceo* — *de*, and *mulceo*, to stroke, to touch lightly, to soothe, akin to *mulgeo*; Gr. *amelgi*, to milk. See MILK.] Softening; mollifying; as, a *demulcent* property.

—n. (Med.) A class of soft, bland, fluid medicines or drinks, and either given in colds and obstinate coughs, to shield the passages from the contact of the cold air, or to protect the tender coat of the gullet and stomach from the action of corrosive or irritating acids or poisons, and also to save the mucous membrane of the urinary organs from the acrid action of the water in certain affections of the kidneys and bladder. For these several purposes, demulcents are either taken by the mouth, or used as an injection. Barley-water, thin arrowroot, almond emulsion, linseed tea, gum-water, or mucilage, or any decoction of herbs, are all included under this name.

Demulsion, *n.* Act of softening or soothing; coaxing.

Demur, *v. n.* [Fr. *demeurer*; Lat. *demorer* — *de*, and *morer*, from *mora*, a delay.] To delay; to doubt; to pause; to hesitate; to object; as, to *demur* to a proposition.

(Law.) To delay a legal process by doubts and objections.

"To this plea the plaintiff demurred." — Walton.

—n. Stop; pause; hesitation as to the propriety of proceeding; suspense in proceeding or decision.

"All my demurs but double his attacks." — Pope.

Demure, *a.* [Fr. *de mœurs*, of manners, having manners, mannerly.] Of discreet manners; considerate; staid; sober; grave; modest.

"Come, pensive nun, devout and pure,
Sober, steadfast, and demure." — Milton.

—Downcast; affectedly modest; seemingly grave or decorous; as, *demure* as a cat.

Demurely, *adv.* In a demure manner; with assumed gravity, or affected modesty.

"Hypocrisy . . . demurely looking down." — Dryden.

Demureness, *n.* Gravity of countenance; soberness of mien; affected modesty; prudery; make-believe propriety; as, the *demureness* of a nun.

Demurrage, *n.* (*Com.*) An allowance made to the owner of a trading-vessel, for delay or detention in port beyond the appointed time of departure. Also, the payment thereof.

Demurrer, *n.* One who demurs or objects.

(Law.) An issue between plaintiff and defendant on matter of law. It confesses that the facts are true as stated by the opposite party, but denies the legal consequences inferred by the opposite party from these facts. *D.* is either *general* or *special*. *D.* in equity is of the same nature with that at law. *D.* may be also applied to an indictment in criminal cases.

Demy, *n.* [Fr. *demi*, half, from Lat. *deminius*, through the middle — *de*, and *medius*, middle.] A particular size of paper; a kind of paper of small size, a degree smaller than *medium*, and two degrees smaller than *royal*.

—At Magdalen College in Oxford University, Eng., a title given to one who ranks as a *scholar* in other colleges, and who partakes of the founder's benefaction, and succeeds by turn to a vacant fellowship.

—a. Made of the size of paper called *demy*; relating or pertaining to the same; as, a *demy* edition.

Den, *n.* [A.S. *denn*, *dene*; Belg. *denne*, akin to Ital. *tana*, a cavern, and Fr. *tanière*, a den, a hole; Heb. *danna*, low ground, from *danan*; Ar. *danna*, to be low, depressed.] A cave or hollow place in the earth; a pit or subterranean recess, used for concealment, shelter, protection, or security.

"The shapeless bear his *den* forsakes." — Dryden.

—A haunt; a retreat; any place of frequent resort or retirement; as, an author's *den*, a *den* of vice, &c.

—v. n. To live, as in a den.

Denain, a town of France, dep. Nord. on the Scheldt, 5 m. W. of Valenciennes; pop. 9,116. Near it, Marshal Villars, at the head of a French army, defeated the allied Dutch and German troops, commanded by the Earl of Albemarle, July 24, 1712. Prince Eugene was, by the admirable strategy of Marshal Villars, compelled to witness a defeat that he could not avert.

Denane, in Illinois, a village of Saline co., about 50 m. S.S.E. of Vandalia.

Denarcotize, *v. a.* [*De*, and *narcotic*, *q. v.*] To dispossess of narcotic; to free of narcotic matter; as, to *denarcotize* tobacco.

Denarius, *n.*; *pl.* DENARII. [Lat.] (*Antiq.*) The principal silver coin used by the Romans, consisting originally of 10 asses, and afterwards considered equal to 18 asses, when the weight of the latter coin was reduced to one ounce. Originally, the denarius was $\frac{1}{160}$ of a pound of silver, but its weight varied. Its value is considered equal to 17 cents of American money. There was also a gold denarius equal in value to 25 silver denarii.

Denarius Dei. [Lat., the money of God; Fr. *denier a dieu*.] (*Law.*) A certain sum of money which is given by one of two contracting parties to the other as a sign of the completion of the contract. It does not bind the parties, as he who received it may return it in a limited time, or the other may abandon it and avoid the engagement. It differs from *arrha* in this, that the latter is a part of the consideration, while the *D. D.* is no part of it.

Denary, *a.* [Lat. *denarius*, from *deni*, ten.] Containing ten; tenfold.

—n. The number ten.

Denationalize, *v. a.* [*De*, and *nation*.] To divest of national character or rights by transference to the service of another nation.

Denaturalize, *v. a.* [*De*, and *naturalize*.] To render unnatural; to alienate from nature. — To denationalize; to make a renunciation of natural rights.

Denbigh, (*den-be*), a maritime county of England, in N. Wales, bounded E. by Flintshire, Cheshire, and Shropshire; W. by Caernarvonshire; N. by the Irish Sea; and S. by Merionethshire and Montgomeryshire. Area, 634 sq. m. This county is rugged and mountainous, but here and there interspersed with rich valleys. Rivers, The Clwyd, the Conway, the Dee, and the Elwy. Pro. Chiefly cattle, wheat, barley, oats, and cheese. Goats and sheep are numerous. Min. Lead, iron, and slate. Wool is the principal article of manufacture. Pop. 104,266. — *D.*, the county-town, is situated on the branch of the Elwy, 5 m. from St. Asaph. Pop. 9,972.

Den'dera, a town of Upper Egypt, opposite Keneh, on the left bank of the Nile. It has some very remarkable antiquities, the most noteworthy of which is the well-preserved temple of Venus. Lat. 26° 15' N., Lon. 32° E.

Den'dermonde, a fortified town of Belgium, prov. E. Flanders, at the confluence of the Dender and the Scheldt, 19 m. S.W. of Auteper. Manuf. Lace, woollen cloths, and cotton yarn. Pop. 9,000.

Den'drachates, *n.* [Gr. *dendron*, a tree.] (*Min.*) Arborescent agate; agate containing the figures of shrubs and trees. See AGATE.

Den'driform, *a.* [Gr. *dendron*, a tree, and Lat. *forma*, form.] Having the form of a tree.

Dendrit'ic, **Dendrit'ical**, *a.* [Gr. *dendritēs*, tree-like.] Presenting offshoots like the branches of trees.

Dendro'ica, *n.* (*Zoöl.*) See SYLVICOLA.

Den'droid, **Dendroid'al**, *a.* [Gr. *dendron*, and *eidos*, form.] Resembling a tree or shrub.

Dendrolagus, *n.*

[*Gr. dendron*, a tree.] (*Zool.*) The Tree-kangaroo, a genus of Marsupialian animals, differing from the other kangaroos by their adaptation to an arboreal life. They are found in New Guinea, and some of them are found measuring more than four feet in length, independent of the sweeping tail.

Dendrolite, *n.* [*Gr. dendron*, tree, *lithos*, stone.] (*Geol.*)

The petrified stems of trees and plants found in the secondary formation, and especially in the coal strata. These remains are found in very different sizes, some being gigantic. Sometimes they are found with fossil branches, fruit, and even leaves,—these, however, only as impressions,—whilst in other places only fragments occur, which, however, belong to trees having nothing in common with those now growing in the same regions—as, for example, the beautiful stems of palms at Chemnitz in Saxony, &c. Such woods are generally changed into agate, or into pitchstone, when they occur in ancient strata altered by volcanic fire. Concerning the question of their origin, opinions are still divided. Many of them are so hard and beautifully colored, that they are cut and employed for all artistic purposes. When cut into very thin plates, they exhibit under the microscope the structure of the wood so perfectly, that it is not only possible for botanists to determine the natural order or family of plants to which it belongs, but even the genus and species. They mostly belong to the *Filices*, *Cycas*, and *Conifera*.

Dendroligist, *n.* One versed in the knowledge of trees.**Dendrol'ogy**, *n.* [*Gr. dendron*, and *logos*, discourse.] A discourse or treatise on trees; the natural history of trees.**Dendrom'eter**, *n.* [*Gr. dendron*, and *metron*, measure.] An instrument for measuring trees.**Dendrophis**, *n.* [*Gr. dendron*, and *ophis*, a serpent.] (*Zool.*) A genus of harmless serpents, family *Coluber*, remarkable for their long and slender body.**De'nel**, DENEbola, *n.* [*Ar.*, a tail.] (*Astron.*) A bright star of the first magnitude, in the tail of *Leo*. It is 10° S.E. of *Zosma*, and may be distinguished by its great brilliancy.**Den'telyte**, *n.* (*Min.*) An amorphous mineral, somewhat resembling gum-arabic; *sp. gr.* = 2.246; lustrous; color whitish, yellowish, greenish, reddish. Translucent; brittle, and often much cracked. *Comp.* Silica, 40.2; magnesia, 35.7; water, 24.1 = 100.**Dengue**, or BREAK-BONE FEVER, (*deng(r)*). (*Med.*) A disease that has, on several occasions, recently made its appearance in the southern part of the United States, and the East and West Indies. It is characterized by a severe inflammatory fever, accompanied with rheumatic pains in the joints and muscles. Though very severe, it is not often fatal, and usually terminates in a few days after a copious discharge of perspiration.**Den'ham**, SIR JAMES, an English poet, b. in Dublin, 1615. He accompanied Charles II. in his exile, and was subsequently sent as ambassador to Poland. The poem of *Cooper's Hill* is the most celebrated of his productions. D. 1668.**Deni'able**, *a.* That may be denied or contradicted.

"The negative authority is also deniable by reason."—*Brown*.

Deni'al, *n.* Act of denying; negation; contradistinction; an affirmation to the contrary; an assertion that a declaration or fact stated is not true.

"Denial would but make the fault fouler."—*Sidney*.

—Refusal to grant, allow, or concede; rejection; as, his request met with *denial*.

—A disowning; an abjuration; a disclaimer; a refusal to avow or acknowledge; as, the *denial* of a charge preferred against one.

Denial of one's self. See SELF-DENIAL.

Deni'er, *n.* One who denies, contradicts, or refuses to avow or acknowledge.

"Christ looked his *denier* into repentance."—*South*.

Denier, (*de-nē'*) *n.* [*Fr.*; from *Lat. denarius*.] A small ancient French copper coin, which was the twelfth part of a *sou* or cent.**Den'igrator**, *n.* One who blackens.**Den'im**, *n.* (*Com.*) A coarse kind of cotton drill.**Denina**, (*da-nē'na*), GIACOMO MARIA CARLO, an Italian historian, b. 1731. His principal works are: *Discorso Sopra le vicende della Letteratura: Delle Rivoluzioni d'Italia; Storia dell'Italia Occidentale*, etc. D. in Paris, 1813.**Den'is**, or **Denys**, (*St.*) first bishop of Paris, in the 3d cent. He was sent from Rome, about A.D. 250, to convert the pagans of Gaul. He built many churches, and selected Paris as the seat of his bishopric. During the persecution of the Christians under Aurelian, he was condemned to death by the Roman governor Pescennius, and beheaded in 272.**Denis**, (*St.*) a town of France, dep. Seine, 6 m. N. of Paris. A chapel in honor of St. Denis was founded at this place, in 250. Dagobert was buried here in 580. Dagobert I. founded the abbey in 636, and it has ever since been the place of sepulchre for the French monarchs. The first church was finished in 775, and the present edifice, commenced in 1130, was completed in 1281. A

Fig. 797.—TREE-KANGAROO. (*Dendrolagus*.)

battle between the Roman Catholics and the Huguenots was fought in its vicinity, Nov. 10, 1567, when the latter were victorious, De Montmorenci, the Roman Catholic leader, being mortally wounded. By a decree of the Convention, Aug. 6, 1893, the royal tombs were opened, but they were restored by Napoleon I. in 1806. The abbey was suppressed in 1792. Pop. (1895) 51,290.

Den'ison, in Illinois, a township of Lawrence co., on the Wabash.**Denison**, in Iowa, a thriving town, cap. of Crawford co., on Boyer river, 65 m. N.E. of Council Bluffs; is the trade center of a very rich farming region. Pop. (1897) 2,300.**Deniza'tion**, *n.* Act of making one a denizen, subject, or citizen.

"That the mere Irish were reputed aliens appears by the characters of denization."—*Davies*.

Denize', *v. a.* To make a denizen or citizen. (*R.*)**Denizen** (*den'e-zn*), *n.* [*W. dinaster*, *dinesydd* a citizen, from *dinas*, a fortress, a fortified town, or city.] A citizen, particularly a naturalized citizen, in England.

—A stranger or alien admitted to residence in a foreign country.

"And roam . . . the world's tired denizen."—*Byron*.

—An inhabitant; a dweller; as "denizens of air."—*Pope*.

—*v. a.* To make a denizen of; to naturalize; to enfranchise.

"Falsehood is denizen'd, virtue is barbarous."—*Donne*.

—To furnish or populate with denizens.

Deni'zanship, *n.* State or condition of being a denizen.

Den'mark, one of the secondary kingdoms of Europe, lies on the S. side of the entrance to the Baltic, between 53° and 58° N. Lat., and 8° and 13° E. Lon. It consists partly of the peninsula, stretching from the river Königsåne, or Kongeåne, the N. frontier of Schleswig, to the Skaw or Skagen, and comprising the province of Jütland; and partly of the Danish Archipelago (or of the islands of Zealand, Fünen, Laaland, Falster, &c., between the Baltic and the Cattegat), and the island of Bornholm, in the Baltic. Except on the S., where it is bounded by the duchy of Schleswig, continental D. is everywhere surrounded by the sea, having E. the Baltic, the Little Belt, and the Cattegat; N. the Skager Rack, and W. the North Sea. Iceland, the Farøe Isles, part of Greenland, and some possessions in the W. Indies, belong to this kingdom. Exclusive of these D. contains an area of 14,493 sq. m.

POLITICAL DIVISIONS.

HOME PROVINCES.	Area in Eng. sq. m.	Pop. (1890.)	Chief Towns.
Zealand and Möen	2,793	721,703	COPENHAGEN.
Bornholm	221	35,364	Ronne.
Fünen and Langeland	1,302	226,428	Odense.
Laaland and Falster	640	94,612	Nykøping.
Jutland	9,597	942,120	Aarhus.
TOTAL	14,493	2,020,227	
COLONIES.			
Europe and N. America.			
Farøe Islands	514	12,955	Thorshavn.
Iceland	39,756	70,927	Reikiavik.
Greenland	56,740	10,516	Upernivik.
W. Indies.			
St. Thomas	45	14,389	Charlotte Amalia.
St. Croix (Santa Cruz)	110	19,783	Christiansadt.
St. John	42	12,500	Christiansborg.

Surface. Low and level, having neither mountains nor hills of any considerable elevation. The coasts rise but little above sea-level, and in parts of the W. coast of Jütland the land is defended by dykes from irruptions of the ocean.—**Soil.** For the greater part, the soil is extremely fertile, forming, particularly in the S.W. part of Jütland, the finest pastures, and producing excellent crops. In the more N. and central dists., the soil is arid, sandy, and barren, comprising large tracts of heath. **Rivers, &c.** D. has no rivers of any magnitude; freshwater lakes are numerous, but not large. The most remarkable feature of the physical geography of this country is, undoubtedly, the number and extent of the

Fig. 798.—COPENHAGEN—THE GREAT SQUARE.

inlets of the sea, or rather lagoons, which intersect its continental portion. The principal of these lagoons, the *Lymfjord*, formerly communicated only by a narrow channel with the Cattegat, stretching thence in a W. direction, with long sinuosities, and expanding in various places into immense sheets of water, encompassing large islands, across the peninsula of Jütland, almost to the N. Sea.—**Anim. and Veg. Prod.** The horses and cattle of W. Jütland are among the best of their kind. The wool of the sheep is short and coarse, but it has latterly been much improved by crossing with Merinos. The

feeding of hogs is largely prosecuted, and quantities of bacon and salt pork are yearly exported. Poultry is abundant that their feathers alone make a considerable item of export. All the common grasses, with potato flax, and hemp, madder, and tobacco, are raised in D. The forests are not very extensive, lying principally along the E. shores of Jütland, and in Zealand and Fünen, and consisting chiefly of birch, ash, alder, and oak. Pine and fir are rare.—**Min.** No metals or mineralogical deposits have been found that would repay the expense of working.—**Clim.** Humid, and subject to strong and cold winds. In winter the sound is sometimes frozen over. Fogs are very prevalent.—**Agr.** The land in D. is greatly subdivided, owing partly to the state of the law, which interdicts the union of small farms with larger estates, but encourages in various ways the parceling out of landed property. The average yield of crops may be estimated at the following figures:—Wheat, 3,200,000 bushels; rye, 1,280,000; barley, 16,000; oats, 3,600,000; buckwheat, 1,000,000; bear &c., 2,000,000 bush.; and 2,250,000 tons potatoes. The principal attention of all the more extensive and intelligent Danish farmers is directed to grazing, cattle-feeding and the dairy. Horses, cattle, salt provisions, butter, wool, and other animal products, are, in fact, in ordinary years, the ruling staples of industry and exportation. The farmers are, in general, a comfortable, and even wealthy class.—**Manuf.** Woollens, linens, cottons, beer, liquor, earthenware, sugar, pepper, soap, leather, &c. Large quantities of flour are milled, and exported on a large scale from Copenhagen and Flensburg.—**Com.** The foreign commerce of D. is usually carried on with England and the N. countries of Europe. The precise monetary value of the commercial transactions carried on by D. cannot be stated with any pretence to accuracy, as the Danish official returns do not give the declared or real value of the imports and exports, but only the weight of the same. As regards the extent of trade reciprocity between D. and her colonies and the U.S., the returns for the fiscal year terminating June 31, 1896, show an aggregate of domestic exports from the country of \$6,534,393; correlatively the exports from D. and her possessions to the U. S. are stated at \$334,586. On January 1, 1891, the commercial marine of the kingdom consisted of 3,543 vessels, with a total of 302,110 tons. The privilege of exacting tolls on shipping passing through the Sound (formerly called the *Sound due* was relinquished by D. in 1857, for a compensation in full of 35,000,000 rix dollars (\$19,145,000), which was contained in a pro rata proportion by the various powers trading with the Baltic. Of this indemnity the U. S. paid 20.3 per cent., or \$393,011.—**Const. and Govt.** The present constitution of D. is embodied in the charter of 1848, restored, with modifications, by the national vote, July 28, 1866. According to its provisions the executive power rests in the king, and his responsible ministry. The king must be a member of the Evangelical Lutheran Church, which is the declared religion of the state. The *Rigsråd* (diet or congress) comprises the *Landsting*, and the *Folksting*; the former being a senate or upper house and the latter a house of representatives. The former consists of 66 members, of whom 12 have a life-nomination from the crown; the remainder are elected by popular vote. The *Folksting* is comprised of 101 members, and is admissible to all citizens who have attained the age of 25, and who are not ineligible by reason of pauperism or mental incapacity. The elected members of the *Landsting* hold their seats for 8, and those of the *Folksting* for 3 years, each body receiving payment for their services. The *Landsting* forms the supreme court of the realm, and tries parliamentary impeachment while to the *Folksting* are committed the fiscal measures of the country.—**Relig. and Educ.** The Lutheran is the established religion, but complete toleration is extended to every other sect. Of the inhabitants, there are less than 1 per cent. belonging to other churches than the Lutheran. Elementary education is widely diffused, attendance at school for 7 years being compulsory. The number of parochial schools maintained at the public expense is above 4,000. Besides the University of Copenhagen, there are gymnasia, or colleges, at Lørdø and Aalborg, together with grammar schools, academies, and normal schools in all the chief towns.—**Finance.** The revenue of the state in 1890, amounted to 57,392,9 kroner, the expenditures to 62,329,181 kroner, and the public debt to 188,148,541 kroner, principally held at home, only 10,605,700 kroner being foreign debt (The kroner is equivalent to 26.8 cents American coin). The debt was chiefly created by the expenses of the Schleswig-Holstein war of 1864.—**Military and Naval.** The army, Jan. 1, 1897, consisted of 40,303 regulars, 39,618 first reserve, and 47,360 second reserve, making a total war strength of 127,263. The navy consisted of 8 ironclads, 25 torpedo boats, 20 marmored ships, 28 gunboats, 6 troop and other ships, the whole armed with 456 guns, and manned by 4,127 officers and men. The navy reserves number 4,100. **Railways, &c.** In 1891, D. possessed 1,247 miles of railway and 3,674 miles of telegraph line; 1,000 miles of railway and 2,790 of telegraph belonging to the state. In 1897, the railways within the limits of the kingdom had a total length of about 1,500 miles and the telegraph lines had increased proportionately.—**Inhab.** The Danes present, physically, the true characteristics of the Scandinavian type—light-haired, blue-eyed, fair-skinned, robust-framed. They are brave (like their ancestors the Vikings or sea-rovers), sober, industrious, of good morals, and highly intelligent; but without fond of a certain amount of gaiety and harmless conviviality.—**Hist.** The early history of D. is obscure and uninteresting. In 1385 Margaret, daughter of Waldemar, king of Denmark, and wife of Hacon, king

Norway, ascended the throne of these kingdoms; in 89 she was chosen by the Swedes their sovereign; the two crowns being united, it was supposed, for ever, in 97, by the treaty of Calmar. This great queen, the *Semiramis of the North*, and whose reign is the most glorious in Danish annals, D. in 1412. After her death a long-continued struggle ensued, which resulted in the Swedes emancipating themselves from the Danish yoke, 1523. 1448, the race of the ancient kings becoming extinct, Christian I., of the house of Oldenburg, was raised to the throne, which his posterity still possess; and by this was the valuable provs. of Schleswig and Holstein were added to the throne, in 1761 and 1773 respectively. Lutheranism was introduced in 1523, and Catholicism suppressed in 1537. In 1658 D. was invaded by Gustavus of Sweden, who wrested from her some of her finest provs. 1807 Copenhagen was bombarded by a British fleet; and the conclusion of the European war, in 1815, Norway, which had for so many ages belonged to D., was assigned to Sweden, the former obtaining in exchange the duchy of Lüneburg, and a money indemnity. The Danes felt its sacrifice acutely; but a greater was to follow. Unwise legislation, and the pro-German element in the population of the Schleswig-Holstein duchies, brought about a rising in these provinces in 1848. But though Prussia interfered in behalf of the insurgents, the matter was satisfactorily settled in 1852. In Sept., 1863, however, occurred the death of Frederick VII., the last of a direct line of the house of Oldenburg. In view of this event, the great powers of Europe had in 1852 concluded a treaty in London, to the effect that, "taking into consideration that the maintenance of the integrity of the Danish monarchy, as connected with the general interests of the balance of power in Europe, is of high importance to the preservation of peace," the succession to the crown was made over to the next collateral heir, Prince Christian of Schleswig-Holstein-Sonderburg-Glücksburg. This treaty was nullified by a rising taking place in the duchies, and by Prussia and Austria sending large armies to aid the insurgents. A sanguinary struggle followed, in which the Danes, after fighting bravely against overpowering odds, finally succumbed, when the two provinces were given up to the German powers. Thiscession was confirmed by the treaty of Vienna, in 1864, and the duchies now form part of the Prussian dominions. N. Schleswig was not permanently annexed to Prussia until 1879, and then in violation of treaty stipulation.

Denmark, in *Wisconsin*, a post-office of Brown co.

Denner, BALTHASAR, a famous German portrait-painter. He died in 1685. The chief excellence of his painting consisted in the accuracy of his details. D. 1747.

Denet, *n.* A kind of light, open, two-wheeled carriage.

Denning, in *New York*, a post-village and township of Ulster co., about 70 m. S.W. of Albany.

Denning's, in *Maryland*, a P. O. of Carroll co.

Denmis, in *Iowa*, a former P. O. of Appanoose co.

Denmis, in *Massachusetts*, a town and township of Barnstable co., on the peninsula of Cape Cod, 84 m. S.E. of Boston. Pop. of twp. (1897) about 2,375.

Denmis, in *New Jersey*, a township of Cape May county.

Denmis Creek, in *New Jersey*, traverses Cape May and falls into Delaware Bay.

Denmis Mills, in *Louisiana*, a post-office of St. Bernard parish.

Denmison, in *Michigan*, a post-office of Ottawa co.

Denmison, in *Ohio*, a town of Tuscarawas co., on P., C. & St. L. R.R., about 100 m. E. of Columbus. Here are extensive railroad repair shops, brick works, &c. Pop. (1897) about 5,100.

Denmison, in *Pennsylvania*, a township of Luzerne co.

Denmison, in *Penn.*, a former P. O. of Venango co.

Denmisport, in *Massachusetts*, a post-office of Barnstable co.

Denmisville, or **DENNIS CREEK**, in *New Jersey*, a post-village of Dennis township, Cape May co., on a creek of its own name, about 7 miles N. of Cape May Court-House. Pop. (1897) about 550.

Den'ny, in *Illinois*, a former post-office of Warren co.

Den'nyville, in *Maine*, a post-township of Washington co., about 135 m. E. by N. of Augusta.

Denominable, *a.* That may be named or denominated.

Denominate, *v. a.* [Lat. *denomino*, *denominatus*—*de*, and *nomen*, from *nomen*, a name.] To give a name or epithet to; to name; to call; to style; to give a title to; to designate.

"The two faculties that denominate us men, — understanding and will." — *Hammoud*.

—*a.* Having a specific name or denomination.

Denomination, *n.* Act of denominating, naming, or designating. — *A* name, title, or appellation; an epithet; a name which generally denotes some principal quality of a thing.

"The liking or disliking of the people gives the play the denomination of good or bad." — *Dryden*.

—*A* society or collection of individuals called by the same name; a class; a sect; as, a religious denomination.

"Divided . . . into many sects and denominations." — *South*.

Denominational, *a.* Relating, or pertaining, to a denomination.

Denominationalism, *n.* Policy of, or adherence to, a certain denominational theory or doctrine.

Denominationality, *adv.* By denominations or sects.

Denominative, *a.* That gives a name, or designation; that confers a distinct appellation. — Derived from a noun or adjective; as, a denominative verb.

—*n.* (*Gram.*) A verb taken from a noun either substantive or adjective.

Denominatively, *adv.* By denomination.

Denominator, *n.* [Fr. *dénominateur*, from Lat. *denomino*, I name.] (*Arith.*) The number of parts into which a unit is divided in any fraction. It is distinguished from the numerator, which specifies the number of parts of a certain kind which are to be taken; thus, in the fraction $\frac{3}{4}$, 3 is the numerator, and 4 is the denominator.

Denon, (*dai-nong'*), DOMINIQUE VIVANT, a French archaeologist, b. at Châlons-sur-Marne, in 1747. He accompanied Napoleon to Egypt, and, on his return, published his *Voyage dans la Basse et la Haute Égypte*. He is also the author of *Voyage en Sicile*, and *Voyage Pittoresque de Naples et de Sicile*. D. in Paris, 1825.

Denoon, in *Wisconsin*, a village of Waukesha co., about 80 m. E.S.E. of Madison.

Denotable, *a.* That may be denoted or marked.

Denotation, *n.* [Lat. *denotatio*.] Act or process of denoting.

Denote, *v. a.* [Lat. *denote*—*de*, and *note*, a mark, a sign.] To mark or point out; to signify by some mark or indication. — To indicate, express, show, betoken, or imply; as, a quick pulse denotes fever.

Denotement, *n.* A sign, mark, or indication. (*R.*)

Dénouement, (*dē-nō'māng'*) *n.* [Fr., from *dénouer*—*de*, and *nœud*, a knot, from Lat. *nodus*, a knot.] The unravelling or development of the plot of a play or novel, or the elucidation of any series of mysteries or events; as, a tragic dénouement.

Denounce, *v. a.* [Fr. *dénoncer*; Lat. *denuncio*—*de*, and *nuncio*, to tell or declare.] To proclaim in a threatening manner; to announce authoritatively; to declare, as a threat.

"Denouncing wrath to come in their impenitence." — *Milton*.

—To threaten by some external sign or expression.

"His look denounc'd desperate revenge." — *Milton*.

—To accuse publicly; to censure; to stigmatize.

"Archdeacons ought to . . . denounce such as are negligent." — *Ayliffe*.

Denounce'ment, *n.* Act of denouncing; the declaration of a menace, or of evil; denunciation; as, the denouncement of a curse.

Denoun'eer, *n.* One who denounces, or declares a menace.

Dense, *a.* [Fr.; Lat. *densus*; allied to Gr. *dasy*, thick with hair.] Thick; close; compact; having its constituent parts closely united; as, a dense atmosphere, a dense crowd, a dense understanding.

Densely, *adv.* With great compactness; in a dense manner.

Dense ness, *n.* State of being dense; compactness; density.

Density, *n.* [Fr. *densité*; Lat. *densitas*.] Thickness; closeness of constituent parts; compactness; — antithesis of rarity.

"The opacity of white metals ariseth not from their density alone." — *Newton*.

(*Phys.*) A term used synonymously with *specific gravity*, to denote the quantity of matter which a body contains under a given or determinate surface; for example, a cubic foot. The quantity of matter in any body is called its *mass*, and is measured by the weight of the body, to which it is always proportional. Hence the *D.* of any body is great in proportion as its weight is great and its volume small; or, the *D.* of bodies is directly as their mass, and inversely as their volume. It follows also from the definition, that if two bodies have the same volume, their densities are directly as their masses or weights; and that if two bodies have the same mass or weight, their densities are respectively in the inverse ratio of their volumes.

Dent, *n.* [Fr.; Lat. *dens*, *dentis*, probably from *edens*, the 1st pr. of *edo*, to eat; Gr. *odon*, *odontos*; Sansk. *danta*; Pers. *denidan*, a tooth, root; Sansk. *ad*, to eat.] A gap, notch, or small hollow made by the pressure of a harder body on a softer; an indentation.

—*v. a.* To make a dent or small hollow. See **INDENT**.

Dent, in *Missouri*, a S.E. central co.; area, about 500 sq. m. *Rivers*, Maramee River, and the head-waters of the Big Black river. *Products*, corn, wheat, oats, tobacco, hay, &c.; cattle and hogs are largely raised. *Surface*, hilly. *Soil*, fertile. *Cap. Salem*. Pop. (1897) 12,149.

Dent, a town of England, W. Riding, co. York, 3 m. from Sedbury. Pop. 2,096.

Dental, *a.* [Fr. *dentale*, from *dent*, a tooth; Lat. *dentalis*.] Relating, belonging, or pertaining to the teeth; as, a dental operation, a dental college.

(*Gram.*) Formed or pronounced by the teeth, with the aid of the tongue; as, a dental letter.

"The Hebrews have assign'd which letters are labial, which dental, and which guttural." — *Bacon*.

—*n.* (*Gram.*) An articulation or letter formed by placing the end of the tongue against the upper teeth, or against the gum that covers the root of the upper teeth.

Dental Formula. See **DENTITION**. § **Zööl**.

Dental-surgeon, *n.* A dentist.

Dentalium, *n.* [Lat. *dentus*, a tooth.] (*Zööl*.) A genus of molluscs inhabiting elongated univalve shells, resembling an elephant's tusk in miniature—whence its name.

Dentatus, LUCIUS LECINIUS, (*an-tai'tus*), a Roman tribune, who had been engaged in 120 conflicts, and was 45 times wounded. He was murdered by the soldiers of Appian Claudius, but not until he had slain 15 of them, and wounded 30 more, 450 B. C.

Dentaria, *n.* [Lat. *dens*, in allusion to the tooth-like structure of the roots.] (*Bot.*) The Tooth-worts, a genus of plants, order *Brassicaceæ*. They are perennial plants, with toothed root-stocks of a pleasant, pungent taste.

Dentary, *a.* Pertaining to, or producing teeth.

Dentate, **Dentated**, *a.* [Lat. *dentatus*, from *dens*, *dentis*, a tooth.] Toothed; notched; having points resembling teeth; as, a dentate leaf.

Dentately, *adv.* In a dentate manner.

Dentate-seriate, *a.* (*Bot.*) Having the margin divided into incisions, resembling the teeth of a saw.

Dentation, *n.* The form or formation of teeth.

Dentatus, *a.* (*Zööl*.) Toothed; applied to the margins of bodies furnished with sharp teeth with concave edges.

Dent-du-Midi, (*dawn-doo-mé-ä*) [Fr.] An Alpine mountain on the frontiers of Savoy and the Valais; alt. 10,780 ft. above the sea.

Dented, *a.* [See **DENT**.] Indented; impressed with small hollows.

Dentelli, *n. pl.* [It. See **DENTIL**.] (*Arch.*) Modillions.

Denticle, *n.* [Lat. *denticulus*, dim. of *dens*, a tooth.] A small tooth, or projecting point.

Denticulate, **Denticulated**, *a.* [Lat. *denticulatus*.] (*Bot.*) Having the margins finely and slightly toothed.

Denticulately, *adv.* In a denticulate manner.

Denticulation, *n.* State of being denticulated, or set with small teeth.

Denticule, *n.* [Fr., from Lat. *denticulus*.] (*Arch.*) The flat, projecting part of a cornice, on which dentils or modillions are cut.

Dentiform, *a.* [Lat. *dens*, *dentis*, and *forma*, form.] Having the form of a tooth.

Dentifrice, (*den'te-fris*), *n.* [Fr., from Lat. *dens*, and *frico*, to rub.] (*Hygiene*.) A substance usually in the form of a powder, used as an aid in cleaning the teeth. Camphorated chalk is one of the most generally used dentifrices. Cuttle-fish shell and charcoal, reduced to fine powder, are extremely useful as detergents. Pumice-stone is also employed when the teeth have become dark-colored. Catechu, cinchona, and rhatany, are used in order to give astringency; myrrh to give odor; and Armenian bole to impart color to various tooth-powders.

Dentigerous, *a.* [Lat. *dens*, *dentis*, and *gerere*, to bear.] Bearing teeth.

Dentil, *n.* [It. *dentello*, from Lat. *denticulus*.] (*Arch.*) An ornament resembling a tooth, used in the bed-mouldings of Ionic, Corinthian, and Composite cornices. (See Fig. 135.)

Dentilated, *a.* Having teeth, or something resembling teeth.

Dentilation, *n.* Dentition.

Dentilave, *n.* [Lat. *dens*, *dentis*, and *lavare*, to wash.] A wash for the teeth.

Dentile, *n.* [Lat. *dentis*.] (*Conch.*) A small tooth or notch.

Dentiloquist, *n.* One who speaks through the teeth; one who speaks with the teeth closed.

Dentiloquy, *n.* [Lat. *dens*, and *loquor*, to speak.] Act or habit of speaking through the teeth.

Dentinal, *a.* Pertaining to the dentine.

Dentine, *n.* [Lat. *dentinum*.] (*Physiol.*) The fundamental and most constant substance or tissue of which a tooth is composed. It consists of an organized animal basis disposed in the form of extremely minute tubes and cells, and of earthy particles, which have a two-fold arrangement; being either blended with the animal matter of the interspaces and parietes of the tubes and cells, or contained in a minutely granular state in their cavities.

Dentiroster, *n.* (*Zööl*.) A bird of the dentirostral species.

Dentirostral, **DENTIROSTRATE**, *a.* [Lat. *dens*, and *rostrum*, a beak.] (*Zööl*.) Relating to birds of the *Dentirostres* tribe.

Dentirostres, *n. pl.* [Lat. *dens*, and *rostrum*, a beak.] (*Zööl*.) A tribe of Incessores birds, corresponding to the family **SHRIKE**, *q. v.*

Dentirostrate, *a.* Dentiostrial.

Dentiscalp, *n.* [Lat. *dens*, *dentis*, and *scalpare*, to scrape.] An instrument for scraping and cleaning the teeth.

Dentist, *n.* One whose avocation is to treat diseases of the teeth. See TEETH and TOOTH-ACHE.

Dentistry, *n.* Art, profession, or practice of a dentist. See TEETH.

Dentition, *n.* [Fr.; Lat. *dentitio*, from *dentio*, to breed teeth, from *dens*, a tooth.] The breeding or cutting of teeth in infancy; the time of breeding teeth.

(*Physiol. and Med.*) At birth, the teeth consist only of pulpy rudimentary substances, buried in the gum; and it is not till the third or fourth month after birth, that they begin to assume shape and hardness. At this period children become uneasy and fretful; the gum is red and swollen, accompanied with a feeling of itching, which is manifested by the eagerness with which they press any hard substance against the gums. The salivary glands sympathize with the gums, and there is a copious discharge of saliva. Frequently, these symptoms of local irritation are accompanied by others of a more constitutional nature. The skin becomes dry and hot, the face flushed, the bowels relaxed, and the child very restless and fretful. A red rash usually also appears on the skin, called the *red gum*; and if the irritation extends to the muscles of the chest, there is a dry and troublesome cough. When the infant is in a tolerably healthy state, these symptoms usually subside in the course of two or three weeks; but if it be in a weakly condition, they frequently lead to serious and sometimes fatal results. The mucous membrane which lines the stomach and intestines may be affected with that of the mouth, and griping pains, nausea, vomiting, diarrhoea, and other disorders, may be the result. The external skin, sympathizing with the internal covering, may be affected with various kinds of eruptions; the air-passages and lungs may also become inflamed, or the brain and nervous system may become diseased, producing convulsions, epilepsy, tetanus, &c. The cutting of the teeth usually takes place between the seventh and ninth month, though sometimes it is much later. The gum again becomes extremely sensitive; but, instead of now being eased by the pressure of a hard substance, it cannot endure the slightest touch. It is red and swollen, but paler at the upper part, which, just before the tooth appears, seems covered with a flat whitish blister. The other symptoms are a repetition of those already described, with frequent eruptions about the head or lips, inflammation about the ears, and occasionally spasmodic movements of the mouth and jaws. These diseases are not always confined to the period of infancy; for in irritable and nervous constitutions they sometimes manifest themselves (though usually in a less aggravated form) at the eruption of the second or permanent teeth, and even occasionally when the *dentis sapientie* are about to make their appearance. As the great exciting cause of these disorders is the local irritation in the gums, the great object to be kept in view in the treatment of them is to abate or remove this irritation. Where that is considerable, the gums ought to be freely lanced. As the flow of saliva and diarrhoea are efforts of nature to carry off the inflammation, these are not to be interfered with, unless the latter be excessive, in which case it is to be cautiously corrected by small doses of magnesia, or carbonate of lime. Where the bowels are confined, small doses of cooling laxatives are to be administered. If there be drowsiness and oppressed respiration, irregular movements of the jaws, or convulsions, a leech or two to the temples, and a small blister to the back of the neck, or behind the ear, ought to be resorted to. Very mild opiates may sometimes be of benefit; but they ought only to be administered with the utmost caution, and never intrusted to the nurse. Extreme caution should also be exercised in meddling with any eruptions on the skin.

(*Zoöl.*) Anatomists are in the habit of briefly expressing the number of the different kinds of teeth in any mammal by what they term a *dental formula*.

Thus the cat, or genus *Felis*, are characterized by

	6	1	1	2	2
incis.	—	canin.	—	præmol.	—
	6	1	1	2	2

which signifies that they have six incisors in both the upper and the lower jaw; one canine tooth on each side of both jaws; two præmolars, or false molars, on each side of each jaw; two true molars on each side of the upper, and one on each side of the lower jaw. The dental formulae of man is: incis. —; canin. —; præmol. —; molars, —, — = 32.

	4	1	1	2	2
incis.	—	canin.	—	præmol.	—
	4	1	1	2	2

Dentoid, *n.* [Lat. *dens*, *dentis*, and Gr. *eidos*, form.] Tooth-shaped.

Denton, in Maryland, a township and village, cap. of Caroline co., on the Choptank River.

Denton, in Texas, a N. co.; area, abt. 960 sq. m. Rivers. Elm Fork, and Denton Fork of Trinity River, and Hickory Creek. Surface, generally level; soil, fertile. Cap. Denton. Pop. (1890) 21,259.

—A city, the cap. of Denton co., 35 m. N. W. of Dallas. Center of rich farming region. Pop. (1897) about 3,000.

Denton, in Virginia, a village of Hanover co., abt. 20 m. N. W. of Richmond.

Denton Fork, in Texas, rises in Cook co., and flowing S. E., joins the Elm Fork in Dallas co.

Dentonsville, in Virginia, a village of Hanover co., about 22 m. N. of Richmond.

Dentonville, in Michigan, a village of Wayne co., abt. 24 m. W. by S. of Detroit.

D'Entreeasteanx's Channel, (*dawn'tre(r)-kas'-toes*), a strait on the coast of Tasmania, separating Bruny Island from the main-land. Ext. 35 miles long, with a varying breadth of from 3 to 9. — Also, the name of a group of islands in the Pacific Ocean; Lat. 10° S., Lon. 151° E.

Dent's Run, in Pennsylvania, a P. O. of Elk co.

Dent's Station, in Missouri, a P. O. of St. Francois co.

Denu'date, **Denu'dated**, *a.* [Lat. *denudo*, *denudatus*, naked.] (*Bot.*) Appearing naked, as plants, when flowers appear before the leaves.

Denudation, *n.* Act of stripping off covering; a making bare.

(*Geol.*) The removal of solid matter by water in motion, whether of rivers, or of the waves and currents of the sea; and the consequent laying bare of some inferior rock.

Denude', *v. a.* [Lat. *denudo* — *de*, and *nudo*, to make bare or naked.] To strip of all covering; to make bare or naked; to divest; to lay bare; to uncover; to render nude.

"Not a treaty can be obtained, unless we would denude ourselves of all force to defend us." — *Clarendon*.

Denun'ciate, *v. a.* [See DENOUNCE.] To denounce; to threaten; to stigmatize.

Denun'ciation, *n.* [Lat. *denunciatio*. See DENOUNCE.] Act of denouncing; solemn or formal declaration accompanied with a menace, or the declaration of intended evil; proclamation of a threat; a public menace; arraignment.

(*Civil Law*.) The act by which an individual informs a public officer, whose duty it is to prosecute offenders, that a crime has been committed.

Denun'ciator, *n.* He who denounces.

Denun'ciatory, *a.* Characterized by denunciation.

Denver, in Colorado, the capital and principal city of the State, on the South Platte river, 922 miles W. of St. Louis and 15 m. E. of the Rocky Mountains, on a level plain 5,196 feet above the sea. D. was founded in 1858 as a mining camp, on a treeless and barren waste. In the forty years since its origin the village of miners has grown into the handsome "Queen City of the Plains," with stately buildings of brick and yellow stone, wide, well-shaded streets, with electric lights and street cars, and all the essentials of a large modern city. D. is the meeting point of numerous railroads, and the center of a great agricultural and mining district, with a large trade in live stock. It is famed for the invigorating quality of its dry air. Pop. (1897) about 125,000.

Denver, in Iowa, a post village of Bremer co.

Den'verton, in California, a township of Solano co.

Den'ville, in New Jersey, a post-village of Morris co.

Deny', *v. a.* [Fr. *dénier*; Lat. *denego* — *de*, and *nego*, to say no; Sw. *neka*; W. *nacu*. See NEGATION.] To say no to, or in regard to; to declare not to be true, as a statement or position; to contradict; to gainsay; to disavow; to disclaim; to renounce; to abjure; to disown; to refuse, or neglect to acknowledge; to reject; to refuse to grant; to withhold.

Deobstruet', *v. a.* [Lat. *de*, and *obstruo*, *obstructus*, to obstruct — *ob*, and *struo*, to pile. See STRUCTURE.] To remove obstructions, or impediments to a passage; to clear from anything that hinders the passage of fluids in the proper ducts of the body.

Deob'struent, *a.* [Lat. *deobstruens*.] (*Med.*) Removing obstructions; having power to clear or open the natural ducts of the fluids and secretions of the body; aperient. — *n.* Any medicine supposed to have the power of removing obstructions and opening the natural passages of the fluids of the body; an aperient. Among the most important of this class of remedies must be placed the stimulus of friction, whether with the hand or the flesh-brush; mercurial plaster, iodine, camphor, hartshorn, oil, turpentine, and a few other local stimulants.

De'odor, *n.* (*Bot.*) See CEDRUS.

Deodorization, *n.* The act of depriving of odor; and especially of absorbing or destroying the odoriferous principles evolved from decomposing animal and vegetable matter.

Deo'dorize, *v. a.* [Lat. *de*, and *odoro*, from *odor*, smell, scent. See ODOR.] (*Chem.*) To deprive of odor or smell.

Deo'dorizer, *n.* He who, or that which, deodorizes: — especially applied to chemical substances which have the power of absorbing or destroying fetid effluvia; as chlorine, chloride of zinc, nitrate of lead, carbolic acid, &c. See DISINFECTANT, and ANTISEPTIC.

Deodur', an independent state of Hindostan, pres. of Bombay; area, 80 sq. m. Lat. 24° 9' N., Lon. 71° 49' E. Pop. 2,000.

D'Eon, or EON DE BEAUMONT, (The CHEVALIER,) a French adventurer and diplomatist, acting between Louis XV. and the court of London, whose name has been rendered notorious by the curious doubts which prevailed concerning his sex. He is author of *Loisirs du Chevalier D'Eon*, a work in 13 vols. 8vo.; containing numerous historical and political treatises. B. 1728; d. 1810.

Deontolog'ical, *a.* Relating to deontology.

Deontolog'ist, *n.* One versed in deontology.

Deontology, *n.* [Gr. *deon*, *deontos*, that which is binding, from *deo*, to bind, and *logos*, a discourse.] Properly, the doctrine or science of duty, commonly known as *ethics*, or moral science. It has, however, been adopted by Bentham and his followers to designate their own particular doctrine of ethics. "Deontology," says Bentham, "or that which is proper, has been chosen as a fitter term than any other which could be found to represent, in the field of morals, the principle of utilitarianism, or that which is useful."

Deox'idate, **Deox'idize**, **Deox'y'dize**, *v. a.* [Lat. *de*, and *oxidate*. See OXYGEN.] (*Chem.*) To deprive of oxygen, or reduce from the state of an oxide.

Deoxida'tion, **Deoxidiza'tion**, **Deoxyd'za'tion**, *n.* (*Chem.*) The act or process of reducing from the state of an oxide, *i. e.*, of withdrawing the oxygen from a compound, as in the reduction of the native peroxide of iron in the smelting furnaces to the condition of metallic iron. On a small scale, in experimental inquiries, the process of deoxidation may be carried on before the *blow-pipe*, *q. v.*, where the inner, reducing, flame is essentially a deoxidizing one.

Deox'ygenate, *v. a.* (*Chem.*) To deprive of oxygen. **Deoxygena'tion**, *n.* (*Chem.*) The act of deoxygenating.

Depar'eieux, ANTOINE, a French writer on trigonometry and logarithms. B. 1703; d. 1768.

Depart', *v. a.* [Fr. *départir* — *de*, and *partir*; Lat. *dis* and *partior*, to divide, to distribute. See PART.] To leave; to go away; to vanish; to disappear. — To desist; desert; to abandon; to apostatize; to vary; to deviate. — To leave the world; to die. Followed by *from* before the person or thing left; as, to depart from home.

Depart'er, *n.* One who departs. — One who refines metals by separation.

Depart'ing, *p. a.* Going; leaving; forsaking; desisting; vanishing; dying.

— *n.* A going away.

Depart'ment, *n.* [Fr. *département*, from *départir*.] separation or division; a separate part or portion. — separate allotment, or part of business; as, the *department* of ribbons in a fancy-goods store. — A distinct province, in which a class of duties are allotted to a particular person; as, the *department* of correspondence in a banking-house. — A portion of the agents employed by the executive branch of the U. States govt., to whom a specified class of duties is assigned; as, the *Department* of the Interior, the *Department* of State, &c.

(*Geog.*) A division of territory. Previous to the Revolution, France was divided into 34 provinces. By decree of Feb. 16, 1790, the National Assembly ordered the abolition of the old provincial divisions, and the redistribution of the land into 83 Departments. During the years of the Revolution, these were increased to 98; 1808, the Empire consisted of 127; at the fall of Napoleon, of 130; and at present it consists of 86, including the 3 new D. formed by the annexation of Savoy and Nice. Originally, it was intended that the D. should be governed by persons elected by the citizens; but this plan did not suit the views of the First Consul, who placed over each D. a prefect, and a *conseil de préfecture*. The D. were again subdivided into *arrondissements*, over each of which was placed a sub-prefect (*sous-préfet*). The right of naming these functionaries was reserved to the chief of the state.

Department'al, *a.* Pertaining to a department division.

Depart'ure, *n.* Act of departing, or of going away, moving from or leaving a place; withdrawal. — Relinquishment; abandonment. — Death; decease; exit.

(*Surveying*.) The distance between two meridians drawn through the extremities of any course and considered as parallel.

(*Naut.*) The distance made good by a ship due E., due W., of the meridian from which she departed.

(*Law*.) In pleading, the statement of matter in replication, or subsequent pleading, as a cause of action or defence, which is not pursuant to the previous pleading of the same party, and which does not support or fortify it.

Depas'ture, *v. a.* [Lat. *depaſcor*, *depaſtus*. See PASTURE.] To feed upon; to eat up; to consume.

— *v. n.* To feed; to graze.

Depan'perated, *a.* [Lat. *depauper*, *depauperatus*, *de*, and *pauper*, poor.] (*Bot.*) Imperfectly developed; ill-formed.

Depan'ville, in N. York, a post-vill. of Jefferson co. on Chaumont River, abt. 178 m. N. W. of Albany.

Deped'elen, a town of European Turkey. See TEPELI.

Depend', *v. a.* [Fr. *dépendre*; Lat. *dependeo* — *de*, and *pendo*, to hang, from *pendo*, to cause to hang down. See PENDANT.] To hang from, or upon something; hang down; to be sustained by being fastened or attached to something above.

"From gilded roofs depending lamps display." — *Dryden*.

— To be closely connected with anything; to rest or rely solely upon; to have support; to be subservient or subject to; to adhere; to hold; to be retained; to rest with confidence in; to trust; to confide; to have full confidence in; to be in suspense; to be undetermined. (Generally followed by *on* or *upon*.)

Depend'ant, *n.* [Lat. *dependens*.] One who depends on another; one who is at the disposal of another; one who is sustained by, or relies on, another; a retainer.

Depend'ence, or DEPENDENCY, *n.* [Fr. *dépendance* from L. Lat. *dependentia*, from Lat. *dependens*. See DEPEND.] A state of depending, or of hanging down from a supporter; anything hanging down; a series of things hanging to another; state of deriving support from. Reliance; trust; confidence. — State of being related a cause or antecedent; concatenation; connection. State of being subordinate or subject to; that which subordinate and attached to; an adjunct; a subject province, or territory remote from the kingdom or state to which it belongs.

Depend'ent, *a.* [Lat. *dependens*.] Hanging down from or hanging upon; subject to the power of; at the disposal of; not able to exist or sustain itself without the will or power of; relying solely on for support or favor. — *n.* One who depends on another; one who is at the disposal of another; a dependant.

Depend'ently, *adv.* In a dependent manner.

Depend'er, *n.* One who depends; a dependant.

Depend'ing, *p. a.* Relying on; pending; undecided.

Deper'dit, *n.* [Lat. *deperditus*, pp. of *deperdere*, from *de*, and *perdere*, to lose, destroy.] Anything lost or destroyed. (R.)

De Pere, in Wisconsin, an important city of Brown co., on Fox river, 5 m. S. of Green Bay. Here blast furnaces, foundries and machine shops, saw and flour mills, &c. Pop. (1897) abt. 5,000.

De Pey'ster, in New York, a post-village and township of St. Lawrence co., on the Oswegatchie River, about 10 m. S.E. of Ogdensburg.

Depleg'mate, *v. a.* [*de*, priv., and Gr. *phlegma*, phlegm.] (Chem.) To free or clear from phlegm; to deprive of superabundant water; to clear spirit or acids of aqueous matter: to rectify.—A very strong and pure spirit is often said to be highly *depleg'mated*.

Depleg'mation, *n.* (Chem.) The operation of separating water from spirits and acids, by evaporation or repeated distillation.

Deplogis'ticate, *v. a.* [*de*, priv., and Gr. *phlogistos*, burnt, from *phlogizo*, to cause to burn, from *phlox*, *phlogos*, a flame, from *phlego*, to burn, to set on fire, allied to Lat. *fulgeo*; Sans. *bhraj*, to shine.] (Chem.) To deprive of phlogiston, or the supposed principle of inflammability.

Deplogistica'tion, *n.* (Chem.) In the Stahlian theory, the operation by which bodies are deprived of phlogiston.

Depict', *v. a.* [Lat. *depingo*, *depictum*—*de*, and *pingo*, to paint. See PICTURE.] To paint; to portray; to form a likeness of in colors.—To represent in words; to delineate; to describe; to represent.

Dep'ilate, *v. a.* [Lat. *depilo*, *depilatus*—*de*, and *pilus*, the hair. See PILE.] To strip off hair from.

Depila'tion, *n.* [Lat. *depilatis*.] Act of pulling off the hair.

Depilatory, *a.* [Lat. *depilatorius*; Fr. *depilatoire*.] Having the quality or power to take off hair, and make bald.

—*n.* (Med.) Any substance which will remove unnecessary hairs, or hair of any kind. The articles usually sold for this object contain arsenic, the most certain substance known for the purpose; but as any one of the ordinary nostrums requires to be used with great care, they should seldom, and, if possible, never be employed, or when so, not permitted to remain long on the skin at one time. Caustic potash, and arsenic, or litharge, and quick-lime, form the bases of nearly all the preparations vended for this purpose. Depilatories act by entering the pores of the skin and destroying the bulbs of the hairs, causing them to fall off either directly or in a few hours. The only safe article of the sort is a pair of small tweezers, with which, like the Chinese, the hairs may be plucked out. There is a savage method, called the *mechanical depilatory*, in which a compost of plaster of Paris, or pitch, is spread over the part, and, when dry, plucked off, tearing the hair with the plaster.

Dep'ulous, *a.* [Lat. *de*, priv., and *pilosus*, hairy, from *pilus*, hair. See PILOUS.] (Anat.) Without hair; hairless.

Deplanta'tion, *n.* [Fr., from Lat. *deplantare*, to take off a twig, N. Lat., to take out a plant, from *de*, and *plantare*, to plant, from *planta*, plant; Fr. *dé plantatin*.] (Hort.) The art of taking up plants. (R.)

Deple'tion, *n.* [L. Lat. *depletio*, from Lat. *depleo*, *depletus*—*de*, and *pleo*, to fill.] Act of emptying out, or drawing off.

(Med.) The emptying, pulling down, or weakening the system. There are several modes by which *D.* may be effected, as by bleeding, both local and general; by powerful drastic purgatives; by hot baths, and a violent action on the exhalents of the skin, as by sweating; and, lastly, by a vigorous action on the secretions generally, and by a diuretic effect on the kidneys, reducing the system by the amount of liquid discharge from the body. Sometimes one, occasionally all these means are put into operation at once, according to the constitution of the patients, and the nature of the disease which has to be reduced. — See PLETHORA.

Deple'tory, *a.* (Med.) Calculated to obviate fulness of habit.

Deplorable, *a.* [Fr. *deplorable*.] That may be deplored or lamented; that demands or causes lamentation; lamentable; sad; dismal; grievous; miserable; pitiable.

Deplorableness, *n.* State of being deplorable; misery; wretchedness; a miserable state.

Deplorably, *adv.* In a manner to be deplored.

Deplore', *v. a.* [Fr. *deplorer*; Lat. *deploro*—*de*, and *ploro*, to cry out, to cry aloud.] To feel or express deep and poignant grief for; to bewail, lament, mourn, or bemoan.

“But chaste Diana, who his death *deplor'd*,
With Esculapian herbs his life restor'd.” — Dryden.

Deplor'ingly, *adv.* In a deploring manner.

Deploy', *v. a.* [Fr. *deployer*, from Lat. *de*, and *plico*, to fold.] To unfold; to open; to display; to extend, as a body of troops.—(Mil.) When troops have been marching in column, and have changed the formation from column to line, they are said to deploy into line. In column, the front presented is narrow; but when the troops are in line, it is greatly extended;—whence the meaning of the term.

n. The expansion of a body of troops, previously compacted into a column, so as to present a large front.

Depluma'tion, *n.* [L. Lat. *deplumatio*.] The stripping or falling off of plumes or feathers.

(Med.) A tumor of the eyelids with loss of the eyelashes.

Deplume', *v. a.* [Fr. *déplumer*, from Lat. *de*, and *plumo*, *plumatus*, to cover with feathers, from *pluma*, a small, soft feather.] To strip, or pluck off plumage, or feathers; to deprive of plumage.

Depolariza'tion, *n.* [From *de*, and *polarization*, *q. v.*; Fr. *dépolarisation*.] (Optics.) Act of depriving of polarity, as the rays of light.

Depo'larize, *v. a.* [*de*, and *polarize*.] (Optics.) To deprive of polarity.

Depone', *v. n.* [Lat. *depono*, to lay down.] To bear witness; to depose.

Depo'nent, *a.* [Fr. *déponent*.] (Lat. Gram.) Noting certain verbs which have a passive form, but an active or nenter signification. They are so called because they have laid down, as it were, the signification proper to their form.

—*n.* (Law.) One who gives a deposition under oath; one who gives written testimony to be used as evidence in a court of justice.

(Gram.) A deponent verb.

Depopulate, *v. a.* [Lat. *depopulor*, *depopulatus*—*de*, and *populus*, the people; Fr. *dépeupler*.] To unpeople; to dispeople; to deprive of inhabitants.

—*v. n.* To become destitute of people; to become dispeopled.

Depopula'tion, *n.* Act of depriving of people; destruction or expulsion of inhabitants.

Depopulator, *n.* One who depopulates.

Deport', *v. a.* [Fr. *déporter*; Lat. *deporto*—*de*, and *porto*, to carry. See PORTER.] To behave; to demean; to conduct (with the reciprocal pronoun).

“He *deports* himself in the most graceful manner.” — Pope.

Deporta'tion, *n.* [Fr. *déportation*; Lat. *deportatio*.] A carrying away; a removal from one country to another, or to a distant place.

—Banishment; exile.

(Fr. Law.) A punishment equivalent to transportation in English law. It is ranked as third in degree, after capital punishment, and condemnation to the galleys or public labor (*travaux forcés*) for life. *D.* for political offences was a common punishment at one period during the French revolution, especially after the fall of Robespierre and his party. It was then usually executed by conveying the criminals to Cayenne in South America. It has been revived, both to that region and to Algeria, under the law of 1835, art. 17.

Deportment, *n.* [Fr. *déportement*.] Carriage; behavior; conduct; demeanor; manner of acting in relation to the duties of life.

“The coldness of his temper, and the gravity of his *deportment*.” — Swift.

Depos'able, *a.* That may be deposited or deprived of office.

Depos'al, *n.* Act of depositing or divesting of office.

Depose', *v. a.* [Fr. *déposer*; Lat. *depono*, *depositum*—*de*, and *pono*, to lay or put.] To reduce from a throne or other high station; to divest of office; to dethrone; to degrade; to reduce or bring down.

“The duke yet lives that Harry shall *depose*.” — Shaks.

—*v. n.* (Law.) To lay down testimony; to bear witness; to give testimony in writing, according to due form of law.

Deposed', *p. a.* Dethroned; degraded.

(Law.) Testified.

Depos'er, *n.* One who deposes; a deponent; a witness.

Depos'ing, *n.* The act of one who deposes.

Depos'it, *v. a.* [Fr. *déposer*; Lat. *depono*, *depositus*.] To drop; to throw down; to lay up; to lay in a place for preservation; to lodge in the hands of a person for safe-keeping or other purpose; to commit to the care of; to intrust to; to commit to one as a pledge.

—*n.* [Fr. *dépôt*.] Any matter laid, or thrown down, or lodged; anything intrusted to the care of another; a pledge; a pawn; a thing given as security or for preservation; a place where things are deposited; a depository.

(Law.) A naked bailment of goods to be kept for the depositor without reward, and to be returned when he shall require it. A bailment of goods to be kept by the bailee without reward, and delivered according to the object or purpose of the original trust. A contract by which one of the contracting parties gives a thing to another to keep, who is to do so gratuitously, and obliges himself to return it when he shall be requested. A depository is bound to take only ordinary care of the deposit, which will of course vary with the character of the goods to be kept, and other circumstances.

(Geol.) The solid matter which has been formed by the settling down of matter held in suspension in water. Deposits originate in inundation, the forming of alluvium, and the gradual collection of sand, gravel, &c. at the mouths of rivers. Deposits are called marine, lacustrine, fluvial, &c., according to the circumstances which attended their formation.

(Chem.) A substance precipitated from a solution by decomposition.

Deposit, in New York, an important town of Broome co., on the Delaware river, 38 m. S. by E. of Binghamton. Manufactures of pearl buttons, iron, and condensed milk. Pop. (1897) abt. 1,800.

Depos'itory, *n.* [Fr. *depositaire*.] A person with whom anything is deposited, or with whom anything is left or lodged in trust; one to whom a thing is committed for safe-keeping, or to be used for the benefit of the owner; a trustee; a guardian.

Depos'ited, *p. a.* Laid down; put away; laid up or aside; intrusted.

Deposi'tion, *n.* [Fr.; Lat. *depositio*. See DEPOSIT.] That which is thrown down, laid, or lodged; act of dethroning a king; the degrading of a person from an office or station; a divesting of sovereignty, or of office and dignity; a depriving of clerical orders.

(Law.) Act of giving written testimony under oath; the attested written testimony of a witness; an affidavit.

Depos'itor, *n.* [Lat.] One who makes a deposit.

Depos'itory, *n.* [L. Lat. *depositorium*.] A place where anything is deposited or lodged for safe-keeping.

Depôt, (*dépôt*), *n.* [Fr. *dépôt*, from Lat. *depono*, from *depono*. See DEPOSE.] A deposit; a place of deposit; a place where stores and provisions are kept; a building for the reception of passengers, &c., at the terminus of a railroad.

(Mil.) The name given, in France and in England, to any place in which naval and military stores are deposited; but it is more particularly applied to the town or barracks which form the headquarters or home station of any regiment, the main portion of which is serving abroad. Here the records and books of the regiment are kept, and one or two reserve companies are stationed, which are called *dépôt* companies. All recruits and young officers appointed to the regiment are sent to the *dépôt* to be drilled, and to learn their duty before being sent out as reinforcements to the regiment, wherever it may be stationed abroad.

Dep'ing, GEORGES BERNARD, a French historian, who wrote both in the French and in the German languages, B. at Münster, Westphalia, in 1784. In 1803 he settled in Paris, became a teacher, and subsequently devoted himself to literature. His principal works are: *Geschichte des Krieges der Münsterer und Kölner im Bündnisse mit Frankreich gegen Holland*; *Histoire de la Normandie sous le Règne de Guillaume le Conquérant et de ses Successeurs*; *Histoire générale de l'Espagne*. D. in Paris, 1853.

Deprava'tion, *n.* [Lat. *depravatio*.] Act of depraving or corrupting; state of being made bad or worse; deterioration; corruption; degeneracy; contamination; vitiation.

Deprave', *v. a.* [Fr. *dépraver*; Lat. *depravo*—*de*, and *pravo*, crooked, distorted. See PRIVITY.] To make bad or worse; to impair good qualities; to make bad qualities worse; to corrupt; to vitiate; to contaminate; to pollute.

Depraved', *a.* Destitute of holiness or good principles; corrupt; vicious; vitiated; profligate.

Deprav'edly, *adv.* In a corrupt manner.

Deprav'edness, *n.* State of being depraved; corruption; taint; a vitiated state.

Depraver, *n.* One who depraves or vitiates; a corrupter.

Depraving, *n.* Act of traducing.

Deprav'ingly, *adv.* In a depraving manner.

Deprav'ity, *n.* [Lat. *de*, and *pravitus*, crookedness.] State of being depraved; a vitiated state; a corruption of moral principles; destitution of holiness or good principles; corruption; vitiation; wickedness; vice; contamination.

Dep'recable, *a.* [Lat. *deprecabilis*; It. *deprecabile*.] That is to be deprecated; very undesirable.

Dep'recate, *v. a.* [Lat. *deprecor*, *deprecatus*—*de*, and *precor*, to pray. See PRAY.] To seek to avert or ward off any evil by praying, entreating, &c.; to pray against; to pray or entreat that a present evil may be removed, or an expected one averted.—To regret; to have or to express deep sorrow at a present evil, or for one that may occur.

Dep'recatingly, *adv.* By deprecation.

Dep'recation, *n.* [Fr.; Lat. *deprecatio*.] Act of deprecating; a praying against; a praying that an evil may be averted or removed; entreaty.—Petitioning; an excusing; a begging pardon for.

Dep'recative, *a.* Same as deprecatory.

Dep'recator, *n.* [Lat.] One who deprecates.

Dep'recatory, *a.* [L. Lat. *deprecatorius*, and *deprecaturus*.] That serves to deprecate; tending to remove or avert evil by prayer; having the form of a prayer.

Dep'reciate, *v. a.* [Fr. *déprecier*; L. Lat. *déprecio*, *dépreciatus*—*de*, and *pretium*, price, *q. v.*] To lower or lessen the price of a thing; to cry down the price or value of; to undervalue; to disparage; to decry; to lower; to detract from; to underrate; to traduce.

—*v. n.* To fall in value; to become of less worth.

Dep'reciation, *n.* [Fr.] Act of depreciating, or of lessening or crying down in price or value; a falling off in value; reduction of worth.

Dep'reciative, **Dep'reciatory**, *a.* Tending to depreciate; undervaluing.

Dep'reciator, *n.* One who depreciates.

Dep'redable, *a.* That may be depredated or preyed upon.

Dep'redate, *v. a.* [Fr. *dépréder*; Lat. *deprador*, *depradatus*—*de*, and *prada*, prey, booty. See PREY.] To prey upon; to plunder; to ravage; to rob; to pillage; to take the property of an enemy, or of a foreign country by force; to waste; to spoil.

Dep'redation, *n.* [Fr.; Lat. *depradatio*.] Act of plundering; a robbing; a pillaging; waste; consumption; a taking away by any act of violence.

Dep'redator, *n.* [L. Lat. *depradator*.] One who plunders or pillages; a spoiler; a waster.

Dep'redatory, *a.* Belonging to depredation or robbery; plundering; consisting in pillaging.

Dep'rehend', *v. a.* [Lat. *deprehendere*, from *de*, and *prehendere*, to lay hold of, to seize; O. Sp. *deprehend*. See PREHENSIBLE.] To catch one; to take unawares; to take in the fact. (R.)

“That wretched creature being *deprehended* in that impiety, was held in ward.” — Hooker.

—To discover; to find out a thing; to come to the knowledge or understanding of. (R.)

Dep'ress', *v. a.* [Lat. *depressus*, from *deprimo*—*de*, and *premo*, to press; Fr. *déprimer*. See PRESS.] To press, weigh, or cause to sink down; to press to a lower state or position; to let fall; to bring down; to sink; to lower; to abase; to cast down; to deject; to humble; to degrade; to dispirit.

Depressed, *p. a.* Pressed or forced down; lowered; dejected; dispirited; sad; humbled; sunk; rendered languid.

(*Zoöl.*) Applied to the whole or part of an animal body when its vertical section is shorter than its transverse.

(*Bot.*) Pressed inward or flattened from above.

Depressingly, *adv.* In a depressing manner.

Depression, (*de-prēsh'yun*), *n.* [Fr.; Lat. *depressio*.] Act of pressing down; state of being pressed down; a low state; a hollow; a sinking or falling in of a surface; act of humbling; abasement; a state of sadness; humiliation; a sinking of the spirits; dejection; melancholy; a low state of strength; a sinking of strength; a low state of business or of property.

(*Algebra.*) The derivation from a given equation, of another lower in degree, whose roots are related in a known way to those of the first.

(*Surg.*) Operation for a cataract; couching.

D. of the Horizon. See DIP OF THE HORIZON.

Depressive, *a.* Able or tending to depress or cast down.

Depressor, *n.* He or that which depresses.

(*Anat.*) The name of two or three sets of muscles, in the human body, serving to depress the part on which they act; as the *depressor anguli oris*, or *D.* of the corner of the mouth.

Depriement, *a.* [Lat. *deprimens*, *ppr.* of *deprimere*. See DEPRESS.] (*Anat.*) Applied to muscles that depress the external ear.

Deprivable, *a.* Liable to deprivation.

Deprivation, *n.* [Lat. *de*, and *privatio*, from *privo*, to separate.] Act of depriving; a taking away; state of being deprived; loss; want; bereavement; deposition.

"Fools, whose end is destruction, and eternal deprivation of body." — *Bentley*.

(*Eccles. Law.*) An act of censure by which a clergyman is deprived of his parsonage, vicarage, or other ecclesiastical promotion or dignity.

Deprive, *v. a.* [Lat. *de*, and *privo*, from *privas*, one's own, private; Fr. *priver*. See PRIVATE.] To take from one something which is his peculiar property; to take away something possessed or enjoyed; to strip; to bereave; to rob; to despoil; to hinder from possessing or enjoying; to divest of an ecclesiastical preferment, dignity, or office.

Depriver, *n.* He who, or that which, deprives.

De Profundis, [Lat., out of the depths.] (*Eccles.*) The first words of the 130th psalm, which forms a portion of the liturgy of the Roman Catholic Church, and is sung when the bodies of the dead are committed to the grave. A tender melancholy pervades the psalm, which, however, brightens up at the close, under the conviction that with God there is "plenteous redemption."

Deptford, (*dētfūrd*), a town in Kent, England, on the bank of the Thames, at the mouth of the Ravensbourne, 3 m. S.E. from London Bridge. It contains a royal naval school, two hospitals for pilots. It now forms part of London. *Pop.* 1890, 110,000. In 1698 Peter the Great acquired here the art of ship-building.

Deptford, in *New Jersey*, a township of Gloucester co., on the Delaware River.

Depth, *n.* [See DEEP.] Deepness; the distance or measure of a thing from the surface to the bottom, or to the extreme part downward or inward; a deep place; the sea; the ocean; the abyss; a gulf of infinite profundity. — The middle or height of winter; the darkest or stillest part, as of the night; the inner part.

(*Logic.*) Abstruseness; obscurity; unsearchableness; infinity; profoundness; extent of penetration, or of the capacity of penetrating.

Depthless, *a.* That has no depth. (*R.*)

Depuch Islands, (*de'pook*), a large collection of broken rocks lying off the N.W. coast of Australia, and attaining a height of upward of 600 feet above the level of the sea; *Lat.* 20° 37' 45" N., *Lon.* 117° 44' E.

Depudicate, *v. a.* [Lat. *depudicare*, *depudicatum*, to violate.] To violate; to deflower.

De Pue, in *Illinois*, a post-office of Bureau co.

Depulsory, *a.* [Lat. *depulsorius*, from *depulsor*, one who drives away, from *depellere*.] Putting away; averting. (*R.*)

Depurate, *v. a.* [Fr. *dépurer*; Lat. *de*, and *puro*, *puratus*, from *purus*, pure.] (*Med.*) To purge; to purify; to free from impurities, heterogeneous matter, or feculence.

Depuration, Depurition, *n.* Act of purifying, or freeing fluids from heterogeneous matter; purification; clarification.

(*Med.*) The cleansing of sound from impure matter.

Depurator, *n.* He who, or that which, depures or cleanses.

Depuratory, *a.* [Fr. *dépuratoire*.] (*Med.*) Purifying, or tending to purify; cleansing.

Deputa'tion, *n.* [Fr. *députation*. See DEPUTE.] Act of deputing, or of appointing or sending a deputy, substitute, or representative to act for, or to transact business for another; a special commission, or authority, to act as the substitute of another; the person deputed; the person or persons authorized and sent to transact business for another or others.

Depute, *v. a.* [Fr. *députer*, from L. Lat. *deputo*, for *delego*.] To send as a representative; to appoint as a substitute or agent to act for another, or for others; to appoint and send with a special commission, or authority, to transact business in another's name.

Deputies, (*CHAMBER OF*), (*dep'u-tees*). (*Hist.*) Under the French monarchy, the lower of the two legislative chambers in that country. Corresponding to it was the *CORPS LEGISLATIF*, *q. v.*, and the present *NAT. ASSEMBLY*.

Dep'ntize, *v. a.* To depute; to employ or appoint as a deputy.

Dep'uty, *n.* [Fr. *député*.] A representative; a person appointed or elected to act for another, especially a person sent with a special commission to act in the place of another; a lieutenant; a viceroy; a substitute; a delegate; an agent; a factor.

(*Law.*) In general, ministerial officers can appoint deputies, unless the office is to be exercised by the ministerial officer in person; and when the office partakes of the judicial and ministerial character, although a *D.* may be made for the performance of ministerial acts, one cannot be made for the performance of a judicial act. A sheriff cannot, therefore, make a *D.* to hold an inquisition, under a writ of inquiry, though he may appoint a *D.* to serve a writ. In general, a *D.* may have power to do every act which his principal might do; but a *D.* cannot make a *D.*

Deputy District Attorney, *n.* An officer appointed by the District Attorney of the United States, to act for him in certain cases.

De Quincey, THOMAS, an English author, b. in Manchester, 1785. He received a classical education at the grammar-school of Bath, and entered the university of Oxford in 1803, where he remained until 1808. Whilst there he contracted the habit of eating opium, to which he remained a bounden slave for many years. In 1809, after leaving Oxford, he took up his abode at Grasmere, where he resided for more than 27 years. Here he cultivated the friendship of Wordsworth, Coleridge, Southey, Charles Lloyd, and other distinguished authors. He made German literature and philosophy his special study, and translated some of the works of Kant, Fichte, Schelling, Lessing, and Richter. At first he took opium only once a week, but gradually the evil habit grew upon him, and at last he took the horrid drug daily. But the consequences were fearful, as he himself relates in his principal work, *The Confessions of an English Opium-eater*. In 1823 he went to London, where he published his *Suspiria de Profundis*, his *Templar's Dialogues*, and other works. In 1843 he settled at Lasswade, near Edinburgh. His works evince profound learning and deep speculation, together with great critical powers and terseness of diction. *D.* 1859. See *Life of*, by H. A. Page (1877).

Deracinate, *v. a.* [Fr. *déraciner* — *de*, and *racine*, root; from Lat. *radix*, *radius*, root.] To pluck or tear up the leaves; to destroy. (*R.*)

Deracination, *n.* A plucking up by the roots.

Dera Gha'zee Khan, a town of Afghanistan, 40 m. from Bhaulpoor; *Lat.* 30° 5' N., *Lon.* 70° 52' E. It belongs to the English. *Pop.* 25,000.

Dera Is'mael Khan, a town of Afghanistan, 16 m. from Bukkur; *Lat.* 31° 5' N., *Lon.* 70° 58' E.

Derail, *v. a.* (*Mach.*) To run off from the rails of a railway, as a locomotive.

Derailment, *n.* (*Mach.*) The act of a locomotive which runs off from the rails.

Derange, *v. a.* [Fr. *déranger* — *de*, and *ranger*, to set in order, from *rang*, rank.] To put out of the proper rank, array, order, or arrangement; to disturb the regular order of; to throw into confusion or disorder; to disorder the intellect; to disturb the regular operations of reason; to disarrange; to unsettle; to displace; to disturb; to discompose; to ruffle; to disconcert.

Deranged, *p. a.* Put out of order; disturbed; embarrassed; confused; disordered in mind; delirious; distracted.

Derangement, *n.* [Fr. *dérangement*.] A putting out of order; disturbance of regularity, or regular course; disorder; irregularity; confusion; disturbance; disorder of the intellect or reason; insanity.

Derayah, *El.* (*dai-rab-yah*), a town of Arabia, prov. Nedjd, at the foot of Mount Khoeir; *Lat.* 25° 15' N., *Lon.* 56° 50' E.; formerly cap. of the Wahabees. In 1819 it was captured and destroyed by Ibrahim Pasha, of Egypt. *Pop.* 12,000.

Der'be, (*Anc. Geog.*) A small town of Lycaonia, Asia Minor, at the N. foot of the Taurus Mountains, abt. 18 m. E. of Lystra. Paul and Barnabas fled there from Lystra.

Derbend, DERBENT, a fortified maritime town of Russian Daghestan, on the W. shore of the Caspian Sea; *Lat.* 42° 12' N., *Lon.* 48° 25' E. It is fortified by walls of great strength. In 1722 it was taken by Russia, in 1735 restored to Persia, and recaptured by Russia in 1795. *Pop.* 11,431.

Derby, (*dar'be*) EDWARD GEOFFREY SMITH-STANLEY, K.G., 14TH EARL OF, an English statesman, orator, and author, b. in Lancashire, 1799. He was educated at Eton and Oxford, and, in 1821, entered the British House of Commons, being then Mr. Stanley. In that arena, he soon distinguished himself by the brilliancy of his oratorical powers; and on the formation of Lord Grey's govt., he was named Chief Sec'y of State for Ireland. During the Reform Bill crisis, 1830-2, *D.*'s singular genius for debate became still more prominent. In 1833 he carried the Church Temporalities Bill, and the Measure for the

Emancipation of Slavery in the British W. India islands. After devoting the earlier part of his parliamentary life to the furtherance of liberal measures, Lord Stanley joined the Tory opposition, accepted the seals of the Colonial Office in 1841, and took his seat in the House of Peers. On Sir R. Peel's bill for the Repeal of the Corn Laws, *D.* appeared as the head of the Protectionist opposition to the measure in the Upper House. In 1851, Lord Stanley succeeded his father as 14th Earl of Derby, and thenceforward became the acknowledged chief of the great Conservative party. In the same year he became Prime Minister of England, and resigned office in the following year. In 1858 he was again called to power, and, with his cabinet, resigned a second time in 1859. In 1866, Lord *D.* became premier a third time, and held office until the accession of the Gladstone cabinet, in 1868. *D.* 1869. Lord *D.* was the author of a brilliant translation of the *Iliad* into English blank verse, which has gone through 6 editions; and also of an English version of the *Odes of Horace*. He was not a great statesman in the true meaning of the word, but as an orator he stood, in his own time, without a superior, and scarce a rival.

DERBY, EDWARD HENRY, 15th Earl of *D.*, son of the preceding, b. 1826, after distinguishing himself in various official positions, became Secretary for Foreign Affairs in 1874.

Derby, CHARLOTTE DE LA TREMOUILLE, COUNTESS OF, (*dar'be*), an illustrious lady, historically famous for her heroic defence of her husband's castle of Lathom, and of his seignory the Isle of Man, for King Charles I. She was the second daughter of Charles, Duke de Thoars, Prince de Talmont and a peer of France, and at an early age married James Stanley, seventh Earl of Derby. On the breaking out of the civil war, her husband, the Earl of Derby, hastened to join his sovereign at Shrewsbury. Being sent into Lancashire to raise fresh levies, he heard that the enemy intended to invade the Isle of Man, where the Earl was regarded almost as king, and of which he was hereditary chief. Before crossing to the defence of the island, he threw

Fig. 800. CHARLOTTE, COUNTESS OF DERBY.

a few troops, with some munitions of war, into his family-seat of Lathom, the residence of his wife and children; and leaving the Countess with full power to act to the best of her judgment, departed to defend his insular possessions. On February 28, 1644, Lord Fairfax, with the Parliamentary army, sat down before the towers of Lathom Castle, first offering pardon and protection to the Countess and her family, if she would surrender her house. The Countess, after proudly refusing all his conditions, told Fairfax that she held her castle under a double pledge, a promise of faith to her husband, and allegiance to her sovereign, and that while she had life, or one stone held on another, she would maintain her post and defy his power. In consequence of so spirited a reply, Fairfax gave orders for at once commencing the siege; but so incessant was the vigilance of the Countess, and bold and repeated the sallies made by her small garrison, that it was 14 weeks before Fairfax, backed by all the resources at his command, was enabled to complete his parallels. Having, however, at last effected that necessary work, he constructed a large battery, and mounting on it several large pieces of ordnance and a mortar, was in a position to effect serious injury on the devoted castle; but at the last moment, and when, under the cover of night, they were on the point of unmasking their battery, the besieged made a desperate sortie, beat the enemy back, destroyed the battery, spiked the guns, and carried off the mortar in triumph to Lathom. Upon repairing the damages and unmasking a second battery, a second sortie was made with equal success; all the guns were again spiked, and above 100 of the enemy left dead in the advanced trench. Fairfax, at length, disgusted with the resistance he encountered, having already lost over 2,000 men before the place, left the conduct of the siege to one of his lieutenants, Rigby, and proceeded to seek more active service in the field. For the next fortnight Rigby pressed on the siege with redoubled spirit and energy, but owing to the nightly sallies and daily sorties of the garrison, the success of one day was overthrown by the disaster of the next, so well that, alarmed at the number of his dead, and despairing of making any impression on a fortress so gallantly defended, Rigby, having expended all his ammunition, was compelled, on May 22, 1644, to raise the siege of Lathom Castle, and retreat from a place where he had suffered so much mortification and disgrace. Her husband was afterwards taken prisoner at the battle of Worcester, and, in violation of a promise of quarter which had been given him, was beheaded in 1651. The Countess then retired to the Isle of Man, where she regarded herself as queen, and which she defended with the utmost gallantry, being the last person in the British dominion who yielded to the Parliamentary forces.

Fig. 799. — LORD DERBY.

Thomas DeQuincey

1765-1859

Derby (formerly pron. *dar'by*), the county-town of Derbyshire, England, on the Derwent, 132 miles N.N.W. of London. *Manuf.* Has extensive cotton, silk, lace, porcelain, carriages, white-lead, sheet-lead, and iron boilers. Sends two members to the House of Commons. *Pop.* (1897) about 100,000.

Der'by, in *Connecticut*, an important manuf. city of New Haven co., at the junction of the Naugatuck and Housatonic rivers, about 10 miles W. by N. of New Haven; formed, in 1894, from the village of Derby and the borough of Birmingham. Here are extensive manuf. of pins, corsets, silver plate, underwear, paper, &c. *Pop.* (1897) abt. 5,000.

Der'by, in *Indiana*, a post-village of Perry co., on the Ohio river, about 90 m. below Louisville, Ky.

Der'by, in *Vermont*, a post-village and township of Orleans co., on Lake Memphremagog, abt. 50 m. N.N.E. of Montpelier.

Der'by Centre, in *Vermont*, a village of Derby township, Orleans co., on the Passumpsic river, abt. 53 m. N. by W. of St. Johnsbury.

Der'byshire, a county of England, lying between Yorkshire on the N., and Leicestershire on the S. *Area*, 1,030 sq. m. It is mountainous and picturesque towards the N.W., on which account this portion of the country is called the *High Peak*, while the E. and S. parts are called the *Low Peak Rivers*. The Trent, Derwent, Wye, Rother, Dove, and the Erwash. Mineral springs are numerous. *Prod.* Upwards of 2,000 tons of cheese are annually sold out of the county. *Minerals*. Lead, iron, coal, gypsum, felspar, crystals (called Derbyshire diamonds), jasper, chalcedony, and terra-vert. *Manuf.* Woolens, linens, cottons, silks; spinning and weaving, gunpowder, beer, and calico printing. *Pop.* 527,886.

Der'byshire Spar, *n.* (*Min.*) Same as FLINT. *q. v.*

Der'by (The), a very celebrated English horse-race, held at Epsom, and founded by the Earl of Derby. It was first run May 4, 1780, and takes place early on the Wednesday after Trinity Sunday.

Der'ceto, ATARGATIS. (*Myth.*) A Syrian goddess, sometimes represented as in fig. 207, but more generally with the body of a woman, and (as *Dagon*) the tail of a fish (fig. 801). Plutarch says that some regarded her as "Aphrodite, others as *Iero*, others as the cause and natural power which provides the principles and seeds of all things from moisture." This last view is pronounced an accurate description of the attributes of the goddess, and explains her fish-like form and popular identification with Aphrodite. A temple of Atargatis (2 *Mac.* iii. 26) at Carnion was destroyed by Judas Macabens (1 *Mac.* v. 44). Some have supposed that Atargatis was the tutelary goddess of the first Assyrian dynasty.

Der'elict, *a.* [Lat. *derelictus*, from *derelinquo*—*de*, and *relinquo*, to leave. See RELINQUISH.] (*Law.*) Wholly forsaken; left; abandoned, as land left uncovered by the receding of water from its former bed, or a vessel forsaken at sea.

Der'eliction, *n.* [Lat. *derelictio*.] Act of leaving or forsaking; deserting utterly; abandonment; relinquishment; state of being left or forsaken.

(*Law.*) The abandonment of property. Also the gaining of land by the receding of water from its former bed;—opposed to *alluvion*.

Der'g, (*Lough*), a lake of Ireland, in the county of Donegal, abt. 7 m. S.E. of Donegal. It is 3 m. long, 1 to 2½ m. wide, and is surrounded by steep, rugged mountains. Its depth is about 70 feet. It is dotted with many little islands, one of which, Station Island, contains a cave, called St. Patrick's Purgatory, which is visited by many pilgrims between Aug. 1 and 15 of each year.

Der'ide, *v. a.* [Lat. *derideo*—*de*, and *rideo*, to laugh. See RISTLE.] To laugh to scorn; to laugh at in contempt; to turn to ridicule, or make sport of; to treat with scorn by laughter; to ridicule; to mock; to scoff; to jeer.

Der'id'er, *n.* One who derides; a mocker; a scoffer.

Der'id'ingly, *adv.* By way of derision or mockery.

Der'in'da, or DARINDA, in *Illinois*, a township of Jo viess co.

Der'ision, (*-rīzh'un*), *n.* [Fr.; Lat. *derisio*, from *derideo*,—*de*, and *rideo*. See DERIDE.] Act of deriding or laughing at in contempt; contempt manifested by laughter; scorn; mockery; ridicule; a laughing-stock.

Der'isive, *a.* Containing derision; mocking; ridiculing.

Der'isively, *adv.* In a derisive manner; contemptuously.

Der'isory, *a.* [Lat. *derisorius*, from *derisor*, a mocker; *derisor*; Pr. *derizori*; It. *derisorio*.] Mocking; ridiculing; derisible.

Der'ivable, *a.* That may be derived; that may be won or received, as from a source or origin, or from ancestors.

Der'ivation, *n.* [Fr. *dérivation*; Lat. *derivatio*.] The

transmission of anything from its source; a deduction from premises; a tracing of descent; genealogy.

(*Gram.*) A tracing of a word from its original root.

(*Gun.*) The peculiar constant deviation of an elongated projectile fired from a rifled gun.

(*Med.*) The removing or drawing away of a disease from its original seat to another part by artificial means, as by the application of a blister in pleuritis. The doctrines held by the earlier physicians on this subject, as that the matter of the disease was thus drained away through some channel, are now quite exploded.

(*Math.*) The operation of reducing one fraction, from another, according to some fixed law; the process of finding a derivation.

Deriv'ational, *a.* That relates to derivation; derivative.

Deriv'ative, *a.* [Fr. *dérivatif*; Lat. *derivativus*.] Derived or taken from another.

—*n.* A thing or word derived or taken from another.

(*Med.*) An agent employed to draw away a disease from its original seat to another part.

(*Mus.*) A chord not fundamental, but obtained from another by inversion.

(*Math.*) The relation between the successive states of a varying function.

(*Gram.*) A word formed from another word, by the adjunction of a prefix or suffix, or other change; as, *disadvantage*, derivative from *advantage*.

Deriv'atively, *adv.* In a derivative manner; by derivation.

Derive, *v. a.* [Lat. *derivo*—*de*, and *rivo*, from *rivus*, a stream.] To receive from a source by a regular conveyance.—To draw or receive, as from a source or origin; to deduce or draw, as from a root or primitive word; to trace.

(*Logic.*) To infer.

(*Gram.*) To trace a word from its origin.

—*v. n.* To proceed or come from. (*R.*)

"I am, my lord, as well deriv'd as he"—*Shaks.*

Derived, *p. a.* Drawn, as from a source; deduced; received; regularly conveyed; descended; transmitted.

Deriver, *n.* One who derives or deduces.

Derm, *n.* [Gr. *derma*. See DERMAL.] (*Anat.*) The true skin of the human body, sometimes called the *dermoid* tissue; as the scarf skin, or cuticle above it, is denominated the epidermis, from being upon or above the derma.—See SKIN.

Dermal, *a.* [From Gr. *derma*, a skin, from *derō*, to flay.] (*Anat.*) Pertaining to skin; consisting of skin.

Dermatic, or DERMATINE, *a.* [Gr. *dermaticos*, and *dermatin*, from *derma*.] (*Anat.*) Belonging to the skin.

Dermatin, or DERMATINE, *n.* [Gr. *derma*, *dermatos*, skin.] (*Min.*) A mineral closely allied to *Hydrophite*, formed in brown stalactitic masses in the serpentine quarry of Saxony.

Dermatog'raphy, *n.* [Gr. *derma*, skin, and *graphe*, writing, description, from *graphein*, to write.] Same as DERMATOLOGY, *q. v.*

Dermatoid, *a.* [Fr. *dermatoïde*; Gr. *dermatoides*, *dermatoides*, from *derma*, skin, and *eidōs*, form.] (*Anat.*) Resembling the skin.

Dermatolog'y, *n.* [Gr. *derma*, skin, and *logos*, discourse.] (*Med.*) A treatise or history of the skin and its diseases.

Dermestes, *n.*; **Dermes'tidæ**, *n. pl.* (*Zoöl.*) A genus and family of coleopterous insects, the antennæ of which are elevated and perfoliated transversely. The larvæ or grubs of this tribe devour dead bodies, skins, and almost any animal substance, and are exceedingly destructive to books and furniture. One of the most familiar species is the *Dermestes lardarius*, or Bacon-beetle, which is about ½ inch in length, of a dusky-brown color, and marked with black spots.

Dermie, *a.* (*Med.*) Relating to derm or skin.

Dermis, *n.* See DERM.

Dermoid, *a.* See DERMATOID.

Dermoskel'eton, *n.* [From *derm*, and *skeleton*, *q. v.*] (*Zoöl.*) The coriaceous, crustaceous, or osseous integuments, such as covers many invertebrate and some vertebrate animals; it serves more or less completely the office of protecting the left parts of the body, and as a fixed point of attachment to their moving powers.

Dermot'omy, *n.* [Gr. *derma*, *dermatos*, skin, and *tomē*, a cutting, from *tomēin*, to cut.] (*Anat.*) The anatomy of the skin.

Dernier, *a.* [Fr. from O. Fr. *derinier*, the last, from Lat. *de*, and *retro*; L. Lat. *deretro*, from behind.] Last; final; ultimate; as, the *dernier* resort.

Der'ogate, *v. a.* [Lat. *derogo*, *derogatio*—*de*, and *rogo*, to ask, to propose, as a law. See ROGATION.] To detract from; to lessen by taking away a part.

Der'ogately, *adv.* In a disrespectful manner.

Deroga'tion, *n.* [Fr. *dérrogation*; Lat. *derogatio*.] Act of derogating, or of taking from any thing, established by law or otherwise; a taking from; a lessening or diminishing; a diminishing of value; reputation, or estimation; deduction; (Sp. *derogativo*).

Derogative, *a.* [Sp. *derogativo*.] Derogatory. (*R.*)

Derogatorily, *adv.* In a derogatory or detracting manner.

Derogatoriness, *n.* Quality of being derogatory.

Derogatory, *a.* [L. Lat. *derogatorius*.] Detracting or tending to lessen by taking something from; that lessens the extent, effect, or value.

Der'rias, *n.* (*Zoöl.*) See BABOON.

Der'rick, *n.* [Also *Derick*, originally an abbreviation of *Theodorick*; Transylvanian, *Theodorich*; Goth. *Thiudreiks*; A. S. *Theodoric*; O. Sax. *Detrich*; O. H. Ger. *Diolrich*; N. H. Ger. *Diétrich*; the name of a noted executioner at Tyburn, in the 17th cent., hence it became a general term for a hangman. Cf. Ger. *diétrich*, a pick-lock, originally equivalent to *Derrick*, *Theodorick*, *Webster*.] (*Mil.*) A beam of wood, one end resting on the ground, the other supported at any convenient angle by guys. It gives a point or fulcrum in space to which tackle can be applied for moving heavy ordnance, &c.

(*Naut.*) A floating crane, which consists of a large iron pontoon of great width, divided into a number of watertight compartments. From the centre rises a powerful tripod mast, across which turns a yard of great strength. To one arm of the yard are suspended several fourfold blocks, through which pass the chains intended to hoist the weight. From the blocks these chains pass over the top of the mast to the opposite extremity of the yard, and thence to drums worked by powerful steam-engines, in the pontoon. When the weight is suspended on one side, the water is admitted as a counterpoise into some of the compartments on the other. The vessel has powers of slow locomotion, and is employed in the lifting of vessels to have their bottoms examined, the placing of machinery, recovery of wrecks, &c. It is an invention of Mr. Bishop of the U. States.

Derrs'town, in *Pennsylvania*. See LEWISBURG.

Der'ry, a co. and town of Ireland. See LONDONDERRY.

Der'ry, in *Illinois*, a township of Pike co.

Der'ry, in *New Hampshire*, a town and township of Rockingham county, about 25 miles southeast of Concord, on the Boston and Maine Railroad. Has extensive manuf. of shoes and edge tools, and is surrounded by an apple-growing region of some importance. *Pop.* (1897) about 3,000.

Derry, in *Pennsylvania*, a borough and township of Dauphin co.

—A township of Mifflin co.

—A township of Montour co.

—A township of Westmoreland co.

Derry Church, in *Pennsylvania*, a post-office of Dauphin co.

Derry Depot, in *New Hampshire*, a post-office of Rockingham co.

Derry Station, in *Pennsylvania*, a post-office of Westmoreland co.

Der'rynaue, in *Minnesota*, a township of Le Sueur co.

De Rny'ter, in *New York*, a post-village and township of Madison co., 26 m. S.S.E. of Syracuse. *Pop.* (1897) 725.

Der'vis, **Dervise**, or **Dervish**, *n.* [From Per. *derwesh*, poor, from O. Per. *derew*, to beg, to ask alms.] Like the corresponding Arabic word *Fakir*, *D.* denotes a particular class of persons in Moslem countries, resembling in many respects the monks of Christendom. There are many different brotherhoods and orders of dervishes, who are generally named after their founders; and, according to tradition, their origin dates from the earliest times of Islam, but they probably arose at a much later period. They mostly live in richly endowed convents called *Tekkijé*, or *Changah*, and are under a chief, who

Fig. 801.

DERCETO, OR ATARGATIS.

Fig. 802.

BACON-BEETLE.
(*D. lardarius*.)

Fig. 803.—DANCING DERVISHES.

has the title of sheik or pir, *i. e.* elder. They are generally allowed to marry, but are obliged to sleep one or two nights a week in the convent of their order. Among some of the orders a part of their religious exercises consists in dancing and whirling themselves around with great velocity, while others subject their bodies to the most cruel tortures.

Derwent, (*dur'went*), the name of several rivers of England.—1. A river of Cumberland, rising in the district of Borrowdale, and falling into the Irish Sea, after a course of 36 m.—2. A river of Derbyshire, rising in the mountains of that county, and uniting with the Trent, after a course of nearly 63 m.—3. A river of the East Riding of Yorkshire, rising near Tearwood Dale, and falling into the Ouse at Barmby, after a course of 72 m.

Der'went, a Tasmanian river, rising near the centre of Van Diemen's Land, and falling into the S. Pacific Ocean through an estuary, separating the districts of Richmond and Hobart-town. Length, 115 miles.

Derzhavin, (*der-zha'vin*), GABRIEL ROMANOVITCH, a Russian poet, b. in Kasan, 1743. He distinguished himself both in the military and civil services, was appointed secretary of state in 1791, by Catherine II., and minister of justice in 1802, by Alexander I. His poems are marked by lofty sentiments and beautiful imagery, especially his world-renowned *Ode to God*, which has

been translated, not only into every European language, but even into Persian, Chinese, and Japanese. This grand effusion of the Russian muse received the honor of being suspended, embroidered with gold, in the great temple of Jeddo. Among *D*'s other poems may be mentioned *Feliza*, and *The Waterfall*. *D*. in 1816.

Desaguado'ro, a river of the Argentine Republic, between the provinces of San Luis and Mendoza, but dried up in summer. Length, 450 m.

Desaguado'ro, an extensive depression or valley in Bolivia and Peru, lying between two ridges of the Andes into which the great chain divides near the famous city of Potosi, Lat. 19° 35' S.; and again unites at the peak of Vilcañota, Lat. 14° 30' S., Lon. 78° 50' W. This great valley or table-land comprises an area of about 150,600 sq. m., and includes the lake Titicaca, 12,000 ft. below the level of Titicaca.

—A river which, rising in Lake Titicaca, and flowing S. 180 m., enters lake Anillagas, or lake Pansa, abt. 160 m. N.W. of Potosi. It is the only river of any consequence whose entire basin is within Bolivia. Length, 170 m.

Desaguadero de Ossor'no, a lake in Chili, prov. Araucania, abt. 35 m. long, by abt. 5 m. wide. Its surplus waters are carried to the Pacific Ocean by the Osorno River.

Desaignes, (*dés'ain*), a town of France, dep. Ardèche, on the Doux, 16 m. W.N.W. of Tournon: pop. 4,647.

Desaix de Vey'goux, LOUIS CHARLES ANTOINE, (*dés'ai*), a French general, b. 1768. In the early part of the Revolution he became aide-de-camp to General Custine, and was severely wounded at the battle of Lauterberg, but kept the field, and rallied the battalions after they had been thrown into disorder. Named successively general of brigade and of division, he contributed greatly, by his talents, to the success of the famous retreat of Moreau from Germany, the left wing of the army being commanded

Fig. 804.

TOMB OF DESAIX, (near Strasburg.)

by him on that occasion. He afterwards defended the bridge and fort of Kehl for two months against the Austrian army with great bravery, and was wounded; but subsequently joined Bonaparte at Milan, when it was announced that "the brave General Desaix had come to visit the army of Italy." He served with Bonaparte in Egypt, where he distinguished himself greatly, and was appointed governor of the upper part of the country. It was here he achieved his greatest glory. He completely subdued Upper Egypt, and received, as a testimony of admiration, from Bonaparte, a sword, with this inscription on its blade, "Conquête de la Haute Egypte!" He was obliged, however, in 1800, to sign the unfavorable treaty of El Arish with the Turks and English, and, on his way to France, was captured and detained by Lord Keith as a prisoner of war. He afterwards obtained his parole, and went to France. He once more fought under the banner of Bonaparte in Italy, but was killed at the battle of Marengo, to which victory he principally contributed, June 14, 1800.

Des Al'temand's Lake, in Louisiana, abt. 5 m. N. E. of the Mississippi River, and connected by a bayou of its own name with lake Washia; length, about 7 m.

Des Arc, in Arkansas, a post-village, cap. of Prairie co., on White river, about 50 m. N. E. of Little Rock.

Des Arc Bayou, in Arkansas, rises in White co., traverses a part of Prairie co., and enters the White River near Des Arc.

Desang'iers, MARC ANTOINE MADELEINE, a French song-writer and dramatist, b. 1772. His songs were for a time very popular. *D*. 1827.

Desault, PIERRE JOSEPH, (*da-sô'*), a French surgeon, b. near Macon, 1744. In 1782 he was appointed surgeon-major to the Hospital of Charity, after which he became head surgeon of the Hôtel-Dieu. In 1791 he commenced his "Journal de Chirurgie," a work of high reputation. During the violence of the Revolution, he was confined some time in the Luxembourg prison; but his usefulness saved his life. He died while attending the Dauphin, June 1, 1795, which induced a suspicion that he was dispatched because he would not poison that unfortunate prince. He left a work entitled *Traité des Maladies Chirurgicales*, &c., 2 vols. 8vo.

Desboro, or DESBOROUGH, a sea-port on the N. coast of Prince Edward Island, in Queen's co.; Lat. 46° 21' N., Lon. 63° 13' W.

Des'cant, *n*. [O. Fr. *deschant*; Sp. *discante*, treble, concert. See the verb.] (*Mus.*) A term formerly used to express the art of composing in parts. By Hubald, Odo, Guido, and others, it was employed to signify concord and harmony of sounds. Descant is of 3 kinds: viz., *Plain descant*, which is synonymous with simple counterpart; *Figurative descant*, which is less restrained, and includes the relief of discords; and *Double descant*, which denotes that arrangement of the parts which will allow the treble or any high part to be converted into the bass, and *vice versa*. This term is also employed to imply a

melodious display of notes extemporaneously played or sung to any given bass, as well as to denote the highest part in the score, viz., the soprano, or highest female voice.

—A discourse; discussion; disputation; animadversion; comment, or a series of comments.

—*v. n*. [O. Fr. *deschanter*; Sp. *discantar*; Lat. *dis*, and *canto*, to sing. See CHANTS.] (*Mus.*) To sing in parts; to run a division or variety with the voice on a musical ground, in true measure.

—To discourse at large; to comment; to make a variety of remarks; to animadvert freely. (Followed by *on* or *upon*.)

Descant'er, *n*. One who descants.

Descant'ing, *n*. The act of one who descants.

Descartes, RENE' (*da-kart'*), a celebrated French philosopher, b. in La Haye, Touraine, 1596, and received his education at the Jesuits' College at La Flèche. On leaving that seminary he removed to Paris, and applied himself to the study of mathematics. In 1616 he entered into the army of the Prince of Orange; and, while serving in the garrison at Breda, solved a difficult mathematical problem, which had been posted in the public streets. This introduced him to the acquaintance of the learned Beckman, the principal of the college of Dort. While at Breda, he wrote, in Latin, a treatise on music, and projected some other works. He next served in the army of the Duke of Bavaria, but soon after quitted the military life, that he might give himself wholly up to science and philosophy. He visited the principal countries of Europe, and in 1623 settled at Amsterdam; removing, however, to other towns of Holland in succession, the better to insure privacy. During the 20 years thus spent he published his various works, obtaining immense reputation as a philosopher, and at the same time encountering violent opposition, especially from the side of theology. Rome and Geneva were at one in persecuting the new thinker. His works were condemned, he was prohibited from public teaching, and his life was scarcely safe. At the invitation of Christina, queen of Sweden, he went to Stockholm, where he died in 1650. His principal works are: *Principia Philosophiæ*; *Discours de la Methode pour bien conduire la Raison, et chercher la Verité dans les Sciences*, &c. The philosophy of *D*. forms one of the great landmarks in the history of free thought. It gave the death-blow to scholasticism, raised a stout opposition to the merely experimental method, and infused a new life and vigor into the sphere of thought and speculative research. *D*., starting from doubt, finds the first certainty in self-consciousness: *Cogito*. On this he attempts to found and build up a

Fig. 805. — BIRTH-PLACE OF DESCARTES.

system capable of demonstration. His system, as vehemently opposed by some as it has been eagerly embraced by others, has formed the starting-point for most of the subsequent systems. — See CARTESIANISM. Recent discoveries place his nativity at Sincé-m-Erdre, near Nantes.

Descend', *v. n*. [Fr. *descendre*; Lat. *descendo* — *de*, and *scendo*, to climb.] To move or pass from a higher to a lower place; to move, come, or go downward. — To rush; to fall suddenly or violently. — To invade, as an enemy. — To proceed from a source or original; to be derived from; to proceed, as from father to son, or to a successor, in the order of inheritance or lineage. — To pass from general to particular considerations. — To come down from an elevated or honorable station.

(*Mus.*) To fall in sound; to pass to a note less acute.

—*v. a*. To walk, move, or pass downward on a declivity.

Descendant, *n*. [Fr. *descendant*; Lat. *descendens*.] Any person proceeding from an ancestor in any degree; issue; offspring; in line of generation.

—*a*. Descending; falling; sinking. — Proceeding from an original, or ancestor.

Descend'er, *n*. One who descends.

Descendibility, *n*. Quality of being descendible, or capable of being transmitted from ancestors.

Descendible, *a*. That may be descended or passed down; that may descend from an ancestor to an heir.

Descend'ing, *p. a*. Moving downward; proceeding from an ancestor.

Descen'sion, *n*. [Lat. *descensio*.] Act of going downward. — Degradation.

Descen'sional, *a*. Pertaining to descension, or to descent.

Descen't, *n*. [Fr. *descente*; Lat. *descensus*.] Act of descending; act of passing from a higher to a lower place, by any form of motion. — Inclination downward; fall from a higher state or station. — A landing from ships; invasion of troops from the sea. — A passing from an ancestor to an heir; a proceeding from an original or progenitor; birth; origin; extraction; lineage. — A generation; a single degree in the scale of genealogy; dis-

tance from the common ancestor; offspring; descent; issue. — A rank in the scale of subordination; lowest place.

(*Law*.) Hereditary succession. See SUCCESSION.

Deschambault, (*desh-am-bo'*), a post-village, Lower Canada, co. of Pont-neuf, on the St. Lawrence River, about 39 m. S.S.E. of Quebec. Pop. 2,402.

Desclo'zite, *n*. (*Min.*) An orthorhombic mineral, named after the French mineralogist Descloizeaux. gr. = 5.839. Lustre bright. Color black to olive-brown. Comp. Vanadic acid 29.3, oxide of lead 70.7 = 100.

Describable, *a*. That may be described; capable of description.

Describe', *v. a*. [Lat. *describo* — *de*, and *scribo*, write.] To delineate, or mark the form or figure of; mark or trace out; to show or represent to others words, or by signs; to set forth; to represent; to plain; to define; to depict; to portray; to relate; to count; to express; to narrate; to draw a plan; to represent by lines and other marks on paper, or other material; to give a clear and vivid exhibition of in language.

Describ'ent, *n*. [Lat. *describens*. See SUPRA.] (*Geo*) That line or surface from the motion of which a surface or body is supposed to be generated or described.

Describ'er, *n*. One who describes or recounts.

Descri'er, *n*. One who describes or perceives.

Description, *n*. [Fr.; Lat. *descriptio*, from *describo*, from *describo*.] Act of describing, or of delineating; or representing the figure of anything by a plan; a figure or appearance of anything delineated; delineation; representation.

—A sentence or passage in which anything is described.

"A poet must refuse all tedious and unnecessary descriptions; a robe which is too heavy, is less an ornament than a burthen." Dryden

—The qualities expressed in a representation; a class; sort; as, a friend of evil description.

Descriptive, *a*. [Fr. *descriptif*.] Containing description; tending to describe; having the quality of representing.

D. Geometry. The application of geometrical rules to the representation of the figures, and the various relations of the forms of bodies, in accordance to forms applicable to civil, military, and naval architecture, and mechanical engineering, and the other arts that require more correct scientific representations than hitherto been afforded to the student.

Descriptively, *adv*. By description.

Descriptiveness, *n*. The quality of being descriptive.

Descry', *v. a*. [O. Fr. *descrier*, now *décrier* — *de*, and *crier*, to cry.] To explore; to examine by observation; to find out; to discover anything concealed; to have a sight of from a distance; to see; to behold; to spy; to discern.

Descra'da, an island in the W. Indies. See DESIRAD.

Desec'rate, *v. a*. [Lat. *desecro*, *desecratus* — *de*, and *sacro*, from *sacra*, sacred.] To divert from a sacred purpose or appropriation; to divest of a sacred character or office. — To profane by misapplication.

Desecration, *n*. Act of diverting from a sacred purpose or use; the act of diverting from a sacred character or office; profanation.

Deselm', in Illinois, a post-office of Kankakee co.

Desembo'que, a town of Brazil, in the province of Minas-Geraes, on the Velhas, about 400 m. S.W. of Goyaz. There are mineral springs in the neighborhood, considered very efficacious in cutaneous affections. pop. of town and dist. about 5,000.

Des'cret, *n*. The name sometimes given to the Missouri Territory, in the United States. See UTAH.

Des'cret University of, founded in 1850. See UNIVERSITY OF UTAH.

—A post-village of Millard co. Pop. about 700.

Des'ert, *a*. [Fr. *désert*; Lat. *desertus*.] Forsaken; uninhabited; wild; untilled; waste; uncultivated; empty; unoccupied.

—*n*. A term generally used to designate an uninhabited place or solitude. In this sense it is equally applicable to the fertile plains watered by the Marañon, and the wastes of Libya; but it is applied more particularly to the vast sandy and stony plains of Africa and Asia. In every region of the globe plains are to be found of greater or less extent, which, though marked by striking features of resemblance in their grand outlines, exhibit with the different latitudes in which they are placed corresponding variety of character, and, according to the distinguishing peculiarities of each, are known by different appellations. Thus we have the *Steppes* of Europe, the *Deserts* of Asia and Africa, the *Prairies* or *Savannahs* of the Mississippi and the Missouri, and the *Pampas* and *Llanos* of S. America. — The most striking feature of N. Africa consists of its immense deserts, which have in all ages presented to the speculation of the geographer objects highly worthy of attention. Of these the chief is the *Sahara*, or the *Desert*, so called by way of pre-eminence. In many parts the dreary waste of loose and hardened sand is broken by low hills of sandstone, or by tracts of arid clay, and occasionally is enlivened by verdant isles, or *oases*, which serve as resting-places for the caravans that traverse these arid regions. But for these *oases*, indeed, the *Sahara* would be wholly impassable. It presents, says M. Brun, no traces of a beaten path; and the caravans that traverse it, directing their way by the polar star, describe a tortuous road, in order to profit by the oases, which are represented as brilliant with vegetation, and which probably owe a great part of their reputation to the contrast they form with the absolute barrenness of the desert. The great deserts of Africa are separated

René Descartes

1596-1650

from those of Asia only by the valley of the river Nile and the Red Sea. Soon after quitting the Nile, the traveller by the route of Suez encounters sand, which is continued into the centre of Arabia, where it forms the desert of Nejd, extending to the valley of the Euphrates. The sandy zone then inclines northward, enters Persia, and forms the saline deserts of Adjemi, Kerman, and Mekran; it is turned north-east by the valley of the Indus, passes through Cabul and Little Bokhara, till it joins the vast deserts of Gobi and Shamo, which occupy so large a portion of Central Asia between the Altai and Mustai chains, and reach to the confines of China. The sandy zone, thus traced throughout the breadth of the ancient continent from W. Africa to 120° of E. Lon., has been computed to cover an area of 6,500,000 sq. m.; but the Asiatic portion of this tract includes many chains of mountains, and fertile valleys. It is characterized by the occurrence of arid wastes of sand or clay, sometimes with saline incrustations on the surface, and is remarkably deficient in considerable rivers. Except the Nile, the Euphrates, the Indus, and the Oxus, there are no large rivers in a region which embraces almost a fourth part of both Africa and Asia. This portion of Central Asia forms a series of elevated plains 6,000 miles in length from east to west. Some of these plains, says Humboldt, are covered with herbage; others produce only evergreen saliferous plants, with fleshy and jointed stems; but a great number glitter from afar with a saline efflorescence that crystallizes in the semblance of lichens, and covers the clayey soil with scattered patches like new-fallen snow. Under the head of *MIRAGE* is found some account of a singular optical illusion often seen in the desert.—In the Old Testament the term *desert* bears a wholly different interpretation from that usually attached to it in other writings. It has been fully shown by Reland (*Palest.* l. i. p. 375) that the Hebrew כרוב (mid-bar), the ἐρημος of the Greeks, and the *desertum* or *solitudo* of the Latins, bear no analogy to each other; the first being appropriated almost exclusively to those thinly peopled districts of the Holy Land which yielded pasturage for cattle, and were remarkable at once for their beauty and the luxuriance of their vegetation.

Desert', n. [O. Fr. *déserte*, merit; Lat. *deservitura*, *deservitio*, from Lat. *deservio*, to serve diligently—*de*, and *servio*, to serve.] A deserving; diligent or faithful service; due; worth; excellence; that which is deserved; merit, or demerit; claim to reward, or liability to punishment; worthiness, or unworthiness; reward, or punishment justly due.

Desert', v. a. [Fr. *désarter*; Lat. *desero*, *desertum*—*de*, and *sero*, *sertum*, to join or bind together; Gr. *heiro*.] To separate from; to quit with a view not to return to; to forsake; to leave, as the service in which one is engaged, in violation of duty; to forsake; to leave; to abandon; to relinquish; to quit.

—*v. a.* To run away; to quit a service without permission; as, to desert from a ship.

Desert'er, n. One who deserts; particularly a soldier or seaman who quits the service without permission, and in violation of his engagement. By the articles for the government of the navy of the U. States (Art. 12), it is enacted, that, "if any person in the navy shall desert to the enemy, or to rebels, he shall suffer death;" and (Art. 13), "if any person in the navy shall desert in time of war, he shall suffer death, or such other punishment as a court-martial shall adjudge." The rules and articles for the government of the land forces of the U. States authorize the infliction of corporal punishment, not exceeding 50 lashes, for desertion in time of peace, by sentence of a general court-martial; and the law does not permit punishment by stripes and lashes for any other crime in the land service. In time of war, a court-martial may sentence a deserter to suffer death, or otherwise punish, at its discretion.

Desert'ion, n. [Fr. *désertion*.] Act of deserting; act of forsaking or abandoning, as a party, a friend, a country, an army, a military corps, or a ship; act of quitting, with an intention not to return; state of being forsaken by God.

Deserve', v. a. [O. Fr. *déservir*; Lat. *deservis*—*de*, and *servio*, to serve.] To earn by diligent and faithful service; to merit; to have a just claim to an equivalent for labor or services, or for good conferred; to be worthy of, whether in good or evil.

—*v. n.* To merit; to be worthy of, or deserving.

Deserved', pp. or a. Merited; worthy of.

Deserv'edly, adv. According to desert; justly.

Deserv'er, n. One who deserves, or merits.

Deserv'ing, n. Act of meriting; desert.

—*a.* Worthy; meritorious.

Deserv'ingly, adv. In a deserving manner.

Desève', RAYMOND, a French magistrate, b. in Bordeaux, 1750. He practised as an advocate at Paris, and his acknowledged talents caused him to be named one of the counsel for the unfortunate Louis XVI., whose cause he most ably defended, after Turgot had declined the dangerous task. He was imprisoned for a time, but escaped the scaffold; and on recovering his liberty he could never be induced to serve either the Directory, the Consulate, or the Imperial government. On the return of the Bourbons he received, as the only survivor of the 3 selected by Louis for his counsel, the grateful notice of Louis XVIII. for his devotedness to his royal and unfortunate predecessor. He held several distinguished offices, was a peer of France, a knight of the order of Malta, a member of the French Academy, and president of the Court of Appeals. D. 1828.

Desha', in *Arkansas*, a S. E. co. bordering on the Mississippi river. Area, about 732 sq. m. Rivers, Mississippi, Arkansas, and White rivers, and Bartholomew Bayou.

Surface, an alluvial plain. *Soil*, fertile. *Cap.* Arkansas City. *Pop.* (1890) 10,324.

Deslionnières, ANTOINETTE DU LIGIER, (*du-zool-yair'*), a handsome, witty, and accomplished Frenchwoman, and a writer of much versatility, was b. at Paris, in 1634; she married a gentleman of family, and was introduced at the court of Louis XIV. in 1657, where she attracted much attention, and lived on terms of friendship with the principal literati of the age. She produced numerous plays and operas, few of which were successful; but her "*Jdyls*" are still admired. She d., after 12 years of suffering from a cancer in her breast, in 1694.

Deshabille, (*d's-hā-beel'*) *n.* [Fr., from *deshabiller*, to undress, from *des*, equivalent to Lat. *dis*, and *habiller*, to dress; Lat., as if *habituare*, from *habitus*, dress, attire.] Undress; loose dress. — See *DISHABILLE*.

Desic'cant, a. [Lat. *desiccans*.] Having the property of drying up.

—*n.* (*Med.*) An application that dries up.

Desic'cate, v. a. [Lat. *desicco*, *desiccatus*—*de*, and *sicco*, to dry; Gael. *saec*, to scorch, to dry, to parch; W. *syeh*, dry; Fr. *dessécher*.] To dry up; to exhaust of moisture; to exhale or remove moisture from.

—*v. n.* To grow by.

Desiccation, n. [Fr.; L. Lat. *desiccatio*.] Act of making dry; the state of being dried.

Desic'cative, a. Drying; tending to dry; that has the power to dry.

—*n.* (*Med.*) An application which tends to dry up secretions.

Desid'erate, v. a. [Lat. *desidero*, *desideratus*] To long or greatly wish for; to desire; to want; to miss.

Desideration, n. Act of desiderating. (*R.*)

Desid'orative, a. [Lat. *desiderativus*; It. *desiderativo*.] (*Gram.*) Implying desire; as, a desiderative verb.

—*n.* An object wished for.

(*Gram.*) A verb which expresses the desire of doing an act denoted by another verb, from which it derives.

Desiderat'um, n. [Lat., from *desidero*.] That which is desired; that which is not possessed, but which is desirable; any perfection or improvement which is wanted.

Desiderins, or Didier, (*d's-e-de're-us*), the last king of Lombardy; he was duke of Istria, and succeeded Astolphus in 757. His daughters were married to the two sons of Pepin, king of France, Carloman and Charlemagne. The latter soon repudiated his wife, and, at the request of Pope Adrian, invaded Italy in 773, dethroned Desiderius, and sent him to end his days in the monastery of Corbie.

Design, (*de-zîn'*) *n.* [Fr. *déssin*, drawing, purpose.] Something marked or traced out; a plan or representation of a thing by an outline; sketch; general view; first idea represented by visible lines; a plan drawn out in the mind; purpose; intention; aim; project.

(*Fine Arts.*) In all the arts, the idea formed in the mind of an artist on any particular subject, which he endeavors to transfer to some medium for the purpose of making it known to others. It is sometimes loosely and improperly used as synonymous with *drawing*.—Every work of design is to be considered either in relation to the art that produced it, to the nature of its adaptation to the end sought, or to the nature of the end it is destined to serve; thus its beauty is dependent on the wisdom or excellence displayed in the design, on the fitness or propriety of the adaptation, and upon the utility of the end. The considerations of design, fitness, and utility, have become the three great sources of beauty of form. This beauty frequently arises from the combined power of these expressions.—Every work of art supposes unity of design, or some particular end proposed by the artist in its structure or composition. In every beautiful work of art, we are not satisfied with mere utility—we must have elegant design, of which the grand feature is variety; it is this which in general distinguishes beautiful from plain forms, and without it uniformity is dull and insipid.

—*v. a.* [Fr. *déssiner*, to draw, *désigner*, to design, from Lat. *desino*—*de*, and *signum*, a mark, token, or sign.] To mark or trace out; to delineate by drawing the outline of form or figure; to form an outline or representation of in the mind; to form an idea; to form a plan, purpose, or intention; to establish, form, or set apart for some end; to plan; to purpose; to intend; to propose; to project; to mean; to do.

—*v. n.* To intend; to purpose.

Design'able, a. Capable of being designed or marked out; distinguishable.

Design'ate, v. a. [Fr. *désigner*; Lat. *designo*, *designatus*.] To mark or trace out; to mark out or show, so as to make known; to indicate by visible lines, marks, description or something known and determinate; to point out; to distinguish from others by indication; to name; to denominate; to style; to characterize; to describe; to appoint; to assign; to allot.

—*a.* Designated; marked out; appointed; as, a bishop designate.

Designation, n. [Lat. *designatio*.] Act of pointing or marking out by signs or objects; indication; a showing or pointing; a distinguishing from others; appointment; direction; a selecting and appointing; assignment; import; distinct application.

Designative, a. [Fr. *désignatif*.] Appointing; showing. (*R.*)

Designator, n. One who designates.

Designatory, a. Employed to designate.

Designed, (*de-sînd'*) *p. a.* Intended; projected; planned.

Design'edly, adv. By design; purposely; intentionally.

Design'er, n. One who designs, marks out, or plans;

one who frames a scheme or project; a contriver; a plotter.

Design'ful, a. Full of design or artifice.

Design'ing, p. a. Marking out; forming a design; planning; drawing figures on a plane; delineating the outline of; insidiously contriving schemes of mischief; artful; intriguing; deceitful; treacherous.

—*n.* The art of designing, or of delineating objects.

Design'less, a. Without intention or design.

Design'lessly, adv. Inadvertently.

Desil'ver, v. a. To deprive of silver.

Desip'ient, a. [Lat. *desipiens*, ppr. of *desipere*, to be foolish, from *de*, and *sapere*, to be wise.] Foolish; trifling; playful.

Desirability, n. State of being desirable; desirableness.

Desir'able, a. Worthy of desire; that is to be wished for with sincerity or earnestness; pleasing; agreeable.

Desirableness, n. The quality of being desirable.

Desir'ably, adv. In a desirable manner.

Desirade, *DESIRADA*, or *DESIDERA'DA*, (*da'zei-rād'*) an island of the Little Antilles, W. Indies, about 4 m. W. of Guadeloupe, of which it is a dependency. Length from N.E. to S.W. 6 m.; averaging 2 m. in breadth. *Surface*, elevated. *Soil*, not fertile. It was the first island discovered by Columbus on his second voyage, Nov. 1493. *Pop.* about 3,000.

Desire', n. [Fr. *désir*, from Lat. *desiderium*, from *desidero*, to long for.] A longing, ardent wish for something not possessed; a passion excited by the love of an object, or uneasiness at the want of it, and directed to its attainment or possession; eagerness to obtain or to enjoy; aspiration; eagerness; longing; prayer or request to obtain; the object of desire; love; affection; appetite; lust.

(*Ethics.*) There is room for difference of opinion as to the number of our desires that are original; but that certain of them are primarily inherent in our nature, scarcely admits of doubt.

—*v. a.* [Fr. *désirer*; Lat. *desidero*.] To long or greatly wish for something not possessed; to wish for the possession or enjoyment of, with a greater or less degree of earnestness; to hanker after; to covet; to express a wish for in the way of petition; to express a wish for in the way of a direction; to ask; to request; to solicit; to entreat.

Desired', a. Wished for; coveted; requested; entreated.

Desire'less, a. Without desire.

Desir'er, n. One who desires.

Desir'ous, a. Full of desire; wishing for; wishing to obtain; coveting; solicitous to possess or enjoy; eager; anxious; covetous.

Desir'ously, adv. With desire; with earnest wishes.

Desir'ousness, n. Fulness of desire.

Desist', v. a. [Fr. *désister*; Lat. *desisto*—*de*, and *sisto*, to set or place one's self. See *ASSIST*.] To set or remove one's self away from anything; to cease to act or proceed; to stop; to forbear; to leave off; to discontinue; followed by *from*.

"They will readily desist from their project when they are convinced it is impracticable."—*Addison*.

Desist'ance, n. [L. Lat. *desistantia*, and *desistentia*.] The act of desisting; cessation.

Desist'ive, a. Ending; concluding.

Desk, n. [A. S. *disc*, a plate, a table; Du. *disch*, a table; Ger. *tisch*; Dan. and Sw. *disk*; O. Ger. *tisc*, a table; It. *desco*; L. Lat. *discus*, the table of writers and notaries, a table on which goods were exposed for sale; Lat. *discus*, a quoit, a dish, so called from its shape; Gr. *diskois*, a quoit, from *dikein*, to throw, from obsolete *diko*.] A table; an inclining table to write upon; the pulpit in a church; and, figuratively, the clerical profession.

—*v. a.* To shut up, as in a desk. (*R.*)

Des'man, n. (*Zoöl.*) The common name of the genus *Mygale*, order *Insectivora*. The common *D.*, *Mygale moschata*, the Musk-rat of the English, is nearly equal in size to the Hedgehog. Its muzzle is elongated into a small, very flexible proboscis, which is constantly in motion. It has a long tail, scaly, and flattened at the sides; membranous feet; eyes very small; and no external ears. This animal is very common along the rivers and lakes of Southern Russia, where it feeds on worms, the larvae of insects, and particularly on leeches, which it easily withdraws from the mud by means of its flexible proboscis. It never comes voluntarily on shore, but is often taken in the nets of the fishermen. Its burrow, excavated in a bank, commences under water, and ascends to above the level of the highest floods. Under the tail of the Desman are two small follicles containing a kind of unctuous substance, of a strong musky odor, from which the name of *Musk-rat* is given to it.

Fig. 806.
THE DESMAN AND ITS FORE-FEET.
(*Mygale Moschata*.)

Desmid'ium, a. [Gr. *desmos*, strain, and *eidos*, form.] (*Bot.*) A genus of microscopic plants, order *Diatomaceæ*.

Des'mine, n. (*Min.*) Same as *HYPOSTILBITE*, *q. v.*

Desmo'dium, n. [Gr. *desmos*, a band, in allusion to the stamens being joined.] (*Bot.*) A genus of plants, order *Fabaceæ*. They are perennial, herbaceous, or suffrutescent plants, with leaves pinnately trifoliate. The

N. American species are numerous. But this genus is chiefly remarkable for the periodical movements of the leaflets, in some of its tropical species. In *D. gyrans*, a native of India, the leaf is trifoliate, the terminal leaflet being much larger than the two lateral ones. When exposed to the influence of a bright light, the larger leaflet becomes more or less horizontal; but, on the approach of evening, it falls downward. The lateral leaflets are in constant motion during the heat of the day, advancing by their edges towards the large terminal leaflet, and then retreating towards the base of the common petiole. This movement takes place first on one side and then on the other, so that the point of each leaflet describes a circle. As these movements resemble those of the arms of the old semaphore telegraphs, the plant has been named the *Telegraph-plant*. No satisfactory explanation of the cause of the extraordinary movements of the leaflets has yet been given.

Desmography, *n.* [Gr. *desmos*, ligament, and *graphê*, description.] (*Anat.*) A description of the ligaments of the body.

Des Moines, in Iowa, the largest river of the State. Rising in Minnesota, it enters Iowa in Emmett co., and after a general S.E. course through Kossuth, Humboldt, Webster, Boone, Polk, Marion, Mahaska, Wapello, and Van Buren cos., enters the Mississippi at the S. extremity of Lee co., abt. 4 m. below Keokuk.

—A S.E. co., bordering on Illinois. *Area*, abt. 408 sq. m. *Rivers*, Mississippi (which forms its E. and S.E. boundary) and Skunk rivers, and Flint Creek. *Surface*, diversified. *Soil*, excellent. *Min.* Coal and limestone. *Cap.* Burlington. *Pop.* (1890) 35,324.

—A city, the capital of Iowa, and of Polk co., and an important railroad center, on Des Moines river at junction with the Raccoon, 138 m. E. of Omaha. Founded in 1852 as Fort Des Moines, and made the State capital in 1857. There is here a State House that cost \$3,000,000, a State arsenal, a State library with 40,000 volumes, and numerous schools, churches, banks, and other institutions. Coal mines which are practically inexhaustible adjoin the city, and fuel for manufacturing purposes is supplied at a trifling cost. *D. M.* is an important manufacturing center, having 297 establishments in 1890, with products valued at \$3,242,992. *Pop.* 1890, 50,093.

Desmond, in Michigan. See PORT HURON.

Desmotomy, *n.* [Gr. *desmos*, ligament, and *tome*, a cutting, from *temnein*, to cut.] (*Anat.*) The dissection of the ligaments.

Desmoulins, CAMILLE, (*dai-moo-lan'*) one of the leaders in the French revolution, b. at Guise, in Picardy, 1762. He was a fellow-student with Robespierre at the college of Louis le Grand, became an advocate at Paris, and distinguished himself as an enthusiastic political reformer. On the 12th July, 1789, he made a very exciting harangue on the dismissal of Necker, and bade the people arm. This was the beginning of the revolt, which, in two days, resulted in the destruction of the Bastille. Camille assumed the grotesque title of "Attorney-general of the iron-lamp," and published, among other things, *Les Révolutions de France et de Brabant*. He took part in the attack on the Tuileries, on the 10th Aug., 1792. As deputy to the Convention, he co-operated with his school-fellow Robespierre, and promoted the fall of the Girondists. He would fain have checked the excesses of the revolution, and made the attempt with Danton and others. For the same purpose he published his *Vieux Cordelier*; but Robespierre gave him up to the revolutionary tribunal, and they sent him to the Conciergerie, and thence to the guillotine, 5th April, 1794. His young and noble wife, Lucile, hovered about the prison, made vain attempts to save him, and in a few days followed him to the scaffold.

Desna, a river of Russia, rising in the gov. of Smolensk, and falling into the Dnieper, near the city of Kiev, after a course of 530 m.

Desolate, *a.* [Lat. *desolatus*, from *desolo*. See the verb.] Left alone; solitary; forsaken; destitute, or deprived of inhabitants; waste; laid waste; in a ruinous condition; neglected; destroyed; afflicted; deserted; deprived of comfort.

—*v. a.* [Lat. *desolo*, *desolatus*—*de*, and *solo*, to make lonely, from *solus*, alone; Fr. *désoler*.] To deprive of inhabitants; to make desert; to lay waste; to ruin; to ravage; to destroy, as improvements, or works of art.

Desolately, *adv.* In a desolate manner.

Desolateness, *n.* State of being desolate.

Desolater, **Desolator**, *n.* One who causes desolation.

Desolation, *n.* [Fr. *désolation*; L. Lat. *desolatio*.] Act of desolating; destruction or expulsion of inhabitants; waste; ruin; destruction; devastation; ravage. A place wasted, ravaged, and ruined; a desert. — A desolate state; destitution; melancholy; gloom; sadness; gloominess.

Desolation, (*Cape*), is the S.W. extremity of Nunarsoak Island, Greenland; Lat. 60° 50' N.; Lon. 48° 50' W. — Also, a headland of Terra-del-Fuego, S. America, on one of its W. islands; Lat. 55° 45' S.; Lon. 71° 37' W.

Desolatory, *a.* [Lat. *desolatorius*.] Causing desolation. (*R.*)

Desor, (*dai-sore'*) EDWARD, a German geologist, b. in 1811. Having published, in 1845, his *Geologische Alpenreisen*, he accompanied Agassiz to America, in 1847, and took an active part in the coast-survey of Lake Superior, under Whitney and Foster, and of Pennsylvania under Rogers. In 1852 he returned to Europe, and was appointed professor of geology in Neuchâtel. His most important work is *Der Gebirgsbau der Alpen*, which has gained him a place among the most eminent geologists of the day.

De So'to, HERNANDO, the discoverer of the Mississippi,

was a Spanish officer, b. at Xeres de los Caballeros, Estremadura, 1500. In 1519 he accompanied Pedraria Davila on his second expedition to America as governor of Darien, opposed courageously the oppressive administration of that officer, and, withdrawing finally from his service in 1528, went to explore the coast of Guatemala and Yucatan. In 1532 he joined Pizarro in his enterprise for conquering Peru, and was the hero of the battle which resulted in the capture of Cuzco, the metropolis. He then returned to Spain, married the daughter of Davila, and proposed to the Emperor Charles V. to undertake the conquest of Florida at his own expense; and, the privilege being conceded to him, he set sail, April, 1538, with 600 men, generally composed of Spanish and Portuguese cavaliers. After stopping at Santiago de Cuba, he crossed the Gulf of Mexico, and anchored in the Bay of Spiritu Santo (Tampa Bay), May 25, 1539; and on Oct. 18, he reached the village of Mavilla, or Mobile, where he fought against the Indians a sanguinary battle, in which the loss of the Spaniards was 80 men, and that of the Indians about 2,500. He passed the winter in the country of the Chickasaws, and the next spring he reached the Mississippi, and the highlands of White River, from whence, proceeding S. by the hot springs of Arkansas, he made his third winter station at Autiamque, on the Washita River. In April, 1542, while attempting in vain to descend the banks of the Mississippi, through the bayous and marshes, he was attacked with a malignant fever, and died, after appointing Luis de Moscoso his successor. His followers, considerably reduced in number, embarked in the spring of 1543, and reached the Mexican town of Panuco, where they dispersed. The wife of De Soto died at Havana, on the third day after learning his fate.

De Soto, in Florida, a S. co. formed in 1887 from the E. part of Manatee co. *Cap.* Arcadia. *Pop.* 7,500.

De Soto, in Georgia, a post-village in Sumter co.

De Soto, in Kansas, a post-village of Johnson co., on the Kansas river, about 14 m. E. of Lawrence; now merged in Lexington township.

De Soto, in Louisiana, a N. W. parish, bordering on Texas. *Area*, about 910 sq. m. *Rivers*, Red and Sabine rivers. *Surface*, diversified. *Soil*, fertile. *Cap.* Mansfield. *Pop.* (1890) 19,860.

—A village of Madison parish, on the Mississippi river, opposite Vicksburg, Miss.

De Soto, in Minnesota, a township of Blue Earth co., on the Blue Earth river.

—A village of Todd co., on Osakis Lake, about 55 m. W. N. W. of Saint Cloud.

De Soto, in Mississippi, a N. W. co., bordering on Tennessee. *Area*, about 960 sq. m. *Rivers*, Mississippi river, and Cold Water creek. *Surface*, almost level. *Soil*, fertile. *Cap.* Hernando. *Pop.* (1890) 24,183.

—A post-village of Clarke co., about 104 m. N. by W. of Mobile, Alabama.

De Soto, in Missouri, a city of Jefferson co., 42 m. S.S. W. of St. Louis. *Pop.* (1897) about 4,500.

De Soto, in Nebraska, a post-village and township of Washington co., on the Missouri River, about 6 m. N. of Fort Calhoun.

De Soto, in Wisconsin, a village of St. Croix co., on Willow River, about 6 m. N.E. of Hudson.

—A post-village of Vernon co., on the Mississippi River, about 6 m. above Lausing, Iowa.

Deso'toville, in Alabama, a post-office of Choctaw co.

Despair, *n.* [Fr. *désespoir*; Lat. *desperatus*. See the verb.] A hopeless state; hopelessness; destitution of hope or expectation; desperation; despondency; that of which there is no hope; loss of hope in the mercy of God.

—*v. n.* [Fr. *désespérer*; Lat. *despero*—*de*, and *spero*, to hope; probably allied to Sansk. *spñ*, to desire, to long for.] To be hopeless; to give up all hope or expectation; to despond.

Despair'er, *n.* One without hope.

Despair'ing, *p. a.* Giving up all hope or expectation.

Despair'ingly, *adv.* In a despairing manner.

Despair'ingness, *n.* The state of being in despair; hopelessness.

Despatch, *DISPATCH*, *v. a.* [Fr. *dépêcher*, for *despacher*; It. *spacciare*, to expedite, to hasten, to speed; Sp. *despachar*, probably from Lat. *spatior*, *spatiari*, to go, to proceed.] To send away in haste, as a messenger, letters, &c.; to expedite; to hasten; to accelerate; to send out of the world; to put to death; to execute speedily; to perform quickly; to conclude; to finish.

—*n.* Act of sending away in haste, as messenger, &c.; message or communication on public business, sent with expedition; a message sent in haste; speedy performance; execution or transaction of business with due diligence; expedition.

Despatch-boat, (*Naut.*) A vessel employed to carry naval despatches.

Despatch-box, *n.* A leathern case used by government messengers for holding despatches, &c.

Despera'do, *n.* [Sp., from *desperar*, to despair.] A desperate fellow; a furious man; a madman; a person urged by furious passions; one fearless or regardless of safety.

Des'perate, *a.* [Lat. *desperatus*, from *despero*. See DESPAIR.] Hopeless; despairing; desponding.—Without care for safety; fearless of danger; rash; precipitate; headlong; furious, as a man in despair; frantic; mad.—Despaired of; lost beyond all hope of recovery.

Des'perately, *adv.* In a desperate manner.

Des'perateness, *n.* State of being desperate; madness; fury; rashness; precipitance.

Desperation, *n.* [Lat. *desperatio*.] A despairing; a giving up of hope; hopelessness; despair; fury; rage; disregard of safety or danger.

Des Peres, in Missouri, a post-village of St. Louis co., abt. 15 m. W. by S. of St. Louis.

Des'picable, *a.* [L. Lat. *despicabilis*, from Lat. *despicor*, to despise, to disdain.] That may be, or deserves to be, despised; contemptible; mean; vile; worthless; low; base; degrading.

Des'picableness, *n.* Worthlessness; vileness.

Des'piciously, *adv.* Meanly; vilely; contemptibly.

Des'pisable, *a.* That may be despised; despicable; contemptible. (*R.*)

Despise, *v. a.* [Lat. *despecio*—*de*, and *specio*, to look, or look at.] To look down upon; to hold in contempt; to have the lowest opinion of; to condemn; to scorn; to disdain; to undervalue.

Despis'edness, *n.* The state of being despised.

Despis'er, *n.* A contemner; a scorner.

Despis'ingly, *adv.* With contempt.

Despite, *n.* [Fr. *dépit*; O. Fr. *despite*, from Lat. *despectus*, from *despicio*. See DESPISE.] A looking down upon; extreme malice; malice, irritated or enraged; active malignity.—Angry hatred; defiance with contempt, or triumph over opposition; an act of malice or contempt.

—*v. a.* To vex; to offend; to tease.

—*prep.* In spite of; notwithstanding.

Despite'ful, *a.* Full of spite; malicious; malignant.

Despite'fully, *adv.* With despite; maliciously; contemptuously.

Despite'fulness, *n.* Quality of being spiteful; malice; extreme hatred; malignity.

Des Plaines, or O'PLAIN, (Ind. *She-shik-mah-o*), in Illinois, a river rising in Lake co., and flowing S. and S.W., joins the Kankakee River at Dresden, to form the Illinois River. Length about 160 m.—A species of maple called *plaine* by the French.

Despoblado, See PLATA, (LA.)

Despoil, *v. a.* [Lat. *despolio*—*de*, and *spolio*, to strip, from *spolium*, spoil; Fr. *dépouiller*.] To take from by force; to strip or divest by any means; to deprive; to rob; to bereave; to rifle.

Despoil'er, *n.* One who despoils.

Despoil'ment, **Despolia'tion**, *n.* The act of despoiling; spoliation; robbery. (*R.*)

Despond, *v. n.* [Lat. *despondeo*—*de*, and *spondeo*, to promise.] To abandon or lose hope; to be cast down; to be depressed or dejected in mind; to lose all courage, spirit, or resolution; to sink by loss of hope.

—*n.* Despondency.

Despond'ency, **Despond'ence**, *n.* Sinking or dejection of spirits at the loss of hope; loss of courage at the failure of hope, or through deep affliction, or at the prospect of insurmountable difficulties.

Despond'ent, *a.* Losing courage at the loss of hope; sinking into dejection; depressed and inactive by despair.

Despond'ently, *adv.* Without hope.

Despond'ing, *p. a.* Losing courage to act, from loss of hope; sinking into dejection; yielding to discouragement; depressed in spirit.

Despond'ingly, *adv.* In a desponding manner.

Despot, *n.* [Fr. *despote*; Gr. *despotês*, &c. Pers. *despot*.] A master, king, or emperor, invested with absolute power, or ruling without any control from men, constitution, or laws; a tyrant.

Despot'ic, **Despot'ical**, *a.* [Fr. *déspotique*; Sp. and It. *despotico*; Gr. *despotikos*, from *despotês*.] Absolute in power; independent of control from men, constitution, or laws; arbitrary in the exercise of power; absolute; tyrannical; arbitrary.

Despot'ically, *adv.* With unlimited power; arbitrarily; in a despotic manner.

Despot'icalness, *n.* Disposition to exercise arbitrary power.

Despotism, *n.* [Fr. *déspotisme*; Sp. *despotismo*.] The power of a despot; absolute power; authority unlimited and uncontrolled by men, constitution, or laws, and depending alone on the will of the ruler; an arbitrary government. See DICTATOR, MONARCH, TYRANT.

Despoto Dagh, (*des-po'to dâh*), a mountain-chain of European Turkey, extending from 30 m. to the E. of the Balkan to the bank of the Maritza.

Despumate, *v. n.* [Lat. *despumare*, *despumatus*—*de*, and *spuma*, foam, froth, scum.] To foam; to froth; to form froth or scum.

—*v. a.* To take off scum from; to skim; to throw off in foam.

Despumation, *n.* [L. Lat. *despumatio*.] The act of throwing off excrementitious matter, and forming a froth or scum on the surface of liquor; clarification; scumming.

Desquamate, *v. a.* or *v. n.* [Lat. *desquamare*, *desquamatus*—*de*, and *squama*, a scale. See SQUAMOSE.] To take off the scales from; to come off in scales.

Desquamation, *n.* [Fr., L. Lat. *desquamatio*.] (*Med.*) Falling off in scales; a term applied to the cuticle of the body when, after an eruptive disease, such as measles or small pox, the dead portion of the skin peels off where the pustules have been. This, which generally takes place in from 4 to 6 days after the decline of the disease, is always a critical time with the patient, when it is necessary to guard him from colds of all kinds.

Desalines, JEAN JACQUES, (*des-sa-leen'*), was a slave in St. Domingo, who, having an opportunity of showing his great courage and talents during the disturbances in that colony, became second in command to Toussaint L'Ouverture; on whose imprisonment he was chosen emperor of Hayti, under the title of Jacques I. This was in 1804; but he retained his imperial dignity only two years, perishing the victim of a conspiracy, provoked by his intolerable cruelties, in 1806.

Des'sau, a town of Germany, the capital of the duchy of Anhalt, situate on the Mulde, 2½ m. above its conflu-

ence with the Elbe, 69 m. S.W. of Berlin. *Manuf.* Cotton, linen, and woollen goods; leather, hats, musical instruments. *D.* is the birth-place of Moses Mendelssohn, the great philosopher.

Dessert, *n.* [Fr. *dessert*, from Lat. *deservio*, to serve with zeal.] That which is served when the substantial part of a meal is removed, consisting of ices, fruits, &c.

Desterro, or **Nossa Senhora do Desterro**, (*nos'sa sen-yô-ra des-ter-ro*), a city of Brazil, cap. of prov. Santa Catharina, on the W. coast of the island of Santa Catharina, about 450 m. S.W. of Rio Janeiro. Pop. 8,000.

Destinate, *v. a.* [Lat. *destinare*, *destinatus*. See DESTINE.] To destine. (o.)

—*a.* Appointed; destined; determined. (o.)

Destination, *n.* [Fr. *destination*; Lat. *destinatio*.] Act of destining or appointing; the purpose for which anything is intended or appointed; end or ultimate design; appointment; end; purpose; design; destiny; place to which a thing is appointed.

Destine, *v. a.* [Fr. *destiner*; Lat. *destino*—*de*, and obsolete *stano*, allied to *sisto*, and Gr. *histano*, to set fast, late form for *histemi*, to make to stand.] To set or make fast or firm; to set or appoint to a use, purpose, state, or place; to design; to mark out; to devote; to doom; to ordain; to fix unalterably, as by divine decree; to appoint unalterably.

Destined, *p. a.* Ordained; appointed by previous determination; devoted; fixed unalterably.

Destinist, *n.* A fatalist. (R.)

Destiny, *n.* [Fr. *destin*, *destinée*.] State or condition appointed or pre-determined; ultimate fate; invincible necessity; fate; a necessity or fixed order of things established by a divine decree.

(*Philos.*) The doctrine of inevitable necessity depending upon a superior cause has, under a variety of names, been embodied in almost all the religious systems of antiquity; and even in modern times, with a few modifications, it has been largely adopted by many sects of the Christian church. Destiny was called by the Romans *Fatum*, and by the Greeks *Ἀνάγκη*, *Necessity*. The Stoics understood by destiny a certain concatenation of things, which from all eternity follow each other of absolute necessity, there being no power able to interrupt their connection. To this invisible power even the gods were compelled to succumb.—See FATES, FREE WILL, NECESSITY, PREDESTINATION.

Destitute, *a.* [Lat. *destitutus*, from *destituo*—*de*, and *statuo*, to set.] Left weak and helpless; forsaken; not having or possessing; wanting; needy; abject; comfortless; friendless; forlorn.

—*n.* One who is destitute. (R.)

Destitution, **Destitute'ness**, *n.* [Lat. *destitutio*.] State of being destitute; want; absence of a thing; a state in which something is wanted, or not possessed; poverty.

Destouches, PHILIPPE NÉRICAUT, a French dramatic writer, b. at Tours, 1680. Being sent to London in 1717, to assist in the political negotiations then carrying on, he continued there seven years, and married. On his return to France he retired into the country, where he devoted himself to agriculture and the belles-lettres. His principal pieces are, *Le Philosophe Marié*, and *Le Glorieux*. D. 1734.

D'Estrées, (GABRIELLE.) See GABRIELLE D'ESTRÉES.

Destroy, *v. a.* [Lat. *destruo*—*de*, and *struo*, to pile or to build; *destruere*.] To pull down, as a building or structure; to demolish; to overturn; to raze; to ruin; to overthrow; to subvert; to consume; to lay waste; to dismantle; to throw down; to devastate; to kill; to devour; to extirpate; to extinguish; to annihilate, or put an end to.

Destroyable, *a.* That may be destroyed.

Destroy'er, *n.* One who destroys.

Destroy'ing, *p. a.* Demolishing; laying waste; killing; putting an end to; annihilating.

Destructibility, *n.* [Fr. *destructibilité*.] The quality of being capable of destruction.

Destructible, *a.* [Fr.; Lat. *destructibilis*, from Lat. *destruo*, *destructum*.] Liable to destruction; capable of being destroyed.

Destructibleness, *n.* The quality of being destructible.

Destructive, *n.* [Fr.; Lat. *destructio*. See DESTROY.] Act of destroying; a pulling down; ruin, by whatever means; demolition; subversion; overthrow; desolation; death; murder; slaughter; massacre; cause of destruction; a consuming plague; a destroyer.

(*Theol.*) Eternal death; annihilation.

Destructivist, *n.* One in favor of destroying.

(*Theol.*) One who believes that the final punishment consists in a total destruction of being, or annihilation.

Destructive, *a.* [L. Lat. *destructivus*.] Causing destruction; having the quality of destroying; mortal; deadly; fatal; ruinous; pernicious; mischievous.

D. distillation, (*Chem.*) A term applied to the distillation of organic products at high temperatures, by which the ultimate elements are separated, or evolved in new combinations. The *D.* distillation of coal is resorted to for the production of gas, that of bone for the production of ammonia, and that of wood for the formation of vinegar.

D. A destroyer; a radical reformer; a political destructionist, *i. e.*, one who wishes to sweep away all existing political or social institutions to give place to the foundation of a new system.

Destructively, *adv.* With destruction; ruinously; with power to destroy; mischievously.

Destructiveness, *n.* The quality of being destructive.

(*Par.*) A propensity to destroy, kill, or murder.

Desudation, *n.* [L. Lat. *desudatio*—Lat. *de*, and *sudo*, to sweat. See SUDORIFIC.] (*Med.*) A violent sweating, succeeded by an eruption of pustules called *heat-pimples*.

Desuetude, *n.* [Fr. *désuétude*; Lat. *desuetudo*, from *desuesco*—*de*, and *suesco*, to become used, or accustomed to; Sansk. *sir*, to frequent.] The cessation of use; disuse; discontinuance of practice, custom, or fashion.

Desulphurate, **Desulphurize**, *v. a.* (*Chem.*) To deprive of sulphur.

Desulphuration, *n.* (*Chem.*) The act of depriving of sulphur.

Desultorily, *adv.* In a desultory manner; without method; loosely.

Desultoriness, *n.* The quality of being desultory.

Desultory, *a.* [Lat. *desultorius*, from *desilio*, *desultus*—*de*, and *saltio*, to leap.] Passing from one thing or subject to another, without order or natural connection; unconnected; coming suddenly; started at the moment; rambling; immethodical; loose; discursive; inconstant; cursory; hasty; unconnected.

Desynonymize, *v. a.* To show not to be synonymous; to cause to be different in meaning.

Detach, *v. a.* [Fr. *détacher*. See ATTACH.] To break off; to cause a separation from; to separate; to disengage; to remove anything attached; to part from; to disjoin; to withdraw; to draw off; to separate and send away, as a part of a military force, or of a fleet.

Detached, *p. a.* Separated; parted from; disunited; drawn and sent on a special service; separate.

(*Paint.*) Applied to all objects in a picture which appear to stand out from those by which they are surrounded.

(*Mil.* and *Naut.*) Applied to a body of troops, or to a vessel sent on a particular service; as, a *detached* battalion.

Detachment, *n.* Act of detaching or separating; a body of troops, or a number of ships, selected or taken from the main army or fleet, and employed on some special service or expedition; state of being detached or alienated.

Detail, *v. a.* [Fr. *détailler*—*de*, and *tailler*, to cut, from Lat. *talēa*, a cutting, set, layer for plaiting.] To dwell in narration on the different parts of a subject; to particularize; to specify; to relate minutely and distinctly.

(*Mil.*) To select for a particular service, as an officer or body of troops.

Detail, or **De'tail**, *n.* [Fr. *détail*.] A minute and particular narration; an account; relation; narrative; recital; explanation; narration.

(*Mil.*) A selecting of certain individuals, or bodies of men, for a particular service.

Detailed, *p. a.* Related in particulars; minutely recited; selected.

Detail'er, *a.* One who details.

Detain, *v. a.* [Lat. *detineo*—*de*, and *teneo*, to hold; Fr. *détenir*.] To hold off; to keep back or from; to keep what belongs to another; to withhold; to stop; to arrest; to check; to retard; to delay; to hinder.

Detain'er, *n.* (*Law.*) Same as DETINCE, *q. v.*

Detain'er, *n.* One who detains or withholds; a detention of what is another's; holding or keeping possession of what belongs to another.

(*Law.*) A term almost synonymous with DETENTION, *q. v.*

Detain'ment, *n.* Act of detaining; detention.

Detect, *v. a.* [Lat. *detego*, *detectus*—*de*, and *tego*, to cover.] To uncover; to lay bare, or expose; to bring to light something hidden or unobserved; to discover; to lay open.

Detectable, *a.* That may be detected.

Detect'er, *n.* One who detects; a discoverer; one who finds out what another attempts to conceal.

Detection, *n.* Act of detecting; discovery of a person or thing attempted to be concealed; discovery of anything before hidden or unknown.

Detective, *a.* That detects or discovers.

—*n.* A police officer specially employed to detect offenders.

Detect'or, *n.* [Lat.] Same as DETECTOR.

Detent, *n.* [Fr. *détente*; Lat. *detentus*, from *detineo*, see DETAIN.] (*Mech.*) A stop in a clock, which, by being lifted up or let down, locks and unlocks the clock in striking.

Detention, *n.* [Fr. *détention*.] Act of detaining; a withholding from another his right; a keeping what belongs to another; confinement; restraint; delay from necessity; a detaining.

Deterr, *v. a.* [Lat. *deterreo*—*de*, and *terreo*, to frighten. See TERROR.] To discourage, stop, or prevent by fear, terror, danger, difficulty, &c.; to prevent by prohibition or danger.

Deterge, *v. a.* [Lat. *detergeo*—*de*, and *tergeo*, to wipe; lengthened form of *tero*, to rub; Gr. *teiro*, to rub, to wipe away.] To wipe off or away; to cleanse; to purge away foul or offending matter from the body, or from an ulcer.

Detergent, *a.* [Lat. *detergens*.] (*Med.*) Cleansing; purging.

—*n.* (*Med.*) Such a medicine as cleanses and removes viscid humors adhering to or obstructing the vessels; also such applications as cleanse foul ulcers.

Deteriorate, *v. n.* [Fr. *détériorer*, from Lat. *deterior*, worse, compar. of an obsolete adjective, *deterus*, from *de*, in a downward direction, down from.] To grow downward; to grow worse; to be impaired in quality; to degenerate; to decay.

—*v. a.* To cause to grow downward; to make worse; to reduce in quality.

Deterioration, *n.* [Fr. *détérioration*.] A growing or making worse; the state of growing worse.

Deterior'ity, *n.* Quality or state of being worse; degeneracy.

Determent, *n.* Act of deterring; the cause of deterring; that which deters.

Determinability, *n.* Quality of being determinable.

Determinable, *a.* That may be decided with certainty; that may end or be determined; conclusive.

Determinableness, *n.* State of being determinable.

Determinant, *a.* That causes determination; that determines.

—*n.* That which determines, or causes determination.

—*pl.* (*Math.*) A name given to a new method of great use, *inter alia*, in the solution of equations embracing several unknown quantities, whereby the student can almost, on inspection, write down the values (in terms of the known quantities) of each of the unknown.

Determine, *v. a.* [Lat. *determinatus*, from *determino*. See DETERMINE.] Limited; fixed; definite; established; settled; positive.—Decisive; conclusive; resolved on; resolute.

(*Geom.*) A *D. problem* is a problem which admits of a limited number of solutions; an *indeterminate* problem being one which admits of an indefinite number of solutions. Thus the problem: *Given the base, perimeter, and area, to construct the triangle*, is determinate, there being, in general, but four solutions. By omitting one of the three data, however, the problem becomes indeterminate.

Determinately, *adv.* With certainty; resolutely; with fixed resolve.

Determinateness, *n.* The state of being determinate.

Determination, *n.* [Fr. *détermination*; Lat. *determinatio*.] Act of determining or deciding; decision of a question in the mind; firm resolution; decision; conclusion; purpose; resolution; resolve; firmness; judgment; award; strong impulsion to a given point; absolute direction to a certain end; an ending; a putting an end to.

(*Law.*) The end or conclusion of a right or authority; as, the *determination* of a lease. The *D.* of an authority is the end of the authority given. The term is also sometimes applied to a decision of a court of justice.

(*Chem.*) The ascertaining the proportional quantity of a substance contained in another substance; as, the *determination* of the arsenic contained in an organic body.

(*Physics*.) The tendency of a body in any particular direction.

(*Logic*.) The act of defining a conceit or notion by giving its essential constituents.—The addition of a definition to a conceit or notion, and thus limiting its extent.—the opposite of *generalization*.

(*Med.*) The excessive flowing of the blood to any part; as, a *determination* of blood to the head, &c.

Determinative, *a.* [Fr. *déterminatif*.] That determines or makes a limitation; that uncontrollably directs to a certain end; limiting; that limits or bounds; that is employed in determining.

Determinator, *n.* One who determines.

Determine, *v. a.* [Lat. *determino*—*de*, and *termino*, from *terminus*, a bound or limit.] To border off; to bound; to limit; to end; to fix permanently; to settle; to adjust; to conclude; to decide; to end and fix; to settle ultimately; to fix on; to establish; to give a direction to; to influence; to resolve on; to purpose; to design; to cause to cease or terminate; to bring to an end; to terminate.

Determined, *p. a.* Ended; concluded; decided; limited; fixed; settled; resolved; directed; having a firm or fixed purpose; resolute; determinate; definite.

Determinedly, *adv.* In a determined manner.

Determiner, *n.* One who determines.

Determinism, *n.* (*Metaph.*) The doctrine that motives invariably determine the will.

Deterra'tion, *n.* [Fr. *déterrer*, to unearth, to dig up, from *de*, and *terre*; Lat. *terra*, earth.] Discovery of anything by removal of the earth that hides it; the art of unburying or disinterring.

Deterrence, *n.* That which deters; hinderance. (R.)

Deterrent, *n.* [Lat. *deterrens*. See DETER.] That which deters or hinders; a preventive.

Deter'ring, *p. a.* [See DETER.] Discouraging or influencing not to proceed or act, by fear, difficulty, danger, or prospect of evil; discouraging; frightening.

Deter'sion, *n.* [Lat. *detersus*, wiped off, from *detergo*. See DETERGE.] Act of cleansing, as a sore.

Deter'sive, *a.* [Fr. *détersif*; It. *detersivo*.] Cleansing; having the power to cleanse from offending matter.

—*n.* (*Med.*) Same as DETERGENT, *q. v.*

Deter'sively, *adv.* In a deterrent manner.

Deter'siveness, *n.* Quality of being deterrent.

Detest, *v. a.* [Fr. *détester*; Lat. *detestor*—*de*, and *testor*, to bear witness, from *testis*, a witness.] To hate extremely; to abhor; to loathe; to abominate.

Detest'able, *a.* [Fr. *détestable*; Lat. *detestabilis*.] Extremely hateful; deserving abhorrence; abominable; odious; execrable; abhorred.

Detestableness, *n.* The quality of being detestable.

Detest'ably, *adv.* Hatefully; abominably.

Detestation, *n.* [Fr. *détestation*; Lat. *detestatio*.] Extreme hatred; abhorrence; loathing.

Detest'ed, *p. a.* Hated extremely; abhorred.

Detest'er, *n.* One who detests.

Dethrone, *v. a.* [Fr. *détrôner*; Lat. *de*, and *thronus*, a throne.] To remove or drive from a throne; to depose; to divest of royal authority and dignity, or of supreme power.

Dethrone'ment, *n.* Removal from a throne; deposition of a king, emperor, or prince.

Detron'er, *n.* One who dethrones.

Det'inet, *n.* [Fr. *détenu*, from *détenir*, from Lat. *de*

lineo. See DETAIN.] (Law.) A writ that lies against him who wrongfully detains goods or chattels delivered to him or in his possession.

Det'mold, a town of Germany. See LIPPE-DETMOLD.

Det'onate, *v. a.* [Fr. *détoner*; Lat. *detono*, *detonatus*—*de*, and *tono*, to thunder. See TONE.] To cause to explode; to cause to burn with a sudden report.

—*v. i.* To thunder down, as from the skies.

—*v. n.* To explode; to burn with a sudden report.

Det'onating, *p. a.* (Chem.) Exploding; inflaming, with a sudden report.

Det'onating Powder, *n.* (Chem.) A term applied to certain combinations of substances which detonate or fulminate by slight friction, by heat, or by electricity. Amongst these may be mentioned the ammoniurets of gold and silver, and the fulminates of silver and mercury. In most cases of *D. P.* decomposition is the result of detonation; thus, ammoniuret of gold is separated into metallic gold and other products. Iodide of nitrogen resolves itself into iodine, which appears as a violet vapor, and into nitrogen, which assumes a gaseous form. A mixture of 3 parts of nitre, 2 of dry carbonate of potash, and one of sulphur, forms a *D. P.* If a small quantity of this compound be heated on a metallic plate to about 330°, it blackens, fuses, and explodes with much violence, in consequence of the rapid action of the sulphur upon the nitre, and the sudden evolution of nitrogen and carbonic acid. *D. P.* are much used in the manufacture of percussion-caps.

Det'onating Tube, *n.* (Chem.) A stout glass tube used in the chemical laboratory for the detonating of gaseous bodies.

Detona'tion, *n.* [Fr. *détonation*.] (Chem.) An explosion or sudden report made by the inflaming of certain combustible bodies.—When chemical combination, or decomposition, is sudden and attended by flame and explosion, it is often said to be effected by *detonation*. If a mixture of hydrogen or oxygen be inflamed by the electric spark, or by a taper, it burns rapidly and with explosion, and is said to *detonate*. When a grain or two of phosphorus is mixed with chlorate of potassa, and struck with a hammer, the mixture *detonates*.

Detoniza'tion, *n.* (Chem.) Same as DETONATION (*n.*).

Det'onize, *v. a.* (Chem.) To detonate.

Detorsion, *n.* A wresting; a perversion.

Detort', *v. a.* [Lat. *detorquere*, *detortum*, from *de* and *torquere*, to turn about, to twist; Fr. *détorquer*, *detordre*.] To wrest from the original import, meaning, or design.

Detour', *n.* [Fr., from *dé* for *des*, equiv. to Lat. *dis*, and *tour*.] A circuitous turning in or from a given path.

Detour, in Michigan, a post-office of Chippewa co.

Detour Point, in Michigan, a headland of the S.E. extremity of Chippewa co., opposite Drummond's Island, in Lake Huron; Lat. 45° 57' N., Lon. 84° 4' W.

Detract', *v. a.* [Fr. *détracter*; Lat. *detraho*, *detractus*—*de*, and *traho*, to draw. See TRACT.] To draw away from, to take away from the reputation or merit of; to disparage; to depreciate; to asperse; to calumniate; to vilify; to defame; to slander; to derogate from; to take away; to withdraw—followed by *from*, except in the last two senses.

—*v. n.* To take away reputation from; to depreciate the merit of.

Detract'er, *n.* One who detracts; a detractor.

Detract'ingly, *adv.* In a detracting manner.

Detrac'tion, *n.* [Fr. *détraction*; Lat. *detractio*.] Act of detracting, or taking something from the reputation or worth of another; depreciation; slander; defamation; derogation.

Detrac'tive, *a.* Having the quality or tendency to detract from, or to lessen the worth or estimation of.

Detrac'tiveness, *n.* The quality of being detractive.

Detrac'tor, *n.* [Lat.; Fr. *détracteur*.] One who detracts; a slanderer; a defamer.

Detrac'tory, *n.* Defamatory; derogatory.

Detrac'tress, *n.* A censorious woman.

Detrampe, *n.* [Fr.] (Painting.) See WATER-COLOR.

Det'riment, *n.* [Fr. *détriment*; Lat. *detrimentum*, from *detero*, *detrin*—*de*, and *tero*, to rub.] A rubbing off, or wearing away; loss; damage; injury; prejudice; hurt; mischief; harm.

Det'riment'al, *a.* Causing detriment, loss, or damage; injurious; hurtful; mischievous.

Det'riment'alness, *n.* Quality of being detrimental or hurtful.

Detri'tal, *a.* Pertaining to or consisting of detritus.

Detrition (*de-trish'um*), *n.* [From Lat. *detero*.] A rubbing or wearing off; as, the *detrition* of rocks by water.

Detritus, *n.* [Lat. *detrin*, from *detero*. See DETRIMENT.] (Geol.) That which is rubbed away or worn off; a mass of substances worn away from solid bodies by attrition and reduced to small particles.

(Med.) The residuum occupying the place of the organic texture of parts which have undergone disorganization.

Detroit, in Michigan, cap. of Wayne co., and the largest city in the State, situated on Detroit river, 7 miles S. of Lake Sinclair, and 18 N. of Lake Erie, 302 miles W. of Buffalo; Lat. 42° 20' N., Lon. 82° 58' W. The Detroit river, the boundary line between the U. S. and Canada, is here half a mile wide and very deep, forming an excellent harbor. *D.* is one of the oldest places in the U. S. It was founded by the French in 1610, transferred to the British in 1763, and passed to the U. S. in 1796. In 1812 it was surrendered to the British, and retaken in 1813. It was twice besieged by the Indians. In 1824 it was incorporated as a city. *D.* stands on a site that rises with a gradual inclination from the river, a fact which permits a practically perfect system of drainage. Its streets are broad and well paved, three of them being each 200 feet wide, while others vary

from 60 to 120 feet. They generally cross at right angles. The city has an abundant water supply, distributed through over 400 miles of pipe, a paid fire department with steam apparatus, and a fire-alarm telegraph. The chief public building is the City Hall, which is regarded as one of the finest in the West. The Michigan Soldiers and Sailors Monument is the most imposing work of art, while there are numerous important public and private buildings. The parks include Belle Isle, of about 700 acres, connected by a bridge with the city Clark Park, of 17 acres, and many smaller ones. A boulevard from Belle Isle bridge encircles a great part of the city. There are three attractive cemeteries in locations of great natural beauty and tastefully embellished. The U. S. custom house for the port of Detroit is located here, and Fort Wayne, designed to be the most powerful fortification on the northern frontier, stands just below the city.—*Manuf.* *D.* presents abundant advantages for manufacturing, and these have been fully made use of, the city possessing a large number of iron foundries, blast furnaces, copper smelting works, ship yards, bridge works, safe manufactories, wood-working mills, &c., and some of the largest tobacco and cigar factories in the country. In 1890 it had 1,744 manufacturing establishments, employing 38,281 workmen, and yielding products valued at \$77,039,177. The assessed valuation of property was \$143,993,438, and the municipal debt \$2,215,226. In 1897 the valuation was \$209,642,000, and the debt \$3,828,330. Pop. (1870) 79,577; (1880) 116,340; (1890) 205,876; (1897) about 240,000.

Detroit', in Minnesota, a town, cap. of Becker co., on Detroit lake, 32 miles E. of Moorhead. Pop. 1,800.

Detroit River, separates Canada from Wayne co., Michigan, and connects lake St. Clair with lake Erie; length, 25 m.; average breadth, $\frac{3}{4}$ of a m.

Detrude', *v. a.* [Lat. *detrudo*—*de*, and *trudo*, to thrust.] To thrust down; to push down with force.

"The torpid sap, detruded to the root
By wintry winds."—Thomson.

Detrun'cate, *v. a.* [Lat. *detrunc*, *detruncatus*—*de*, and *trunc*, to cut shorter.] To cut off, as boughs from the trunk of a tree; to lop; to shorten by cutting.

Detrun'cation, *n.* [Lat. *detruncatio*.] Act of cutting or lopping off.

(Surg.) Separation of the trunk from the head of the foetus, the latter remaining in the uterus.

Detru'sion, *n.* [Lat. *detrusio*.] The action of any force to thrust outward a body exposed to its influence, as in the case of an embankment behind a retaining wall, or of an arch, or a truss acting upon a pier or other point of support intended to receive its effect. The word *detrusion* is in fact nearly synonymous with the expression *outward thrust*, and in most cases it may be conveniently substituted for it.

Det'ingen, a village of Bavaria, Circle of Lower Franconia, situate on the Main, 12 m. from Aschaffenburg. Here, in 1743, the French army under Noailles was defeated by the allied English and Austrians, commanded by George II. of England. Pop. abt. 1,400.

Det'min'scence, *n.* [Fr.] Diminution of swelling; subsidence of anything swollen.

De'tur, *n.* [Lat. *detur*, subjunctive present of *dare*, to give.] A term applied to a book given as a present to a meritorious undergraduate in Harvard university.

Deucalion, (*deu-ka'leon*). (Myth.) The son of Prometheus and Clymene. Zeus having resolved to destroy the human race by a deluge, *D.* built a ship, in which he and his wife, Pyrrha, escaped the destruction which befell the rest of mankind. When the ship finally rested on Mount Etna, they resolved to offer up sacrifices to the gods for the repopling of the world; thereupon, they went to the sanctuary of Themis for this purpose, and were told by the goddess that they must throw behind them the bones of their mother as they departed from the temple. Understanding by the "bones of their mother" the stones of the earth, they obeyed the injunction, and from those thrown by *D.* sprang up men, and from those by Pyrrha women. *D.* built his first dwelling-place at Opus, or Cynus. He is also said to have founded the sanctuary of Olympian Jove at Athens, and in later ages his tomb in the vicinity was long pointed out. *D.* had by Pyrrha several children, Hellen, Amphictyon, Protogeneia, and others. It was at one time extensively believed, even by intelligent scholars, that the myth of *D.* was a corrupted tradition of the Noachian deluge, but this untenable opinion is now all but universally abandoned. The myth is a comparatively late one, being mentioned neither by Homer nor Hesiod.

Deuce, *n.* [Fr. *deux*, two.] (Gaming.) A card with two pips; a die with two spots.

Dence, or **Dense**, *n.* [L. Lat. *dusius*, among the ancient Gauls, a demon, an incubus, an evil spirit, from Armor. *teuz*, a phantom, a spectre.] An evil spirit; a demon; the devil; as, to play the *dence*.

Den'ced, or **DEUSED**, *a.* Devilish; excessive; as, a *den'ced* deal of pride.

Dens ex Machina, (*de'us eks mai'kin-ä*). [Lat., a god from the machine.] An expression borrowed from the ancient stage, it being usual among the ancient Greeks, when there was any difficulty in bringing the plot to a satisfactory conclusion, to have recourse to the assistance of a deity, who was let down in a machine for that purpose. In the modern drama, when a person or incident is arbitrarily introduced in order to bring about the dénouement, this is called *dens ex machina*. The expression is also by analogy sometimes applied to the mode in which some philosophers attempt to account for facts which they cannot explain by any known law; viz., by the intervention of supernatural agency.

Deutero-canon'ical, *a.* [Gr. *deuteros*, second, and *canon*, a rule, canon.] (Eccl.) A term applied by Roman Catholic writers to what is commonly termed by Protestants the *Apocrypha*, or the Apocryphal books of the Old Testament. They receive their name from their being regarded as inspired, but are not of the same authority as the canonical books proper.

Denterog'amist, *n.* [Gr. *deuterogamos*.] One who marries a second time.

Denterog'amist, *n.* [Gr. *deuterogamia*, from *deuteros*, the second, and *gamos*, marriage.] A second marriage after the death of the first husband or wife.

Denteron'omy, *n.* [Gr. *deuteros*, second, and *nomos*, law.] The second law, or second giving of the law by Moses; the name given to the 5th book of the Pentateuch, the recapitulation of the laws and ordinances scattered over the other books of Moses. — See PENTATEUCH.

Denteropa'thia, or **DEUTEROPATHY**, *n.* [Gr. *deuteros*, the second, and *pathos*, suffering, from *paschein*, *pathein*, to suffer; Fr. *deuteropathie*.] (Med.) A sympathetic affection of any part; as a headache from an overloaded stomach, or sickness from an injury of the head.

Denteros'copy, *n.* [Gr. *deuteros*, the second, and *skopia*, a looking out, a spying, from *skopein*, to look at, to behold.] (Med.) Second sight; a fanciful power of seeing future things or events. Also, a form of hallucination, in which the patient sees a spectral image of himself.

Denthydro'guret, or **DEUTOHYDROG'URET**, *n.* [From Gr. *deut*, *deuto*, from *deuteros*, the second, and *hydroguret*, *q. v.*] (Chem.) A compound of two equivalents of hydrogen with one equivalent of a base.

Dentox'ide, *n.* [From *deut*, contracted from Gr. *deuteros*, the second, and *oxide*, *q. v.*] (Chem.) The oxide of a metal containing a double dose of oxygen. The word *binoxide* is, however, more generally used. This remark applies to all compounds commencing with the word *deuto*.

Dentz, (*doitz*), a fortified town of Prussia, on the Rhine, opposite Cologne, with which it is connected by a bridge of boats. *Manuf.* Silks and velvets. Pop. 10,488.

Dent'zia, *n.* (Bot.) A genus of plants, order *Saxifragaceae*. The leaves of some species, especially those of *D. scabra*, are covered with beautiful scales; hence from their roughness, they are used in Japan for polishing purposes.

Denz-Ponts, (*doopawng*). [Fr., two bridges; in Ger. *Zweibrücken*.] A town of Bavaria, capital of a duchy of the same name, on the Little Erbach, with a fine castle 58 m. S.E. of Mentz. *Manuf.* Woollens, cotton, leather and tobacco. Pop. 9,155. From 1802 to 1814, this town with its duchy, formed a department of France called *Mont-Tonnerre*.

Deva, (*dai'ra*), the name of two rivers in Spain, one of which is the town of Deva, a fishing sea-port on Guipuscoa, 15 m. from St. Sebastian. Pop. of town, 3,000.

Deva, a town of Transylvania, 19 m. from Hunyady pop. 4,385.

De'vall's Bluff, in Arkansas, a P. O. of Prairie co.

Devaprayaga, (*de-va-pra-ya'ga*), a town of N. Hindostan, dist. Serinagar. It has a noted Hindoo temple to which pilgrims resort in great numbers. Lat. 30° N., Lon. 78° 31' E.

Devapora'tion, *n.* [Lat. *de*, and *vaporare*, to emit steam, or vapor, *vaporatio*, a steaming vapor.] A change from vapor into water, as in the formation of rain.

De'vastate, *v. a.* [Lat. *devasto*, *devastatus*—*de*, and *vasto*, to waste.] To lay waste; to ravage; to desolate; to destroy; to demolish; to plunder.

Devasta'tion, *n.* [Fr. *dévastation*; Lat. *devastatio*.] Act of devastating; state of being devastated; desolation; ravage; waste; havoc; destruction; overthrow.

Devasta'tit, *n.* [Lat. *devastare*, to lay waste.] (Law) A devastation or waste of the property of a deceased person, by an executor or administrator being extra agent, or misapplying the assets, for which he will be held liable, as the creditors or legatees cannot be prejudiced by his misconduct.

Devel'op, *v. a.* [Fr. *développer*; probably from *la de*, and *volvere*, to roll.] To unwrap; to unfold; to uncover; to disclose or make known something concealed or withheld from notice; to lay open; to exhibit; unravel; to detect.

Devel'oper, *n.* One who develops.

Devel'opment, *n.* [Fr. *développement*.] The disclosing of something secret, or withheld from the knowledge of others; full exhibition; disclosure; an unraveling; detection; disentanglement; expansion; growth increase.

(Physiol.) Gradual change from an embryo state full maturity. — See PHYSIOLOGY.

(Math.) The process by which any mathematical expression is changed into another of equivalent value meaning, and of more expanded form.

Development Theory. See DARWINIAN THEORY; EVOLUTION, &c.

Development'al, *a.* Belonging to the process of development.

Deven'ter, **DEWEN'TER**, a city of Holland, province Overysseel, on the Yssel, 20 miles S. E. of Haarlem. *Manuf.* Carpets, hosiery, iron and tinware, toys, &c. Pop. (1895) 24,531.

De Ven'tre Inspicien'do. [Lat., of inspecting belly.] (Law.) A writ to inspect the body where a man feigns to be pregnant, to see whether she is a child. It lies for the heir presumptive to examine a widow suspected to be feigning pregnancy in order to enable a supposititious heir to obtain the estate.

De Vere, (*dai-ver'*), MAXIMILIAN SCHELE, an eminent philologist, b. in Sweden, 1820. After spending a few years in the military and civil service of Prussia,

emigrated to the U. States, and was appointed professor of modern languages and belles-lettres in the University of Virginia, in 1844. He wrote a great many essays on various subjects for American and English magazines, and published *Outlines of Comparative Philology*, 1853; *Stray Leaves from the Book of Nature*, 1856; *Glimpses of Europe in 1848*, &c. His work on philology has gained him a wide-spread reputation, both in America and Europe, and has been translated into several languages. One of his latest works is *The Wonders of the Deep*.

Devereaux, (*dev'-er-ou*), in Georgia, a village of Hancock co., about 18 m. N.E. of Milledgeville.

Devereux, (*dev'-er-ou*), the names of several earls of Essex. — I. WALTER. B. in 1540. He distinguished himself by his gallantry in the campaign against the rebellious earls of Westmoreland and Northumberland, and afterwards in the expedition against Ireland. Died in Dublin, 1576. — II. ROBERT, the son of the preceding, b. in 1567. He gained the favor of Elizabeth, joined the expedition of the earl of Leicester to Holland, distinguished himself both in the military and the civil service, and succeeded in supplanting Leicester in the councils of the queen. After many quarrels with Elizabeth, he finally resolved to rid himself by force of his rivals at court, but failed in the attempt, and was tried, convicted of treason, and beheaded in 1601. — III. ROBERT, son of the preceding, b. in 1592. He fought with great bravery against Charles I., and defeated the royalists in several engagements, but finally met with several reverses, and was obliged to resign his commission of lord-general. In 1644 he urged the impeachment of Cromwell, whom he suspected of despotic designs, but failing in this attempt, he retired into private life. In recognition of his past services, the Parliament voted him an annuity of £10,000. D. in 1647.

Fig. 807. — II. EARL OF ESSEX.

Dever'gence, Dever'gency, *n.* See DIVERGENCE.

Devest', *v. a.* See DVEST.

Deviate, *v. n.* [*Lat. devio, deviatum — de, and via, a way; It. deviare.*] To go out of the way; to turn aside from the common or right way, course, or line; to stray from the path of duty; to wander; to swerve; to stay; to digress; to deflect; to err.

—*v. a.* To cause to deviate.

Deviation, (*de-re-a'sh-un*), *n.* [*Fr. from L. Lat. deviatio.*] A wandering or turning aside from the right way, course, or line; variation from a common or established rule; want of conformity to the rules prescribed by God; error; sin; obliquity of conduct.

(*Mar. Law.*) The voluntary divergence of a ship from its appointed and proper course, without paramount reason or necessity. An act of *D.* by invalidating the policy of insurance, relieves the underwriters thereof from their responsibility in case of loss or damage resulting from such act of deviation.

(*Med.*) A vicious curvature of the spine or other bones. — A faulty direction of the teeth or other parts. — The passage of blood, bile, urine, milk, &c., into vessels not natural to them.

Devise', *n.* [*Fr. devise, an emblem, a motto, from devis, a plan; from Lat. dividio, divisus, to divide.* See DEVISE.] That which is devised, formed, or invented with care and art; invention; genius; faculty of devising; contrivance; design; scheme; project; stratagem; shift.

(*Her.*) A motto expressed by means of a pictorial emblem.

"That banner with the strange devise —
"Excelsior!" — Longfellow.

The motto proper originated in the emblem, a written inscription coming to be added to the pictorial design, with the view of rendering the meaning more explicit. *D.* thus consist of two parts — a pictorial figure called the *body*, and a motto in words called the *soul* of the *D.* As early as the times of Æschylus, the "Seven heroes before Thebes" all appear with *D.* on their shields; and the same is related by Xenophon of the Lacedæmonians and Sicyonians. In the Middle Ages, *D.* on coat-armor came into regular and formal use, and chivalry employed them in its courtly expressions of devotion to the fair sex. They were used both as charges on the shield, and as crests. The only respect in which the *D.* differs from other heraldic emblems is, that it has always some specific reference to the history, or circumstances, or position of the bearer. As an example: Louis XIII. of France had a falcon as a *D.*, with these words: "*Aquila generosior ales*" ("A more generous bird than the eagle"), by which he meant to denote his own superiority to the emperor, whose *D.* was an eagle. On all festive occasions, *D.* figured on triumphal arches, on banners, and on hangings. At a later period, it became customary to work *D.* into buildings; friezes and stained windows were often covered with them. This practice has recently much gone out of use, at least in its original form.

evil, *n.* [*A. S. deofol; D. duivel; Ger. teufel; L. Lat. diabolus; Fr. diable; Gr. diabolos, from diabolō, to*

calumniate — *dia*, all through, to the end, and *ballō*, to throw at or hit.] A term applied in the New Test. to the Evil Principle; the adversary of man referred to throughout the Old and New Testaments, under various names and titles, as *Satan, Lucifer, Belial, Apollyon, Abaddon, the Man of Sin, the Tempter*; and described as an angel who fell from heaven with many inferior spirits, being cast down thence by God for his pride and rebellious spirit. From that time he is said to have had permission to try and tempt mankind. He is represented in Job and Zachariah as standing in the presence of the Lord, seeking permission to tempt men. The character herein attributed to the Devil is identical with that of the Evil Principle in the Gnostic and Manichean philosophy; excepting, indeed, that the Scriptures always maintain the inferiority of the evil to the good.

—An evil spirit or being; a demon.

"There was a laughing devil in his sneer." — Byron.

—An expletive term, expressive of wonder, emphatic surprise, or vexation.

"We . . . wonder how the devil they got there." — Pope.

—A very wicked person; — used metaphorically.

"I . . . seem a saint when most I play the devil." — Shaks.

(*Cookery.*) A piece of the flesh of game, meat, &c., grilled and seasoned with Cayenne-pepper, &c.; as, "preparing devils on the gridiron." — Scott.

(*Mach.*) A machine for dividing rags or cotton in paper-making.

Printer's devil. A term used to designate an errand-boy in a printer's establishment; doubtless derived from the persecution sustained by authors in the demands made upon them for manuscript-copy; or, it may be from the many hearty anathemas these troublesome imps receive for the trouble they give.

"With the printer's devil dunning me for copy." — Fonblanque.

To play the devil with. To interfere with prejudicially; to meddle with ruinously; as, war plays the devil with trade.

—*v. a.* To render devilish; to convert into the resemblance of a devil. — (*Cookery.*) To broil, and season highly with pepper, &c.; as, a devilled drumstick.

—To cut up refuse or waste rags.

Dev'ilet, Dev'ilkin, *n.* A little devil.

Dev'ilish, *a.* Partaking of the qualities of the devil; very evil and mischievous; having communication with the devil; pertaining to the devil; diabolical; infernal; hellish; saturnine; wicked; detestable; as, a dev'ilish deed.

"A dev'ilish knave." — Shaks.

Dev'ilishly, *adv.* In a devilish or diabolical manner.

Dev'ilishness, *n.* The qualities of the devil.

Dev'il Island, of Terra del Fuego, Lat. 54° 58' 30" S., Lon. 69° 4' 50" W.

Dev'ilkin, *n.* See DEVILET.

Dev'il Lake. See MINNIEWAKAN.

Dev'il-me-care, *a.* Reckless; rantipole; heedless of consequences; as, a dev'il-me-care fellow.

Dev'ilment, Dev'iltry, *n.* Roguery; mischief; extreme folly or wickedness.

Dev'il's, an island off the coast of French Guiana, Lat. 5° 16' N., Lon. 52° 34' W.

Dev'il's Basin, a name given by Capt. Cook to a port in Christmas Sound, Terra del Fuego; Lat. 55° 16' S., Lon. 70° W.

Dev'il's Bit Mountains, a mountain-range of Ireland, in Munster, co. Tipperary, extending S.W. and N.E. about 24 m., and separating the basins of the Shannon and the Snir Rivers. Height, about 1572 feet.

Dev'ilship, *n.* The character of a devil.

Dev'iltry, *n.* Same as DEVILMENT, *q. v.*

Dev'ious, *n.* [*Lat. devius — de, and via, way.* See WAY.] Out of the common way or track; as, a dev'ious road.

"Through ev'ry dark, and ev'ry dev'ious way." — Pope.

—Going astray from rectitude, or the divine precepts; wandering; rambling; excursive; vagrant; erring.

"The dev'ious paths where wanton fancy leads." — Rowe.

Dev'iously, *adv.* In a dev'ious or roundabout manner.

Dev'iousness, *n.* Departure, or wandering from a straight or regular course.

Devir'ginate, *a.* Without, or deprived of, virginity.

Devir'gination, *n.* Act of depriving of virginity.

Devis'able, *a.* That may be devised or contrived; that may be bequeathed or given by will; as, *devisable* lands.

Devise', *v. a.* [*O. Fr. deviser, to devise, to invent; Lat. de, and viso, visum, from video, to see.*] To form in the mind or in idea; to imagine; to contrive; to excogitate; to invent; to discover; to plan; to scheme; to project; to strike out.

—*v. n.* [*Lat. dividio, divisus, to divide.*] To give or bequeath by will.

—*n.* [*L. Lat. divisa, a legacy for charitable purposes, from Lat. dividio, divisus, to divide.*] (*Law.*) The act whereby a testator conveys his lands by will, the conveyance of personal property being commonly termed a *bequest*.

Devisee', *n.* (*Law.*) One to whom a devise has been made.

Devis'er, *n.* One who contrives or invents; a contriver; an inventor.

Devisor, *n.* (*Law.*) One who gives by will; one who bequeaths lands or tenements; a testator.

Devitrification, *n.* [*From de, and ritrification, q. v.*] (*Chem.*) A peculiar change which takes place in glass, in consequence of the action of certain decomposing agents. Thus, glass long exposed to ammoniacal fumes, or which has been long acted upon by water, is subject to this change. It is characterized by the surface becoming dull and earthy; its losing transparency, and assuming a kind of opaline iridescence; it also becomes more fibrous, and less brittle, than ordinary glass. Some

glass vessels discovered in Greek, Roman, Egyptian, and Assyrian tombs bear marks of this kind of decay.

Devit'rify, *v. a.* To take away a glass-like nature or character from.

Dev'izes, a town of England, in Wiltshire, 23 m. N.N.W. of Salisbury. *Manuf.* Silks, smuff, and malt. *Pop.* 7,524.

Devoid', *a.* [*de, and void.*] Destitute; free from; not possessing; — preceding *of*; as, *devoid of propriety*.

—*v. a.* To put away or from.

Devoir, (*dev'-vair*), *n.* [*Fr. duty, from Lat. debeo — de, and habeo, to have.* See DEBT.] Service or duty; an act of civility or respect; respectful notice due to another.

"Gentlemen . . . pay their *devoirs* to one particular fair." — Spectator.

Devolut'ion, *n.* [*L. Lat. devolutio.*] The act of rolling down.

—Removal from person to person by succession.

"The last devolution is to the king by way of appeal." — Hale.

Devolve', *v. a.* [*Lat. devolvere — de, and volvo, to roll.* See VOLUBLE.] To roll down; to pour or cause to flow with windings, as a river. — To send down from one person to another; to deliver over, or from one possessor to a successor.

"The whole power, at home and abroad, was devolved upon that family." — Swift.

—*v. n.* To pass from one to another; to fall by succession from one possessor to his successor; — preceding *on* or *upon*; as, the command devolved on the senior general.

Devolve'ment, *n.* Act of devolving.

Dev'on, in England. See DEVONSHIRE.

Dev'on, a river of Scotland, rising in the Ochil Hills, and falling into the Forth near Alloa. There is another smaller river of the same name, which falls into the Forth at Clackmannan harbor.

Dev'on, in Iowa, a post-office of Chickasaw co.

Dev'on, in Kansas, a post-office of Bourbon co.

Dev'on, (North.) a tract of the Arctic regions in N. America; Lat. 75° N., Lon. 80° to 92° W.; bounded on the E. by Baffin's Bay, W. by Wellington Strait, and S. by Barrow's Strait, which latter separates it from North Somerset.

Devon'ian, *a.* Relating or pertaining to Devonshire, Eng.

(*Geol.*) Composed of, or having relation to, the fossil strata found in Devonshire, Eng.

Devonian Age. (*Geol.*) See OLD RED SANDSTONE.

Dev'onite, *n.* (*Min.*) Same as WAVELLITE, *q. v.*

Dev'onport, a parliamentary borough, and naval arsenal of Devonshire, England, situate on the Tamar, near its entrance into Plymouth Sound, 215 m. S.W. of London, and 1½ m. W. of Plymouth. It has a very large harbor, with deep water. Prior to 1824 its name was *Plymouth Dock*, and it then formed a suburb of Plymouth. It contains a naval and a military school, a public library, an orphan asylum, and two theatres. In the N., S., and E., it is fortified by a strong wall, with a breastwork and a ditch, while the entrance of the harbor is commanded by heavy batteries. It has several basins, dry-docks, and slips for ship-building. The town itself contains some large soap-houses and breweries, but no factory worth mentioning.

Dev'onshire, or DEVON, a county of England, bounded N. and N.W. by the British Channel, W. by the Tamar and Marland-water; S. and S.E. by the British Channel; and E. and N.E. by Dorset and Somerset counties. *Area*, 2,580 sq. m. *Rivers*: the Dart, Tavy, Exe, Teign, Torridge, Otter, Tamar, Plym, Lynn, Avon, Axe, Sid, and Yealm. The principal artificial water-courses are the *Great Western*, the *Tavistock*, and the *Tamar* canals. *Prod.* Wheat, barley, peas, beans, flax, clover, oats, dairy produce, cider, apples, and other fruits. *D.* contains many exceedingly rich valleys and pastures, the latter being chiefly used for dairy purposes. Butter and cheese are made in very large quantities. The *D.* short-horned and red breed of cattle is highly valued. In 1807, it was for the first time imported

into this country, where it is now perfectly acclimatized. *Min.* Copper, lead, tin, bismuth, cobalt, antimony, coal, and marble. *Manuf.* Linen, and woollen goods, serge, lace, and soaps. Ship-building is carried on to a considerable extent, especially at Devonport and Plymouth. *Cap.* Exeter. *D.*, next to Yorkshire, the largest county of England, returns 15 members to Parliament. *Pop.* (1895) 653,880.

Devote', *v. a.* [*Lat. devoveo, devotus — de, and roveo, to vow.* See VOW.] To appropriate by solemn promise or vow; to set apart by a solemn act or deed; to dedicate; to consecrate; — also used in a sense of evil, as to *devote* to destruction.

"No devoted thing that a man shall devote unto the Lord." — Lev. xxvii.

—To give up wholly; to resign; to destine; to doom; to addit; to yield to; to apply closely to; to consign; as, *devoted to sorrow, a devoted friend, &c.*

Devot'edness, *n.* State of being devoted or given up wholly; addictedness; as, "*devotedness unto God.*"

Devotee', *n.* [*Fr. dévot, from devôte, the O. Eng. spelling.*] One who is wholly and entirely devoted, particularly one given wholly to religion; one who is superstitiously or bigotedly devoted to religious duties and ceremonies; a zealot.

Fig. 808. — DEVON COW.

Devote'ment, *n.* Act of devoting; state of being devoted.

Devot'er, *n.* One who devotes.

Devotion, *n.* [Fr.; Lat. *devotio*.] A devoting or consecrating.—The state of being dedicated, consecrated, or solemnly set apart for a particular purpose; consecration.—A solemn attention to the Supreme Being in worship; piety; devoutness; religiousness; external worship; acts of religion; performance of religious duties; prayer.

"Religious minds are inflamed with the love of public devotion."—Hooker.

—An act of reverence, respect, or ceremony; ardent love or affection; attachment; devotedness; ardor; earnestness.

"Immaculate devotion, holy thoughts."—Shaks.

—An object of reverence, or devotion; anything consecrated and holy; as, "Priests and all devotions."—Beau. and Fl.

Devo'tional, *a.* [L. Lat. *devotionalis*.] Pertaining to devotion; used in devotion; suited to devotion; religious; as, a *devotional* exercise.

Devo'tionalist, **Devo'tionist**, *n.* A person given to devotion, or one superstitiously devout.

Devo'tionally, *adv.* In a devout, or devotional manner.

Devour', *v. a.* [Fr. *dévorer*; Lat. *dévoro*—*de*, and *voro*, to swallow whole. See VORACIOUS.] To eat up; to eat ravenously, or with greediness; to consume with rapidity and violence; to swallow up gluttonously.

"Some evil beast hath devoured him."—Gen. xxxvii. 20.

—To enter upon and pursue with great eagerness; to waste; to destroy; to ruin; to annihilate.

"Each flying hour

Does some loose remnant of thy life devour."—Dryden.

—To enjoy with avidity; to spend in disposition and riot; as, to *devour* one's substance.

Devour'er, *n.* One who, or that which, devours, wastes, or destroys.

Devour'ingly, *adv.* In a devouring manner.

Devout', *a.* [It. *devoto*; Fr. *dévo*; Lat. *devotus*, from *devoro*. See DEVOTE.] Devoted to religion; yielding a solemn and reverential attention to God in religious exercises, particularly in prayer; as, a *devout* state of mind.—Expressive of devotion or piety.

"With uplifted hands, and eyes devout."—Milton.

—Expressing a lively interest; earnest; sincere; as, a *devout* desire.

Devout'ful, *a.* Devout; testifying reverence or devotion.—Holy; sacred; as, "*Devoutful* rights."—Marston.

Devout'less, *a.* Without reverence or devotion.

Devout'lessly, *adv.* In a manner void of devotion.

Devout'lessness, *n.* State of being destitute of devotion.

Devout'ly, *adv.* In a devout manner; piously; religiously.

"Cast her fair eyes to heav'n, and prayed devoutly."—Shaks.

—Expressive of devout feeling and emotion.

"One of the wise men . . . devoutly viewed this cross."—Bacon.

—Earnestly; solemnly; veritably.

"Tis a consummation devoutly to be wished."—Shaks.

Devout'ness, *n.* Quality of being devout.

Dew, (*dū*), *n.* [A. S. *deaw*; L. Ger. *dau*; Du. *dauw*; Ger. *thau*; Dan. *dug*; Swed. *dagg*; O. Ger. *tau*; Icel. *dögg*, from *digna*, to become moist or wet; Goth. *dagg*; Gr. *denō*, to wet, to drench; Sansk. *dih*, to water, to irrigate; but possibly the real Sansk. root is found in *dir*, to shine, to glitter, as the morning dew presents a glittering appearance.] (*Meteor.*) The moisture or aqueous vapor which is deposited from the air on those bodies which are exposed to it. It is generally observed in the form of minute globules on the surface of leaves. When the cold is extreme, it takes a solid form, and appears as hoar-frost. When the atmosphere is at any given temperature and pressure, it holds a proportionate quantity of aqueous vapor in suspension. If that temperature is lowered to a certain point, called the *dew-point*, a quantity of aqueous vapor is set free in the form of water or dew, which can sometimes be seen falling as a fine rain or mist. Those substances which radiate heat rapidly are cooled soonest; and therefore the dew is deposited upon them first. All vegetable fibres are ready radiators of heat; consequently, the smooth leaves of trees, shrubs, and grasses, cause the dew to be deposited upon them, even upon moderately warm evenings. Radiation takes place most rapidly when there is a clear sky; when there are many clouds in the air, heat is radiated back by them to the earth, which nearly supplies the amount of heat lost. Thus dew is more readily deposited upon clear, fine nights than when the sky is overcast. The history of the knowledge of dew is interesting. Aristotle supposed that there was a rain formed by the condensation of the water, which had been evaporated during the day, by the cold of night. (*Meteor.* i. 10.) In 1784, however, the recognized opinion was, that the cold was caused by the dew. It was not until the discoveries of Leslie concerning radiant heat, in 1794-5, that the true theory of *D.* was established.

Dew, *v. a.* To wet with dew; to moisten; to dampen; to bedew.

"Give me thy hand,

That I may dew it with my mournful tears."—Shaks.

Dew, THOMAS RODERIC, an American author, b. in Virginia, 1802. In 1827 he was appointed professor of history and political economy in William and Mary Coll., and a few years later was chosen president of that institution. In 1833 he published his *Essay on Slavery*, in which he took strong ground against abolition, which at that time was warmly advocated by many leading

men of Virginia. His principal work, printed several years after his death, is *A Digest of the Laws, Customs, Manners, and Institutions of the Ancient and Modern Nations*. D. in Paris, 1846.

Dewart, in *Pennsylvania*, a post-office of Northumberland co.

Dew'-berry, *n.* (*Bot.*) See RUBUS.

Dew'-claws, *n.* The bones or little nails behind a deer's foot.

Dew'-drop, *n.* A drop of dew which sparkles at sunrise; a spangle of dew.

"Stars of morning, dew-drops."—Milton.

Dew'ees, WILLIAM POTTS, an American physician, b. at Pottsgrove, Pa., in 1768. Having for several years practised medicine at Abington, Pa., he removed to Philadelphia, where, in 1834, he was appointed professor of obstetrics in the University of Pennsylvania. He published *Medical Essays; The System of Midwifery; The Physical and Medical Treatment of Children; Practice of Medicine*, &c. Some of his works have been translated into German and French, and are still highly esteemed. D. in Philadelphia, 1841.

De Wet'te, WILHELM MARTIN LEBERECHE, a German theologian, b. in 1780. In 1810 he was appointed professor of theology in the University of Berlin, and subsequently rector of the University of Basle. His works were very numerous; the most important of them are, *Religion und Theologie; Christliche Dogmatik; Kritische und Historische Einleitung zum Alten und Neuen Testament*; and a new German translation of the Bible. D. in 1849.

Dew'-fall, *n.* The time in which dew falls.

Dew'iness, *n.* State of being dewy.

De Witt, JOHN, a celebrated statesman of Holland, b. at Dort, 1625. In 1650 he was chosen Pensionary of his native city; and, after distinguishing himself in public affairs, was elected Grand Pensionary of Holland. In that capacity he concluded a peace with Cromwell, one article of which excluded the House of Orange from the stadtholdership. In 1665 war broke out between the Dutch and English, in which the French afterwards joined the former, and, in 1666, *De W.* sent the fleet under De Ruyter which sailed up the Thames. The peace of Breda was concluded the same year. *De W.* about the same time procured the passing of the perpetual edict for abolishing the office of stadtholder, for which he received public thanks. However, in 1672, when Holland was invaded by the French, and civil dissension overspread the country, both John De Witt and his brother Cornelius were barbarously murdered by the populace, and the stadtholdership was re-established. William, Prince of Orange (afterwards William III. of England), was then called to that post.

De Witt, in *Arkansas*, a post-village, cap. of Arkansas co., on the Arkansas River, abt. 70 m. S.E. of Little Rock.

De Witt, in *Georgia*, a post-office of Mitchell co.

De Witt, in *Illinois*, a central co.; area, about 450 sq. m. Rivers, Salt creek, an affluent of the Sangamon river. Surface, level. Soil, fertile. Min. Stone coal. Cap. Clinton. Pop. (1890) 17,011.

—A post-village of De Witt co., about 60 m. E. N. E. of Springfield.

—A township of De Witt co.

De Witt, in *Iowa*, a thriving trading city of Clinton co., 26 m. N. of Davenport; center of rich farming region. Pop. (1897) about 1,650.

De Witt, in *Michigan*, a township of Clinton co., on the Looking-glass river, about 8 miles north of Lansing.

De Witt, in *Missouri*, a post-village of Carroll co., on the Missouri river, about 85 miles N. W. of Jefferson City. Pop. (1897) about 700.

De Witt, in *Nebraska*, a post-village of Saline co.

De Witt, in *New York*, a post-town and township of Onondaga county, about 4 miles east of Syracuse. Pop. (1897) about 5,000.

De Witt, in *Texas*, a S. central co.; area, about 880 sq. m. Rivers, the Guadalupe. Surface, elevated and rolling. Soil, fertile. Cap. Cuero. Pop. (1897) about 20,000.

De Witt Land, a region on the N.W. coast of Australia, between Lon 120° and 123° W. Discovered in 1628.

De Witt's Valley, in *New York*, a village of Alleghany co.

De Witt'ville, in *New York*, a post-office of Chautauqua co.

De Wittville, a village of Lower Canada, co. of Beauharnois, about 50 m. S. of Montreal; pop. abt. 200.

Dew'lap, *n.* The flesh that hangs from the throat of oxen, which licks or licks the dew in grazing.

"Large rolls of fat about his shoulders hung,

And from his neck the double dewlap hung."—Addison.

—A throat wrinkled and flaccid with age;—used in a vulgar sense.

"And on the wither'd dewlap pour the ale."—Shaks.

Dew'lapt, *a.* Having a dewlap; furnished with a dewlap; as, a *dewlapt* bull.

Dews'bury, in *England*. See SUPPLEMENT.

Dew'-point, *n.* (*Meteor.*) The temperature at which dew begins to form.

Dew'-stone, *n.* A species of limestone which collects a large quantity of dew on its surface.

Dew'-worm, *n.* (*Zoöl.*) A name given to the Earth-worm, *Lumbricus terrestris*, from its living just under the surface of the ground.

Dew'y, *a.* Partaking of dew; moist with dew.

"His dewy locks distill'd ambrosia."—Milton.

—Resembling dew or dew-drops; as, *dewy* tears.

(*Bot.*) Having the appearance of being covered with dew.

Dexter, (*deks'tur*), *a.* [Lat.; Gr. *dexios*; Goth. *taihsvō*, the right hand, *taihso*, on the right; Sansk. *daza*, right, *dazina*, at the right hand, on the right.] Right, as opposed to left, or *sinister*; as, the *dexter* hand.

"My mother's blood runs on the dexter cheek."—Shaks.

Dexter-point, (*Her.*) The right-hand side of a shield.

Dex'ter, in *Maine*, a post-town and township of Penobscot county, 40 m. W. N. W. of Bangor. Pop. of township (1897) about 2,850.

Dex'ter, in *Michigan*, a post-village of Scio township, Washtenaw co., at the junction of Mill Creek and Huron River, abt. 50 m. W. by N. of Detroit.

Dex'ter, in *New York*, a post-village of Brownsville township, Jefferson co., at the mouth of Black River on Lake Ontario, abt. 7 m. W. of Watertown.

Dex'ter, in *Ohio*, a post-office of Meigs co.

Dex'ter, in *Wisconsin*, a post-township of Wood co.;—now merged in Albion township, Jackson co.

Dexter'ity, *n.* [Fr. *dextérité*; Lat. *dexteritas*, from *dexter*.] Right-handedness; readiness of the limbs to perform their functions; skill in the use of the physical members of the body.—Readiness in mental action; adroitness; activity; expertness; cleverness; skill; ability; tact; facility; aptitude.

"They attempted to be knaves, but wanted skill and dexterity."—South.

Dex'terous, **Dex'trous**, *a.* Right-handed; ready, quick, and expert in the use of the body and limbs; skillful, smart, and active in manual employment; adroit; expert; ready; as, a *dexterous* mechanic.

"For both their dexterous hands the lance could wield."—Pope.

—Apt; prompt in contrivance; quick of conception or invention; as, a *dexterous* schemer.

"They are dexterous managers enough."—Locke.

—Performed with art, ready skill, and dexterity; as, a *dexterous* sleight of hand.

Dex'terously, *adv.* With dexterity; expertly; skillfully; artfully; adroitly; promptly.

Dex'terousness, *n.* Dexterity; adroitness; address.

Dex'terville, in *New York*, a village of Chautauqua co., at the outlet of Chautauqua Lake, abt. 18 m. S.E. of Mayville.

Dex'tral, *a.* Relating to the right hand; right, as opposed to left; as, the *dextral* fin of a shark.

Dextral shell, (*Zoöl.*) Applied to spiral shells when the aperture faces the right hand of the observer, the shell being held with the apex upward.

Dextrin, (*deks'trin*), *n.* [Lat. *dexter*, the right hand.] (*Chem.*) The *Soluble Starch*, a vegetable substance found in the interior of the cells of plants. The sap of all plants contains a certain quantity of it, and there seems every reason for believing that it is the source of the cellular matter of starch, sugar, gum, and other vegetable substances. It is almost as valuable to plants as protein is to animals, for it is a constituent from which their organism derives its most important products. Form. $C_{12}H_{10}O_{10}$.—*D.* is artificially procured by adding 2 parts of nitric acid to 300 of water, and mixing this liquid with 1,000 parts of dry starch. This mixture is then subjected to heat, or it may be produced by treating starch with *diosate*. When thus obtained, *D.* is used under the name of *gum substitute*, *soluble gum*, &c., for thickening the colors in calico-printing, for making bandages for fractures, and for the adhesive layer at the back of postage stamps, &c. *D.* may be always distinguished from starch by not giving a blue color with iodine; and from gum, by giving a blue solution with potash and sulphate of copper.

Dex'tro-gy'rate, *a.* Tending to gyrate or turn to the right.

Dextror'sal, *a.* [From Lat. *dextrorsus*—*dextro-versus*, towards.] Rising from right to left, as a spiral line or helix.

Dex'trons, *a.* See DEXTEROUS.

Dey, (*dai*). [Perhaps from the Turkish *dai*, a maternal uncle.] A Turkish title of dignity, given to the governors of Algiers (before the French conquest), Tunis, and Tripoli. The dey is chosen for life from among the chief authorities of the place, with the approbation of the Turkish soldiery. At Tunis the equivalent title of *bey* is more usually substituted for *dey*.

Deyuze, (*dajnze*), a town of Belgium, on the Lys, 9 m. from Ghent; pop. 4,786.

D. F. An abbreviation for *defensor fidei*, defender of the faith.

D. G. An abbreviation for *Dei gratia*, by the grace of God.

Dha'lac, or **Dhulac**, an island in the Red Sea, off the coast of Abyssinia. Lat. 15° 46' N., Lon. 40° 6' E. It is 30 m. long, and 15 m. in average breadth. *D.* is composed of coral rock, and its surface is flat and sandy.

Dhar, (*dar*), a town of Central India, situated in the table-land of Malsoor, Lat. 22° 35' N., Lon. 75° 20' E. It is the cap. of a state of same name, under the protection of the British, having an area of 1,070 sq. m., and a pop. of 105,000.

Dhar'wa, or **Dharwar**, a district of India, pres. of Bombay, inclosed by Belgaum, Mysore, and the dominions of the Nizam. Area, 3,840 sq. m. The country is fertile and level; and, since 1842, the cotton of the New Orleans description has been successfully cultivated. Pop. 800,000. Lat. between 14° 16' and 15° 20' N., Lon. between 74° 50' and 76° E. This district has belonged to the British since 1818.—*D.*, its cap. is abt. 290 miles from Bombay.

Dhawalagiri, or **Dhwalagiri**, (*da-wal-a-pe're*), a peak of the Himalayas, in Hindostan, formerly supposed to be the highest point of the earth's surface. Height 28,000 ft. Lat. 29° N., Lon. 82° 50' E.

Dhoolpore, (*dool-por'*), a city of Hindostan, in the

province of Agra, on the Chumbul River, 35 miles from Agra. It has several mosques and tombs.—*D.* is the cap. of a territory of the same name, made fertile by artificial watering. *Area*, 1,626 sq. m. *Pop.* estimated at 500,000. *Lat.* between 26° 30' and 27° 57' N., *Lon.* between 77° 32' and 78° 30' E.

Dhums, or Dums, (*dum-tas'*) a valley in the Punjab, British India, traversed by numerous streams, and containing a number of scattered villages, which, in the aggregate, form a large population. It grows sugar, and cattle are extensively reared. *Lat.* between 34° and 34° 10' N., *Lon.* between 72° 15' and 73° 15' E.

Di. (*Chem.*) See CHEMICAL NOMENCLATURE.

Di. Dia, Dis. Greek prefixes to many, chiefly medical, terms. They stand generally for *in, through, to, or between.*

Diabase, n. (Min.) A fine-grained, compact hornblende-rock, tough and heavy. See HORNELENDE.

Diabate'rial, a. Crossing over a border or borders. (*r.*)

Diabete's, n. sing. and pl. [*Gr. dia, through, and bainomai, to pass.*] (*Med.*) A disease characterized by an inordinate flow of urine. Medical men recognize two distinct kinds of *D.*—the *diabetes insipidus*, in which there is merely a greatly increased flow of urine; and *diabetes mellitus*, in which the urine is found to contain a large quantity of saccharine matter. Persons of a debilitated constitution, and in the decline of life, are most subject to this disease. It commonly comes on slowly and imperceptibly, without any apparent disorder of the system, and may exist for a considerable time before it attracts any notice. One of the most constant symptoms of this disease is an inordinate degree of thirst; and yet the quantity of urine passed daily is usually much greater than that of the liquids drunk. A voracious appetite is also a usual characteristic of this disease. At length the constitution manifestly suffers, the body becomes emaciated, the strength and vigor fail, the pulse is frequent and small, a slight degree of fever prevails, and the skin is dry and rough. There are also usually aching pains in the back and loins, and uneasy sensations along the urinary passages. The symptoms gradually become more and more intense, until at length the patient sinks from exhaustion, or is cut off by dropsy, consumption, or some other incurable disease. Of the causes or treatment of this disease, unfortunately, little is known. It may be produced by intemperate habits, or whatever tends to impair the system and produce debility. In general, the kidneys are found in a diseased state after death, though in some cases no traces of disease could be found in these or any of the other urinary organs. In fact, as yet little is known of the true character of this disease. There are very few cases on record of the cure, or even of the relief, of confirmed *D.* Where it is symptomatic of hysteria, dyspepsia, or hypochondriasis, the usual remedies for those affections are useful; but where it is *idiopathic*, and saccharine, nothing has proved decidedly serviceable. Strict abstinence from vegetable food of every kind, and the free exhibition of opium, are the only plans which have held out hope of success; but there are very few cases upon record in which even these seem to have been permanently successful.

Diabetic, Diabetic'al, a. Pertaining to diabetes.

Diablerie, Diab'ery, n. [*Fr. diablerie.*] Devilry; incantation; sorcery; witchcraft; occult practices.

Diabolic, Diabolic'al, a. [*Lat. diabolikos, from Gr. diabolos, the devil.*] Devilish; pertaining to the devil; extremely malicious; impious; atrocious; nefarious; outrageously wicked; partaking of any quality ascribed to the devil; as, a *diabolical* act.

Diabolically, adv. In a diabolical manner; nefariously.

Diabolicalness, n. State, character, or quality of being diabolical, or devilish.

Diabolify, v. a. [*Lat. diabolus, and facere, to make.*] To render diabolical, or atrociously wicked.

Diabolism, n. The actions of the devil.—Possession by the devil.

Diabro'sis, n. (Med.) Same as EROSION, *q. v.*

Diacathol'ieon, n. [*Gr. dia, and katholikos, universal.*] (*Med.*) A kind of purge, so called from its supposed general usefulness.

Diacaus'tic, a. [*From Gr. dia, and kaein, to burn.*] (*Geom.*) See CAUSTIC.

n. (Geom.) A curve, to which the rays of light, issuing from a luminous point, and refracted by another curve, are tangents.

(*Med.*) That which is caustic by refraction, as a double convex lens, which has been sometimes used for canterizing an ulcer, by directing the sun's rays upon it.

Diach'ylon, Diach'ylin, (di-ak'e-lün.) n. [*Gr., succulent.*] (*Med.*) The name sometimes given to the adhesive plaster, both spread and unspread; though the term strictly belongs to the little plaster (*emplastrum lithargyri, or plumbi*). It is used occasionally as a discutient dressing, but most frequently employed to make, when mixed with resin, the common sticking or adhesive plaster.

Diac'lasite, n. (Min.) An orthorhombic mineral, much resembling *Bronzite*, found in crystals or foliated masses, of a brass-yellow to a greenish-gray color, in the gneiss mountain of Guadalupe, Spain. *Sp. gr.* 3.054.

Diacod'ium, n. [*Lat., from Gr., and kodia, a poppy-head.*] (*Med.*) A preparation made of the heads of poppies.

Diac'onal, a. [*Fr., from Lat. diaconus.* See DEACON.] Pertaining to a deacon; as, the *diac'onal* office.

Diac'onate, n. [*Fr. diaconat.*] The office of a deacon.

Diacon'tic, a. [*From Gr. dia, and akouin, to hear.*] Pertaining to the science or doctrine of sounds.

Diacon's'ties, n. sing. That branch of physics which treats of the properties of sound refracted in passing through media of different densities. (*Brande.*)—See SOUND.

Diaer'tic, Diaer'tical, a. [*Gr. diakritikos, from diakrino—dia, and krino, to separate.*] Distinctive; that separates or distinguishes.

D. marks. (Palæography.) The marks used to distinguish letters, between the forms of which much similarity exists. Thus, *n* and *u* are distinguished in German running-hand by the mark (—) over the latter letter.

Diadelph'ia, n. [*Gr. dis, twice, and adelphos, a brother.*] (*Bot.*) In some systems, a class of plants which have their stamens united in two parcels.

Diadelph'ons, a. [*Fr. diadelphique.*] (*Bot.*) Applied to stamens the filaments of which have coalesced into two masses or brotherhoods, as in *Fumaria*, and many leguminous plants.

Diadem, u. [*Gr. diadema, from diadō, to bind round—dia, and dō, to bind.*] A head-band or fillet worn by kings as a badge of royalty; the mark or badge of royalty worn on the head; a crown; a tiara.

"Mont Blanc, . . . monarch of mountains,
With a diadem of snow."—Byron.

—Empire; supreme power; royalty; sovereignty.

"Faction that once made diadems her prey."—Roscommon.

(*Her.*) Although the crown and the diadem (see fig. 733) have been from ancient times confounded, yet the latter was a very different thing from what a crown now is, or was. The *D.* was a fillet of silk or linen; and no other crown was used, excepting in some Asiatic kingdoms, before the Christian era. Diocletian assumed the *D.* in 303. After this time it was adorned with a single or double row of pearls and precious stones. It was finally superseded by the crown.

Diademed, (di'a-dēmd,) a. Adorned with a diadem; crowned.

Diadex'is, n. [*Gr. diadexomai, to transfer.*] (*Med.*) A transformation of a disease into another, differing from the former both in its nature and seat.

Diadumedia'nus, MARCUS OPIIUS MACRINUS ANTONINUS, was emperor of Rome in 217, and was killed by the soldiers of Heliogabalus, A. D. 218.

Diare'sis, Diere'sis, n. [*Gr. diairesis, from diairō, to divide—dia, and haireō, to take.*] (*Gram.*) The dividing of a diphthong, or of a contracted syllable, into two syllables, and usually denoted by two dots, thus (··), over the last vowel; as, *aveng'ed, beloved*. Sometimes the mark of *D.* is used to show that two vowels coming together do not form a diphthong; as, *re'iterated*.

(*Surg.*) An operation which consists in dividing any part of the body.

Diaglyphic, (di-a-glif'ik,) a. [*Gr. dia, and glyphein, to carve.*] Presenting depressions in a general surface; as, a *diaglyphic* carving.

Diagnom'eter, n. [*Gr. diagein, to deliver, and metron, measure.*] An electric instrument for determining the conducting power of fixed oils, and especially for the detection of adulteration of olive-oil, which is said to have the lowest conducting power of such oils.

Diagnose', v. a. Same as DIAGNOSTICATE. (*R.*)

Diagnos'is, n. [*Gr., from diagnoskein, to discern or distinguish.*] (*Med.*) The art of discovering the nature of a disease, and of distinguishing it from other diseases of a similar nature. Much depends upon a correct *D.* of disease; and the minute characteristics that frequently distinguish one disease from another render it often a matter of great skill and delicacy. If the true nature of a disease be not ascertained, a course of treatment may be pursued that may be followed by very serious results.

—Concise analysis or determination of a scientific theorem.

Diagnos'tic, a. [*Gr. dia, and gnōstikos—dia, and gnōskō, to know.* See GNOSTIC.] Distinguishing characteristic; indicating the nature of a disease.

—The symptom or distinguishing feature of a disease.

Diagnos'ticate, v. a. To determine the character of a disease by diagnosis.

Diag'onal, a. [*Gr. diagōnios—dia, and gōnia, a corner, an angle.*] (*Geom.*) Extending from one angle to another of a quadrilateral or multilateral figure, and dividing it into two parts; being in an angular direction.

—*n. (Geom.)* A straight line drawn from any angle to an opposite one, in a rectilinear figure. A straight line drawn between two adjacent angles would obviously coincide with the boundary-line; consequently no triangle can have a *D.* A quadrilateral figure has two *D.*: a pentagon, five; a hexagon, nine; &c. In order to calculate the number of possible *D.* in a given figure, the plan is, to take 3 from the number of sides, multiply the remainder by the number of sides, and take half the product. Thus, in the case of a pentagon, $2 \times 5 = 5$; and in the case of a hexagon, $3 \times 6 = 9$.

(*Arch.*) A *D. rib* is a projecting band of stone or timber passing diagonally from one angle of a vaulted ceiling across the centre to the opposite angle.

Diag'onally, adv. In a diagonal direction.

Diag'onite, n. (Min.) Same as ERFWSTERITE, *q. v.*

Diag'onous, a. (Bot.) Possessing four corners.

Diag'oras, OF MELOS, a Greek philosopher, contemporary of Socrates. He was a pupil of Democritus of Abdera. On account of his ridiculing the popular religion, he was charged with impiety, and received the surname of the *Atheist*. Fearing for his life, he fled from Athens and went to Pallene, and finally to Corinth, where he died. Date of his death abt. 412 B. C.

Diagram, n. [*Gr. diagramma, from diagraphō—dia, and graphō, to write, describe, or delineate.*] That which is marked out by lines.

(*Geom.*) A figure, draught, or scheme, delineated for the purpose of demonstrating the properties of any figure, as a square, triangle, circle, &c.

(*Mus.*) In ancient music, the table of sounds.

Indicator diagram. (Steam-Engineering.) See INDICATOR.

Di'agraph, n. [See DIAGRAM.] (*Fine Arts.*) An instrument employed in perspective.

Diagraphic, Diagraph'ical, a. [*Gr. dia, and graphikos, from graphō.*] Making out by lines; delineative; descriptive; as, the *diagraphic* art.

Diagraphic Art. (or DIAGRAPHS,) n. sing. The art of designing, painting, or engraving.

Diagry'diate, n. [*Lat. diagrydium.*] (*Med.*) A purgative decoction of scammony and quince-juice.

Di'al, n. [*Lat. dialis, from dies, a day.*] (*Harol.*) An instrument for showing the time of the day by the shadow of the sun:—more frequently termed *StN-DIAL*, *q. v.*

—The plate or graduated face of a watch, clock, or time-piece on which the hours, minutes, and seconds are marked by lines. (Called, also, *dial-plate*.)

(*Mining.*) A pocket-compass used by miners.

—*v. a.* To measure by means of a dial.

(*Mining.*) To prospect or survey with a dial.

Dialect, n. [*Fr. dialecte; Gr. dialectos—dia, and legō, to pick out one from another, to lay in order, to speak.*] Discourse; conversation; speech; language; argument; phraseology; manner of speaking or expression.—In the philosophical sense of the word, a language which resembles another in its general features, but differs from it in details. The two most widely spread families of languages in the world are the *Indian-Gothic*, and the *Semitic*. In the former are included the *Sanskrit, Zend, Armenian, Greek, Latin, Lithuanian, Slavonic, Teutonic, and Celtic* dialects. In all these, the resemblance, although often far distant, is able to be traced. The *Semitic* embraces the *Hebrew, Syriac, Arabic*, and other *D.* not so well known. The differences of speaking the same language in the same country do not properly come under the head of *D.* In France any such peculiarity is called *patois*, and in England *provincialism*.

Dialect'al, a. Relating or pertaining to a dialect or idiom.

Dialect'ic, Dialect'ical, a. [*Gr. dialektikos, from dialegomai, I discourse.*] Skilled in discourse or argument; relating to disputation or to logic, logical; argumental; as, "*dialectical* subtlety."—Boyle.

—Pertaining to a dialect or dialects; not radical.

Dialect'ically, adv. In a dialectical manner.

Dialectitian, (di-a-tek-tish'an,) n. A logician; a reasoner; one who is versed in dialectics.

Dialect'ics, n. sing. The old name for *logic*, or the art of reasoning and disputing justly. According to Socrates, *D.* were so called from being an inquiry pursued by persons who take counsel together, separating the subjects considered according to their kinds. There were several systems of *D.* among the ancients. The *D.* of Plato are a kind of analyses to direct the human mind by dividing, defining, and bringing things to the first truth: which having reached, it applies itself to explain sensible things, but with a view to return to the first truth, where alone it can rest. The *D.* of Aristotle comprise the doctrine of simple words, delivered in his book of *Predicaments*; the doctrine of propositions, contained in his book *De Interpretatione*; and that of the several kinds of syllogism, in his books of *Analytics, Topics, and Elenchuses*. The *D.* of the Stoics appear to have been little more than a system of grammatical rules. In modern times various systems of *D.* have been propounded in different countries; but by no philosophers, either ancient or modern, has this science been more successfully cultivated than by the Germans, who, among a host of other names more or less distinguished, can boast of a Fichte, Kant, Leibnitz, Hegel, Schelling, and Schlegel, as the propounders each of a peculiar dialectical system.—See *Logic*.

Dialectology, n. [*Gr. dialektikos, and logos, discourse.*] The branch of philologic science which treats of the principles and characters of dialects.

Dialect'or, n. A dialectitian.

Dialing, n. The science which demonstrates the principles of measuring time by dials; the art or practice of constructing dials.

Dialist, n. A constructor of dials; a person skilled in dialling.

Dial'tim, n. (Bot.) The Linnæan name of the genus CODARIUM, *q. v.*

Diallage, n. [*Gr. diallagō, from diallassō, to interchange, to exchange—dia, and allassō, to make other than it is, from allos, Lat. alius, another.*] (*Rhet.*) A rhetorical figure by which arguments are presented in various points of view, and then concentrated into one point.

Diallage, u. (Min.) A variety of hornblende, so called from its changeable color.

Dial'ogite, n. (Min.) Same as RHODOCHROSITE, *q. v.*

Dialog'ical, a. Having relation to dialogues.

Dialog'ically, adv. After the manner or method of a dialogue.

Dialogism, n. [*Gr. dialogismos, a balancing of accounts.*] (*Rhet.*) A mode of writing dialogue, in which the conversation of two or more persons is reported in the third person instead of the first. A speech by a single person, or a soliloquy, when reduced into the narrative form, is also, although somewhat incorrectly, termed by the French writers *dialogism*.

Dialogist, n. A speaker in a dialogue or conference; also, a writer of dialogues.

Dialogis'tic, Dialogis'tical, a. [*Gr. dialogistikos.*]

Pertaining to discourse or reasoning; having the form of a dialogue.

Dialogically, *adv.* In the manner of a dialogue.

Dialogize, *v. n.* To confer or speak in the manner of a dialogue.

Dialogue, (*dī'a-log*), *n.* [Fr.; Gr. *dialogos*, from *dialegomai*—*dia*, and *lego*, to speak.] A conference or conversation between two or more persons; a colloquy.

(*Lit.*) A composition or part of a composition in the form of a conversation between two or more persons. The *D.* was the form most generally adopted by the ancients for the conveyance of instruction, and was considered equally applicable to the most grave and philosophical, and to the most ludicrous and comical subjects. It was adopted by Plato, Cicero, and Lucian, with equal success. Among modern writers the philosophical *D.* has been frequently employed, more especially by the French. Among other eminent persons of that country who have enriched its literature with this species of composition are: Fénelon; Boulhours, in his *Entretiens d'Ariste et d'Eugène*; Fontenelle, in his *Dialogues of the Dead*, and *Plurality of Worlds*; Galiani, *Sur le Commerce des Grains*, &c. Among the Italian writers of *D.* may be mentioned Machiavelli and Algorotti; and among the Germans, Lessing, Mendelssohn, Schelling, and Herder. In England, if we except Berkeley, Hurd, and Walter Savage Landor, this method of composition has rarely succeeded in the hands of those who attempted it.

Dial-plate, *n.* (*Horol.*) See **DIAL**.

Dial-ton, in *Ohio*, a post-office of Clarke co.

Dialyser, *n.* (*Chem.*) See **DIALYSIS**.

Dialysis, *n.* [Gr., from *dialyō*, to loose one from another—*dia*, and *lyō*, to loose. See **LOOSE**.] (*Gram.*) Same as **DIERESIS**, *q. v.*

(*Rhet.*) Same as **ASYNDETON**, *q. v.*

(*Med.*) A solution of continuity; a destruction of parts, or diminution of strength.

(*Chem.*) A method invented by Mr. T. Graham of separating the crystalloid and colloid constituents of solutions, by taking advantage of the property possessed by the former of passing through a septum of colloid matter. It is generally effected by means of an instrument called a *dialyser*, which consists of a hoop of gutta-percha covered with a sheet of parchmentized paper strained tightly, and kept in its place by an India-rubber band. The solution to be dialyzed is poured into the dialyser to the depth of half an inch, and the whole is floated in a basin of pure water. The crystalloids contained in the liquid diffuse themselves through the parchment-paper into the water below, but the colloids are retained behind the *colloidal parchment-paper*, being impervious to them. A mixture of common salt and gum, placed in the dialyser for thirty or forty hours, parts with the whole of its salt, the gum being left behind in a pure condition. Other substances besides parchment may be used; such as a layer of albumen brushed on writing-paper and coagulated by heat, or a film of animal mucus laid between two pieces of linen. *D.* promises to be of the greatest use in separating crystalline principles, such as the alkaloids, from vegetable infusions. It may also be applied to the detection of crystalline poisons, such as arsenic or strychnine, in animal mixtures, no matter how heterogeneous the compound may be. It also throws great light on many obscure points in animal physiology. The ready absorption of crystalline matters by the stomach, which is a membrane covered with colloid mucus, and the separation thus effected of the crystalloid and colloid portions of the food, are instances of *D.* going on in the human frame. Another example is the tongue, the mucous membrane of which readily transmits crystalloid salt and sugar to the nerves of taste; while gum, starch, and other colloids, are either rejected altogether, or only feebly absorbed. *D.* has already received some useful applications, especially for the separation of sugar from molasses, and its purification. It is a process so simple, and so cheap, that it only needs to be better understood to acquire great popularity.

Dialytic, *a.* [Gr. *dialytikos*, able to dissolve.] Pertaining to dialysis.

Diamagnet, *n.* A body possessing diamagnetic polarity.

Diamagnet'ic, *a.* Taking a position at right angles to the lines of magnetic force.

Diamagnetic, *n.* (*Magnet.*) A term applied to bodies which appear to be repelled by either pole of a magnet; as opposed to the term *magnetic* bodies, the particles of which are attracted by either pole.

Diamagnetic'ally, *adv.* After the form or manner of diamagnetism.

Diamagnetism, *n.* (*Magnet.*) Dr. Faraday was the first (1845) to show that the magnetism of bodies was manifested in two ways—either in being attracted by the magnet, as iron; or in being repelled, like bismuth. When a needle or slender rod of iron is suspended between the poles of a magnet (Fig. 809), being attracted by them, it takes up a position of rest on the line *ab*, joining the two poles. When a substance behaves itself in this manner, it is said by Faraday to be *paramagnetic*, and to place itself *axially*, *ab* being the axis. A rod of bismuth, on the other hand, being repelled by the poles of the magnet, comes to rest in the line *cd*, at right angles to *ab*. Bismuth, and the like substances, he calls *diamagnetic*, and they are said to place themselves *equatorially*, *cd* being the equator. These terms, being both definite and graphic, have been universally adopted. Magnetic is the term used by Faraday to indicate magnetism of either sort, although in general language it is understood to refer to paramagnetic bodies, such as iron, &c. Paramagnetic bodies, then, are those

which manifest the same properties with regard to the magnet that iron does; and diamagnetic bodies are those which, like bismuth, show opposite but corresponding properties; so that in circumstances where paramagnetic bodies place themselves axially, diamagnetic bodies place themselves equatorially; and where the former are attracted, the latter are repelled, and *vice versa*. A paramagnetic, therefore, not in the elongated form, but in a compact shape, such as a ball or cube, is attracted by either pole of the magnet, when suspended near it; a ball or cube of a diamagnetic, on the other hand, experiences, when so placed, repulsion. The paramagnetism of iron, nickel, and cobalt, becomes manifest in the presence of magnets of ordinary power; but the magnetism of most other substances is so feeble as to be developed only under the influence of the strongest magnets.

Fig. 809.

Diamant, a town of the French colony of Martinique, in the W. Indies, on the S. coast of the island, about 8 m. S.S.E. of Port Royal, near the *Morne de Diamant*, a volcanic mountain about 1,568 feet in height; *pop.* about 1,700.

Diamant, *n.* (*Min.*) Same as **DIAMOND**, *q. v.*

Diamante, (*NEUQUE*, or *NEUGUEN*), a considerable river of the Argentine Confederation, rising on the E. slopes of the Chilian Andes, in about Lat. 36° 16' S., Lon. 70° W., and flowing S.S.E. about 170 m. to the Rio Negro.

Diamanti'na, a town of Brazil, prov. Matto Grosso, at the junction of the rivers Ouro and Diamantino, about 70 m. N.N.W. of Cuyaba. The Rio Diamantino (*Diamant River*), so called from the valuable diamonds found in its basin, was discovered in 1728. The present town of Diamantina occupies the site of the old village of *Alta Paraguar-Diamantina*. *Pop.* 4,500.

Diamanti'na, (or *TEJUCO*), a city of Brazil, province Minas-Geraes, cap. of the Diamond District. It lies in a valley surrounded by high mountains, about 220 m. N.N.E. of Ouro-Preto, 5,700 feet above sea-level. *Pop.* about 7,000.

Diameter, *n.* [Gr. *diametros*—*dia*, through, and *metron*, measure.] (*Geom.*) A right line passing through the centre of a circle or other curvilinear figure, terminated by the curve, and dividing the figure symmetrically into two equal parts.

—Distance or length through the centre of any object; as, the diameter of a tree.

(*Arch.*) The measure across the lower part of the shaft of a column, which is usually divided into 60 minutes, and forms a scale for the measurement of all the parts of an order.

(*Astron.*) The apparent *D.* of a celestial body is the angle which the latter subtends at the eye, and is measured by the micrometer. The distance from the earth of the body in question, when multiplied by the sine of this angle, gives the real *D.* of the body.

Diam'etral, *a.* Diametrical; relating to a diameter; as, a *diametral* plane.

Diam'etric, *a.* **Diamet'rical**, *a.* [Gr. *dia*, and *metrikos*, belonging to measure, from *metron*, measure. See **MEASURE**.] Pertaining, or relating, to a diameter.—Being in the direction of a diameter; direct.

Diamet'rically, *adv.* In a diametric direction; as, *diametrically* opposite.

Diamine, *n.* (*Chem.*) When olefiant gas of ethylene (C_2H_4) is brought in contact with bromine, the compound $C_2H_4Br_2$, corresponding to Dutch liquid ($C_2H_4Cl_2$), is obtained, and from the action of ammonia upon this *bibromide of ethylene* there is derived a new alkaline base, having the composition $N_2H_4(C_2H_5)$ or two atoms of ammonia (N_2H_5), in which the diatomic ethylene replaces two atoms of hydrogen. Such bases, formed upon the double ammonia type, are called *diamines*, while those which correspond to a simple atom of ammonia are called *monamines*. The base above mentioned is named *ethylene-diamine*. The diamines, like the double atom of ammonia from which they are derived, are capable of combining with two equivalents of hydrochloric or any similar acid, which is implied by stating that they are *diacid*.

Diamond, (*dī'mund*), *n.* [Fr. *diamant*; Lat. *adamas*, from Gr. *adamas*. See **ADAMANT**.] (*Min.*) This most valuable of precious stones, and the hardest of known substances, consists, chemically speaking, of pure, or nearly pure, carbon. As found in nature, *D.* occurs crystallized in forms belonging to the regular system. The crystals are mostly derived from the octohedron; but the faces are frequently convex, and the edges rounded. In their raw state they present the appearance of semi-transparent rounded pebbles, covered with a thin brownish opaque crust. Freed from that coating, they are generally colorless; but they are also found tinged with red, orange, yellow, brown, and black. The pure white transparent variety are most highly prized, and are called *D. of the first water*. They are found in a detached state in alluvial deposits, from which they are extracted by washing. *D.* were originally discovered in Bengal, and in the island of Borneo. The most celebrated mines of India were those of Golconda, and of Rohilcund, in the Mahratta empire. In 1728 they were found in Brazil, and in 1867 in So. Africa. In 1872

one of 288 carats was found on Vaal river, and since then much larger ones have been found. The art of cutting and polishing *D.* was discovered in 1450, by Louis van Berquen, a citizen of Bruges, who found that by rubbing two *D.* together, their surfaces might be abraded.

At the present time diamond cutting is principally carried on by Jews at Amsterdam. They are cut chiefly into two forms, called *brilliant*, and *rose-diamonds*, or *rosettes*, and sometimes into what are called, from their flat surface, *table-diamonds*. The brilliant form, which has from 56 to 64 facets, was first introduced by Cardinal Mazarin, in 1650. It is especially calculated to bring out the lustre and refractive powers of the gem. Thus, a well-cut brilliant, held in a beam of light, reflects nearly the whole of the light which falls upon it, throwing it out and refracting it in colored rays through the facets in front. With the exception of one small point of light through the *collet*, the brilliant forms an opaque shadow on a screen. Until recent years the largest known *D.* was that mentioned by Tavernier as belonging to the Great Mogul. It was found in 1850 in Golconda; and is said to have originally weighed 793 carats. Among the crown-jewels of Russia is the Orloff or Orloff *D.*, weighing 194 carats; it is of the size of a pigeon's egg, and was purloined from a Brahminical idol by a French soldier; it passed through several hands, and was ultimately bought by the Empress Catharine for the sum of \$450,000 and an annuity of \$230,000. One of the most perfect *D.* hitherto found is a brilliant brought from India by a gentleman of the name of Pitt (hence called the *Pitt Diamond*), who sold it to the regent (duke of Orleans) for \$625,000. It weighs 136½ carats (430.55 grains). Another very celebrated *D.* is the *Koh-i-noor* (mountain of light), which became the property of the Queen of England on the annexation of the Punjab, in 1850. It then weighed 186½ carats, but it has been since re-cut, and reduced to 103¾ carats. *D.* known as the Excelsior, weighing 971 carats, has been found in the South African mines. *D.* are inflammable when heated red-hot and plunged into an atmosphere of oxygen, burning with a steady light, and giving rise to pure carbonic acid. The *D.* is not perfectly pure carbon, combustion leaving a small residue containing silic and iron. Its sp. gr. is about 3.54. It was first found to consist of carbon by Lavoisier, in 1775-6. The mine of Brazil yield yearly about \$2,000,000; Africa not less than \$20,000,000, but the character of the African stone is, as a rule, inferior to those of Brazil and India.

(*Geom.*) A figure, thus, \diamond ; otherwise called *rhombus* and *lozenge*.

—One of the four suits of playing-cards, bearing the figure of a diamond or lozenge, in vermilion.

(*Printing.*) The smallest kind of printing-type, with the exception of *Brilliant* and *Excelsior*. The following line is a specimen of *D.*:

Diamond cut Diamond.

—A pencil tipped with a diamond used by glaciologists for cutting glass.

Diamond, *a.* Resembling a diamond; consisting of diamonds; as, a *diamond* necklace.

Diamonded, **Diamond-shaped**, *a.* In square like a diamond.—Shaped like a diamond.

Diamond-bee'le, *n.* (*Zoöl.*) A name usually given to *Curculio imperialis*, or *Splendens*, a beetle of the

Fig. 811.—DIAMOND-BEETLE.

genus *Curculio* *q. v.*, found abundantly in Brazil. It is remarkable for the splendor and exquisite beauty of colors, in which it is thought to be unrivalled even

FAMOUS GEMS AND PRECIOUS STONES.

DIAMONDS.

- 1 THE GREAT MOGUL (Russia), 279 carats (rough, 793 carats).
- 2 THE KOH-I-NOOR (Great Britain), before recutting, 186 $\frac{1}{4}$ carats.
- 3 THE ORLOW, or ORLOFF (Russia), 194 carats.
- 4 THE SHAH OF PERSIA (Russia), 95 carats.
- 5 THE REGENT (France), 136 $\frac{1}{2}$ carats (rough, 410 carats).
- 6 THE STAR OF THE SOUTH (Brazil), 124 carats.
- 7 THE GRAND DUKE OF TUSCANY (Austria), 139 $\frac{1}{2}$ carats.
- 8 THE PIGOTT (England), 82 carats.
- 9 THE NASSAC (England), 48 carats.
- 10 THE PACHA OF EGYPT (Egypt), 49 carats.
- 11 THE POLE STAR (Russia), 40 carats.
- 12 THE SANCY (France), 33 carats.
- 13 THE HOPE (England), 44 carats.
- 14 THE KCH-I-NOOR (England), after recutting, 103 $\frac{3}{4}$ carats.
- 15 THE TIFFANY YELLOW DIAMOND (United States).

PRECIOUS GEMS.

- 16 HUNGARIAN OPAL.
- 17 PERSIAN TURQUOISE.
- 18 ORIENTAL RUBY.

among coleopterous insects. It is of a golden-green color, with two black longitudinal bands on the thorax, and several rows of depressed spots on the elytra (*wing-covers*), which exhibit a beautiful and sparkling green with intervals of black.

Diamond Bluff, in Wis., a p. v. and twp. of Pierce co., on the Mississippi, about 10 m. below Prescott.

Diamond City, in Kansas, a village of Morris co. —In Missouri, a post-village of Meagher co.

Diamond Creek, in Kansas, a twp. of Chase co.

Diamond District, (The.) a portion of the dist. of Seno Frio, Minas Geraes, Brazil, noted for its diamond mines. It is a mountainous region, situate in the vicinity of Villa do Principe. Ext. abt. 25 m. from N. to S., and 15 from E. to W. Diamonds were first discovered here in 1730, by a party of gold-miners. Since that time, immense numbers of these precious stones have been exported, and the supply seems to be inexhaustible. The stones are found in a sort of gravel called *casculhão* by the Portuguese, and *cascujo* by the Spaniards. This gravel is dug up, and conveyed to the washing-shed. The diamond mines are worked by the Brazilian government, which keeps very strict guard upon its monopoly, and punishes every infringement with great severity. Pop. abt. 16,000.

Diamond Fields of S. Africa, were discovered in 1867. In 1869 the first large *D.* was found, wt. $8\frac{1}{2}$ carats, and was sold for \$54,504. The mines at Kimberly, 600 m. from Cape Town, are of exceeding value, and are claimed to be the richest in the world. The output of a single mine, known as the Kimberly, is \$4,000,000 annually. The buying and selling of *D.* is controlled by the strictest government supervision. Within ten years this field has yielded some \$58,000,000 in dividends.

Diamond Grove, in Va., a p. v. of Brunswick co.

Diamond Hill, in N. C., a P. O. of Anson co. —In N. H., a p. v. of Merrimack co. —In Rhode Island, a P. O. of Providence county.

Diamond Harbor, on the river Hooghly, 30 m. below Calcutta, of which it is the port for large ships. As the adjacent country is swampy and unhealthy, the spot is marked only by a few huts, inhabited by pilots.

Diamond Island, in the estuary of the Bassein river, Burmah. It is 12 m. from Negrais, and abounds in turtles.

Diamondize, v. a. To deck or ornament with diamonds.

Diamond Lake, in Illinois, a post-office of Lake co.

Diamond Mills, in Pennsylvania, a village of Indiana co., on Two Lick creek, about 58 m. E. N. E. of Pittsburg. Pop. about 150.

Diamond-ring, n. A ring set with one or more diamonds.

Diamond River, in New Hampshire, traverses Coos co., and empties into Dead river.

Diamond Springs, in California, a post-village and township of El Dorado co., about 44 m. E. by N. of Sacramento.

Diana (*dī-ān'a*). (Myth.) The Roman goddess of chastity and hunting, the daughter of Jupiter and Latona, and the sister of Apollo or Phœbus, from which circumstance she is occasionally called *Phœbe*, her usual name in heaven as *D.* was on earth. This goddess was worshipped under many forms, which were almost as numerous as the attributes ascribed to her. She was also called *Triceps* and *Tergemina*, from her three special spheres of rule; worshipped as *Luna* in heaven, *D.* on earth, and *Hecate* beneath the earth, or the Infernal shades. As *Trips* she was ainted with three heads, one of a horse, another of a dog, and the third of a virgin. As *D.* she was esteemed the patron goddess of hunting and female chastity, and for a title she sometimes shared with *Artemis*, her aid is considered opitiatory to women in labor.

Fig. 812. — DIANA.
(After an ancient statue.)

ough worshipped as an immaculate excellence, of which the unhappy fate of the hunter Actæon is perhaps the only representation, *D.* had a temperament as fervid as that of the other members of her august rod, as her amours with Pan, the Carian Shepherd, Dionysus, and Orion, fully substantiate. She is represented with a quiver, sometimes attended with dogs, sometimes drawn in a chariot by two white stags. She is supposed to be the same as the "Isis" of the Egyptians, whose worship was introduced into Greece under the name of *Artemis*, with that of "Osiris" under the name of *Apollo*. The most famous of her temples was that of Ephesus, q. v.

Diana, in New York, a post-township of Lewis co., abt. 10 m. S. of Ogdensburg.

Diamond Necklace, (The.) (Fr. *Hist.*) Bohmer and

Bassanger, the court jewellers of France, were commissioned by Louis XV., in 1774, to collect the most beautiful diamonds, for a necklace which he intended to present to Madame du Barry. Louis XV. died before the necklace was completed; but the jewellers persevered with their work, hoping that Louis XVI. would purchase it for Marie Antoinette. The necklace was valued at 1,800,000 francs, or \$360,000. An intriguing woman, called De Lamotte, who took the title of countess, pretending to have received authority from Marie Antoinette to purchase the necklace, induced the jewellers to part with it in return for orders, to which the forged signature of the queen was attached, amounting to 1,400,000 francs. This negotiation was completed in Jan., 1785. Several persons connected with the court became the dupes of Madame Lamotte, and a girl named Legnet, or D'Olive, was on one occasion made to personate the queen. The Cardinal de Rohan, Grand Almoner, who had been employed by De Lamotte as an instrument to carry out her schemes, was arrested and sent to the Bastille with the persons associated in the scheme. At the trial that ensued, brought to a close May 31, 1786, the cardinal's innocence was clearly established, and Madame Lamotte was sentenced to be flogged, branded on both shoulders, and imprisoned for life. The scandal created by this affair proved most disastrous. Talleyrand-Périgord wrote to a friend: "Attend narrowly to that miserable affair of the necklace; I should not be surprised if it overturned the throne." It was really the beginning of the revolution. Seven years afterwards, when led to execution, poor Marie Antoinette was taunted with the scandal of the Diamond necklace, by the yelling and cursing mob.

Diana Mills, in Virginia, a post-village of Buckingham co., on Slate River, about 75 m. W. of Richmond.

Diana Monkey, n. (Zool.) The Diana or spotted Monkey, order *Simiada*, has a long white beard; the upper parts of the body are of a reddish color, marked with white specks; the belly and shin are whitish; it

Fig. 813. — DIANA MONKEY.
(*Cercopithecus diana*.)

has a crescent of white hair on the brow; and the tail, which is very long, is of the same color as the body. It is a native of Congo and Guinea; and is one of the most lively and playful of the whole tribe.

Dian'dria, n. [Gr. *dis*, twice, and *anēr*, andros, a male.] (Bot.) In the Linnean system, a class of plants having two stamens.

Dian'drous, a. [See SUPRA.] Applied to any plant having but two stamens.

Diane de Poitiers, mistress of Henri II. of France, was b. in 1499, and married Louis de Brezé, Comte de Maulevrier, at the age of 13. She lost her husband in 1531, and subsequently became mistress to Henri, Duke d'Orleans, afterwards Henri II. At court she was the rival of the Duchess d'Étampes, and the hatred of the two for each other gave rise to disgraceful scenes. On the accession of Henri to the throne, her influence became paramount, and the great changes then made in the court and in the ministry, the cruel persecutions of the Huguenots, and the train of ills that marked the whole reign, are by some attributed to her influence. In 1548 the king gave her the duchy of Valentinois, and she took the title of duchess. She retained her beauty and her power over the king till his death, retired then to the château of Anet, and d. 1566.

Dianoetic, a. [Gr. *dianoetikos*.] (*Metaphys.*) Belonging or having relation to the operation of the discursive, elaborate, or comparative faculty. — Sir W. Hamilton.

Dianoctology, a. [Gr. *dianoia*, and *logos*.] The science of the dianoetic faculties and their acts. — Sir W. Hamilton.

Dianthus, n. [Gr. *anthos*, a flower; *dios*, of Jupiter, —the divine flower.] (Bot.) A gen. of plants, order *Caryophyllaceæ*. Many of the species are highly valued

for the beauty and the fragrance of their flowers. *D. Barbatus*, the Sweet-william, or Bunch-pink, is an old inhabitant of the flower-garden, and was much esteemed in Gerard's time "for its beauty to deck up the bosoms of the beautiful, and garlands and crowns of pleasure."

Fig. 814. — DIANTHUS HEDDEWIGII.

The flowers grow in fascicles, and are usually of a fine crimson color. There are numerous varieties in cultivation. The species *D. Chinensis*, the China Pink, is distinguished for its large, toothed, or crenate red petals. The species *D. caryophyllus*, the Carnation, is supposed to be the source of the garden Carnations, and by some botanists, of the pinks also. The carnation has been cultivated from time immemorial, and its beauty and rich spicy odor make it a general favorite. It is the principal florist's flower of Germany and Italy, from which countries we derive the choicest varieties. The varieties of the carnation are arranged in three classes, — *flakes*, *bizarres*, and *picotees*. Flakes have two colors only, the stripes being large; *bizarres* (Fr., odd or irregular), are variegated in irregular spots and stripes, with no less than three colors; *picotees* (Fr., pricked or spotted), have a white ground spotted or pounced with red, purple, or other colors. The Clove-gillyflower, and other *cloves* have petals of a deep scarlet color, and are derived, like the varieties of the carnation, from *D. caryophyllus*. The Pink, as a florist's flower, received but little attention until the close of the last century, but many fine varieties have been developed since then, one of the newest of which is *D. heddewigii* (Fig. 814). The varieties most esteemed are called *pheasant's eyes*, which seem to have sprung from *D. plumaris*. New varieties of the carnation and pink are procured from seeds, and thousands of seedlings are annually obtained. Established or approved varieties are continued by layering and by cuttings, or, as they are commonly called, *pipings*. The soil in which they thrive best is a rich loam, rather sandy than otherwise.

Diapason, **Diapase**, n. [Fr. *diapason*; Gr. *diapason*, through all, *choron*, strings, being understood — *dia*, and *pas*, *paso*, *yon*, all, whole.] (Mus.) The concord of the first and last notes of the musical scale. — The octave or interval which includes all the tones. — It is also the name of a kind of rule by which certain instrument-makers determine the measures of the various parts of their instruments. Some of the stops in the organ are called by this appellation, because they extend through the entire instrument. — The *D. diapente* is the *D.*, or octave, together with the fifth; the interval of a twelfth. The *D. diatessaron* is the *D.*, with the fourth; the interval of an eleventh.

Diapensia, n. pl. (Bot.) A small order of plants, alliance *Gentianales*. — *Diag.* No stipules, single stamens at the end of a manifest style, axile placentæ, indefinite peltate seeds, and interpetalous stamens. — There are but two genera and two species of shrubby plants, the properties and uses of which are unknown. *Diapensia laponica* is found on the summits of the White Mountains, forming dense tufts among the rocks.

Diapente, n. [Gr., from *dia*, and *pente*, five.] (Mus.) An ancient term, signifying a fifth.

Diaper, n. [Fr. *diapre*, from *Ypres*.] (Cem.) A kind of textile fabric, either of linen or cotton, or a mixture of the two, with a figured pattern on the exterior surface, produced by a peculiar method of twilling. *D.* are much used for table-linen and fine towels. With the exception of damask, *D.* are the most ornamental kind of twilled cloths. There is some controversy as to the origin of the term *D.* According to M. Planché, it is derived from D'Ipres, or "Ypres," a town in Flanders, famous for its manufacture of rich stuffs and fine linen before the year 1200. Ducange derives the word from the Italian *diaspro*, "the jasper," on account of its

shifting light; but the former is the most probable derivation.

(*Fine Arts.*) *D.-work*, or *Diapering*, is a term used to signify the repetition of a pattern of any flowers, foliage, or geometrical form of ornamentation, over a large surface of work; it differs from *chequers*, inasmuch as the latter is applied to a repetition of geometrical figures which are indicated by rectangular or diagonal lines intersecting at fixed intervals.

Fig. 815.—DIAPER-WORK.

Diaper, *v. a.* To variegate or diversify, as cloth with figures; to flower.

"Diaper'd like the discolor'd mead."—Spenser.

—To place a diaper or napkin on, as on an infant.
—*v. n.* To draw flowers upon cloth, &c.

Diaphane, *n.* (*Physiol.*) An investing cortical membrane of a sac or cell.

Diaphaned, (*di'-a-fānd*), *a.* [O. Fr. *diaphener*.] Pellucid; transparent. (*R.*)

Diaphaneity, *n.* [Fr. *diaphanéité*; Gr. *diaphainō*—*dia*, and *phainō*, to show, to shine.] The power of transmitting light; transparency; pellucidness.

Diaphan'ic, *a.* Capable of conveying light; transparent.

Diaphanometer, *n.* [Gr. *diaphanēs*, and *metron*, measure.] An instrument for measuring the transparency of the atmosphere.

Diaphanoscope, *n.* [Gr. *diaphanēs*, transparent, *skopeō*, I see.] A dark box, suitably constructed for exhibiting transparent photographs or other pictures. It may or may not be furnished with a lens.

Diaphanous, (*di'-a-fan-us*), *a.* [Gr. *diaphanēs*, from *dia*, and *phainō*, to shine.] A term applied to bodies which, like porcelain, permit the light to pass through their substances. It is the synonym of *translucent*. A body which allows the distinct forms of objects to be seen through, is *transparent*.—In common language *D.* is frequently, though improperly, used as synonymous with transparent; as, "a crystal river, *diaphanous*."—Wordsworth.

(*Bot.*) Semi-transparent, like horn.

Diaphanously, *adv.* In a diaphanous manner; clearly; transparently.

Diaphon'ies, *n. sing.* [Gr. *diāphonē*, a tone.] The science or doctrine of refracted sound.

Diaphore'ma, *n.* (*Zoöl.*) See *PHYLUM*.

Diaphoresis, *n.* [Gr., from *dia*, and *phoreō*, to convey.] (*Med.*) A greater degree of perspiration than natural, but less than in sweating. Every kind of cutaneous evacuation.

Diaphoretic, **Diaphoretical**, *a.* [Gr. *diaphoretikos*; Fr. *diaphorétique*.] Promoting diaphoresis, or gentle perspiration.

—*n.* (*Med.*) A medicine which exercises almost exclusive action on the skin, producing perspiration as sudorifics produce sweating; the same drugs which induce the one action excite the other—the difference in dose and mode of combination making the only distinction. Among the most important of this class of drugs are antimony, ipecacuanha, squills, ammonia, vinegar, opium, camphor, and contrayerva.

Diaphoretically, *adv.* In a diaphoretic manner.

Diaphragm, (*di'-a-fram*), *n.* [Gr. *diaphragma*, from *diaphrassō*—*dia*, phrassō, to fence in, to defend.] A thin membrane or partition.—(*Anat.*) The midriff, or transverse muscle which separates the thorax, or chest, from the abdomen, or belly. It is usually described as consisting of two muscles. The superior and larger of these arises from the ensiform cartilage of the sternum, and the ends of the lower ribs on either side; from which points the fibres converge, and terminate in a tendon, or aponeurosis, termed the *centrum tendinosum*, or central

Fig. 816.—ANTERIOR VIEW OF THE DIAPHRAGM IN A STATE OF REPOSE.

tendon. The second and inferior muscle springs from the vertebrae of the loins by two productions, or crura; that on the right side from the four upper lumbar vertebrae, that on the left from the three upper ones. From

these points the fibres ascend, some of them crossing over and decussating to surround the oesophageal opening; but all of them ultimately uniting with the central tendon, and thus making but one muscular partition. The *D.* is convex superiorly, and concave inferiorly, and is covered on the upper side by the pleura, and on the lower by the peritoneum. In form it is nearly circular, and is fleshy at the edges, but becomes tendinous towards the centre. It presents three large openings and several smaller ones. The opening of the vena cava is quadrangular in form, and is situated in the tendinous centre. The oesophageal opening is posterior to that of the vena cava, and is of an elliptic form. The aortic opening is the most posterior, triangular, and between the crura. This muscle is the principal agent in respiration; for by contracting, it enlarges the cavity of the chest, and allows the lungs to receive the air in inspiration; while, by being relaxed, the cavity of the chest is again diminished, and the air suddenly expelled. The contracting and relaxing of this muscle must likewise, it is evident, have a similar effect in increasing and diminishing the size of the abdominal cavity; and hence, by its action upon the stomach and intestines, it aids in the expulsion of the feces and urine. The *D.* is largely engaged in laughing, sneezing, sighing, sobbing, and other affections of the respiratory organs. Whatever occasions stoppage of the action of this muscle speedily proves fatal. It is subject to inflammation, called *diaphragmatitis*; but as this is rarely confined to the organ itself, but communicated either to the pleura or peritoneum, its symptoms and mode of treatment correspond with inflammation of these parts. It is also the part chiefly involved in the spasmodic affection called hiccup.—See *HICCUGH*, *PLEURITIS*, and *PERITONITIS*.

(*Zoöl.*) The septa by which the chambers of multilocular and other shells are divided from each other.

(*Optics.*) A circular ring used in some optical instruments.

(*Mech.*) A partition or dividing wall of a compartment.

Diaphragmatic, *a.* (*Anat.*) Pertaining or relating to the diaphragm;—applied to several vessels and nerves.

Diapophysis, *n.*; *pl.* *DIAPOPHYSES*, (*di-a-pof'-ē-sis*). (*Anat.*) One of the transverse processes of the vertebrae.

Diapophyseal, *a.* Pertaining to a diapophysis.

Diaporesis, *n.* [Gr.] (*Rhet.*) Hesitancy; doubt as to order of progression in discourse or discussion.

Diarbekir, or **DIARBEK**, (*de'-ar-bek'-ir*), a town of Asiatic Turkey, near the right bank of the Tigris, 200 m. N.E. of Aleppo, and 490 m. N.E. of Damascus; Lat. 37° 55' 30" N., Lon. 30° 52' E. The town is built on a rocky eminence, and surrounded by walls with many towers. *Manuf.* Cottons and silks. *Pop.* abt. 13,000, of whom 8,000 are Turks, and the rest Armenians, Greeks, and Catholics.

Diarchy, *n.* [Gr. *di*, for *dis*, double, and *archein*, to rule.] A system of government wherein the chief power is centred in two persons or rulers.

Diatrial, **Diatrian**, *a.* Daily; pertaining to, or comprised within, a diary.

Di'arist, *n.* One who keeps a diary, or journal of daily occurrences.

Diarrhea, **Diarrhoea**, (*di-ar-rē'-ah*), *n.* [Gr. *dia*, and *rheō*, I flow.] (*Med.*) A disease characterized by an increased discharge from the bowels, usually in a very liquid state, and sometimes containing a large quantity of bile. The disease may be occasioned by anything that stimulates or irritates the mucous surface of any portion of the alimentary canal. Besides the various purgative medicines, undressed or indigestible food or vegetables, acid fruits, oily or putrid substances, frequently cause *D.* Suppressed perspiration, occasioned by a sudden chill or cold applied to the body, or a draught of any cold liquid when overheated, may produce it. It is more apt to occur during the summer and autumn months than at any other period of the year. The effluvia arising from the decomposition of organic substances is a frequent cause of it. It sometimes results from the irritation caused by worms, or by some organic disease, and is a common symptom of the advanced state of consumption. Besides looseness of the bowels, this disease is usually accompanied with griping and flatulency, together with an uneasy sensation in the lower part of the abdomen. There are frequently, also, nausea and vomiting, a bitter taste in the mouth, a furred and yellow tongue, dry and harsh skin, a pale or sallow countenance, and, if not speedily checked, great emaciation. Physicians distinguish various kinds of *D.*; as, *crapulosa*, when the feces pass of ordinary quality, but immoderately loose and copious; *biliosa*, when the bile is more abundant than natural; *mucosa*, when the excrements contain a quantity of mucus; *serosa*, in which they are almost entirely liquid and watery; and *tenteria*, when the food passes through the body in an almost unaltered state. This is one of those diseases by means of which nature strives to get rid of impurities, and restore the system to its normal condition. Hence, when it is not very violent, and the patient is strong, it is best to allow it to run its course, at all events for a time, and even to aid it by small doses of laxatives. In any case, great care should be taken not to stop it too suddenly. Sometimes an emetic is of great benefit in removing the cause of irritation. When it arises from obstructed perspiration, a warm bath, and warm clothing in bed, will usually effect a cure. When it is occasioned by a too acid state of the secretions, the great remedy is chalk-mixture. Opium is also frequently employed; but it should not be taken in large quantities without medical advice. The treatment thus in all cases depends upon the cause from which it springs.

Diarrhet'ic, **Diarrhœt'ic**, *a.* (*Med.*) Producing diarrhoea, or a lax habit of body.

Diarthrosis, *n.* [Gr., articulation.] (*Anat.*) The movable connection of bones.

Di'ary, *n.* [Lat. *diarium*, from *dies*, a day.] An account of daily events or transactions; a register of daily occurrences or observations.—The term *D.* is equivalent to the French *journal*, the Italian *diario* and *giornale*, and the German *tagebuch*.

Diaschisma, (*di-as-skiz'-ma*), *n.* [Gr.] (*Mus.*) An interval consisting of two commas.

Dias, GONÇALVES, (*dee'-az*), a Brazilian poet, b. 1823. In 1848 he was appointed professor of history in the college of Don Pedro II. His poetry is very popular in Brazil and greatly esteemed in Portugal. His principal works are his *Cantos*, and his drama, *Leonar de Mendonça*.

Dias Creek, in *New Jersey*, a post-office of Cape May county.

Diaspore, *n.* [Gr. *diaspeiro*, to scatter.] (*Min.*) Hydrate of alumina, usually found in thin, flattened prisms. Small pieces decrepitate, and are dispersed numerous fragments before the blowpipe;—whence name. *Sp. gr.* 3.3 to 3.5.

Dia'stase, *n.* [Gr. *dia*, and *istemi*, I place.] (*Chem.*) white, amorphous substance generated during the germination of barley, wheat, &c., which tends to accelerate the formation of sugar during the fermentation of wort. It is precipitated from infusions of bruised malt by alcohol. It is the principle which, by its reaction on starch, tends to its conversion into dextrine and glucose. 1 part of it being sufficient for the conversion of 24 parts of starch.

Dia'stasis, *n.* [Gr., separation.] (*Surg.*) A separation of the ends of bones, as that which occasionally happens to the bones of the cranium in some cases of hydrocephalus.

Diastem, *n.* [Lat. *diastema*.] An interval of space.—(*Anc. Mus.*) A simple interval of time;—correlated to one that is compound.

Dia'stole, *n.* [Gr. *diastolē*, from *diastellō*—*dia*, a stello, to set, to place; Fr. *diastole*.] (*Gram.*) The tension of a syllable, or a figure by which a syllable naturally short is made long.

(*Med.*) A dilatation of the heart, auricles, and arteries—used in contradistinction to *systole*.

Diastyle, *n.* [Gr. *diastylōs*; Lat. *diastylus*.] (*Arch.*) arrangement of columns in Grecian and Roman architecture, in which the intercolumniation, or space between them, is equal to three or four diameters of shaft.

Dia'sesaron, *n.* [Gr. *dia*, and *tessaron*, four.] (*Mus.*) An interval of time in musical composition, now called a perfect fourth.

(*Theol.*) A harmony of the four gospels.

Diathermal, *a.* [Gr. *dia*, and *thermē*, heat.] Allowing radiant heat to pass through.

Diathermancy, **Diatherman'ity**, *n.* Quality of transmitting radiant heat.

Diathermanism, *n.* Doctrine of the transmission of radiant heat.

Diathermanous, *a.* Same as *DIATHERMAL*, *q. v.*

Diathermic, *a.* Allowing free transmission of heat.

Diathermous, *a.* Diathermal.

Diathesis, *n.* [Gr., a disposition.] (*Med.*) A particular state of constitution predisposing to certain diseases; such as inflammatory, nervous, and putrid *D.*; uric, in which there is excess of uric acid thrown off by the kidneys; gouty *D.*, &c.

Diatomia, *n.* (*Bot.*) A genus of plants, order *DIATOMACEÆ*, *q. v.*

Diatomaceæ, *n. pl.* (*Bot.*) The Brittle-worts, an order of plants, alliance *Algae*.—*DIAT.* Crystal, angular, fragmentary bodies, brittle, and multiplied by spontaneous separation. This group of *Algae* is of low organization, and including the *Bacillaria*, is remarkable for the large quantity of silica which they contain. Vast beds occur, many feet in thickness, consisting entirely of effete *frustules*, as the separate parts of the fronds are called. These beds are known by the name of *Tripoli*, and afford an admirable article for polishing. They occur again in the form of white powder, known as *Mountain Meal*, which is mixed with flour in some parts of Sweden. The *D.* form a large portion of the food of some of the lower molluscs. They occur in all parts of the world, enduring extreme degrees of cold without annihilation, and are found also in springs of high temperature.

Diatonic, *a.* [Gr. *di* for *dis*, twice, and *atomos*, indivisible.] (*Chem.*) Comprising two atoms.

Diatomous, *a.* [Gr. *diatomos*.] (*Min.*) Having diagonal cleavage.

Diatonic, *a.* [Gr. *diatonicos*—*dia*, and *tonos*, tone. See *TONE*.] (*Mus.*) A term denoting the natural scale, consisting of eight sounds and seven intervals; five of these intervals are called *tones*, and the remaining three *semitones*, which occur between the third and fourth, sixth and seventh, and eighth. The *D.* scale is a graduation of sounds by tones and semitones, which may proceed either from acute to grave, or *vice versa*, and whole tones and two semitones making a complete natural octave.

Diatonically, *adv.* In a diatonic manner.

Diatretum, *n.* (*Antiq.*) An enclaved or curiously engraved vase or goblet.

Diatribe, *n.* [Gr. *diatribe*—*dia*, and *tribo*, to abrade, to waste.] A continued discourse or dispute, which wastes away much time; a prolonged character of invective, or delivery of reproachful language.

Diatribist, *n.* One who speaks or writes diatribe.

Diaz, BARTOLOMET, (*dee'-ath*), a Portuguese navigator, who, in 1486, with two small vessels, discovered

Charles Dickens

1812-1870

Cape of Good Hope, which he named the *Cape of Storms*. The king, however, changed it to its present name. In 1497 Diaz accompanied Vasco de Gama on his expedition of discovery, and subsequently set out with Cabral for the Indies. He perished by shipwreck, May, 1500.

Diaz del Castillo, BERNAL, (*de'ath del cas'eel'yo*.) a Spanish adventurer and chronicler, b. abt. 1485. In 1514 he went to the New World, and joined the expedition which sailed from Cuba to Yucatan, in 1517, under Cordova, and, in 1518, under Grijalva. Subsequently, he accompanied Cortez to Mexico, and clung to him through all his vicissitudes. He afterward wrote a history of the exploits of his chief, which was published under the title of *Historia verdadera de la Conquista de la Nueva España*; a work destitute of literary merit, but prized for its simplicity of style. In 1568 he was appointed corregidor of the city of Guatemala. The date of his death is unknown.

Dib, *v. n.* To dip, bob, or dabble for fish.

Dib'ber, **Dib'ble**, *n.* [*Dim. of DIP, q. v.*] (*Agric.*) A pointed tool which is dipped or thrust into the earth, to make holes for planting seeds, roots, &c.

"Dibble, rake, mattock, and spade." — *Tusser*.

Dib'ble, *v. a.* To plant by means of a dibble. — To make holes for the insertion of roots of plants, &c.

—*v. n.* To dip or bob for fish with a line, hook, and bait; as, to *dibble* for carp.

Dib'bler, *n.* One who makes holes with a dibble, for plants or seeds.

Dib'bleville, in *Michigan*, a village of Livingston co., abt. 51 m. N.W. of Detroit.

Dib'din, CHARLES, an English song-writer and musical composer, b. 1745. Among his many operas and operettas may be mentioned the *Shepherd's Artifice*, *The Padlock*, and *The Quaker*, and the well-known musical farce of the *Waterman*, which is still a favorite on the stage. It is, however, as a writer of nautical and patriotic songs that D.'s reputation will endure. He is believed to have written altogether nearly 1,400 songs and ballads, some of which, as *Tom Bowling*, *The Anchor's Wighed*, *Poor Jack*, &c., will transmit his name to posterity. So potent an influence had his sea-songs on the British public, and so powerfully did they contribute to the prestige of the naval service of that country during the French war, that the govt. conferred upon him an annuity of \$1,000. D. in 1814. — His son THOMAS, author of more than 1,000 songs and musical dramas, b. 1841.

Dibranchiata, **Dibranchiata**, *n. pl.* [*Gr. di for dis, twice, and branchia, gills of a fish.*] (*Zool.*) An order of *Cephalopods*, which includes those with two gills, and which are also characterized by having three distinct hearts: an apparatus for secreting and emitting an inky fluid; cephalic arms, never exceeding ten in number, solid, and supporting acetabulae; and, in short, all the chief characteristics which are usually ascribed to the entire class of *Cephalopods*. This order embraces the families *Organitidae* and *Octopodidae*, which have 8 arms, and fixed eyes; *Tentaculidae*, *Belemnitidae*, *Sepiidae*, and *Spirulidae*, which have 8 arms and 2 elongated tentacles, with expanded ends, and movable eyes.

Dibs, *n.* A kind of sweet marmalade, made in Oriental countries from the debris of grape-skins.

Dib'stone, *n.* A stone flung and aimed to hit another stone; — used in children's sport.

Dic'ast, *n.* [*Gr. dikastēs.*] (*Greek Hist.*) An Athenian jurymen.

Dice, *n. pl.* of *DIE*. — Also, a game. See *DIE*.

—*v. n.* To play or game with dice.

"I was virtuous enough . . . died not above seven times a week." — *Shaks.*

Dicearchus, (*di'se-ar'kus*.) a Peripatetic philosopher of Messina, in Sicily, who lived in the 3d century, B. C. His principal philosophical work was one *On the Soul*, which argued against its existence.

Dice-box, *n.* A box from which dice are flung in gaming.

"Shaking her elbow for a whole night together, and thumping the table with a dice-box." — *Addison*.

Dice-coal, *n.* Coal susceptible of fracture into small cubes.

Dicephalous, (*di'sef'a-lus*.) *a.* [*Gr. dis, double, and kephalē, a head.*] See *CEPHALIC*.] Having two heads on one body.

Dic'er, *n.* One who plays at dice; a gambler; a gamster.

Dice's Head, in *Maine*, a point at the entrance of Castine Harbor. It has a fixed light, 116 feet above the sea-level; Lat. 44° 21' N., Lon. 68° 45' 30" W.

Dich, *a.* A Shakspearean corruption from *dit for do it*, or *may it do*.

"Much good dich thy good heart, Apemantus." — *Shaks.*

Dichastasis, *n.* [*Gr. dichazo, to cleave asunder.*] Subdivision by spontaneity.

Dichast'ic, *a.* Susceptible of spontaneous subdivision.

Dichlamyd'eons, *a.* [*Gr. di, for dis, and chlamys, a mantle.*] (*Bot.*) Applied to plants having both calyx and corolla.

Dichophy'ia, *n.* [*Gr. dichia, double, and phyto, I grow.*] (*Med.*) A disease of the hair, in which they split and grow forked.

Dichot'omous, *a.* (*Bot.*) Branching by pairs; forked. **Dichot'omously**, *adv.* In a dichotomous manner; by dichotomy.

Dichot'omy, *n.* [*Gr., from dichia, asunder, and temnein, to cut.*] Division by cleavage into two distinct parts or species.

(*Astron.*) The phase of the moon when she shows just half her disk.

(*Logic.*) The division of a class into two sub-classes which are opposed to each other by contradiction.

Dichroic, (*di-kro'ik*.) *a.* Dichrous; having the quality of dichroism.

Dichroism, *n.* [*From Gr. dichroōs, bi-colored.*] (*Min.*) A term applied to those minerals which present different colors, when viewed by transmitted light, in two different directions; the colors being the same in the direction of like axes, and different in that of unlike axes. Iolite is an example of this property, and the name *Dichroite* has been given to it in consequence. Mica affords another instance, being nearly opaque when viewed in one direction, but transparent and of a different color in another. A good instance of D. occurs in the crystals of chloride of palladium, which appear of a deep red color along the axis, and of a vivid green when viewed in a transverse direction.

Dichroite, *n.* (*Min.*) Same as *SOLITE, q. v.*

Dichromate, *n.* (*Chem.*) A chromate possessing double properties.

Dichromat'ic, *a.* [*Gr. dis, double, chroma, color.*] Showing, or susceptible of affording two colors.

Dichroscope, *n.* [*Gr. dis, double, chroma, color, and skopein, to look.*] An instrument for examining the dichroism of crystals.

Dichroscop'ic, *a.* Pertaining to the dichroscope.

Dichrons, *a.* Possessing the nature of dichroism.

Dic'ing, *n.* The art, practice, or habit of gaming with dice.

Dick, THOMAS, D. D., a Scottish theologian and scientist, b. 1772. His leading writings are, *The Sideral Heavens*; *The Practical Astronomer*; *Treatise on the Solar System*; *The Christian Philosopher*; *The Philosophy of Religion*, &c. D. 1857.

Dick'ens, *n.* A vulgarism for the dence; the devil; as, there's the *dickens* to pay.

"I cannot tell what the *dickens* his name is." — *Shaks.*

Dick'ens, CHARLES, one of the most distinguished novelists of the English school, was b. at Portsmouth, Eng., Feb. 7, 1812. Early in life the law was selected as the future profession of D., and he accordingly was placed in an attorney's office. The dry drudgery of legal business soon disgusted him, however, and young D., before his one-and-twentieth year, removed to London, where he embarked on a literary career, at first confining himself wholly to the reporting of parliamentary debates for the *Morning Chronicle* newspaper. To this journal he presently contributed a series of papers sketching off the social characteristics of English class-life as presented by the middle and lower sections of society at large. In 1836, under the title of *Tales and Sketches*, by "Boz" (a "nom de plume"), the above papers were collected into a revised form, and published in 2 vols. The book proved a success both in England and in the U. States, and the production of the celebrated *Pickwick Papers*, in the year following (1837), conclusively stamped him a master in the art of fiction, and an author of a peculiarly

Fig. 517. — DICKENS.

original cast of genius. A long and brilliant series of successes followed, extending over a period of a quarter of a century, and each adding to his fame and fortune. Among these are his world-known works, *Oliver Twist* (1838); *Life and Adventures of Nicholas Nickleby* (1839); and *Master Humphrey's Clock*, and the *Old Curiosity Shop* (1840). Soon after the publication of the latter joint work, D. visited the U. States, and on his return home, in 1842, brought out before the reading public his *American Notes for General Circulation*; a rather pungent description of various aspects of social life in this country, as they then appeared to European eyes. Many of the statements given in this work were controverted by the American people, and produced a smart philippic in return, under the apropos title of *Change for American Notes*. In 1844, D.'s novel of *Martin Chuzzlewit* appeared, and also a work on Italian travel. In 1846, Mr. D. started the *Daily News* newspaper (still in flourishing existence), the editorship of which he, however, soon abandoned to return to his old congenial sphere of fiction. In 1843, D. commenced the annual production of those delightful Christmas stories which have had no small share in the consolidation of his fame. Of these, the *Christmas Carol* (1843), and the *Cricket on the Hearth* (1846), are two of the most exquisite idylls in the English language. Of his larger works, in addition to those before noted, the most esteemed are *Dombey and Son*; *History of David Copperfield* (1849-50); *Bleak House*

(1853); *Little Dorrit* (1856); *Our Mutual Friend* (1864), &c. In 1850, D. founded the popular serial magazine called *Household Words*, of which he was the chief conductor. As a public reader of his own books, and also as an amateur actor, D. is scarcely less distinguished than as a creator of literary characters. As a novelist, he, in his own walk of fiction, stands unrivalled; or, in other words, no writer who has yet appeared has succeeded in delineating the middle and lower strata of English manners and character with such exquisite pathos, and humorous fidelity. Of the upper world of his country's society, D. may be said to know, in a literary sense, comparatively little or nothing; in this regard being the exact counterpart of his former friend and brilliant compeer in genius, Mr. Thackeray. Over and above the popularity D. has achieved in this country, by the literary works which have been diffused through almost every household, — he has become equally known and appreciated by the admirable course of lectures he delivered in the U. States in 1867-8, which were to himself a mine of pecuniary profit, and to tens of thousands of intelligent Americans a treat of the highest intellectual character. After his return to England, in the latter year, the publication of a new serial story, the *Mystery of Edwin Drood*, was interrupted by the death of the gifted author, in June, 1870. His remains are interred in Westminster Abbey. In 1872-4, a *Life of Charles Dickens* appeared from the pen of his friend and executor, John Forster.

Dick'ensville, in *Virginia*, a P. O. of Russell co.

Dick'er, *n.* A small bargaining or barter.

—*v. n.* To swap; to barter; to exchange small articles of traffic.

Dick'erson, in *Illinois*, a post-office of Champaign co.

Dickerson, in *Maryland*, a P. O. of Montgomery co.

Dickerson, in *Miss.*, a post-office of Coahoma co.

Dickerson Run, in *Penna.*, a P. O. of Fayette co.

Dick'ey, **Dick'y**, *n.* The seat behind a carriage for the use of the servants; sometimes called the *rumble*. — A loose linen bosom for hiding a dirty shirt front. — The name is sometimes applied to a loose shirt-collar; as, a *paper dickey*.

Dick'eysville, in *Wisconsin*, a post-village of Grant co., about 21 m. N. W. of Galena.

Dick'inson, DANIEL STEVENS, an American politician, born at Goshen Conn., 1809. He early entered on the study of the law, and was admitted to the New York bar in 1826-7, where he soon made for himself a reputation. In 1836 he became a member of the State Senate, where he so prominently distinguished himself that, in 1842, the Democratic Party elected him lieutenant-governor of the State, and, in 1844, sent him to the U. S. Senate. Here he became known for his pro-slavery and state-rights proclivities, and exerted a strong influence in the Senate, which appointed him chairman of the Finance Committee. D. was brought forward, in 1852, as a candidate for the Presidency, but without success. He afterward quitted political life, and settling at Birmingham, N. Y., devoted himself almost exclusively to the duties of his profession. Died 1866.

Dick'inson, in *Iowa*, a N. W. co., bordering on Minnesota. Area, about 130 sq. m. Rivers, Okoboji river. It contains several lakes. Cap. Spirit Lake. Pop. 8,000.

Dick'inson, in *Kansas*, an E. central co.; area, about 750 sq. m. Rivers, Kansas river, and Chapman's and Camp creeks. Surface, diversified. Soil, fertile. Cap. Abilene. Pop. (1890) 20,326.

Dick'inson, in *New York*, a post-village and township of Franklin co., on Racket river, about 16 m. S. W. of Malone.

Dickinson, in *Pennsylvania*, a P. O. of Cumberland co.

Dick'inson, in *Virginia*, a post-village of Franklin co., about 200 m. W. S. W. of Richmond.

Dickinson's Landing, a village of Ontario, co. of Stormont, on the St. Lawrence river, about 50 m. S. W. of Montreal. Pop. about 900.

Diclin'ic, **Diclin'ate**, *a.* [*Gr. dis, double, and klinein, to lower or incline.*] (*Crystall.*) Having two of the intersections between the three axes oblique.

Diclinous, *a.* [*Gr. dis, and kline, couch.*] (*Bot.*) Having the stamens and pistil separated; that is to say, situated in separate flowers, sometimes on the same plants, sometimes on distinct plants.

Dick Johnson, in *Indiana*, a township of Clay co.

Dicksburg, in *Indiana*, a village of Knox co., on the W. Fork of White river, about 14 m. S. of Vincennes.

Dick'son, SAMUEL HENRY, an American physician and author, born in Charleston, S. C., 1798, and professor of the Practice of Medicine in the Jefferson Medical College, Philadelphia. He has published a *Manual of Pathology and Practice of Medicine*; *Essays on Pathology and Therapeutics*; *Elements of Medicine*, &c. Died 1872.

Dickson, in *Alabama*, a post-office of Colbert co.

Dickson, in *Tennessee*, a N. N. W. co. Area, about 650 sq. m. Rivers, Harpeth river, and other affluents of the Cumberland river, which bounds it on the N. E. Surface, undulating. Soil, fertile. Cap. Charlotte. Pop. 13,945.

Dick'souburgh, in *Pennsylvania*, a post-office of Crawford co.

Dick's River, in *Kentucky*, rises in Rockcastle co. and flows N. W. into the Kentucky River.

Dicoc'eous, (*di-kok'kus*.) *a.* [*Gr. dikokkos.*] (*Bot.*) Bi- or double-grained; as, a *dicoc'eous* capsule.

Dicoc'lous, *a.* [*Gr. dis, and kōilon, cavity.*] Presenting two cavities.

Dic'otyles, *n. pl.* (*Zool.*) A genus of quadrupeds of the *Suidæ* family; the PECCARY, *q. v.*

Dicrot'ic, *a.* [*Gr. dis, double, and krotein, to beat.*] (*Med.*) Possessing a rebounding beat, as the pulse.

Diero'tus, *n.* [*Gr. dikrotos.*] (*Med.*) Redoubled rapidity of the pulse.

Dicotyledons, *n.* [Gr. *dis*, two, and *kotylēdon*, a seed-lobe.] (*Bot.*) One of the two great divisions of the phanerogamous or vascular flowering plants, synonymous with the *Exogæne* of DeCandolle, and with the *Exogæus* and *Gymnogens* of Lindley. In this division are contained all those plants the embryo of which has two opposite cotyledons or seed-lobes, and are thus opposed to the monocotyledones. The dicotyledonous plants are much more numerous than the monocotyledonous, being in the proportion of eleven to two; and they constitute almost exclusively the arborescent scenery of all cold countries.

Fig. S18.
DICOTYLEDONOUS EMBRYO.

Dicotyledonous, *a.* (*Bot.*) Having two seed-lobes, as certain plants.

Dictamen, *n.* [L. Lat.] A mandate dictated by one person to another; an edict; an injunction.

Dictamnus, *n.* [From *Dictæ*, a mountain of Crete, where it grew.] (*Bot.*) A genus of plants, ord. *Ruticæe*, including two species, which are commonly cultivated in gardens for the sake of their handsome flowers. Of these the more remarkable is *D. fraxinella*, so named in allusion to the similarity which exists between its leaves and those of *Fraxinus*. This plant is said to contain such a quantity of volatile oil, that the air surrounding it becomes inflammable in hot weather. Its root was formerly much used in medicine, being thought to possess aromatic, tonic, diuretic, antispasmodic, and emmenagogue properties; but it is now rarely, if ever, employed. The plant is commonly called the *false dittany*.

Dictate, *v. a.* [Fr. *dicter*; Lat. *dicto*, *dictatus*, frequentative from *dico*, to speak. See *Dictio*.] To tell or communicate with authority; to deliver, as an order, command, or direction; to prescribe; to direct; as, to *dictate* an order. — To tell or instruct what to say or to write; to suggest; to point out; as, to *dictate* the contents of a letter.

—*n.* That which is dictated; an order delivered; a command; an injunction; an authoritative precept or maxim; a suggestion; an impulse; as, the *dictates* of conscience.

"Then let this dictate of my love prevail." — Pope.

Dictation, *n.* [L. Lat. *dictatio*.] Act of dictating or issuing an injunction; act or practice of prescribing.

Dictator, *n.* [Lat.] One who dictates; one who prescribes rules, maxims, ordinances, &c., for the direction and regulation of others. — One intrusted with supreme authority over his fellows; an absolute ruler.

"Patriots fell, ere the dictator rose." — Prior.

(*Rom. Hist.*) The Roman *D.* possessed sovereign power in the state, and were the generals-in-chief of the army. The first was Titus Laertius, who was appointed B.C. 501. The *D.* were at first chosen from the patrician order of the people; but B.C. 356, Marcus Rutilius, a plebeian, obtained the honor. The office was finally abrogated by the law of Antony, B.C. 44.

Dictatorial, *a.* [Fr., from Lat. *dictatorius*.] Pertaining to a dictator; absolute; unlimited; uncontrollable; despotic; as, *dictatorial* powers. — Resembling, or characteristic of, a dictator; imperious; dogmatical; overbearing; as, a *dictatorial* manner.

Dictatorially, *adv.* In a dictatorial manner.

Dictatorship, *n.* Rank or position of a dictator; period of a dictatorial office.

Dictatory, *a.* Overbearing; dogmatical; unduly authoritative in manner.

Dictatress, *n.* A female dictator.

Dictature, *n.* The office of a dictator; dictatorship.

Diction, (*dik'shun*), *n.* [Lat. *dictio*, from *dico*, *dicere*, to speak, allied to Gr. *deiknūmi*; Sansk. *dis*, to show; Goth. *gataihan*, to notify.] Expression of ideas by words; manner of expression; language; style; choice of phraseology.

"There appears in every part of his diction . . . a noble and bold purity." — Dryden.

Dictionarian, *n.* A lexicographer; one who compiles or constructs a dictionary. (*R.*)

Dictionary, *n.* [Fr. *dictionnaire*, from L. Lat. *dictionarium*, from Lat. *dictio*, a saying, a word.] A collection of words in one or more languages, with their peculiar significations, arranged in alphabetical order; but the term may be applied in a more extended sense to any work which professes to give information on an entire subject, or an entire branch of a subject, under words or heads digested in order of the alphabet. Hence *D.* may be said to be of two sorts — of *words*, and of *facts* or *things*; in the former sense the term *dictionary* being equivalent to *lexicon*, in the latter to *encyclopedia*. The present work is both a *Lexicon* and an *Encyclopedia*. *D.* of words are generally such as explain in alphabetical order the words composing any language, in the same language, or interpret them by the words of some other. A *D.* usually, also, gives an explanation of phrases; for when it is confined to single words, it is properly only a *vocabulary*. The Latin term *Thesaurus* (treasury) and the Greek *Lexicon* are sometimes used as equivalent to *D.* A *glossary* (Lat. *glossarium*) is a *D.* of unusual terms. The ancient Greeks and Romans made use of glossaries of unusual words and phrases, but had no *D.* of language in our sense of the term. In learning a foreign language, they seem to have adopted the natural method of conversation. It was not till after the invention of printing, when a taste for the classic languages of antiquity began to prevail, that *D.* came into use. The

Latin *Thesaurus* of Robert Stephens made its appearance in 1531; and in 1572 the *Greek Thesaurus* of Henry Stephens was published. Among the most carefully compiled *D.* of modern languages are the *Vocabolario degli Accademici della Crusca*, of the Italian; and the *Dictionnaire de l'Académie Française*, of the French. The Spaniards also possess a *D.* of considerable merit, entitled *Diccionario de la Lengua Castellana*, by the Royal Spanish Academy. In English, Johnson's dictionary, which made its first appearance in 1775, notwithstanding its defects, still ranks as a standard work of its class. Dr. Richardson's dictionary, which first formed part of the "Encyclopædia Metropolitana," but was afterwards published separately, is rather critical and philosophical than practical, and adopts the principle of giving together all the words derived from the same root. It is particularly valuable for the numerous examples which it gives of the uses of the words. It is a fact that all the best dictionaries of the English language, with a single exception, have been produced entirely by Americans. That of Noah Webster was for many years the recognized standard, having been reprinted several times in England, and forming the basis for the best of its contemporary English works, the *Imperial Dictionary*, compiled by Dr. John Ogilvie. Walker's *Pronouncing Dictionary*, an English work, was remarkable chiefly for the attention paid to pronunciation. The *D.* edited by Joseph E. Worcester, LL.D., a purely American product, has taken very high rank; and of the later works the *Standard and Century* far exceed any English lexicon except *The Encyclopædic Dictionary*, of which these are to some extent imitations. The last-named work, of which revised and greatly improved editions were issued by the Syndicate Publishing Company, Philadelphia (1894-96), is undoubtedly the most exhaustive and accurate *D.* of the English language yet produced. The greatest of projected dictionaries is doubtless that of Dr. Murray, on which work was begun in England about 1880 and practically discontinued in 1896, because of lack of available funds, after proceeding no further than the letter *D.*

Dictum, *n.*; *pl.* *Dicta*. [Lat., from *dicere*, to speak.] An authoritative saying or assertion; as, a professional *dictum*. — The arbitrament or award of a judge.

Diety, *n.* (*Myth.*) A nymph of Crete, and one of Diana's attendants, who first invented hunting-nets. Some have supposed that Milos pursued her, and that, to avoid his importunities, she threw herself into the sea, and was caught in fishermen's nets, (*diktua*;) whence her name.

Dietyogens, *n. pl.* [Gr. *dietyon*, a net.] (*Bot.*) A class of flowering plants established by Lindley for the reception of a comparatively small number of natural orders, genera, and species, usually included by other botanists among *Endogens*, but which, whilst they agree with endogens in the structure of the embryo, differ from them in the stem and leaves. The annual branches or aerial stems have indeed the endogenous structure, but the rhizomes or subterranean stems more resemble the structure of exogenous plants with pith, medullary rays, and wedge-like vascular bundles. The leaves are broad and net-veined, usually disarticulating with the stem. The class includes the *Dioscoreaceæ*, *Smilacæ*, *Trilliaceæ*, *Rorburghiaceæ*, and *Philesiaceæ*.

Dietyophyllum, *n.* [Gr. *diktyon*.] (*Pal.*) A name given by Lindley and Hutton to a fossil leaf from the upper sandstone, shale, and coal of the Yorkshire oolite, and employed to designate all fossil leaves of a common reticulated structure; the term *phyllite* being applied to leaves whose principal veins converge both at the base and apex.

Diety Creten'sis, an ancient historian, who served under Idomenus, king of Crete, at the siege of Troy; of which expedition he wrote an account. This work is said to have been the foundation of Homer's "Iliad." The book which is extant under his name is a forgery.

Did, *imp.* of the verb *Do*, *q. v.*

Didactic, **Didactical**, *a.* [Gr. *didaktikos*, from *didaskō*, to teach, from the root *da* by reduplication, whence the old verb *daō*, learn; Fr. *didactique*.] (*Lit.*) A term applied to every species of writing, whether in verse or prose, the object of which is to teach or explain the rules or principles of any art or science. Thus, to this class of literature belong the writings of Aristotle on grammar, poetry, and rhetoric; Longinus's *Treatise on the Sublime*; the *Institutiones* of Quintilian, &c. But the term is more exclusively applied to all poetical writings devoted to the communication of instruction on a particular subject, or of a reflective or ethical character, thence called *didactic poetry*. Among the most celebrated poems of this species may be reckoned, in ancient times, that of Lucretius, *De Rerum Naturâ*, in which the Epicurean system of philosophy is explained; Virgil's *Georgics*; and Horace's *Art of Poetry*; in more recent times, Pope's *Essay on Criticism*, and *Essay on Man*; Du Fresnoy's *Art of Painting* (see Mason's translation, in the Literary Works of Sir J. Reynolds); Vida and Boileau's *Art of Poetry*; Akenside's *Pleasures of the Imagination*; Armstrong's *Art of Preserving Health*, &c.

Didactically, *adv.* In a didactic manner.

Didacticity, *n.* Predisposition to preceptive duties.

Didactics, *n. sing.* The art or science of teaching.

Didactyl, **Didactylous**, *a.* [Gr. *didaktylous*, two-fingered.] (*Zoöl.*) An epithet applied to various animals possessing only two toes, as to the ruminants among quadrupeds (by Klein); to the ostrich among birds; to the amphibia, an amphibious reptile with two digits on each extremity; and to certain insects, as the *Pterophorus didactylus*, and *Gryllotalpa didactyla*.

Didactyl, *n.* A two-toed animal.

Didal, *n.* A triangular instrument used for digging.

Didapper, *n.* [From *dip*.] (*Zoöl.*) Same as *DAB-CHICK*, *q. v.*

Didascal, **Didascalie**, *a.* [Gr. *didaskalikos*.] Didactic; tending to the inculcation of precepts. (*R.*)

Didder, (often pronounced *dither*), *v. n.* [O. Dn. *citteren*.] To shiver, quake, or tremble from the effects of cold.

Didde, *v. a.* [Etymol. uncertain.] To cheat; to get the better of in any bargaining or business transaction; to chouse; to trick; as, a man *diddled* out of his money.

—*v. n.* To walk with tottering steps, as a young child.

Didelphic, (*dī-delf'ik*), *a.* Relating or pertaining to the Didelphis.

Didelphid, *a.* Relating or pertaining to the marsupial tribe of animals.

Didelphidæ, *n. pl.* (*Zoöl.*) The Opossum family, ord. *Marsupialia*. The typical genus, and which gives its name to the family, is *Didelphis*, the species of which are peculiar to America, and were the first marsupial animals known. They are characterized by having ten cutting-teeth above, and eight below, and a tail, the end of which is naked, scaly, and prehensile. They are nocturnal animals, do not appear to possess much intelligence, and live on eggs, insects, and fruits. Some of them are about the size of our domestic cat, others are not larger than a mouse. They do not all possess the abdominal pouch so characteristic of the order, some of them having only a fold of skin on each side of the bottom of the abdomen, forming a mere rudiment of a pouch. Of those which have pouches, the Virginian opossum, *D. Virginiana*, is the best known. It is a native of the U. States W. of the Hudson, and is about the size of a cat, but of a thicker form, and has a woolly fur-like felt. Its walk is very slow, but it is very active

Fig. S19. — OPOSSUM.
(*Didelphis Virginiana*.)

in getting from one branch of a tree to another, by means of its prehensile tail. The young, when first littered, become firmly attached to the teat, and grow in that position, never leaving the pouch till they are about fifty days old, and even then quickly returning to it on the slightest alarm. Of those which have no pouch, the young, when first born, adhere to the teat like the others, but when they are able to quit it, they mount upon the back of their mother when alarmed, and twisting their little tails round that of their parent, they are speedily hurried out of danger. Such is the *Philander dorsigerus*, or Merian's opossum.

Didelphis, **Didelphid**, **Didelphys**, *n.* [Gr. *di*, for *dis*, and *delphos*, the uterus.] (*Zoöl.*) A genus of animals, family *DIDELPHIDÆ*, *q. v.*

Diderot, **DENIS**, (*dēd-ro'*), a celebrated French writer, b. at Langres, 1712. With a passion for books and study, he refused to enter the church, and quitting the law, settled at Paris, and devoted himself to literature. After struggling for some years in obscure, laborious ways, he attracted public attention by his *Pensées Philosophiques*, which appeared in 1746. It was lifted into greater notoriety by the parliament of Paris, which condemned it to be burnt. Three years later he published his *Lettre sur les aveugles, à l'usage de ceux qui voient*, for which he was imprisoned at Vincennes. But *D.* is chiefly remembered as the projector of the famous *Encyclopédie*. D'Alembert was joint editor with him for a time. The work was in 17 folio volumes, the first of which appeared in 1751, and the rest during the next 14 years. It made a great noise in the world, but did not enrich the projector, who for want of money proposed to sell his library. The Empress Catherine of Russia paid him a high price for it, left it in his own hands, and gave him a salary as librarian. In 1773 he visited St. Petersburg, where he met a very flattering reception. On his return he visited Berlin, where Frederick II. received him, but coldly. *D.* was a friend of Rousseau, and one of the band of daring doubters who met at the suppers of Baron d'Holbach. His two most powerful tales are *Jacques le Fataliste* and *Le Neveu de Rameau*. *D.* worked at the *Encyclopédie* for the space of about 30 years. His fitness, natural and acquired, for this species of literary labor, was complete. With the advantage of an excellent education, he had a great love of truth, and a curiosity to ascertain the real relations of any subject upon which he was engaged. He was distinguished by a swiftness and dexterity of intellect that enabled him to catch the salient points of his topic, and to present them in the best light. As regards religion, *D.* was an atheist, sincere even to fanaticism in his opinions, and anxious to indoctrinate his countrymen with his own scepticism. The *Encyclopédie* became a vehicle for the indirect propagation of his views. One of the last recorded sayings of *D.* is very characteristic: "The first step towards philosophy is incredulity." *D.* 1784.

Didier-la-Seauve, (*St.*), (*dī-dē-ai la sai-ové'*), a

town of France, dep. Haute-Loire, 14 m. from Yssendeaux; *pop.* 5,418.

Didius Salvinus Julianus, MARCUS, a Roman emperor. B. abt. A. D. 133. Having filled the offices of quaestor, aedile, and praetor, he was appointed commander of a legion in Germany, and subsequently governor of Belgica. For his services against the Catti, he was made governor of Dalmatica, and next of Lower Germany. Having distinguished himself in Africa and Asia Minor, he returned to Rome, and, on the assassination of Pertinax, made himself emperor by bribing the praetorian guards. He now assumed the name of *Marcus Didius Commodus Severus Julianus*; but, after a short reign of 2 months, was killed in his palace by a common soldier, A. D. 193.

Dido, whose name lives embalmed in the verse of Virgil and of Ovid, was daughter of Belus, king of Tyre. Pygmalion, who succeeded him, murdered her husband, Sichæus, in order to gain possession of his wealth; but *D.* managed to escape with the treasures for the sake of which he had committed the crime; and, aided by the Tyrians, who had fled with her to escape Pygmalion's tyranny, founded the city of Carthage. The legend is, that, having bargained with the natives for as much land as a bull's hide would cover, she had it cut into thin strips, and then claimed all the territory which these, joined together, were made to encompass. From this legend the citadel of Carthage took its name of *Byrsa* (the Greek for "a bull's hide"). Her beauty and riches caused her to be sought in marriage by many suitors; but finding that her subjects inclined to compel her to marry Iarbas, king of Mauritania, to avoid the match she pretended a desire to honor the memory of her husband Sichæus by a solemn sacrifice, and causing a funeral pile to be erected, ascended it, and suddenly stabbed herself in the presence of the assembled people. Her name had previously been *Elissa*, but was changed to that of *Dido* ("valiant woman"), in memory of this courageous act, and she was numbered among the Carthaginian divinities. Virgil transposes both dates and circumstances, in order to suit the requirements of his poem; for he makes *D.* kill herself in despair when abandoned by Æneas, who, according to the commonly received chronology, died some three hundred years before Dido was born.

Dido, *n.*; *pl.* *Dinos*. An antic; a frolic; a caper; as, to cut a *dido*. (Practically the same as *to cut a caper*.)

Didodecahedron, *a.* (*Crystall.*) Having the form of a dodecahedron, or ten-sided, prism, with pentahedral, or five-sided, summits.

Didot, (*dē'dō*.) the name of a family distinguished in the history of French printing; the most celebrated member of which is FIRMIX, the inventor of stereotyping, and also a classical scholar and author; b. 1764, d. 1836.

Didrachm, **Didrachma**, (*dī'dram*, *dī-drak'ma*.) *n.* [Gr.] Among the ancient Greeks, a piece of money of the value of two drachmas.

Didst, the second pers. sing. of the imp. of *Do*, *q. v.*

"O last and best of Scots! who *didst* maintain
Thy country's freedom from a foreign reign." — *Dryden*.

Diduction, *n.* [Lat. *diductio*.] A separating by withdrawing one part from another.

Didus, *n.* (*Zoöl.*) See *Doro*.

Didymium, *Didym*, *n.* [Gr. *didymos*, twin.] (*Chem.*) A very rare metal, very similar to Lanthanum, which is associated with it in Cerium. It forms but one oxide (*DiO*), which is violet when hydrated, and brown when anhydrous. It is insoluble in potash. Its salts are either pink or violet. Its discovery is comparatively recent, and has not been applied till now to any use whatever.

Didymons, *a.* [Gr. *didymos*, twofold.] (*Bot.*) Growing in pairs; as, *didymous* leaves.

Didynamia, *n.* [See *DYNAMIC*.] (*Bot.*) The 14th class of plants in the Linnæan system, including all plants which have four stamens, 2 short and 2 long.

Didynmian, **Didynmians**, *a.* (*Bot.*) Having two long stamens and 2 short ones in the same flower.

Die, *v. n.* [A. S. *dydan*; Swed. and Goth. *doe*; Dan. *døer*; O. Ger. *töden*; Ger. *töden*, to kill. See *DEAN*.] To be deprived of life, either animal or vegetable; to perish; to expire; — generally preceding *of*, *by*, and sometimes *for*, before the cause of death. — To suffer death; to perish by disease or violence; to lose life; to pass into another state or existence.

"Before I see my country's ruin, I will *die* in the last ditch."
William, Prince of Orange.

—To come to an end; to come to nothing; to cease; to vanish; to become lost; or extinct; as, a *dead* reputation.

"One of the few, the immortal names,
That were not born to *die*." — *Halleck*.

—To sink; to faint; to droop gradually; to languish; — used in reference to pleasure, tenderness, affection, weakness, &c.; as, to *die* for a woman.

"*Die* of a rose in aromatic pain." — *Pope*.

—To be insensible, or become indifferent; to cease to cherish or care for; as, *dead* to the world.

—To vanish; to become imperceptible to the senses; to recede; frequently before *out* or *away*; as, the breeze *died away*.

"Dying clouds contend with growing light." — *Shaks*.

—To lose elasticity; to evaporate; to become flat and spiritless; as, a *dead* liquor.

Die, *n.*; *pl.* *DIES*. [O. Fr. *die*; Fr. *dé*, *pl.* *dies*, *dez*; It. *dado*; Sp. *dado*; Provençal, *dat*; L. Lat. *dadus*, *decino*. Etym. uncertain.] (*Games*.) A small cube, marked on its face with pips, dots, or numbers, from one to six. Two dice are employed in certain games of chance, such as backgammon; also in throwing for high stakes, or settling some dispute in which the decision is referred to the

highest number thrown. In this latter point, the throwing of dice is an equivalent to what is usually spoken of as "casting lots." The throwing of dice is in all cases effected by means of a small tubular box, which, held in the hand, is shaken at will by the player. When the dice are true cubes, there is no plan by which any kind of shaking can bring out a desired number; but unscrupulous gamblers, as is well known, resort to the odious practice of *loading dice*, by plugging them with lead on a particular side, so that the higher numbers are almost certain to be turned up. Where there is any suspicion of this trick, the thrower should be requested to turn down the mouth of the box abruptly, to prevent the dice from rolling, and improperly adjusting themselves.

(*Arch.*) The cube of a pedestal, or, in other words, that part which lies between the base and its cap.

(*Mech.*) One of two pieces of hardened steel, which, when placed together, form a *female screw* (or a screw in a nut), which has cutting edges, used for making a screw on a bolt.

(*Coinage*.) The instruments by which the impressions are given upon the various denominations of coin. The following is an outline of the *die manufacture*. The engraver selects a forged plug of the best cast-steel, of proper dimensions for his intended work; and, having carefully annealed it, and turned its surfaces smooth in the lathe, proceeds to engrave upon it, the intended device for the coin. When this is perfect, the letters are put in, and the circularity and size duly adjusted; it is then hardened, and termed a *matrix*. Another plug of soft steel is now selected; and the matrix being carefully adjusted upon it, they are placed under a very powerful fly-press, and two or three blows so directed as to commence an impression of the matrix upon the plug; this is then annealed, and the operation repeated till the plug receives a perfect impression of the work upon the matrix. This impression is of course in *relief*, the original work upon the matrix being indented, and produces what is termed a *punch*. This, being duly shaped in a lathe, is hardened, and is employed in the production of impressions in soft steel, or *dies*, which being properly turned and hardened, are exact *fac-similes* of the original matrix, and are used in the process of *coinage*. When a pair of dies are made of good steel, and duly hardened and tempered, and are carefully used, they will sometimes yield from 200,000 to 300,000 impressions before they become so far worn or injured as to require to be removed from the coinage presses.

Die, (*dē*.) a town of France, dep. Drôme, on the river Drôme, 30 m. from Grenoble; *pop.* 4,416.

Die, (*St.*) (*de'ai*.) a town of France, dep. Vosges, 24 m. N.W. of Epinal. *Manuf.* Cotton-spinning, iron and wire-works. *Pop.* 10,472.

Diebitsch, HANS KARL FRIEDRICH ANTON, (COUNT SABALKANSKY,) a distinguished Russian general, b. in Silesia, 1785. In the campaigns of 1812, 1813, and 1814, he signalized himself by his skill and bravery, and was advanced to the rank of quartermaster-general by the Emperor Alexander. He displayed great courage in the battles of Ansterlitz, Eylau, Friedland, and Dresden. He at length became head of the staff; and in 1820 was intrusted, by the Emperor Nicholas, with the chief command of the Russian army in the expedition against Turkey. For his brilliant services in that campaign, he was promoted to the rank of field-marshal, and rewarded with the title of Count Sabalkánsky (or *crosser of the Balkan*), the orders of St. Andrew and St. George, a million of roubles, &c. D. of the cholera, 1831.

Die'cian, **Die'cions**, *n.* and *a.* See *DIECIAN*, and *DIECIOTS*.

Die'dral, *a.* Same as *DIHEDRAL*, *q. v.*

Dieffenbach, JOHANN FRIEDRICH, one of the most eminent surgeons of the present century, b. 1792 in Königsberg. After graduating in 1822 at Würzburg, he went to Berlin, where he became, in 1840, professor and director of the surgical clinic, in the Charity Hospital. After suffering many years, he d. in 1847, suddenly, just after an operation, surrounded by his numerous scholars. He was eminent not only for his great expertness and facility in ordinary operations, but also for his surgical genius in making improvements in the older methods, and the invention of new ones, particularly in those appertaining to Plastic Surgery. Of his works are to be mentioned: "Chirurgische Erfahrungen;" "Die Transfusion des Blutes, und die Einspritzung der Arzneien in die Adern;" "Ueber die Durchschneidung der Sehnen und Muskeln;" "Die Heilung des Stotterns;" "Die Aether gegen den Schmerz;" and his principal work, which has been translated into all the modern languages — "Die Operative Chirurgie."

Dieffenbachia, *n.* [Named after *M. Dieffenbach*, *q. v.*] (*Bot.*) A genus of plants, order *Araceæ*, belonging to the tropics of America, and consisting of herbs having tall fleshy stems, rather large leaves often variegated, and spadix enclosed in yellowish spathe. *D. seguina* is the Dumb Cane of the West Indies, a virulent plant, whose juice is so acrid as to render speechless for days those who may happen to bite the stems, which, when the leaves are gone, and the ring-like markings become evident, bear some resemblance to those of the sugarcane.

Diege'sis, *n.* [Gr.] A narrative, recital, or history.

Diego, (*Sau.*) (*de-ai'go*.) a shoal in the Gulf of Mexico, between Florida and the mouth of the Mississippi.

Dielec'tric, *n.* [Gr. *dia*, and Eng. *electric*.] (*Electricity*.) A body which admits of the force of electricity acting through it.

Die'men's Land, (*Van*.) See *TASMANIA*.

Diepenbeck, ABRAHAM VAN, (*dē'pen-bek*.) an eminent

Dutch painter of the Flemish school, was a fellow-pupil of Vandyke in the school of Rubens, at Antwerp: b. about 1606; d. 1675.

Dieppe, (*dē'pē*.) a maritime town of France, dep. Seine-Inférieure, cap. arrond. of same name, at the mouth of the Arques, on the British Channel, 31 m. N. of Rouen, and 92 N.W. of Paris. *D.* is a handsome, well-built town, and possesses many fine buildings, and public institutions. It is also a favorite sea-side resort, and is, besides, one of the principal stations for passenger traffic between Great Britain and the N. of France, Paris, &c.; steam-communication being carried on daily with Newhaven, Eng. — *Manuf.* Sugar, rope, ship-building, &c. — *D.* is a considerable entrepôt for coastwise trade, and is largely concerned in the oyster fisheries. *D.* was bombarded by the English and Dutch in 1694. Its inhabitants were formerly famous for their enterprise as discoverers and navigators.

Diere'sis, *n.* See *DIERESIS*.

Die-sinker, *n.* One whose vocation is to cut and engrave the dies used in the stamping of coin, &c.

Die-sinking, *n.* See *DIE*.

Dies Irae, (*dī-es-ī're*.) *n.* [Lat., day of wrath.] (*Mus.*) The name commonly given, from the opening words, to a celebrated Latin hymn, describing the final judgment of the world. It is characterized by remarkable force and beauty, combined with great smoothness of rhyme, and commences:

"Dies ira, dies illa,
Solvat sæclum in favilla,
Teste David cum Sibylla."

The authorship of this beautiful hymn has been ascribed to various persons; but it most probably proceeded from the pen of Thomas of Celano, a Franciscan monk, who died about the year 1255. In the 14th century it was admitted into the service of the Church, and made a part of the *Requiem*, or mass for the souls of the dead. This hymn has been frequently translated into German, and into English.

Di'esis, *n.* [Gr.] (*Mus.*) An interval less than a comma. The harmonial *D.* is the difference between a greater and a lesser semitone.

(*Printing*.) A mark of reference, sometimes called *double-dagger*, and annotated thus, ‡.

Dies non. [Lat., implying no legal day.] (*Law*.) A day, as the Sabbath, or any specified legal holiday, when all legal business is suspended.

Die-stock, *n.* An apparatus for holding the dies in a fixed position, during the process of cutting screws.

Diest, (*dē'est*.) a town of Belgium, prov. S. Brabant, cap. canton, on the Demer, 32 m. E.N.E. of Brussels. *Manf.* Stockings, woollens, &c. *Pop.* 9,573.

Diet, *n.* [Fr. *diète*; It. *dieta*; Lat. *diata*; Gr. *diata*. Etymol. uncertain.] Food or victuals generally; daily allowance of provision; board; nutriment.

"Be plain in dress, and sober in your diet." *Lady M. W. Montagu*.

—Course of food prescribed for the prevention and cure of disease; choicely assorted descriptions of nutritious aliment allowed to invalids.

(*Hygiene and Med.*) Man has been supplied by nature with an organization of stomach capable of digesting and assimilating into nutriment every substance in the animal and vegetable kingdoms not actually poisonous. Many of these valuable gifts, however, are rendered inoperative or less serviceable, from an ignorance of knowing how properly to prepare them for food. The ancients were in the habit of curing nearly all acute diseases by a system of dietetics, i. e., by a more or less total abstinence from aliment of all kinds; and there is little doubt that one-half of the maladies now besieged and driven out of the body by an artillery of potent medicines, might and could be cured by a course of proper diet alone, but for the unreasonableness of the patient, who, refusing the necessary time, and demanding an instant recovery, rejects the safer but more tardy system for the more rapid, but, at the same time, more injurious plan of medicine. Climate, and the mode of life a person pursues, have a great effect on the diet; the warmer the climate, the less and the poorer the food the man eats; the colder the region, the richer and more abundant the aliment he consumes; while the man of sedentary occupation in all latitudes eats less than he who takes exercise, or has an active employment. Though modern science has classified all kinds of food according to the great proximate principles they contain or yield, and separated them into those which produce fluids and flesh, and those that generate heat, — and though it has been proved that vegetable aliment will afford all the properties necessary to yield those proximate principles, — it has been found that man requires a due mixture of animal and vegetable aliment to produce a perfect nutrition. When it is remembered how frequently relapses are caused in illness by a too hasty return to the customary dietary, and how the indulgence in a small quantity of some long debarred dish or favorite viand will undo months of cure, the importance of a strict and rigidly obeyed system of diet cannot be too strongly impressed on the mind of all. It is impossible to lay down a rule of dietary to be observed in all cases of illness, though general principles will be better understood in relation to that subject when we come to treat of *Food*, and divide that important theme into those substances which generate heat, repair the waste of the solids or the flesh, and those that reproduce the fluids of the body; then, according as the disease is a fever, the wasting of the body as in atrophy, or the corruption of the fluids, as in scurvy, the kinds of food most serviceable to each, and those most objectionable, will be readily understood. The system that once prevailed of giving broths and gravies, under the delusion that the patient was imbibing strength with every

spoonful of the concentrated essence of beef, mutton, or chicken, has fortunately been long discarded, and medical men now know that a few dry fibres of long-boiled beef will go further to build up a shattered constitution than a quart of the richest gravy ever extracted from animal tissue. It is now also a patent fact that the most nutritious food, or that substance containing the largest quantity of those principles necessary to build up the living frame, is, if exclusively lived upon, as poisonous as arsenic or hemlock, destroying the body by a lingering marasmus or wasting. In the same way, the use of malt liquors—considered by some people to be of nutritive benefit to the system—is, regarded simply in its alimentary aspect, a perfect and entire fallacy. A person of good digestion, who satisfies the requirements of his stomach with a five-cent loaf and a glass of water, does more to promote the formation of muscular fibre in his body, by his simple diet resolving itself into 20 times the amount of farina and sugar—the basis of malt—than ten cents worth of beer could yield his system, and this, too, with the immediate certainty of its being converted into animal tissue.

Diet, *v. a.* [Gr. *diataō*, from *diata*, diet.] To feed; to furnish provisions for; to take food by prescribed rules.

"I will attend my husband, be his nurse,
Diet his sickness."—*Shaks.*

—*v. n.* To eat according to prescribed regimen; to eat; to feed; as, to be on spare diet.

Diet, *n.* [From Lat. *dies*, a day; It. *dieta*.] An appointed day of assembling, or the assembly itself.

(*Hist.*) By the usage of the German Empire, two *D.* were summoned every year by the emperor. There were three chambers:—1. That of the electors, q. v.; 2. That of the sovereign princes, divided into two spiritual, and four temporal benches; 3. The chamber of the imperial cities, divided into the Rhenish and the Swabian benches. The *D.*, together with the emperor, exercised the prerogatives of sovereignty. A decree of the *D.* was termed a *recess of the empire*.—The *D. of Hungary* is, according to the constitution, composed of the king (emperor of Austria), and the estates. The latter consist of the higher clergy, the magnates, the two courts of appeal, and two representatives from each chapter, county, city, and privileged district. They are divided into two chambers, called *tabulæ*.—The *D. of Switzerland* is composed of the representatives of the cantons, and manages such affairs as by the federal constitution are exempted from the jurisdiction of those several independent states. It is held every two years, alternately at Zurich, Berne, and Lucerne, which are termed the presiding cantons (*Vorort*). The *schultheiss* or governor (chief executive magistrate) of the presiding canton is landamann of Switzerland for the time being. Each canton has one vote in the *D.*—From a very remote period, down to 1832, Poland had national assemblies, or *D.*, which were of two sorts—ordinary, and extraordinary. The ordinary *D.* was held every two years, and usually at Warsaw. The *D.* was composed of a selection from the nobility, who formed what was called the *senate*, and of the deputies returned by each of the palatinates and districts of the country. The number amounted to about 400. The period of its meeting was fixed by the king, who presided over its deliberations. The extraordinary *D.* were convoked only to listen to propositions from the throne, and lasted only four days. As is well known, the throne of Poland was not hereditary, but elective; and, on the occasion of choosing the sovereign, the Polish *D.* were held in the open country, and were attended by all the nobility on horseback, armed and equipped as if for battle. On this subject the reader is referred to a work of great ability, by De la Birardière, entitled *Histoires des Diètes de Pologne, pour les Élections des Rois, depuis 1572 jusqu'en 1674* (Svo., Paris, 1679).—*Dietines* was the name given to the particular assemblies of the Polish nobility, in which deputies were elected to serve in the ordinary *D.*, and to represent the wishes and interests of their constituents. In these dietines every gentleman possessing an estate of three acres had the right of voting, and every deputy was chosen by the majority of suffrages.

Dietary, *a.* Pertaining or relating to diet, or the regimen prescribing or governing the same; as, a dietary scale.

—*n.* Allowance of daily food, especially as applied to the inmates of a prison, poor-house, almshouse, &c.; as, a liberal dietary.

Diet-bread, *n.* Food, as regulated by medical authority.

Diet-drink, *n.* A beverage, as barley-water, beef-tea, &c., given to the sick under medical supervision.

Dietet, *n.* One who diets; one who prescribes rules for eating; one who prepares food by course of regimen.

"He sauc'd our broth as Juno had been sick,
And he her dietet."—*Shaks.*

Dietetic, *a.* Pertaining or relating to diet, or to the prescribed rules for regulating the quality and quantity of food requisite to be eaten; as, dietetic philosophy, *i. e.* dietetics.

Dietetically, *adv.* In a dietetic manner.

Dietetics, *n. sing.* [Fr. *diététique*.] The doctrine or principle involved in the regulation of common diet; that branch of hygiene which relates to the prescription of proper and nutritious food.—See **Diet**, and **Food**.

Dietetist, *n.* A medical practitioner who applies the principle of dietary regimen to the cure of diseases.

Diethylamine, *n.* (*Chem.*) A compound which may be represented as ammonia, two atoms of whose hydrogen have been replaced by two of ethyl. It is a colorless volatile inflammable caustic liquid.

Dieth'ylin, *n.* (*Chem.*) A colorless liquid, derived from two atoms of alcohol, and one of glycerine.

Dietine, *n.* [Fr.] A minor or subordinate diet or convention.—See **Diet**.

Dietist, *n.* One who is skilled in the prescription or preparation of diet.

Dieu, *n.* [Fr.] In the French language, God; the Almighty.

Dieu et mon Droit, (*dū āi mong drwāw*). (*Her.*) The motto borne by the English monarchs; first assumed by Richard I. (*Cœur de Lion*), in 1198, and in French signifying, "God and my Right."

Dieuse, (*de'esze*), the ancient *Decem Pagi*, a town of France, dep. Meurthe, 26 m. from Nancy; pop. 4,642.

Diffare'ation, *n.* [Lat. *diffareatio*.] (*Rom. Hist.*) The dividing of a cake; among the ancient Romans, part of the ceremony of a divorce.

Differ, *v. n.* [Lat. *differe*—*dis*, and *fero*, to bear or carry.] To come apart; to be separate; to be unlike, dissimilar, distinct, or various;—sometimes followed by *from*.

"Discern how the hero differs from the brute."—Addison.

—Not to accord; to disagree; to vary; to dissent from; as, to differ in opinion.

"It is free to differ from one another in our opinions and sentiments."—Burnet.

—To dispute; to contend; to wrangle; to be at variance;—usually preceding *with*; as, to differ with one's relations.

—*v. a.* To cause to be or appear contrary or different. (*R.*)

Difference, *n.* [Fr.; Lat. *differentia*.] Act of differing; state of being different; unlike, or distinct; dissimilarity; diversity; unlikeness; variation; as, the difference in color between white and black.

—The quality which distinguishes one thing from another; disproportion; disparity; inequality; attribute of distinction; special characteristic of quality.

"Oh! the strange difference between man and woman."—*Shaks.*

—Contention; dispute; debate; controversy; ground of quarrel or controversy; point in dispute; as, family differences.

"Are you acquainted with the difference
That holds this present question in the court?"—*Shaks.*

—Distinction; as, the difference between the guilty and the innocent.

"She is in her grave, and oh!
The difference to me!"—Wordsworth.

(*Logic.*) One of the predicables. It is that particular quality which distinguishes the subject from all others when contemplated from that point of view in which we were then regarding it; and is said, logically, to be part of the essence of the subject. The genus, together with the difference, is said to make up the species; the species, with the *D.*, to make up the lower species, or the individual: *e. g.*, to the genus metal add the *D.*, "susceptible of magnetic attraction," and we obtain the species iron, which is distinguished from all other metals by that peculiarity.

(*Her.*) A device borne on the escutcheon to indicate the part of a family to which the bearer belongs. This has been effected by various methods—at present by what are termed *brisures*, marks of *filiation*, *cadency*, or *CADENCE*, *q. v.* Females do not bear differences.

(*Math.*) Remainder of a sum or quantity after a lesser amount is subtracted.

—*v. a.* To cause a difference or distinction.

"Organs, . . . and differenced by other concurrent causes."—Holder.

Different, *a.* [Fr.; Lat. *different*, from *differe*.] Distinct; separate; not the same; as, two different places.

"Like—hut oh! how different."—Wordsworth.

—Various or contrary; of various or contrary forms, natures, or qualities; dissimilar; unlike; as, different creeds, different kinds of food, &c.

"Men are different from each other, as the regions in which they are born are different."—Dryden.

Differential, (*diff'er-ən'she-a*). *n.* (*Logic.*) Specific difference in essence or species.

Differential, *a.* [Fr. *différentiel*.] Creating a difference; making discrimination or distinction; as, differential duties.

(*Mech.*) Differing in amount or quality of motive force.

—Calculated to indicate difference of motion or results;—used in relation to machinery.

(*Math.*) Having reference to differentials.

—*n.* An infinitesimal difference between two states of a variable quantity.

Differential Calculus, *n.* (*Math.*) A term applied to one of the most important branches of the higher mathematics, and in which magnitudes are contemplated as susceptible of continuous growth. Broadly speaking, the object of the *D. C.* may be said to be the determination of the ratios of the differences of mutually dependent variable magnitudes, on the supposition that these differences become infinitely small.—an hypothesis which gives rise to considerable abbreviations in the general calculation of differences. The infinitely small variation, increment or decrement, of a quantity is termed its *differential*, and is expressed by writing the letter *d* before the magnitude or function; thus *d x* signifies the differential of the variable magnitude *x*, *d (x y)* the differential of the product of the two variables *x* and *y*, and so on. The differential of a differential is called the *second differential*, and, *x* being the variable, is denoted by *d d x*, or more briefly by *d²x*. In a similar manner *dⁿx* is the *n*th differential of *x*. The letter *d* was introduced by Leibnitz, and is now adopted by all writers as the symbol of differentiation. The *D. C.*, although invented by Leibnitz, was reduced to a system-

atic form, and greatly extended, by the two celebrated brothers Bernoulli. See INTEGRAL CALCULUS.

Differential Thermometer, *n.* (*Physics*.) An ingenious instrument, invented by Sir John Leslie, and of great use in experimental philosophy, for measuring very small differences of temperature. It consists of two glass bulbs, connected by a glass tube bent in the form of the letter U. The tube is then partly filled with a colored liquid, when, exposing one bulb to heat, the expansion of the air forces the liquid down, causing it to rise in the opposite limb or part of the tube. This instrument is not meant to indicate the temperature of the atmosphere, as the application of cold or heat to both bulbs at the same time occasions no alteration in the level of the liquid; it merely indicates the difference of temperature between the two tubes.

Fig. 820.

Differen'tially, *adv.* After the manner or method of differentiation.

Differen'tiate, *v. a.* (*Math.*) To obtain the differential of; as, to differentiate an equation.

Differentiation, (*diff'er-ən'she-ā'shun*). *n.* (*Math.*) Act, method, or process of differentiating quantities or equations.

(*Zoöl.*) The formation or discrimination of differences or varieties.

Differently, *adv.* In a different manner; variously; possessing distinctive qualities.

Differingly, *adv.* In a differing, different, or contrary manner.

"Protuberant and concave parts of a surface may remit the light so differing, as to vary a color."—Boyle.

Diffib'ulate, *v. a.* [Lat. *diffibulare*.] To unbutton.

Difficult, *a.* Hard to do or to practise; hard; not easy; laborious; arduous; necessitating pains and trouble to perform or accomplish; as, a difficult task.

"It is difficult in the eyes of this people."—Zachariah.

—Hard to be pleased; unaccommodating; unyielding; uncomppliant; austere; rigid; peevish; as, a difficult woman to manage.

—Painful; perplexed; beset with trouble, labor, or difficulty; as, a difficult passage to construe.

Difficultly, *adv.* With trouble or difficulty.

Difficultas, *n.* [Fr. *difficulté*; Lat. *difficultus*, from *difficilis*—*di*, or *dit*, and *facilis*, from *facilis*.] That which is hard to be done or surmounted; obstruction; impediment; obstacle; embarrassment; perplexity; as, a person in difficulties.—State of anything which renders its performance hard, laborious, or perplexing; arduousness; exigency; as, a work of difficulty.

—Objection; cavil; variance; disagreement; matter of quarrel or controversy; as, to raise a difficulty.

Diffidence, *n.* [L. Lat. *diffidentia*; It. *diffidenza*, from Lat. *diffidens*, distrusting, from *diffido*—*dis*, and *fido*, to trust.] Want of confidence; any doubt of the power, ability, or disposition of others; doubt; fear; timidity; apprehension; hesitation; modest reserve; excessive modesty; bashfulness; coyness; reluctance; want of self-reliance.

Diffident, *a.* [Lat. *diffidens*, *diffidentis*.] Wanting confidence in, or doubting of, another's power, ability, disposition, sincerity, or intention; distrustful.

"Be not diffident of wisdom."—Milton.

—Distrustful of, or wanting confidence in, one's self; doubtful of one's own power, influence, or competency; hesitating; over-modest; bashful; coy; reserved.

"Distress makes the humble heart diffident."—Richardson.

Diffidently, *adv.* With distrust; in a distrusting manner; modestly.

Difform, *a.* Having a different form; dissimilar in structure; unlike in properties;—in contradistinction to *uniform*; as, a difform leaf.

"The unequal refractions of difform rays proceed not from any contingent irregularities."—Newton.

Diffract, *v. a.* [Lat. *diffringere*.] To deflect or separate into different parts, as the sun's ray.

Diffraction, *n.* [Fr. (*Optics*).] A species of deviation or deflection which the rays of light undergo in passing very near to any opaque body. This phenomenon was first observed by Grimaldi, who described the principal appearances with sufficient accuracy; but Newton first attempted to explain its cause by the general properties of light. His experiments are detailed in the last book of his *Optics*. In order to exhibit the phenomena of *D.* let a beam of solar light, reflected horizontally, be admitted into a dark chamber through a small round hole and received on a white vertical wall. If the hole have a sensible diameter, the image of the sun thrown on the wall will suffer no sensible alteration of color; but if we place in the axis of the beam of light, and at a distance of 5 or 6 ft. from the hole through which it is admitted a metallic plate, having a puncture made in it by the point of a very fine needle, and intercepting all the light than that which passes through the puncture, the appearance on the wall will no longer be a circular spot of white light only; it will be surrounded with several concentric colored rings, covering a space far exceeding in extent that which the solar beam would have occupied if the rays of which it was composed had followed their rectilinear direction. By substituting a very narrow slit for the puncture in the metallic plate, or several punctures or slits very close to each other, and arranged in a certain manner, some of the most beautiful phenomena of optics are exhibited.

Diffra'ctive, *a.* Having the power of diffraction.

Diffrau'chise, *v. a.* Same as DISFRANCHISE.

Diffrau'chisement, *n.* See DISFRANCHISEMENT.

Diffuse, (*diff-fūz'*) *v. a.* [Fr. *diffus*; Lat. *diffundo*, *diffusus*—*dis*, and *fundo*, to pour out.] To pour or spread, as a fluid; to cause to flow or spread; to spread; to circulate; to expand and extend in all directions; to disperse; to publish; to proclaim; as, to *diffuse* benevolence.

—*a.* Widely spread; dispersed; using many words; copious; expansive; prolix; verbose; redundant; as, a *diffuse* style of composition.

Diffusedly, *adv.* In a diffused manner; with wide dispersion.

Diffusedness, *n.* State of diffusion; dispersion.

Diffusely, *adv.* In a diffuse or spreading manner; widely; extensively; copiously; fully.

Diffuseness, *n.* Quality of being diffuse, or of lacking conciseness; prolixity.

Diffuser, *n.* One who diffuses or disseminates.

Diffusibility, *n.* State or quality of being diffusible.

Diffusible, *a.* That may be diffused; that may flow or be spread in all directions; that may be dispersed.

(*Med.*) Applied to those stimulating medicines which augment the action of the vascular system.

Diffusibleness, *n.* Same as DIFFUSIBILITY, *q. v.*

Diffusion, (*diff-fū'zhun*), *n.* [Fr.; Lat. *diffusio*. See DIFFUSE.] Act of diffusing; a spreading or scattering; dispersion; dissemination; spread; propagation; circulation; as, the *diffusion* of learning, the *diffusion* of species.

(*Chem.*) 1. *D. of gases.* If two vessels be filled with two different gases, and connected by a tube, it will be found that, after a certain lapse of time, an intimate and equal intermixture of them will take place. If, however, means be taken to measure the velocity with which they mix, it will be found that the lighter of the two diffuses itself much more rapidly than the heavier, and *vice versa*. This velocity of *D.* may be measured in the following manner:—If a glass tube, closed at one end with a porous plug of plaster of Paris, is filled with hydrogen, and plunged mouth downwards, the hydrogen will gradually pass through the porous diaphragm into the air, and the air will gradually supply its place. But it will be found that the hydrogen diffuses itself into the air much more rapidly than the air into it, causing the water to rise in the tube, contrary to the action of gravity. Mr. Graham and others, by a singular apparatus, have determined the exact rates of *D.* of all gases, which appear to be in accordance with a law that the relative diffusiveness of gases is unity divided by the square root of their density, taking air as the standard. The following are the velocities of *D.* of some of the more familiar gases:

Hydrogen.....	3.83
Carburetted hydrogen	1.34
Olefiant gas	1.02
Air	1.00
Carbonic acid	0.81
Sulphurous acid	0.68

D. of gases is a process that is continually going on around us. Were it not for this property, gases deleterious to animal and vegetable life would be constantly accumulating in poisonous masses, instead of being silently and harmlessly distributed through the atmosphere.—2. *D. of liquids.* Liquids of different densities, like gases, gradually diffuse into each other when brought into contact. Thus, if a salt jar be filled with water, and red wine be carefully and gradually conveyed to the bottom of the vessel, it will be found that, after the lapse of a few days, the wine will gradually diffuse itself into the water and the water into the wine, until the whole be uniformly mixed. By means of an apparatus of this kind, Mr. Graham was enabled to calculate the different velocities of a large number of substances. These velocities vary in the most remarkable manner, sulphuric acid, for instance, diffusing into water with 24 times the velocity of albumen. Pursuing these experiments, Mr. Graham was at last able to classify all soluble substances according to their velocities, and in doing so he made the marvellous discovery that a diaphragm covered with a layer of a solution of low velocity totally interrupted the passage of a solution of still lower power of *D.* through its mass. Carrying these ideas further, he has classified all soluble substances under 2 heads,—*colloids*, or amorphous substances, similar to gelatine, which he takes as the type of the class; and *crystalloids*, or substances taking a crystalline form, and having a high diffusive velocity. These two classes seem to be divided naturally by other characteristics than velocity of *D.* All crystalloids are more or less rapid, while colloids, such as starch, dextrin, albumen, &c., are insipid, and soluble with difficulty. Colloids offer but little resistance to the *D.* of crystalloids through their mass, while they are in a manner impervious to substances of their own class. On this property Mr. Graham has founded his system of dialysis, or the separation of the crystalline and colloid constituents of a liquid by the intervention of a colloid septum. (See DIALYSIS.) Another curious property of colloids is their power of remaining in solution until some disturbing influence suddenly reduces them to what Mr. Graham calls their *pectous* state. For instance, solution of ulmic acid may be preserved perfectly liquid for weeks in a sealed tube, but it is sure to become gelatinous, and insoluble at last. The following table will give an idea of the relative diffusibility of crystalloids and colloids:

Hydrochloric acid	1	} Crystalloids.
Chloride of sodium	2.33	
Cane-sugar	7	
Albumen.....	49	} Colloids.
Caramel	95	

Diffusive, *a.* Having the quality of diffusing, spreading; or dispersing; extended; spread widely; extensive; expansive.

"And with *diffusive* light adorn their heavenly place."—Dryden.

Diffusiveness, *n.* Power of diffusing, or state of being diffused; dispersion; extension or extensiveness; quality or state of being diffuse; verbosity; copiousness of words or expressions.

Dig, *v. a.* (*imp.* and *pp.* DIGGED, or DUG.) [A. S. *dician*, *gedician*; Swed. and Goth. *dika*, to dike, bank, mound, to make a ditch or trench. See DIKE and DITCH.] To open and break or turn up, as the earth, with a spade or other sharp instrument, or penetrate with a sharp-pointed or sharp-edged tool or instrument.

"You cannot *dig* up your garden too often."—Temple.

—To excavate; to form an opening in the earth by digging and removing the loose soil, &c.; as, to *dig* a well, to *dig* the ground for the foundation of a building.

"*Digg'd* from her entrails first the precious ore."—Dryden.

To *dig* down, to dig from under the foundation of.—To *dig* in, to spread over by digging; as, to *dig* in compost.—To *dig* from, out, or up, to get at and procure by digging; as, to *dig* out treasure, to *dig* up potatoes.

—*v. n.* To delve; to work with a spade, or similar tool or instrument; to perform servile labor.

"I cannot *dig*; to beg I am ashamed."—Luke xvi. 3.

(*Mining.*) To remove ores from their bed or lode after excavating for them.

To *dig* in or into, to pierce with a spade; act of excavating.—To attack with a view to consume or demolish; as, to *dig* into a good dinner. (Vulgar.)—To *dig* through, to open a way or passage to by digging; as, to *dig* through a layer of rock.

—*n.* A punch or poke with the fist; as, to give a person a *dig* in the ribs. (Vulgar.)—In the U. States, a slang term for one who reads or studies unweariedly.

Digamist, *n.* One who marries a second wife or husband, after the demise of the first.

Digamma, *n.* [Gr. *dis*, and *gamma*, the double gamma.] (*Gram.*) The name of a letter in the early language of Greece. It appears to have had very nearly the sound of the English *f* or *v*, and was so called from its resemblance to 2 *gamma*s, one placed above the other, thus *F*.

Digam'mate, **Digam'mated**, *a.* (*Gram.*) Containing the digamma.

Digamous, *a.* Pertaining, or relating to a second lawful marriage.

Digamy, *n.* [From Gr. *dis*, and *gamin*, to marry.] Marriage to a second wife or husband, after the death of the first;—contradistinguished from *bigamy*, or marriage with a second partner during the lifetime of the first.

Digast'ric, *a.* [Gr. *dis*, and *gastēr*, the belly.] (*Anat.*) Having a double belly.—An epithet given to a double muscle situated externally between the lower jaw and mastoid process. It pulls the lower jaw downward and backward; and when the jaws are shut, it draws the larynx, and with it the pharynx, upward in the act of swallowing.

Dig'by, in Nova Scotia, a W.S.W. co., bordering on the Atlantic Ocean. Surface extremely diversified. The co. contains several lakes, which give rise to some considerable rivers. Briar's Island and a very remarkable headland, called Digby Neck, enclose St. Mary's Bay on the N.W. *Min.* Coal and sandstone. *Cap.* Digby. *Pop.* (1897) 20,456.

—A seaport town, cap. of the above co. on the N. shore of Digby Neck, 140 m. W. of Halifax. *Pop.* (1897) 2,115.

—A village on Annapolis Harbor, abt. 11 m. S.W. of Annapolis.

Digby, or DIGBY CHICKEN, *n.* A small, dried herring, cured at Digby, Nova Scotia, and much esteemed as an appetizer or relish with wine, &c.

Digen'esis, *n.* Same as PARTHENOGENESIS, *q. v.*

Digen'ite, *n.* (*Min.*) An orthorhombic mineral. *Sp. gr.* = 5.5 to 5.8. Lustre metallic. Color and streak blackish, lead-gray. *Comp.* sulphur 20.2, copper 79.8 = 100. In the United States, compact varieties occur in the red-sandstone formation at Limebury and Cheshire, Conn.; also at Schuyler's Mines, N. J.

Digest, (*de-jest'*) *v. a.* [Lat. *digero*, *digestus*—*dis*, and *gero*, to bear about with one, to wear. See GESTATION.] To separate or dissolve, and concoct in the stomach, as food; to convert into chyme.—To distribute into classes; to arrange or dispose methodically; to draw out methodically in the mind; to dispose and nourish in the mind, so as to improve the understanding and heart.

"Read, mark, learn, and inwardly *digest*."—Book of Com. Prayer.

—To receive and enjoy; to brook.

"With my two daughters' dowers, *digest* the third."—Shaks.

—To receive without open resentment, repugnance, or rejection; as, to *digest* good counsel.—To soften, abate, or reduce, as anger or other passions.—To mature; to bring to ripeness or perfection.

"Learning, *digested* well."—Thomson.

(*Chem.*) To soften and prepare by caloric, or heated moisture.

—*v. n.* To experience the process of digestion; as, properly *digested* food.—To be mollified and prepared by heat.—To suppurate, or generate pus or matter, as a wound.

—*n.* That which is digested; an orderly distribution or arrangement; a body of laws arranged under proper titles; any collection, compilation, abridgment, or summary of laws, or of the principles of any other science, disposed under proper heads or titles.

(*Civil Law.*) A term often applied to the Pandects of the civil or Roman law. It was compiled from the works of previous Roman jurists by Tribonian and others, at the command of the emperor Justinian, and was published in A. D. 529.

Digest'edly, *adv.* In a digested manner; in a methodical and regular way.

Digest'er, *n.* One who digests.

"People that are bilious and fat, are great eaters and ill digesters."—Arbuthnot.

—An article of food, or medicine, taken to aid and strengthen the digestive organs of the stomach.

—A boiler invented by Papiu for raising water to a higher temperature than the common boiling-point, 212°: this is effected by forming a vessel somewhat resembling a kitchen-pot; the mouth is formed into a flat ring, so that a cover may be screwed tightly on; this cover is furnished with a safety-valve, loaded to the required pressure.

Digestibility, *n.* Quality of being digestible.

Digestible, *a.* Capable of being digested, or concocted with chyme in the stomach; as, *digestible* meat.

Digest'ibleness, *n.* Same as DIGESTIBILITY, *q. v.*

Digestion, (*de-jest'yun*), *n.* [Fr.: from Lat. *digestio*.] Act of digesting, or the process of dissolving aliment in the stomach, and preparing it for conversion into chyme, for circulation and nourishment of the body. See below, *Physiol.*

—Ordely arrangement; distribution in order; act of reducing to classification and method.

"The *digestion* of the counsels in Sweden is made in the senate."—Temple.

(*Surg.*) A term formerly applied to the treatment by which wounds or ulcers were brought into that state in which they found healthy pus: the remedies or applications promoting this object were termed *digestives*.

(*Chem.*) The heating of a substance in a liquid, in order to extract some principle contained in it. It is distinguished from *maceration* by being performed at a high temperature.

(*Physiol.*) That process by which the food of animals is converted into chyme in the stomach, and prepared for being ultimately taken into the blood. The function or process of *D.* is one of the principal of those that are directly concerned in the maintenance of life; and hence its proper performance is of the utmost importance to the individual; while depending, as it does, upon the healthy condition of a great number of organs, it is not to be wondered at that it is liable to disorders, and is productive of an endless variety of diseases under the general term *indigestion*. The principal processes connected with digestion are usually represented as—1. *Mastication*; 2. *Insalivation*; 3. *Deglutition*; 4. *Chymification*, or the action of the stomach; 5. *Chylification*, or the action of the intestines; 6. *Defecation*; and 7. the *absorption of the chyle*. The operation of mastication is a very important auxiliary to *D.*, since the more food is broken down and mixed with the saliva, the more readily and completely will it be acted upon by the stomach. Imperfect mastication is a frequent cause of indigestion. During this process the salivary glands yield up their contents, by means of which the dry food is moistened and rendered more fit for deglutition. The third process is the act by which the food is transferred from the mouth to the stomach. (See DEGLUTITION.) The alimentary matter being propelled by the contractions of the oesophagus into the cardiac extremity of the stomach, is there acted upon and dissolved by the gastric juice, which is secreted by glands lying in its inner or mucous coat. This process is assisted by the muscular contractions of the stomach, by means of which the mass is kept in motion until it is formed into chyme. When it has been sufficiently operated upon, it passes through the pyloric opening into the duodenum. The pylorus possesses a peculiar sensibility, that prevents any matter from passing through it but such as has been properly converted into chyme. Recent investigations have shown that the changes which the food undergoes in the stomach are essentially chemical.

(See GASTRIC JUICE.) The process of gastric *D.* is very slow. It is more than an hour before the food suffers any apparent change; and the ordinary time required for the *D.* of animal food is from three to four hours. The chyme having passed through the pylorus into the duo-

Fig. 821.—ALIMENTARY CANAL.

a, oesophagus; b, stomach; c, cardiac orifice; d, pylorus; e, small intestine; f, biliary duct; g, pancreatic duct; h, ascending colon; i, transverse colon; j, descending colon; k, rectum.

denum, mixes with the biliary, pancreatic, and intestinal secretions. These juices, by their action upon the chyme, separate it into two portions, — one a milky fluid called *chyle*, the other the excrementitious portion. The bile seems to be of use principally in promoting the digestion of fatty matters, while the pancreatic juice serves mainly to convert starchy matters into sugar. Of the use of the intestinal juice little is known. The chyle attaches itself to those irregular circular folds of the mucous membrane of the small intestines, called the *valvula conniventes*, where it is absorbed by the lacteals. The large intestines also possess lacteals; so that, if any portion of the chyle should not have been absorbed in the small intestines, it is taken up in the large one. The faeces pass gradually from the small to the great intestines, until they reach the rectum, in which they are retained for some time, and then discharged. The absorption of the chyle forms the last act in the process of *D.* It is, as we have already seen, taken up by the lacteals, and is by them conveyed to the mesenteric glands, where it is supposed to undergo some change. From thence it makes its way to the right side of the aorta, in the lumbar region, where it is finally discharged into an elongated pouch, called the *receptaculum chyli*. From this pouch the thoracic duct conveys the chyle upwards to the left side of the neck, where it is poured into the left subclavian vein at its junction with the internal jugular, and, being thus mixed with venous blood, it is carried to the lungs and there converted into new and perfect arterial blood.

Digestive, *a.* [Fr. *digestif*.] Having the power to cause digestion in the stomach; as, a *digestive* tonic.

—Capable of softening and preparing by heat.

—Methodizing; classifying; reducing to form and order.

"To business, ripen'd by *digestive* thought,
This future rule is into method brought." — Dryden.

—*n.* (*Med.*) That which increases or aids digestion.

(*Surg.*) See DIGESTION.

Dig'gable, *a.* That may be digged.

Dig'ger, *n.* One who digs; as, a gold-digger.

(*Agric.*) An instrument resembling a spade, used for digging.

Digger Indians, a name applied to several tribes of miserable and degraded Indians in Oregon and California, who subsist on roots which they dig out of the earth, and on insects, lizards, &c. They are believed to be the lowest grade of humanity upon earth.

Digges' Islands, (*digz*), a group of 3 small islands in the Arctic Ocean, on the W. side of Hudson's Strait. Lat. 62° 37' N., Lon. 70° 18' W.

Digging, *n.* (*Hort.*) The operation of moving, or stirring, or breaking up earth with a spade, pickaxe, or other sharp instrument. It is mostly performed in gardening, and its chief use is to mix the surface by burying it and bringing what is below to the top. In private gardens, *D.* is often much neglected; but commercial growers, who have to make the most of their ground, pay particular attention to the subject, and the result is seen in their superior productions.

—*pl.* Certain localities, gulches, mines, &c., in certain counties in California, Australia, &c., where gold is obtained by digging beneath the soil; as, the Bendigo diggings.

—*pl.* Place of residence, business, or resort; as, what sort of diggings is he in? (*Vulgar.*)

Dight, (*dit*), *v. a.* (*imp.* and *pp.* DIGHT or DIGHTED.) [A.S. *dihutan*.] To dress; to deck; to adorn; to embellish (*R.*)

"Just so the proud insulting lass
Array'd and dighted Hudibras." — Butler.

Dighter, (*dit'er*), *n.* One who dights, bedecks, or adorns.

Dighton, (*dit'n*), in Massachusetts, a town and township of Bristol co., on the N. side of Taunton river, about 35 m. S. by W. of Boston. Pop. (1897) 1,910. On the E. side of the river there is a remarkable rock, which is exposed and covered at every ebb and flow of the tide, and which presents a number of rudely engraved characters attributed by some to the Norsemen.

Digit, (*dij'it*), *n.* [Lat. *digitus*, allied to Gr. *deiknmi*, to show, to point out; Sansk. *dic*, to show.] A finger; as, the ten *digits* of the hands. (*Vulgar.*) — A measure of a finger's breadth, or $\frac{3}{4}$ ths of an inch.

(*Arith.*) A term employed to signify any symbol or number from 0 to 9; thus, 10 is a number of two digits.

(*Astron.*) The twelfth part of the sun or moon's diameter.

Digital, *a.* [Lat. *digitalis*.] Pertaining or relating to the fingers, or to digits; as, the *digital* extremities.

D. exercises. (*Mus.*) The exercises employed for the purpose of rendering the fingers independent of each other. As the third finger is the weakest, it is very necessary for all who practise the pianoforte, &c., to cultivate its *volition*, and strengthen it by exercise adapted to that purpose.

Digitalia, **Digitaline**, *n.* (*Chem.*) A very poisonous vegetable alkaloid, procured from the leaves of the *DIGITALIS*, *q. v.*

Digitalis, (*dij-it-a'lis*), *n.* [Fr. *digital*, from Lat. *digitulum*, a thimble, from the form of the flowers.] (*Bot.*) A genus of plants, order *Scrophulariaceae*, containing a number of species, which are found growing in various parts of Europe, Asia, and the Canary Islands. They are for the most part herbaceous plants, and are generally distinguished by having large and handsome terminal flowers. Several species are in consequence cultivated in our gardens, but they are all suspicious plants, and endowed with active properties. The best known, and the most powerful of them all, is the common fox-glove, *D. purpurea*. Its large and numerous flowers, of a rosy color, spotted with white and purple internally, and hanging gracefully, arranged in one-sided racemes, render it an object of admiration to all. The name fox-

glove ought perhaps to be *folk's-glove*, or the gloves of the "good people," the fairies, whom pastoral fables represent to have been in the habit of using these flowers for caps. The French call it "*Doigt de la Vierge*," "*Gantelée*," "*Gant de Notre Dame*," &c. In Scotland they are called "*witches' thimbles*," and "*dead men's*

Fig. 822. — DIGITALIS.

gloves." The leaves have an acrid, bitter, disagreeable taste, and their effects on the human system require this plant to be employed medicinally with great caution. The first effects of an over-dose are a painful sense of constriction of the throat and stomach; then follows great excitement, vomiting, severe purging, and finally death. Employed in small doses, *D.* acts as a diuretic and a sedative of the circulation, and its continued use causes great slowness of the pulse, rendering it extremely useful in diseases of the heart, and in inflammation. It is prescribed as a diuretic in dropsies of all kinds, but is most useful in those associated with a debilitated and generally diseased state of the constitution. It is a violent poison, and great care is requisite in prescribing it, as its use, even in small doses, has been productive of fatal results; for it accumulates in the system. The active principle of fox-glove is termed *digitaline*.

Digitalia, *n.* (*Bot.*) A genus of plants, order *Gramineae*. See MILLET.

Dig'itate, **Dig'itated**, *a.* [Lat. *digitatus*.] (*Bot.*) Branching into several leaflets like fingers, as a leaf.

Dig'itately, *adv.* In a digitate manner.

Digitation, *n.* [Fr.] A division into processes resembling fingers.

Dig'itiform, *a.* [Lat. *digitus*, and *forma*, form.] (*Bot.*) Formed in the manner of fingers.

Dig'itigrade, *a.* [Fr. *digitigrade*; Lat. *digitus*, and *gradior*, I walk. See GRADE.] Walking on the toes.

Digitigra'da, **Dig'itigrades**, *n. pl.* (*Zoöl.*) The name given by Cuvier to a tribe of carnivorous animals distinguished by walking upon the toes, the heel being always raised from the ground. Those animals which place the heel or the sole of the foot on the ground belong to the tribe *Plantigrada*. Some of the most carnivorous of the mammalia belong to the *D.* The feline and canine families, hyenas, civets, &c., are all included in it. The Weasel fam. (*Mustelidae*) appears to form a connecting link between the *D.* and the *plantigrada*.

Digitus, The Latin word for a finger or a toe.

Diglyph, (*dij'glif*), *n.* [Gr. *dioglyphos*.] (*Arch.*) An imperfect triglyph, with only two channels instead of three. See TRIGLYPH.

Digue, (*dain*), [anc. *Dirmia*,] a walled town of France, cap. of dep. Basses-Alpes, on the Bleone, 55 m. N.E. of Aix, 78 S.S.W. of Grenoble, and 373 S.E. of Paris. Pop. 7,002.

Dignification, *n.* [L. Lat. *dignificare*.] Exaltation; act of rendering dignified.

"Where an ancient descent and merit meet in any man, it is a double dignification." — Walton.

Dignified, *a.* Marked with dignity; noble; stately; grave; commanding awe or respect; as, a *dignified* judge.

Dignify, *v. a.* [Fr. *dignifier*; Sp. *dignificar*; Lat. *dignus*, worthy, and *facio*, to make.] To invest with honor, rank, or dignity; to exalt in position or office; to honor; to make illustrious; to elevate; to advance; to prefer; to ennoble; to adorn.

"The place is dignified by the doer's deed." — Shaks.

Dignitary, *n.* [Fr. *dignitaire*.] An ecclesiastic who holds a dignity, or a benefice which gives him some pre-eminence over minor priests and canons; as, a college *dignitary*.

Dignity, *n.* [Fr. *dignité*, from Lat. *dignitas*, from *dignus*, worthy. See DIGN.] True honor; nobleness or elevation of mind or character; elevation of thought,

sentiment, and action; — opposed to *meanness*. — Honorable place or rank of elevation; degree of excellence in popular estimation; an elevated office giving a high rank in society; advancement; preferment, or the rank attached to it; as, the *dignity* of the purple. — Elevation of aspect, or of deportment; grandeur of mien or carriage; lofty elegance of manner; impressiveness of personal presence.

"Some men have a native *dignity*, which will procure them more regard by a look, than others can obtain by the most imperious command." — Richardson.

—Rank or title of a nobleman, or dignitary; as, the *dignity* of a marquis.

Dignostic, *a.* Same as DIAGNOSTIC, *q. v.*

Dig'onous, *a.* [Gr. *di* for *dis*, twice, and *gonia*, an angle.] Presenting two angles.

Dig'ram, *n.* [Gr. *di* for *dis*, and *gramma*, letter.] A digraph.

Digraph, (*dij'gräf*), *n.* [Gr. *dis*, twice, and *graphō*, to write.] (*Gram.*) Two vowel letters in a syllable, which represent but one sound, as in the words *head*, *friend*, &c.; a digram.

Digress, *v. n.* [Lat. *digressor*, *digressus* — *dis*, and *gradior*, to walk.] To go from the right way or road; to deviate; to wander; to transgress.

"Thy noble shape is but a form of wax,
Digressing from the valour of a man." — Shaks.

—To depart from the main subject, design, or tenor of discourse, argument, or narration; as, to *digress* from the point at issue.

Digression, (*de-gresh'un*), *n.* [Lat. *digressio*.] A departure from the main subject under consideration; an excursion of speech or writing; the part or passage of a discourse, argument, or narration, which deviates from the main subject, tenor, or design, but which may have some relation to it, or be of use to it.

(*Lit.*) *D.* may sometimes be introduced with great effect; but they ought not to be had recourse to without sufficient reason, and should never be too frequent, nor too long. Frequent *D.* are a sure mark of an unskilful writer or speaker. Where a subject is heavy and dry, an occasional *D.* may serve to relieve the attention, and throw additional light upon it.

—Deviation from the right course; transgression.

"My digression is so vile, so base,
That it will live engraven in my face." — Shaks.

(*Astron.*) A term now restricted to the apparent distance of the inferior planets Mercury and Venus from the sun. Mercury is never seen at a greater distance than about 28° from the sun; this is called its *great D.*; but on account of the great eccentricity of the planet's orbit, its maximum *D.* are subject to great variation. The greatest *D.* of Venus is about 47 $\frac{1}{2}$ °, and admits of a variation amounting to about 2° 48'. — See ELONGATION.

Digressional, *a.* Pertaining to digression; comprising digression; departing from the main course, purpose, or subject.

Digressive, *a.* Going aside from the main point, subject; involving the character or nature of digression; as, a *digressive* turn of conversation.

Digressively, *adv.* By way of digression; after the manner of digression.

Digyn'ian, **Dig'yinous**, *a.* (*Bot.*) Possessing two pistils or styles.

Dihedral, *a.* [Gr. *dis*, double, and *hedra*, a side.] Having two sides or surfaces, as a figure.

Dihedral angle, (*Geom.*) The mutual inclination of two intersecting planes; or, more accurately, the *quantity of turning*, around the intersection of two planes which would be required to make one coincide with the other. It is obviously equal to the angle between the two lines drawn one in each plane, from any point on the intersection, perpendicular to the intersection of the two planes.

Dihedron, *n.* (*Geom.*) A figure with two sides or surfaces.

Dihexagonal, *a.* [Gr. *di*, for *dis*, and *hexagona*, formed of a union of two hexagonal parts.

Dihexahedral, *a.* [Gr. *di*, for *dis*, and *hexahedra* (*Crystall.*) That has the form of a hexahedral prism with trihedral summits.

Dihydrite, *n.* (*Min.*) A variety of PSEUDOMALCHITE, *q. v.*

Dii, (*Myth.*) The Latin generic name for all the gods. They were, indeed, very numerous. Every object which caused terror, inspired gratitude, or bestowed affluence received the tribute of veneration. Mythologists have divided these *Dii* into different classes. The Romans generally speaking, reckoned two classes of the gods, the *dii majorum gentium*, or *dii consules*, and the *dii minorum gentium*. The former were twelve in number, six males and six females; their names are, Juno, Venus, Minerva, Ceres, Diana, Venus, Mars, Mercury, Jupiter, Neptune, Vulcan, Apollo. In the class of the latter were ranked all the gods which were worshipped in different parts of the earth. Besides these, there were some called *dii selecti*, sometimes classed with the greater gods. There were also some called *demigods*, that is, those who deserved immortality by the greatness of their exploits, and for their uncommon services mankind. Besides these, all the passions, and the moral virtues, were reckoned as powerful deities; and temples were raised to a goddess of concord, peace, &c. According to Hesiod, there were no less than 30,000 gods that inhabited the earth, and were guardians of men, all being subservient to the power of Jupiter; and, in succeeding ages, we find temples erected, and sacrifices offered, to unknown gods. In process of time, not only good and virtuous men, who had been the patrons of learning and the supporters of liberty, but also thieves and pirates, were admitted among the gods; and the

Roman senate obsequiously granted immortality to the most cruel and abandoned of their emperors.

Diamb, Diambus, *n.* [Gr. *diambos*.] (*Pros.*) A twofold or double iambus. See **IAMBUS**.

Dijon, (*dē'zhon*.) (*anc. Divio*), an ancient walled city of France, cap. dep. Côte d'Or, and formerly of the duchy and prov. of Burgundy, in a plain at foot of the Côte d'Or mountains, and confluence of the Ouche and Saône. 105 m. N. of Lyons, and 160 S.E. of Paris. It is a fine, handsome city, possessing many magnificent public buildings, among them the castle erected by Louis XI., and the ancient palace of the dukes of Burgundy. It is the seat of an Academy and of a Court Imperiale. — *Manuf.* Linen, cotton, and woollen stuffs, earthenware, vinegar, soap, wax, sugar, leather, &c. *D.* existed previously to the era of the Roman domination, and was enlarged by the emperor Aurelius, A. D. 274. Among *D.*'s most famous sons may be mentioned Bossuet, Crebillon, and Piron. *Pop.* (1890) 66,307.

Dike, Dyke, *n.* [A. S. *dic*, a mound, bank, also a ditch, or moat; L. Ger. *dijk*; D. *dyk*; Ger. *düch*, a mound; Icel. *diki*, a ditch; Dan. *dek*; O. Ger. *teig*; Icel. *deig*; Goth. *daig*, a lump, a mass; Goth. *dgan*, to build, to form; Fris. *dika*, to raise up a dike, or embankment; Gael. *dig*, a ditch, a mound; probably allied to Gr. *techos*, a fortified wall.] An excavation, or ditch, made in the earth, of greater length than breadth; a channel for water; a water-course.

"The dikes are fill'd, and with a roaring sound
The rising rivers float the nether ground." — *Dryden*.

—A mound of earth, of stone, or of other material, forming an embankment against inundations of the sea, &c.

(*Geol.*) A vein of basalt, green-stone, or other stony substance; or an intrusion of melted matter into rents or fissures of stratified rocks. The illustrations (fig. 823) show the form of lava dikes in the

Fig. 823.

show the form of lava dikes in the Val del Bove, on the slopes of Mount Etna. In fig. 823, *a a a a* are horizontal strata, *b c* dikes of lava forced through the strata, of which *b b* are parallel throughout their entire length, and *c c* decrease upwards. In fig. 824 the horizontal strata are shown worn away by the action of the weather, and the vertical veins of lava *d d d d* (marked *b c c c* in fig. 823) being harder, have resisted its effects, and consequently remain projecting in the form of walls or *D.*

v. a. To secure by a dike, embankment, or mound; as, to dike a flat coast. To drain or irrigate by means of a dike or dikes; as, to dike a meadow.

ik'er, *n.* One who constructs dikes, hedges, or ditches.

ilacerate, (*de-las'ur-āt*.) *v. a.* [Lat. *dilacero*, *dilaceratus* — *dis*, and *lacero*, to tear or rend. See **LACERATE**.] To tear in pieces; to separate or rend by forcible means.

ilaceration, *n.* [Fr., from L. Lat. *dilaceratio*.] Act of tearing or rending asunder, or of dilacerating; as, "dilaceration of the nervous fibres."

ilapidate, *v. a.* [Lat. *dilapido*, *dilapidatus* — *dis*, and *lapis*, *lapidis*, a stone. See **LAPIDARY**.] To pull down; to suffer to fall into decay or ruin; as, to dilapidate a coat.

To waste, squander, or destroy; as, dilapidated means. *v. n.* To go to ruin; to fall by decay; as, a dilapidated house.

ilapidation, *n.* [Fr., from Lat. *dilapidatio*.] State of being dilapidated; decay; ruin; destruction; demolition; as, a hat in a state of dilapidation. — Ecclesiastical waste; a voluntary wasting, or suffering to go to decay, any building in possession of an incumbent.

ilapidator, *n.* [Fr. *dilapidateur*.] One who causes, or brings about, dilapidation.

ilatability, *n.* [Fr. *ilatabilité*.] Quality of being ilatable.

ilatable, *a.* [Fr.] Capable of dilatation or expansion; possessing elasticity; elastic; as, "Small air-bladders ilatable and contractible."

ilation, *n.* [Fr., from L. Lat. *dilatatio*.] Act of dilating; the expanding of a body into greater bulk by its own elastic power; expansion; a spreading or extending in all directions; state of being expanded; as, he dilated of rays. — See **EXPANSION**.

(*Surg.*) The expansion or opening of any organ; — sometimes applied to the heart, but most frequently to the iris of the eye.

late, *v. a.* [Fr. *dilater*, from Lat. *dilato*, frequentative from *differo*, *dilatus*. See **DIFFER**.] To expand; to well; to enlarge, spread, or extend in all directions; — a contradistinction to *contract*; as, air dilates by heat.

"They now dilate, and now contract their force." — *Prior*.

—To relate at large; to tell copiously, or diffusely; to amplify.

"He would not endure that woful theme,
For to dilate at large." — *Spenser*.

—*v. n.* To widen; to expand; to extend or swell in all directions.

"His heart dilates, and glories in his strength." — *Addison*.

—To speak largely and copiously; to dwell on in narration; — with *on* or *upon*; as, to dilate on a woman's beauty.

Dilated, *p. a.* Expanded; distended; enlarged, so as to occupy a greater space; as, a dilated air-bladder.

Dilater, *n.* One who dilates, or enlarges; that which expands, or is capable of expansion.

Dilation, *n.* [A modernized form of **DILATATION**, *q. v.*] Act of expanding or dilating; state of expansion or dilatation.

"A gigantic dilation of the hateful figure." — *Dickens*.

Dilative, *a.* Expansive; causing or producing dilation.

Dilator, *n.* Same as **DILATER**, *q. v.*

Dilatorily, *adv.* With delay; tardily.

Dilatoriness, *n.* Quality of being dilatory or late; slowness in motion; lateness; delay in proceeding; procrastination; tardiness; sluggishness.

Dilatory, *a.* [Fr. *dilatatoire*; Lat. *dilatatorius*, from *differo*, *dilatatum*. See **DILATE**.] Slow; late; tardy; given to procrastination; disposed to delay or put off anything.

"And wit depends on dilatory time." — *Shaks*.

—Attended with delay, sluggishness, loitering, or procrastination.

"A dilatory temper commits cruelties without design." — *Addison*.

—Intended or tending to cause delay, or gain time; as, a dilatory policy.

(*Law*.) A *D. plea* is a plea which goes to defeat the particular action brought, merely; and which does not answer as to the general right of the plaintiff.

Dilemma, *n.* [Gr. *dilemma* — *dis*, and *lemma*, anything received, an assumption, from *lambanō*, to take.] A state of things in which a difficult or doubtful choice is presented, and which raises a vexatious and embarrassing question as to what is best to be done, or what course to take determinately.

"A strong dilemma in a desperate case!
To act with infamy, or quit the place." — *Swift*.

(*Logic*.) A species of argument in the form of a complex, conditional syllogism. It is defined to be a redundant, hypothetical syllogism, in which the hypothetical premise consists of an antecedent, or condition, dependent on the several members of a distributive or disjunctive consequent. This argument was called by the Romans the *Syllogismus cornutus*; whence our phrase of "placing one on, or between, the horns of a dilemma." It is used to prove the absurdity or falsehood of some assertion. A *D.* must be so framed that one of the alternatives must be admitted; and each alternative must exactly apply. It ought also to be incapable of being retorted. When an affirmative is proved, the argument is said to be *constructive*; when a negative, it is called *destructive*. Of the constructive *D.* there are two sorts — the *simple*, which concludes categorically, and the *complex*, which has a disjunctive conclusion. There is only one kind of destructive *D.* The Greek dialecticians prided themselves on exhibiting *D.*, which they alleged to be insoluble. Some of these examples were constructed with great dexterity, and the discovery of the fallacy is by no means easy. One of the most famous of them, known as the "sophism of Euathlus," is as follows: — Euathlus had received lessons from Protagoras the rhetorician, on condition that the fee should be paid when the pupil gained his first cause. Euathlus delaying to undertake any cause, Protagoras sues him, and argues in this way: "If I am successful, you must pay me in virtue of the sentence; if unsuccessful, you must pay me in terms of our agreement, as then you will have gained your first cause." The pupil retorts: "If I am successful, I am free by the sentence; if unsuccessful, I am free by the agreement."

Dil'ettant, *a.* Relating to, or partaking of, dilettantism, or amateurship; as, dilettant taste.

Dil'ettant, Dilettante, *n.*; *pl.* **DILETTANTI**. [It.] An ardent admirer of, or amateur in, the fine arts, literature, &c.

"Of Dardan tours let dilettanti tell." — *Byron*.

Dilettantism, *n.* State or quality of a dilettante, or of desultory amateurship in the arts, literature, science, &c.

Diligence, (*dil'i-jens*.) *n.* [Lat. *diligentia*, from *diligo*, *diligens*, to value or esteem highly, to love — *dis*, and *lego*, to choose.] Carefulness; attentiveness; earnestness; steady application in business of any kind; industry; assiduity; constant exertion or effort; steady perseverance in performing or executing; watchful attention; heed; attention; constancy; — opposed to *idleness*.

To use or give diligence. To make energetic effort; to apply application and promptness to.

"Brethren, give diligence to make your calling and election sure." — 2 *Pet.* i. 10.

Diligence, (*dē-lē'zhōngs*.) *n.* [Fr.] In France, a public stage-coach.

Diligent, *a.* [Lat. *diligens*.] Careful of or about; assiduous; attentive; steady in application to business; constant in effort or exertion to accomplish what is undertaken; active; sedulous; industrious; persevering; as, a diligent scholar.

"Seest thou a man diligent in his business, he shall stand before kings." — *Prov.* xxii. 29.

—Constantly and carefully applied; prosecuted with prompt and persevering industry; steadily assiduous; as, to make diligent inquiry.

Diligently, *adv.* In a diligent, steady, and assiduous manner.

Dill, *n.* [A. S. *dil*, *dile*; D. and L. Sax. *dille*; Ger. *dill*; Dan. *dill*, *dild*; Swed. *dills*; O. Ger. *tilli*. Etymol. unknown.] (*Bot.*) The English name of *Anethum*, a genus of plants, order *Apiaceae*, having compound umbels, without general or partial involucre; the border of the calyx minute, but five-toothed; yellow involute petals; and dorsally compressed lenticular fruit. The common Dill (*A. graveolens*) is an annual or biennial plant, which grows wild in corn-fields in the countries around the Mediterranean. It has from a very early period been in general cultivation as an aromatic stimulant, and carminative. It has a strong peculiar aromatic smell and taste; the leaves are sometimes used for flavoring pickles, sauces, &c. The fruit (*Dill-seed*) is used in medicine, chiefly for relief of flatulence and griping in infants, and is administered in the form of *Dill Water*, in the preparation of which *Oil of Dill* is employed; a pale-yellow essential oil, on which the properties of the plant depend, and which is obtained by distillation.

Dillenburgerite, *n.* (*Min.*) A variety of **CHRYSOCOLLA**, *q. v.*

Dillenia'ceae, *n. pl.* (*Bot.*) The *Dillenia* family, an order of plants, alliance *Ranales*. *Diag.* Distinct carpels; no stipules; an imbricated corolla; homogeneous albumen; and arillate seeds. This order, consisting of trees, shrubs, and a few herbs, chiefly natives of India and tropical America, includes 26 genera, and 200 species. They have astringent properties, and many are used for tanning, and as vulneraries. The young calyces of some species of the typical genus *Dillenia* have an acid taste, and are employed to flavor curries in some parts of India. Many species of this genus grow to a large size, and form hard, durable timber. Those of India are generally remarkable for fine evergreen foliage, and very beautiful flowers. They are sometimes cultivated as stove or greenhouse plants in this country.

Dillersville, in *Pennsylvania*, a village of Lancaster co., abt. 1 m. W. of Lancaster.

Dille's Bottom, in *Ohio*, a post-office of Belmont co.

Dillesk, *n.* (*Bot.*) See **RHODOMENIA**.

Dillingersville, in *Pennsylvania*, a post-office of Lehigh co.

Dill'nite, *n.* (*Min.*) A hydrated silicate of alumina, obtained from Dillna, near Schemnitz.

Dillon, in *Illinois*, a post-township of Tazewell county.

Dillon, in *Missouri*, a village of Phelps co., about 5 m. N.E. of Rolla.

Dillon Run, in *West Virginia*, a post-office of Hampshire co.

Dillsborough, in *Indiana*, a post-town of Dearborn co., about 65 miles S. E. of Indianapolis. *Pop.* abt. 570.

Dillsburg, in *Pennsylvania*, a post-borough of York co., about 15 miles S. W. of Harrisburg. *Pop.* abt. 600.

Dilly, *n.* [From **DILIGENCE**, *q. v.*] A kind of stage-coach.

"The Derby dilly, carrying three insides." — *Geo. Canning*.

Dilly-dally, *v. n.* To trifle; to play with; to loiter about the doing of anything.

Diluent, *a.* [Lat. *diluens*, from *diluo*. See **DILUTE**.] Making liquid, or more fluid; attenuating; weakening the strength of, by mixing with water.

"Every fluid is diluent as it contains water in it." — *Arbuthnot*.

—*n.* That which dilutes, thins, or attenuates; that which makes more liquid, or weakens the strength of.

(*Med.*) One of the medicaments employed to quench thirst, dilute and make thin the thickened blood, and cool the system preternaturally heated by fever or disease. Balm-tea, toast and water, barley-water, whey, lemonade, and such like articles, belong properly to the class of diluents.

Dilute, *v. a.* [Lat. *diluo*, *dilutus* — *dis*, and *luo*, to wash; akin to Gr. *lūō*, to loosen, unfasten, but hardly to *louō*, to wash.] To render liquid, or more liquid; to make thin, or more fluid; to attenuate by the admixture of other parts.

"Drinking a large dose of diluted tea." — *Locke*.

—To make weak, or weaker, as color, by mixture.

"Least these colors should be diluted . . . by the admixture of any adventitious light." — *Newton*.

—*v. n.* To become attenuated, weakened, or diluted.

Dilut'ed, *a.* Thin; attenuated; reduced in strength; as, diluted spirits.

Dilut'edly, *adv.* In a diluted form.

Dilut'edness, *n.* State of dilution, or attenuation.

Diluter, *n.* He who, or that which, thins, dilutes, attenuates, or makes more liquid.

"Water is the only diluter." — *Arbuthnot*.

Dilution, *n.* [L. Lat. *dilutio*.] Act of diluting, or of making thin, weak, or more liquid; state of being diluted. "Opposite to *dilution* is coagulation, or thickening." — *Arbuthnot*.

Diluvial, **Diluvian**, *a.* [Lat. *diluvialis*, from *diluvium*, a flood, from *diluo*, to wash away.] Relating or pertaining to a flood or deluge, particularly to the Deluge of the time of Noah. — (Occasioned by, or resulting from, a deluge; as, a diluvial deposit.

D. formations. (*Geol.*) The deposits which are the result of an unusual and extraordinary rush of water, carrying with it all kinds of material removed from the surface, or torn up during the progress of a wave. Diluvial action may result from heavy rains, the melting of snow, submarine earthquakes, or other causes. The material accumulated in this way is called **DILUVIUM**, *q. v.*

Diluvialist, *n.* An expositor of the Noachian flood; one who explains physical phenomena caused by the Deluge.

Dilu'vian, *a.* See DILUVIAL.

Dilu'vium, **Dilu'vian**, *n.* [Lat. *diluvium*, a washing away of the earth.] (*Geol.*) A term applied to accumulations of gravel, sand, or stones, which are referred to the extraordinary action of water; the term alluvium implying the ordinary operations of water. At one time geologists merely used the word *D.* to distinguish accumulations supposed to have been formed during the Noachian deluge; but we now employ it as a common name for all masses which have apparently been produced by powerful aqueous agency.

Dilve, *v. n.* (*Mining*.) To cleanse tin-ore. (Used in Cornwall, Eng.)

Dil'worthtown, in *Pennsylvania*, a post-village of Chester co., abt. 75 m. E.S.E. of Harrisburg.

Dim, *a.* [A. S. and Iris. *dim*; Swed. and Goth. *dimmer*; O. Ger. *timbar*, *timbari*, dark, obscure, *demar*, the twilight; Ir. *teim*, dark; Lith. *tamsa*, darkness, *tamsus*, dark; Russ. *temnyi*, dark; O. Sax. *thim*, dark; Sansk. *tamas*, darkness, root *tam*, to languish, to fade.] Shut up from the sight; darkened; obscured; dusky; dark; darkish; wanting luminousness, brilliancy, or clearness.

"Which, *dim* by nature, wit did never clear."—*Davies*.

—Not seeing clearly; not plainly seen; mysterious; dull; imperfect; sullied; tarnished; of obscure vision; as, *dim* eyesight, a *dim* understanding, a *dim* shadow.

"*Dim* with the mist of years."—*Byron*.

—*v. a.* To dull; to deaden; to darken; to cloud; to obscure; to diminish the brilliancy or clearness of.

"And *dim'd* the glory of that golden time."—*Davies*.

—To impair the powers of vision; to render the perceptive faculties dull and obscure; to tarnish or sully.

"No tears
Dim the sweet look that Nature wears."—*Longfellow*.

Dimag'nerite, *n.* (*Min.*) A variety of MAGNETITE, *q. v.*
Dime, *n.* [O. Fr. *disme*; Fr. *dixième*, from Lat. *decem*, ten.] In the U. States, a silver coin, valued at ten cents, or the tenth part of a dollar.

Dimension, (*de-men'shun*), *n.* [Fr., from Lat. *dimetior*, to measure—*dis*, and *metior*, to measure. See MEASURE.] The measure or compass of a thing; extent; the extent of a body, or length, breadth, and thickness, or depth (usually in the pl.); the definite bulk or size of a thing; as, the *dimensions* of a room, of the brain, &c.

—Degree; importance; stretch; scope; application; as, the affair assumed *grave dimensions*.

(*Algebra*.) The term is applied in much the same sense as *degree*, to express the number of literal factors that enter into a term. Thus, x^2 , xy , $2ab$, are all of two dimensions, or of the second degree; x^3 , x^2y , abc , are of three dimensions, &c.

(*Geom.*) A line, whether straight or curved, has only one *D.*, or measurement—namely, *length*; a surface has two—*length* and *breadth*; and a solid has three *D.*—*length*, *breadth*, and *thickness*, or *depth*. These three measurements or *D.* determine all forms of extension.

Dimen'sionless, *a.* Without dimensions, or possessing them to an unnoticeable extent or definite bulk.

Dimen'sity, *n.* Dimension; bulk; capacity.

Dimen'sive, *a.* Possessing dimensions; making the boundaries, limits, or outlines.

"But who can draw the soul's *dimensive* lines?"—*Davies*.

Dim'erous, *a.* [Gr. *dis*, double, and *meros*, part.] Composed of two parts; twin; twofold.

Dim'eter, *a.* [Lat., from Gr. *di* for *dis*, and *metron*, measure.] Containing two poetical measures.

Dim'etric, *a.* [See DIMETER.] (*Crystall.*) Presenting two unequal axes; as, a *dimetric* crystal.

Dimid'iate, *a.* [Lat. *dimidiare*, to divide into two parts.] Expressed by, or appearing in, two equal parts or divisions.—Having an apparently divided shape.

(*Bot.*) A term used when one half of an organ is so much the smaller as to appear to be missing, as in the pinna and pinnules of some species of *Asplenium*, *Adiantum*, and *Lindsaea*.

(*Zool.*) When the base covers are about half the length of the abdomen.

Dimidia'tion, *n.* [Lat. *dimidiatio*.] The act of halving; division into two equal parts.

Dimin'ish, *v. a.* [Fr. *diminuer*; Lat. *diminuo*—*dis*, and *minuo*, to lessen, from *minor*, less. See MINOR.] To make smaller or less; to lessen; to take from; to abate; to decrease; to reduce.

"That we call good which is apt to cause or increase pleasure, or *diminishes* pain in us."—*Locke*.

—To impair; to degrade; to abase; to lessen or lower the dignity or importance of; as, *diminishing* power.

"All the stars hide their *diminished* heads."—*Milton*.

—To take away from; to subtract;—opposed to *add*.

"Neither shall ye *diminish* aught from it."—*Deut.* iv. 2.

D. interval. (*Mus.*) An interval which is defective, or short of its perfect quantity by a semitone.

D. scale. (*Arch.*) That scale which expresses the gradual decrease of thickness in the upper part of a column.

—*v. n.* To become or appear less, or smaller; to lessen, decrease, subside, or abate.

"What judgment I had, increases rather than *diminishes*."—*Dryden*.

Dimin'ishable, *a.* Capable of diminution or reduction in size, quantity, or capacity.

Dimin'isher, *n.* The person who, or thing which, diminishes.

Dimin'ishingly, *adv.* In a diminishing or lowering manner.

"I never heard him . . . so much as speak *diminishingly* of any one that was absent."—*Locke*.

Diminnen'do, *adv.* [It. See DIMINISH.] (*Mus.*) A

direction in a musical score to decrease loudness of sound; marked thus > .

Diminn'tion, *n.* [Fr., from Lat. *diminutio*.] Act of diminishing or lessening; a making smaller; state of becoming or appearing less; decrease; abatement; decay; deduction; correlative to *augmentation*; as, a *diminution* of bodily vigor.

—Discredit; degradation; abasement; lessening of dignity, importance, or influence; as, *diminution* of repute.

"I shall not regard the world's opinion or *diminution* of me."—*King Charles I.*

(*Mus.*) The subject of a figure or canon is said to be taken in *D.* when its notes are diminished in length, generally to $\frac{1}{2}$ or $\frac{1}{4}$ of their former time.

D. of the record. (*Law*.) Incompleteness of the record of a case sent up from an inferior to a superior court.

Dimin'utive, *a.* [Fr. *diminutif*. See DIMINISH.] Small; little; narrow; contracted; minute; as, a *diminutive* child.

"The poor wren, the most *diminutive* of birds."—*Shaks.*

—Having the power of lessening or diminishing.

—*n.* A small or insignificant thing of little value or importance.

"Be shown

For poor'st *diminutives*, for doits!"—*Shaks.*

(*Gram.*) A word which, by the addition of one or more syllables to those from which it is derived, is softened in meaning or diminished in force or effect; as, *lambkin* from *lamb*, *manikin* from *man*, &c. Every language is in a greater or less degree susceptible of diminutives; but in this respect, as is well known, the Italian language surpasses all those of both ancient and modern times.

Dimin'utively, *adv.* In a diminutive manner; in a manner to lessen.

Dimin'utiveness, *n.* Want of size or bulk; littleness; state of being diminutive; want of importance or dignity.

Dim'ish, **Dim'mish**, **Dim'my**, *a.* Partially dim, or having weak or imperfect sight.

"My eyes are somewhat *dimish* grown."—*Swift*.

Dim'issory, *a.* [L. Lat. *dimissorius*. See DISMISS.] Dismissing to another jurisdiction. In the Church of England the name of *dimissory* letter belongs to such as are given by a bishop to a candidate for holy orders, having a title in his diocese, directed to some other bishop, and giving leave for the bearer to be ordained by him.

Dim'ity, *n.* [Gr. *dis*, double, from *duo*, two, and *mitos*, a thread of the warp; L. Lat. *dimittum*; It. *dimito*.] A kind of cotton cloth of a thick texture, and generally striped, or otherwise ornamented in the loom; it is chiefly used for articles of female dress, and for bed-furniture and window-curtains, and is very rarely dyed.

Dim'ly, *adv.* In a dim, faint, or obscure manner; without brightness or clearness; with a faint light; with dull or imperfect sight.

"With the lanterns dimly burning."—*Wolfe*.

Dim'mick, in *Illinois*, a township of La Salle co.; *pop.* about 1,400.

Dim'mish, *a.* See DIMISH.

Dim'mit, in *Texas*. See DEMMIT.

Dim'ness, *n.* Dullness or imperfection of the visual organs, or of the perceptive faculties of the mind.

"Answering to this *dimness* of their perception, was the whole system and body of their religion."—*Decay of Piety*.

—Want of brightness or clearness; dullness; state or condition of being dim and imperfect; as, the *dimness* of distant perspective.

Dim'ock, in *Pennsylvania*, a post-village and township of Susquehanna co., about 7 m. S. of Montrose; *pop.* 1,124.

Dimorphan'thus, *n.* (*Bot.*) A genus of plants, order *Araliaceae*. The *D. (aralia) edulis* is employed in China as a sudorific; its young shoots are a delicate vegetable; and its root, which is bitter, aromatic, and pleasant to the taste, is employed by the Japanese, as we use the scorzonera.

Dimorphism, (*di-mor'fiz'm*), *n.* [Gr. *dis*, twice, and *morphe*, form.] (*Chem.*) The property possessed by certain bodies of assuming crystalline forms which cannot be derived from each other. Instances of this occur in the case of sulphur, which crystallizes as oblique prisms, and as octohedra, according as it is crystallized by heat, or from the solution in bisulphide of carbon.

Dimorphous, (*di-mor'fus*), *a.* Assuming two separate forms.

(*Crystall.*) Susceptible of crystallization under two essentially distinct forms.

Dimor'phite, or **Dimor'phine**, *n.* (*Min.*) An orthorhombic mineral of orange-yellow color. Translucent and transparent. Lustre, splendid, adamantine. Fragile. Sp. gr. 3.58. *Comp.* Sulphur 24.55, arsenic 75.45 = 100.

Dimple, (*dim'pl*), *n.* [Seemingly corrupted from *dimple*, a little hole, dim of *dint*, a hole.] A small natural cavity or circular depression in the cheek, chin, elbow, &c., of the face and body.

"Love sits in the *dimple* of her chin."—*Prior*.

—A small depression or hollow in the surface of anything; as, the *dimple* of running waters.

—*v. n.* To form into dimples; to sink into little, hollow inequalities of surface.

"Shallow streams run *dimpling* all the way."—*Pope*.

—*v. a.* To mark or impress with dimples, or little cavities; as, to *dimple* a baby's cheek.

Dimpled, *a.* Set with dimples.

"Pretty *dimpled* boys like smiling Cupids."—*Shaks.*

Dim'plement, *n.* State of being marked with dimples.

Dim'ply, *a.* Dimpled; full of dimples; as, a *dimply* brook.

Dim'-sighted, *a.* Having dim or obscure vision.

Dim'yarias, **Dim'yariae**, **Dim'yary**, *n. pl.* [Gr. *dis*, and *myor*, a knot of muscles.] (*Zool.*) All those bivalves or conchifers are so called which have two distinct and separate adductor muscles; and, consequently, two corresponding muscular impressions on each valve.

—*a.* Pertaining or relating to the limyary molluscs.

Din, *n.* [A. S. *dyne*, *gedyn*, a noise; Icel. *dyn*, *dundi*, and *dynia*, to thunder, to resound; O. Sax. *thunar*; O. Ger. *thonar*, *donar*, thunder; Sansk. *stan*, to groan, to thunder; allied to Gr. *stenō*, to groan, Lat. *tono*, to thunder, &c.] Noise; a loud sound, particularly a rattling, clattering, or rumbling sound, long continued; racket; deafening clamor; as, "The odious *din* of war."—*Milton*.

—*v. a.* To strike with continued or confused sound; to stun with deafening noise; to annoy and harass with racket and clamor.

"And *din* your ears with hungry cries."—*Otway*.

Dinagepoor, (*din'a-gor*), a district of British India, enclosed by Rungpoor, Purneah, Rajshaye, Mymminging, and Boglipoor; Lat. between 24° 53' and 26° 38' N., Lon. between 82° 2' and 89° 16' E.; area, 5,374 sq. m. *Prod.* Rice, cotton, barley, wheat, sugar, pepper, and ginger. *Manuf.* Silks, cottons, paper, &c.—Its cap. DINAGEPOOR, is situated on an island formed by the Purnabadah River, 260 m. from Calcutta.

Dinah, daughter of Jacob by Leah (*Gen.* xxx. 21), his only daughter named in Scripture. While the family were sojourning near Shalem, she heedlessly associated with the Canaanitish maidens, and fell a victim to the seductive arts of Shechem, a young prince of the land, but was perfidiously and savagely avenged by Simeon and Levi, her full brothers, to the great grief of Jacob their father.

Dinan, (*dé'nan*), a town of France, dep. Côtes-du-Nord 13 m. S. of St. Malo. *Manuf.* Sail-cloth, linen and cotton fabrics. This old place, still enclosed by walls, was taken by Duguesclin in 1373, and by De Clisson in 1379. *Pop.* 8,510.

Dinant, a town of Belgium, on the Meuse, 14 m. S. o Namur. Its principal buildings are a church, town-hall, palace, college, hospitals, schools, and charitable institutions. *Manuf.* Hats, paper, woollens, cards, cutlery, vinegar, hydromel, and glass. It has marble-work, soap-works, salt-refineries, and breweries. *Pop.* 7,447.—This place was taken by Philip the Good, Duke of Burgundy, in 1466, when 800 of its inhabitants were taken by twos, tied back to back, and thrown into the Meuse. The town was also razed to the ground; but in 1493, was rebuilt. In 1554, and 1675, it was again taken by the French.

Dinapore, (*din-a-por'*), a town of India, president Bengal, on the Ganges, 145 m. E. of Benares. It is military station of the British.

Dinar, *n.* A Persian coin, of which 1,000 form 1 kera or about 24 cents.

Dinar'ic Alps, that portion of the Alps which connects the Julian Alps with the branches of the Balkan in Turkey.

Din'dle, *n.* An English provincialism for the Sowthistle.

Dine, *v. n.* [A. S. *dynan*, to feed; Fr. *diner*; O. F. *disner*, to dine; It. *desinare*, from Lat. *dejejunare*—from, and *jejuno*, to fast—to cease to fast.] To eat the chief meal of the day; to partake of the mid-day past; to sit down and take dinner; as, to *dine* out.

"And wretches hang that jurymen may *dine*."—*Pope*.

—*v. a.* To feed; to give a dinner to; to furnish with the principal meal of the day; as, to *dine* a party of friends.

Diner'-out, *n.* One who dines away from his own table, or in company; one who is frequently invited to other people's tables, for the sake of his companional and conversational qualities.

"A brilliant *diner-out*, though but a curate."—*Byron*.

Ding, *v. n.*, (*imp.* and *pp.* DUNG, or DANGED.) [A. S. *de-gan*; Icel. *deingie*; Swed. and Goth. *daenga*, to be to strike.] To bluster or threaten violence; to bound to talk with noisy bluster or importunity. (Vulgar.)

"He huffs and *dings*, because we will not spend the little we have left."—*Arbutnot*.

—To tinkle or sound, as a bell.

—*n.* A stroke, as of the clapper of a bell.

Ding'-dong, *n.* A term used to express the sound of bells.

"Let us all ring . . . ding-dong bell."—*Shaks.*

Dingelstedt, FRANZ, (*ding'el-stet*), a German novelist and poet, b. 1814. He has published several volumes of poems and tales, and some tragedies, and has several years occupied the position of director of Royal Theatre at Munich. He has also translated some of Shakspeare's plays into German.

Din'gey, **Din'ghey**, **Din'gy**, *n.* [Hind.] A kind of large boat, used on E. Indian rivers, resembling a baidar.

(*Naut.*) A small boat belonging to a ship.

Din'gey-hire, *n.* Charge made for use of a dingey in India.

Din'gey Wal'lah, *n.* [Hind.] A boatman on E. Indian rivers.

Din'giness, *n.* State or quality of being dingy dusky or dark hue; brownness.

Dingle, (*din'gl*), *n.* [dim. of *den*.] A narrow dell valley between hills; a wooded glen; a brake.

"I know each *dingle* . . . of this wild wood."—*Milton*.

Ding'-le-dang'-le, *adv.* In a dangling, loitering, fling manner.

Din'gle, a sea-port, and the most westerly town in land, co. Kerry, on the N. side of Dingle Bay, 30 W.N.W. of Killarney; *pop.* 2,250.

Ding'man's Ferry, in Pa., a post-village of Pike co., in Dingman township, on the Delaware river, about 8 miles below Milford; a favorite summer resort.

Dingmausburg, in Ohio, a village of Shelby co., on the Miami River, opposite Sidney, abt. 72 m. W.N.W. of Columbus.

Dingo, (*ding'go*), *n.* (Zool.) The Australian dog, found both in a wild and tamed state. It has a very wolf-like appearance, is extremely fierce, and barks and growls as other dogs, although the contrary has been said by some.

Dingy, (*din'ji*), *a.* [From A.S. *dyngan*, to manure; Swed. Goth. *dynga*; Finn. *tungin*, dung, manure.] Of a dull, dark color; brownish; soiled; sullied; of a dun appearance; as, a *dingy* coat.

Din'ing, *p. a.* Eating the principal repast of the day; pertaining to, or referring to dinner; as, a *dining-room*. Giving a dinner; entertaining at dinner; as, *dining* a select few.

Dinkelsbühl, (*din'klz-bool*), an ancient, walled town of Bavaria, 20 m. S.W. of Anspach. *Manuf.* Woollens, fustian, &c. *Pop.* 5,157.

Dinner, *n.* [Fr. *diner*, or *diné*. See DINE.] The meal taken about the middle of the day, or the principal repast of the day, eaten between noon and night; as, a club-dinner.

"A good dinner lubricates business." — Lord Stowell.

A special entertainment; a banquet; a feast; as, a public dinner.

dinnerless, *a.* Without a dinner; having no dinner; as, as hungry as a *dinnerless* man.

dinnerly, *adv.* Appertaining to a dinner.

dinornis, *n.* [Gr. *deinos*, wonderful or terrible, *ornis*, a bird.] (*Pal.*) A genus of large birds of the tribe *Brevipennes*. No species of the *dinornis* now exists, but many bones belonging to birds of this class have been found in New Zealand; not only in the most recent deposits, but in the sand by the sea-shore, in caves, in swamps, in the soil of forests, and also in river-beds. Among the natives there are many traditional reports about these birds, which were called *moa*. Other large birds, such as the Palaperyx and the Apornis, are also spoken of by them. It would appear that the *dinornis* became extinct at the end of the 17th, or the beginning of the 18th century. According to the traditions of the natives, these birds must have had brilliantly colored plumage, while their flesh was a delicate food. For these two reasons they were objects of pursuit. They are described also as being fat and stupid, unable to fly, and living in the mountains or in the depths of forests, feeding entirely on vegetable food. The bones of the *dinornis* have been closely examined by comparative anatomists, and the description of the natives coincides with the inferences drawn. The *dinornis* must have been considerably larger than any bird now existing; some of the bones found are twice as large as those of the ostrich. The body must have been very bulky, and somewhat similar to that of the extinct Dodo. The *D. giganteus* must have been nearly even feet high. The bones of the legs are massive, and remarkably solid in structure. The number of bones of the *dinornis* that have been found is very great. Several species have been recognized, and some skeletons have been nearly completely restored. The first bone examined by a naturalist was a leg-bone, and the naturalist was Professor Owen. From that bone alone he placed the *D.* in its correct place in the system of nature, — a remarkable example of the correctness of the great laws of the correlation of parts so beautifully elaborated by Cuvier.

di-no-sau'ria, *n.* [Gr. *deinos*, terrible; and *sauros*, lizard.] (*Pal.*) An order of extinct reptiles, which were related to the crocodiles on one hand, and bear an interesting relation to the birds on the other. They had usually short front limbs, and large hind limbs, on which many of them habitually walked, with the body upright. They differed greatly in size, varying from feet to 60 feet in length, had three-toed feet, and other bird-like characters. They are looked upon as the link between reptiles and birds. The *Iguanodon*, *Hylaeosaurus*, *Elmosaurus*, and *Megalosaurus* are the principal genera.

di-no-the'rium, *n.* [Gr. *deinos*, and *therion*, a wild beast.] See DINOTHERIUM.

dis'more, in Ohio, a post-township of Shelby co.

dynt, *n.* [A.S. *dynt*; Icel. *dynt*, a concussion; *dynta*, shake; Scot. *dynt*; probably formed from the sound.] A mark or impression made by a blow; a cavity or indentation made by a blow or by undue pressure; force; violence; power exerted; as, a *dynt* in a leaf.

By dint of, by sheer force or effort employed; by means of.

"And by the dint of war his mistress claims." — Gay.

dynt, *a.* To make a mark, cavity, or indentation on a substance by a blow, or by forcible pressure.

"Your body's print, the yielding down doth dynt." — Donne.

Dinwiddie, in Virginia, a S. S. E. co.; area, about 529 sq. m. *Rivers*. Appomattox river, Nottoway river, Stony creek, Namazine creek. *Surface*, undulating. *Soil*, generally fertile. *Cap.* Dinwiddie Court House. *Pop.* (1890) 36,195.

Dinwiddie Court-House, in Virginia, a post-village, cap. of Dinwiddie co., on Stony Creek, abt. 35 m. S. by W. of Richmond.

diocesan, *a.* [L. Lat. *diocesanus*.] Pertaining to a diocese; as, a *diocesan* council.

diocesan, (*Eccl.*) A bishop; one in possession of a diocese, and having the ecclesiastical jurisdiction over it.

diocese, (sometimes written *DIOCES*), *n.* [Gr. *diokesis*—*dia*, and *oikesis*, residence, from *oikia*, a dwelling, from *oikos*, a house. See ECONOMY.] (*Eccl.*) A province or jurisdiction; specifically, the circuit or extent of a bishop's jurisdiction; or, an ecclesiastical division of a kingdom or state, subject to a bishop's authority.

Diocletian, CAIUS VALERIUS (di-oh-kle'shun), a Roman emperor, b. in Dalmatia, 245. He entered the Roman army, distinguished himself under several emperors, and was elected emperor by the soldiers on the death of Numerianus, 284. Two years later, to strengthen himself against the numerous enemies threatening the empire, both in the east and west, he made Maximian his associate, assigning to him the charge of the west. A further division was afterwards made by the creation of two new Caesars, Constantius Chlorus, and Galerius; four emperors thus reigning at the time. War was almost continually going on, but *D.* seldom took any personal share in it. In the latter part of his reign he was induced to sanction a cruel persecution of the Christians, whom he had long protected. In 305, *D.* abdicated the imperial dignity, and retired to his native country. *D.* 313 A. D.

Diocletian Era, or, the ERA OF MARTYRS, dates from the proclamation of Diocletian as emperor, Aug. 29, 284. This era was generally used by Christians, till the introduction of the Christian era, abt. 527.

Diodia, *n.* [Gr. *dis*, twice, and *odon*, tooth; alluding to the two calyx teeth crossing the ovary.] (*Bot.*) A genus of plants, order *Rubiaceae*. They are American, chiefly tropical plants, with, save the indehiscent carpels, the habit of the *SPERMATOCOE*, *q. v.*

Diodon, *n.* [Gr. *dis*, and *odon*, a tooth; two-toothed.] (*Zool.*) A genus of fishes, order *Plectognathes*, with undivided jaws, each with a single and continuous dental plate. The *D. hystrix*, commonly termed the Sea-porcupine, or Balloon-fish, is of a nearly spherical form, sometimes measuring not less than two feet in length; but it possesses the power of inflating or contracting itself at pleasure, by means of an internal skin or membrane situated beneath the exterior or spiny covering. When taken by a line and hook, it inflates its body and elevates its spines to the highest possible degree, as if endeavoring to wound in all directions; nor can it be touched without danger until it is dead. It is a native of the Indian and American seas, and its flesh is coarse and worthless.

Diodorus Siculus, a native of Agrigum, in Sicily, who wrote a Universal History in 40 books, of which only 15 books and a few fragments remain. It is a laborious but uncritical compilation of most heterogeneous materials, and occupied him 30 years. It is still valued for the portions which it has preserved to us of many lost works. He flourished about B. C. 10.

Diocleous, *Diocleous*, *a.* [Gr. *dios*, and *oikos*, a house.] (*Bot.*) Applied to a plant whose male flowers are produced on one individual, and the female ones on another.

Diogenes, (di-oh-jee-neez), the celebrated Greek cynic, was a native of Sinope, in Pontus, where he was born 413 B. C. He was banished from his country for coining false money, and repaired to Athens, where he studied philosophy under Antisthenes, and surpassed his master in the rudeness of his manners, and his austere views of human nature. He walked about the streets with a tub on his head, in which it is said he lodged at night. He is the type of cynicism, and for his zeal as a moralist has been called the *Mad Socrates*. Being on a voyage, he was taken by pirates and sold into slavery at Corinth, where he became tutor to the sons of a rich citizen, but died in the greatest misery, B. C. 324. His reputation procured him a visit from Alexander the Great, who asked *D.* if there was anything in which he could gratify him. "Only," he answered, "do not stand any longer between me and the sun." Some moral "sentences" are extant under his name, but they are thought to be apocryphal. The inhabitants of Sinope raised statues to his memory, and the marble figure of a dog was placed on a high column erected on his tomb.

Diogenes Laertius, a Greek historian, b. in Cilicia. He wrote the *Lives of the Philosophers* in 10 books, an immethodical and uncritical work, valuable only, as such books often are, for the fragments they contain of earlier writings which have perished. He is supposed to have lived in the 3d century.

Diomedea, *n.* (Zool.) A genus of birds: the ALBATROSS, *q. v.*

Dion'edes, a king of Thrace, who fed his horses with human flesh, and was slain by Hercules, who threw his body to be devoured by his own steeds.

Diomedes, son of Tydeus and Deiphyle, was king of Etolia, and one of the bravest of the Grecian chiefs in the Trojan war. He often engaged Hector and Eneas,

and wounded Mars and Venus in battle. He went with Ulysses to steal the Palladium from the temple of Minerva, in Troy; and assisted in murdering Rhesus, king of Thrace, and carrying away his horses. On account of his wife's infidelity, he went to Italy, and built a city, which he called *Argyrippa*, and married the daughter of Daunus, the king of the country. He died there in extreme old age, or, according to a certain tradition, he perished by the hand of his father-in-law. His death was greatly lamented by his companions, who, in the excess of their grief, were changed into birds resembling swans.

Dion, a celebrated patriot of Syracuse, was the disciple and friend of Plato when that philosopher was at the court of Dionysius the elder, whose daughter, Arete, Dion married. Being accused of treason, he was banished by Dionysius the younger, and went to Athens, where he acquired considerable popularity; which so provoked the tyrant, that he confiscated his estates, and compelled his wife to marry another man. Dion, irritated at this treatment, resolved to attempt the deliverance of his country; and with a small force he landed in Sicily during the absence of Dionysius, and entered Syracuse in triumph. After various successes he perished, the victim of a conspiracy, headed by one Calippus, an Athenian, B. C. 355.

Dion, in Illinois, a post-office of Cumberland co.

Dionaea, (di-on-ee'-a), [from *Dion*, one of the names of Venus.] (*Bot.*) A genus of plants, ord. *Droseraceae*. The only species known is *D. muscipula*, a native of the Southern States. This plant affords a remarkable instance of vegetable irritability. The leaf is two-lobed,

Fig. 826. — VENUS'S FLY-TRAP.
(*Dionaea muscipula*.)

and each lobe is furnished on its upper surface with three stiff hairs, which, on being touched by an insect, or any other object, causes the two lobes to collapse and enclose the object. This plant, which is known as Venus's Fly-trap, is sometimes grown in our hot-houses.

Dion Cassius, an historian of the third century, born in Bithynia, went to Rome about 180: was appointed successively to many high offices: was twice consul; and wrote, in Greek, the History of Rome, from the arrival of Eneas in Italy to A. D. 229. The small portions extant of Dion's work are highly valued.

Dion Chrysostomus, (i. e. *Dion the golden-mouthed*), a celebrated Greek rhetorician, flourished the first century of the Christian era. He was a native of Prnsa, in Bithynia, but lived mostly at Rome. Suspected of conspiracy by Domitian, he took refuge in the country of the Getæ, returning to Rome on the accession of Nerva. He enjoyed the favor both of Nerva and Trajan, and lived to an advanced age. He left about 80 orations or discourses on morals and politics, which are admired for their elegance of style. *D.* A. D. 117.

Dione, (*Myth.*) A sea-nymph, and the mother of Venus.

Dionysia, (di-on-ish'yah), (*Antiq.*) Festivals in honor of Dionysius, or Bacchus, which, originating in Egypt, were introduced into Greece by Melampus, B. C. 1415. They were four in number, — the *Rural* or *lesser D.*, which was the most ancient; the *Lenæa*, the *Anthesteria*, and the *D. proper*, all of which were celebrated annually, with much extravagant merriment, though they were not disgraced by the excesses of the Roman *Bacchanalia*, *q. v.*

Dionysius, (di-on-nish'yus), (*Myth.*) A Greek name of the god BACCHUS, *q. v.*

Dionysius I., the Elder, tyrant of Syracuse, was born B. C. 430. He served in the war with the Carthaginians, got himself appointed general, and, in 405, sole emperor, and head of the republic. He formed a powerful body-guard, conquered other cities of Sicily, carried on war with the Carthaginians, and after making peace with them in 392, invaded Italy and subdued several of the Greek cities of the south. He was afterwards again at war with Carthage. Dionysius, like some other tyrants, was a patron of literary men and artists, aspired to literary fame, and contended for the prize at the Olympic games. He erected many fine temples. *D.* 367.

Dionysius II., the Younger, tyrant of Syracuse, was son of the preceding, and succeeded him, B. C. 367. Idly brought up, he was for a time restrained from excesses by the influence of Dion and Plato. Many other distinguished men visited him, or lived at his court. His subsequent treatment of Dion and his family led to his own overthrow in 356. He went to Italy and obtained the chief power at Locri, and after ten years absence returned and regained his throne at Syracuse. A final end was put to his tyranny by the noble Greek Timoleon, 343, and he spent the rest of his life in exile at Corinth, wallowing in the mire of sensuality and vice.

Dionysius, called the Tyrant of Heraclea, in Pontus, married the niece of Darius, and greatly enlarged his territories. He was, it is said, of a most corpulent habit, so that it was impossible to awake him without piercing his flesh with pins. B. 359; D. 304 B.C.

Dionysius, an historian and critic of Halicarnassus, in Caria, who was invited to Rome about 30 B.C., and there wrote his *Roman Antiquities*, only eleven books of which are extant. He is esteemed for his impartiality, and particularly for his chronological accuracy. Besides this work, we have one written by him entitled, *de Compositione Verborum*, and another on the *Structure of Language*. The best edition of his works is that of Oxford, in 1704, 2 vols. folio. Lived in the 1st century, dying about 7 B.C.

Dionysius, the Areopagite, a native of Athens, and a member of the Areopagus, where he sat when St. Paul was brought before it, and made his famous speech respecting the "unknown God," which was the means of the conversion of Dionysius. According to some accounts, he was consecrated bishop of Athens, and suffered martyrdom abt. 95 A.D. There were printed at Antwerp, in 1634, 2 vols. purporting to be his works, but their authenticity is questionable.

Diophantine Analysis, *n.* (*Algebra*.) A branch of the science which treats of indeterminate questions, of which the following may serve as a very simple example: *To find three (commensurable) numbers such that the sum of the squares of two of them shall be equal to the square of the third.*—The name *Diophantine* is derived from Diophantus, a mathematician of Alexandria, who is supposed to have lived in the third century of our era, and who examined and resolved a great number of questions of this nature in his celebrated treatise on arithmetic. Of this work, which exhibits the state of algebra among the Greeks, there are two editions: one by Bachet, at Paris, in 1621; the other at Toulouse, in 1670.

Diopside, *n.* The same as MALACOLITE, *q. v.*

Diop'sis, *n.* (*Zoöl.*) A genus of dipterous insects, remarkable for having the eyes and antennæ situated at the extremity of slender, horny peduncles, rising from the sides of the head, and equalling in some species the entire length of the body. On this account it is likewise termed the *Telescope-fly*. All the species, but one of this country, are found in warm parts of the Old World.

Fig. 827.—TELESCOPE-FLY.

Diop'tase, *n.* (*Min.*) Sometimes called *emerald copper*. A crystallized silicate of copper, the primary form of which is a rhomboid. Its color varies from emerald to blackish green; it is translucent and brittle.

Diop'ter, **Diop'tra**, *n.* [From Gr. *dioptrikos*.] (*Geom.*) An instrument for measuring the altitude of distant objects; and for taking the levels of a source of water intended to be conveyed to a distance by means of an aqueduct.

Diop'tric, **Diop'trical**, *a.* [Gr. *dioptrikos*, from *dioptrai*—*dia*, and *optomai*, to see. See OPTICS.] (*Optics*.) Affording a medium for the sight; assisting the sight in the view of distant objects; as, a *diop'tric* glass.

Diop'tries, *n. sing.* (*Optics*.) The science of refracted light, or of light passing through different mediums, as through air, water, or glass.

Diorama, (*dī-o-ram'd*), *n.* [Fr.; Gr. *dia*, through, *orao*, I see.] A method of painting, and scenic exhibition, invented by two French artists, Daguerre and Bouton. It does not possess all the advantages of a panorama, but produces a far greater degree of optical delusion. The peculiar effects of the *D.* arise more particularly from the contrivances employed in exhibiting the painting. In the first place the picture is viewed through a prosenium; the room in which the spectators are, is almost in darkness; and the light, which is admitted through colored glass, falls upon the picture alone. It is principally used to illustrate architectural and interior views. By means of slides and shutters the light can be increased or diminished at will, and hence very pleasant effects may be represented; such as the ordinary change from daylight to sunshine, and from sunshine to cloudy weather, or twilight. The *D.* was first exhibited in Paris in 1822.

Dioram'ic, *a.* Relating to, or having the characteristics of, a diorama; as, a *dioram'ic* view.

Diorism, *n.* [Gr. *diorismos*.] Distinction; characteristic feature; ruling quality.

Dioris'tic, *a.* Distinguishing; characterizing; defining. **Dioris'tically**, *adv.* In a defining or distinguishing manner.

Diorit'ic, *a.* Pertaining to, or containing diorite.

Diortho'sis, *n.* [Gr., from *dia*, through, and *orthos*, straight.] (*Surg.*) The art or the act of straightening crooked limbs.

Diorthot'ic, *a.* Relating to the correction of ancient texts.

Di'oryte, *n.* (*Min.*) A rock composed of green hornblende and albite, or soda felspar. It is called also *Diabase*, and is a hard kind of *Greenstone*. It is susceptible of taking a fine polish, and might be usefully employed in decorating buildings. Some of the forts of Sebastopol are built of this species of stone.

Dios'Nombre de, a town of Mexico, in the State and about 50 m. S.E. of the city of Durango; *pop.* abt. 7,000.

Diosco'rea, *n.* (*Bot.*) The typical genus of the order DIOSCOREACEÆ, *q. v.*

Dioscorea'ceæ, *n.* (*Bot.*) The Yam family, an order of plants, alliance *Dictyogens*.—DIAG. Unisexual flowers, an adherent perianth, and consolidated, several-seeded carpels. The species are twining shrubs, chiefly natives of hot climates, and for the most part possess a dangerous acrid principle, which renders them generally suspicious. The genus *Dioscorea* is the type, and consists of perennial fleshy-rooted or tuberous plants, with twining stems, broad alternate leaves, and loose clusters of small green flowers. *D. alata*, the W. India yam, is one of the best known species, and is a native of the West Indies. It is cultivated also in the East Indies, and the tubers are oblong, brown externally, white internally, and often very large, weighing sometimes as much as 30 lbs. They are used as a substitute for potatoes in tropical climates. *D. globosa* is a native of India, and is cultivated in Bengal under the name of Choo-puree-aloo. It is considered the best of the Indian yams; the flowers are highly fragrant, and the tubers are white internally. Several other species have the tubers purple-colored, and are also used as food—such are *D. rubella purpurea*, and *Atropurpurea*, in India, and *D. bulbifera* in Tahiti. Some of the species, on the other hand, which have ternate leaves, possess tubers which are poisonous, and have a nauseous taste. *D. villosa* is a delicate twining vine, found throughout the U. States, in thickets and hedges. The order includes 6 genera and 110 species.—See TAMUS, and TESTUDINARIA.

Dioscorides PEDANIUS, or PEDACIUS, a celebrated Greek physician and botanist, b. at Anazarbus, Cilicia, in the 1st cent. of the Christian era; he distinguished himself as the author of a work on *Materia Medica*, in which all the vegetable substances then used as medicines are described or catalogued. This work held its ground as the first and sole authority on the subject of which it treats for sixteen hundred years; its infallibility and completeness being almost as hard to shake and disprove as that of Aristotle or the Pope. It was printed by Aldus in 1499.

Dios'ma, *n.* [Gr. *dios*, divine, *osme*, smell.] (*Bot.*) A genus of plants, order *Rutaceæ*, inhabiting the Cape of Good Hope. They have alternate simple leaves, strongly marked with spots of transparent oil, and diffusing a powerful odor when bruised. The *D. crenata* furnishes the BUCHU leaves, once so esteemed as a valuable medicine. The name was given by Linnaeus in consequence of the divine odor exhaled from bruising the leaves, and resulting from the essential oil contained in the follicles or glands on the leaf.

Dios'pyros, *n.* (*Bot.*) The Date-plums, a genus of trees, order *Ebenaceæ*. Many of the species have hard and dark-colored heart-woods, which constitute the different kinds of ebony; thus, *D. ebenum* furnishes Mauritius ebony; *D. melanoxylon*, a native of the Comorand coast, the sort commonly known as Black ebony; and *D. ebenaster*, the Bastard ebony of Ceylon. The beautifully variegated furniture-wood called Comorand, or Calamander wood, is obtained from *D. hirsuta*, and is brought from Ceylon. Other species also yield valuable timber. The fruit of *D. kaki* is eaten in China and Japan, and is known in the latter country as the Keg-fig. The fruit of *D. Virginiana*, the Persimmon tree, a native of the U. States, is sweet and edible when quite ripe, but very austere previously; hence it is frequently employed medicinally in its unripe state as an astringent.

Diox'ylite, *n.* (*Min.*) Same as LANARKITE, *q. v.*

Dip, *v. a.* (*Imp.* and *pp.* DIPPED, or DIPT.) [A. S. *dyppan*; Fris. *dippe*; D. *doopen*; Ger. *taufen*; O. Ger. *tauffan*; O. Sax. *dōpan*; Goth. *daupjan*, to dip, to baptize; allied to Gr. *duplo*, to dive, from *duo*, to get into, to sink in; Hind. *dubnā*, to dive, to be immersed; Heb. *tabagh*, to sink, to press in.] To plunge or immerse, for a short time, in water or other liquid substance; to put anything into a fluid and withdraw it again.

"And dipp'd an olive-branch in holy dew."—Dryden.

—To take with a ladle or other vessel by immersing it in a fluid; often followed by *out*; as, to *dip out* water.

—To baptize by immersion. (Colloquial.)

"The person to be baptized may be dipp'd in water."—Ayliffe.

—To moisten or wet, as by immersion in liquid.

"A cold shuddering dew dips me all o'er."—Milton.

—To plunge, as into difficulty or embarrassment; to engage; to take concern; to mortgage; as, the property was *dipped* past redemption, to be *dipped* in a fraud, &c.

—*v. n.* To dive; to plunge; to be immersed in a liquid, as water; to sink below the horizon; as, the "sun's rim dips."—Coleridge.

—To enter; to pierce; to thrust and take; to engage.

"Whoever dips too deep will find death in the pot."—L'Estrange.

—To enter slightly; to look cursorily, or here and there; to choose by chance; as, to *dip* into a book.—To incline downward; to have a horizontal depression, as the strata of certain rocks.

Dip, *n.* Act of dipping or immersing in any liquid; as, a *dip* in the sea.

"The dip of oars in unison."—Glover.

(*Mining*.) The greatest inclination of a stratum to the horizon.

(*Geol.*) The technical term for the angle at which strata slope downward into the earth. This angle is measured from the plane of the horizon, and may be readily ascertained by the common spirit-level and plummet, or, as is usual among geologists, by a small pocket-instrument called the *clinometer*, *q. v.* To describe the opposite of *dip*, the term *rise* is used; and, as every bed that dips in one direction must necessarily

rise in another, either term may be used according to the position of the observer. For instance, a bed of coal which is spoken of by those on the surface as *dipping* to the south, would be described by the miners in the pit as rising to the north. The place where each bed rises to the surface of the ground is called its *outcrop*, or *basset*. Miners say that such and such bed "crop out" to the surface, and speak of their "basse edges." The line at right angles to the dip, that is, the line of outcrop of a bed along a level surface, is called its *strike*, a term introduced from the German by Professor Sedgwick. On geological maps the direction of the dip is generally indicated by an arrow, and the line of outcrop, or strike of a stratum, by a bold line.

—A description of candle manufactured by repeated dipping a wick in melted fat or tallow. (Sometimes called *dipped candle*.)—A sweet sauce for pudding.—A sauce made of fat pork for fish. (U. S.)

Dipaschal, (*dī-pās'hāl*), *a.* [Gr. *dis*, twice, and *pascha*, the passover.] Comprising two passovers.

Dip'chick, *n.* See DABCHICK.

Dipet'alons, *a.* [Gr. *dis*, and *petalon*, a leaf or petal (*Bot.*) Double-petalled; having two petals or flower leaves.

Dip'phanite, *n.* (*Min.*) Same as MARGARITE, *q. v.*

Dip'hryges, *n.* (*Metal.*) The scorial sediment, a calyx of melted copper, gathered in the furnace where the metal has run out.

Diphtheria, or DIPH'THERITIS, (*dif-the're-ā*), *n.* [*E. diphtherite*, from Gr. *diphthera*, a skin or membrane (*Med.*) A very malignant and fatal disease of the throat, which has recently made its appearance, and differs from all other forms of sore-throat previously known. It was first observed and described by M. Br tonneau, of Tours, in France, in 1818. It is characterized by a peculiar inflammation of the mucous membrane of the throat, or pharynx, accompanied by the production of a false membrane. At first, this membrane appears in the form of a white spot on the pharynx or tonsils, from which it gradually extends forward to the soft palate and into the nostrils, and backward into the oesophagus, sometimes into the larynx but seldom into the trachea,—producing, at length, suffocation. It is usually accompanied by a foetid discharge from the nose and mouth, and hæmorrhage frequently occurs. There is usually, also, a low and dangerous form of fever, with great depression of spirits, and rapid decrease of the patient's strength, which is still further accelerated by his inability to take food. Various modes of treatment have been recommended. The patient's strength is to be supported by means of tonics and stimulants. Quinine is generally recommended; and in most cases wine may be given with advantage. In the local treatment of the throat, nitrate of silver and chlorine are used. There can be little doubt that this disease is owing, in some measure, to sanitary neglect, as it is known to be contagious, and due to the presence of noxious bacilli. The disease has been successfully treated by an anti-toxin (*q. v.*). See BACTERIOLOGY.

Diph'thong, *n.* [Gr. *diphthoggos*, a double sound (*Gram.*) A double vowel, or two vowels pronounced together or in rapid succession, so as to make only one syllable. *D.*, with relation to sight, are distinguished from those with reference to sound; as an instance the former, we have *mouse*; of the latter, *mind*. Many double vowels, however, are not real diphthongs, cause the sound of only one of the vowels is heard; in *bread*, *field*.

—*v. a.* To form or pronounce as a diphthong.

Diphthou'gal, *a.* Consisting of two vowel sounds pronounced in one syllable.

Diphthou'gally, *adv.* In a diphthongal manner.

Diphy'lous, *a.* [Gr. *diphyllous*.] (*Bot.*) Possessing two leaves, as a calyx.

Diplei'doscope, *n.* [Gr. *diplo-ōs*, double, *eidōs*, form and *skopein*, to behold.] (*Astron.*) An instrument indicating the passage of the sun, or a star, over the meridian, by the coincidence of two images formed by single and double reflexion.

Diplin'thus, *n.* [Gr. *dis*, twofold, and *plinthos*, brick.] (*Arch.*) A wall, two bricks in thickness.

Dip'loc, *n.* [Gr. *diploon*.] (*Anat.*) The cellular canalized tissue found between the two plates of all bones but more particularly confined to the osseous cancellations found between the flat bones of the skull.

Diplogen'ic, *a.* [Gr. *diplo-ōs*, double, and *gennān*, produce.] Producing two bodies or substances, or taking of their nature or properties.

Diplo'ma, *n.*; *pl.* DIPLOMAS. [Gr., from *diplo-ōs*, double or fold. See DOUBLE.] Any official letter or public document; specifically, a letter or writing conferring some power, authority, privilege, honor, or degree; a doctor's diploma.

Diplomacy, (*de-plō'ma-se*), *n.* [Fr. *diplomatie*; *diplomacia*.] That which has reference to the knowledge of diplomas, charters, &c.—The art, science, practice of conducting negotiations, and making treaties, &c., between nations and states; forms of negotiation; art of composing diplomatic despatches; customs, rules, and privileges of ambassadors, envoys, &c.; diplomatism.

—A diplomatic body; the agency or management of ministers at a foreign court.

—Skill or dexterity in conducting and managing negotiations, or securing advantages.

Dip'lomat, **Dip'lomate**, **Diplo'matist**. [Fr. *diplomate*.] One skilled in diplomacy; one who is intrusted with the performance of political negotiations between powers and states, &c.; a diplomat.

Dip'lomate, *v. a.* To invest with a diploma, privilege, &c.; to confer ambassadorial authority upon

diploma'tial, *a.* Diplomatic. (*R.*)
diploma'tic, **Diploma'tical**, *a.* Pertaining to diplomas; specially privileged. — Relating to diplomacy, or to a body of ministers at a foreign court.

diplomatist, *n.* A minister or envoy to a foreign court; a diplomatist.
diploma'tically, *adv.* According to the rules, or after the manner, of diplomacy.

diplomat'ics, *n. sing.* The science of deciphering ancient writings, as diplomas, charters, &c., and of ascertaining their authenticity, date, &c.

diplomat'ism, *n.* Same as DIPLOMACY, *q. v.*

diplomat'ist, *n.* See DIPLOMAT.

dipl'o'pia, **Dip'lopy**, *n.* [*Gr. diploōs*, double, and *ptomai*, I see.] (*Med.*) The Double Vision, a disease of the eye, affecting the optic nerve and the retina. The peculiarity of this disease is, that the person sometimes sees two, three, and even more likenesses of one object at once, sometimes when looking with both eyes; to others, he sees naturally with both, but unnaturally with one. The disease is, by the best authorities, now regarded as purely functional; and as the exciting cause is supposed to reside in the stomach, bowels, and liver, the treatment consists in covering up the eyes for a time from light and irritation, and subjecting the patient to course of aperients, alteratives, and, eventually, tonic medicines.

diplote'gia, *n.* (*Bot.*) A kind of fruit resembling an ordinary capsule in every respect, except that it is inferior. It is the only inferior fruit which presents a dry, dehiscent pericarp. Examples are seen in the Camellias.

dip'ody, *n.* [From *Gr. dis*, double, and *pous*, foot.] (*Pros.*) Two metrical feet taken in one measure.

dip'olar, *a.* [*Gr. dis*, and *POLAR*, *q. v.*] Possessing two poles.

dip'per, *n.* He who, or that which, dips. — A ladle; a vessel to bale out liquid.

(*Zoöl.*) See HEMOPODIDÆ.

(*Astron.*) See CHARLES'S WAIN.

dip'ping, *n.* (*Mining.*) The term given to an interruption or breaking-off of a vein or ore.

dip'ping-needle, *n.* (*Magnetism.*) An instrument which consists of a frame in which a graduated circle is fixed in a vertical position. The frame itself moves on a graduated circle in a horizontal position, fixed on a small tripod that can be adjusted by means of levelling-screws. The needle is suspended on two knife-edges of steel, fixed in the frame exactly in the centre of the vertical circle, and moves freely in any direction in a vertical plane. When the vertical plane in which the needle moves coincides with that of the magnetic meridian of any place, the needle inclines from a horizontal position, and forms an angle with the horizontal line. This angle of inclination is called the *dip of the needle*. The dip varies like the angle of declination at different parts of the earth's surface, and at the same place at different periods. It also varies at different heights above the earth's surface. In 1576, when this property of the needle was first discovered by Robert Norman, the depression of the north end was about 71° 50'; in 1733 it had increased to 74° 42'; but at present it is about 73° 30'. When the plane of the needle is at right angles to the vertical plane of the magnetic meridian, the needle assumes a vertical position; but when it is in the plane of that meridian, the dip is the least. When the needle is in a vertical position, it gives us the means of determining the magnetic meridian by moving the vertical circle attached to the horizontal circle of the instrument until the space of 90°, which brings the vertical circle into the plane of the magnetic meridian, and serves the latter to serve the purpose of a declination-circle.

dip'rismat'ic, *a.* [*Gr. di* for *dis*, and *PRISMATIC*, *q. v.*] Having twofold prismatic power.
Crystall. Doubly prismatic; having a cleavage parallel to a four-sided vertical prism, and also to a horizontal prism.

DIPS, *n.* See DIPS.

dipsac'ceæ, *n. pl.* [Probably from *Gr. dipsao*, I test.] (*Bot.*) The Teasel family, an order of plants, alliance *Camparites*. *DIAG.* One-ovary, imbricated corolla, anther, perianthous ovule, and numerous seeds. They consist of herbs and undershrubs, with opposite or verticillate leaves, and capitate or verticillate flowers, surrounded by a many-leaved involucre. They are chiefly natives of the south of Europe, the Levant, and the Cape of Good Hope. Some are reputed to possess astringent and febrifugal properties, but as remedies they are altogether unimportant. One very useful plant belongs to the order, namely, *Dipsacus Fullonum*, the Fuller's teasel, the dried roots of which have long been employed for dressing

Fig. 828.

CAPITULUM OF THE WILD TEASEL.

cloth. Their hooked bracts are just stiff enough to raise the nap, but too yielding to tear the stuff. *D. sylvestris*, or Wild teasel, has a stem about 4 feet high, angled, and prickly, with the opposite, lance-shaped leaves united around it; flowers bluish, in a large oval or cylindrical head, whose bracts or scales are not hooked as in other species, but straight. It is naturalized in this country, and grows in hedges and road-sides, from Massachusetts to Louisiana. The order includes 6 genera, and 150 species.

Dip'pel's Oil, *n.* [From *Dippel*, its inventor.] (*Med.*) This oil, called also *Emphyreumatic Animal Oil*, or *Rectified Oil of Hartshorn*, is prepared by the destructive distillation of bones in close vessels, when *Bone-black* is left in the retort or vessel, and the crude oil distills over into a suitable receiver. When obtained in this manner, it is a thick, viscid oil of a brown color, and a very disagreeable odor, but on re-distillation it may be obtained limpid and colorless. Air, and light, affect the pure or rectified oil, and render it colored and somewhat viscid. Its elementary constituents are carbon, hydrogen, nitrogen, and oxygen, and it contains a number of volatile organic bases, such as aniline, picoline, &c. Dippel's animal oil is a powerful medicinal agent, and when swallowed in doses of a few drops, it is anti-spasmodic, and stimulates the vascular and nervous systems. In large doses, it is a powerful irritant poison.

Dip'sacus, *n.* (*Bot.*)

The typical genus of the order DIPSAKACEÆ, *q. v.*

Dip'sæ, *n.* [*Gr.* a serpent whose bite causes thirst.] (*Zoöl.*) A genus of venomous serpents, of the *Coluber* family. Their form is very elongated, and their head is thick, broad, and obtuse. They are tree-snakes, and some species are of great size. One of the most beautiful species is *Dipsas cyanodon*, of Java and Sumatra.

Dipset'le, *a.* [*Gr. dipsetikos*.] Conducting to thirst.

Dipsoma'nia, *n.* (*Med.*) See ONOMANIA.

Dipsos'is, *n.* [*Gr. dipsos*.] (*Med.*) An intense degree of thirst, superinduced by disease.

Dipt'era, **Dipt'er-ans**, *n. pl.* [*Gr. dipteros*, two-winged.] (*Zoöl.*)

A sub-order of insects, having for their main and most conspicuous character two wings only corresponding to the anterior pair, and two short clubbed appendages, called *halteres*, or balancers, and which seem to be the rudiments of the posterior pair in four-winged insects. The Dipterans are also distinguished by having the mouth in the form of a sucker, composed of from two to six lancet-shaped elongated scales, enclosing a canal upon the upper surface of a fleshy tongue or proboscis. The larvæ, or maggots, of the dipterous insects have frequently a membranous head, and always have the stigmata, or breathing pores, confined to the second and terminal segments of the body. In some species, as the Blow-fly, the eggs are hatched within the body of the parent; in others, as the Forest-fly (*Hippobosca*), the larva undergoes its metamorphosis in the parent's body, and the young are excluded in the form of pupæ.

Diptera'ceæ, *n. pl.* (*Bot.*) An order of plants, alliance *Guttiferales*. *DIAG.* Single alternate leaves; large convolute stipules; symmetrical flowers; equilateral petals; an unequal, permanent, winged calyx; beaked anthers; and a one-celled, one-seeded fruit. They are large trees, with single, alternate, involute leaves, and large, deciduous, convolute stipules. The order includes 7 genera, and 47 species, natives of the forests of the East Indies, with the exception of the genus *Lophira*, which belongs to tropical Africa. — See DIPTEROCARPUS, DRYSBALANOPS, VATERIA.

Dipt'eral, *a.* [*Gr. dis*, and *pteron*, a wing.] (*Zoöl.*) Furnished with two wings only, as the *Diptera*.

(*Arch.*) Having a double range of columns all around. A dipteral temple usually has 8 in the front row of the end porticoes, and 15 at the sides, the columns at the angles being included in both.

Dipterocarp'us, *n.* [*Gr.* a double-winged carpel.] (*Bot.*) A genus of plants, order *Dipteraceæ*. Several species, as *D. turbinatus*, *costatus*, *alatus*, and *incanus*, yield an oleo-resinous substance, called Wood-oil, or Gurjun balsam, which resembles in its properties the so-called balsam of copaiba, and which is used for similar purposes. In India, wood-oil has been employed for painting houses.

Dipt'eron, *n.* (*Arch.*) In ancient architecture, a temple surrounded with a double row of columns, which formed porticoes, called *wings*, or *aisles*.

Dipt'eros, *n.* (*Arch.*) Among the Greeks, a temple with a double row of columns on each of the four sides.

Dipt'erosus, *a.* (*Zoöl.*) Having two wings, or wing-like processes.

Dipt'eryu, *n.* (*Bot.*) A genus of plants, order *Fabaceæ*. The seeds of *D. odorata*, a native of Guiana, have a very powerful and agreeable odor, which is due to the presence of a volatile oil containing coumarin. They are used for scenting snuff, and in perfumery, and are commonly called *Tonquin* (or *Tonka*) beans.

Fig. 829. — DIPSAS CYANODON.

Dip'tote, *n.* [*Gr. diptōtos*.] (*Gram.*) In the Greek and Latin, a noun consisting of two cases only.

Dip'tych, **Dip'tychum**, (*dip'tik*), *n.* [*Gr. diptychos*, doubled.] A catalogue of saints; a register of ecclesiastical benefactors, dignitaries, &c.

"The commemoration of saints was made out of the diptycha of the church." — *Stillingfleet*.

(*Rom. Antiq.*) A tablet containing two leaves, which could be folded together. It was commonly made of wood, and coated over with wax.

Dip'us, *n.* See JERBOA.

Dipyre', *n.* [*Gr. dipyros*, from *dis*, and *pyr*, fire.] (*Min.*) A silicate of alumina, lime, and soda: composed of 53.8 per cent. of silica, 26.2 alumina, 9.5 lime, and 10.5 soda. It occurs in grayish, or reddish-white, translucent or transparent, fascicular masses, and in slender four-sided prisms, which are indistinctly formed, and rounded at the ends like grains of wheat. The name has reference to the double effect produced upon the mineral by fire, which first renders it phosphorescent, and then fuses it.

Diradia'tion, *n.* [*Fr.*, from *Lat. diradiatio*.] The emission and diffusion of rays of light.

Dir'æ, (*Myth.*) The Furies — Sisiphone, Alecto, and Megæra. They were the daughters of Acheron and Nox, and persecuted the souls of the guilty. They were called *Diræ* in heaven, *Harpies* on earth, and *Furies* in hell.

Dir'ea, *n.* [*Gr.* a fountain: the shrub grows in wet places.] (*Bot.*) A genus of plants, order *Thymelacææ*. The Leather-wood (*D. palustris*), native of the U. States, is a shrub 5 feet in height. Its flowers appear in April and May, much earlier than the leaves. They are small, yellow, funnel-shaped; about 3 together, issuing from the same bud. Leaves entire, on short petioles, pale underneath. Stamens much longer than the sepals, alternately a long and a short one. Berry oval, small, red. Every part of this shrub is very tough. The twigs furnish "rods for the fool's back." The bark is used for ropes, baskets, &c.

Dir'ee, (*dur'se*), (*Myth.*) The second wife of Lyceus, king of Thebes, who from jealousy imprisoned Antiope, whom Lyceus had divorced in order to marry herself; but Jupiter set Antiope at liberty, when she soon gave birth to two sons, Amphion and Zethus. These latter having grown up, put Lyceus to death, and attached *D.* to the tail of a wild horse, which dragged her over the rocks, on which she was dashed to pieces. The gods, pitying her misfortunes, changed her into a spring, which bears her name and flows near Thebes.

Dire, *a.* [*Lat. deirus*; perhaps allied to *Gr. deidō*, to fear.] Fearful; awful; terrible; ill-omened; dreadful; dismal; gloomy; destructive; evil in a great degree; as, a dire calamity.

Direct', *a.* [*Fr.* *directus*, from *dirigo*; see the verb.] Straight; right; leading or tending to an end, as by a straight line or course; not circuitous or oblique; as, a direct road. — Open; straightforward; not ambiguous or doubtful; as, the lie direct. — Plain; express; absolute; without ambiguity or reservation; as, "he nowhere says it in direct words." (*Locke*). — In regular descent, as from father to son; — opposed to *collateral*; as, the heir in the direct line.

(*Astron.*) Appearing to move forward from east to west, as a heavenly body: — opposed to *retrograde*. The motion of all the heavenly bodies, except some of the comets, is direct. The apparent motion of the heavens is retrograde, because the earth's motion is direct. By the astronomers of the 14th and 16th centuries, bodies in direct motion were said to move in *antecelestia*, and those in retrograde motion, in *consequentia*.

Direct-action engine, (*Mach.*) An engine having the rotatory motion communicated to a crank placed directly over the cylinder, so as to save height, and lessen the weight of the engine; the term applies more particularly to marine engines.

Direct fire, (*Mil.*) An enemy's fire perpendicularly directed to the troops or battery in line of aim.

Direct tax, (*Pol. Econ.*) A tax whose assessment is directly chargeable upon personal property and income; in contradistinction to taxes derived from duties levied on merchandise in the manner of customs and excise-duties, and the like.

Direct', *v. a.* [*Lat. dirigo*, *directum* — *dis*, and *rego*, to keep straight. See REGAL.] To give direction to; to point or aim in a straight line toward a place or object; as, to direct the aim of a gun. — To show the right road or course; to guide; to give a direction as to the proper bearings of a track or goal; as, to direct a person who has lost his way. — To cause to proceed in a particular manner; to regulate or determine the course of; to dispose; to govern, manage, or conduct; to adjust; as, to direct the councils of a state.

"Rides on the whirlwind, and directs the storm." — *Addison*.

— To prescribe; to point out; to instruct with authority; to order; to command; as, he directed him to leave at once. — To specify a direction or address, by a written mark or superscription; as, to direct a package, newspaper, &c.

— *r. n.* To show or point out a course; to give or convey direction; to lead by guidance.

— *n.* (*Mus.*) A character (*W*) placed at the end of a staff to indicate to the performer the situation of the first note on the succeeding staff, and which is for this purpose always situated on that line or space in its own staff which corresponds with the line or space occupied by the note which it is intended to announce in the other.

Direct'er, *n.* One who directs or prescribes; a director.
Direction, (*di-rek'shun*), *n.* [*Fr.*, from *Lat. directio*.] Act of directing; aim at a certain point; a pointing toward, in a straight line or course; the line in which a body moves by impulse; course; a straight line or course;

as, a northerly *direction*.—Act of guiding; guidance; management; superintendence; administration; adjustment; instruction in what manner to proceed, or what course to take; as, the *direction* of the foreign policy of a country.—Prescription; order; command; authoritative imposition of instructions as to a specified course; as, to *direct* an agent.—Superscription or address of a letter, parcel, package, &c.; as, goods sent to a given *direction*.—A board of directors, or body of persons intrusted with the control and management of any public affairs or business-matters; as, to submit a proposal to the *direction*.

Directive, *a.* [L. Lat. *directivus*.] Having the power of direction; informing; instructing; showing the way.

"Nor visited by one directive ray."—Thomson.

Directly, *adv.* In a straight line or course; rectilinearly; not in a winding course or manner; without circuitousness or deviation.—Without delay; soon; straightway; immediately; as, to go *directly*.—Quickly; promptly; instantly, immediately; as, *directly* they appeared.—Openly; expressly; without circumlocution or ambiguity; without a train of inferences; absolutely.

"Infidels deny directly the very principles of Christianity."—Hooker.

Directness, *n.* State or quality of being direct; straightness; a straight course; nearness of way; as, the *directness* of a journey. *Directness* of speech.

Director, (*di-rek'ter*), *n.* [Lat.; Fr. *directeur*.] One who directs, governs, superintends, or manages; one who prescribes to others by virtue of authority; an instructor; a counsellor; as, a spiritual *director*.

"In all affairs thou sole director."—Swift.

—One of a number of persons chosen by a plurality of votes from among the body of proprietors to conduct the affairs of some joint-stock undertaking, as a bank, railroad, insurance company, and the like.

—That which directs or controls by influence; any instrument, rule, or ordinance that directs.

(*Surg.*) An instrument, generally made of silver, and resembling a grooved probe. Its use is to direct the knife, and protect the parts underneath from its edge or point.

Directorate, *n.* [Fr. *directorat*.] Office or body of directors.

Directorial, *a.* [L. Lat. *directorius*.] Containing direction or command; directive.—Pertaining or relating to directors, or direction.—Having reference to the French Directory.

Directorship, *n.* Directorate; condition, office, or state of a director.

Directory, *a.* [Fr. *directoire*; L. Lat. *directura*.] Containing directions or commands; directorial; instructing.

n. A book containing directions for public worship, or religious services.—A book or register, containing an alphabetical list of the inhabitants of a city, with their places of abode, and other information for the use of citizens; as, the Philadelphia *Directory*.—A board of directors; a council of management of public affairs; as, the *Directory* of France.

(*French Hist.*) The name given by the constitution of 1795 to the executive body of the French republic. It consisted of five persons, called *directors*, who were selected by the council of elders from a list of candidates presented by the Council of Five Hundred. One of these directors retired every year, and was succeeded by another elected on the same principle. To the Directory was intrusted the superintendence of the home and foreign departments, the finances and the army, and the appointment of the ministers of state, and other public functionaries. Its policy was at first moderate and conciliatory; but after a short interval it had recourse to measures which produced wide-spread dissatisfaction, and it was at length overthrown on the ascendancy of Bonaparte, after an existence of four years. It exercised authority from Oct. 27, 1795, till Nov. 11, 1799.

Directrix, *n.* (*Geom.*) A right or curved line which serves for the description or definition of a curve or surface. Assuming the indefinite line AB (Fig. 831) as the direction, and F, a point without it, as a focus, then, if the line FD revolve about F as a centre, while a point, D, serves in it in such a manner that its distance from F shall always be to CD, its perpendicular distance from the line AB, in a constant ratio, then

Fig. 831.

the curve VD, described by the point D, is a conic section, and is an ellipse, a parabola, or an hyperbola, according as FD is less than, equal to, or greater than CD, or FV, than VA. The constant ratio referred to is called the *determining ratio of the conic*.—When a surface is conceived to be generated by the motion of a line, right or curved, which always rests on other fixed lines, the latter are sometimes called *directrices*, but more frequently *directing lines*, or simply *directors*; the former being distinguished as the *generator*.

Directress, **Directrix**, *n.* [Fr. *directrice*.] A female director or manager.

Dirful, *a.* Dire; dreadful; dismal; terrible; fearful; calamitous; as, a *dirful* event.

Dirfully, *adv.* Wofully; calamitously; terribly.

Dirfulness, **Dir'ness**, *n.* Calamitousness; terribleness; wofulness.

Direption, (*di-rep'shon*), *n.* [Lat. *direptio*.] The act of plundering.

Direptiously, (*di-rep'tish'us-le*), *adv.* With plundering.

Dirge, (*durj*), *n.* [Lat. *dirige*.] From the funeral service commencing with *Dirige, Domine nos—direct or guide us, O Lord*. (*Mus.*) An abbreviation of *dirige*, the first word of the antiphona "Dirige, Domine Deus," chanted in the funeral service of the Roman Catholic Church. It is now used to express a solemn and mournful composition performed at funerals.

Dir'ge, *n.* [Lat.] See DIRGE.

Dir'igo, in Maine, a post-office in Androscoggin co.

Dirk, (*dérk*), *n.* [Probably from Armor. *dir*; W. *dur*, steel; Scot. *durk*; perhaps allied to Sansk. *durh*; to strike; to dash against; to hurt. The D. *dolk*, and Ger. *dolch*, a dagger, seem to be of different origin.] A kind of dagger, or poniard; as, a midshipman's *dirk*.

n. a. To use a dirk upon; to poniard; to stab.

Dirk-Hartog Island, situated in Lat. 26° S. Lon. 113° E., lies off the W. coast of Australia. In length it is 45 m., by 10 in breadth. The coast is steep and rocky.

Dirk-knife, *n.* A clasp-knife having a blade resembling a dirk or stiletto.

Dirk, *v. n.* To thrill; to didder; to shiver gently.

Dirk, *n.* [A. S. *gedritom*; Icel. *dryta*, to go to stool; Icel. *drít*, excrement.] Any foul or filthy substance; excrement; mud; mire; earth; dust; whatever, adhering to anything, renders it foul or unclean;—hence, by implication, anything obnoxious, unpalatable, or obscene.

v. a. To make foul or filthy; to soil; to defile; to be-daub; to pollute; to befoul.

"A dog dirks those most whom he loves best."—Swift.

Dirt-beds, *n. pl.* (*Geol.*) Dark-colored, loam-like beds, that occur interstratified with the oolitic limestones and sand-stones of Portland, England, and of Nova Scotia. They are evidently the soils in which

Fig. 832.—ZAMIA SPIRALIS. (South Australia.)

plants allied to the Cycads and Zamias of the period grew. Stumps of trees in an erect position, with their roots extending beneath them, have been found in these strata.

Dirt-dauber, *n.* (*Zoöl.*) See PELOPEUS.

Dirt-eating, *n.* (*Med.*) A peculiar disease to which the negroes, both of Africa and the West Indies, are peculiarly liable, and one to which they seem at times impelled against their will, as if driven into a morbid state by the power of some invisible but supernatural agency. The negro becomes low-spirited and dejected, shuns his work, seeks solitude, and, refusing all communion with his fellows, retires into some seclusion, where he devours a peculiar kind of clay, which soon acts on his system, and he dies in a loathsome state of emaciation and corruption.

Dir'tily, *adv.* In a dirty manner; foully; filthily; nastily; meanly; sordidly; as, to be treated *dir'tily*.

Dir'tiness, *n.* State of being dirty; filthiness; foulness; nastiness; meanness; baseness; sordidness; as, *dir'tiness* of habits, *dir'tiness* in usage of another.

Dir'town, in Georgia, a village of Chattooga co., abt. 180 m. N.W. of Milledgeville.

Dir'ty, *a.* Covered or soiled with dirt; foul; nasty; filthy; unclean; not pure; turbid; cloudy; dark; as, *dir'ty* weather, *dir'ty* linen, *dir'ty* hands, &c.

—Mean; base; low; sordid; dishonorable; despicable; as, a *dir'ty* action, *dir'ty* treatment, a *dir'ty* fellow, &c.

"Mean in their discourses, and dirty in their practices."—South.

v. a. To stain or soil with dirt, or any unclean substance; to foul; to make filthy; to soil; as, to *dir'ty* one's boots.

"They never dir'tied their fingers with pen and ink."—Arbuthnot.

—To tarnish; to sully; to scandalize; to disgrace; as, to *dir'ty* one's reputation.

Dirup'tion, *n.* [Lat. *diruptio*.] A disruption, or bursting asunder.

Dis-, a prefix or inseparable participle from the Latin, implying a privative or negative signification of the word it prefixes; as, to arm, to *disarm*; to join, to *disjoin*. In a general sense, it denotes a separation or parting from.

Disability, *n.* [From *disable*.] Want of ability, strength, or power; want of competent intellect or power or strength of mind; inability; incompetence.

(*Law.*) Want of qualification in a legal sense; social impediment; incapacity to do a legal act.

Disable, *v. a.* To render unable; to deprive of competent natural or mental strength or power; to deprive adequate means, instruments, or resources; to weaken to unfit; as, a *disabled* ship, a *disabled* soldier; to *disable* by poverty.—To incapacitate or disqualify by legal force; to prevent from exercising civic, municipal, legal rights; as, *disabled* by attainder.—To disparage or undervalue; to declare incapable and incompetent as, "he *disabled* my judgment."—Shaks.

Disabuse, *v. a.* [Fr. *désabuser*—*dés* for *dis*, and *abus* to abuse.] To free from abuse; to free from mistal to undeceive; to disengage from error, fallacy, or deception; to set right; as, to *disabuse* a person of a prejudice.

Disaccommodate, *v. a.* To inconvenience; to commode.

Disaccommodation, *n.* State of being inconvenient or unsuited.

Disaccordant, *a.* Not in accordance.

Disaccus'tom, *v. a.* [Fr. *désaccoutumer*.] To destroy the force of habit in; to obviate the effects of custom.

Disacidify, *v. a.* To free from acid; to remove acidulous properties.

Disacknowledge, (*dis-ak-nōl'ej*), *v. a.* To disown; to refuse to recognize or acknowledge.

Disadorn, *v. a.* To take off ornaments; to deprive of decoration.

Disadvantage, *n.* [Fr. *désavantage*.] That which prevents success, or renders it difficult; a state not favorable to successful practice or operation; any unfavorable state or condition; as, he acted under a *disadvantage*.—Detriment; injury; hurt; loss; damage; to sell goods to *disadvantage*, to spread a report to *disadvantage*.

Disadvantageous, *a.* Not advantageous; unfavorable to success, prosperity, or fruition; inconvenient; not adapted to promote interest, reputation, or other good; as, to be placed in a *disadvantageous* position.

Disadvantageously, *adv.* Unfavorably; in a disadvantageous manner; conducive to loss or detriment.

Disadvantageousness, *n.* In a state or position inimical to success; inconvenience; loss; want of advantage.

Disaffect, *v. a.* To disturb or alienate the affections of; to make less friendly to; to make less faithful to a person, party, or cause, or less zealous to support; to render discontented or unfriendly; as, *disaffect* allies.

—To disorder; to derange; to cause functional disturbance; as, a *disaffected* palate.

Disaffect'edly, *adv.* In a disaffected manner.

Disaffect'edness, *n.* State of being disaffected; disaffection.

Disaffection, *n.* Alienation of affection, fidelity, or good-will; positive enmity, or opposition of feeling; dislike; hostility; disloyalty; disgust; as, *disaffection* of troops.

—Functional derangement of the constitution of the body.

Disaffirm, *v. a.* To deny; to contradict; to affirm the contrary.

(*Law.*) To overthrow or annul, as a judicial decision by a contrary judgment of a superior tribunal.

Disaffirmance, *n.* Denial; negation; dispute; refutation.

(*Law.*) Overthrow or annulment by the decision of a superior tribunal.

Disafforest, *v. a.* [*Dis*, and *afforest*—*ad*, and *fore*, (*Eng. Law.*) To strip of the privileges of forest-lands; to reduce a forest to common ground;—correlative to *afforest*.

Disag'gregate, *v. a.* To separate an aggregate into its component parts.

Disaggregation, *n.* Act or operation of separating an aggregate body into its component parts.

Disagree, *v. n.* To be not accordant or coincident; to be not the same, or not exactly similar; to differ; to be at variance with another thing; as, these accounts *disagree*.—To be of a different opinion; to differ; to quarrel; to be at variance or in a state of opposition to quarrel; as, the best of friends *disagree*.

"Both the bands in worship disagree,
Some adore the flow'r, and some the tree."—Dryden

—To be unsuitable, unfitted, or unadapted; to be not agreeable to;—often followed by *with*; as, a heavy dinner *disagrees* with the stomach.

Disagreeable, *a.* Not agreeable; contrary; unlikable; not congruous or sympathetic; as, to be required to do something *disagreeable* to one's feelings.

—Unpleasant; offensive; repugnant; displeasing; as, *disagreeable* to the taste.

Disagreeableness, *n.* State or quality of being disagreeable; unsuitableness; unpleasantness; offensiveness to the mind or to the senses; contrariety.

Disagreeably, *adv.* Unsuitably; offensively; unpleasantly; in an objectionable or disagreeable manner.

Disagreement, *n.* State of disagreeing, or of being at issue; difference; diversity; dissimilitude; unlikeness; discrepancy.—Variance in opinion; dissent; contrariety of ideas or sentiments.—Unsuitableness; inadaptability; want of affinity.—Dispute; discord; disagreement.

out; dissension; cavil; controversy; as, "their *disagreement* is not great."

Disagre'er, *n.* He who, or that which, disagrees.

Disallow, *v. a.* To refuse to allow or permit; not to grant; not to make or suppose lawful; not to authorize; to refuse assent; to disapprove; to prohibit; to censure; to condemn; to reject; as, to *disallow* extra expenses.

—*v. n.* To refuse permission; not to grant.

Disallow'able, *a.* Not allowable; not to be suffered, granted, or acquiesced in.

Disallow'ableness, *n.* State or nature of being disallowable.

Disallow'ance, *n.* Refusal to allow, admit, or permit; disapprobation; prohibition; censure; rejection.

"God accepts of a thing . . . where he does not declare his disallowance of it." — *South*.

Di Sal'to, [It., by the leap.] (*Mus.*) A motion by skips, not by degrees.

Disanim'ate, *v. a.* To discourage, deject, or depress; to dishearten, or deprive of hope, spirit, or heartiness.

"The presence of a king . . . disanimates his enemies." — *Shaks*.

Disanima'tion, *n.* State of being disanimated, disheartened, or depressed.

Disannex', *v. a.* To disunite, disjoin, or dissever.

Disannul', *v. a.* To make void; to annul; to deprive of force or authority.

"Wouldst thou God's laws of fasting *disannul*?" — *Herbert*.

Disannul'ler, *n.* One who annuls, or makes void.

Disannul'ment, *n.* Act of making null or void.

Disappar'el, *v. a.* [O. Fr. *désappareiller*.] To strip of apparel; to undress.

Disappear', *v. a.* To go out of sight or view; to vanish or recede from visual ken; to become invisible.

"She *disappear'd*, and left me dark!" — *Milton*.

—To cease to be or to exist; to withdraw from common life; as, love has *disappeared*.

Disappear'ance, *n.* Cessation of appearance; a removal from sight; a vanishing from view.

Disappend'ency, *n.* A disentangling from a former attachment or connection.

Disappend'ent, *a.* Disconnected from former ties.

Disappoint', *v. a.* To neglect to do according to appointment; to balk; to defeat expectation, wish, hope, desire, or intention; to hinder from the fruition, possession, or enjoyment of that which was intended, desired, hoped for, or expected; as, to *disappoint* popular opinion. — To frustrate; to foil; to baffle; to defeat.

"Shrinks from the wound, and *disappoints* the blow." — *Addison*.

Disappoint'ed, *a.* Defeated of expectation, hope, desire, or design; frustrated; balked; as, a *disappointed* lover.

Disappoint'ment, *n.* State of being disappointed; defeat or failure of hope, expectation, wish, design, or intention; a balking of plan or design; frustration; miscarriage. — That which disappoints, balks, or frustrates.

Disappoint'ment Islands, a group in the S. Pacific, in Lat. 14° 5' S., Lon. 145° 4' W., discovered by Commodore Byron in 1765.

Disappre'ciate, *v. a.* To disesteem; to fail to appreciate; to undervalue.

Disapproba'tion, *n.* A disapproving; the act of the mind which condemns what is supposed to be wrong; censure; condemnation; dislike.

Disap'probatory, *a.* Containing or implying disapprobation; tending to condemn or disapprove.

Disappro'priate, *v. a.* To withdraw from an appropriate use; to deprive of appropriated property.

Disapprov'al, *n.* Disapprobation; dislike; censure.

Disapprove', *v. a.* [Fr. *désapprouver*. See APPROVE.] To refuse to approve of; to dislike; to condemn in opinion and judgment; to censure as wrong or unfit; to manifest disapprobation of; as, his conduct was *disapproved of*. — To refuse to sanction or confirm; to reject, as disliked, what is proposed for authorized approbation; as, "the treaty was *disapproved* by Congress."

Disapprov'ingly, *adv.* In a manner expressing, or implying disapprobation.

Disarm', *v. a.* [Fr. *désarmer*.] To deprive of arms, or other weapons of attack or defence; to take away arms or weapons from; to deprive of force, strength, or means of annoyance; to render harmless; as, to *disarm* a militia. — To divest of anything injurious or threatening; to divest of offensive or antagonistic powers; as, to *disarm* opposition, to *disarm* a prejudice.

Disarm'ament, *n.* Act of disarming; state of being disarmed.

Disarm'er, *n.* He who, or that which, disarms.

Disarrange', *v. a.* To unsettle or disturb the order or due arrangement of parts; to derange; to put out of order.

Disarrange'ment, *n.* Act of disarranging, or of disturbing order or method; confusion; disorder.

Disarray', *v. a.* To undress, or divest of clothing; as, "the witch they *disarrayed*." (*Fairie Queene*). — To throw into confusion or disorder, as troops.

n. [Fr. *désarroi*.] Disorder; confusion; loss or want of array or regular order.

"*Disarray*, and shameful rout ensue." — *Dryden*.

—Undress; state of being divested of apparel.

Disartic'late, *v. a.* To divide; to break asunder, as an articulation of the body.

Disarticula'tion, *n.* The dividing or sundering of articulations.

Disassociate, (*dis-as-sō'she-āt*), *v. a.* [O. Fr. *désassocier*.] To disunite; to disconnect, as things associated.

Disas'ter, *n.* [It. *disastro*; Fr. *désastre*—*dés*, and *astre*; Gr. *aster*, a star.] Any unfortunate event, especially a

sudden misfortune; mishap; calamity; mischance; grief; catastrophe; final end; as, "Some dire *disaster*."

—*v. a.* To injure; to inflict harm upon.

"The swain *disaster'd* stands." — *Thomson*.

Disas'trous, *a.* Ill-timed; unfortunate; calamitous; occasioning loss or injury; gloomy; dismal; threatening disaster, or a fatal result.

Disas'trously, *adv.* Unfortunately; in a dismal or disastrous manner.

Disas'trousness, *n.* Calamity; unfortunateness.

Disattire', *v. a.* Essentially the same as DISAPPAREL, *q. v.*

Disavow', *v. a.* To deny; to disown; to deny to be, as a fact or charge respecting one's self; to disclaim; to disallow; to reject; as, to *disavow* participation in an offence.

—To dissent from; not to homologate.

Disavow'al, *n.* A disowning; denial; rejection; a declining to vindicate.

Disavow'er, *n.* One who disavows.

Disband', *v. a.* To scatter; to disperse; to dismiss from military service; as, to *disband* an army.

—To dismiss from service or ties of obligation.

—*v. n.* To retire from military service; to break up; to separate; to dissolve connection.

"Human society may *disband*." — *Tillotson*.

Disband'ment, *n.* Act of disbanding.

Disbar', *v. a.* To degrade a barrister from his rank or position; to expel from the bar, according to English usage.

Disbark', *v. a.* See DISEMBARK.

Disbark', *v. a.* To take off the bark, as from a tree.

Disbelief', *n.* A disbelieving; refusal to give credit to, or have faith in; denial of belief; distrust.

"Our belief or *disbelief* of a thing does not alter the nature of a thing." — *Tillotson*.

—Unbelief; scepticism.

Disbelieve', *v. a.* Not to believe; to hold not to be true, or not to exist; to refuse to credit; as, to *disbelieve* in the Bible.

Disbeliever, *n.* One who refuses to believe; one who rejects belief in Christ; a sceptic.

Disbench', *v. a.* To remove from a bench or seat; as, to *disbench* a judge.

Disbend', *v. a.* To relax from a state of firmness or dignity; to make incapable of action.

"Bondage doth *disbend*, else break the heart." — *Spenser*.

Disbind', *v. a.* To unbind; to unfasten; to loosen.

Disbow'el, *v. a.* To take away the bowels from; to eviscerate. — See DISEMBOWEL.

Disbranch', *v. a.* To separate or break off, as a branch from a tree; to lop off branches from.

Disbud', *v. a.* To deprive of buds or shoots, as a tree.

Disburden', *v. a.* To remove a burden from; to throw off, as a burden; to clear, as of anything weighty, troublesome, or cumbersome; to unload; to discharge.

"*Disburdened* heaven rejoiced." — *Milton*.

—*v. n.* To ease the mind; to be relieved; as, to be *disburdened* of cares.

Disburgeon, (*dis-bur'jon*), *v. a.* To divest of burgeons or buds.

Disburse', *v. a.* [Fr. *déboursier* — *de*, and *bourse*, a purse.] To pay out, as money; to spend or lay out.

Disbursement, *n.* [Fr. *déboursement*.] Act of disbursing, or of laying out, as money from a chest; amount of money or sum paid out; as, a cash *disbursement*.

Disburs'er, *n.* He who pays out or disburses money.

Disburthen', *v. a.* or *n.* Same as DISBURDEN, *q. v.*

Disc, *n.* [Lat. *discus*.] Same as DISK, *q. v.*

Discant, *n.* See DESCANT.

Discapac'itate, *v. a.* To incapacitate; to disable. (*R.*)

Discard', *v. a.* [From Lat. *dis*, apart, and *charta*, paper; Sp. *descarter*; Fr. *écarter*.] To throw out of the hand such cards as are useless. — To turn out from service or employment, or from society. — To cast off; to thrust away; to reject; to dismiss; to displace; to discharge.

Disease', *v. a.* [Prefix *dis* and *case*.] To strip; to undress.

"Fetch me the hat and rapier in my cell;
I will *disease* me, and myself present." — *Shaks*.

Discern', *v. a.* [Fr. *discerner*; Lat. *discerno*—*dis*, and *cerno*, to separate or distinguish; Gr. *krino*; Sansk. *kri*, to separate, to know.] To separate or set apart by the eye, or by the understanding; to distinguish; to mark or note as different; to make choice between; to discriminate; to discover; to see; to perceive; to descry; to discover by the intellect; to have knowledge of; to judge.

—*v. n.* To see or understand the difference; to make distinction; to judge.

Discern'er, *n.* One who discerns; an observer; one who knows and judges; that which distinguishes, or causes to understand.

Discern'ible, *a.* That may be discerned; that may be seen distinctly; discoverable by the eye or the understanding; perceptible; distinguishable; apparent; visible; evident; manifest.

Discern'ibleness, *n.* Quality of being discernible; visibility.

Discern'ibly, *adv.* In a manner to be discerned, seen, or discovered; visibly.

Discern'ingly, *adv.* With discernment; acutely; with judgment; skillfully.

Discern'ment, *n.* Act of discerning; also, the power or faculty of discerning or distinguishing; judgment; acuteness; discrimination; penetration; sagacity.

Discerp'ibility, **Discerpt'ibility**, *n.* State or quality of being discerpible. (*R.*)

Discerp'ible, **Discerpt'ible**, *a.* That may be destroyed by the disunion of its parts; separable. (*R.*)

Discharge', *v. a.* [Fr. *décharger*. See CHARGE.] To free from a charge, load, or burden; to disburden; to unload; to remove the cargo or contents of; to exonerate; to free from; to relieve; to release; to let go the charge of; to let fly or go, as a missile; to shoot; to fire off; to give vent to; to express; to pay; to clear off by payment; to send away, as a creditor by payment; to absolve or acquit; to relieve; to clear; to put away; to expel; to perform or execute; to dismiss; to discard; to set at liberty; to let out or emit; to disclose; to cancel; to put an end to; to relieve, as of incumbent weight.

—*v. n.* To deliver a charge; to fire.

—*n.* Act of discharging; an unloading, as of a ship. — A throwing; vent; emission; a flowing or issuing out, or a throwing out. — The removal of a charge from an electrical jar, battery, &c.; explosion; report; as, a *discharge* of artillery. — Matter emitted; as, a serious *discharge*. — Dismission from office or service; writing which evidences the dismission; as, the governor solicited his *discharge*. — Release from obligation, debt, or penalty; an acquittance; as, a *discharge* in full. — Absolution from a crime or accusation. — Ransom; liberation; price paid for deliverance. — Performance; execution; as, the *discharge* of our duties. — Liberation; release from imprisonment or other confinement; as, *discharge* of a prisoner. — Exemption; escape. — Payment, as of a debt.

(*Arch.*) The relief, or distribution of a weight, or load to be borne. Thus, discharging arches are used in a wall over a lintel, or an opening, to discharge them of the weight which they would otherwise bear.

Discharg'er, *n.* He who, or that which, discharges.

(*Elect.*) An instrument for discharging electricity; a DISCHARGING-ROD, *q. v.*

Discharg'ing, *n.* The act of unloading, releasing, or unburdening.

Discharg'ing-rod, *n.* (*Physics*.) An instrument much used in electricity for discharging Leyden jars without partaking of the shock. The jointed *D.* is that most generally employed. It consists of two brass wires, terminated by two brass balls. The wires are jointed at the middle, and are attached to a glass handle. With this instrument it is easy to discharge a jar or battery, by bringing one ball in contact with the exterior, and the other with some part of the interior. The glass handle, as an insulator, forms a protection from all the effects which take place in the restoration of electrical equilibrium.

Dischurch', *v. a.* [*dis*, and *church*.] To deprive of the rank of a church. (*R.*)

Dis'ciform, *a.* [Lat. *discus*, disc, and *forma*, shape; Fr. *disciforme*.] (*Bot.*) Disc-shaped; flat and circular, like a disc or quoin.

Disciple, (*dis-i-pl*), *n.* [Fr.; Lat. *discipulus*, from *disco*, I learn.] Literally, one who learns anything from another; and hence, the followers of any teacher, philosopher, or head of a sect. In this sense the word is sometimes used in Scripture, as when we read of the *D.* of Moses, of John, of Christ. Generally, however, it is used with reference to the last of these—the followers of Jesus. Sometimes all who received the doctrines of Christ are called *D.*; but in a more limited sense, it is applied to the 70, or 72, persons, who were his more immediate followers and attendants. Sometimes it is used as synonymous with *apostle*, and is applied to the Twelve.

—*v. a.* To make a disciple, or disciples of; to teach; to train, or bring up; to cause to become a follower. — To discipline; to punish.

Disciplesh'ip, *n.* The state of a disciple, or follower in doctrines and precepts.

Disci'ples of Christ, or CAMPBELLITES. (*Ecl. Hist.*) This religious body, which is a branch of the Baptist denomination, holds to no rule of faith but the Word of God, and rejects all doctrines or terms as binding which are founded on speculations of theology. It grew into a separate denomination under the influence of the example and teachings of Thomas Campbell, who settled in Pennsylvania in 1808, as a minister of the "Seceders," and of his son Alexander. The father was a conscientious advocate of religious reform, and contended for a restoration of the Christian Church to apostolic practice and precept. His son Alexander joined him, and they formed a small association of disciples for the special study of the Scriptures, who were to reject all creeds. This grew into a congregation, of which the Campbells became elders. An investigation of the subject of Baptism led them to the belief that immersion was the only Scriptural method. For some years the churches which were formed were attached to associations of Baptists. In 1823, Alex. Campbell established the "*Christian Baptist*." Through this monthly, and by several public oral debates on baptism, and extensive tours of preaching, his views spread rapidly and widely among the Baptists. But personal opposition at last took the form of ecclesiastical action, and in 1827 the Dover Association of Virginia decreed the excommunication from Baptist fellowship of all who held and advocated the views of Alexander Campbell. This was the beginning of a general action among the Baptists; and the Reformers, as they were called, were compelled to associate in a separate organization, which rapidly increased, especially in Kentucky, Ohio, Indiana, Illinois, Missouri, and Virginia. Churches were also formed in the British Provinces of North America, in England, Wales, Ireland, and Australia. The disciples are Congregational in their organization; regard very highly the obligation to provide for the preaching of the gospel; are active and energetic, and accord in essential

doctrines with "evangelical" Christians. Their colleges are: Bethany College in West Va.; Kentucky University, Ky.; Butler University, Ind.; Drake University, Ia.; Hiram College, O.; Enreka College, Ill.; Christian University, Mo., &c. In all of these the Bible is used as a text book. They publish twelve weeklies and a quarterly magazine, and have publishing houses in St. Louis and Cincinnati. The Disciples have in the United States 8,768 churches, and 871,017 members (1897).

Discipless, *n.* A female disciple. (R.)

Disciplinable, *a.* Fr., from L. Lat. *disciplinabilis*.] Capable of discipline, or of instruction and improvement in learning.—That may be subjected to discipline; subject or liable to discipline.

Disciplinableness, *n.* That is capable of receiving instruction.—That may be made matter of discipline.

Disciplinary, *a.* Relating to discipline. (R.)

Disciplinarian, *n.* [Lat. *disciplinarius*.] One of a strict religious order. (R.)

Disciplinarian, *a.* Pertaining to discipline.

—*n.* One who enforces discipline, or adherence to stated rules; a martinet.

—*pl.* (Eccl.) A term once applied to the Puritans and Presbyterians.

Disciplinary, *a.* [Fr. *disciplinaire*, from L. Lat. *disciplinarius*.] Pertaining to discipline, or government by strict rules; relating to a regular course of education; intended for instruction.

Discipline, (*dis-se-plin*), *n.* [Lat. *disciplina*, from *discipulus*, a disciple.] Instruction; teaching; education; training; cultivation; improvement; culture; instruction; and government; method of government; order; rule; that which is taught; art; science; subjection to laws, rules, orders, precepts, or regulations; punishment; chastisement; correction.

(Eccl.) The punishments employed in convents, and those which enthusiasts undergo or inflict upon themselves by way of mortification.

(Mil. and Naval.) The series of duties to be performed by both orders, in strict conformity to the rules of each service. It also implies subordination, and practice to proficiency of the manual evolutions and exercises of the different services.

Discipline, *v. a.* To subject to discipline, or instruction; to inform the mind; to educate; to teach; to train; to instruct; to advance by instruction; to regulate; to govern; to train up in good order, method, regularity, good conduct, and habits; to direct; to correct; to chastise; to punish.

Disciplined, *p. a.* Instructed; educated; subjected to rules and regulations; corrected; chastised; punished; admonished.

Discipliner, *n.* One who disciplines.

Disclaim, *v. a.* [Dis and claim.] To deny all claim to; to reject, as not belonging to one's self; openly to reject any union or connection with; to disown; to disavow; to renounce.

—*n. n.* To disavow all part, or share.

Disclaim, *n.* (Law.) A person who disclaims, disavows, or renounces; a formal disavowal; renunciation; relinquishment, as of claims, pretensions, &c.

Disclose, *v. a.* [Lat. *dis*, and *claudere*, *clausus*, to shut. See Close.] To separate from things shut up; to uncover; to open; to unveil; to discover; to reveal; to divulge.

—*n. n.* To open; to gape.

Discloser, *n.* One who discloses.

Disclose, *n.* [Lat. *dis*, and L. Lat. *clausura*, a shutting, a castle, a fort.] Act of disclosing; an uncovering, and opening to view; act of revealing, or making known; revelation; utterance of what was secret; a telling; that which is disclosed, or made known.

Disclusion, *n.* [Lat. *disclusio*.] See DISCLOSE.

Disco, a considerable island in Davis' Strait, off the W. coast of Greenland, belonging to Denmark; Lat. 69° 11' N., Lon. 53° 20' W.

Disco, in Michigan, a post-village of Macomb co., abt. 27 m. N. of Detroit.

Discolor, *v. a.* Incoherent.

Discolor, *n.* [Fr. *discolor*; Gr. *discos*, a disc, and *eidos*, form.] Something in the form of a discus, or disc.

Discolor, *n.* [Fr. *discolor*; Gr. *discos*, a disc, and *eidos*, form.] Having the form of a disc.

Discolor, *v. a.* [Prefix *dis*, and *color*, *q. v.*; O. Fr. *déscolorer*, now *décolorer*; Pr. and Sp. *descolorar*; It. and L. Lat. *discolorare*.] To deprive of color; to alter the natural hue or color of; to stain; to tinge; to change or alter any color, natural or artificial; to alter the complexion of; to change the appearance of.

Discoloration, *n.* Act of altering the color; a staining; alteration of color; alteration of complexion or appearance.

Discolored, *p. a.* Altered in color; stained.

Discomfit, *v. a.* [O. Fr. *desconfire*; Fr. *déconfire*, pp. *déconfit*; It. *sconfiggere*; Lat. *dis*, con, and *figo*, to fix.] To rout; to defeat; to scatter in flight; to cause to flee; to vanquish.

"In pursuing rebels half discomfited." — Addison.

—*n.* Rout; dispersion; defeat; overthrow.

"Fly you must; incurable discomfit
Reigns in the hearts of all our present party." — Shaks.

Discomfited, *p. a.* Routed; defeated; overthrown.

Discomfiture, *n.* [O. Fr. *desconfiture*; Fr. *déconfiture*.] Rout; defeat in battle; dispersion; overthrow; frustration; disappointment.

Discomfort, *v. a.* [Fr. *disconforter*; It. *disconfortare*.] To deprive of comfort; to disturb peace or happiness; to make uneasy; to pain; to grieve; to sadden; to deject.

—*n.* Want of comfort; uneasiness; disturbance of peace; pain; grief; inquietude.

Discommend, *v. a.* To declare to be unworthy of commendation; to blame; to censure; to mention with disapprobation.

Discommendable, *a.* Blamable; censurable; deserving disapprobation.

Discommendation, *n.* Act of discommending; blame; censure.

Discommode, *v. a.* [Dis, and Fr. *commode*.] To incommode. (R.)

Discommodious, *a.* Incommodious; inconvenient. (R.)

Discommodiously, *adv.* In a discommodious manner. (R.)

Discommodiousness, *n.* Inconvenience.

Discommody, *n.* Incommody; disadvantage; misfortune. (R.)

Discommon, *v. a.* (Law.) To deprive of the right of common; to appropriate common land; to separate and inclose a common; to deprive of the privileges of a place.

Discompany, *v. a.* To deprive of company; to disassociate. (R.)

Discompose, *v. a.* [Fr. *décomposer*.] To throw into confusion, as affairs; to disturb peace and quietness, as of the mind or temper; to disorder; to derange; to disturb; to disconcert; to agitate; to ruffle; to vex.

Discomposed, *p. a.* Unsettled; disordered; ruffled; agitated; disturbed.

Discomposedness, *n.* Quality of being discomposed; disquiet; agitation.

Discomposure, *n.* State of being discomposed; disorder; agitation; disturbance; perturbation.

Discompt, *v. a.* Same as DISCOUNT, *q. v.*

Disconcert, *v. a.* [See CONCERT.] To break or interrupt any order, plan, or harmonious scheme.—To unsettle the mind.—To derange; to disturb; to confuse.—To ruffle; to defeat; to frustrate.

Disconcertion, *n.* Act of disconcerting; discomposure.

Disconformable, *a.* That is not conformable; dissenting. (R.)

Disconformity, *n.* Want of conformity. (R.)

Discongruity, *n.* Want of agreement; unlikeness; disparity.

Disconnect, *v. a.* To separate, as things connected together; to dissolve, as a preëxisting connection.

Disconnected, *a.* Separated; disunited.

Disconnection, *n.* Act of disconnecting or separating, or state of being disunited; separation; want of union.

Disconsolance, *n.* Disconsolateness.

Disconsolate, *a.* [O. Fr. *désconsolé*.] Destitute of comfort or consolation; sorrowful; hopeless, or not expecting comfort; sad; dejected; melancholy; saddening; gloomy; cheerless.

Disconsolately, *adv.* In a disconsolate manner; without comfort.

Disconsolateness, *n.* State of being disconsolate.

Discontent, *n.* [See CONTENT.] Uneasiness or inquietude of mind; dissatisfaction.

—*a.* Discontented; uneasy; dissatisfied.

—*v. a.* To make uneasy in a present state; to dissatisfy.

Discontented, *p. a.* Uneasy in mind; dissatisfied; unquiet.

Discontentedly, *adv.* In a discontented manner or mood.

Discontentedness, *n.* State of being discontented; uneasiness of mind; inquietude; dissatisfaction.

Discontenting, *a.* Giving uneasiness or dissatisfaction.

Discontentment, *n.* State of being discontented or uneasy in mind; uneasiness; inquietude; discontent.

Discontinuable, *a.* That may be discontinued. (R.)

Discontinuation, *n.* Interruption of continuance; want of continued connection or cohesion of parts; want of union; cessation; intermission; separation; disunion.

Discontinuation, *n.* Breach or interruption of continuity; disruption or separation of parts.

Discontinue, *v. a.* [Fr. *discontinuer*.] Not to continue; to leave off; to cause to cease; to stop; to put an end to; to break off; to interrupt; to cease to take or receive.

—*v. n.* To lose continuity; to cease; to leave the possession, or lose an established or long-enjoyed right.

Discontinence, *n.* State of being discontinued.

Discontinuee, *n.* (Law.) One whose estate is discontinued.

Discontinuer, *n.* One who discontinues.

Discontinuity, *n.* Want of continuity; disunity of parts; want of cohesion.

Discontinuity, *n.* (Law.) One who discontinues;—opposed to *discontinuee*.

Discontinuous, *a.* Not continuous; broken off; interrupted.

Discophore, *n. pl.* (Zool.) See MEDUSÆ.

Discopleura, *n.* [Gr. *diskos*, and *pleura*, a rib.] (Bot.) A genus of plants, order *Apiaceæ*. The Bishop-weed, *D. capitata*, found in swamps from Massachusetts to Georgia, has a stem 1 to 2 feet high, much branched; leaves very smooth; umbels axillary; and white flowers blossoming from July to November.

Discord, *n.* [Fr. *discorde*; Lat. *discordia*—*dis*, and *cor*, *cordis*, the heart.] Disagreement; want of order or harmony; variance; difference; opposition; dissension; contention; strife; disagreement of sounds; dissonance;—the opposite of *concord*.

(Mus.) A dissonant or inharmonious combination of sounds, so called in contradistinction to *concord*, the effects of which it is intended to sweeten and relieve. Some require to be introduced by certain preparatives,

and to be succeeded or resolved by concords to which they have some relation. *D.* are sometimes intentionally introduced into music, not for themselves alone, but to set off the concords by contrast and opposition. Their necessity in the composition of part-music cannot be denied, as they not only improve the concords by opposition, but by causing a momentary distress to the ear, which remains unsatisfied and even uneasy until it hears something better, they give a stimulus to the attention, which would otherwise languish.

Discordance, **Discordancy**, *n.* [Fr. *discordance*, from Lat. *discordans*.] Want of concord; disagreement; opposition; inconsistency; discord.

Discordant, *a.* [Fr.] Wanting concord or agreement; in a state of opposition; being at variance; not coincident; disagreeing; incongruous; contradictory; repugnant; contrary; not in unison; dissonant; inharmonious; harsh; jarring.

(Mus.) Applied to all dissonant or inharmonious sounds, whether successive or simultaneous.

Discordantly, *adv.* In a discordant manner.

Discordia, (Myth.) The goddess of mischief, daughter of Nox, and sister to the avenging Nemesis, was expelled from heaven for breeding discord among the gods. Irritated at not being invited to attend the nuptials of Peleus and Thetis, she threw into the midst of the goddesses the famous golden apple, bearing the inscription *Deur pulchriori*, "Let it be given to the most beautiful," which occasioned the famous contest of which Paris was the umpire. This contest was the cause of the fall of Troy, and of innumerable calamities.

Discount, *n.* [Sp. *descontar*; Fr. *décompte*.] (Com.) An allowance made on a bill, or any other debt not yet become due, in consideration of present payment. It is usual in commercial dealings to allow for *D.* a sum equal to the interest on the debt from the time of payment to the time when it actually becomes due; which sum is deducted from the whole amount. Thus, a person holding a bill for \$100.00 payable in one year at per cent. would receive \$93.00, which would be considered its present value. The true *D.* of any sum for any given time, is such a sum as will in that time amount to the interest of the sum to be discounted. Elaborate tables have been calculated, showing the *D.* on any sum for any given number of days, so as to facilitate the computation, and are used by all banks and bankers. *D.* tables are also interest tables; care must be taken, however, not to confound interest with discount. *D.* is the abatement in advance; interest is payment of usage of money, paid at the end of the period or at maturity.—The term discount is also applied:—to the sum deducted or refunded;—to a deduction on the price of purchased merchandise, in consideration of immediate payment;—and to the depreciation in value of any fixed investment.

Discount, *v. a.* [Fr. *décompter*; Sp. *descontar*.] To pay back, or by a counter-reckoning; to deduct a certain sum or rate per cent., from the principal sum; to lend on advance the amount of, deducting the interest or other rate per cent. from the principal, at the time of the loan or advance.

—*v. n.* To lend, or make a practice of lending money, deducting the interest at the time of the loan.

Discountable, *a.* That may be discounted

Discount-day, *n.* The day of the week on which banks discount bills and notes.

Discontentance, *v. a.* [Fr. *décontentancer*.] To put out of contentance; to abash; to dishearten; to discourage; to check; to restrain by frowns, censure, argument, opposition, or cold treatment.

—*n.* Cold treatment; unfavorable aspect; unfriendly regard; disapprobation; whatever tends to check or discourage.

Discontentancer, *n.* One who discontenances.

Discounter, *n.* One who advances money, or discounts, as, a bill-discounter.

Discountage, *v. a.* [Fr. *décourager*.] To dishearten; to deprive of confidence; to deter from anything; attempt to redress or prevent; to dispirit; to depress; to dissuade.

Discourageable, *a.* That may be discouraged

Discourage, *v. a.* [Fr. *décourager*.] To dishearten; to deprive of confidence; to deter from anything; attempt to redress or prevent; to dispirit; to depress; to dissuade.

Discouragement, *n.* [Fr. *découragement*.] Act of disheartening, or depriving of courage; the act of deterring or dissuading from an undertaking.—The act of depressing confidence; that which destroys or abates courage, confidence, or hope.—That which deters, tends to deter, from an undertaking, or from the prosecution of anything.

Discourager, *n.* He who, or that which, discourages.

Discouragingly, *adv.* In a discouraging manner.

Discourse, (*dis-kōrs*), *n.* [Fr. *discours*; Lat. *discursus* from *discurro*—*dis*, and *curro*, to run.] (Logic.) An operation of the mind, whereby it passes or proceeds from one thing to another,—from a thing known to one unknown;—synonymous with *reasoning*.

(Rhet.) A series of sentences and arguments arranged in a regular manner, with a view to carry conviction to the mind of those to whom it is addressed;—an oration.—Mutual intercourse by spoken language; conversational talk; chat.

—*v. n.* To talk; to converse; to communicate thoughts or ideas in a formal manner; to treat upon in a solemn set manner.—To reason; to pass from premises to conclusions.

—*v. a.* To talk over; to utter or give forth.

"Let us there at large discourse all our fortunes." — Shaks.

Discourser, *n.* A speaker; one who harangues, holds forth.—A writer on any subject; a dissertator.

"Philologists and critical discoursers." — Browne.

discour'sive, *a.* Passing by intermediate steps from premises to consequences.—Interlocutory; containing dialogue.

"The epic is everywhere interlaced with *discursive* scenes."—Dryden.

—Having a tendency or disposition to converse; communicative; as, a *discursive* person.

discour'teous, *a.* Uncourteous; void of courtesy; uncivil; rude; uncomplaisant; wanting in good manners.

discour'teously, *adv.* In a rude or uncivil manner; with incivility.

discour'teousness, *n.* Incivility; discourtesy; rudeness or churlishness of behavior or language.

dis'cous, *a.* [From Lat. *discus*, a disc.] Resembling a discus, or disc; broad; flat; wide.

discov'enant, *v. a.* To break off a covenant with.

discover, (*-kur'v.*) *v. a.* [Fr. *découvrir*—*de* and *couvrir*.] See COVER. To remove, as a covering; to find out, as something hidden or not known before; to ascertain; to make known; to disclose; to show; to manifest.—To reveal; to communicate; to make known; to impart; to tell.

"Discover not a secret to another."—Prov. xxv.

—To have the first sight of; to find out; to detect; as, to discover an island.

v. n. To appear; to present or show one's self.

discoverability, *n.* State or quality of being discoverable.

discov'erable, *a.* That may be discovered, or seen; apparent; as, "not *discoverable* by reason."

discover'er, *n.* One who discovers or finds out; a spy.—An explorer; a scout.

discov'ert, *n.* (*Law*.) One not within the bounds of matrimony;—applied to a woman unmarried or widowed.

discov'erture, *n.* (*Law*.) Freedom from matrimonial ties.

discovery, *n.* Act of discovering; action of disclosing to view, or bringing to light; disclosure; manifestation. A making known; action of finding something hidden; revelation; as, "such a *discovery* ought to be made as late as possible."

Act of finding out, or coming to the knowledge of; act of spying; first sight of; as, the *discovery* of a new continent.—That which is first brought to light, seen, or known; the unravelling of a plot in a tragedy or comedy. **discovery Port**, in *Oregon*, a harbor near the head of the Straits of Juan de Fuca, extending inland about 3 m. to the parallel of 48° N.

isera'dile, *v. n.* To emerge, as from a cradle.

isera'site, *n.* (*Min.*) See DISCRASITE.

iscred'it, *n.* [Fr., from *décriditer*—*dé*, and *créditer*, to credit.] Want of credit or good reputation; some degree of disgrace or reproach; want of belief, trust, or confidence; disesteem; disrepute; disbelief; dishonor; distrust.

"The small *discredit* of a bribe

Scarcely hurts the lawyer, but undoes the scribe."—Pope.

Act of discrediting; state of being unworthy of credit or credence; as, the story was received with *discredit*.

v. a. To give no credit to; not to credit or believe; to disbelieve; to distrust; as, the news is generally *discredited*.—To deprive of credit or good reputation; to make less reputable or honorable; to bring into disesteem, or into some degree of disgrace, or into disrepute.—To deprive of credibility or trust; to destroy confidence in.

scred'itable, *a.* Injurious to credit or reputation; disreputable; disgraceful.

scred'itably, *adv.* In a discreditable manner.

scred'itor, *n.* One who discredits.

scrcet', *a.* [Fr. *discret*; Lat. *discretus*, from *discernere*, to separate.] Perceiving distinctly; discerning; prudent; wise in avoiding errors or evil, and selecting the best means to accomplish a purpose; circumspect; cautious; wary; not rash or headstrong.

"Wiseest, virtuoussest, *discreetest*, best."—Milton.

scrcet'ly, *adv.* Circumspectly; cautiously; prudently; in a discreet manner; with discretion.

"Poets lose half the praise they should have got, Could it be known what they *discreetly* blot."—Waller.

scrcet'ness, *n.* Quality of being discreet; discretion.

scrcpance, **Dis'crepancy**, *n.* [Lat. *discrepantia*, from *discrepo*, *discrepano*, to sound differently—*dis*, and *crepo*, to creak, to rattle. See CREPITATE.] Discrepancy; difference; disagreement; contrariety; state of being discrepant or incongruous.

"versity of education, and *discrepancy* of principles." Lord Digby

scrcpant, *a.* [Lat. *discrepans*.] Incongruous; different; disagreeing; contrary.

scrcete', *a.* [Lat. *discretus*. See DISCREET.] Separate; distinct; disjunct; as, a *discrete* quantity.

disjunctive; discrete; as, "I resign my life, but not my honor, is a *discrete* proposition."—Johnson.

D. movement. A sudden pitch of the voice from one extremity of the musical scale to another;—opposed to *credele* movement.

D. proportion. (*Arith.*) Proportion where the ratio between two pairs of numbers, or quantities, is the same; it without there being the same proportion between the four; thus, 6 : 8 :: 3 : 4.

D. quantity. (*Arith.*) A quantity of which the component parts have a separate and distinct existence; thus, numbers are *discrete* quantities, being composed of separate units.

cretion, (*dis-kresh'on*), *n.* [Fr.; L. Lat. *discretio*.] Quality of being discreet; prudence, or knowledge and judgment; wise management; true discernment united with caution; knowledge to govern or direct one's self properly; nice discernment and judgment, directed by

circumspection; capacity for wise management; exercise of judgment and prudence; as, "the better part of valour is *discretion*."—Shaks.

—Liberty or power of acting according to one's own judgment; exercise of free and uncontrolled powers of action.

At discretion. Without stipulation; as, to surrender *at discretion*.

Discre'tional, **Discre'tionary**, *a.* [Fr. *discretionnaire*.] Left to discretion; unrestrained except by discretion or judgment; that is to be directed or managed by discretion only; as, *discretionary* power.

Discre'tionally, **Discre'tionarily**, *adv.* At discretion; by discretion; according to discretion.

Discre'tive, *a.* Disjunctive; noting separation or opposition; separate; distinct.

D. proposition. (*Logic*.) A proposition expressing distinction, contrariety, or variety, noted by the particles *but*, *though*, *yet*, &c.; as, "Joh was patient, *though* his grief was great."—Watts.—(*Gram.*) A *D. distinction* is one which implies opposition; as, not a man, but a beast.

Discre'tively, *adv.* In a discrete manner.

Discrim'inant, *n.* (*Math.*) The *D.* of a given quantity is the resultant of the system of equation, formed by equating to zero the several first derived functions of that quantity.

Discrim'inate, *v. a.* [Lat. *discrimino*, *discriminatus*, from *discrimen*, that which separates or divides two things; from *discerno*. See DISCERN.] To distinguish; to observe the difference between; to select from others; to make a distinction or difference between.

—To mark with notes of difference; to distinguish by some note or mark.

Discrim'inuate, *a.* [Lat. *discriminatus*.] Distinguished; having the difference marked.

—*v. n.* To make a difference, or distinction; to distinguish; to observe or note a difference.

Discrim'inately, *adv.* Distinctly; with minute distinction; particularly.

Discrim'inateness, *n.* Distinctness; marked difference.

Discrimina'tion, *n.* [L. Lat. *discriminatio*.] Act of discriminating or distinguishing; act of making or observing a difference.

"Prudent *discrimination* made between the offenders of different degrees."—Addison.

—State of being distinguished or discriminated.—Discernment; penetration; clearness; acuteness; judgment.—Distinction; mark of distinction; that which discriminates.

Discrim'inative, *a.* That discriminates or distinguishes; characteristic.—That which observes distinction.

Discrim'inatively, *adv.* With discrimination or distinction.

Discrim'inator, *n.* One who discriminates or distinguishes.

Discrim'inatory, *a.* Discriminative.

Discrown', *v. a.* To deprive of a crown.

Discul'patory, *a.* Having the power of exculpation.

Disenun'bency, *n.* Act of leaning over the table at meals.

Disenun'ber, *v. a.* To free from encumbrance; to disenumber.

Discur'sion, (*dis-kur'shun*), *n.* [Fr.; from Lat. *discurro*, *discursum*—*dis*, and *curro*, to run. See CURRENT.] A running or rambling about; a passing from one thing to another; gradation of reasoning or argument.

Discur'sive, *a.* [Fr. *discursif*; Sp. *discursivo*.] Moving or roving about; desultory; argumentative; reasoning; proceeding regularly from premises to consequences.

Discur'sively, *adv.* In a discursive manner.

Discur'siveness, *n.* State or quality of being discursive.

Discur'sory, *a.* Discursive; argumentative.

Dis'cus, *n.* [Lat., from Gr. *diskos*. See DISK.] A round, flat piece of iron, copper, or stone, to be thrown in play; a quoit; a disc; the face of the sun or moon.

(*Antiq.*) The quoit used by the ancients was generally a heavy, circular piece of iron, sometimes perforated in the middle. The *D.* was not thrown at a mark, but the players endeavored who could throw it the farthest. The practice of throwing the *D.* is mentioned by Homer as being one of the sports at the funeral of Patroclus. In the Cabinet of Antiquities at Paris, a *D.* is preserved which contains holes for the insertion of the thumb and fingers. In the well-known statue of Discobolus throwing the *D.*, (Fig. 833.) one of the methods of using it may be seen.

Dis'cuss, *v. a.* [Lat. *discutio*, *discussum*—*dis*, and *quatio*, to shake, to beat, to strike; Fr. *discuter*.]

Fig. 833.

DISCOBOLUS THROWING THE DISCUS.
(From an ancient statue by Myron.)

To separate into parts; to disperse; to scatter; to dissolve; to repel; to debate; to agitate by argument; to clear of objections and difficulties; to sift; to examine by disputation; to ventilate; to reason out.

Discuss'er, *n.* One who discusses.

Discuss'ing, *n.* Examination.

Dis'cuss'ion, *n.* [Fr., from Lat. *discussio*.] Act of discussing or sifting; debate; disquisition; the agitation of a point or subject with a view to elicit truth; the treating of a subject by argument.

(*Med.*) Dispersion or resolution of tumors or coagulated matter.

(*Civil Law*.) In Louisiana, a proceeding on the part of a surety, by which the property of the principal debtor is made liable before resort can be had to the sureties. This is called the *benefice of discussion*.

Dis'cuss'ional, *a.* That relates to discussion; discussive. (*R.*)

Discuss'sive, *a.* [Fr. *discussif*.] Having the power to discuss, resolve, or disperse tumors or coagulated matter.

Dis'cuss'ient, *a.* [Lat. *discutiens*.] (*Med.*) Discussive.

—*n.* (*Med.*) A class of medicines used by surgeons to dissolve or dissipate impacted humors, swellings, tumors, &c. Like deobstruents, however, such remedies are more fanciful than real: for though mercury, lead, and ammonia are considered among the best of the class, there is one agent of more value than twenty such combined, as a *bond fide D.*, and that is the human hand. Friction with a soft hand—with or without lard, or oil—is the only reliable *D.* in the whole catalogue.

Disdain', *v. a.* [O. Fr. *desdaigner*; Fr. *dédaigner*; It. *disdegnare*; Lat. *de*, and *dignor*, from *dignus*, worthy. See DEIGN.] To think or deem unworthy; to deem worthless; to consider to be unworthy of notice, care, regard, esteem, or derogatory to one's character; to contempt.

—*v. n.* To consider as derogatory; to scorn.

—*n.* [Fr. *dédain*; Sp. *desden*, *desdeno*.] Contempt; scorn; a passion excited either by contempt for, or detestation of, what is mean and dishonorable, or by some supposed superiority; arrogance; haughtiness; pride.

Disdain'ful, *a.* Full of disdain; expressing disdain; contemptuous; scornful; haughty; indignant.

Disdain'fully, *adv.* Contemptuously; with scorn; in a haughty manner.

Disdain'fulness, *n.* Quality of being disdainful; contempt; contemptuousness; haughty scorn.

Dis'de'ify, *v. a.* To deprive of the quality of being a god.

Disdiapa'son, or BISDIAPA'SON, *n.* [See DIAPASON.] A double diapason; a scale of two octaves, or a fifteenth.

Dis'ease, *n.* [O. Fr. *disease*.] (*Med.*) Any morbid state of the body generally, or of any particular organ or part of the body, is called a *D.* By medical writers the term *D.* is defined as implying "a deviation from the natural and healthy actions of the whole system, or of any individual part;" and they are in the habit of designating certain forms of disease by the following terms, namely: *acute*, *chronic*, *contagious* or *infectious*, *endemic*, *epidemic*, *exanthematous*, *hereditary*, *idiopathic* or *primary*, *intermittent*, *functional*, *malignant*, *puerperal*, *specific*, *sporadic*, &c. The classification and arrangement of *D.* according to their external characters is called *nosiology*; and that branch of science which more particularly regards the nature and progress of *D.*, with a view to its cure, is called *pathology*.—See NOSOLOGY, PATHOLOGY.

—*v. a.* To afflict with disease; to infect; to disorder; to derange.

Diseased', *p. a.* Disordered; distempered; sick.

Diseas'edness, *n.* State of being diseased; a morbid state; sickness.

Disedged', *a.* Deprived of the edge; dulled; cloyed.

Dised'ify, *v. a.* To fail of edifying.

Disembark', *v. a.* [Fr. *désembarquer*.] To remove from a bark, barge, or vessel, to the land; to land; to put on shore.

—*v. n.* To go out of a bark, or step to the land; to land; to go ashore.

Disembarka'tion, *n.* Act of disembarking.

Disembark'ment, *n.* [Fr. *désembarquement*.] Act of disembarking; disembarkation.

Disembar'rass, *v. a.* [Fr. *désembarrasser*.] To free from embarrassment or perplexity; to clear; to extricate.

Disembar'rassment, *n.* Act of disembarrassing, or extricating from perplexity.

Disembay', *v. a.* To clear from a bay.

Disembell'ish, *v. a.* To deprive of embellishment.

Disembit'ter, *v. a.* To free from bitterness; to clear from acrimony; to render sweet or pleasant.

Disembod'ied, *a.* Divested of the body; separated; discharged from keeping in a body.

Disembod'y, *v. a.* To divest of a body; to free from flesh; to discharge from military array.

Disembogue', *v. a.* [Sp. *disembocar*, to flow into the sea; It. *shoccare*, to discharge or empty itself into a river, or the sea; from *bocca*; Lat. *bucca*, the cheek, a cavity; Fr. *bouche*, the mouth.] To pour out or discharge at the mouth, as a stream; to vent; to discharge into the ocean, as a river, or a lake.

—*v. n.* To flow out at the mouth, as a river; to discharge waters into the ocean, or into a lake; to pass out of a gulf or bay.

Disembogue'ment, *n.* Discharge of waters into the ocean, or into a lake.

Disembos'om, *v. a.* To separate from the bosom of.

Disembow'el, *v. a.* To take out the bowels of; to take or draw from the bowels.

Disembow'elled, *p. a.* Taken or drawn from the bowels.

Disembroil', *v. a.* To free from broil; to disentangle; to free from perplexity; to extricate from confusion.

Disemploy', *v. a.* To deprive of employment.

Disenab'le, *v. a.* To disable; to disqualify; to deprive of ability.

Disenam'ored, *a.* Freed from the thralldom of love.

Disenchant', *v. a.* To free from enchantment; to deliver from the power of charms or spells.

Disenchant'er, *n.* One who disenchants; one who frees from enchantment.

Disenchant'ment, *n.* Act of disenchanting.

Disencharm', *v. a.* To free from the power or influence of charms or incantations; to disenchant.

Disenclose', *v. a.* To throw open, as something that has been enclosed.

Disencum'ber, *v. a.* To free from encumbrance; to deliver from clogs and impediments; to disburden; to free from any obstruction.

Disencum'bered, *p. a.* Freed from encumbrance.

Disencum'brance, *n.* Freedom or deliverance from encumbrance, or anything burdensome or troublesome.

Disendow'ment, *n.* Act of depriving of endowment.

Disenfranchise, *v. a.* Same as DISFRANCHISE, *q. v.*

Disenfranchisement, *n.* Same as DISFRANCHISEMENT, *q. v.*

Disengage', *v. a.* To free from engagement; to separate, as a substance from anything with which it is in union; to set free; to set at liberty; to release; to liberate; to extricate; to clear; to disentangle; to detach; to set free from any obligation, attachment, or pursuit; to withdraw; to wean.

—*v. n.* To set one's self free; to withdraw one's affections; —followed by *from*.

Disengaged', *p. a.* Separated; detached; set free; released; disjoined; disentangled; vacant; being at leisure; not particularly occupied; not having the attention confined to a particular object.

Disengage'dness, *n.* Quality or state of being disengaged; freedom from connection; disjunction; vacuity of attention.

Disengage'ment, *n.* State of being disengaged; a setting free; separation; extrication; act of separating or detaching; liberation or release from obligation; freedom from attention; vacancy; leisure.

Disenoble, *v. a.* To deprive of that which ennobles; to deprive of title.

Disenroll', *v. a.* To erase from a roll or list.

Disenslave', *v. a.* To free from slavery or bondage.

Disentan'gle, *v. a.* To free from entanglement; to separate or disconnect things which are interwoven or united without order; to free from perplexity; to disengage from complicated concerns; to set free from impediments or difficulties; to unravel; to unfold, or untwist; to extricate; to disembarass; to clear; to disengage.

Disentan'glement, *n.* Act of disentangling.

Disenter', *v. a.* See DISINTER.

Disenthrall', *v. a.* See DISINTHRALL.

Disenthron'e, *v. a.* To remove from a throne; to dethrone; to depose from sovereign authority.

Disen'tis, a village of Switzerland, canton of the Grisons, in the valley of the Rhine, 34 m. from Chur, 3,800 feet above the level of the sea; *pop.* 1,500.

Disenti'tle, *v. a.* To deprive of title.

Disentomb', *v. a.* To take out of a tomb; to disinter.

Disentrance', *v. a.* To free or restore from a trance; to awaken from a trance, or from a deep sleep; to rouse from a reverie.

Disentwine', *v. a.* To untwist; to free from the state of being entwined.

Disespouse', *v. a.* To separate after faith pledged.

Disestab'lish, *v. a.* To remove from establishment; to overthrow; to unsettle. (*R.*)

Disesteem', *n.* Want of esteem; slight dislike; disregard.

—*v. a.* Not to esteem; to dislike in a moderate degree; to consider with disregard, disapprobation, dislike, or slight contempt; to slight.

Disesteem'er, *n.* One who disesteems.

Disestimation, *n.* Disesteem; bad repute.

Disfa'vor, *n.* Want of favor; dislike; slight displeasure; discountenance; unfavorable regard; disesteem; a state in which one is not esteemed or favored, or not patronized, promoted, or befriended; an ill or disobliging act.

—*v. a.* To withhold favor from; to discountenance; to withdraw or withhold from one kindness, friendship, or support; to check or oppose by disapprobation.

Disfa'vorer, *n.* One who disfavors.

Disfeat'ure, *v. a.* To deprive of features; to disfigure.

Disfel'lowship, *v. a.* To exclude from fellowship.

Disfigura'tion, *n.* Act of disfiguring or marring external form; state of being disfigured; some degree of deformity.

Disfig'ure, *v. a.* To mar or spoil the figure or form of; to change to a worse form; to deform; to deface; to impair shape or form, so as to render it less perfect and beautiful; to injure beauty, symmetry, or excellence.

Disfig'ured, *p. a.* Changed to a worse form; impaired in form or appearance.

Disfig'urement, *n.* A marring of the figure or form; change of the external form for the worse; defacement of beauty.

Disfig'urer, *n.* One who disfigures.

Disfor'est, *v. a.* Same as DISAFFOREST.

Disform'ity, *n.* Diversity of form.

Disfran'chise, *v. a.* To deprive of a franchise; to deprive of the rights and privileges of a free citizen; to deprive of chartered rights and immunities.

Disfran'chised, *p. a.* Deprived of the rights and privileges of a free citizen, or of some particular franchise.

Disfran'chisement, *n.* Act of disfranchising or de-

priving of the privileges of a free citizen, or some particular immunity.

Disfur'nish, *v. a.* To deprive; to unfurnish; to strip. "He durst not *disfurnish* that country either of so great a commander, or of the wonted garrisons." — *Knolles*.

Disgar'land, *v. a.* To deprive of the ornaments of a garland.

Disgar'nish, *v. a.* To take guns from a fortress; to disarm; to disfigure.

Disgar'ison, *v. a.* To deprive of a garrison.

Disgorge', *v. a.* [O. Fr. *desgorger*, to vomit, to spue out; Fr. *dégorgier*, to clear, to open — *de*, from, and *gorge*, the throat. See *GORGE*.] To eject or discharge from the gorge or throat, or from the stomach or mouth; to vomit; to throw out or discharge violently, or in great quantities, from a confined place; to yield up or give back what had been seized or obtained wrongfully; to relinquish; to surrender.

Disgorge'ment, *n.* Act of disgorging; a vomiting.

Disgrace', *n.* State of being deprived of grace or favor. State of ignominy; cause of shame; disfavor; opprobrium; reproach; discredit; dishonor; shame; infamy.

—*v. a.* To put out of grace or favor; to bring a reproach on; as, to *disgrace* a rival. To bring to shame; to sink in estimation; to degrade; to abase; to debase; to dishonor; to defame.

Disgraced', *p. a.* Put out of favor; brought under reproach; dishonored.

Disgrace'ful, *a.* Shameful; reproachful; dishonorable; procuring shame; sinking reputation.

Disgrace'fully, *adv.* In a disgraceful manner.

Disgrace'fulness, *n.* Quality of being disgraceful; ignominy; shamefulness.

Disgrace'er, *n.* One who disgraces.

Disgrace'ous, *a.* Unpleasant; ungracious.

Disguise, (*dis-giz'*), *v. a.* [O. Fr. *désguiser*, to counterfeit, or put a false coat or gloss on; Fr. *déguiser*. See *GUISE*.] To divest of the usual guise, manner, dress, or appearance; to conceal by an unusual habit or mask; to hide by a counterfeit appearance; to cloak by a false language, a false show, or an artificial manner; to dissemble; to disfigure; to alter the form of, and cause to exhibit an unusual appearance.

—*n.* A counterfeit habit; a dress intended to conceal the person who wears it; a false appearance; a counterfeit show; an artificial or assumed appearance, intended to deceive the beholder.

Disguised', *p. a.* Concealed by a counterfeit habit or appearance.

Disguis'edly, *adv.* So as to be concealed.

Disguis'edness, *n.* State of being disguised. (*R.*)

Disguise'ment, *n.* Disguise; dress of concealment; false appearance.

Disguis'er, *n.* One who disguises.

Disgust', *n.* [O. Fr. *desgoust*; Fr. *dégout*, from Lat. *dis*, and *gustus*, taste.] Distaste; disrelish; aversion of the senses; nausea; loathing; an unpleasant sensation in the mind, excited by something offensive.

—*v. a.* [O. Fr. *desgouter*; Fr. *dégouter*.] To cause distaste, disrelish, dislike, or loathing in; to excite aversion in the stomach of; to offend the taste of; to displease; to offend the mind or moral taste of.

Disgust'ful, *a.* Offensive to the taste; nauseous; exciting aversion in the natural or moral taste.

"I have finished the most *disgustful* task that ever I undertook." — *Swift*.

Disgust'fulness, *n.* State of being disgustful.

Disgust'ing, *a.* Provoking dislike; odious; hateful.

Disgust'ingly, *adv.* In a manner to give disgust.

Dish, *n.* [A. S. *disc*; Du. *disch*; Ger. *tisch*; O. Ger. *tisc*, a table; Icel. *diskr*; Lat. *discus*; Gr. *diskos*, a quoit, a dish. See *DESK*.] A broad, round, open vessel, used for serving up meat and various kinds of food at table; something in shape of a dish. — The meat or provision served in a dish; as, a *dish* of fish.

Dishabille, (*diz-ah-beel'*) *n.* [Fr. *deshabillé*, *des* for *dis*, and *habiller*, to dress.] A loose, negligent dress for the morning. — See *DESHABILLE*.

Dish-cloth, **Dish-clout**, *n.* A cloth used for washing and wiping dishes.

Disheart'en, *v. a.* To deprive of heart or courage; to impress with fear; to dispirit; to discourage; to depress; to deject; to deter.

Disheart'ening, *p. a.* Discouraging; depressing the spirits.

Disheart'eningly, *adv.* In a manner to cause dejection.

Dished, (*disht*), *p. a.* Made concave or hollow, as a dish. — Ruined; frustrated.

Dishev'el, *v. a.* [Fr. *décheveler*, *de*, *dis*, and *chaveu*, hair.] To spread out, as the hair; to suffer to hang negligently, and to flow without confinement, as the hair of the head. (Not often used but in the passive participle.)

"A gentle lady all alone,
With garments rent and hair *dishevelled*." — *Spenser*.

—*v. n.* To be hanging loosely and negligently without confinement, as the hair. (*R.*)

"Their hair, curling, *dishevels* about their shoulders." — *Herbert*.

Dish'ful, *a.* As much as a dish will hold.

Dish'ing, *a.* Concave; having the hollow form of a dish.

Dishon'est, *a.* [Fr. *deshonnête*; It. *disonesto*; Sp. *deshonesto*.] Destitute of probity, integrity, or good faith. — Having or exercising a disposition to deceive, cheat, and defraud. — Proceeding from fraud, or marked by it. — Unfaithful; faithless; fraudulent; knavish; perfidious. — Unchaste; lewd; as, a *dishonest* desire.

Dishon'estly, *adv.* In a dishonest manner.

Dishon'esty, *n.* [It. *disonestà*; Fr. *deshonnêteté*.] Want of honesty, probity, or integrity in principle;

faithlessness; a disposition to cheat or defraud, or to deceive or betray. — Violation of trust or of justice; fraud; treachery. — Any deviation from probity or integrity. — Unchastity; incontinence; lewdness.

Dishon'or, **Dishon'our**, *n.* [It. *disonore*; Fr. *deshonneur*.] Whatever constitutes a stain or blemish on the reputation; disgrace; ignominy; shame; reproach; opprobrium.

—*v. a.* To bring reproach or shame on; to disgrace; to shame; to degrade; to debase; to treat with indignity. — To violate the chastity of; to debauch; to pollute.

(*Com.*) To *dishonor* a bill, is when a person on whom a bill is drawn declines to accept it, or to pay it when it becomes due. In such a case it is necessary for the holder, or person in whose favor the bill is drawn, to give notice to the drawer and indorsers of the dishonor of the bill, within a reasonable time, so as to preserve his recourse against them.

Dishon'orable, **Dishon'ourable**, *a.* Shameful; reproachful; base; vile; bringing shame on; staining the character and lessening reputation. — In state of neglect or disesteem.

"He that is *dishonorable* in riches, how much more in poverty!" — *Ecclesi.* x. 31.

Dishon'orably, *adv.* Reproachfully; in a dishonorable manner.

Dishon'orableness, *n.* Quality of being dishonorable.

Dishon'orary, *a.* Tending to dishonor or disgrace.

Dishon'orer, *n.* One who dishonors.

Dish'mor, *n.* Ill-humor.

—*v. a.* To deprive of humor; to put out of humor.

Dish'-washer, *n.* (*Zoöl.*) A bird, the Wagtail, gen.

Mergus, *q. v.*

Dish'-water, *n.* The water in which dishes are washed.

Disimprove'ment, *n.* Reduction from a better to a worse state.

Disincarcerate, *v. a.* To set at liberty; to free from prison.

Disinclina'tion, *n.* Want of propensity, desire, inclination; unwillingness; dislike; repugnance; slight aversion.

"Disappointment gave him a *disinclination* to the fair sex." — *Arbutnot*.

Disincline', *v. a.* [*Sp. disinclina*.] To excite dislike or slight aversion in; to make disaffected; to alienate from.

Disinclined', *p. a.* Not inclined; averse.

Disincorporate, *v. a.* [*Fr. désincorporer*.] To unite a corporate body; to detach or separate from corporation or society.

Disincorpora'tion, *n.* The act of disincorporating.

Disinfect, *v. a.* [*Fr. désinfecter*.] To cleanse from infection; to purify from contagious matter.

Disinfect'ant, *n.* (*Hygiene*.) A substance which, combining with deleterious gases or emanations, composes them and renders them harmless. The most powerful *D.* known are *carbolic acid* in solution and *chlorine*, which is generally employed for the purpose in the form of chloride of lime. Another powerful *D.* is permanganate of potash, which acts by yielding up an equivalent of nascent oxygen. It is known in commerce as *Condy's disinfectant fluid*. — See *CARBOLIC ACID*, *CHLORINE*, *POTASH*, &c.

Disinfection, *n.* [*Fr. désinfection*.] Act of disinfecting; purification from infectious matter.

Disingen'uons, *a.* Not open, frank, or candid; meanly artful; unbecoming true honor or dignity; unfair; illiberal; crafty; sly; cunning; as, a "*disingenuous* way of proceeding."

Disingen'uously, *adv.* In a disingenuous manner; unfairly.

Disingen'uonsness, *n.* Unfairness; want of candor; low craft; conduct or practices characterized by unfairness.

Disinhabited, *a.* Deprived of inhabitants.

Disinherit'ion, *n.* The act of disinheriting, or the state of being disinherited.

Disinherit'it, *v. a.* To deprive of an inheritance or prevent, as an heir, from coming into possession of property or right.

Disinherit'itance, *n.* Act of disinheriting.

Disinhume', *v. a.* To disinter.

Disin'tegrable, *a.* That may be disintegrated or separated into integrant parts.

Disin'tegrate, *v. a.* [*Dis*, priv., and Lat. *integratus*, from *integer*, *q. v.*] To separate, as the integrant parts or small particles of a body by mechanical division.

Disin'tegrated, *p. a.* Separated into integrant parts without chemical action.

Disintegra'tion, *n.* The act of separating the integrant parts of a substance, as distinguished from *decomposition*, or the separation of constituent parts. — Differs more particularly to the mechanical diffusion of a substance; *decomposition*, to the chemical division.

Disinter', *v. a.* [*Sp. desenterrar*; Fr. *désenterrer*.] To take out of a grave, or out of the earth. — To take out, as of a grave; to bring from obscurity to view.

Disin'terested, *a.* [*Fr. désintéressé*.] Free from interest; having no separate personal interest or private advantage in a question or affair; not influenced or created by private advantage; unbiassed; impartial; different; uninterested.

Disin'terestedly, *adv.* In a disinterested manner.

Disin'terestedness, *n.* The state or quality of being disinterested; freedom from bias or prejudice; account of private interest; indifference.

Disinter'ment, *n.* Act of disinterring, or taking out of the earth.

Disinthal'dom, *n.* Disinthalment.

Disinthalrill, *v. a.* To liberate from thrall, slavery, bondage, or servitude; to free or rescue from oppression.

Disinthalment, *n.* Liberation from bondage; emancipation from slavery.

Disinvestiture, *n.* Act of depriving of investiture.

Disjec'tion, *n.* [Lat. *disjunctio*, from *disjicio*, *disjicere*—*dis*, and *jacio*, to cast.] A casting down or dissipating.

Disjoin, *v. a.* [Fr. *disjoindre*, from Lat. *disjungo*.] To separate what has been joined; to part asunder; to disunite; to sever; to detach.

"Together we had liv'd; ev'n not in death disjoin'd."—Dryden.

—*a.* To be separated; to part.

Disjoint, *v. a.* To separate parts united by joints; to put out of joint; to dislocate; to separate, as junctures; to break at the part where things are united by cement. —To separate, as united parts. —To break, as the natural order and relation of a thing. —To make incoherent; as, a *disjointed* speech.

—*v. n.* To fall in pieces.

"Let both worlds disjoint, and all things suffer."—Shaks.

Disjointedness, *n.* State of being disjointed.

Disjointly, *adv.* Separately.

Disjunct, *v. a.* [Lat. *disjunctus*, from *disjingo*—*dis*, and *jungo*, to join.] Disjoined; separated.

(Zool.) Applied to an insect when the head, trunk, and abdomen are separated by a deep incision.

Disjunction, (*dis-junk'tshun*), *n.* [Fr., from Lat. *disjunctio*.] Act of disjoining; disunion; separation.

Disjunctive, *a.* [Fr. *disjunctif*, *disjunctive*, from Lat. *disjunctivas*.] Incapable of union; as, "atoms of a *disjunctive* nature."

(Gram.) A conjunction which disjoins the sense of connected sentences; as, "He is either wicked or foolish;" "They are neither wise nor brave."

(Logic.) A proposition compounded of two or more categorical propositions, so stated as to imply that some of them must be true: thus, "Either A=B, or C=D." A *D.*, in which the two propositions are not naturally connected together in such a manner as to warrant their being proposed as alternatives, is nugatory and absurd in sense, although not incorrect in logical form. If one or more of the categorical antecedent propositions be denied, we infer that the remaining one, or, if there are more than one, some one of those remaining, is true: e.g., "Either A=B, or C=D; but A is not equal to B, therefore C=D." A poem is either good, bad, or indifferent; but it is not good; therefore it is bad or indifferent.

—*a.* A word that disjoins; a disjunctive conjunction.

Disjunctively, *adv.* In a disjunctive manner; separately.

Disjuncture, *n.* The act of disjoining; separation; dislocation. (*R.*)

Disk, *n.* [Lat. *discus*. See DISC, DISCS, DESK.] A flat, round piece of stone or metal; a quoit. —The face, or visible surface of a celestial body, as of the sun, moon, or planets.

(Bot.) A term now applied to whatever intervenes between the stamens and the ovary upon the thalamus. It presents a great variety of forms; thus, in the Orange it forms a fleshy ring, surrounding the base of the pistil; on the Tree Peony, a dark-red cup-shaped expansion, covering nearly the whole of the pistil except the stigmas; in the Rose, a sort of waxy lining to the tube of the calyx; in umbelliferous plants, a swelling on the top of the ovaries, adhering to the styles. In other cases, the *D.* is reduced to little separate glandular bodies, as in cruciferous plants; or in scales, as in the Vine; or to various petaloid expansions, as in the Aquilegia.

Diskind'ness, *n.* Unkindness; injury.

Dislike, *n.* Distaste; contrariety of feeling; a moderate degree of hatred; disapprobation; disinclination; aversion; antipathy; repugnance.

—*v. a.* To disapprove; to regard with some aversion or displeasure. —To disrelish; to regard with some disgust, as food.

Dislik'en, *v. a.* To make unlike.

Dislik'er, *n.* One who dislikes.

Dislimb, *v. a.* To dilaniate; to tear limb from limb. (*o.*)

Dislocate, *v. a.* [Fr. *disloquer*; from *dis*, and Lat. *loco, locatus*, from *locus*, place.] To displace; to put out of its proper place.

"Our civil war has dislocated all relations."—Fuller.

—To put out of joint; to disjoint.

"They are apt enough to dislocate and tear Thy flesh and bones."—Shaks.

Dislocat'ion, *n.* [Fr.] Act of dislocating, or moving from its proper place.

(Surg.) See LUXATION.

(Geol.) See UPLIFT.

Dislodge, (*dis-loj*), *v. a.* [Fr. *déloger*; It. *disloggiare*.] To remove or drive from a lodge or place of rest. —To drive from the place where a thing naturally rests or inhabits. —To drive from a place of rest, habitation, retirement, or retreat, or from any station. —To remove an army to other quarters.

"The Volcians are dislodg'd, and Marcus gone."—Shaks.

—*v. n.* To go from a place of rest.

"He resolved—with all his legions to dislodge."—Milton.

Dislodg'ment, *n.* Act of dislodging; displacement; removal from a lodge, station, or place of rest.

Disloy'al, *a.* [O. Fr. *desloyal*; Fr. *déloyal*.] Not true to allegiance; false to a sovereign, or state.—Faithless; perfidious; treacherous.

Disloy'ally, *adv.* In a disloyal manner; with violation of faith or duty to a sovereign, or state.—Faithlessly; perfidiously.

Disloy'alty, *n.* [O. Fr. *desloyauté*; Fr. *déloyauté*.]

Want of loyalty or fidelity to a sovereign; violation of allegiance or duty to a prince or sovereign authority.

Dis'mal, *a.* [Probably from Teut. *dys*, an avenging deity, and Belg. *mael*, judgment.] Productive of horror or distress; dreary; gloomy; dark; doleful; horrid; direful; horrible; calamitous; sorrowful; melancholy; unfortunate.

"The dismal situation waste and wild,
A dungeon horrible!"—Milton.

Dis'mally, *adv.* Gloomily; horribly; sorrowfully; uncomfortably.

Dis'mal Swamp, an extensive morass, partly in N. Carolina and partly in Virginia. Its length from N. to S. is 30 m., by 10 or 12 m. in breadth. It covers an area of about 300 square miles. Lake Drummond, in its centre, is about 6 m. in extent, and when full, 21 feet above high water on the surface. The *D. S.* was originally, in large proportions, covered with a thick forest of cypress, white cedar, and other timber, and portions are still overgrown with reeds; but nearly all the most valuable timber has been cut down to furnish shingles, ship-timber, rails, &c.; and a part of the morass has been drained and devoted to agriculture. The *Dismals*, as they are locally called, were formerly noted retreats of runaway slaves.

Dismant'le, *v. a.* [*Dis*, and *mantle*.] To deprive, as of dress; to strip; to divest; to loose; to throw open or off; to deprive or strip, as of apparatus or furniture; to unrig; to deprive or strip, as of military furniture; to deprive, as of outworks or forts; to break down.

Dismant'led, *p. a.* Divested; stripped of furniture; deprived of outworks or forts; unrigged; as, a *dismantled* ship.

Dismask, *v. a.* To strip off, as a mask; to uncover; to remove that which conceals.

Dismast, *v. a.* (*Naut.*) To deprive, as of a mast or masts; to break and carry away the masts from.

Dismastment, *n.* The act of dismasting; the state of being dismasted.

Dismay, (*dis-mā*), *v. a.* [Sp. *desmayar*, to dismay; It. *smagare*, to dispirit; O. Fr. *s'esmagier*, to be astonished; probably from Lat. *dis*, and *maga*, an enchantress, a witch. See MAGIC.] To deprive of strength or firmness of mind by magical incantation or witchcraft; to sink the spirits or resolution;—hence, to produce fright or terror in; to terrify; to frighten; to appal; to daunt; to dishearten; to dispirit; to depress.

—*n.* [Sp. *desmayo*.] Fall or loss of courage; a sinking of the spirits; depression; dejection; a yielding to fear; discouragement; fear; fright; terror.

Dismay'edness, *n.* Full of discouragement; dismay.

Dis'me, *n.* [Lat. *decime*, or tenths.] (*Ecclesiastical History*.) The name given to the tenth part of the yearly value of all spiritual benefices, which, in Catholic countries, was anciently paid to the Pope.

Dismem'ber, *v. a.* [Sp. *desmembrar*; Fr. *démembrer*.] To separate or sever, as member from member, or limb from limb; to separate, as a member from the body; to tear or cut in pieces; to separate, as a part from the main body; to dilacerate; to mutilate; to divide; to sever.

Dismem'berment, *n.* [Fr. *démembrement*.] The act of severing a limb or limbs from the body; act of tearing or cutting in pieces; mutilation; act of severing a part from the main body; division; separation.

Dismiss, *v. a.* [Lat. *dimittit*, *dimissus*—*dis*, and *mitto*, to send. See MISSION.] To send away; to permit to depart; as, to *dismiss* an assembly. —To discard; to discharge; to remove from office, service, or employment.

Dismiss'ion, **Dismiss'al**, *n.* [Lat. *dimissio*; Fr. *démission*.] Leave to depart; removal from office or employment; discharge.

(Law.) Removal of a suit in equity out of court, without any further hearing.

Dismiss'ive, *a.* That grants dismissal.

Dis'mount, *v. a.* [It. *dismontare*; Fr. *démonter*.] To descend or alight from a horse; to descend or get off, as a rider from a beast. —To descend from an elevation, or place of honor.

—*v. a.* To cause to descend; to throw or remove from a horse; to unhorse. —To throw or bring down from any elevation. —To throw or remove cannon or other artillery from their carriages, or to render them unfit for service, as by breaking the axletrees, wheels, &c.

Disnat'uralize, *v. a.* To deprive of naturalization; to make alien; to deprive of the privileges of birth.

Disobedi'ence, *n.* [Fr. *désobéissance*.] Violation of a command or prohibition; the omission of that which is commanded to be done, or the doing of that which is forbidden; breach of duty prescribed by authority.

Disobed'ient, *a.* [Fr. *désobéissant*.] Omitting to do what is commanded, or doing that which is prohibited; refractory; not observant of duty or rules prescribed by authority.

Disobed'iently, *adv.* In a disobedient manner.

Disobey, *v. a.* [Fr. *désobéir*.] To omit or refuse to do what is commanded, or to do that which is forbidden; to transgress or violate an order or injunction.

Disobey'er, *n.* One who disobeys.

Disoblige, *v. a.* [Fr. *désobliger*.] To withhold or refuse a kindness or a service from; to do an act which contravenes the will or desires of; to offend by an act of unkindness or incivility; to injure in a slight degree.

Disoblige'ment, *n.* Act of disobliging.

Disoblige'r, *n.* One who disobliges.

Disoblig'ing, *p. a.* Not obliging; not disposed to gratify the wishes of another; not disposed to please; unkind; offensive; unpleasing; unaccommodating.

Disoblig'ingly, *adv.* In a disobliging manner; offensively.

Disoblig'ingness, *n.* Tendency to displease; offensiveness.

Disorbed, *a.* [Prefix *dis*, and *orb*.] Thrown out of the proper orbit, as a star. —Shaks.

Disor'der, *n.* [It. *disordine*; Fr. *désordre*.] Want of order or regular disposition; immethodical distribution; irregularity; disarrangement; confusion.—Turbulence; tumult; bustle; violation of decorum or quiet.—Discomposure of mind; turbulence of passions.—Illness; indisposition; malady; distemper; disease.

—*v. a.* To break the order of; to disturb, as any regular disposition or arrangement of things; to put out of method; to throw into confusion; to disarrange; to derange; to confuse.

"Eve . . . with tears that ceas'd not flowing,
And tresses all disorder'd, at his feet fell humble."—Milton.

—To disturb the body; to produce sickness or indisposition in; as, my dinner *disorders* me. —To discompose; to disturb the mind.

Disor'dered, *p. a.* Disorderly; irregular; vicious, loose; unrestrained in behavior.

"Men so disorder'd, so debauch'd, and bold."—Shaks.

Disor'deredly, *adv.* In a disordered manner.

Disor'deredness, **Disor'derliness**, *n.* The state of being disorderly.

Disor'derly, *a.* Being without proper order or distribution; acting without regularity; irregular; immethodical; confused; tumultuous; turbulent; as, a *disorderly* assembly. —Inordinate; intemperate; unruly; lawless; vicious; loose; contrary to law or good order; as, a *disorderly* person.

D. house, (*Lave*.) A house the inmates of which behave so badly as to become offensive to the neighborhood. The keeper of such house may be indicted for keeping a public nuisance.

Disor'derly, *adv.* In a disorderly manner; without order, rule, or method; irregularly; confusedly; in a manner violating law and good order.

Disordina'tion, *n.* Disarrangement; disorder.

Disorganiza'tion, *n.* [Fr. *désorganisation*.] Act of disorganizing; act of destroying organic structure or connected system; act of destroying order; state of being disorganized.

Disor'ganize, *v. a.* [Fr. *désorganiser*.] To break or destroy organic structure or connected system; to dissolve regular system or union of parts.

Disor'ganizer, *n.* One who disorganizes.

Disown, *v. a.* [*Dis*, and *own*.] Not to own; to refuse to acknowledge as belonging to one's self; as, to *disown* a spurious work. —Not to allow or admit as belonging to another.

"Than they, who brother's better claim disown."—Dryden.

—To disown; to disclaim; to deny; to renounce; to disallow.

Disown'ment, *n.* Act of disowning.

Disox'idate, *v. a.* See DE-OXIDATE.

Disoxida'tion, *n.* See DE-OXIDATION.

Disox'igenate, *v. a.* See DE-OXIGENATE.

Disoxigena'tion, *n.* See DE-OXIGENATION.

Dispair, *v. a.* To part a couple.

Dispar'age, *v. a.* [O. Fr. *disparager*; Fr. *déparer*; Sp. *desparajar*, to unmatch; from Lat. *dispar*, unequal—*dis*, and *par*, equal, and *ago*, to impel.] To injure or dishonour by a comparison with something of less value or excellence; to depreciate; to undervalue; to vilify. —To reproach; to detract or derogate from; to decry; to degrade.

Dispar'agement, *n.* [O. Fr.] In England, the matching of a man or woman to one of inferior rank or condition, or against the rules of decency.

—Injury by union or comparison with something of inferior excellence; diminution of value or excellence; indignity; derogation; detraction; reproach; dishonor; degradation; disgrace.

Dispar'ager, *n.* One who disparages.

Dispar'agingly, *adv.* In a manner to disparage or dishonor.

Dispar'ate, *a.* [Fr., from Lat. *disparatus*.] Dissimilar; unequal.

Dispar'ates, *n. pl.* Things so unlike or unequal that they cannot be compared with each other.

Dispar'ity, *n.* [Fr. *disparité*, from Lat. *dispar*.] Inequality; unlikeness; difference in degree, in age, rank, condition, or excellence. —Dissimilitude; disproportion.

Dispark, *v. a.* [Fr. *déparquer*.] To throw open, as a park; to lay open; to set at large; to release from confinement.

"You have fed upon my signories,
Dispark'd my parks, and fell'd my forest woods."—Shaks.

Dispark'ing, *n.* The act of liberating from a park.

Dispart, *v. a.* [O. Fr. *despartir*; Fr. *départir*.] To divide; to separate; to sever; to burst; to rend; to rive or split.

"The rest to several places
Disparted, and between spun out the air."—Milton.

—*v. n.* To separate; to open; to cleave.

Dispart, *n.* (*Gun*.) Half the difference between the diameter of the base-ring at the breech of a gun, and that of the swell of the muzzle.

—*v. a.* To set a mark on the muzzle-ring of a piece of ordnance.

Dispas'sion, *n.* Want of, or freedom from, passion; an undisturbed state of the mind; apathy.

Dispas'sionate, *a.* Free from passion; unmoved by feelings; not dictated by passion; not proceeding from temper or bias; calm; cool; composed; serene; temperate; moderate.

Dispas'sionately, *adv.* Without passion; calmly; coolly.

Dis'patch. See DESPATCH.

Dis'pathy, n. Want of passion; apathy. (R.)

Dispeace, n. Want of peace or quiet.

Dispel, v. a. [Lat. *dispello*—*dis*, and *pello*, *pulsus*, to drive.] To scatter by driving or force; to dissipate; to disperse: to drive away; to banish.

—*v. n.* To fly different ways; to be dispersed; to disappear, as clouds.

Dispend, v. a. To spend; to consume; to expend. (O.)

Dispen'sable, a. That may be dispensed with.

Dispen'sary, n. [See DISPENSE.] A place where medicines are made up and distributed; but the term is used more generally for a charitable institution where the poor are supplied with medicines and advice. Institutions of this nature are of comparatively recent origin; though they are now to be met with in every town of any importance, in this country, as in Europe.

Dispensa'tion, n. [Fr., from Lat. *dispensatio*.] Act of dispensing; distribution; act of dealing out to different persons or places.

(Theol.) The scheme or plan of God's dealings with his creatures, particularly in some unusual or extraordinary way. In some cases it has reference to those providential ordinances by which the world was prepared for the gospels. Sometimes it has reference to the system of principles or rites enjoined by divine authority; as, the *Mosaic D.*, the *Christian D.*

(Eccl.) A relaxation of the law, or a dispensing with obedience to it in certain cases, granted by one who has the power to do so. In the Roman Catholic Church, the Pope alone has the power to release from oaths and vows; and a decree of the Council of Trent anathematizes all who deny the power of the Church to grant *D.* for marriages within the prohibited degrees of the Mosaic law. In the Church of England, an archbishop has authority to grant special licenses for the celebration of marriages, and for clergymen to hold pluralities.

Dispen'sative, a. Granting dispensation. (R.)

Dispen'satively, adv. By dispensation.

Dispensator, n. A dispenser; a distributor.

Dispensatorily, adv. By way of dispensation.

Dispensatory, a. That grants dispensation.

—*n.* A medical book, which, in addition to containing the whole *Materia Medica*, or history of all the drugs and medicaments used in the practice of physic, embraces an account of the manner in which each article is prepared, with directions how to compound all prescriptions. It contains the *Materia Medica*, *Pharmacy*, and the *Pharmacopœia*, in one volume, and forms the authority and reference of every chemist, druggist, and medicine-vender.

Dispense, v. a. [Fr. *dispenser*, from Lat. *dispenso*.] To deal or divide out in parts or portions; to administer; to apply; to distribute, as justice.

"Those to whom Christ has committed the dispensing of his gospel."—*Decay of Piety*.

—To allow; to give leave to do or not to do; to exempt; to excuse; to grant dispensation for. (Followed by *with* in the last three senses.)

Dispen'ser, n. One who dispenses, distributes, or administers.

Dispeop'le, v. a. [Fr. *dépeupler*.] To depopulate; to empty of inhabitants, as by destruction, expulsion, or other means.

Dispeop'ler, n. A depopulator.

Disper'mous, a. [Gr. *di*, *ais*, and *sperma*, seed.] (Bot.) Containing only two seeds; two-seeded.

Disper'sal, n. Dispersion.

Disperse, v. a. [Fr. *disperser*, from Lat. *dispergo*, *dispersus*.] To scatter about or on all sides; to drive asunder; to cause to separate into different parts; to dissipate.—To dispel; to spread; to diffuse; to distribute; to deal out.

—*v. n.* To be scattered; to separate; to go or move into different parts; to vanish, as fog or vapors.

Dispersed, p. a. Scattered; driven apart; diffused; dissipated; as, "dispersed love."—*Bishop Hall*.

Dispers'edly, adv. In a dispersed manner; separately.

Dispers'edness, n. State of being dispersed.

Dispers'er, n. One who disperses; a spreader.

Dispers'ion, n. [Fr., from L. Lat. *dispersio*, a scattering.] Act of dispersing or scattering; state of being scattered, or separated into remote parts; diffusion; dissipation.

(Optics.) The separation of a ray of white light into its several component colored parts by refraction, through the instrumentality of a prism. Allow a beam

P. If the prism is placed at the proper angle, the beam of light is not only bent from its course, but is spread out so as to form a long band of light on the opposite wall. This band is not white, like ordinary sunlight, but made up of the seven colors of the rainbow, violet, indigo, blue, green, yellow, orange, and red. This colored band is called the *solar spectrum*, and the colors are often called prismatic colors. These colors appear in the order of their refrangibility or capability of refraction, some being subject to a greater degree of refraction than others; that of blue being greater than that of yellow, and yellow greater than red. The breadths of the spaces occupied by the different colors are not in the same ratio to each other for every kind of prism; that is to say, the ratio of the spaces occupied by the colors differs according to the kind of glass of which the prism is made, and the length of the spectrum also differs. This is called the *irrationality of D.* The best method of trying the experiment of *D.* of light is to allow the sun's rays to enter the apartment through a long and very narrow slit, instead of through a circular hole, which will give a spectrum of greater breadth.—The term *D.* is also often applied to the reflection or scattering of rays of light from any polished and reflecting surface, such as a steel mirror or looking-glass.

Dispers'ive, a. Tending to scatter or disperse; having the power to disperse.

Dispir'it, v. a. To deprive of spirit or courage; to impress with discouragement or fear; to dishearten; to discourage; to damp; to depress; to cast down; to daunt; to intimidate; as, a *dispirited* army.

Dispir'itedly, adv. In a dispirited manner.

Dispir'itedness, n. Want of courage, spirit, animation, or vivacity.

Displace, v. a. [O. Fr. *displacer*; Fr. *déplacer*.] To put out of the usual or proper place; to remove from its place; as, the cards are *displaced*.

—To remove from any state, condition, office, or dignity; to dismiss; to discard; as, to *displace* a commanding officer.

Displace'able, a. Susceptible of being displaced.

Displacement, n. [Fr. *déplacement*.] Act of removing from the usual or proper place, or from a state, condition, or office; as, a *displacement* of funds.

—The weight of water displaced by a floating body, as a ship, &c., which is equal to the weight of the floating body.

Displace'r, n. One who, or that which, displaces.

Displac't, v. a. To drive away or remove from the usual place of a residence, as a nation.—To strip of inhabitants, as a country.

"I like a plantation in a pure soil; that is, where people are not *displaced*."—*Bacon*.

Displanta'tion, n. Act of displanting, or removing from its usual place.

Display, v. a. [O. Fr. *deplay*; Fr. *déployer*; Lat. *dis*, and *plic*, *plicatus*, to fold. See *PLY*.] To unfold; to lay open; to spread wide; to expand.—To spread before the eyes or mind; to make manifest; as, the budget *displays* the actual state of the finances.—To set forth ostentatiously to view; to exhibit; to show; to show off; to parade; as, to *display* heraldic insignia.

—*v. n.* To lay anything open; to talk without restraint; to make a great show of words.

—*n.* An opening or unfolding; manifestation; an exhibition of anything to the view, or to the thoughts.

"A glorious *display* of the highest form of created excellencies."—*Glanville*.

—Show; parade; pomp; ostentatious exhibition.

"He died . . . without *display*, without parade."—*Byron*.

Displayed, (dis-plād') p. a. Unfolded; opened; spread; expanded; exhibited to view; manifested; as, goods *displayed* upon a counter.

(Her.) Synonymous with *expanded*, as an eagle expanded, or, as it is commonly termed, a *spread eagle*.—See *EAGLE*.

Display'er, n. He who, or that which, displays or exhibits.

Displease, v. a. To make angry; to offend; to dissatisfy; to provoke; to vex; to irritate; to disgust; to be disagreeable to; to raise aversion in.

"God was *displeased* with this thing."—1 Chron. xxi. 7.

—To disgust; to cause aversion.

Displeas'edly, adv. In an offended or displeased manner.

Displeas'edness, n. State of being displeased; displeasure.

Displeas'er, n. One who occasions displeasure.

Displeas'ingly, adv. In a manner to cause displeasure.

Displeas'ingness, n. State or quality of being displeasing or disagreeable; offensiveness to the mind, tastes, or senses.

Displeasure, (dis-plezh'ur,) n. Dissatisfaction; dislike; distaste; disgust; offence; disapprobation; anger; indignation; resentment.—That which displeases; cause of disgust or dissatisfaction; state of being discontented; disfavor; as, to incur the royal *displeasure*.

Displode, v. a. [Lat. *displodere*.] To explode; to discharge.

—*v. n.* To cause to burst with a loud, explosive report.

Displ'o'sion, n. A bursting with loud noise; an explosion.

Displ'o'sive, a. Adapted to burst or explode.

Displume, v. a. To strip or deprive of plumes or feathers; to disarray of badges of honor.

Dispon'dee, n. [Lat. *dispondeus*.] (Anc. Pros.) A double spondee, or a foot consisting of four long syllables, as *juramentum*.

Dispoue, v. a. (Law.) To convey property to another in a legal manner.

Dispon'er, n. (Law.) One who transfers property over to another by legal instrument.

Disport, n. [Dis, augment, and *sport*—see *SPORT*: O. Fr. *déporter*.] Pastime; diversion; amusement; play; sport; merriment.

"His *disports* were ingenuous and manlike."—*Hayward*.

—*v. n.* To sport; to play; to wanton; to move gayly, lightly, and without restraint.

—*v. a.* To divert or amuse one's self.

Disport, v. a. [dis, and *port*, q. v.] To remove from a port.

Dispos'able, a. Subject to disposal; not previously engaged or employed; free for use or employment; as, *disposable* funds.

Dispos'al, n. Act of disposing or regulating anything; arrangement; distribution; as, the *disposal* of merchandise.

—Disposition; power of ordering or arranging; management; government; control; conduct.

"Tax not divine *disposal*."—*Milton*.

—Power of distribution; method of regulating; right of bestowing; as, the *disposal* of a daughter in marriage.

—Power or right to dispose of, or to control;—generally with *at* or *in*; as, to be *at the disposal* of another.

Dispose, (dis-pōz') v. a. [Fr. *disposer*; Lat. *dispono*, *dispositum*—*dis*, and *pono*, to place. See *POSITION*.] To distribute; to place in order; to set in right and proper order; to arrange; to order; as, to *dispose* troops in line of battle.

—To regulate; to adjust; to determine; to set right; to settle; as, to *dispose* the formalities of a duel.—To apply to a particular purpose; to set, place, or turn to a particular end or consequence; to form for any purpose; to apply; to use; to employ; as, to be *disposed* to acts of charity.—To incline; to set the mind in a particular frame; to give a bent or propensity to; usually preceding *to*; as, to be *disposed* to take a wife.

To *dispose of*. To apply to any specific purpose; to direct or employ to a given end; to transfer; to put into the hands of another; to give away by authority; to part with or relinquish; as, to *dispose of* one's goods by auction.

"A rural judge *dispos'd* of beauty's prize."—*Waller*.

Disposed, p. a. Inclined; minded; applied; as, *disposed* to act liberally.

Dispos'edness, n. State of being disposed; inclination; having a mind to.

Dispos'er, n. One who disposes; a distributor; a bestower; a director; a regulator.

"God . . . is the absolute *disposer* of all things."—*South*.

Dispos'ingly, adv. In a manner to dispose, regulate, or place in order.

Disposition, (dis-po-zish'un,) n. [Fr., from Lat. *dispositio*.] Act of disposing; disposal; application; as, *disposition* of one's estate.—Manner in which things, or the parts of a complex body, are disposed, placed, or arranged; adjustment; regulation; arrangement; distribution; order; method; as, the *disposition* of troops in a proper manner.—Adaptation; natural fitness or tendency of qualities or parts.

"Disposition is where the power and ability of doing anything is forward."—*Locke*.

—Temper or natural constitution of the mind; temper or frame of mind; predisposition; inclination; humor; temperament.

"I have suffered more . . . than the villanous inconstancy of man's *disposition* is able to bear."—*Shaks*.

—Acquired tendency or propensity of mind, temper, or character; as, a *disposition* to act fairly.

(Arch.) One of the six essentials of the art. It is the arrangement of the whole design by means of the *ichnography* (plan), *orthography* (section and elevation), and *scenography* (perspective view); and differs from *distribution*, which signifies the particular arrangement of the internal parts of a building.

(Mus.) A term used in organ-building, adopted from the German, meaning the arrangement and combination of the stops on the different rows of keys and pedals with the pitch of each stop, or length of the lowest C pipe.

(Logic.) That operation of the mind whereby we put the ideas, propositions, or arguments which we have formed concerning a subject, in the order fittest to gain a clear knowledge of it, to retain it in the memory, or to explain it to others.

(Rhet.) The due placing or ranging the several part of a speech or discourse. The *logician* is tied down to a certain prescribed form in his mode of reasoning; the *rhetorician* adopts that mode which seems most convenient to him. "A discourse," says Quintilian, "that want disposition must necessarily be confused and without connection, liable to frequent tautologies and omission; and, like one wandering in the dark, be conducted by chance rather than design."—See *ORATORY*.

Disposi'tional, a. Relating to disposition.

Dispos'itor, n. A disposer.

Dispossess, v. a. To deprive of the actual occupancy of a thing; to disseize;—generally preceding *of*; as, to be *dispossessed* of a fortune.

Dispossession, (dis-pos-sesh'un,) n. Act of putting out of possession; act of ejecting.

(Law.) See *OUSTER*.

Disposses'sor, n. One who dispossesses or disseizes.

Dispost, v. a. To remove or displace from a post.

Disposure, (dis-pōzh'ur,) n. Disposal; power to dispose of; government; management; as, "they quietly surrendered themselves to his *disposure*."—*Sandys*.

Dispraise, n. The imputation of something improper or faulty; blame; censure; dishonor; reproach.

—*v. a.* To deny or refuse praise to; to blame; to censure.

Fig. 834. — SOLAR SPECTRUM.

of sunlight, SA (fig. 834), to pass through a small opening into a darkened room, and fall upon the prism

to mention with disapprobation, or some degree of reproach.

"In praising Antony, I've *dispraised* Caesar." — *Shaks.*

Disprais'er, *n.* One who dispraises or censures.

Disprais'ingly, *adv.* After the manner of dispraise, or by way of censure or reproach.

Dispread', *v. a.* To extend or cause to spread or flow in different directions.

"Above, below, around, without *dispread*." — *Pope.*

—*v. n.* To expand, or be extended.

Dispread'er, *n.* One who spreads or expands.

Disprince', *v. a.* To take away princely quality, rank, or character from. (*R.*)

Disprison, (*dis-priz'n.*) *v. a.* To liberate from prison.

Disprize', *v. a.* To take away valuable qualities from; to detract; to undervalue.

Disprofess', *v. a.* To abandon or renounce the profession of.

Disprofit, *v. a.* To fail to profit from.

—*n.* Loss; damage; detriment; absence of profit.

Disproof, *n.* A removal of proof or evidence adduced; confutation; refutation; a proving to be false or erroneous.

Dispropor'tion, *n.* Want of proportion of one thing to another; discrepancy between the parts of a thing; want of symmetry; as, the *disproportion* of the rooms in a building. — Want of proper quantity according to rules prescribed; want of suitableness or adequacy; disparity; inequality; unsuitableness; as, the *disproportion* of a man's means to his desires.

—*v. a.* To deprive of proportion; to make unsuitable in form, size, length, or quantity; to violate the rules of symmetry in; to join unfily; to render mismatched.

"To shape my legs of an unequal size,
To *disproportion* me in every part." — *Shaks.*

Dispropor'tionable, *a.* Disproportional; not in symmetry or proportion.

Dispropor'tionableness, *n.* Unsuitableness, or want of proportion.

Dispropor'tionably, *adv.* With want of proportion; unfily; unsymmetrically.

Dispropor'tional, *a.* Deficient in proportion to something else; without proportion, suitability, or symmetrical disposition of parts; unequal; inadequate; as, payment *disproportional* to services rendered.

Disproportional'ity, *n.* State or quality of being disproportional, or without due symmetry of parts.

Dispropor'tionally, *adv.* Disproportionately; unfily; unsuitably.

Dispropor'tionate, *a.* Not in proportion with; unsuitable; unsymmetrical; not in accord with something else in bulk, form, or value; inadequate.

"It is plain that men have agreed to a *disproportionate* and unequal possession of the earth." — *Locke.*

Dispropor'tionately, *adv.* In a disproportionate or unsymmetrical form or manner; inadequately; unfily; unsuitably.

Dispropor'tionateness, *n.* Unsuitableness, or want of proportion in form, bulk, or value; inadequateness.

Disprop'riate, *v. a.* To disappropriate.

Disprov'able, *a.* Susceptible of disproof or refutation.

Disprov'al, *n.* Act of disproving; confutation; disproof.

Disprove, (*dis-prōv'*) *v. a.* To divest of proof or evidence which has been adduced; to prove to be false or erroneous; to refute; to confute.

"It is easier to affirm than to *disprove*." — *Holder.*

Disprov'er, *n.* One who disproves; a confuter.

Dispunge', *v. a.* [*Lat. dis*, and *pungere*, to prick.] To expunge; to obliterate by erasure.

Dispun'ishable, *a.* Without penal restraint or discipline.

Dispur'pose, *v. a.* To dissuade from a purpose.

Disputable, *a.* [*Fr.* from *L. Lat. disputabilis*.] That may be disputed; liable to be called in question, contested, or controverted; of doubtful certainty; as, a *disputable* point of logic.

Disputableness, *n.* State or condition of being disputable or a moot point.

Disputant, *n.* [*Lat. disputans*.] One who argues in opposition to another; a controvertist; a caviller.

—*a.* Engaged in dispute or controversy.

"Disputant on points and questions flitting Moses' chair." — *Milton.*

Disputa'tion, *n.* [*Lat. disputatio*.] Act of disputing; a reasoning or argumentation in opposition to something, or on opposite sides; controversy in words; debate; dispute.

—An exercise in schools or colleges, in which parties reason in opposition to each other on some question proposed.

Disputatious, (*dis-pu-ta'shūs*) *a.* Inclined to dispute; apt or prone to cavil or controvert; as, a person of *disputatious* temper.

Disputa'tiously, *adv.* Controversially; in a cavilling or disputatious manner.

Disputa'tiousness, *n.* Tendency or predisposition to argue or dispute.

Disput'ative, *a.* Disputatious; disposed to cavil or dispute.

Dispute', *v. n.* [*Fr. disputer*, from *Lat. disputo* — *dis*, and *puto*, to trim, to adjust.] To discuss; to discourse; to think differently; to contend in argument; to reason or argue in opposition; to debate; to cavil; to altercation.

"Fighting is a worse expedient than *disputing*." — *Decay of Piety.*

—To strive or contend in opposition to a competitor; as, to *dispute* for a prize.

—*v. a.* To attempt to prove to be false, fallacious, unfounded, or erroneous; to attempt to overthrow by rea-

soning; to controvert; to impugn; to call in question; as, to *dispute* the soundness of an opinion.

—To debate; to argue; to discuss; to reason about.

"I am not to *dispute*."

My prince's orders." — *Dryden.*

—To contest; to strive or contend for; as, "To *dispute* the prize." — *Dryden.*

—To struggle; to strive to maintain.

"Dispute it like a man." — *Shaks.*

—*n.* Strife or contest in words or by arguments; debate; discussion; verbal contention; disputation; controversy; argumentation; disagreement; difference; as, a matter in *dispute*.

Beyond dispute, *past dispute*, that may not be disputed; incontrovertibly; not open to cavil or question; as, it is a fact *beyond dispute*.

Dispute'less, *a.* Incontrovertible; admitting of no dispute or question.

Disput'er, *n.* One who disputes; a controvertist; a caviller; a disputant; as, "vehement *disputers* against the heathen idolatry."

Disqualifica'tion, *n.* Act of disqualifying; hence, disability or deprivation of legal capacity; as, a *disqualification* for voting at elections. — That which disqualifies, or renders unsuitable, unfit, or inadequate; as, the *disqualification* of an imbecile. — Want of qualification.

Disqual'ify, *v. a.* To divest of qualifications, or the qualities and properties necessary for any purpose; to make or render unfit; to disable; to incapacitate; — generally preceding *for*.

"My deafness utterly *disqualifies* me for conversation." — *Swift.*

—To make legally unfit; to deprive of legal capacity, action, or right; to disable by social or legal impediment; as, a *disqualified* juror.

Disquiet, (*dis-kiw'et*) *a.* Unquiet; uneasy; restless.

—*n.* Want of quiet; uneasiness; restlessness; want of tranquillity in body or mind; disturbance; care; anxiety.

—*v. a.* To deprive of ease or quiet; to disturb; to render uneasy or restless; to take away peace, rest, or tranquillity from.

"By anger and impatience the mind is *disquieted*." — *Duppa.*

Disqui'eter, *n.* One who, or that which, disquiets, makes uneasy, or harasses.

Disquiet'ely, *adv.* Anxiously; uneasily; restlessly; as, to repose *disquietly*.

Disqui'etness, *n.* State of being disquieted; uneasiness; disturbance; as, "Riches, root of all *disquietness*." — *Spenser.*

Disqui'etude, *n.* [*Dis*, and *L. Lat. quietudo*, from *quies*, rest. See *QUIET*.] Want of peace or tranquillity; uneasiness; disturbance; agitation; anxiety.

Disquisition, (*dis-kiw-zish'un*) *n.* [*Fr.* from *Lat. disquisitio*, from *disquiro* — *dis*, and *quæro*, *quæsitus*, to seek. See *QUEST*.] Diligent inquiry or investigation; a formal mode of instituting inquiry into any subject, by arguments, or discussion of the facts and circumstances that may elucidate truth; systematic dissertation or examination; treatise; essay; as, "For grave *disquisition* he was not well qualified." — *Macaulay.*

Disquisi'tional, *a.* Pertaining, or relating to, or suggesting, disquisition.

Disquisi'tionary, *a.* Tending to disquisition.

Disquisi'tive, **Disquisi'tory**, *a.* Relating to, or promoting, disquisition; disquisitional.

Dis'raeli, ISAAC, an English literateur, b. at Enfield 1766. He published, in 1790, the *Curiosities of Literature*, which was succeeded by many other standard works of a like nature. He was the father of Benjamin Disraeli. (*q. v.*) D. 1848.

Disraeli, BENJAMIN, an English author, orator, and statesman, b. in London, 1804. He early developed literary tastes and talents of a remarkable character, and, in 1826, caused a sensation in the reading world by the production of his brilliant, fragmentary novel, *Vivian Grey*. Other works of fiction, principally of a philosophical nature, followed his virgin effort; among them the *Young Duke*; *Henrietta Temple* (perhaps the finest love-story in the English language); *Venetia*; *Tancred*, or *The New Crusade*; *Sybil*, or *The Two Nations*; *Coningsby*. In 1837, he entered parliament as member for Maidstone, and joined the Conservative side. His maiden speech was an utter failure, and elicited even the laughter of the House. He thereupon returned to his seat, after using the memorable words, "I sit down now, but the time will come when you shall hear me." In 1841, D. became recognized as the leader in parliament of the so-called "Young England Party." In 1847, he was returned for the county of Bucks, which he represented until made a peer; and upon the death of Lord George Bentinck, in the following year, became the recognized chief of the Conservative party in the House of Commons — a position won entirely by his brilliant oratorical powers, which, as he had prognosticated, became eventually recognized as being of the very highest order. In 1852, upon Lord Derby coming into power, D. was appointed Chancellor of the Exchequer, and, again, in 1858. In 1866, he became financial minister under the Earl of Derby for the third time, and, in 1867, successfully carried a Reform-Bill. 1u Feb., 1868, Lord Derby resigned office, when D. at last reached the summit of his ambition, in becoming first minister of the Crown, a position he resigned in Dec., 1868, giving place to Mr Gladstone. D. wrote *Vindication of the English Constitution* and a *Biography of Lord George Bentinck*. In 1870 his novel of *Lothair* appeared, and in 1880, *Endymion*. In 1874 he again became prime minister, and was created Earl of Beaconsfield and Viscount Hughenden in 1876. His term of office terminated in 1880, and he died on April 19, 1881.

Disregard', *n.* A withholding of regard; neglect; omission of notice; slight; behavior implying indifference, or some degree of contempt; as, a wilful *disregard* of the feelings of others.

—*v. a.* Not to regard; to omit taking notice of; to neglect to observe; to slight as unworthy of notice, attention, or regard; as, to *disregard* admonition.

Disregard'er, *n.* One who disregards.

Disregard'ful, *a.* Neglectful; negligent; heedless; inattentive.

Disregard'fully, *adv.* Heedlessly; negligently; neglectfully; inattentively.

Disrel'ish, *n.* Distaste; dislike of the palate, implying some degree of disgust. — Absence of relishing or appreciative taste; nauseaousness; distaste or dislike, in a figurative sense; squeamishness.

—*v. a.* To have no relish for; to dislike the taste of; to feel some degree of squeamishness or disgust at; as, to *disrelish* ordinary food.

—To render nauseous or unpalatable.

Disre'mem'ber, *v. a.* To forget; not to remember.

Locally used in the U. States.

Disreputability, *n.* State or quality of being disreputable.

Disrep'utable, *a.* [See *REPUTE*.] Not reputable; held in disesteem; not honorable; low; mean; disgracing the reputation; tending to impair the good name of, and bring into disrepute; disgraceful; shameful; as, a *disreputable* character.

Disreputably, *adv.* In a disreputable or dishonorable manner.

Dis'repute, *n.* Loss or want of reputation; disesteem; discredit; dishonor; disgrace.

Disrespect', *n.* Want of respect or reverence; incivility; any act approaching to wilful slight or rudeness; disesteem.

—*v. a.* To show disrespect to; to hold in no consideration.

Disrespect'ful, *a.* Irreverent; uncivil; discourteous; impolite; rude.

Disrespect fully, *adv.* In a disrespectful manner; irreverently; uncivilly.

Disrespect'fulness, *n.* Quality of being disrespectful.

Disrespect'ive, *a.* Disrespectful.

Disrobe', *v. a.* To divest of garments; to undress; to strip of covering. — To divest of any surrounding appendage.

Disrob'er, *n.* One who disrobes.

Disroot', *v. a.* To tear up the roots, or by the roots; to tear from a foundation; to loosen or undermine.

Disrud'der, *v. a.* To deprive of the rudder; — said of a ship.

Disrupt', *v. a.* [*Lat. dirumpo, diruptum* — *dis*, and *rumpo*, to break. See *RUPTURE*.] To break in pieces; to burst or rend asunder. — To separate.

Disruption, *n.* [*Fr.* from *Lat. disruptio*.] Act of breaking, bursting, or rending asunder; act of bursting and separating; breach; rent; dilaceration.

(*Scot. Eccl. Hist.*) A term applied to that act by which upwards of 400 ministers of the Established Church left their churches and manse, in 1842, in vindication of their principles, and formed themselves into what has since been known as the *FREE CHURCH*, *q. v.*

Dissatisfac'tion, *n.* State of being dissatisfied; want of satisfaction; discontent; discontentment; displeasure; disapprobation; distaste; dislike.

Dissatisfac'toriness, *n.* State of being unable to give content or satisfaction.

Dissatisfac'tory, *a.* Unable to give satisfaction or content; giving discontent; displeasing.

Dissat'isfy, *v. a.* To render discontent; to displease; to excite uneasiness in by frustrating wishes or expectations.

Disseat'ter, *v. a.* To shed abroad; to disperse.

Disseat', *v. a.* To put out of a seat.

Dissect', *v. a.* [*Lat. disseco, dissectus* — *dis*, apart, and *seco*, to cut; *Fr. disséquer*.] To cut up; to cut in pieces, as an animal or vegetable, for the purpose of examining the structure or condition of its several parts; to anatomize. — To divide and examine minutely and carefully; to examine in separate parts or divisions.

"This paragraph, that has not one ingenious word throughout, I have *dissected* for a sample." — *Atherbury.*

Dissect'ed, *p. a.* Cut in pieces; separated; divided into its constituent parts; opened and examined.

(*Bot.*) Cut deeply into many lobes or divisions.

Dissect'ible, *a.* That may be dissected.

Dissec'tion, *n.* [*Fr.* from *Lat. dissectio*.] Act of dissecting or cutting in pieces an animal or vegetable, for the purpose of examining the structure or condition of its parts. — See *ANATOMY*.

—Act of separating into constituent parts for the purpose of critical examination.

Dissector, (*dis-sekt'er*) *n.* One who practises dissection; an anatomist.

Disseize, **Disseise**, (*dis-sē'zē*) *v. a.* [*Fr. déseaisir*; *L. Lat. desessire, dissagire*. See *SEIZE*.] To deprive of actual seizin or possession; to dispossess in a wrongful manner.

Disseizee', **Disseisee'**, *n.* (*Law.*) One who is wrongfully put out of possession of his lands; one who is disseised.

Disseizin, **Disseisin**, (*dis-sē'zin*) *n.* (*Law.*) The unlawful dispossessing a man of his land or estate, or interrupting his seizin. Every dispossession is not a disseisin. A disseisin, properly so called, requires an ouster of the rightful owner from the seizin or estate in the land, and the commencement of a new estate in the wrong-doer. — See *SEIZIN*.

Disseis'or, **Disseiz'or**, *n.* (*Law.*) One who puts another out of the possession of his land wrongfully; — opposed to *disseisee*.

Disseis/oress, Disseiz'oress, n. (Law.) A female disseisor.

Dissem'blance, n. [Fr.] Dissimilitude; contrariety to resemblance. (R.)

Dissem'ble, v. a. [Fr. dissimuler, to differ, not to be like; dissimuler, to feign, to disguise, from Lat. dissimulo—dis, and simulo, from similis, like.] To hide under a false appearance; to pretend that not to be which really is; to disguise; to conceal; to cloak; to cover; as, to *dissemble* one's sins.—To simulate; to pretend that to be which is not; to dissimulate; to feign.

—*v. n.* To assume a false appearance; to be hypocritical; to conceal the real fact, motive, intention, or state of any case; to hide actual sentiments under a pretentious mask; to play the deceiver; as, a *dissembling* tongue.

Dissem'bler, n. One who dissembles, or plays the hypocrite.

"Thou dost wrong me, thou *dissembler*, thou!"—*Shaks.*

Dissem'blingly, adv. Hypocritically; dissimulatingly; falsely specious; artfully; with deception.

Dissem'inate, v. a. [Lat. disseminare, disseminatus—dis, and seminare, to sow, from semen, seed. See SEMINARY.] To sow; to scatter, as seed;—hence, to scatter for growth and propagation, like seed; to spread abroad; to diffuse; to propagate; as, to *disseminate* heretical opinions.

—To disperse widely; to circulate; to spread over a large surface.

"The Jews are *disseminated* through all the trading parts of the world."—*Addison.*

Dissem'inated, p. a. (Min.) Occurring in small portions scattered about, or through some other substance.

Dissemina'tion, n. [Lat. disseminatio; Fr. dissémination.] Act of disseminating or scattering, and propagating like seed; the act of spreading and diffusing for growth and permanence; as, the *dissemination* of Christian principles.

Dissem'inative, a. Having a tendency to become dispersed, disseminated, or diffused.

Dissem'inator, n. One who disseminates, spreads, or propagates.

Dissen'sion, n. [Lat. dissensio. See DISSENT.] Difference of opinion or sentiment; disagreement in opinion; contrariety of sentiment or feeling; breach of friendship or union; contention; discord; strife; quarrel; altercation.

"Debates, *dissensions*, uproars, are thy joy."—*Dryden.*

Dissen'sions, a. Contentious; disposed to dissension; quarrelsome; factious; as, *dissensious* rumors.

Dissen'sionsly, adv. In a dissensions or factious manner.

Dissent', v. n. [Lat. dissentio—dis, and sentio, to think. See SENTIMENT.] To differ in sentiment or opinion; to disagree in opinion; to think in a different or contrary manner;—generally preceding *from*; as, to *dissent from* the premises advanced by another.—To differ; to be of a contrary nature.

"Shun as hurtful whatever *dissenteth* from it."—*Hooker.*

(*Eccl.*) To differ or separate from an established church, or form of state religion, whether as regards doctrines, rites, or government; as, a *dissenting* form of worship.

—*n.* Difference of opinion or sentiment; disagreement; declaration of disagreement in opinion; as, the majority expressed their *dissent* from the motion.

(*Eccl.*) A difference or separation from an established or state form of worship. It is the general name in England for those Protestants who disagree with the discipline or mode of worship of the Established Church. The principal of these are the Presbyterians, Wesleyans, Methodists, Independents, Baptists, and Friends. These, again, are split into numerous subdivisions. In Scotland, the more numerous classes of dissenters separated from the Church in 1740, and are generally known as *Seceders*, who are divided into *Burghers*, *Anti-Burghers*, *Original Burghers*, and *Original Seceders*. Besides these, there are those known under the name of *Relief-Church*, who originated in 1758, and the *Free Church*, which separated from the Established Church in 1842. The early Scottish dissenters are the *Episcopalian*s, and *Cameronians* or *Covenanters*, or *Reformed Presbyterian Synod*. The Jews and Roman Catholics are seldom included in the term dissenters. The first datum of dissent, as an important movement, is placed in the time of Edward VI., in 1548, when a controversy arose between the Church and Hooper by his refusing to be consecrated bishop in the robes, as heathenish. He was, however, consecrated without canonicals; hence the terms *Conformist*, and *Non-conformist*, the latter of which in Elizabeth's reign became merged in the term *Puritan*.

Dissent'neous, a. Inconsistent; contrary; denoting dissent or difference.

Dissent'er, n. One who dissents; one who differs in opinion, or one who declares his disagreement; a dissident.

(*Eccl.*) One who separates from the doctrines, ritual forms, &c. of an established or state church.

Dissent'erism, n. The governing religious opinions or principles of dissenters; the spirit of the doctrine of dissent.

Dissentient, (dis-sen'shent), a. Disagreeing; dissenting; declaring contrary opinions or sentiments; as, the bill passed without a *dissentient* voice.

—*n.* One who dissents, or declares his dissent from, or antagonism to; one who disagrees with.

Dissert'ional, a. Relating or pertaining to dissertations; disquisitional.

Dissert'ionist, n. One skilled in the practice of dissertations; a writer of dissertations.

Dissen'tious, a. Exhibiting dissent from, or disagreement; disposed to act contrarily.

Dissep'im'ent, n. [Lat. dissepimentum.] A partition; a dividing tissue.

(*Bot.*) One of the partitions that are found in the ovary by the united sides of the cohering carpels, and which separates the inside into cells. Also called *Septum*, pl. *Septa*. True dissepiments must always be equal in number to the carpels of which the compound pistil is compounded, as in the pistil of a *Saxifrage*, composed of two carpels or simple pistils, united below, but distinct above; represented, in fig. 835, cut across both above and below.

Dissert', v. n. [Fr. disserter; Lat. disserere.] To dissertate; to discourse.

Dis'sertate, v. n. To practise dissertation; to indulge in disquisition or discourse.

Disserta'tion, n. [Fr.; Lat. dissertatio, from disserto, dissertatus, frequent, from dissero, to set or plant asunder—dis, and sero, ser-tum, to sow, to plant, to set or fix in.] An argumentative conversation; a discussion, or rather a formal discourse, intended to illustrate a subject; a written essay, treatise, or disquisition; as, a *Dissertation* on the Poets.

Dis'sertator, n. [Lat.; Fr. dissertateur.] A dissertationist; one who writes a dissertation; a debater; one learned in disquisition.

Disserve', v. a. To do an ill service, or bad office; to work a mischief to; to injure; to hurt; to harm.

"He took the first opportunity to *disserve* him."—*Clarendon.*

Disser'vice, n. An ill service; an injury, hurt, harm, or mischief.

Disser'viceable, a. Injurious; mischievous; hurtful; disposed to work harm rather than good service.

Disser'viceableness, n. State or quality of being disserviceable.

Disser'viceably, adv. In an injurious or hurtful manner;—opposed to *serviceably* or *beneficially*.

Disset'tlement, n. Act of rendering unsettled.

Dissever', v. a. [Dis-, augment., and sever, q. v.; O. Fr. desseverer.] To part in two; to divide asunder; to separate; to disunite; as, to *dissever* a connection.

Dissever'ance, n. Act of dissevering, sundering, or separating; a dividing from; as, the *disseverance* of the Catholic and Protestant Churches.

Dis'sidence, n. [See DISSENT.] Dissent; disagreement; want of uniformity; separation from established religious worship.

Dis'sident, a. [Lat. dissideo, dissidens—dis, and sideo, to sit. See SEAT.] Separated; divided; not agreeing; dissenting.

—*n. (Eccl.)* One who disagrees or dissents; a dissenter; one who separates from an established form of religion.

—*pl. (Eccl. Hist.)* A term applied in Poland to those dissenters from the established religion (Catholic) who, under the old republic, were allowed the free exercise of their faith; including Lutherans, Calvinists, and Greeks, but excluding various minor sects. Their rights were fixed by the Religious Peace (*pax dissidentium*) of 1573, but they were infringed upon in the 18th century by various princes. They were supported in demanding the repeal of these restrictions by Russia and Prussia (in 1766), and hence those powers acquired one of their favorite pretexts for interference in the affairs of the Polish nation. Their rights were restored in 1775, with some exceptions; but after the Russian conquest they were placed on the same footing with the Catholics.

Dissil'ience, n. [From Lat. dissilio, dissiliens—dis, and salio, to leap.] Act of leaping or springing asunder; act of bursting or starting in two.

Dissil'ient, a. [Lat. dissiliens.] Starting or bursting asunder; breaking and opening in two with an elastic force.

Dissilation, (dis-sil-ish'un), n. Dissilience.

Dissim'ilar, a. [Lat. dissimilis—dis, and similis, like. See SIMILAR.] Unlike in nature, qualities, properties, or outward form; not similar; incongruous; not having the resemblance of; heterogeneous; as, good is *dissimilar* to bad.

Dissimilar'ity, n. Unlikeness; want of resemblance; incongruity; dissimilitude.

Dissim'ilarly, adv. In a dissimilar or opposite manner.

Dissim'ile, n. (Rhet.) Exemplification or illustration by contrary parts or principles.

Dissim'ilitude, n. [Lat. dissimilitudo.] Want of resemblance; unlikeness; dissimilarity.

(*Rhet.*) A dissimile.

Dissim'ulate, v. a. To dissemble; to feign. (R.)

Dissim'ulation, n. [Fr.] Act of dissembling; act of concealing something which exists; deceit; hypocrisy; simulation.

Dissip'able, a. Easily scattered or dispersed; liable to be dissipated or squandered; as, the *dissipable* heat of plants.

Dissip'ate, v. a. [Lat. dissipare, dissipatus—dis, and obsoleto suppo, to throw.] To spread abroad; to scatter; to disperse; to drive asunder; to dispel; as, to *dissipate* an illusory idea.—To scatter in wasteful extravagance; to squander; to spend profusely; to consume; as, to *dissipate* a fortune.

—*v. n.* To scatter; to disperse; to separate into parts and

Fig. 835.
PISTIL OF SAXIFRAGE.

cause to disappear; to vanish into space; as, the heat of the sun *dissipates* vapor.—To be extravagant, vicious, and reckless in the pursuit of enjoyment; to be wastefully luxurious in self-indulgence.

"A life irregular and *dissipated*."—*Johnson.*

Dissipation, n. [Fr., from Lat. dissipatio.] Act of dissipating, or scattering profusely; dispersiou; state of being dispersed.

"Now foul *dissipation* follow'd, and fore'd rout."—*Milton.*

—Act of squandering or wasting; waste; a dissolute, irregular course of life and morals; a wandering from object to object in search of pleasure; as, the *dissipations* of society.—That which diverts or calls off the mind from any subject.

"I have been prevented from finishing my letters... by a thousand avocations and *dissipations*."—*Swift.*

—A state of scattered or desultory attention.

Dissociability, (dis-so-she-a-bil'e-ty), n. Unsociableness; state of keeping one's self to one's self.

Disso'ciable, a. [Lat. dissociabilis.] Mixed; without proper affinity; incongruous; as, *dissociable* elements.

—Without sociable tendencies; unsuitable, or disinclined to social intercourse.

Disso'cialize, v. n. To disrupt; to cause to become unsociable or inharmonious.

Dissociate, (dis-so'she-at), v. a. [Lat. dissocio, dissociatus—dis, and socio, to unite. See SOCIAL.] To separate, as from society, fellowship, or company; to disunite; to part association or connection.

Dissociation, (dis-so-she-a'shun), n. [Lat. dissociatio.] A state of separation; disunion; want of amalgamation.

(*Chem.*) By selecting a proper compound and heating it sufficiently, the distance between the molecules can be increased to such an extent that they will separate into their elementary condition. This is a spontaneous decomposition, not determined by any chemical action, and that to which Henri St. Claire-Deville, who discovered it in 1857, gave the name of *Dissociation*. M. Deville's law gives a rational explanation of the action of mass, i. e., to the action of two bodies which mutually chase each other from a compound, the one which is in excess taking the place of the other. M. Deville has been led to conclude, from his experiments, that in the decomposition of bodies by heat the phenomena are the same as in the vaporization of liquids. As the change of a liquid to the gaseous state requires a certain quantity of heat, which is entirely absorbed (becomes latent), so in the same manner a compound body, in order to be reduced to its elements, absorbs a quantity of heat equal to that which it disengages when it is recombined. Suppose, for example, that we heat the vapor of water to 120° C. in a large excess of chlorine (water being composed of oxygen and hydrogen), a small quantity of hydrogen and oxygen will be liberated. The free hydrogen has a tendency to combine either with the chlorine or the oxygen, but the oxygen being present in very feeble quantities, as compared with the chlorine, it is with the latter element that the greater part of the hydrogen will unite; if this process be continued, as more water is destroyed than is reconstructed, in course of time the whole of the water will be transformed into hydrochloric acid. If, on the other hand, we heat hydrochloric acid in a great excess of oxygen, the hydrogen dissociated from the acid will combine with the oxygen and the hydrochloric acid will be transformed into water and free chlorine. The phenomena are the same, but in an inverse order.—According to Dumas, the "phenomenon of Dissociation is one of the most important acquisitions, not only to chemistry but to natural philosophy, made in modern times. It has opened a new path to scientific research by intimately allying chemical decompositions to the purely physical phenomena of the formation of vapors; and assumes that there exists a tension of decomposition analogous to the tension of vapors, and that the evaporation of a liquid, or the decomposition of a carbonate, is effected by virtue of the same laws. What Dalton's law of the tension of vapors was to physics, is Deville's law of the tension of dissociation to chemistry." From experiment made in 1866, and published in 1867, it appears that the theory of dissociation is capable of extended application throughout the whole field of metallurgy. When better known, this theory will certainly receive extensive application in the reductions of bodies to their elementary conditions, in the preparation of pure gases, in metallurgical operations, &c. Some 30 years ago, in this country, the American geologist Sterry Hunt had recourse to Deville's theory in explanation of the origin of rocks, and the action of forces in primeval chemistry.

Dissociation, (dis-so'she-a'shun), n. [Lat. dissociatio.] A state of separation; disunion; want of amalgamation.

(*Chem.*) By selecting a proper compound and heating it sufficiently, the distance between the molecules can be increased to such an extent that they will separate into their elementary condition. Dissociation, (dis-so'she-a'shun), n. [Lat. dissociatio.] A state of separation; disunion; want of amalgamation.

(*Chem.*) By selecting a proper compound and heating it sufficiently, the distance between the molecules can be increased to such an extent that they will separate into their elementary condition. This is a spontaneous decomposition, not determined by any chemical action, and that to which Henri St. Claire-Deville, who discovered it in 1857, gave the name of *Dissociation*. M. Deville's law gives a rational explanation of the action of mass, i. e., to the action of two bodies which mutually chase each other from a compound, the one which is in excess taking the place of the other. M. Deville has been led to conclude, from his experiments, that in the decomposition of bodies by heat the phenomena are the same as in the vaporization of liquids. As the change of a liquid to the gaseous state requires a certain quantity of heat, which is entirely absorbed (becomes latent), so in the same manner a compound body,

or of separation of parts. — Act of liquefying or changing from a solid to a fluid state by heat or moisture: a melting; a thawing. — The resolution of a body into its constituent elements: decomposition; as, the *dissolution* of a compound. — Death; separation of the soul and body. — The life of a man is always . . . declining towards *dissolution*.
— *Raleigh*.

Separation of the parts which compose a connected system or body; destruction; ruin: as, the *dissolution* of an empire. — The breaking up of an association or assembly, or the putting an end to its existence: as, a *dissolution* of Congress, a *dissolution* of partnership. — State of undergoing liquefaction.

"I am as subject to heat as butter; a man of continual *dissolution* and thaw." — *Shaks*.

The substance, or product formed by dissolving a body. Dissolve the iron in the aqua-fortis, and weigh the *dissolution*.
— *Bacon*.

Looseness of morals; laxity of discipline: dissipation. (R.)

"An universal *dissolution* of manners began to prevail."
— *Atterbury*.

D. of the blood. (Med.) That condition of the vital fluid in which it does not readily coagulate on its cooling out of the body, as in the case of malignant fever.

issolvability, *n.* Solubility; state of being dissolved.

issolvable, *a.* That may be dissolved. — Capable of being melted, or converted into a fluid.

issolvableness, *n.* Dissolvability; capacity of being soluble.

issolve, (*diz-zól'*) *v. a.* [Lat. *dissolvo* — *dis*, and *solveo*, to loose or free. See *SOLVE*.] To loosen asunder; to separate; to break up; to disunite.

"Down fell the duke, his joints *dissolv'd* asunder." — *Fairfax*.

To melt; to liquefy; to convert from a solid or fixed state to a fluid condition. — To loose the ties or bonds of anything; to loose; to relax; to deprive of force or rigor.

"Angels *dissolv'd* in balleanjahs lie." — *Dryden*.

To break up; to destroy; to separate; to put an end to; as, to *dissolve* a meeting. — To solve; to clear; to resolve; to explain away, as doubts.

To waste away; to consume; to cause to vanish, or perish.

(Law.) To annul; to rescind; as, to *dissolve* a writ of error.

Dissolved blood. (Med.) Blood that does not quickly coagulate.

n. To be melted or liquefied; to be resolved from a solid to a fluid state; as, wax *dissolves* by heat.

To sink or vanish from sight; to fall to nothing; to fade into oblivion; as, a *dissolving* view. — To melt away in pleasure; to become soft or languid; as, *dissolved* in diss. (Used in a figurative sense.)

ssolvent, *n.* [Fr. *dissolvant*; Lat. *dissolvens*.] That which has the power of dissolving or melting; a solvent.

(Med.) A medicine capable of dissolving bodily swellings, concretions, &c.

Having melting or solvent properties; as, the *dissolving* juices of the stomach.

ssolver, *n.* The person who, or thing which, has the power of dissolving.

ssonance, *n.* [Fr., from L. Lat. *dissonantia*, from *dissono* — *dis*, and *sono*, to sound.]

The effect produced from the union of two sounds not in concordance with each other. Thirds and sixths were anciently considered as dissonances; in fact, every chord except the perfect concord is dissonant. Formerly there were an unlimited number of dissonances, but they are at present reduced to a comparatively small number.

Disagreement; incongruity; want of harmony or consistency; as, the *dissonance* of contradictory reports.

ssonant, *a.* [Fr., from Lat. *dissonans*.] Discordant sound; harsh and displeasing to the ear; inharmonious; as, a *dissonant* strain. — Without fitness or conformity; disagreeing; — generally preceding *from*; as, *ssonant* from reason.

ssuade, *v. a.* [Fr. *dissuader*, from Lat. *dissuado* — *dis*, and *suadeo*, to advise or exhort. See *STATION*.] To advise or exhort against; to persuade from; to divert from by the agency of convincing or dehortative means. To make averse to; to divert by bias or prejudice. — To represent anything as unfit or dangerous, and hence deter from.

War . . . open or conceal'd, alike my voice *dissuades*. — *Milton*.

ssuader, *n.* One who dissuades, or deters from.

ssuasion, (*dis-swā'zhun*), *n.* [Fr., from Lat. *dissuasio*.] Act of dissuading; reason, argument, or counsel employed to deter one from a measure or purpose.

ssuasive, (*dis-swā'siv*), *a.* That which dissuades or tends to deter from; dehortation.

Dehortatory; having the power to dissuade from a measure, design, or purpose; as, *dissuasive* counsel.

ssuasively, *adv.* In a way to dissuade or deter.

ssuatory, *a.* Dissuasive.

ssunder, *v. a.* To snuder; to divide. (R.)

ssyllabic, *a.* [See *SYLLABLE*.] Comprising two syllables only; as, a *disyllabic* word.

ssyllabification, *n.* Act of forming into two syllables.

ssyllabify, *v. a.* [Eng. *dissyllable*, and Lat. *facere*, form.] To form into two syllables.

ssyllabize, *v. a.* Same as *DISSYLLABIFY*, *q. v.*

ssyllable, *n.* [Fr. *dissyllabe*, from Gr. *dis*, and *syllabos*, a syllable.] A word consisting of two syllables only, as *de-vote*.

ssympathy, *n.* Lack of sympathy; indifference. (R.)

staf, *n.* [A. S. *distæf*, corrupted from *toro*, and

staf, a staff. See *Tow*.] The staff to which a bunch of

Fig. 836. — DISTAFF.

it, and as engaged in spinning the thread of life. It has ever been considered as the peculiar emblem of feminine (as opposed to male) occupations, and has come to be used figuratively for a woman. Thus, the French say, "The crown of France never falls to the *distaff*."

Distaff-thistle, *n.* (Bot.) The *Carthamus lanatus*, a species of thistle, used in the S. of France and in Spain for making distaffs.

Distain, *v. a.* [O. Fr. *destrindre*; Fr. *déteindre*; Lat. *dis*, and *tingo*, to dye. See *TINGE*.] To sully; to stain; to tarnish; to smear; to blot; to color or tinge with any color but the natural or proper one. (Poetically used.)

"Place on their heads that crown *distain'd* with gore." — *Pope*.

Distal, *a.* (Anat.) Applied to the aspect of a bone from the trunk, or towards the extremity.

Distally, *adv.* Distantly; near the end of.

Distance, *n.* [Fr., from Lat. *distantia*, from *dis*, and *stans*, to stand apart. See the verb.] Remoteness in place; as, the *distance* is not far. — Interval or space between two objects or things.

Interval, space, or length of time; any indefinite length of time, past or future, intervening between two periods or events; as, a *distance* of twenty years.

The remoteness which respect imposes in certain cases; hence, respect, reserve, coldness, ceremoniousness of manner; as, he keeps his inferiors at a *distance*. — Contrariety; opposition; antagonism.

"Banquo . . . is mine (enemy); and in such bloody *distance*." — *Shaks*.

Remoteness in succession or relation; as, the *distance* between ancestor and descendant. — Coldness; alienation of heart; reserve; retraction of kindness or esteem.

"On the part of heav'n, now alienated, *distance* . . . given." — *Milton*.

Space kept between two antagonists, in fencing or in a duel. — Ideal separation; mental or social disjunction.

"There is no separation, no *distance* between them." — *Locke*.

(Sports.) In horse-racing, a space marked on the course on which horses run, being a length of 260 yards from the winning-post. Any horse is said to be *distanced*, which has not arrived at this distance in the first heat, before the leading horse has reached the winning-post; in which case such horse is disqualified to run in the remaining heats.

"This horse run the whole field out of *distance*, and won the race." — *L'Estrange*.

(Mil.) Space between separate bodies of troops; — in contradistinction to *interval*.

(Mus.) The interval between two notes of the scale.

(Paint.) The utmost extent to which the power of vision can reach, or the limit of view. — *Extreme distance* is the visible horizon of the observer, in which the land and sky appear to meet; and *middle distance* is that part which lies midway between the extreme distance of the picture and the foreground.

Angular distance, apparent distance between the angle dividing two bodies.

Distance, *v. a.* [Fr. *distancer*; Lat. *disto*, *distans*; *dis*, and *sto*, to stand.] To separate from; to place remote; as, being then ten miles *distanced* from my pursuers.

— To throw off from the view; as, to *distance* an object.

(Sport.) To win a race by great superiority of speed; to leave at a considerable distance behind; to surpass by fleetness or dexterity; as, a horse *distanced* by six lengths, one who *distances* his competitors, &c.

Distaut, *a.* [Fr., from Lat. *distans*.] Remote; separate; having an intervening space of any indefinite extent. — Remote in place or in time; not near; far; remote in the line of succession or descent; indefinitely; remote in natural connection or consanguinity. — Remote in nature; not allied; not agreeing with or in conformity to. — Remote in view; remote in connection. — Not easily seen or understood; indirect; indistinct; faint; reserved; implying haughtiness, coldness of affection, indifference, or disrespect; cool; shy.

Distantly, *adv.* Remotely; at a distance; with reserve.

Distaste, *n.* Dislike of food or drink, in a greater or less degree; disrelish; aversion of mind; alienation of affection; dislike; displeasure; dissatisfaction; disgust. — *v. a.* To have an aversion of the taste for; to disrelish; to dislike; to loathe.

Distasteful, *a.* Unpleasant or disgusting to the taste; nauseous; loathsome; causing disgust; proceeding from, or attended with, disgust or opposition; offensive; displeasing; dissatisfactory.

Distaste'fully, *adv.* In a distasteful manner.

Distaste'fulness, *n.* Quality of being distasteful; disagreeableness; dislike.

Distemper, *n.* [Fr. *détrempe*.] Any morbid state of an animal body, or of any part of it; disorder; disease; sickness; malady. — Bad constitution of the mind. — Undue predominance of a passion or appetite.

(Paint.) The coloring-matter used in scene-painting, and for printing and staining paper-hangings. A mixture is made of whitening and coarse size, in the proportion of ten parts of the former to one of the latter, to which the required color is added when it has been diluted with a little water, and brought to a consistency resembling cream. *D.* colors dry very rapidly, and should be slightly warmed before they are used. This method is sometimes used in coloring the walls of houses externally, and the interior of rooms.

(Canine Pathology.) A disease to which young dogs are liable. It is considered to be a typhoid inflammation, affecting the upper air-passages. It closely resembles the *strangles* of young horses; and the *scarlatina*, and such like diseases, to which young children are liable. The disease is contagious, occurs generally only once in a lifetime, runs a definite course, and is accompanied by low fever and debility. Careful attention to nursing and diet constitutes the most successful treatment of this disorder. A dog with the *D.* is easily recognized. The eyes become red, weak, and watery; the nose hot and dry; any movement in the air excites a cough or sneeze; and there is a general dullness, fever, and loss of appetite. The running from the nose, as the disease proceeds, becomes, after some days or weeks, mucous or purulent, loading the eyes and obstructing the nostrils. It then lodges in the bronchial tubes, preventing the free access of air and the purification of the blood. In the cure of *D.*, all irritating and reducing remedies must be avoided. If the stomach is overloaded, it should be relieved by a mild emetic; and if no effect is produced by the dose, it should be repeated in twenty minutes. To ward off *D.*, young dogs should be very liberally and nutritiously fed. In such cases, if, in spite of all care, they are attacked with *D.*, they are almost certain to pass over it very favorably. Nothing proves the prophylactic effect of pure air and voluntary exercise more than that young hounds at their walks are seldom attacked by *D.* Inflammation of the lungs is often the consequence of *D.*, and the bowels are always more or less affected by diarrhoea and dysenteric discharges, often indicating ulceration of the intestinal canal. Protracted cases of *D.* are sometimes attended by a pustular eruption on the chest and abdomen, accompanied by an hepatic affection usually called the *yellow disease*, from its giving the whole surface of the skin a yellowish color. The symptoms in such cases are generally fatal. *D.* is communicated by contact of the diseased catarrhal secretion.

Distemper, *v. a.* To disease; to disorder; to derange the functions of the body or mind. — To disturb; to ruffle; to deprive of temper or moderation.

Distemperature, *n.* Intemperateness; excess of heat or cold, or of other qualities. — A noxious state; violent tumultuousness; outrageousness. — Perturbation of mind; confusion. — Loss of regularity; disorder.

Distempered, *p. a.* Diseased in body, or disordered in mind; disturbed; ruffled.

Distemperedness, *n.* The state of being distempered.

Distempering, *n.* (Paint.) The art or process of painting in distemper.

Distend, *v. a.* [Fr. *distendre*, from Lat. *distendo* — *dis*, and *tendo*, to stretch, or stretch out.] To stretch out; to dilate; to extend; to expand; to swell. — To stretch or spread in all directions; to spread apart or abroad.

— *v. n.* To dilate; to spread in all directions.

Distensibility, *n.* Quality of being distensible.

Distensible, *a.* Capable of being distended or dilated.

Distensive, *a.* That distends, or may be distended.

Distension, or **Distention**, *n.* [Fr., from Lat. *distentio*.] Act of distending; state of being distended; act of stretching in breadth, or in all directions; expansion. — Extent of space occupied by the thing distended. — An opening, spreading, or divarication.

Dis'thene, *n.* [Gr. *dis*, and *sthenos*, strength.] (Min.) A name given by Haily to Kyanite, in consequence of its double electric powers; some crystals becoming negatively, and others positively, electric by friction.

Distich, (*dis'tik*), *n.* [Fr. *distique*, from Gr. *distikos*.]

(Pros.) A couple of verses or poetic lines making complete sense. The term is principally applied to the hexameters and pentameters used among the Romans, especially by Ovid and Catullus. Among the Greeks and Romans the *D.* was used as a vehicle for the expression of definite sentiments, and especially for epigram. Goethe and Schiller, together with other great poets of Germany, have, in later years, shown a great predilection for the *D.*, and great skill in using it.

Distichiasis, *n.* [Gr. *dis*, and *stixos*, a row.] (Med.) A double row of eyelashes, the innermost of which excites a constant irritation of the eye. The term *trichiasis* is generally applied to this malformation.

Distichous, (*dis'tik-us*), *a.* (Bot.) Disposed in two rows; producing leaves or flowers in two opposite rows.

Distil, *v. n.* [Fr. *distiller*, from Lat. *distillo* — *de*, and *stillo*, to drip.] To drop down; to fall in drops; to drip; to trickle down; to flow gently, or in a small stream. — To use a still; to practise distillation.

— *v. a.* To let fall in drops; to throw down in drops. — To extract by heat; to separate, as spirit or essential oils from liquor, by heat or evaporation; to extract spirit from, by evaporation or condensation. — To extract, as the pure part of a fluid.

Distillable, *a.* That may be distilled.

Distillation, *n.* [Fr., from Lat. *distillatio*.] (*Chem.*) The process of evaporating a fluid by means of heat, and afterwards condensing it into a liquid. Its object is to separate one substance from others with which it may be mixed; and the possibility as to whether a substance can be distilled depends upon the temperature at which it evaporates. It is not known when distilled spirits were first made; but the discovery is usually attributed to the alchemists, who called it *aqua vitæ*. In the laboratories, *D.* is commonly performed by means of a still like that represented in Fig. 837, in which A is a copper

Fig. 837. — COMMON STILL.

boiler containing the water to be distilled; B is the head of the still, which lifts out at *b*, and is connected by the neck C with the worm D, a pewter pipe coiled round in the tub E, and issuing at F. The steam from the boiler, passing into the worm, is condensed to the liquid state, being cooled by the water in contact with the worm; this water becoming heated, passes off through the pipe G, being replaced by cold water, which is allowed to enter through H. A rosette gas-burner, K, on Bunsen's principle, is very convenient for a small still of that description.

(*Applied Chem.*) The process of *D.* is carried on upon the most extensive scale for the production of ardent spirits in the distilleries. Under the words Alcohol, Fermentations, Wine, &c., will be found some details bearing upon the nature, sources, and production of spirituous liquors; in the present article, therefore, we shall limit ourselves to an outline of the different processes of *D.* — There are two distinct operations in the production of ardent spirits: the one is the conversion of certain vegetable principles into alcohol; and the other, the separation of the alcohol from the other substances with which it is necessarily blended during its production. The vegetable principle which is essential to the formation of alcohol is *sugar*; and this is sometimes used *directly*, as where molasses and analogous saccharine products are subjected to immediate fermentation; or it is *indirectly* obtained by subjecting amylaceous grains to certain processes, by which the starch they contain is first converted into sugar, and then that sugar afterwards alcoholized. In our distilleries the latter alternative is adopted; and various kinds of grain, but chiefly corn, barley, wheat, and rye, with more or less malt, are subjected to the operation of *mashing*. For this purpose the ground grain and the bruised malt are duly mixed, and infused under constant agitation in a proper quantity of hot water in the *mash-tun*; the wort is then run off, and fresh water added, till the soluble materials of the grain are extracted. The mixed worts, or *wash*, thus obtained, is run into the fermenting vats, where, mixed with a small quantity of yeast, it is subjected to the process of fermentation, which continues from six to ten or twelve days, the time required for its completion varying with the mass of liquid, and with the temperature of the atmosphere. During *mashing*, the starch passes into sugar, and during fermentation the sugar changes into alcohol; the consequence of which is, that the wash gradually decreases in density, or *attenuates*; and as soon as this attenuation has reached its maximum, which may be determined by the hydrometer, it should be distilled in order to prevent the commencement of acetic fermentation. In all large distilleries there are two sets of stills: one for the purpose of distilling from the wash a weak spirit, technically called *low wines*; and the other for re-distilling (or *rectifying*) the low wines. In these *D.* there passes over, along with the first and last portions of the spirits, a peculiar volatile oil of a disagreeable flavor and odor, and rendering the weaker spirit milky. These portions are called *faints*, and are carefully turned into separate receivers as soon as the appearance of the runnings from the worm end indicates their presence. It is not our province here to enter into an elaborate description of the extensive apparatus used in the process of *D.*; it will suffice to say, that, however complicated some of their parts may seem, they are always constructed on the principle of the small still represented in Fig. 837. Some stills have a working capacity of distilling 3,000 galls. per hour. The quantity of alcohol which may be obtained from a given quantity of sugar will depend upon the skill and care with which

mashing, fermentation, and distillation have been respectively conducted; theoretically, 100 pounds of sugar are convertible into about 51 of alcohol and 49 of carbonic acid. The quantity of alcohol to be procured from different kinds of grain will also depend upon the same causes, and upon the quantity of sugar, and of starch and gum convertible into sugar, which each may contain. According to Hermstedt, 100 pounds of starch should yield 35 pounds of real alcohol; and 100 pounds of the following grains should yield the following quantities of spirit of the specific gravity of 0.9427; that is, of spirit containing 45 per cent. of real alcohol; name, y. wheat 40 to 45 pounds, rye 36 to 42, barley 40, oats 36, buckwheat 40, maize 40. Sometimes, though rarely, malt only is used in the distillery, in which case the distiller calculates on obtaining two gallons of whisky of proof-strength from each bushel of malt.

D., *destructive*. See DESTRUCTIVE DISTILLATION.

Distillatory, *a.* [Fr. *distillatoire*.] Pertaining to distillation; used in the process of distilling; as, "distillatory vessels."

Distilled, *a.* Formed by distillation.

D. Water. See WATER.

D. Waters. The name usually given to the combined results of the distillation of aromatic plants along with water, as rose-water, lavender-water, &c.

Distiller, *n.* One who is employed in the process or practice of distilling spirits by evaporation and condensation; one who distils; as, a brandy distiller.

Distillery, *n.* [Fr. *distillerie*.] The building or manufactory where the business of distilling is carried on.—Distillation. (*R.*) — See DISTILLATION.

Distilment, *n.* That which distils. (*R.*)

Distinct, *a.* [Fr., from Lat. *distinctus*, from *distinguo*. See DISTINGUISH.] Separated by points; having the difference marked or specified; set apart by a visible sign, or by a note or mark.—Not the same in number or kind; different.

"Fatherhood and property are distinct titles in distinct persons." Locke.

—Separate in place; being apart; not conjunct.

"A happiness distinct from that of our bodies." Tillotson.

—Spotted; variegated; having a distinguishing mark.

—Clear; plain; obvious; unconfused; definite; as, to have a distinct understanding, a distinct view.

Distinction, (*dis-tink'shun*), *n.* [Fr.] The act of separating or distinguishing; difference made; division; separation; as, "the distinction of tragedy into acts."—Dryden.—A separation or disagreement in kind or qualities, by which one thing is known from another; difference in quality; substantial difference; as, the distinction between mankind and the brute species.—Discernment; discrimination; judgment; acumen.—Difference in regard to treatment; preference or neglect in comparison with something else.

"Maids, women, wives, without distinction fall." Dryden.

—Notation of difference between things of an apparently like nature; distinguishing quality.

"This distinction of real and apparent good." Norris.

—Elevation or rank in society, or elevation of character or genius; honorable estimation; superiority; rank; eminence; as, a person of distinction.

Distinctive, *a.* [Fr. *distinctif*.] That makes distinct; that marks distinction or difference; as, a distinctive name or title.

—Having the power to distinguish and discern; judicious; critical; discriminating.

Distinctively, *adv.* With distinction; unconsciously; plainly; perspicuously.

Distinctiveness, *n.* State or quality of possessing distinction.

Distinctly, *adv.* In a distinct manner; clearly; plainly; obviously; not confusedly or dubiously; as, to see distinctly.

Distinctness, *n.* Quality or condition of being distinct or apart; separation or difference obviating confusion or discrepancy in judging of parts or things; as, the distinctness of the sexes.—Plainness; clearness; perspicuousness; precision; nice observation and discrimination in noting or marking differences; as, distinctness of vision.

Distincture, *n.* Distinctness.

Distignish, (*dis-ting'gish*), *v. a.* [Lat. *distinguo* — *dis*, and *stinguo*, from the root *stig*; Gr. *stigō*, *stixō*, to prick.] To separate by points; to ascertain and indicate difference by some external mark or sign.—To indicate by some characteristic feature; to point or mark out by some peculiarity.

"Nor can we be distinguished by our faces, for man or master." Shaks.

—To separate or divide by any mark or quality that constitutes difference; to discern critically; to discriminate; to judge; as, to distinguish a good poem from a bad one.

—To separate from others by some mark of honor or preference; to make eminent or known; to signalize; to honor; as, distinguished services.—To constitute a difference in; to specify; to create a wide distinction from another.

"The great and distinguishing doctrines of our religion."—Locke.

n. n. To make a distinction or distinctions; to find or show the difference.

Distinguishable, (*dis-ting'gish-a-bl*), *a.* Capable of distinction; that may be distinguished; susceptible of being separated, set apart, or made known; as, good is distinguishable from evil.—Worthy of note; meriting special favor or regard; as, distinguishable talents.

Distinguishableness, *n.* State or quality of being distinguishable.

Distinguishably, *adv.* In a distinguishable manner.

Distinguished, *p. a.* Separated from others by be-

ing superior or extraordinary in some respect; marked; noted; celebrated; conspicuous; eminent; illustrious; as, a distinguished scholar.

Distinguishedly, *adv.* In a distinguished manner; eminently.

Distiguisher, *n.* The person who, or thing which distinguishes, or creates a difference.—A close, critical and judicious observer.

Distignishing, *p. a.* Constituting distinction; difference from everything else; characteristic; peculiar; as, a distinguishing feature.

Distignishingly, *adv.* Having distinction; with some mark of distinguishing preference.

Distignishing-pennant, *n.* (*Naut.*) A pennant especially used to direct attention to signals from the admiral's or commodore's ship.

Distignishment, *n.* Distinction; observation; appreciation of difference.

Distigle, *v. a.* To deprive of legal title; to disqualify.

Distoma, *n.* [Gr. *dis*, and *stoma*, mouth.] (*Zoöl.*) genus of *Entozoa* or intestinal worms, order of *Nematodes*. The species are numerous, inhabiting the alimentary canal, or organs of digestion, of birds, fishes, and mammals. Some of them are very minute, others are four or five lines long, and half a line broad. The body generally soft, depressed, or cylindrical, and furnished with two distinct and isolated suckers, the anterior which surrounds the mouth, the other being situated on the ventral surface between the middle and anterior sixth of the body. The best known is the Fluke, *D. paticum*, which occurs in the liver of the sheep, and the cause of the disease, so fatal to them, called the *bilious*. They are found also in the gall-bladder and hepatic duct in man, and occasionally in the ox, horse, &c. The genus *D.* is synonymous with *Fasciola*.

Distort, *v. a.* [Lat. *distorqueo*, *distortus* — *dis*, and *torqueo*, to twist. See TORTURE.] To twist or turn in different ways; to turn or twist out of natural or proper shape; to deform; as, a distorted limb.—To force put out of the true direction or posture.

"Envy and revenge . . . distort the understandings of men." Tillotson.

—To turn aside or pervert from the true meaning; as, to distort the sense of another's speech.

Distorter, *n.* He who, or that which, distorts or perverts.

Distortion, (*dis-tor'shun*), *n.* [Fr. *distorsion*, from Lat. *distortio*.] Act of distorting or wresting; a deforming out of regular shape; a writhing or twisting; a distortion.—State of being deformed or twisted out of shape; crookedness; grimace; a perversion of the true meaning of words.

"The bellows and distortions of enthusiasm."—Addison.

(*Surg.*) A permanent deviation from the natural shape or position of the body, producing visible deformity. may arise from several causes. It generally occurs at birth, and thus differs from deformity, which is for the most part congenital. *D.* is frequently occasioned by affections of the muscles or nerves. It is well known that every movable part of the body is furnished with two sets of muscles acting in contrary directions, by means of which it is not only moved, but also retained in its natural position. Hence it is evident that, if, by means of injury to one of these sets of muscles, or of the nerves communicating with them, their contractility is destroyed or impaired, the part can no longer be maintained in its natural position, but will be drawn towards the antagonistic muscle. In this way various kinds of lameness, wry neck, squinting, &c., are produced. The most common cause of *D.*, however, is disease of the bones. These are sometimes deficient in the earthy matter which gives them hardness and rigidity, and thus are incapable of supporting the weight of the parts which they are designed to bear, or of sustaining the muscular action, without becoming bent and distorted. From this arises the disease known as *rickets*, *q. v.* The *D.* known as *lateral curvature of the spine* arises from weakness of the vertebral muscles, inducing a habit of resting the weight of the body more on one side than on the other. Unlike rickets, which commence early, this does not usually make its appearance before the tenth year, and is commonly found among slender and delicate females in the higher and middle ranks of life. It is generally occasioned by too much confinement and restraint, and is best got rid of by plenty of free exercise of the limbs in the open air. *Angular curvature of the spine* differs entirely from the above, and is occasioned, for the most part, by ulceration of the body of one or more of the vertebrae. The support in front being thus lost, the spine is bent sharply forwards, and one or more of the spinal processes project behind. Perfect rest in the horizontal position, issues and setons in the neighborhood of the diseased bone, and attention to the general health, is the treatment to be adopted in this case. Diseases of a similar kind frequently occur in the bones and joints of other parts of the body, and require similar treatment. *D.* may also arise from a variety of other causes, as rheumatism, gout, burns, and various chronic and local affections; but these come more properly for consideration under their own heads.

(*Phot.*) A term applied to the unnatural increase in size of certain parts of the picture. *D.* may arise from several causes: such as using too small a lens; not using a sufficiently large diaphragm or stop; by approaching the object too closely; or by the lens itself being improperly connected.

Distortive, *a.* Forming or having distortions.

Distorter, *n.* [From Lat. *distorqueo*, to wrest as.] (*Anat.*) A muscle, the office of which is to draw the mouth awry.

Distraht, *v. a.* [Lat. *distraho*, *distractus* — *dis*, to

traho, to draw. See TRACT.] To draw or pull asunder or apart; to separate forcibly; to pull in different directions; to cause a division; as, a *distracted* army. — *Shaks.* — To throw into confusion; to divert from any point or object toward another point, or toward various other objects; to draw toward different objects; as, to *distract* the attention. — To confound; to harass; to perplex; to fill with different or contrary considerations.

"And sense distract to know well what I utter." — *Milton.*

—To derange or confuse the intellect; to disorder the reason of; as, *distracted* with grief.

Distract'edly, *adv.* Madly; frantically; furiously; wildly.

Distract'edness, *n.* State of being demented or distracted.

Distract'er, *n.* He who, or that which, distracts the mind, or diverts the attention.

Distract'ful, *a.* Having power to distract or perplex.

Distract'ible, *a.* Susceptible of being diverted aside.

Distract'ile, *n.* (*Bct.*) A connective which divides into two unequal portions, one of which supports a cell, and the other not, as in *Salvia*.

Distract'ion, (*dis-trak'shun*), *n.* [*Fr.*] The act of distracting; a drawing apart; tendency to separation; a diversion. — Confusion; perplexity; state of divided attention. — Disturbance; disorder; tumult; dissension; as, the *distract'ion* of political parties. — Violent mental perturbation; predomance of some engrossing sentiment or passion; as, the *distract'ion* of love. — Derangement of the intellect; madness; insanity; state of being demented or frantic; furiousness.

"Commiserate those who labour under a settled *distract'ion*." — *Atterbury.*

Distract'ive, *a.* Causing distraction or perplexity; as, *distract'ive* cares.

Distrain', *v. n.* [*O. Fr. distraindre*; *Lat. distringere* — *dis*, and *stringo*, akin to *Gr. strungō*; *Ger. strängen*, to draw tight.] (*Law.*) To seize for debt; to take a personal chattel from the possession of a wrong-doer into the holding of the injured party, to satisfy a demand, or compel the performance of a duty.

v. a. To make seizure of goods.

Distrain'able, *a.* That may be distrained or made over by seizure.

Distrain'er, **Distrain'or**, *n.* One who seizes goods for debt or service.

Distract', (*dis-trā'*), *a.* [*Fr.*] Absent-minded; lost in thought or abstraction; moody.

Distract', (*dis-trawt'*), *a.* Distracted; demented; perplexed.

Distrain', *v. n.* To stream forth or over.

Distress', *n.* [*O. Fr. distresse*; *Fr. détresse*; *Lat. districtio*, from *distringo*, *districtus*. See **DISTRAIN**.] Extreme pain; anguish of mind or body; suffering; agony; misery.

"Tune my *distresses*, and record my woes." — *Shaks.*

Cause of suffering; calamity; adversity; poverty; general affliction, as of a nation; as, the *distress* was universal. — State of danger, destitution, or necessity; as, a ship in *distress*.

(*Law.*) The taking of a personal chattel out of the possession of a wrong-doer into the custody of the party injured, to procure satisfaction for the wrong committed. *D.* are either for some duty omitted, or for some default, or nonfeasance; or they are in respect of some wrongful act done by the distrainee. The most usual injury for which a *D.* is taken, is that of non-payment of rent. *D.* may also be taken where a man finds the beasts of a stranger wandering in his grounds, doing him hurt or damage; in which case the owner of the soil may distrain them while they are upon his grounds, till satisfaction be made to him for the injury he has sustained. As a general rule, all personal chattels are liable to be distrained, unless specially protected or exempted, as are all animals *feræ nature*; whatever is in the personal use or occupation of any man at the time; and things delivered to a person exercising a public trade, to be carried, wrought, or managed in the way of his trade. But, generally speaking, whatever goods or chattels the landlord finds upon the premises, whether they, in fact, belong to the tenant or to a stranger, are distrainable by him for rent, the stranger having his remedy by action on the case against the tenant. Fixtures, however, and things in the custody of the law, money (except in certain cases), and goods of a perishable nature, as fruits, milk, &c., are exempt from distraint; as are also, in some of the states, beasts of the plough, and the instruments of a man's trade or profession. In Pennsylvania, property to the value of \$300, exclusive of all wearing apparel of the defendant and his family, and all bibles and school-books in use in the family, are exempted from levy and deor execution, or from *D.* for rent. A *D.* cannot be made at night, except in the case of cattle damage *ferant*, as otherwise they might escape. In general, the *D.* must be made on the premises; but goods fraudulently clandestinely carried off may be distrained within 30 days thereafter, unless they have been *bonâ fide* sold for valuable consideration. The landlord may not break open a house of which the rent is in arrear, to make a *D.*; but when he is in the house, he may break open an inner door. *D.* must be proportioned to the thing distrained for, and an inventory of as many goods as are judged sufficient to cover rent and expenses, must be made and served personally on the tenant, together with notice of the fact of the *D.* having been made, and the time when the rent and charges must be paid, or the goods replevied. The landlord cannot sell the goods distrained before the expiry of five days; and prior to the sale an appraisalment must be made by two sworn appraisers of the value of the goods. After the sale, if

there be any surplus after payment of the rent and expenses, it is to be handed over to the tenant. This remedy is of great antiquity, and is said to have prevailed among the Gothic nations of Europe from the breaking up of the Roman empire. Our State legislatures have generally, and with some alterations, adopted the English provisions; but, as a means of collecting rents, *D.* is unpopular in the U. States, as giving an undue advantage to landlords over other creditors in the collection of debts. In the New England States the law of attachment or *mesne process* has superseded the law of *D.* In other States, as New York and Mississippi, it has been abolished by statutes; while in others, as N. Carolina, Ohio, Alabama, and Tennessee, there are no statutory provisions on the subject. In Louisiana the landlord may follow goods removed from his premises for 15 days after removal, provided they continue to be the property of the tenant.

Distress', *v. a.* To afflict with pain or anguish; to afflict greatly; to oppress or confound with calamity; to make miserable; to pain; to grieve; to trouble; to harass; to perplex; as, to *distress* a tender heart. — To govern or compel by pain, suffering, or perplexity; as, to *distress* a people into submission.

(*Law.*) To distraint upon; to apply the law to, by seizure of goods.

Distress'edness, *n.* State or condition of being in trouble or distress.

Distress'ful, *a.* Full of distress, pain, or trouble; inflicting or bringing distress; miserable; calamitous. — Indicating distress; proceeding from pain or distress.

"The ewes lay bleating in *distressful* cries." — *Pope.*

Distress'fully, *adv.* In a distressful or painful manner.

Distress'ingly, *adv.* With acute trouble, pain, or distress.

Distrib'utable, *a.* That may be distributed; that may be allotted in portions or parts; as, *distributable* alms.

Distrib'utary, *a.* Distributive; having a tendency to distribution.

Distrib'ute, *v. a.* [*Lat. distribuo, distributus* — *dis*, and *tribuo*, to give; *Fr. distribuer*. See **TRIBUTE**.] To divide among two or more; to give or bestow in parts or portions; to apportion; to deal out; to assign; to allot; as, to *distribute* spoils of war, to *distribute* lands. — To administer, as justice; to dispense. — To divide or separate, as into classes, orders, kinds, or species; to classify into sections.

(*Logic.*) To apply in its entire extent; as, to *distribute* a term.

(*Printing.*) To separate and allot to their proper places in the case; as, to *distribute* type.

v. n. To assign by distribution; to bestow in portions; to give in charity; as, to *distribute* alms, to *distribute* gifts.

Distrib'uter, *n.* One who distributes, dispenses, allots, or assigns; as, a *distributor* of justice.

Distrib'ution, *n.* [*Fr.*, from *Lat. distributio*.] Act of distributing or dividing among a number; a dealing out in parts or portions; allotment; apportionment; a dispensing; as, the *distribution* of riches. — Act of giving in charity; a rendering to individuals; a bestowing in parts. — Act of separating into distinct parts or classes; division or distribution of the parts of anything; as, the *distribution* of political power.

(*Law.*) The division by order of the court having authority, among those entitled thereto, of the residue of the personal estate of an intestate, after payment of all debts and charges.

(*Printing.*) Separation of types, and a classifying of each letter in its right place in the case.

(*Geog.*) Diffusion of zoological and botanical life over the surface of the earth; as, *geographical distribution*.

D. of plants. See **PLANTS** (DISTRIBUTION OF).

Distrib'utive, *a.* [*Fr. distributif*.] That distributes; that divides and allots in portions or parts; that deals to each his proper share; that separates or divides; as, *distributive* justice.

(*Logic.*) That assigns the various species of a general term.

D. adjective. (*Gram.*) An adjective denoting several persons or things taken individually, as *each*, *every*, *either*, and *neither*.

Distrib'utively, *adv.* By distribution; singly; separately; not aggregately.

"An universal term is sometimes taken collectively . . . and sometimes *distributively*." — *Watts.*

Distrib'utiveness, *n.* Sociability; friendly intercourse; good-fellowship.

Dis'trict, *n.* [*Fr.*, from *L. Lat. districtus, districtus*, a territory, from *Lat. distingo*. See **DISTRAIN**.] A limited extent of country; a circuit within which power, right, or authority may be exercised, and to which it is restrained; a territory within given boundaries; a province; a tract; a territory. The U. States are divided into *judicial districts*, in each of which is established a district court; they are also divided into *electoral districts*, *collection districts*, &c.

—A portion of territory without very definite limits; a region; a country.

"Those *districts* which between the tropics lie." — *Blackmore.*

v. a. To partition or divide into districts, or circumscribed limits of territory.

Dis'trict Attorney. (*Law.*) An officer appointed in each judicial district, whose duty it is to prosecute, in such district, all delinquents, for crimes and offences cognizable under the authority of the U. States, and all civil actions in which the U. States shall be concerned, except in the Supreme Court, in the district in which the court shall be holden.

Dis'trict Court. (*Law.*) The U. States are divided into judicial districts, in each of which is a *District Court*, which is to consist of one judge, who is to reside in the district for which he is appointed, and to hold annually four sessions. The Act of Sept. 24, 1789, sect. 9, which established the district courts, gives them exclusive original cognizance of all civil causes of admiralty and maritime jurisdiction. The same Act, as amended by Act of March 3, 1815, gives them cognizance — concurrent with the courts and magistrates of the several States, and the Circuit Court of the U. States — of all suits at common law where the U. States, or any officer thereof, under the authority of any Act of Congress, sue, although the debt, claim, or other matter in dispute shall not amount to \$100. By the Act of Aug. 23, 1842, it is enacted that the district courts of the U. States shall have concurrent jurisdiction with the circuit courts of all crimes and offences against the U. States the punishment of which is not capital. Their power and jurisdiction has been extended to many other matters by other and various Acts of Congress, which may be found in works of authority on such subjects. — Generally, each State constitutes a district, but N. York, Pennsylvania, Virginia, Georgia, Florida, Mississippi, Louisiana, Arkansas, and California are divided into two, and Alabama, Tennessee, and Iowa into three districts each.

Dis'trict, in *Pennsylvania*, a township of Berks co.: *pop.* 724.

Dis'trict of Colum'bia, in the U. S., a small territorial government, containing the city of Washington, and which is under the legislative control of Congress. It is situated between Lat. 35° 51' and 39° N., and Lon. 66° 58' and 77° 6' W., 390 m. from the ocean by the Potomac river and Chesapeake bay. It is bounded on the S.W. by the Potomac, and on all other sides by Maryland. It contains two cities, Washington and Georgetown. *Surface*, gently undulating; *soil*, naturally thin, sandy, and sterile. *Climate*, moist and warm; summer and autumn fevers prevail, especially on the low grounds near the Potomac. Considerable quantities of flour and other domestic produce are brought down the Potomac, but neither the commerce nor shipping of the District are of great importance. There are two old and important colleges in the District — Georgetown, founded in 1789, and under the direction of the Jesuits; and Columbian, founded in 1821. Also the Catholic University of America (*q. v.*) and Howard University, incorporated 1867, especially for the colored race. The area fixed for the District was a square of 10 m., or 100 sq. m., which was ceded by Maryland and Virginia in 1788, and 1789, but the 40 sq. m. ceded by Virginia were restored to that State in 1846. Upon the establishment of a territorial form of government, in 1871, the right of electing a delegate to Congress was granted to the District. This right was abrogated in 1874, since which time the affairs of the District are directly controlled by Congress. *Pop.* (1897) about 300,000. See **WASHINGTON**; **GEORGETOWN**.

Dis'tricting, *n.* (*Law.*) A writ directed to the sheriff, commanding him to distrain a person of his goods and chattels, to enforce a compliance with what is required of him by law.

Distrust', *v. a.* To doubt or suspect the truth, fidelity, firmness, or sincerity of; not to confide in or rely on; to have no faith in; as, to *distrust* the professions of another.

—To suspect not to be real, true, sincere, or firm; to doubt; to mistrust; to discredit; as, to *distrust* one's own strength of mind.

n. Want of trust; doubt or suspicion of reality or sincerity. — Want of confidence, faith, or reliance. — Discredit; loss or forfeiture of confidence on the part of others.

"To me belongs . . . *distrust*, and all dispraise." — *Milton.*

Distrust'er, *n.* One who distrusts another.

Distrust'ful, *a.* Suspicious; mistrustful; apt or disposed to distrust; as, to harbor *distrustful* thoughts. — Diffident; not confident; modest of self; as, *distrustful* of one's own ability.

Distrust'fully, *adv.* In a distrustful or suspicious manner; as, to be looked upon *distrustfully*.

Distrust'fulness, *n.* Want of faith or confidence; state or quality of being distrustful.

Distrust'ingly, *adv.* In a distrustful manner.

Distrust'less, *a.* Without distrust, doubt, or suspicion.

Disturb', *v. a.* [*Lat. disturbo* — *dis*, and *turbo*, from *turba*, turmoil, tumult, disorder.] To overthrow; to throw into disorder; to disorder; to disarrange; to put into a state of confusion; as, to *disturb* existing arrangements.

—To disquiet; to agitate; to discompose; to deprive of tranquillity; to make uneasy; as, a *disturbed* mind, *disturbed* sleep.

"Plots and rebellions *disturb* his age." — *Prior.*

—To molest; to trouble; to perplex; to hinder; to stir; to move; to ruffle; to interrupt or interfere with; as, to *disturb* the peace of the country, tightness of the funds *disturbs* business, &c.

Disturb'ance, *n.* A stirring or excitement; any quiet or interruption of the peace; irruption on a settled state of things — as, atmospheric *disturbance*. — Tumult; brawl; public disorder; popular derangement; civil commotion; as, a political *disturbance*. — Agitation or commotion of the mind; passion; perturbation of the mind or spirits; perplexity; discord; uneasiness.

"Any man in a state of *disturbance* and irritation." — *Burke.*

(*Law.*) Interruption in possession or enjoyment of a social or civil right. The remedy is an action on the case, or, in some instances in equity, by an injunction.

Disturb'er, n. He who, or that which, disturbs the mind, or causes confusion or perturbation of spirits.

"Foes to my rest, and my sweet sleep's disturbers."—*Shaks.*

—One who violates the peace; one who disturbs public tranquillity; a promoter of tumult and social disorder. (*Law.*) One who invades another's possession of his legal right.

Distyle, n. [*Gr. distylos.*] (*Arch.*) A portico of two columns.

Disulphate, n. (*Chem.*) A salt containing one equivalent of sulphuric acid, and two equivalents of the base.

Disulphuret, n. (*Chem.*) A compound containing one equivalent of sulphur, and two equivalents of some other substance.

Disunion, (dis-yūn yun), n. A severing or breaking up of union; separation; disjunction, or a state of not being united. — Breach of concord; contention; social disruption.

Disunionist, n. One who advocates secession or disunion.

Disunite, v. a. To break up or destroy the unity of; to separate; to sever; to disjoin; to sunder; as, to disunite the limbs of the body.

—To vitiate or destroy the concord or amity of; to alienate in accord and feeling; to part friendship or alliance.

"O nations, never be disunited."—*Milton.*

—*v. n.* To fall asunder; to become separate; to part.

Disunit'er, n. The person who, or thing which, severs or disunites.

Disunity, n. A state of actual separation or disunion.

"Disunity is the natural property of matter."—*More.*

Disusage, (dis-ū'saj), n. Gradual falling off from custom or use; neglect of habit, exercise, or practice; as, the custom is falling into disusage.

Disuse, v. a. To neglect, omit, or he disinclined to practise; to cease to make use of. — To disaccustom; — preceding to, from, or in; as, *disused* to hard labor.

"Disused to toils and triumphs of the war."—*Dryden.*

—*n.* Cessation of use, practice, or exercise; as, a woman's *disuse* of her tongue. — Cessation of custom or habit; desuetude; as, the ceremony has now fallen into *disuse*.

Disutilized, a. Deprived of efficacy; deficient in usefulness; of negative force.

Disvaluation, n. Diminution of reputation; disgrace; state of being of decreased value.

Disvalue, v. a. To undervalue; to disrespect; to set a low estimate upon.

—*n.* Disesteem; disvaluation.

Disvouch, v. a. To contradict; to reject the credit of; to vouch to the contrary.

"Every letter he hath writ hath disvouched another."—*Shaks.*

Ditch, (dich), n. [*A. S. dic; D. dyk.* See *DYKE*, and *DIG.*] A trench in the earth made by digging; — specifically, a trench cut around a fortified place; also, for carrying off the drainings of moist lands. — Any long, narrow receptacle of water; — sometimes contemptuously applied to a creek or small river.

—*v. a.* To make or dig a ditch in; to drain by a ditch; as, to *ditch* a meadow. — To encircle with a ditch.

—*v. n.* To dig or make a ditch or ditches.

Ditch'er, n. A laborer employed in making ditches.

Ditrahedral, a. (Crystal.) That is tetrahedral, with dihedral summits.

Di'theism, n. [*Gr. dis, and theos, a god.* See *THEIST.*] The doctrine of two gods, the one good, and the other evil; dualism; manicheism.

Di'theist, n. A dualist in religious faith; a believer in ditheism.

Ditheistic, Dithcis'tical, a. Pertaining to ditheism.

Dithion'ic Acid, n. (*Chem.*) Also called *hyposulphuric acid*—the second of the *thionic* series of sulphuric and oxygen compounds, all of which contain five equivalents of the latter. It unites with transforming salts, generally known as *hyposulphates*, none of which are of any importance.

Dithyramb, Dithyram'bic, Dithyram'bus, n. [*Gr. dithyrambos, a name of Bacchus.* Etymol. unknown.] (*Lit.*) Originally, a hymn in honor of Bacchus; full of poetic fire — hence, a poem written with wildness, impetuosity, or enthusiasm. (More generally called *dithyrambic*.)

Dithyram'bic, n. A dithyrambus; a song in honor of Bacchus.

—Any poem written in a wild, enthusiastic strain.

—*a.* Wild; impetuous; as, a *dithyrambic* style.

Di'tone, n. [*Gr. dis and tonos.* See *TONE.*] (*Mus.*) An interval of musical time comprehending two tones.

Ditrichot'omous, a. Formed into twos or threes. (*Bot.*) Having double or treble ramifications; as, a *ditrichotomous* stem.

Ditriglyph, (di'tre-glif), n. [*Gr. di, for dis, and TRI-GLYPH, q. v.*] (*Arch.*) An interval between two columns, admitting two triglyphs in the entablature; used in the Doric order.

Ditrochean, (di-tro-ke'an), a. Comprising two trochees.

Ditrochee, (di-tro'kee), n. [*Fr., from Gr. ditrochaïos.*] (*Pros.*) A double trochee. See *TROCHEE*.

Dittau'nder, n. (Bot.) See *LEPIDIUM*.

Dit'tany, n. (Bot.) See *CUNILA*.

Dit'tied, a. [*See DITTY.*] Sung after the manner of a ditty; set or adapted to music; as, "smooth-dittied song."

Dit'to, adv. [*It. detto, from Lat. dictum, dictus, from dico, to say.*] As said; aforesaid, or the same thing; as before. (Contracted frequently into *do*.)

Dittology, n. [*Gr. dittologia.*] A double interpretation, as, of a Scriptural passage.

Dit'ty, n. [*A. S. diht, a disposing, ordering, dihtan, to lay in order, to write; O. Fr. dict, dicte, from Lat. dico, dictum.*] Something said, rehearsed, recited, or sung; specifically, a song, a sonnet, or a short poem for music.

"And to the warbling lute soft ditties sung."—*Sandys.*

—*v. n.* To sing; to hum a tune. (*R.*)

Di'n, an island off the S. coast of the peninsula of Guzerat, W. Hindostan, on which is a fortified sea-port town belonging to the Portuguese. Pop. 4,000. It possesses the remains of the richest temple in India.

Diure'sis, n. [*Gr. dia, through, and oureo, to make water.*] (*Med.*) An increased secretion of urine. It is also applied to diabetes.

Diuretic, a. [*Fr. diuretique; Gr. diouretikos, from dia, and ourom, urine.* See *URINE.*] (*Med.*) Having the power to provoke or expel urine; tending to produce discharges of urine.

—*n.* (*Med.*) A class of medicines which act on the kidneys, and cause an increased discharge of water from the bladder. — There are few diseases in which medicines of this nature are not of infinite service; but in dropsies they become of paramount importance. — *D.* belongs to the animal, vegetable, and mineral kingdoms. Among the mineral class are to be included all the preparations of potassa, sulphur, sweet spirits of nitre, antimony, &c. The vegetable kingdom comprises squills, onions, digitalis, tobacco, ammoniacum, colchicum, juniper, turpentine, broom, and camphor; while from the animal kingdom we obtain castor, musk, and caustarides.

Diurnal, a. [*Lat. diurnus, from dies, a day.* See *DAY.*] Relating to daylight; pertaining to the day or daytime; as, the *diurnal* solstice. — Daily; happening every day, performed in a day or in twenty-four hours; quotidian; as, the *diurnal* revolution of the sun, a *diurnal* duty, &c.

—Constituting the measure of a day; as, *diurnal* hours.

(*Bot.*) Applied to plants which only blow when the sun is above the horizon.

—*n.* (*Eccles.*) The name given to the book containing those canonical hours of the Roman Catholic breviary which are to be said during the day. It is intended especially for the clergy of the Roman Church, and consists generally of four volumes, one for each season of the year.

(*Zoöl.*) A name applied to those wild animals and birds which seek their food during the day, in opposition to those that feed at night, and are called *nocturnal*. — It is also sometimes used to designate such insects as the ephemere, which do not live more than twenty-four hours; but most generally it is applied to the first of the three large families into which Latreille divided the lepidoptera, and which corresponds to the genus papilio of Linnaeus, or the true butterflies. One of the chief characteristics of this division of insects is their having the antennae club-shaped. They only show themselves during the day, and generally only when the sun shines bright, and in a cloudless sky. *Doris erippus* (Fig. 766) will give a good idea of the *D. lepidoptera*.

Diurnally, adv. Daily; every day; as, to make inquiries *diurnally*.

Diurn'ness, n. State of being diurnal or quotidian.

Diurnal, a. [*From Lat. diurnus.*] Of long or lasting continuance.

Diurn'ity, n. [*Lat. diurnitus.*] Long duration.

Divagation, n. [*Fr., from Lat. divagare.*] Act of going astray, or wandering.

Divan, n. [*Ar. diwān; Pers. diwān; Hind. deewan, a council.*] In Oriental countries, a muster-roll, or a register of payments or accounts. Also, a collection of poems or songs by one and the same author. Goethe uses it in this sense in his *Westöstliche Divan*. *D.*, again, is applied to an administrative board; the highest council of state at Constantinople is called *Divān humūjūn*, "most illustrious divan." Finally, *D.* is the name for the state reception room in palaces, and the private houses of the richer citizens. Along the walls of the room are ranged low sofas, covered with rich carpets, and provided with many cushions; — hence, in Western countries, an ottoman; a sofa.

—A smoking-room; a tabagie; a snuggery.

Divar'icate, v. n. [*Lat. divarico, divaricatus — dis, and varico, from varicus, with feet spread apart, from varus, grown apart.*] To stretch or open apart; to fork; to shoot off into two branches.

(*Bot.*) To be widely divergent.

—*v. a.* To cause to branch apart, or into two divisions.

—*a.* (*Bot.*) Spreading widely in different directions.

(*Zoöl.*) Applied to the divisions of a part, when spreading out widely.

Divar'icately, adv. Having divarication.

Divar'ication, n. [*Lat. divaricatio.*] A forking; a parting; a separating apart into two branches; as, "a *divarication* of the way." — A wide divergence or division of opinions.

(*Bot.*) A crossing or intersection of fibres at different angles.

Dive, v. n. [*A. S. duflan, gedufian; Dn. doopen.* See *DIP.*] To dip; to sink; to penetrate; to depart from observation.

"Dive, thoughts, down to my soul."—*Shaks.*

—To descend or plunge into water head foremost, as an animal; to thrust the body into water or other fluid, or if already in water, to plunge deeper, so as to sink below the surface; as, to *dive* for sunken treasure. — To go deep into any subject, question, doctrine, theory, or science.

"You should have dived into my inmost thoughts."—*Philips.*

—To plunge into any business or condition, so as to be

thoroughly engaged in it; as, "*dived* into the world's deceit."—*Shaks.*

—*v. a.* To explore by diving.

"The Curtii bravely *div'd* the gulf of fame."—*Denham.*

Dive'dapper, n. Same as *DIDAPPER, q. v.*

Divel'ent, a. [*Lat. divellens.*] Separating; severing; parting asunder.

Divel'icate, v. a. To pull in pieces. (*R.*)

Divel-on-the-neck, n. An ancient instrument of torture, thus described by Fox in his *Acts and Monuments*: "Certain strait irons, called the *divel-on-the-neck*, being after an horrible sort devised, straiteneth and winching in the neck of a man with his legs together in such sort as the more he stirreth in it the straiter presseth him, so that within three or four hours breaketh and crusheth a man's back and body in pieces."

Div'er, n. One who dives or plunges under water; as, *pearl-diver*. — One who enters deeply into study or business.

"A *diver* into causes, and into the mysteries of proportion." *Wotton*

(*Zoöl.*) See *COLYMBIDÆ*.

Diverber'ation, n. [*Lat. diverberare.*] A reverberation or sounding through.

Diverge, (di-vurj'), v. n. [*L. Lat. divergo, from Lat. di and vergo, to incline.* See *VERGE.*] To tend various ways from one point, and recede from each other; shoot, extend, or proceed from a point in different directions, or not in parallel lines; — correlative to *converge* as, *diverging* rays.

—To vary or go aside from the truth, or from a pristine condition; as, to *diverge* from the path of innocence.

Diverging series. (*Math.*) An increasing series of numbers.

Diverge'ment, n. Act of diverging; divergence.

Divergence, Diver'gency, n. [*Fr. divergen from Lat. divergens.*] Act of diverging; a receding from each other, or going further apart; as, *divergence* of lines, or ideas.

Divergent, a. [*Fr.*] Tending to various directions from a starting-point; receding from each other, lines or rays from the same nucleus; — in contradistinction to *convergent*.

D. series. (*Math.*) See *CONVERGENT*.

Divergingly, adv. In a diverging manner.

Divers, a. [*Fr.; Lat. diversus, from diverto — dis, a vorto, to turn.* See *VERSION.*] Different; various; — verse; several; sundry; more than one, but not a great number; as, *divers* things.

Diverse, a. [*Lat. diversus.*] Set over against each other; contrary; different; differing; unlike; differs from itself.

"Four great beasts . . . *diverse* one from another."—*Dan. vii.*

—Various; multiform; in different forms or directions.

"Eloquence is a great and *diverse* thing."—*Ben Jonson.*

—*adv.* In different directions.

"His papers light fly *diverse* toss'd in air."—*Pope.*

Diverse'ly, adv. In a diverse manner; variously; a point *diversely* argued. — In different directions.

Divers'ifiable, a. Susceptible of diversification or change.

Diversification, n. Act of diversifying, or of changing forms or qualities, or of making various. — Variation; change; variegation; alteration; as, a *diversification* of the will.

Diversified, a. Distinguished by various forms, by a variety of objects; as, a *diversified* landscape.

Diversiform, a. [*Lat. diversus, and forma, form.*] Having a variety of forms.

Diversify, v. a. [*Fr. diversifier; Lat. diversus, a facio, to make.*] To make different or various in form, aspect, or quality; to give variety to; to variegate; give diversity to; to distinguish by a change of appearances.

Diversil'oquent, a. Having the faculty of speaking in diverse ways.

Diversion, (di-vur'shun), n. [*Fr., from L. Lat. diverto — diverto, diversus.*] Act of diverting, or turning as from any course, duty, or occupation; as, the *diversion* of a river-channel, *diversion* of the attention from serious cares, &c. — That which diverts; that which allures or unbends the mind from care, study, business, &c., and thus affords relaxation and relief; amusements; sport; play; frolic; as, a boyish *diversion*.

(*Mil.*) Act of drawing off the enemy's attention from some intention, design, or stratagem, by threatening attacking him in a distant or other quarter; alai feint; that which has the effect of diverting.

Diversity, n. [*Fr. diversité, from Lat. diversitas, fr diversus, diverto.*] State of being diverse; contrary disagreement; dissimilitude; difference; unlikeness; as, a *diversity* of opinion. — Variety; as, a *diversity* of ceremonies. — Distinct being, as opposed to identity.

"Blushing in bright *diversities* of day."—*Pope.*

Divert, v. a. [*Lat. diverto — dis, and vorto, to turn.* See *DIVERS.*] To turn off or deviate from any direct course, way, or method of intended application; turn aside or deflect; as, to *divert* a sum of money from its proper use. — To turn, as the mind from business, or study; to please; to gratify; to amuse; to entertain; to recreate; to exhilarate; as, children *diverted* with toys.

(*Mil.*) To make a feint in order to attract an enemy's main force to a distant point.

Divert'er, n. The person who, or thing which, diverts; anything that exhilarates the mind or fancy, that which turns off.

"Angling was . . . a *diverter* of sadness."—*Walton.*

diverticle, *n.* [Lat. *diverticulum*.] (*Anat.*) A receptacle; — sometimes used to express a cavity or reservoir, in which a fluid could be received if necessary.

divertimento, *n.* [It., *divertimento*.] (*Mus.*) A species of composition consisting of different movements, arranged in an easy style for one or more instruments, not so elaborately wrought out as the sonata, or other more regular compositions. The *D.* has generally a fixed character, being merely a musical picture without any attempt at artistic effect, or other aim than to please the ear, and may be said to take its place between the *Etude* and the *Capriccioso*. The *D.* was really in vogue during the last half of the 18th century; until then, the word had never been used to denote a musical composition.

divertingly, *adv.* In a diverting or amusing manner.

divertingness, *n.* Quality or state of being diverted.

divertissement, (*de-vert'iz-mong*.) *n.* [Fr. *divertissement*.] Diversion; recreation.

(*Dram.*) A certain dance introduced between the acts of an opera, or play, for the amusement of the public during the interval.

divertive, *a.* Recreative; exhilarative; entertaining; as, "things of a *divertive* nature."

divès, a small town of France, dep. Calvados, 12 m. W. Pont l'Evêque, noted as being the port where William the Conqueror embarked for the conquest of England.

divest, *v. a.* [Fr. *dévestir*; Lat. *dis*, and *vestio*. See *ESTURE*.] To strip or throw off clothing, arms, or uipage; to denude; — contradistinguished from *invest*; as, a *divested* knight. — To deprive or strip of anything that covers, surrounds, belongs, or attends; as, to *divest* of the franchise.

divestible, *a.* That may be divested.

divestiture, *n.* Act of divesting or causing a deprivation of anything; as, *divestiture* of civic rights; — opposed to *investiture*.

divestment, *n.* Divestiture.

dividable, *a.* Susceptible of being divided.

divide, *v. a.* [Lat. *divido*; Fr. *diviser*.] To part under; to separate; to part or separate as an entire thing; to part, as a thing, into two or more pieces; to sever; to cleave; as, to *divide* a loaf of bread. — To cause to be separate; to keep apart by a boundary or partition; to interpose a barrier between; as, oceans *divide* continents. — To distribute; to share; to allot; to deal out; to apportion; to give in parts or shares; as, to *divide* the profits of a speculation.

dis — To disunite in opinion, feeling, or interest; to separate; to become opposite or hostile; as, a *divided* household. — To separate into two parts, for determining the votes given for or against a measure; as, the vote *divided* on the motion.

dis — To part; to sunder; to become separate. — To break friendship. — To express contrary opinions; to be by the division of a legislative assembly into two sections, on a motion before the house.

The emperors voted . . . and *divided* with their equals." — Gibbon.

divide, *n.* A water-shed.

divided, *n. a.* Parted; separated; allotted; disunited.

(*Bot.*) Applied to leaves, cut into distinct portions when the segments reach the mid-rib or the leaf-stalk.

dividedly, *adv.* Separately; disunitedly.

dividend, *n.* [Fr. *dividende*; Lat. *dividendum*.] (*Math.*) A number which is to be divided into equal parts.

(*Com.*, &c.) A part or share; particularly, the share of interest or profit of stock in trade or other investment, which belongs to each proprietor according to *pro rata* proportion of the stock or capital; as, a *dividend*.

(*Law.*) A part or share divided among creditors out of the estate of a bankrupt.

diver, *n.* One who, or that which, divides, distributes, or separates into allotted portions or parts.

diver — person or thing which causes disunion or severance, or brings about discord.

"Money, the great *divider* of the world." — Swift.

A kind of compasses, used by draughtsmen in drawing circles.

dividing Creek, in New Jersey, a post-village of Cumberland county, about 17 miles S.E. of Bridgeburg.

dividingly, *adv.* By disunion or division; by means of divisions.

dividing Line, in Kentucky, a small village of Pendleton co.

dividing Ridge, in Pennsylvania, a post-office of Berks co.

dividual, *n.* (*Math.*) A quantity to be divided; a part or dividend from which a figure or term of the quotient is obtained by dividing.

dividually, *adv.* By dividing.

divination, *n.* [Fr., from Lat. *divinatio*.] The art or foretelling future events, or discovering things secret or obscure, by the aid of superior beings, or by other human means; prescience; presage; prediction.

(*Antiq.*) At an early time *D.* formed a regular science, lately allied with religion, and furnished with rules and regulations. Of all the nations of antiquity, few valued the science of *D.* with such enthusiasm as the Greeks and Romans. In the most trivial matters of day life they saw something that had reference to future, or destiny, while their auguries and oracles held the higher class of divination. The different methods of divination employed by the ancients were several kinds: by water, fire, air, earth; by the flight of birds, and their singing; by lots, dreams, arrows, entrails of sacrifices, pretended communication with spirits, etc. The Israelites were prohibited from using *D.* of any kind by the law of Moses. (*Deut.*

xviii. 9-12.) — See DIVINING-ROD, MAGIC, SORCERY, ORACLE, NECROMANCY, &c.

Divine, *a.* [Fr. *divin*, *divine*, from Lat. *divinus*, from *deus*, a god.] Pertaining to the true God; partaking of the nature of God; proceeding from God, appropriated to God, or celebrating His praise. — Excellent in the supreme degree; extraordinary; apparently above what is human; godlike; heavenly; holy; sacred; spiritual.

Divine, *v. a.* [Lat. *divino*, from *divinus*, divinely inspired; Fr. *divine*.] To foretell, as if by divine inspiration. — To know or declare beforehand. — To predict; to presage. — To comprehend or conjecture; to guess.

Divine, *v. n.* To use or practise divination; to utter predictions or prognostications. — To have presages or forebodings. — To guess or conjecture.

Divinely, *adv.* In a divine manner; by the agency or influence of God. — Excellently; in the supreme degree.

Diviner, *n.* One who professes divination; one who pretends to predict events, or to reveal occult things, by the aid of superior beings, or by supernatural means. — One who guesses; a conjecturer.

Divining, *n.* The act of descending in water. — Independently of the valuable native productions which are found at the bottom of the sea, such as pearls, coral, sponges, &c., the treasure which is so frequently carried down in wrecked vessels makes it an object of importance to be able to descend to the bottom, and remain there long enough to execute the operations necessary to recover it. But without the assistance of some mechanical apparatus, even the most practised divers can do very little. Two, or perhaps three, minutes is the longest time that a diver, in general, can remain under water. Besides, on account of the loss of weight in water, the power which a man can exert is extremely small, unless borne down by a load which would entirely prevent him from rising again to the top. Of the artificial expedients contrived to render a longer stay beneath the water practicable, besides the DIVING-BELL (*q. v.*), one of the most advantageous consists of a partial covering for the body, made water-tight, with a metallic helmet entirely protecting the head (fig. 838). The diver is supplied with fresh air by means of a flexible water-proof pipe, which enters the helmet, and communicates with an air-pump, worked above in the barge from which he descends. This pipe passes under the left arm of the diver, and enters the back of the helmet, being so contrived that the fresh air is made to impinge on the glasses, which, in a great measure, prevents their being dimmed by the moisture of the breath. From the back part of the helmet there is also led an ejection-pipe, to allow the escape of the breathed air. A signal-line passes under the right arm to communicate with attendants at the surface. The diver descends from the side of the vessel, either by means of a rope or a wooden ladder, loaded at the lower end; the weight being kept at a little height above the ground. When the diver descends to the bottom, the weight is let down, and the rope allowed to become slack, to prevent the motion of the boat from obstructing him. His motion is rendered steady by heavy weights attached to his feet; and he carries a line in his hand, that he may, when necessary, guide himself back to the rope. A water-proof dress covers his body entirely; and he is thus enabled to remain under water five or six hours at once, being all the while perfectly dry. In 1880 Mr. Fless patented a process for breathing under water, which dispenses for the most part with the cumbersome apparatus that divers have hitherto had to employ. In this process, the power of breathing depends on means which are provided within the helmet worn by the diver. These means are designed to furnish a continuous supply of oxygen, and to dispose of the carbonic acid which the diver exhales. No provision is made for nitrogen which enters into the composition of ordinary air, for this merely serves as a diluent, and is not changed or diminished in quantity by breathing; hence the nitrogen which is naturally present in the diver's lungs and in his dress when he puts it on can be used over and over again, and is amply sufficient for its purpose. The oxygen is stored in the helmet in a compressed state, and a solution of soda, confined in a close case, is provided for the disposition of the carbonic acid. A single charging with soda answers for a week of daily use of the apparatus. Actual use has proved the success of this invention.

Fig. 838.
DIVER'S HELMET.

Divining-bell, *n.* (*Naut.*) A vessel, generally made of cast-iron, by means of which persons can descend to a great depth under water, with slight inconvenience. The principle of the *D. B.* will be easily understood by floating a piece of lighted candle, or a wax match, on a cork, and then covering it with an inverted tumbler, and pressing it downwards: the candle will descend below the level of the surrounding water, and continue burning for a short time, although the tumbler be entirely immersed. The reason is obvious enough: the air in the tumbler having no vent, remains in it and prevents the water from occupying its place, so that the cork and candle, though apparently under water, are still floating, and surrounded by the air in the tumbler: the candle continues burning until the oxygen of the air is exhausted, and then it goes out, as would the life of a man under similar circumstances. If vessels full

of air, like the barrels of Dr. Halley, were submerged, and their contents poured into the tumbler, the light might be maintained; but this could be better done if a tube were passed through the tumbler, and air pumped from above through the tube into the tumbler. — The earliest positive mention of the use of the *D. B.* in Europe occurs in the works of John Taisiner, who was B. in 1509. It has since received many improvements, but is so generally known, that it would be useless to enter into further particulars.

Divining-rod, *n.* A hazel twig cut in the form of a Y, by the aid of which certain persons, called *dowsers*, pretend to be able to discover water, or mineral veins. The rod is held in a peculiar manner, and the dowsor walks backward and forward over the ground to be tried. As soon as he crosses or approaches a metallic vein, or aqueous spring, the twig turns toward it with a slow rotary motion. The superstition has not yet died out, and dowsers are yet common in remote parts of England, France, and Germany.

Divinity, *n.* [Fr. *divinité*; Lat. *divinitas*, from *divinus*, divine. See *DEITY*.] The state of being divine; deity; godhead; nature or essence of the Creator.

"They feel divinity within them." — Milton.

— God; the Supreme Being; the Deity.

"'Tis the Divinity that stirs within us." — Addison.

— A false god; a pretended Pagan deity. — A celestial being inferior to God, but superior to man; as, "subservient *divinities*." (*Cheyne*.) — The science of divine things; THEOLOGY, *q. v.* — Supernatural attribute, power, or virtue.

"There is divinity in odd numbers." — Shakespeare.

— Supreme dignity; loftiness of presence; sacredness of character.

"Divinity doth hedge a king." — Shakespeare.

Divinize, *v. a.* To make divine; to invest with a sacred character.

Divisibility, *n.* [Fr. *divisibilité*.] State or quality of being divisible. The property possessed by all bodies of being separable into parts. The question as to whether matter is, or is not, infinitely divisible, was formerly much agitated among philosophers. According to the nature of the atomic theory, the question is not of importance to science; but, from investigations made, there seems to be no limit to the *D.* of the most solid bodies. The diffusion of odors through the atmosphere shows the minute division of material particles; and the tingeing of large quantities of fluid with minute portions of coloring-matter is an instance of the same. In the gilding of buttons, five grains of gold, which is applied as an amalgam with mercury, are allowed to each gross. In this way a coating is left which must amount to the 110,000th of an inch. An ounce weight of silver, gilt with eight grains of gold, has been drawn into a wire of 13,000 feet, covered throughout its entire length with gold.

(*Math.*) The capability of any number being divided by another without remainder.

Divisible, *a.* [Lat. *divisibilis*.] That may be separated, divided, or disunited; separable.

— *a.* A substance or thing susceptible of division.

Divisibleness, *n.* Divisibility.

Divisibly, *adv.* In a divisible manner.

Division, (*de-vizh'un*.) *n.* [Fr., from Lat. *divisio*, from *divido*.] Act of dividing or separating into parts an entire body; as, the *division* of booty. — State of being divided, distributed, or disunited. — That which divides, separates, or keeps apart; separation; partition. — The part separated from the rest by a partition or line — real or imaginary; a part, or distinct portion; a section; a segment.

"Communities, and divisions of men." — Addison.

— A divided state; disunion; discord; disagreement; variance; difference; as, a *division* in a family. — Distinguishing characteristic or mark; distinction; difference of condition or quantity.

"I will put a *division* between thy people and my people." — Exodus viii. 23.

(*Polit.*) A keeping apart of the members of a deliberative or legislative assembly for the act of counting the votes, *pro* and *con*, relating to a motion before it; as, a *division* of the whole House.

(*Logic*.) The enumeration of several things signified by a common name; thus, tree is said to be *divided* into oak, ash, elm, &c. A common term may be divided in several ways, according to the various points of view in which it may be regarded for the purpose of qualification. Thus, a bookbinder may divide books into *folios*, *quartos*, &c.

(*Mil.*) An army which is under a chief general officer, known as the *commander-in-chief*, is always divided into two or more divisions, each under the command of a general officer. Each *D.* is again subdivided into brigades. A *D.* consists of all arms of the service — cavalry, infantry, and artillery.

(*Mus.*) A course of notes running into each other in such a manner as to form one connected chain of sounds; in Vocal Music it is applied to a single syllable. The singing or playing a passage of this kind is called *running a division*. With theoretical musicians it signifies the divisions of the intervals of the octave.

(*Arith.*) One of the four fundamental rules, the object of which is to find how often one number is contained in another. The number to be divided is the *dividend*, the number which divides is the *divisor*, and the result of the division is the *quotient*. *D.* is an inverse procedure, whose effect is annulled by the *direct* operation of multiplication. Its character is *interrogative*, rather than *directive*. In order to discover the subject upon which the direct operation of multiplication will pro-

duce a given result, we must necessarily have recourse to guesses, (suggested it is true by a previous knowledge of the direct operation,) and test the accuracy of the procedure by multiplication. The study of the true nature of *D.* is essential to a clear comprehension of the higher calculus of operations.

Divisional, Divis'ionary, a. [Fr. *divisionnaire*.] Forming, noting, or expressing division; as, a *divisional* line. — Pertaining or relating to a division; as, a *divisional* superintendent of police.

Divis'ive, a. Making division, separation, or distribution. — Causing or promoting disunion, division, or discord.

Divis'ively, adv. In a manner to occasion division.

Divis'or, n. [Fr. *diviseur*.] (*Arith.*) The number which shows how many parts the dividend is to be divided into. — Divisors of a number are those numbers by which it is easily divided; thus, 1, 2, 3, 4, 6, and 12 are divisors of 12, because 12 may be divided by each of them without a remainder.

Divorce', n. [Fr.; Lat. *divortium*, from *diverto*. See the verb.] A separation or dissolution of things heretofore closely united.

"Alienation of mind, and divorce of affections." — *King Charles I.*
—The cause of any penal separation.

"The long divorce of steel falls on me." — *Shaks.*

—The sentence or legal instrument by which marriage is dissolved.

(*Law.*) A separation of husband and wife; and which is either a *D. a vinculo matrimonii* (from the bond of marriage), or a *mensa et thoro* (from bed and board): the marriage in the former case being dissolved; but not so in the latter, the parties being only debarred from living together. According to the law of Moses, "when a man hath taken a wife and married her, and it come to pass that she find no favor in his eyes because he hath found some uncleanness in her, then let him write her a bill of divorcement, and give it in her hand, and send her out of his house." (*Deut.* xxiv. 1.) After ninety days the wife might marry again; but after she had contracted a second marriage, though she should be again divorced, her former husband might not take her again to be his wife. The like lax notions on the subject of marriage appear to have prevailed generally in the East at that early period; and even at the present day — as among the Arabs — a husband can divorce his wife on the slightest occasion; Burckhardt mentions that he had seen Arabs, not more than forty-five years of age, who were known to have had more than fifty wives. The Mohammedan law allows of a separation by mutual consent, giving the wife the right of retaining her marriage portion, unless she agrees to relinquish a part of it as the price of the separation. They are permitted to separate and reunite twice; but, after the third divorce, he cannot again receive her until she has been married and divorced by another. Among the Hindoos and Chinese, the notions are still more lax on this subject, and a husband may divorce his wife upon the slightest grounds, or even without assigning any reason. Among the causes that are considered to justify separation, are loquaciousness or quarrelsomeness on the part of the wife. The laws in the Grecian states, regarding divorce, differed greatly from each other: in some, it was permitted on slight grounds; in others, the laws were stringent regarding it. At Athens, divorce was permitted on slight causes, but not without giving a bill containing the reasons for it, to be decided, if objected to, by the chief archon. At Sparta, divorces seem to have been very rare. By the early laws of Rome the husband was not allowed to divorce his wife without just cause; as, for adultery, drunkenness, counterfeiting his keys, or poisoning his children. Other causes were afterwards added; and at length divorces took place on very frivolous pretexts, and the women enjoyed the same liberty as the men. Hence Augustus introduced a law enacting additional ceremonies in obtaining a divorce, and requiring the presence of seven witnesses, before whom the marriage contract should be torn. By the Theodosian code, among the causes for which a husband could divorce his wife, were adultery, the being a witch or a murderess, committing sacrilege, violating sepulchres, or buying or selling one free-born to slavery, favoring thieves and robbers, frequenting sights or theatres, or feeding with strangers against the wishes of her husband, the being privy with those that plot against the state, or dealing falsely or offering blows. If the wife could prove the husband guilty of any of these crimes, she also was at liberty to leave him, but could not marry again until after the expiration of one year, whereas the husband might marry again immediately. Voluntary divorce was abolished by one of the novels of Justinian, but was afterwards revived by another novel under the Emperor Justin, and the practice is understood to have continued in the Eastern Empire down to the ninth or tenth century, when it was finally subdued by the influence of Christianity. The Scripture doctrine on this subject is enunciated by our Saviour when he says, "Have ye not read that he who made them at the beginning made them male and female, and said, For this cause shall a man leave father and mother, and shall cleave to his wife, and they twain shall be one flesh." "What, therefore, God hath joined together, let not man put asunder." "Moses, because of the hardness of your hearts, suffered you to put away your wives; but from the beginning it was not so; and I say unto you, Whosoever shall put away his wife, except for fornication, and shall marry another, committeth adultery; and whoso marrieth her who is put away, doth commit adultery." (*Matth.* xix. 4-9.) Our Saviour's declaration naturally became the foundation of the law of divorce

in all Christian countries; and after marriage was raised to the dignity of a sacrament by Pope Innocent III., in 1215, the ecclesiastical courts claimed the sole jurisdiction over it. The papal canon law regarded the bond of marriage as indissoluble, but allowed a divorce *a mensa et thoro*, for five causes, viz., adultery, impotency, cruelty, infidelity, and *ingressus religionis*. The Church, however, assumed to itself a power to grant dispensations for absolute divorces. The principle of the canon law (not admitting of an absolute dissolution of the marriage contract for any cause whatever) governed the ecclesiastical law of England. A divorce was only a judicial separation *a mensa et thoro*, not allowing either of the parties to marry again during the lifetime of the other. An individual, however, if able to incur the expense, might, after a sentence of divorce *a mensa et thoro*, (pronounced by the ecclesiastical court, by obtaining an act of parliament), procure a suspension of the law, and by legislative interference obtain a dissolution of his marriage. There were certain causes, however, which were regarded as nullifying marriage, and justifying a divorce *a vinculo matrimonii*; as, a previous marriage still subsisting, or affinity within the proscribed degree, — the sentence in such a case being declaratory only that the marriage was originally null and void. The law of England granted judicial separation only on the grounds of adultery or cruelty: and the effect of it was to place the woman in the same position as a *femme sole*, enabling her to hold and deal with property free from the control of her husband, and, in the case of the man, relieving him from all obligation to support his wife. By Acts 20 and 21 *Vict.* c. 85, an entire change was effected in the law of divorce in England, and a court instituted with exclusive jurisdiction in matters matrimonial, and with authority, in certain cases, to decree the dissolution of a marriage. The entire jurisdiction, therefore, previously exercised by the ecclesiastical courts in matters of divorce, was transferred to this Court of Divorce and Matrimonial Causes, and sentence of judicial separation (having the same effect as a *mensa et thoro*) may be obtained either by the husband or wife on the ground of adultery, or cruelty, or desertion without cause for two years and upwards. This court has also the power of dissolving a marriage on a petition presented by the husband, setting forth that his wife had been guilty of adultery; or on a petition by a wife, on the ground that her husband had been guilty of incestuous adultery, or of adultery with cruelty, or adultery with desertion for two years or upwards. It is the duty of the court not only to satisfy itself as to the facts alleged, but also whether or not the petitioner has been in any manner accessory to, or conniving at, the adultery, or has condoned the same, and shall also inquire into any counter-charge which may be made against the petitioner. In any of these cases, or if there is reason to believe that the petition is presented or prosecuted in collusion with either of the respondents, then the court shall dismiss the said petition. The court may also, if it sees fit, order the husband to secure to the wife such gross or annual sum of money, for any term not exceeding her own life, as it may deem reasonable in the circumstances. It can also allow damages, if asked for, against the adulterer, and may also order him to pay the costs of the proceedings. It has also the power to declare in what manner such damages are to be paid or applied, and to direct that the whole, or any part thereof, shall be settled for the benefit of the children, if any, of the marriage, or as a provision for the maintenance of the wife. It may also make such provisions as it may deem proper with respect to the custody, maintenance, and education of the children of the marriage; and may, if it shall think fit, direct proper proceedings to be taken for placing such children under the protection of the Court of Chancery. If the wife who has been guilty of adultery is entitled to any property, either in possession or reversion, the court may, if it think proper, order such settlement as it may deem reasonable to be made of such property, or any part thereof, for the benefit of the innocent party, and of the children of the marriage, or either of them. — In this country, the formalities and consequences of *D.* are generally identical with those fixed by the English law; but on many questions relating to *D.*, and on the legality of *D.* itself, the provisions are far from being uniform in the different States. Thus, in S. Carolina a divorce is not allowed for any cause; in New York, only for adultery; but in most of the other States it is allowed for adultery, cruelty, wilful desertion for a specified period, habitual drunkenness, &c. In some of the States, also, the matter is left wholly or in part to the discretion of the court. Generally, jurisdiction to grant divorces is conferred by statute upon courts of equity, or courts possessing equity powers. Numerous and difficult questions are constantly arising in regard to the validity in one State of divorces granted by the courts of another State. It may be stated after Bishop (*Marriage and Divorce*, c. 32), 1. That the tribunals of a country have no jurisdiction over a cause of divorce, wherever the offence may have occurred, if neither of the parties have an actual *bona fide* domicile within its territory; 2. That, to entitle the court to take jurisdiction, it is sufficient for one of the parties to be domiciled in the country; 3. That the place where the offence was committed, whether in the country in which the suit is brought, or in a foreign country, is immaterial; 4. That the domicile of the parties at the time of the offence committed is of no consequence, the jurisdiction depending on their domicile when the proceeding is instituted, and the judgment rendered; 5. That it is immaterial to this question of jurisdiction in what country, or under what system of divorce law, the marriage was celebrated. In Pennsylvania, and New Hampshire, nevertheless, it is held

that the tribunals of the country alone where parties were domiciled when the *delictum* occurred have jurisdiction to grant divorce. For more information on this important and difficult matter, recourse must be had to legal treatises, and to the statutes of the several States.

Divorce', v. a. [Fr. *divorcer*; Lat. *diverto*, *diversum*, *vorsum* — *dis*, and *verto*, to turn. See *VERSION*.] To solve, as the marriage-tie, and thus to separate husband and wife, either totally or partially; as, to divorce an unfaithful wife.

—To put or take away.

"Nothing but death shall e'er divorce my dignities." — *Shak.*
—To force asunder; to disunite things intimately connected; as, "divorced from piety." — *Hooker*.

Divorce'able, Divor'cible, a. That may be divorced.

Divorcee', n. One who has been divorced.

Divorce'less, a. Not permitting of divorce; without divorce.

Divorce'ment, n. Dissolution of the marriage contract; divorce.

Divor'cer, n. He who, or that which, causes a divorce.

Divor'cive, a. Possessing power to divorce.

Div'ot, n. Turf used in Scotland for fuel, &c.

Divo'to. [It., devout.] (*Mus.*) A term used to signify a certain part of the music is to be played in a reverent manner.

Divulgator, n. One who divulges.

Divulga'tion, n. [Fr.; Lat. *divulgatio*.] Act of divulging or making known.

Divulge, (de-vulj'), v. a. [Fr. *divulguer*, from Lat. *vulgo* — *dis*, and *vulgo*, from *vulgus*, the common people. See *VULGAR*.] To make public; to tell or make known something, before private or hidden; to reveal; to close; to publish; as, to *divulge* a secret. — To proclaim by a public act.

"God with approbation marks

The just man, and divulges him through heaven." — *Mil.*

—To communicate; to impart; to tell in confidence.

—*v. n.* To become known to the world.

Divulge'ment, n. Act of divulging; divulgation.

Divulger, n. One who discloses or divulges to others.

Divul'sion, n. [Fr., from Lat. *divulsio*, from *divulsus* — *dis*, and *vellio*, to pull. See *DIVELLENT*.] A pulling, tearing, or rending asunder; a separating (*Surg.*) A rupture or laceration of organs by external violence.

Divul'sive, a. Inclined to rend or pull asunder.

Dix, in Illinois, a post-office of Jefferson co.

Dix, in New York, a flourishing township of Schoharie county.

Dix'borough, in Michigan, a village of Washtenaw co., about 34 m. W. of Detroit.

Dix'field, in Maine, a post-township of Oxford co., the Androscoggin River, about 35 miles W.N.W. of Augusta.

Dix'field Centre, in Maine, a P. O. of Oxford co.

Dix Hills, in New York, a post-office of Suffolk co.

Dix'ie, a name originally given by the negroes, in songs, to the Southern States of the American Union, as, "Dixie's land."

Dix'mont, in Maine, a post-village and township, Penobscot co., abt. 40 m. N.E. of Augusta.

Dix'mont, in Pennsylvania, a P. O. of Allegheny co.

Dix'mont Centre, or DIXMONT CORNER, in Maine, a post-village of Dixmont township, Penobscot co., about 40 m. N.E. of Augusta.

Dix'mont Mills, in Maine, a village of Dixmont township, Penobscot co., abt. 43 m. N.E. of Augusta.

Dix'on, WILLIAM HEPWORTH, an English author, Yorkshire, 1821. In 1846 he entered at the bar, instead of devoting himself to the legal profession, as that of literature. In 1853 he became editor of the London "Athenaeum," which office he resigned in 1856. Among his principal works are *John Howard, a Memoir* (reprinted in New York, 1849); *the Life of William Penn* (1851), in which Lord Macaulay's charges against the founder of Pennsylvania were first met serially refuted; *Robert Blake, Admiral and General at sea*, which he had the assistance of the famous Earl of Cornwall (q. v.); *The Holy Land*, &c. In 1866 he spent summer and autumn in travelling through the U. S. *New America*, a record of this voyage, appeared in 1867 and met with distinguished success in both this country and Great Britain. *D.'s Lives of Penn and Blake* together with the "Holy Land," "New America," &c. have passed through many editions. Died Dec., 1871.

Dixon, in Georgia, a post-office of Dawson co.

Dixon, in Illinois, a city, the cap. of Lee co., on the sides of Rock river, 98 miles W. of Chicago. It has eight churches, two national banks, a collegiate institution, the Northern Illinois Normal School, and various mills and factories. Two weekly newspapers are published here. Pop. (1897) about 7,500.

Dixon, in Mississippi, a post-office of Neshoba co., Iowa, a post-village of Scott co., about 20 miles N. of Davenport. In Kentucky, a post-village, cap. of Webster co., about 62 miles E.N.E. of Paducah.

Dixon, in Nebraska, a N.E. co.; area, 468 square miles. Several affluents of the Elkhorn river. Soil, undulating. Soil, fertile. Min. Limestone. Cap. York. Pop. (1897) about 10,500.

—A post-office of the above co.

Dixon, in Ohio, a township of Preble co.

—A post-village of Van Wert co., about 19 m. E. of Fort Wayne.

Dixon's Entrance, a strait on the W. coast of America, between Prince of Wales' Archipelago and Queen Charlotte Island. Lat. 54° 30' N., Lon. 141° 10' W. Length from E. to W. about 190 m.

speaking, it belongs only to *physicians*, or those who have taken the degree of M. D. (Doctor of Medicine) in a school of medicine.

(*Script.*) A *D.* of the law may perhaps be distinguished from *Scribe*, as rather teaching orally than giving written opinions, (*Luke* ii. 46.) Doctors of the law were mostly of the sect of the Pharisees, but are distinguished from that sect in *Luke* (v. 17), where it appears that the novelty of Jesus's teaching drew together a great company both of Pharisees and doctors of the law. The Jewish were invested with the dignity of *D.*, by receiving into their hands a key and a tablet-book.

D. in music. In England, a musician upon whom the degree of doctor has been conferred by some university. The candidates are required to submit for the inspection of the musical profession a composition in eight vocal parts, with instrumental accompaniments.

Doc'tor, v. a. To apply medicinal remedies and treatment; as, to *doctor* a sick person. (Used colloquially.) —To confer a doctor's degree upon. (Colloq.)

Doc'toral, a. [Fr.] Relating or pertaining to a doctor's degree or professional practice.

Doc'torally, adv. In the manner of a doctor.

Doc'torate, n. [Fr. *doctorat*.] Degree of a doctor.

—*v. a.* To confer the degree of doctor upon.

Doc'toress, Doc'tress, n. A female physician, or medical practitioner.

Doc'tor's Commons, n. (*Law.*) In England, the common name for the courts and offices occupied by the body incorporated in 1763 under the title of "The College of Doctors of Law exercent in the Ecclesiastical and Admiralty Courts." These courts are in London, on the southern side of St. Paul's Churchyard. The college consists of a president (the Dean of the Arches for the time being), and of those doctors of law who, having regularly taken that degree in either of the universities of Oxford or Cambridge, and having been admitted advocates in pursuance of the rescript of the Archbishop of Canterbury, have been elected fellows of the college in the manner prescribed by the charter. Doctors' Commons and Will Office, were rem. 1874, to Somerset House.

Doctor's Creek, in Georgia, flows into the Altamaha.

Doctor's Creek, in New Jersey, rises in Monmouth co., and enters Crosswicks Creek about 3 m. N.E. of Bordentown.

Doc'torship, n. Degree or rank of a doctor; doctorate; as, a *doctorship* of civil law.

Doc'tor Town, in Georgia, a post-office of Wayne co.

Doctrinaire, (dok-trin-air'), n. [Fr.] This term denotes, properly, a man who is the supporter of a particular doctrine, or who is a man of doctrines. In general, it is used in a bad sense, as applied to those who hold pedantic or unpractical views. In this sense it was applied in France, during the Restoration, by the reactionary court party to a faction of the parliamentary opposition, who wished to carry out rational and scientific doctrines in politics against all arbitrary measures. After the revolution of 1830, Guizot, Broglie, and others of this party, became ministers and supporters of the government, and their principles came to be very much the same as those of the then king.

Doctrinal, a. Pertaining, or relating, to doctrine, or something formally taught or practised; as, a *doctrinal* proposition. —Relating, or belonging, to the act or means of teaching; as, a *doctrinal* instrument.

—*n.* Something that is a part of doctrine; a subject partaking of the nature of doctrine; as, "*Doctrinals* to deny Christ." —*South.*

Doctrinally, adv. In the form of doctrine or instruction; after the manner of teaching; by way of positive direction.

Doctrinarianism, n. The system, and practice thereof, inculcated by the Doctrinaires.

Doctrine, (dok'trin, n. [Fr., from Lat. *doctrina*, *doceo*, to teach.] Act of teaching; instruction.

"From woman's eyes this doctrine I derive." —*Shaks.*

—Whatever is taught; a principle or position in any science; whatever is laid down as true by an instructor or master; dogma; tenet; the truths of the gospel in general; instruction and confirmation in the truths of the gospel; as, "*Articles of faith and doctrine.*"

—Learning; knowledge; erudition.

Document, (dok'u-ment, n. [Fr., from Lat. *documentum*, from *doceo*, to teach.] Written instruction, evidence, or proof; any official or authoritative paper containing instructions or proof, for information and the establishment of facts; as, an authentic *document*, a magisterial *document*, &c.

—*v. a.* To furnish with documentary instructions or proofs, or with papers presenting written evidence, for the acceptance and establishment of facts.

Documental, a. Relating, or pertaining to, documents, or to the evidence comprised therein, or instruction derived therefrom.

Documentary, a. Pertaining to written evidence or instruction; contained in documents; established by documents; as, *documentary* testimony.

Dod'anim, or Rodanim. (Script.) A people descended from Japhet through Javan (*Gen.* x. 4). They are associated, by the above passage, and by dim etymological inferences, with the island of Rhodes, or some location on the northern coast of the Mediterranean.

Dodd, n. a. To shear or cut off from; as, to *dodd* hair or wool.

Dod'dart, n. A game at ball played by two persons, somewhat like foot-ball. —Also, the stick used in the game.

Dod'ded, a. Possessing no horns; as, a *dodded* steer.

Dod'der, n. [Ger. *dolter*; allied to *D. touteren*, to shake. See *TOTTER*.] (*Bot.*) See *CUSCUTACEÆ*.

—*v. a.* or *n.* To shiver, shake, tremble, or didder.

Dod'dered, a. Overgrown with dodder; covered with cupressent plants.

Dod'dridge, in W. Virginia, a N. co.; area, abt. 300 sq. m. Rivers. Hughes River, and Middle Island Creek. Surface, hilly; soil, adapted to pasturage. Cap. West Union.

Dod'dridge, PHILIP, an eminent English dissenting divine, b. at London, 1702. He published a number of works, of which the most esteemed are, *Rise and Progress of Religion in the Soul*, and the *Family Expositor*. D. at Lisbon, 1751.

Dodds'ville, in Illinois, a post-office of Schuyler co.

Dodecagon, (do-dek'a-gon, n. [Gr. *dodeka*, twelve; *gonia*, an angle.] (*Geom.*) A polygon which has twelve angles and twelve sides. When the angles and sides are each of them equal, the *D.* is a regular one, and may then be inscribed in, or circumscribed by, the circle, the sum of its interior angles equalling twenty right angles. If the side of a *D.* be 1, its area will = $3 \times (2 + \sqrt{3})$, or 11.196 nearly. — See *REGULAR FIGURE*.

(*Fort.*) The term is applied to a place surrounded by twelve bastions.

Dodecagyn'ia, n. [Gr. *dodeka*, and *gynē*, female.] (*Bot.*) In the Linnæan system, an order of plants having 12 styles or stigmas.

Dodecagyn'ian, Dodecagynous, a. (Bot.) Possessing 12 styles.

Dodecahed'ral, a. Pertaining to a dodecahedron.

Dodecahedron, (do-dek-ah'-hed-run, n. [Gr. *dodeka*, twelve, *hedra*, a base.] (*Geom.*) One of the five regular solids of Plato, being contained under the surface composed of twelve equal and regular polygons or bases. — See *REGULAR BODY*.

Dodecan'dria, n. [Gr. *dodeka*, twelve, and *anēr*, andros, a man.] (*Bot.*) In the Linnæan system, the 11th class of plants, including all those having from 12 to 20 stamens.

Dodecan'drian, Dodecan'drous, a. (Bot.) Pertaining to the Dodecandria.

Dodecapet'alous, a. [Gr. *dodeka*, and *petalon*, petal.] (*Bot.*) Having twelve petals.

Dodec'astyle, n. [Gr. *dodeka*, and *stylos*, column.] (*Arch.*) A building having twelve columns in front.

Dodecasyllab'ie, a. Having twelve syllables.

Dodecasyllable, n. A word containing twelve syllables.

Dodeca'theon, n. [Gr. *dodeka*, twelve, and *theos*, the name of an antidote, among the ancients, named after the 12 Grecian gods.] (*Bot.*) A genus of plants, order *Primulaceæ*. They are perennial plants, with radical, oblong leaves, an erect, simple scape, and a terminal umbel of nodding flowers. *D. meadia*, the American cowslip, or Mead's cowslip, is an elegant herb, flourishing on prairies, dry or rocky soils, throughout the Western States.

Dodge, (dodj, v. n. [Etymol. uncertain.] To start or jump suddenly aside; to shift place by a quick, abrupt movement; as, to *dodge* round a corner. — To play tricks; to be evasive; to play fast and loose; to use tergiversation; to quibble; to raise expectations and disappoint them.

—*v. a.* To evade or shirk by a sudden shift of place; to elude or escape from by a quick side-movement; as, to *dodge* a policeman, to *dodge* a cricket-ball. (Used colloquially.)

—*n.* A trick; a clever artifice; a skilful evasion; as, a capital *dodge* to raise money.

Dodger, (dodj'r, n. An evader; one who plays fast and loose; a trickster; a schemer on a small scale; as, an "*artful dodger.*" — *Dickens*.

Dodge, in Iowa, a township of Boone co. Pop. 1,330.

—A township of Dubuque co.

—A post-township of Guthrie co., about 55 m. W.N.W. of Des Moines.

Dodge, in Minnesota, a S.E. co.; area, about 432 sq. m. Rivers. S. branch of the Zumbro, and Red Cedar rivers. Surface, slightly undulating. Soil, fertile. Cap. Mantorville. Pop. (1895) 12,753.

Dodge, in Nebraska, an E. co.; area, about 520 sq. m. Rivers. Platte and Elkhorn, and Maple and other creeks. Surface, undulating. Soil, fertile. Minerals. Limestone. Cap. Fremont. Pop. (1890) 19,260.

Dodge, in Wisconsin, a S.E. central co.; area, about 930 sq. m. Rivers. Rock river and Crawfish and Beaver Dam creeks. Surface, diversified. Soil, very fertile. Min. Limestone. Cap. Juneau. Pop. (1895) 47,851.

Dodge Centre, in Minnesota, a P. O. of Dodge co.

Dodge Centre, in Wisconsin. See *JUNEAU*.

Dodge City, in Minnesota, a post-village of Steele co., about 10 m. S.E. of Faribault.

Dodge's Corners, in Wisconsin, a post-office of Waukesha co.

Dodge'ville, in Iowa, a post village of Des Moines co.

Dodge'ville, in Wisconsin, a city, cap. of Iowa co., 47 m. W. of Madison. Has agricultural implement and wagon works, flour and planing mills. Grain and live stock are largely shipped. Pop. (1895) 2,031.

Dö'diberg, a summit of the Swiss Alps, 17 m. S.S.W. of Glarus, having an elevation of 11,887 ft.

Dod'ipate, Dod'ipoll, n. A doit; a thick-headed fellow; a clodpole.

Dod'kin, n. [D. *duitken*.] A doikin, or small doik; an old coin of trifling value.

"I would not buy them for a *dodkin*." — *Lilly*.

Dod'man, n. An English provincialism for a snail; (sometimes called *hodmandod*.)

Dodo'na. (An. Geog.) A town of Thesprotia in Epirus, (or Thessaly,) in the midst of vast forests. It was the sanctuary of the Pelagic worship, and possessed an oracle of Jupiter, one of the most celebrated and most ancient of Greece. The oracles were given by an oak, called

the *prophetic tree*; the priestess interpreted sometimes the rustling of the branches, sometimes the sound given out by copper vases suspended to the sacred tree; and at others, the singing of doves hidden in its foliage, the murmur of a neighboring spring.

Do'do, n.; pl. DODOES. (Zool.) A genus of birds which has become extinct since the 17th cent., but which appears to have existed up to that time in the Mauritius. Formerly it was usually classed by naturalists in the family *Struthionidae*, or amongst the ostriches; but of late much attention

Fig. 840. — DODO.

has been paid to the history of this lost bird, and it is now arranged in the order *Columbæ*, and family *Columbidae*, or pigeons. It appears to have been a massive bird, ungainly in form, and with a slow waddling motion; to have been clothed with down instead of feathers, and to have had the wings and tail so short and feeble as to be utterly useless to it for flight.

Dodonides, (do-don'e-dees, (Myth.) The priestesses who delivered the oracles in the temple of Jupiter Dodona.

Dod'rans, n. [Lat.] (*Antiq.*) A Roman measure equal to about 9 inches, being the space between end of the thumb and of the little finger when both fully extended. It is about equal to the *palm*.

Dods'ley, ROBERT, an English publisher and miscellaneous writer; b. in Mansfield, Nottinghamshire. He is chiefly remembered for his tragedy of *Cleopatra*, praised by Dr. Johnson. D. 1764.

Dod'son, in Ohio, a thriving township of Highland county.

—A village of Montgomery co., abt. 15 m. W.N.W. Dayton.

Dod'sonville, in Alabama, a post-vill. of Jackson co.

Dod'sonville, in Ohio, a post-village of Highland co., abt. 50 m. E. of Cincinnati.

Doe, (dō, n. [A. S. *da*; Dan. *dua*; Ger. *damthier*; *daim*, *daime*, from Lat. *dama*.] A she-deer; specifically the female of the fallow-deer, of which the male is termed a *buck*. — The word is also applied to the female of other animal species; as, a *doe*-rabbit.

Doe Hill, in Virginia, a post-office of Highland co.

Doe River Cove, in Tennessee, a village of Carter co.

Doe Run, in Pennsylvania, a post-office of Chester co.

Doer, (dō'er, n. [See *Do*.] One who does; one who acts, performs, or executes; an agent; one who performs what is required; one who observes, keeps, or obeys practice.

"Talkers are no good doers." — *Knolles*.

(*Scots Law.*) A factor; an agent; a legal assistant or adviser.

Does, (dūz, n. The third person singular of the verb *do*, indicative mood, present tense. See *Do*.

Doe'skin, n. The skin of a doe. — (*Manuf.*) A kind of twisted cloth, used for trousers and women's suits; as, *doeskin* pants.

Doff, v. a. [From *do*, and *off*; the correlative of *do* and *on*.] To put off, as dress; to strip or divest; to disapparel; as, to *doff* one's garments.

"Thou wear a lion's hide! *doff* it for shame." — *Shaks.*

—To throw or put away; to get off; to shift off, with a view to delay.

Doffer, n. (Mech.) That part of a carding-machine which takes the cotton from the cylinder when carded.

Dof'rines, or Dov'refeld, a chain of mountains dividing Norway from Sweden; its highest point, *Snow-Han* ("Snow Cap"), has an elevation of 7,568 feet. It possesses the richest mines of iron and copper in Europe.

Dog, n. [D. *dog*; Ger. *docke*; Dan. *dogge*; Fr. *dogue*, &c.]

Fig. 841. — DALMATIAN DOG.

doggr. The root is found in Gr. *daknō*, Sansk. *da*, bite.] (*Zool.*) A quadruped of the genus *CANIS*, &c.]

—An audiron; a fire-dog. — See ANDIRON.
 —A term of contempt for a base, mean, worthless fellow; as, "the dog Jew." — *Shaks.*
 —A mau; a fellow; — used colloquially in a humorous or jocular sense; as, "Tom, thou'rt a sly dog." — *Fielding.*
 —A term to denote the male of sundry species of animals; as, a dog-fox. — It is also employed as a particle to denote anything of mean or degenerate quality; as, a dog-rose.

To go to the dogs, to be ruined, or utterly impoverished in purse and character; as, that man's going to the dogs. — To give, throw, or cast to the dogs, to reject and fling away, as worthless.

"Throw physic to the dogs — I'll none of it." — *Shaks.*

—v. a. To hunt; to follow up insidiously or indefatigably; to pester; to urge; to worry with espionage or importunity; as, to be dogged by a footpad.

"I have dogged him like his murderer." — *Shaks.*

Dog'al, *a.* [See DOGE.] Relating or pertaining to a doge; as, the dogal dignity.

Doga'na, *n.* [It.] In Italy, a custom-house.

Doga'te, **Doga'te**, *n.* [Fr. *dogat*.] Office, rank, or jurisdiction of a doge.

Dog'-bane, *n.* Same as DOG'S-BANE, *q. v.*

Dog'-bee, *n.* A drone; a male of the bee kind.

Dog'-berry, *n.* The berry found on the dogwood.

(*Lit.*) In composition, a metaphorical title applied to a night-watchman; — derived from the Shakspearean character of the same name.

Dog'-berry-tree, *n.* (*Bot.*) The dogwood, genus *COENUS*, *q. v.*

Dog'-brier, *n.* (*Bot.*) The brier that bears the hip; *Rosa canina*.

Dog'-cabbage, *n.* (*Bot.*) See DOG'S-CABBAGE.

Dog'-cart, *n.* A carriage with a box for holding sportsmen's dogs; also, a sort of double-seated gig for four persons, those before and those behind sitting back to back.

Dog'-cheap, *a.* Cheap as offal or dog's-meat; ridiculously low-priced. (Sometimes termed *dirt-cheap*.)

"Good store, say you, and dog'-cheap?" — *Dryden.*

Dog'-day Har'-vest-fly, *n.* (*Zool.*) See CICA'DA.

Dog'-days, or **CANTICULAR DAYS**, *n. pl.* (*Astron.*) Canicula was the old name of the constellation *Canis Minor*, *q. v.* It was also used to denote *Sirius* or the Dog-Star, the largest and the brightest of all the stars, and which is situated in the mouth of *Canis Major*, *q. v.* From the *Helical rising* (*q. v.*) of the star *Sirius* the ancients reckoned their Dog-days, or *Dies Caniculares*, which were 40 in number — 20 before, and 20 after, the rising of the star. The rising of the Dog-Star was ignorantly supposed to be the occasion of the extreme heat, and of the diseases incidental to these days. It was by mere accident that the rising of the star coincided with the hottest season of the year, in times and countries of the old astronomers. The time of its rising depends on the latitude of the place, and is later and later every year in all latitudes, owing to precession. In time the star will rise in the dead of winter.

Dog'-draw, *n.* (*Eng. Feud. Law.*) A manifest depredation of an offender against venison in the forest, when he is found drawing after a deer by the scent of a hound which he holds in a leash.

Doge, (*dij*), *n.* [It., from Lat. *dux* — *dux*, a leader.] (*Hist.*) The title borne by the chief magistrate in the former Italian republics of Venice and Genoa. The dogate, or office

and dignity of doge, was elective; the doge of Genoa being elected for two years, and at Venice for life. The office was originated in the latter city in the year 697, when the seven tribunes, by whom state affairs had been previously ministered, were found unequal to their posts, the Venetians resolved to replace them by a single chief magistrate, who could hold office for life. The doge is chief of the council, first minister, and personal representative of the republic; but, though invested with almost regal authority, he was not a sovereign. He could convoke assemblies, declare war, or conclude treaties, command the armies of the state, appoint the military tribunes and the judges, elect citizens, hear appeals, decide disputes between the clergy, award ecclesiastical punishments, invest bishops, and install them in their churches. Notwithstanding these vast powers, a perusal of the history of Venice will prove, that, — though the Venetians allowed four centuries to elapse before they fixed the bounds, or controlled the exercise of the power of their chief magistrate, — after that time, the doge was merely the representative of an authority which was actually reserved to the republic. In fact, he was a state pageant, who lent the weight of his name to the acts of the senate, could give audience to ambassadors, but not make answer to them as from himself on matters of im-

portance. All credentials with which the senate furnished ministers to foreign courts, though written in his name, were not signed by him, but by a secretary of state, who sealed them with the arms of the republic. Dispatches were directed to him by ambassadors, but he could not open them, except in presence of the councillors; and although money was struck in his name, it

Fig. 843. — GRAND CANAL AND DOGE'S PALACE, VENICE.

did not bear his stamp or arms. He could not go beyond Venice without permission of the council. His children and brothers were excluded from all the chief offices of state; and so jealously did the republic regard the chief they had themselves elected, that the doge of Venice was, politically speaking, a nonentity. He could not divest himself of his dignity at will; and at his death, three inquisitors and five correctors examined into his conduct with the most searching rigor. The personal history of the doges is inseparably incorporated with that of the republic of Venice; and the office, after an existence of 1,100 years, yielded, with but slight resistance, to the power of the republic of France.

Dog'-eared, *a.* Said of a book when its leaves are turned down at the corners, and also soiled by careless handling, or incessant usage.

Dog'-eate, *n.* See DOGATE.

Dog'-less, *a.* Without a doge; as, *dogeless Venice*.

Dog'-fancier, *n.* A person having a taste for, and knowledge of, dogs. — One who deals in dogs.

Dog'-fish, *n.* (*Zool.*) The common name of some of the smallest species of the Sharks, or family *Squalidae*. They are characterized by a sharp stout spine in front of the two dorsals. The American species is from 1 to 3 feet long. It is caught in great numbers for the sake of its oil, but causes great annoyance to fishermen by cutting the hooks from their fishing-lines.

Fig. 844. — DOG-FISH.

Dog'-fly, *n.* A pestiferous, biting fly.

Dog'-fox, *n.* A male fox; — opposed to *bitch-fox*.

Dog'-ged, *a.* Like a surly dog; — hence, sullen; surly; sour; morose; severe; obstinate; as, *dogged resolution*.

Dog'-gedly, *adv.* Sullenly; morosely; gloomily; sourly; with resolute obstinacy; as, he's *doggedly* bent on his own course.

Dog'-gedness, *n.* Obstinacy carried to extremity; sullenness; sourness; churlishness.

Dog'-ger, *n.* [D.] (*Naut.*) A ship of about 80 tons burden, with a well in the middle, to bring fish alive to shore; as, a Dutch *dogger*.

Dog'-ger Bank, a vast sandbank in the North Sea, extending from the E. coast of England to within 60 m. of Jutland. Its fisheries are important. The Dutch and English fought an indecisive naval battle here in 1781. Lat. 54° 10' to 57° 23' N., Lon. 1° 21' to 4° 17' E.

Dog'-gerel, **Dog'-grel**, *n.* [From *dog*.] Dog-rhyme or poetry; a loose, irregular kind of poetical composition of the lowest class.

"Those who dealt in *doggerel*, or who pin'd in prose." — *Dryden*.

—*a.* Of a mean, low, base, irregular character; — said of a certain kind of verse; as, *doggerel rhymes*.

Dog'-german, *n.* (*Naut.*) One who belongs to a dogger.

Dog'-gish, *a.* Like a dog; snappish; snarling; brutal.

Dog'-gishness, *n.* Condition or quality of being dog-gish or surly.

Dog'-grel, *n.* and *a.* Same as DOGGEREL, *q. v.*

Dog'-head, *n.* Part of the lock of a gun.

Dog'-hearted, *a.* Cruel; pitiless; brutal.

Dog'-hole, *n.* A den; a vile hole; a mean habitation; a kennel.

Dog'-hook, *n.* A kind of strong hook for wrenching.

Dog Island, in Florida, on the S. coast at the E. side of the middle entrance to St. George's Sound. On its W. extremity is a light 50 ft. high, revolving once in 3 min. Lat. 29° 43' 30" N., Lon. 84° 41' W.

Dog'-hole, *n.* A little wooden house or shelter for dogs.

Dog'-Latin, *n.* Barbarous Latin.

Dog'-legged Stairs, *n. pl.* (*Arch.*) A staircase which is solid between the upper flights, or which has no well-hole, and in which the rail and balusters of both progressive and retrogressive flights fall in the same vertical plane.

Dog'-ma, *n.*; *Eng. pl.* DOGMAS; *Lat. pl.* DOGMATA. [Gr., from *dokéo*, to think, to appear; root *dic*, to show.] That which seems true to one; a notion; a tenet; a doctrine. — A settled opinion; an established maxim, principle, or tenet; a doctrinal point, particularly in matters of faith and philosophy; as, the *dogmas* of the Stoics. — A tenet or doctrine enunciated or propounded on a shallow basis.

Dog'-mad, *a.* Rabid; mad after the manner of hydrophobia.

Dogmat'ic, **Dogmat'ical**, *a.* [Fr. *dogmatique*; Gr. *dogmatikos*.] Pertaining or relating to a dogma, or to settled opinion; as, a *dogmatic* way of speaking. — Asserting with authority; having a disposition to assert positively, or with magisterial force, or arrogance; as, a *dogmatic* writer.

— Asserted with authority; dictatorial; magisterial; positive; confident; overbearing; as, *dogmatical* opinions.

Dogmat'ically, *adv.* Positively; in a magisterial or dogmatic manner; arrogantly.

Dogmat'icalness, *n.* Quality of dogmatical or magisterial positiveness; arrogant authoritativeness of expression.

Dogmatician, (*dog-ma-tish'an*), *n.* One who utters or propounds dogmas; a dogmatist.

Dogmat'ics, *n. sing.* The science of doctrinal theology.

Dogmatism, *n.* [Fr. *dogmatisme*.] Positive assertion in advancing doctrine; arrogance or positiveness of opinion; as, the "*dogmatism* of his conversation."

Dogmatist, *n.* [Fr. *dogmatiste*; late Gr. *dogmatistēs*.] A bold or arrogant advance of doctrines or principles; a magisterial teacher; a positive asserter, or dogmatic expounder.

Dogmatize, *v. n.* [Fr. *dogmatiser*; Gr. *dogmatizō*.] To lay down an opinion or opinions; to assert positively; to teach with bold and unauthorized confidence; to arrogantly put forth opinions; as, "*dogmatizing* schools." — *Blackmore*.

Dogmatizer, *n.* One who dogmatizes; an arrogant asserter.

Dog'matory, *a.* Dogmatical.

Dog River, in Mississippi. See ESCATAPPA.

Dog River, in Vermont, a small stream of Washington co. It joins the Onion River a few m. below Montpelier.

Dog'-rose, *n.* (*Bot.*) Same as dog-brier. — See ROSA.

Dog'-s-bane, *n.* (*Bot.*) APOCYNUM.

Dog'-s-cabbage, *n.* A species of Thelygonum.

Dog'-s-ear, *n.* The corner of the leaf of a book, turned down after the manner of the ear of a dog.

—*v. a.* To turn down in dog's-ears, as the corners of leaves in a book; as, a *dog's-eared* novel.

Dog'-s-grass, or **Dog'-s-cough-grass**, *n.* (*Bot.*) See FRITICUM.

Dog'-ship, *n.* State, condition, or characteristics of a dog.

Dog'-shore, *n.* (*Naut.*) A shore, or small bulk of timber, used to support a ship on the ways before the blocks are knocked from under her at the time of launching.

Dogs (*Isle of*), or **POPLAR MARSHES**, in London, England, a promontory formed by the windings of the Thames 3½ m. from St Paul's. The East India Docks are situated here.

Dog'-sick, *a.* Sick after the fashion of a dog.

Dog'-sleep, *n.* Pretended sleep.

Dog'-s-meat, *n.* Offal; refuse of animal matter, given as food to dogs.

Dog'-s-meat-man, *n.* A purveyor or vender of dog's-meat.

Dog'-s-tail-grass, *n.* (*Bot.*) See CYNOSTRUS.

Dog'-star, *n.* (*Astron.*) The star *SIRIUS*, *q. v.*

Dog'-s-tongue, *n.* (*Bot.*) Same as Hound's-tongue. See CYNOGLOSSUM.

Dog'-tooth, *n.*; *pl.* DOG-TEETH. See CANINE.

(*Arch.*) An ornament used in the Anglo-Norman buildings of the 12th century, consisting of pointed projections. (See Fig. 845.)

Dog'-tooth - violet, *n.*

(*Bot.*) See VIOLA.

Dog'-town, in Pennsylvania, a village of Lancaster co.

Dog'-trick, *n.* A eurrish trick; an ill turn; brutal treatment.

"Learn better manners, or I shall serve you a *dog-trick*." — *Dryden*.

Dog'-trot, *n.* A gentle trot, like that of a dog.

Dog'-vane, *n.* (*Naut.*) A small vane, with bunting attached, used as an indicator of the direction of the wind.

Dog'-watch, *n.* (*Naut.*) Among seamen, a watch of two hours. There are two *D.*, called the *first dog-watch*, and *second dog-watch*, occurring respectively from 4 to 6 o'clock P.M., and 6 to 8 o'clock P.M.

Dog'-weary, *a.* Spent with fatigue; excessively wearied.

"I've watched so long, that I'm *dog-weary*." — *Shaks.*

Dog'-wheat, *n.* (*Bot.*) Same as DOG'S-GRASS.

Dog'-whelk, *n.* (*Zool.*) See NASSA.

Dog'-wood, *n.* (*Bot.*) See CORNUS.

Dog'-wood-tree, *n.* (*Bot.*) See PISCIDIA.

Dog'-wood Valley, in Georgia, a village of Walker co.

Doinly, **D'oy'ley**, *n.* [Supposed to be derived from the name of the original maker.] Formerly a kind of woollen stuff; a small napkin, generally figured and folded, placed with the dessert and wine after dinner.

Do'ings, *n. pl.* [See DO.] Things done; transactions;

Fig. 845.

DOG-TOOTH ORNAMENT.

Fig. 842. — A DOGE OF VENICE.

feats; actions, good or bad; behavior; conduct; stir; bustle; festivity; as, dangerous *doings*, fine *doings*, &c.

"Shall there be then, in the meantime, no *doings*?" — *Hooker*.

Doit, *n.* [*D. duit*; *Ger. deut*, a small coin; *Fr. doit*; *Lat. digitus*, a finger.] A small Dutch copper coin of infinitesimal value; hence, any very small piece of money.

"When they will not give a *doit* to a lame beggar, they will lay out ten to see a dead Indian." — *Shaks.*

—Anything of little or no value; as, I do not mind him a *doit*. (Used figuratively.)

Doit/kin, *n.* A small coin, less than a *doit*.

Dokimas'tic, *a.* See *DOCIMASTIC*.

Do'ko, a country of tropical Africa, S. of Abyssinia, near the river Gojeb, in Lat. 3° N., Lon. 37° E. The negroes inhabiting this region are dwarfs; they wear no clothing; subsist on roots, honey, and reptiles; and are supposed to be the "pigmies" of the ancients.

Dolabel'la, P. CORNELIUS, the son-in-law of Cicero, who took sides with Julius Cæsar in the civil war, served under him at Pharsalia, Thapsus, and Munda, and was made by him consul and governor of Syria. He was deprived of his government by Cassius, and revenged himself by putting to death Trebonius, governor of Asia Minor, and one of the assassins of the dictator. Declared an enemy of the republic for this act, he took refuge in Laodicea, where he was besieged by Cassius and compelled to commit suicide, B. C. 43.

Dolab'riform, *a.* [*Lat. dolabra*, pickaxe, and *forma*, form.] Applied to those bodies, principally leaves, which are fleshy, compressed towards the upper end, with one border thick and straight, and the other thin and convex.

(*Zoöl.*) Shaped like a hatchet, as the foot of certain bivalves.

Dolce, (*dol'chä*), **Dolcemente**, (*dol'cha-men'ta*), *adv.* [*It.* from *Lat. dulcis*.] (*Mus.*) A term denoting that the passage over which it is written is to be played in a soft, smooth, and delicate manner. In instrumental music, this term is generally applied to those portions of melody which are so peculiarly adapted to the voice that the performer cannot express them better than by taking the vocal tones as his guide.

Dolce, CARLO, (*dol'chai*), a Florentine artist, B. 1616, especially excelled in portraits. Amongst his other eminent works may be mentioned: *Jesus Christ in the Garden of Olives*; *Herodias carrying the head of John the Baptist*; *a Saint Cecilia*; *Jesus Christ blessing the bread*; and *Virgin nursing Jesus*. He was distinguished by a softness of touch to which he probably owes his name. D. 1686.

Dolce, GULF, and RIVER. See *DULCE*.

Dolcino, **Dulcino**, (*dol-ché'no*), *n.* [*It.*] (*Mus.*) A small bassoon.

Doldrums, *n. pl.* A term given by sailors to a certain latitude near the equator, remarkable for prevalent calms and baffling winds;—hence, the colloquial expression, *to be in the doldrums*, signifies to be listless, bored, in a state of ennui, and so forth.

Dole, *n.* [*A. S. dæl*, a part; *L. Ger. deel*; *Swed. del*; *Boh. dil*; *Gael. dala*; *O. Ger. teil*; *Sansk. dal*, to cut.] Act of dealing or distributing; as, a "General *dole*." — *Cleveland*.—That which is dealt out or distributed; share or portion.—Gratuity; that which is given in charity; an alms.—A boundary; a partition.—A void space left in tillage. (*Johnson*).—Grief; sorrow; misery; dolor.

"In equal scale weighing delight and *dole*." — *Shaks.*

(*Scots. Law*.) Proof of criminal design or intent.

—*v. a.* [*A. S. dælan*.] To deal out; to apportion; to distribute in small quantities;—generally before out; as, to *dole out* money.

Dôle, a town of France, dep Jura, near the Doubs, 28 m. N. of Lons-le-Saulnier, was founded by the Romans. *Manuf.* Straw hats, leather, chemical products, agricultural implements, earthenware, hosiery, and optical instruments. *Pop.* 11,093.

Dole'-beer, *n.* Beer given away in charity.

Dole'-bread, *n.* Bread bestowed as an alms.

Dole'ful, *a.* [*Fr. deuil*, grief, from *Lat. dolor*—*doleo*, to suffer pain; probably allied to *Sansk. dal*, to be cleft, used metaphorically.] Full of dolor, grief, pain, sorrow, &c.; expressing grief; afflicted; impressing or producing sorrow; piteous; woful; gloomy; dismal; as, a *doleful* face.

"This *doleful* vale of misery past." — *Prior*.

Dole'fully, *adv.* In a *doleful* manner; dismally; sorrowfully; querulously.

Dole'fulness, *n.* State of being *doleful*; melancholy; dismality; gloominess; querulousness.

Dole'-meadow, *n.* A meadow owned by several persons in common.

Dolerite, *n.* (*Min.*) A variety of *LABRADORITE*, *q. v.*

Dolerit'ic, *a.* Resembling *dolerite*; partaking of the nature of *dolerite*.

Dolesome, (*döl'sum*), *a.* *Doleful*; dismal; querulous; gloomy.

Dole'somely, *adv.* *Dolefully*.

Dole'someness, *n.* State of sorrow, gloom, or querulousness.

Dolgorouki, (*dol-goo-roo'ke*), the name of an ancient and princely Russian family, which has furnished a number of distinguished warriors and statesmen.—

IVAN D., one of the classical poets of Russia, was born 1754, and died at St. Petersburg, 1823.

Dolicho-cephalous, (*dol'e-ko-sef'a-lus*), *a.* [*Gr. dolichos*, long, and *cephalē*, head.] (*Physiol.*) Applied to those nations of men, the length of whose heads, from front to back, exceeds the breadth, as in negroes.

Dolich'onyx, *n.* (*Zoöl.*) A genus of birds, family *Icterida*. See *BOBOLINK*.

Dolichos, (*dol'e-kos*), *n.* [*Gr.*] (*Bot.*) A genus of plants, order *Fabaceæ*, consisting of herbaceous or shrubby twining plants with trifoliate leaves, the flowers succeeded by pods, which are sometimes esculent. *D. sesquipedalis*, a native of South America, and cultivated in the warmer parts of Europe, has cylindrical pods a foot and a half long, which form an excellent dish when cooked young. The *D. tuberosus*, of Martinique, yields a fleshy tuber, as well as pulse, both of them edible; and *D. uniflorus* is grown for food in India under the name of Horse Grain. The *D. pruriens* of Linnaeus is the *Mucuna pruriens* of De Candolle. The stiff hair that covers the external surface of the small pod, that constitutes the fruit of the plant, is used medicinally. The intolerable and persistent itching which these hairs produce, when only the smallest atom touches the cuticle, has obtained for it the name of *Cow-itch*, and has been long a favorite but cruel agent in practical joking. It is applied to kill worms, especially the large, long, round species known as the *lumbrici*; and this it effects by mechanical means—the sharp hairs of the *D.* piercing the worm's tender body, like myriads of fine needles. The manner in which it is prepared for use, is, to take a spoonful of treacle, honey, or jam, and grasping one of the pods of the cowhage with a pair of forceps, scrape off about 10 grains of the hair with a knife, mix them with the honey or treacle, and give the whole to the child every night at bedtime, for a few evenings; giving a powder of jalap, scammony, and calomel about the fourth or fifth morning, to expel the dead worms, and the slime, or *nidus*, in which they engender. Should the *D.* ever get on the skin, the only means of obtaining relief is instantly to wash the part with warm water and soap, and afterwards rub lard or pomatum into and over the irritated cuticle.—See *WORMS*.

Dolichu'rus, *n.* [*Gr. dolichouros*.] (*Pros.*) A long-tailed verse; a verse having a redundant foot or syllable.

Dol'ington, in *Pennsylvania*, a post-village of Bucks co., about 120 m. E. of Harrisburg.

Dol'ium, *n.* [*Lat.*] (*Zoöl.*) The Chank Shells, a genus of *Mollusca*, inhabiting univalve shells, found, for the most part, in the Indian, African, and S. American seas. The shell is large, light, and oval or globular; the mouth wide and notched, generally transversely banded. The species now especially known as Chank Shells are fished up by divers in the Gulf of Manar, on the coast opposite Jaffnapatam, in Ceylon, in about two fathoms water; and at Travancore, Jnticoreen, and other places. Large fossil beds of Chanks have also been found. They are of a spiral shape, and form a considerable article of trade in India, where they are in extensive demand all over the country. They are sawn into narrow rings or bracelets, and are worn as ornaments for the arms, legs, fingers, &c., by the Hindoo women; many of them are also buried with the bodies of opulent and distinguished persons. Those which, from being taken with the fish, are called *green Chanks*, are most in demand. The white Chank, which is the shell thrown upon the beach by strong tides, having lost its gloss and consistency, is not worth the freight up to Calcutta. The value of the green Chank depends upon its size. A Chank opening to the right, called in Calcutta the *right-handed Chank*, is so highly prized as sometimes to sell for 400, or 500, or even 1,000 rupees.

Doll, **Dol'ly**, *n.* [Probably from *idol*; *Gr. eidōlon*.] A puppet, or toy-baby, for a child's play.

Dollar, *n.* [*Low. Sax. dahlér*; *Dan.* and *Swed. daler*; *Ger. thaler*; *It. talero*; *L. Lat. dalerus*, from *A. S. dal*, *Ger. thal*, a valley; the coin is said to have been first struck in the *dale* or valley of Joachim, in Bohemia.] The money unit of the U. States, which was taken from the once famous Spanish dollar or piastre. It was established under the Confederation by resolution of Congress, July 6, 1785, and the first coinage of dollars commenced in 1794. It was then only a silver piece, containing 371 4-16th grains of pure silver, and 416 grains of standard silver. The Act of Jan. 18, 1837, reduced the standard weight to 412½ grains, but increased the fineness to 900-1000ths, the quantity of pure silver remaining as before. The smaller silver coins are not of equal weight proportionally. By the Act of March 3, 1849, the coinage of gold dollars was authorized. They were issued the same year, weighing 25 8-10th grains, 9-10ths fine, 23 22-100ths being pure gold. All other coins of the U. States are decimal multiples or subdivisions of the dollar.

Dol'art Bay, or *THE DOLLERT*, a large arm of the North Sea, extending between Hanover and Holland, to the mouth of the river Ems.

Döl'inger, IGNAZ, an eminent German anatomist and physiologist, b. at Bamberg, 1770. He graduated in 1794, went, in 1803, as professor of anatomy to Würzburg, where he, in connection with Schellug, founded a new anatomical-philosophical school. In 1826 he removed to Munich, where he d. in 1841. His prominent position in the history of science was earned particularly by his examination and studies of comparative anatomy and physiology, and by the improving of the microscope. His principal works are: *Grundzüge der Physiologie*; *Ueber den Werth und die Bedeutung der vergleichenden Anatomie*; *Beiträge zur Entwicklungsgeschichte des Gehirns*; *Grundzüge der Entwicklung des Zellen-, Knochen-, und Blut-Systems*.

Doll'man, *n.* See *DOLMAN*.

Dol'ly, *n.* See *DOLL*.—(*Mining*.) A mechanical contrivance for the stirring of ores in the process of washing.—A domestic instrument used for stirring linen while undergoing purification in the laundry.

Dol'man, **Doll'man**, *n.* [*Fr. doliman*; *Hung. dolmány*; *Turk. dhölamat*.] A garment of the cassock kind, worn by the Turks, Albanians, Hungarians, &c.

Dol'men, *n.* [*Celt.*] (*Archæol.*) Same as *CROMLECH*, *q. v.*

Dolomieu', DEODAT GUI SYLVAIN TANCÈDE DE GRATET

DE, a French geologist, b. in Dauphiné, 1750. He accom-

panied Bonaparte to Egypt, and on his return was taken

prisoner, confined at Messina, and d. 1801. He had

travelled, for scientific purposes, in many parts of Eu-

rope; and he is especially distinguished for his discov-

ery of the peculiar geological formation of the moun-

tain-ranges of South Tyrol, which have since been named,

after him, the "Dolomite Mountains." He was author

of many esteemed works, of which his *Mineralogical*

Philosophy, and a *Voyage to the Lipari Islands*, are the

chief.

Dol'omite, *n.* (*Geol.*) [Named after *DOLOMIEU*, *q. v.*] See

PERMIAN and MAGNESIAN LIMESTONE.—(*Min.*) A specific

name for the rhombohedral compounds of carbonate of

lime and magnesia. It includes the varieties Pearl Spar,

Bitter Spar, Mesitine Spar, and Brunnerite.—As a rock

the name is given to limestones containing carbonate of

magnesia; those varieties that approach nearest in com-

position to equivalent combinations of the two carbon-

ates yielding the most durable building-stones. In the

Tyrol, Canada, and other mountainous districts, local

masses of limestone are found to be changed into crys-

talline *D.* over extensive areas.

Dolomit'ic, *a.* Of the nature of, or relating to, *dolo-*

mite; as, *dolomit'ic* rocks.

Dolomiza'tion, *n.* Formation of *dolomite*.

Dolomize, *v. a.* To convert into *dolomite*.

Dol'or, (formerly written *DOLEUR*), *n.* [*Lat.*, from *doleo*

to sorrow. See *DOLEFUL*.] Lamentation; grief; sorrow

anguish; trouble.

Dolo'res, a town of the Mexican Confederation, depart-

ment and 45 m. N.E. of the city of Guanajuato.

Doloriferous, **Dolorif'ic**, **Dolorif'ical**, *a.*

[From *Lat. dolor*, and *ferre*, to produce, *facere*, to make.

Producing or causing pain, anguish, or misery.

Doloro'so, *n.* [*It.*] (*Mus.*) Noting a soft and patheti-

style of execution.

Dol'orous, *a.* [See *DOLOR*.] Full of *dolor*; sorrowful

doleful; dismal.—Painful; giving pain or sorrow; ex-

pressing grief or trouble; as, *dolorous* cries.

Dol'orously, *adv.* Sorrowfully; in a manner to ex-

press pain.

Dolphin, (*dol'fin*), *n.* [*Lat. delphin*, *delphinus*; *G.*

delphis; *Fr. dauphin*. Etymol. uncertain.] (*Zoöl.*)

A name commonly applied to two inhabitants of the ocea-

of widely different habits and organization: by natura-

lists it is generally used to signify the dolphin of the an-

cients, which is a cetaceous mammal of the genus *De-*

lphis of Linnaeus; by poets it is applied to the coryphæ-

(*Coryphæna hippurus*, Linn.), a fish long celebrated for

the swiftness of its swimming, and the brilliant and beau-

tiful colors which it successively assumes in the act of

death.—See *DELPHINIDÆ*, and *CORYPHÆNA*.

(*Mech.*) A technical term applied to the pipe and cov-

er at a source for the supply of water.

(*Archæol.*) A contrivance formed of iron or lead, and

so placed as to hang suspended ready to fall on any sh-

passing under it.

(*Arch.*) The figure of a fish placed as an ornament to

a building, as symbolic of amity.

(*Naut.*) A lashing to secure the puddening of a ma-

when the lower yards rest in the slings.—A mooring

post or pillar on a dock-quay.—A buoy attached to an

anchor, with a ring for the bending of a cable thereto.

Dolphin, in *Minnesota*, a village on the boundary li-

between Ramsey and Washington cos., abt. 6 m. E.

St. Paul.

Dolphinnet, *n.* A female dolphin.

Dolphin-striker, *n.* (*Naut.*) A term sometimes

applied to the quartergale of a ship's bowsprit.

Dol'sentown, in *New York*, a village of Orange co.

abt. 100 m. S. by W. of Albany.

Dol'son, in *Illinois*, a flourishing township of Clar-

ke co.

Dolt, *n.* [*Ger. tölpel*; *A. S. dol*. See *DULL*.] A heavy

stupid fellow; a blockhead; a thickhead; a numskn

an ignoramus; an ass.

Dolt'en's Station, in *Illinois*, a P. O. of Cook co.

Dolt'ish, *a.* Stupid; mean; blockish; obtuse; dull

intellect; as, a *doltish* clown.

Dolt'ishly, *adv.* In a *doltish* manner.

Dolt'ishness, *n.* Stupidity; thickheadedness.

Dom, a termination of certain words denoting sta-

condition, or degree, as regards jurisdiction, power,

property qualification; as, *kingdom*, *earldom*, *wisdom*,

Christendom, &c.

Dom, *n.* [From *Lat. dominus*, lord.] A title given

Portugal and Brazil to the Sovereign, the royal

family and to grandees, or persons of noble birth

quality.

Dom'ableness, *n.* Susceptible of being tamed.

Domain', *n.* [*Fr. domaine*; *Lat. dominium*. See *1*

MESSE.] Dominion; empire; sway.

"Ocean trembles for his green *domain*." — *Thomson*.

—Territory governed, or under the rule of a sovereign

commonwealth.—Possessions; estate; the land ab-

the mansion-house of a lord, or large proprietor of

soil, and in his immediate occupancy; as, broad *dom-*

Do'mal, *a.* [From *Lat. domus*, house.] (*Astrol.*) I-

ndicating, or having reference, to a house, in casting

figures.

Dom'a'nial, *a.* Relating or pertaining to domains

landed estates.

Domat, (*do'mah*), JEAN, a French jurist, b. at Clermont

in Auvergne, held for nearly 30 years the office of ad-

ocate of the king in the court of Clermont. He was

DOMES—MODERN RENAISSANCE.

1. Eglise des Invalides, Paris. 2. Church of the Sorbonne, Paris.
 3. Variation of same. 6. St. Paul's, London. 7. Church of St. Isaac, St. Petersburg.

intimate friend of Pascal, and the associate of the other eminent Port-Royalists. He made the Jesuits his enemies by his opposition to their efforts to get possession of the College of Clermont. In 1681 he settled at Paris, and applied himself to the completion of his great work, *Les Lois Civiles dans leur Ordre Naturel*. It appeared in 1689, has been several times republished, and was translated into English by Stralau in 1726. Domat also wrote a work entitled *Legum Delectus*, which appeared after his death. B. 1625; D. 1695.

ombeya'eeæ, *n. pl. (Bot.)* A name of the order BYTTNERIACEÆ, *q. v.*

ome, *n.* [Fr. *dôme*; Lat. *domus*, a house; It. *duomo*, a house, but applied to cathedrals and churches, as the house of God.] A building; a fabric; an edifice;—used chiefly in a poetical sense.

"Though lightning strike the dome again."—*Prior*.

(*Arch.*) Any covering placed over a building, and taking the form of a hemisphere or spherical vault, whether round or polygonal at the base. A distinction should properly be made between the terms *dome* and *cupola*,—the former applying to the exterior, or convexity of the covering, and the latter to its interior surface, or concavity; but they are generally used as synonymous expressions. In building a *D.* of masonry, its thickness should be the greatest at the base, which is the weakest part, and gradually diminish towards its crown or centre. The lower courses of masonry should also be strengthened by hooping or framing, particularly if the diameter of the base be considerable. The principles on which the equilibrium of a dome is maintained are similar to those on which the equilibrium of arches depends. They are put together on centrings of elaborate construction; but these serve rather as a scaffold for the workman than as a support for the materials of which the *D.* is made, until the crown is inserted. The use of the *D.* was not resorted to by the Egyptians, Assyrians, and Greeks; but the Romans, who were the first to use the arch to any great extent, also erected circular vaulted roofs or *D.* over many of the temples of their heathen gods, among which may be named those of Bacchus, Apollo, Minerva, and Diana, and the magnificent Pantheon at Rome. They also covered the chambers of some of their splendid baths with roofs built in this form, as the baths of Caracalla, and Diocletian. In Byzantine architecture, the *D.* as a peculiar feature in all cathedrals and churches built after that style, and among these the *D.* of St. Sophia, at Constantinople, may be especially noticed. (See *BYZANTINE ARCHITECTURE*.) The majority of the Italian churches built during the Middle Ages are also surmounted by *D.* The great *D.* of St. Peter's at Rome was designed and partly built under the superintendence of Michael-Angelo. Among the most remarkable *D.* of more modern construction may be mentioned those of the Invalides and the Pantheon (fig. 846) at Paris, that of St. Paul's at London, and that of the Capitol at Washington.—See *EQUILIBRIUM OF ARCHES*.

Fig. 846.—THE PANTHEON. (Paris.)

(*Mach.*) In locomotive-engines, the conical part of the boiler, forming a steam-chamber, and terminating the top of the fire-box part. In a locomotive-engine the safety-valves are usually placed on the top of the *D.* or the body of the boiler.

me-book, *n. (Eng. Hist.)* A book composed under the direction of Alfred the Great, for the general use of the whole kingdom, containing the customs of the several provinces. This book is said to have been extant late as the reign of Edward IV., but is now lost.

me-cover, *n. (Mach.)* In locomotive-engines, the brass or copper cover which encloses the dome, to prevent the radiation of heat.

med, (*dōmd*), *a.* Furnished with a dome; as, a *domed temple*.

menichino, (*do-main-e-ke'no*), a celebrated Italian painter, whose real name was DOMENICO ZAMPIERI, was at Bologna, 1581. He studied first under Denis Calvart, and then in the school of the Caracci. At about the age of 20 he went to Rome, where he acquired a great reputation, especially by his fresco of the *Flagellation of St. Andrew*. He spent the latter part of his life at Naples. His chef-d'œuvre is the *Communion of St. Jerome in the Church at Bethlehem*, now placed in the Vatican, opposite "The Transfiguration" of Raphael. His *Martyrdom of St. Agnes*, *Martyrdom of St. Sebastian*, and his scenes from the life of the Virgin, are among his finest works. *D.* was one of the victims of the malignant persecuting triumvirate of painters at Naples, where he died 1641.

mes-day, *n.* See DOOMSDAY.

mes-day-book, *n. (Eng. Hist.)* See DOOMSDAY-BOOK.

mes'tic, *a.* [Fr. *domestique*, from Lat. *domesticus*, in *domus*, a house. See DOME.] Belonging to the use or home; pertaining or having reference to one's use or residence, and to the family therein; as, *domestic comfort*, *domestic concerns*, *domestic servants*, *domestic jills*, &c.

"Domestic happiness, thou only bliss Of Paradise that has survived the fall."—*Cooper*.

—Pertaining to a nation considered as a family, or to one's own country; not foreign; intestine; as, "*domestic dissensions*."—*King Charles I.*

—Made or designed in one's own house, nation, or country; as, *domestic manufactures*.—Fond of home; much at home; attached to home-life, duties, and pleasures; as, a *domestic wife*.

"View her at home in her domestic light."—*Granville*.

—Belonging to a house or household; living in or near human habitations;—hence, tame, not wild; as, *domestic fowls*.

"The faithful husband is a tractable and domestic animal."—*Addison*.

—*n.* A house-servant; one who lives in the house or family of another, as an assistant for hire; a servant or hired laborer residing with a family; as, an old, faithful *domestic*.

—*pl. (Com.)* Cotton goods of home manufacture; as, gray *domestics*.

Domestically, *adv.* Having reference to family affairs; privately.

Domestication, *v. a.* [L. Lat. *domesticor*, *domesticatus*.] To make or render domestic; to cause to retire from public notice; to accustom to remain much at home; as, a *domesticated* husband.—To make one's self familiar; to feel at ease, and as if at home; as, no sensible man will *domesticate* with his mother-in-law.

—To tame; to accustom to human associations; as, to *domesticate* a young bear.

Domestication, *n.* [L. Lat. *domesticatio*.] Act of domesticating, or withdrawing from public notice, and living much at home; act of taming or reclaiming wild animals.

Domesticator, *n.* One who domesticates, or lives in privacy.

Domesticity, (*do-mes-tis'e-tee*), *n.* [Lat. *domesticitas*.] State of being domesticated; home-life.

Dom'ett, *n.* A mixed cotton and woollen cloth.

Dom'eykite, *n. (Min.)* An arsenuret of copper, found in Peru, and in Michipicoton, an island of Lake Superior. *Sp. gr.* 7 to 7.50.

Dom'ical, *a.* Resembling, or pertaining to, a dome.

Domicile, (*dom'e-sil*), *n.* [Fr., from Lat. *domicilium*, from *domus*, a house.] A habitation; a dwelling; an abode; a mansion; a place of permanent residence; the place where a person has his home, or where he has his family residence.

(*Law*.) In a strict and legal sense, the *D.*, legal residence, or habitation of a person is where he has his true fixed permanent home, and principal establishment, and to which, whenever he is absent, he has the intention of returning. *D.* may be either *national* or *domestic*. In deciding the question of national *D.*, the point to be determined will be, in which of two or more distinct nationalities a man has his *D.* In deciding the matter of domestic *D.*, the question is, in which subdivision of the nation does the person have his *D.* Mere taking up residence is not sufficient, unless intention to abandon former *D.* is accompanied by some act in furtherance of such intention. *D.* is of three kinds: *D. by birth*, *D. by choice*, and *D. by operation of law*. The first is the common case of the place of birth, *domicilium originis*; the second is that which is voluntarily acquired by a party, *proprio Marte*; the last is consequential, as that of the wife who has for *D.* the *D.* of her husband. The *D.* of an illegitimate child is that of the mother. If a person goes into a foreign country, and engages in trade there, he is, by the law of nations, to be considered a merchant of that country, and subject to all civil processes, whether that country be hostile or neutral. The disposition of, succession to, or distribution of, the personal property of a decedent, wherever situated, is to be made in accordance with the laws of his actual residence at the time of his death.

Domiciliat, *n.* A member of a household.

Domiciliary, *a.* [Fr. *domiciliaire*; L. Lat. *domiciliarius*.] Pertaining to a domicile, or to an abode, or to the residence of a person or family; as, *domiciliary rights*.

Domiciliary Visit, (*Law*.) A legal visit to a private house, for the purpose of searching it.

Domiciliate, *v. a.* [Fr. *domicilior*.] To establish a fixed place of abode, or a residence that constitutes habitancy; to render domestic.

Domiciliation, *n.* Fixed residence; permanent habitancy.

Dom'icenture, *n.* That which pertains to domestic affairs; household economy. (*R.*)

Dom'ina, *n.* [Lat.] (*O. Eng. Law*.) A lady possessing a barony in her own right.

Dom'inance, Dom'inancy, *n.* Predominance; ascendancy.

Dom'inant, *a.* [Lat. *dominatus*, from *dominor*. See DOMINATE.] Having dominion, rule, or ascendancy; governing; ruling; predominant; authoritative; as, a *dominant* faction.

—*n. (Law.)* That to which a servitude or easement is due, or for the benefit of which it exists.—Distinguished from *servient*, that from which it is due.

(*Music*.) The fifth above the tonic; the ruling or governing tone of the key. Ancient writers called the *D.* the *quinta toni*, from its being the next in importance to the tonic. The *D.* chord is always a major chord, the third being the *subsemitonium modi*, or leading note, which always rises a semitone to the tonic. The *D.* seventh is the major chord with the flat seventh above the *D.*, and is the same in major and minor keys. The rules for the treatment of the *D.* seventh, and for

the chord of the ninth on the *D.*, apply to all other chords of the seventh or ninth, which arise from the other degrees of the scale. The *D.* seventh is a most important chord in modulation. The resolution of the *D.* seventh is always into the chord of the tonic, when not interrupted. The *D.* as a key is the nearest in relation to the tonic. Modulation into the key of the *D.* is so frequent in composition, that its form may be said to be stereotyped. The subdominant, or under *D.*, stands next in importance to the *D.*, and has its place on the fourth above the tonic, or, which is the same, on the fifth below. The chord of the subdominant is major or minor, according to the mode of the key. The chords on all other degrees of the scale, being either minor or diminished, give greater importance to the major chords of the tonic, *D.*, and subdominant; in which chords all the notes of the scale are found, while the combination of these chords, giving the most perfect impression of a key, may account for their being of such importance in harmony.

Dom'inate, *v. a.* [Lat. *dominor*, *dominatus*—*dominus*, a lord, from *domo*; Gr. *damao*; Sansk. *dam*, to tame.] To rule; to govern; to prevail; to predominate over.

"The dominating humour makes the dream."—*Pope*.

Domination, *n.* [Fr.: Lat. *dominatio*.] Rule; dominion; exercise of power in ruling, supreme authority; government; tyranny; as, "the haughtiness of *domination*." (*Burke*).—Faction; party.—One highly exalted in power;—said of a supposed order of angelic beings.

"Dominations, principedoms, virtues, powers!"—*Milton*.

Dom'native, *a.* Imperious; authoritative; ruling.

Dom'inator, *n.* The presiding or predominant power, or influence.

Dom'ineer, *v. n.* [Fr. *dominer*; Lat. *dominor*.] To govern magisterially or tyrannically; to rule with insolence of power, or arbitrary sway; to bluster; to hector; to play the master; to swell with conscious superiority or haughtiness; often preceding *over*; as, to *domineer over* an inferior.

Dom'ingo, San, a seaport-town, and cap. of the Dominican republic, on the S.E. coast of the island of Hayti, at the mouth of the Ozama, which forms its harbor; Lat. 18° 28' 40" N., Lon. 79° 59' 37" W.; was the first permanent settlement made by Europeans in America, having been founded in 1494 by Bartolomeo Columbus. It is handsomely built in the Spanish style, and has a cathedral which formerly contained the ashes of Columbus. Its harbor is both safe and commodious, having from 10 to 12 ft. of water, but large ships cannot cross the bar at the mouth of the Ozama, and lie outside. San Domingo has considerable commerce with the interior, but little foreign trade. The streets are broad and straight, the houses mostly of wood, and the town surrounded by a wall. The harbor is defended by forts and batteries. *Pop.* about 25,000.

Dominica (*dom'e-ne-ka*), a British W. India island, and one of the Leeward group, about 20 m. N. of Martinique, crossed by Lat. 15° 30' N., Lon. 61° 20' W. Length, N. to S. 29 miles, greatest breadth, 11 miles; area about 290 sq. m. It is mountainous throughout, the Morne Diablotin being over 5,900 feet high.—*Prod.* Coffee, sugar, maize, cotton, cocoa, tobacco, timber, and cabinet wood.—*Exp.* Sugar, coffee, rum, molasses, canejuice, cocoa, and copper ore. The island was discovered by Columbus, in 1493. *Pop.* (1895) 29,800.

Dom'inal, *a.* [Fr.: L. Lat. *dominialis*, from *dominus*, from *dominus*, lord.] Indicating Sunday, the Lord's day or the Sabbath.—Relating to, or bestowed by, the Saviour; as, "the *dominical* gospels."

Dom'inal Letter, *n. (Calendar.)* For the purpose of exhibiting the day of the week corresponding to any given day of the year, the framers of the ecclesiastical calendar denoted the seven days of the week by the first seven letters of the alphabet, A, B, C, D, E, F, and G; and placed these letters in a column opposite to the days of the year, in such a manner that A stood opposite the 1st of January or first day of the year, B opposite the 2d, and so on to G, which stood opposite the 7th; after which A returns to the 8th, and so on through the 365 days of the year. Now, if one of the days of the week, Sunday for example, falls opposite to E, Monday will be opposite to F, Tuesday G, Wednesday A, and so on; and every Sunday through the year will be represented by the same letter, E, every Monday by F, and so on. The letter which represents Sunday is called the *Dom'inal Letter*, or *Sunday Letter*. As the common year consists of 52 weeks and one day over, the *D. L.* go backwards one day every common year. If the *D. L.* of a common year be G, F will be the *D. L.* for the next year. As a leap-year consists of 52 weeks and two days, the letters go backwards two days every leap-year. If in the beginning of a leap-year the *D. L.* be G, E will be the *D. L.* for the next year. This extraordinary retrocession, however, is made to take place at the intercalary day (29th February) by the artifice of marking it by the same letter as the day preceding it, and thus the next Sunday is marked by the letter preceding that which marked the Sundays before the intercalary day. Suppose the 28th February in a leap-year to be a Sunday, and marked by F, it is evident that the *D. L.* for the rest of the year will be E. As every fourth year is a leap-year, and the letters are seven in number, it is clear that the same order of letters must return in four times seven, or 28 years, which would, but for the leap-years, recur in seven years, and hence the *Solar Cycle* (*q. v.*). The *D. L.* were first introduced into the calendar by the early Christians, to displace the nundinal letters in the Roman calendar. They are of use as a means of discovering on what day of the week any day of the month falls in a given year.—See *EASTER*.

Domin'icau, *a.* Belonging or relating to the order of St. Dominic; as, a *Dominican* nun.

—*n.* A monk of the order of St. Dominic.

Domin'icau Republic. See HAYTI (ISLAND OF).

Domin'icans, DOMINICAN FRIARS, BLACK FRIARS. (*Ecc. Hist.*) An order of monks first instituted by St. Dominic de Guzman, at Toulouse, in 1215. About the year before he had, together with Diego de Azebes, endeavored to convert the Albigenses in the south of France by preaching. Feeling that the immorality of

Fig. 847. — A DOMINICAN.
(From Dugdale's *Monasticon*.)

the clergy and the ignorance of the population were great aids to heresy, he instituted the order of the *D.* for the purpose of preaching and converting. The order was confirmed by Innocent III., and Honorius III., in 1216. Before that time, however, Dominic had found that preaching had little effect upon the Albigenses; and, at his instigation, the Pope proclaimed a crusade against the "heretics." The barons of France were summoned to join, and horrible slaughter was committed on these unfortunate people. Dominic himself is not said to have been a harsh or cruel man, but merely led blindly away by religious passion. The members of this new order wore a white garment similar to that worn by the Carthusians, with a black cloak and a pointed black cap. Five years after their institution they took the vow of poverty, and in the following year Dominic died. He was canonized by Gregory IX. in 1233. — Another Dominican order was established in 1224, called the *Knights of Christ*. Its object was to suppress heresy by force of arms. The title of the order was afterwards changed to that of the *Penitents of St. Dominic*. They did not lose their civil or domestic rights and privileges. The original order increased rapidly in numbers and influence. In England they were always called the *Black Friars*, and many traces of them are to be observed in nearly every town. In France they were called *Jacobins*, from the fact that they first located themselves in the Rue St. Jacques, Paris, — (in Latin, *Jacobus*.) They produced several famous scholars — Albertus Magnus, Thomas Aquinas, and Raymond de Pennafort being among the number. Their great rivals were the Franciscans. At the present day, the order of Dominicans flourishes chiefly in Hungary, Switzerland, America, Belgium, and France, where the order was revived in this century by the celebrated Lacordaire, *q. v.*

Domin'icide, *n.* [Lat. *dominus*, master, and *cadere*, to kill.] Act of killing a master. — One who is guilty of killing his master.

Domin'ick, in Illinois, a village of La Salle co., about 50 m. N.N.E. of Peoria.

Domin'ic, (*St.*) See DOMINICANS.

Domin'ic, *n.* [From Lat. *dominus*.] In Scotland, a term bestowed on a schoolmaster, man of erudition, or pedagogue.

"Prodigious! cried the dominie." — Scott.

—It is also applied, in Scotland, to a person in holy orders; as, the *dominie* of a parish.

Dominion, (*do-min'yun*), *n.* [Lat. *dominium*, from *dominus*, a lord.] Sovereign or supreme authority; power of ruling, governing, or controlling; sovereign control; rule; authority; right of possession and use, without accountability; empire.

"The sun never sets on my dominions." — Emperor Charles V.
—Predominance; ascendancy; superior power; preponderance. — District governed, or within the limits of the authority of a reigning prince or ruler; territory; country; region; as, the *Dominion* of Canada. — An order of angels, or governing power highly exalted.

"Thrones, dominions, principalities, or powers." — Col. i. 16.

Domin'is, MARCO-ANTONIO DE, a Jesuit and physician of Dalmatia, was the first to explain the rainbow. B. 1566; d. 1624.

Domin'ino, *n.*; *pl.* DOMINOS, or DOMINOES. [Fr., from Lat. *dominus*.] A long, loose cloak of black silk, &c., with a hood removable at will, used as a general disguise at masquerades. — The person who wears a domino for disguise. — A semi-mask worn by ladies to conceal the upper part of the face, at *bals masqué*, &c.

(*Ecc.*) A hooded cape formerly worn by priests during winter.

—*pl.* (*Games*.) A game generally played with 28 flat oblong pieces of ivory or bone, each of which, called a *domino*, is divided by a line into two parts, bearing numbers marked by points. The game is won by the player who plays out all his tablets or *D.* first, or, if that is impossible, the player who has the least number of points on the dominos left in hand. The game of *D.* is supposed to be very ancient; it has been traced back to Greek, Hebrew, and Chinese origin. At the beginning of the 18th century it was introduced into

France from Italy, and, after becoming very popular there, it spread into Germany and other countries. It is much played in some of the U. States.

Dom'inus, *n.*; *pl.* DOMINI. [Lat., master, lord, &c.] Master; sir; a title of respect formerly used when addressing persons of high degree.

(*Law*.) Lord; master; sole owner; proprietor.

Do'mite, *n.* (*Min.*) A volcanic rock (porphyritic trachyte) forming the Puy de Dôme, in Auvergne.

Domitian, TITUS FLAVIUS AUGUSTUS, (*do-mish'yan*), the last of the "Twelve Cæsars," and youngest son of the Emperor Vespasian, was B. 51 A. D. He early displayed the licentiousness and cruelty of his disposition, and was kept — both by his father and by his brother, the noble, generous Titus, who succeeded Vespasian — entirely apart from public life, being intrusted with no employment, and compelled to live altogether as a private citizen. When proclaimed emperor, on the death of Titus, which he is suspected of having accelerated, if not procured, he proved the wisdom of the restraint which had been put upon him by the ferocity in which he ultimately revelled. His first administrative acts were judicious, and gave an augury of better things, which was soon belied. Aspiring to military fame, he was unsuccessful in his undertakings, and after his defeat by the Dacians, who compelled him to make a humiliating peace, his natural disposition — suspicious, savage, gloomy, and morose — manifested itself in all its naked deformity. To be honorable and virtuous was to be a mark for destruction — the mere suspicion of patriotism a warrant for death. His bloody reign furnishes some of the most thrilling pages of that master-spirit among historians, Tacitus; and points with its keenest shafts the withering irony of the great satirist Juvenal. After escaping from many conspiracies, the monster fell, on the 18th of Sept., 96, the victim of a plot in which his wife, Domitia, bore a prominent part.

Dom'mel, a river of the Netherlands, rises in N. Brabant, and after a course of 45 m. falls into the Meuse, 4 m. from Bois-le-Duc.

Do'mo d'Osso'la, a charming small town of N. Italy, in Piedmont, on the Foce, at the foot of the Simplon route, 20 m. from Pallanza; *pop.* 2,716.

Dom'remy-la-Pucelle, a village of France, dep. of the Vosges. Joan of Arc was born here. The cottage in which she was born has been lately repaired at the expense of the government.

Don, *n.* [From Lat. *dominus*.] A Spanish title of respect when addressing a person, equivalent to the English *Master* (Mr.); Italian, *Signor*; Portuguese, *Dom*; German, *Herr*; French, *Monsieur*, &c. — This appellation was in former times confined exclusively to grandees, or persons of noble blood; but its use has now become generally applicable to all classes.

—A term applied to a person of consequence, whether real or pretentious; as (at the English universities), a college *don*.

"The great dons of wit." — Pope.

Don, *v. a.* [To *do on*; — in contradistinction to *doff*, or *do off*, *q. v.*] To put on apparel; to dress; to invest with; as, "her helm the virgin *donn'd*." — Fairfax.

Don, (*anc. Ténais*), a river of Russia in Europe, rises in a small lake in the government of Tula, in about Lat. 53° 45' N., and Lon. 38° 10' E. It flows at first in a S.E. direction through the govts. of Tula, Riazan, Tambov, and Woronez, and after winding S.W. through the country of the Don Cossacks, it advances to its embouchure in the Sea of Azov, which it enters by three mouths, only one of which is navigable. The Don receives 80 affluents, of which the principal are the Sosna and the Donetz on the right, and on the left the Khoper, the Medveditsa, the Sal, and the Manitch. Its total length is about 995 m. Its course is obstructed by frequent sand-banks, which, when the water is low, render navigation impossible to any but flat-bottomed boats. From April to June it is navigable as high as Zadousk, 600 m. from its mouth. The Don is connected by a canal with the Volga, and by this means the produce and manufactures of the interior are conveyed to the S. provinces of Russia. The waters of the Don abound in fish, the traffic in which commodity is considerable, especially in its lower course.

Don, the country of the Don Cossacks. This name is applied to that region of barren steppes lying between the Don on the west, and the Caucasian range on the east, in southern European Russia, and is estimated to contain a roving population of 949,682 Cossacks. — See COSSACKS.

Don, a river of Scotland, rising in Ben Aven, and, after a course of about 78 m., falling into the North Sea, 2 m. from Aberdeen. — Another, in England, rises in the moors near Penistone, Yorkshire, and, after a course of 67 m., joining the Ouse at Goole.

Do'ña, *n.* [Sp. and Pg. fem. of *don*.] A title used in Spain, Portugal, &c., to denote a lady or gentlewoman; as, *Doña Luisa*. (It is sometimes written *Donna*, but erroneously, the latter spelling being strictly Italian.)

Do'na, in Delaware, a village of Kent co., on Delaware Bay, about 7 m. N.E. of Dover.

Dona, (*San*), a town of N. Italy, on the Piave, 18 m. from Venice; *pop.* about 5,000.

Do'nable, *a.* [Lat. *donabilis*.] That may be donated or given.

Donacar'gyrite, *n.* (*Min.*) Same as FREIERSLEBENITE, *q. v.*

Donaghadee, (*don-nā-ha-dē'*), a seaport-town in the north of Ireland, on its eastern coast, in the county of Down, 16 m. from Belfast; it has a *pop.* of 2,671, principally employed in preparing flax, and linen weaving.

Don'ald, the name borne by a line of Scotch kings who lived in the early ages of the Christian æra, and whose

annals are so stained with murder, treachery, and revolting vices, that, as they rather injured than benefited mankind, their names may be expunged with profit from the history of a land they disgraced by their unnatural deeds. Donald I. commenced his reign in 216 and the VIIIth, called the *Bane*, was dethroned by Edgar Atheling in 1098.

Don'aldson, in Pennsylvania, a post-village of Schuylkill co., about 15 m. S.W. of Pottsville.

Don'aldsonville, in Louisiana, a post-town, cap. of Ascension parish, on the Mississippi River, at the head of Bayou La Fourche, about 82 m. above New Orleans. On August 10, 1862, it was bombarded and partly destroyed by Admiral Farragut.

Donally's Mills, in Pennsylvania, a post-office of Perry co.

Do'nary, *n.* [Lat. *donarium*.] A thing given for sacred use.

Donate', *v. a.* [Lat. *donare*, *donatum*, from *dare*, give.] To give; to grant; to bestow; as, to *donate* a sum of money. (American and modern. Not used in Eng.)

Donatello, properly DONATO DI BELLO DI BARDI, one of the greatest Italian sculptors, b. at Florence, 1386. He enjoyed the patronage of the Grand-duke Cosmo, executed many fine works at Florence and other cities of Italy, and carried the art to a degree of excellence which it had not previously reached in modern times. Among his best works are the statues of *St. Mark*, *L. vid*, *St. John*, and *St. George*; the group of *Judith & Holofernes*; the monuments of *Pope John XXIII.* and *Cardinal Brancacci à Pieta*; and an *Annunciation*. 1466.

Donation, (*do-nā'shun*), *n.* [Fr.; Lat. *donatio*, from *domo*, to give, from *donum*, a gift.] Act of presenting with, giving, bestowing, or granting. — That which given, rendered, or bestowed; a benefaction; a gift as present; as, a *donation* for charitable purposes.

(*Law*.) Act or contract by which a thing, or the right of it, is transferred to a person or corporation as a gift; as, a letter of *donation*.

Donation party. In the U. States, a party assembled at the residence of a particular person, to present individually with gifts as a token of esteem.

Donat'ion, in Pennsylvania, a P. O. of Huntingdon co.

Donat'i's Comet, (*Astron.*) A brilliant comet, discovered at Florence by an Italian astronomer named Donati, early in June, 1858, when it was supposed to be nearly 230,000,000 of miles distant from the earth. It became visible to the naked eye in the beginning of September following, reaching its perihelion about 30th of that month. It reached the point in its orbit nearest to the earth on Oct. 10, when the diameter of head appeared to be about 100,000 miles, and that of nucleus 800 miles. When it first became visible with the aid of a telescope, its tail appeared to be 14,000 of miles in length. This gradually increased to 51,000 on Oct. 10, when the tail seemed to cover an arc of 4 but as it went away from the earth, the length of part of the comet diminished with greater apparent rapidity than it had previously increased.

Donat'ism, *n.* [Fr. *donatisme*; Lat. *donatismus*.] (1. *Hist.*) The schismatic doctrines held by the Donatists, *q. v.*

Donat'ists, *n. pl.* (*Ecc. Hist.*) On the election of Cilianus to the see of Carthage, in 311, the minority chose another bishop, who, dying in 313, was succeeded by Donatus. He formed the malcontents into a sect named after himself. The peculiarity of the sect was its strictness in matters of church discipline. Severe laws were passed against it in 316, and it was condemned by the Council of Carthage in 411. It was not totally extinguished till the 7th cent.

Donat'ive, *a.* Relating, or pertaining, to donatists.

Donative, *n.* [Lat. *donativum*, a largess, from *do*, Fr. *donatif*; Sp. and It. *donativo*.] A largess; a gift of gratuity; a present.

—*a.* Vested or vesting by donation.

Donator, *n.* (*Law*.) A donor or giver.

Donatory, *n.* (*Scottish Law*.) The person on whom the king bestows his right to any forfeiture that has fallen to the crown.

Donauwerth, (*don'ow-vairt*), a town of Bavaria on the Danube, 24 m. from Augsburg. The Duke of Bavaria gained an important victory here over the Turkish army of the Count of Arco, July 2, 1704. Another battle was fought here, Oct. 6, 1805, between French under Soult, and the Germans, in which the latter were victorious.

Don Beni'to, a town of Spain, 58 m. E. of Badajoz. *Manf.* Woollens. *Pop.* about 15,000.

Don'caster, a town of England, in the W. Riding of Yorkshire, celebrated for its horse-races: the great "Leger" is run for here. *Manuf.* Cotton and woollen spinning, and glove and stocking-knitting.

Don'caster, in Maryland, a P. O. of Charles co.

Done, (*dūn*), *pp.* of *Do*, *q. v.* Acted; performed; executed; finished. — [From Lat. *donare*, to give.] Given out; issued; published; — used, principally, as certifying the date of a proclamation or of public documents; as, "Done at Washington, this first day of January." — Used interjectionally to denote acceptance of a wish, proposal, &c.

"Done! the wager?" — Shaks.

Donce', *n.* [Fr. *donné*, from Lat. *donare*. See *DON*.] The recipient of a gift, grant, or donation; — opposed to *donor*.

Donegal, (*dun-e-gawl'*), a maritime co. in the N.W. of Ireland, in Ulster, bounded by cos. Londonderry, Fermanagh on the S.E. and S., and on all other sides by Donegal Bay and the Atlantic Ocean. It contains 1,193,443 acres, of which about 393,200 acres

arable, and the balance waste. *Rivers*, Swilly and Leenan. *Surface*, mountainous. The shores are greatly indented, and the co. contains Loughs Swilly and Mulroy, with Sheephaven, Gliddore, Guybarra, and Lochrus bays, and many islands off the coast. The inland lakes are also numerous, the principal of which is Lake Derg, in which is the famous island "St. Patrick's Purgatory." *Prin. towns*, Ballyshannon and Letterkenney, with the ports of Donegal, and Killybegs.

Donegal, in *Pennsylvania*, a village and township of Butler co., about 7 m. N.E. of Butler.

A village and township of Washington co., bordering on W. Virginia.

A post-village and township of Westmoreland co., about 44 m. E.S.E. of Pittsburgh.

Don'elson, in *Tennessee*. See FORT DONELSON.

Don'eraile, a market-town and par. of co. Cork, prov. Munster, Ireland, on the Awbeg River. The ruined castle of Kilcolman, in the vicinity, was a favorite residence of the poet Spenser. *Pop.* of the town 2,700.

Don'etz, a river of S. Russia, the chief affluent of the Don, into which it falls 450 m. from its source.

Dongo'la, a prov. of Upper Nubia, in Africa, lying between Lat. 18° and 19° 30'. Bounded on the N. by Mahass, and on the S. by the country of the Sheygya negroes. Its greatest breadth is little over 3 m. The chief town is New Dongo'la, on the Nile, with a pop. of 6,000. *Manf.* Indigo. *Exp.* Slaves. Ibrahim Pasha captured it from the Mamelukes in 1820.

Dongo'la, in *Illinois*, a township of Union co., about 25 m. N. of Cairo.

Dongo'la, in *Indiana*, a village of Gibson co., on Patok Creek, abt. 14 m. E. of Princeton.

Dongola'wee, n. (*Geog.*) A native or inhabitant of Dongola, Africa.

Don', n. (*Naut.*) A vessel peculiar to the coast of Coromandel, Hindostan.

Doniferous, a. [*Lat. donum*, and *ferre*, to bear.] Bearing gifts.

Doniphan, (*dōn'e-fān*), in *Kansas*, a N.E. co., next to Missouri. *Area*, abt. 390 sq. m. *Rivers*, Missouri and Wolf rivers. *Surface*, diversified. *Soil*, fertile. *Min.* Coal. *Cap.* Troy.

A post-town of the above co., on the Missouri River, abt. 25 m. above Leavenworth.

Doniphan, in *Missouri*, a post-village, cap. of Ripley co., on Current River.

Donizetti, GAETANO, a celebrated Italian musical composer, b. at Bergamo, 1798. He was educated under Mayer and Mattei, and before he had completed his 20th year he had produced *Enrico di Borgogna*, an opera in which Madame Catalani sustained the principal character. This was rapidly succeeded by others; and his fertility of invention may be gathered from the fact, that, besides other musical compositions, he produced in all 63 operas, many of which, such as *Anna Bolena*, *Elisir d'Amore*, *Lucia di Lammermoor*, *La Figlia del Reggimento*, and *Don Pasquale*, have taken permanent possession of the stage. His mind gave way in 1844; and after four years' residence in a maison de santé near Paris, he was removed to Bergamo, where he d. in 1848.

Donjon. Dun'geon, n. [*Fr. donjon*.] The central building, or keep, of an ancient castle, to which the gar- rison could retire in case of necessity. *Fig.* 848 is a plan of the Tower of London, in which A is the donjon, and B the barbican.—Prisoners were generally confined in the basement story of the D., and from this cir-

Fig. 848.—THE TOWER OF LONDON.

instance the word, which is now written *dungeon*, has been taken to express any dark and dreary prison-cell; but more particularly one which is partially or entirely below the surface of the ground.

Don Juan, (*Lit.*) A legendary or mythical character prevalent in Southern Europe, and intended as a rep- resentative embodiment of sensuality and want of faith. It stands in contrast to Goethe's *Faust*, which repre- sents rather a crafty and subtle rationalism tend- ing towards the same ends. The legend of *D. J.* represents the hero as a profligate man, who gives himself up en- tirely to his own selfish pleasures, especially to that of love. The versions are numerous, but bear a close re- semblance to one another. The principal events are as follows: The scene is laid at Seville, and *D. J.* is repre- sented as belonging to a high and celebrated family. His chief object is the seduction of the daughter of a governor at Seville. Finding that the father opposes his designs, he stabs him in a duel. Afterwards, forc- ing his way into the family tomb of the murdered man, he orders a feast to be laid out, and sneeringly invites the marble statue which had been raised to his victim to join him at the banquet. The statue does appear, and, seizing *D. J.*, both of them sink together into hell. The genuine legend of *D. J.* was first put into form by Gabriel Tellez (Tirso de Molina), in *El Burlador de Sevilla y Convivencia de Pedro*. This drama was trans- lated to the Italian stage about 1620, and soon found its way to Paris, where numerous versions of it, among which Molière's *Festin de Pierre*, (1669,) made their

appearance. It was brought on the English stage by Shadwell, under the title of *The Libertine*, (1676.) In the end of the 17th c. a new Spanish version of Tellez's play was prepared by Antonio de Zamora, and brought on the stage. It is this version that forms the ground- work of the later Italian versions, and of Mozart's opera. It was first put into an operatic form by Vin- cenzo Righini, in *Il Convitato di Pietra*, (1777;) the text of Mozart's *Don Giovanni* was written by Lorenzo da Ponte, (1787.) Through this famous opera the story became popular all over Europe, and has since furnished a theme for numbers of poets, playwrights, and writers of romance. A. Dumas has a drama, *Don Juan de Ma- ranna*; Byron's *Don Juan* follows the name, and in so far the character of the original; and Prosper Mérimée's novel, *Les Amos du Purgatoire, ou les Deux Don Juan*, is founded upon it.

Don Juan, in *Indiana*, a post-office of Perry co.

Donkey, (*dong'kē*), n. [Probably from *dun*, and *dim. kin*.] A nickname said to be applied to an ass from his color: an ass of any kind.—See ASS.

—A stupid person; a thick-headed fellow. (Used in con- tempt.)

Donkey-engine, n. (*Mach.*) An auxiliary engine, used principally for pumping water into boilers, lifting heavy weights, &c.

Donkey-pump, n. (*Mach.*) A steam-pump em- ployed in forcing water into boilers.

Don'na, n. [*It.*] In Italy, a title of respect or ceremony used in addressing a lady; as, *Donna Julia*.

Don'na Aña, or ANNA, in *New Mexico*, a S.E. co., bor- dering on Texas. *Area*, abt. 15,000 sq. m. *Rivers*, Rio Grande del Norte and Rio Pecos. *Surface*, mountain- ous. *Soil*, generally fertile. *Cap.* Donna Aña. *Pop.* (1890) 9,191.

Donna Aña, in *New Mexico*, a village, cap. of Donna Aña co., on the Rio Grande del Norte, abt. 45 m. N.N.W. of El Paso, Texas.

Don'naville, in *S. Carolina*, a post-office of Abbe- ville dist.

Don'nat, n. [A corruption of *do naught*.] In some parts of England, a term applied to an idle, worthless fellow.

Donne, JOHN, D.D., (*don*), an English divine and poet, b. 1573. At the age of 19 he abandoned the Roman Catholic for the Protestant religion, entered holy orders, and was made chaplain to King James I., Dean of St. Paul's, and Vicar of St. Dunstan's. D. 1631.—Dr. D. was a man of great wit, learning, and gravity. His satires are highly praised by Dryden, who calls him "the greatest wit, though not the greatest poet, of our nation." They were rendered into modern English by Pope.

Don'nelson, in *Illinois*, a P. O. of Montgomery co.

Don'nelville, in *Ohio*, a post-village of Clarke co., a few m. W. of Springfield.

Don'ner Lake, in *California*, a P. O. of Nevada co.

Don'nington, a village of England, near Newbury, in Berkshire. It is celebrated for the remains of its noble Norman castle, the birthplace of Chaucer, the

Fig. 849.—DONNINGTON CASTLE.

(From a drawing by Buck.)

"father of English poetry," and which sustained vigor- ous sieges both during the wars of the Roses, and the great civil war between Charles I. and the Parliament.

Don'nism, n. [See DON.] A term used colloquially at the English universities, expressive of lofty carriage, assumption of dignity, or self-importance.

Don'nybrook, or ST. MARY'S, a parish of Ireland, co. Dublin, containing the towns of Irishtown, Ringsend, and Sandymount; once notorious for the festival, held annually, known as *Donnybrook Fair*; *pop.* 10,000.

Do'nor, n. [*Fr. donneur*, from *lat. dono*.] One who presents, grants, gives, or bestows; a benefactor; one who confers a gift or favor gratuitously; as, a *donor* to the poor.

(*Law.*) He who makes a donation.

Don Pe'dro's Bar, in *California*, a village of Tuolumne co., on the Tuolumne River, abt. 20 m. S.W. of Sonora; *pop.* abt. 300.

Don Quixote. See CERVANTES.

Don'ship, n. [See DON.] Degree, condition, or quality of a person of gentle blood or social importance.

Dont'lin, in *Montana*, a village of Missoula co., on Hell Gate River, abt. 130 m. N. of Bannock City.

Do'num, n. In Turkey, a land-measure, comprising 40 square paces.

Doodle, (*dōd'ul*), n. [*Scot. dawdle*, to be indolent or slovenly.] A trifter; a half-witted fellow; a num- skull; an idler.

Doo'dle-sack, n. [*Ger. dudelsack*.] A cant name for the Scottish bagpipe. (Used principally in the N. of England.)

Dook, n. [*Scot.*] A wooden plug, or brick, inserted in a wall.

Doo'leyville, in *Minnesota*, a post-office of Scott co.

Doo'lie, n. [*Ind.*] In India, a term applied by the natives to a palanquin, sedan-chair, or litter.

Doo'lie-wallah, n. [*Ind.*] The bearer of a doolie.

Dool'y, in *Georgia*, a S.W. central co. *Area*, about 705 sq. m. *Rivers*, Flint river, Lumpkin's Gum, and Cedar creeks. *Surface*, level. *Soil*, mostly fertile. *Cap.* Vienna. *Pop.* (1890) 18,146.

Doom, v. a. [*A. S. dēman*, to judge, to think; *Fris. dema*, to perceive.] To condemn to any punishment; to consign by a judicial decree or sentence; to pro- nounce judgment on; as, to *doom* a man to death.—To destine; to command and determine by judicial author- ity; to fix irrevocably the fate or direction of.

"Destin'd to love, your eyes are doom'd to reign."—*Granville*.

—To mulct; to condemn or punish by a penalty.

"Doomed to go in company with pain."—*Wordsworth*.

n. Judgment; judicial sentence; determination affect- ing the fate or future state of another: sentence: act of condemnation; decree.—State to which one is doomed or destined; fate; destiny; lot; ruin: destruction.

"A love that took an early root, and had an early doom."—*Hervey*.

Doom'age, n. A fine or penalty.

Doom'ful, a. Having powers of doom or destruction.

Doom'palm, n. (*Bot.*) See HYPPHENE.

Dooms'day, **Domes'day**, n. The day of final doom or judgment; the great day when all men are to be judged and consigned to endless happiness or misery.—The day of sentence, condemnation, or doom.

"All-souls' day is my body's doomsday."—*Shaks*.

Dooms'day, or **Domes'day Book**, n. (*Eng. Hist.*) One of the most ancient and valuable records of England, framed by order of William the Conqueror, to serve as the register from which judgment was to be given upon the value, tenure, and service of lands there- in described. According to some historians, the survey was begun in 1080 or 1083; according to others, at the close of 1085. The book itself records its completion in 1086. The work appears to have been known by the other names of *Rotulus Wintonie* (Roll of Winchester); *Liber de Wintonia* (Book of Winchester, in consequence of its being at one period preserved in that city); the *Liber Censualis Anglie* (Rate-book of England); *Scriptum Thesauri Regis* (Record of the King's Treasury).

Dooms'ter, n. Anciently, the name of the public headman in Scotland.

Door, (*dōr*), n. [*A. S. duru*, *dyr*; *L. Ger. dör*; *Ger. thür*; *Dan. dør*; *Icel. dyr*; *Goth. daur*.] (*Arch.*) The movable panel by which the doorway or entrance to any building, apartment, closet, or court is closed. The most common kind of D. consists of boards joined to- gether, and nailed to transverse strips of wood. Such as these are called *ledge-doors*. They are hung on staples, and fastened by a latch; they are principally used for work-shops, out-houses, offices, and walled gardens. The ordinary house-door is fastened to one side of the door- way by hinges (see HINGES), on which it swings. It is secured by a box-lock fixed to the inner side, or by a mortise-lock, which is buried in the lock-rail, and worked by handles projecting on either side. These D. are made of panels fixed in a solid frame-work, and finished by mouldings of different kinds, which surround the panel. The horizontal pieces of the frame are called *rails*, and the vertical pieces *styles*. D. are technically described by the number of panels they contain, and by the kind of moulding with which they are finished. When they move on hinges, like the ordinary doors of apart- ments, they are termed *swing-doors*. Large double D., used to separate any long room, are called *folding-doors*. A *jib-door* is a D. in a wall, which cannot well be de- tected when closed. A *rolling* or *sliding-door* is one which travels on rollers, or in a groove, parallel and close to the wall in which is the aperture that it is in- tended to close. A smaller D., which closes an opening cut in the entrance-door of a court-yard or large build- ing, is called a *wicket-door*. A *trap-door* is a D. cut in the floor to give access to cellars, or open parts under the roof of a house. D. of large public buildings are sometimes made of brass, or even of stone or marble.

See DOORWAY.

—Passage; avenue; means of approach or access; as, to open a *door* to temptation.—Entrance; portal;—and the inclosure, apartment, or house to which it gives ac- cess; as, I was never inside my neighbor's *door*.

Out of doors, out of the house; in the open air; abroad; as, to get kicked out of doors.—In doors, or within doors, under shelter; within the house; beneath a roof; as, to pass a day in doors.—Next door, or next door to, close to; just adjacent; in near proximity; as, a next-door neighbor.

"A riot unpunished is next door to a tumult."—*L'Estrange*.

To lie at one's door, or at my or your door, to be im- putable to; as, "the fault lies wholly at my door."—*Dryden*.

Door, in *Wisconsin*, an extreme E. co., forming a narrow peninsula between Green Bay and Lake Michigan. *Area*, abt. 450 sq. m. *Cap.* Sturgeon Bay. *Pop.* (1895) 16,969.

Door Creek, in *Wisconsin*, a post-office of Dane co.

Door-case, n. The frame-work in which a door is set.

Door'ga, Dur'ga, n. (*Hind. Myth.*) A Hindoo divinity; the wife of the god Siva.

Door-keeper, n. A porter; a janitor; one who keeps watch or guard at a door; as, the *door-keeper* of the House of Representatives.

Door-nail, n. The knobby projection on which the knocker of a door falls when exercised; — whence, the common, proverbial saying, *dead as a door-nail*.

Door-plate, n. A metallic plate, placed in the centre, or on one side, or in the lintel of a door, inscribed with the name of the occupier of the house, &c.

Door-stone, Door-step, n. The threshold-stone in a doorway.

Door-stop, n. (*Carp.*) A door-post.

Door Village, n. in *Indiana*, a post-village of La Porte co., abt. 3 m. S.W. of La Porte.

Door-way, n. An aperture in the wall of any building, or in the partitions, to allow of ingress and egress to and from the building itself, and the various apartments that are within it. In ordinary buildings, a strong framework of wood, to which the door is hung, is fastened to bond-timbers inserted in the sides of the opening. The vertical pieces or sides of the framework are called the *jambes*, and the transverse piece at the top, the *lintel*. A piece of wood called the *cill*, or *sill*, is sometimes put transversely between the feet, or lower ends of the jambes, to give strength and firmness to the framework. For entrance-doors, the sill is generally of stone. The framework is finished around the edge nearest the wall of the room or passage by a moulding. Doorways vary according to the size and importance of the building or apartment to which they give access, but the dimensions of an ordinary *D.* are about 7 by 3 feet. The treatment of the *D.* forms a striking characteristic feature in the various styles of architecture. In Egyptian and Assyrian architecture, the *D.* are surmounted with square lintels. The openings, particularly in the former, were wider at the bottom than at

Fig. 850.—TOWER OF THE WINDS, ATHENS, (as it was).

the top, and surrounded by a flat moulding enriched with sculpture. The lintel was generally very deep, and surmounted with a projecting cornice, and colossal figures were usually placed on either side of the opening. The Grecian door, of which the Horologium at Athens (fig. 850) exhibits a fine model, was rectangular in form. It was surrounded by mouldings, and sometimes surmounted with a cornice supported on brackets. In early Roman architecture, the form of the *D.* was the same; but at a later period, the semicircular arched heading was introduced, which subsequently became the characteristic feature of the Byzantine and Romanesque styles. In Arabian and Gothic architecture, the head of the *D.* assumed a pointed form, and, in the latter, the opening was surrounded by a great variety of bold and deep mouldings, richly ornamented. The decoration employed became more and more elaborate in the transition from the Norman to the Perpendicular styles. The form of the doorway is determined by the architectural style of the building in which it is placed.

Doquet, (dok'et), n. Old spelling of DOCKET, *q. v.*

Dor, n. [*A. S. dora*, a drone.] (*Zoöl.*) A name given to a species of COCKCHAFER, (*q. v.*)

Do'ra, n. in *Indiana*, a post-village of Wabash co., on the Salamonie River, abt. 8 m. E. of Wabash.

Do'ra, n. in *New York*, a village of Broome co., about 18 m. E. of Binghamton.

Dora'do, n. [*Sp.*, gilt.] A southern constellation formed by Boyer: — sometimes called *Sword-fish*.

Do'rau, n. in *Iowa*, a post-office of Mitchell co.

Do'raville, n. in *New York*, a post-office of Broome co.

Dor'eas, n. a female of Joppa, whom Peter restored to life, and who afterwards devoted her time to acts of

benevolence, especially in making clothes for the poor; from which circumstance the modern associations for relieving poor women in their confinement, with clothes and necessaries, have received the name of *Dorcus Societies*.

Dor'cheat River. See DAUCHITE.

Dor'chester, n. a town of England, cap. of Dorsetshire, situate on an ascent from the river Frome, 8 m. N. of Weymouth. *Manuf.* Serges. *Pop.* 6,915.

Dor'chester, n. an E. co. of prov. of Quebec, extending from the St. Lawrence River on the N.W. to the State of Maine on the S.E. *Area*, about 2,050 sq. m. *Rivers.* Chandière and Etchemin.

Dorchester, n. a river-port, cap. of Westmoreland co., New Brunswick, on the Peticodiac River, near its entrance into Shepody Bay.

Dorchester, n. in *Georgia*, a village of Liberty co., abt. 5 m. from Sunbury.

Dorchester, n. in *Illinois*, a post-village of Macoupin co., abt. 24 m. N.E. of Alton.

Dorchester, n. in *Iowa*, a post-village of Allamakee co., abt. 18 m. W.N.W. of Lansing.

Dorchester, n. in *Maryland*, a S.E. co., between Chesapeake Bay on the W., and the State of Delaware on the E. *Area*, about 640 sq. m. *Rivers.* Choptank, Nanticoke, Hudson, and Marshy Hope. *Surface*, level; *soil*, mostly marshy. *Cap.* Cambridge.

Dorchester, n. in *Massachusetts*, a town of Norfolk co., on Boston Bay, which, in 1869, has been annexed to the city of Boston. It is laid out in numerous fine villas, and is a favorite residence for the business-men of Boston. The first American water-mill was built here in 1633; and to *D.* also belongs the honor of having originated the New England cod-fishery.

Dorchester, n. in *New Hampshire*, a post-township of Grafton co., abt. 50 m. N.N.W. of Concord; *pop.* abt. 700.

Dorchester, n. in *New Jersey*, a village of Cumberland co., on Maurice River, abt. 20 m. S.E. of Bridgeton.

Dorchester, n. in *S. Carolina*, a village of St. George's. Dorchester parish, Colleton dist., near the Ashley River, and abt. 18 m. N.N.W. of Charleston. It is the principal scene of Simms' romantic tale of the *Partisan*.

Dord, or Du'rid, (MAJOR AND MINOR.) two rivers of N. Italy. The Major rises at the foot of Little St. Bernard, and falls into the Po at Crescentino. The Minor rises in the Cottian Alps, and empties into the Po near Turin.

Dordasville, n. in *Arkansas*, a village of Pope co.

Dordogne, (dor'done), n. a large river of France, formed by the union of the Dor and Dogne, which, after a course of 296 m. falls into the Garonne, 15 m. below Bordeaux.

—A department in the S.W. of France, formed of the ancient province of Périgord, with small portions of Limousin, Angoumois, and Saintonge, lies in Lat. 44° 35' to 45° 43' N., and Lon. 0° to 1° 28' E. *Area*, about 3,500 sq. m. *D.* is watered by the Dordogne, and by its tributaries, the Drome, and the Higher and Lower Vézère. The surface is for the most part hilly, and covered with broom and underwood, with here and there a valley of extraordinary beauty and fertility. There is a great deficiency of corn, but the want, as an article of food for the inhabitants, is supplied to some extent by the immense produce of the chestnuts, which, with the walnut and the oak, are the prevailing trees in the forests. The climate is generally mild. Mines of coal, iron, and manganese are worked; marble, alabaster, and mill-stones are quarried. The manufactures are coarse woollens, hosiery, brandy, oil, paper, &c. *D.* carries on considerable trade in iron, wine, hams, and truffled turkeys. The arrondissements are five in number — viz., Bergerac, Nontron, Périgueux, Ribérac, and Sarlat, with Périgueux as capital.

Doré, PAUL GUSTAVE, a French artist, b. at Strasburg, 1832. He is the most German in style of the French artists, and is well known as the illustrator of Rabelais; by his still more delightful pictorial commentaries upon Balzac's wild *Contes Drolatiques*; and by his illustrations of the legend of the *Wandering Jew*, in a series of grotesque yet elegant pictures, which bear the stamp of Holbein and A. Dürer, combined with the racy humor of Hogarth. In 1861, *D.* published 76 large drawings illustrative of the *Divina Comedia* of Dante; and, in 1863, a series of wonderful folio illustrations of *Don Quixote*. His illustrations of the Bible, published in 1866, are of the highest excellence; but his illustrations of Milton, published the same year, want originality, and demonstrate that the artist has not caught the spirit of the poet's sublime imagination. *D.* in Paris, January 23, 1883.

Dore, (dor), n. a mountain in France. See MONT DORE.

Do'ree, n. (*Zoöl.*) See DORY.

Do'rema, n. [*Gr.*, a gift.] (*Bot.*) A genus of plants, order *Apiaceæ*. The species are natives of Persia, one of which, *D. ammoniacum*, supposed to yield the *Gum ammoniac*, abounds in a milky juice, which exudes on the slightest puncture, and dries in the form of little rounded lumps or tears. The ammoniacum of the ancients has been, however, ascribed to *Ferula tingitana*.

Doria, (do're-dä), n. the name of an illustrious family of Genoa, the chief of whom were: — OBERTO, distinguished for a naval victory over the Pisans, 1284. — LAMBA, who defeated the Venetian admiral Dandolo, 1298. — PAGUINO, who defeated the Venetian admiral Pisani, 1352-1354. — LUCIEN, killed in a battle with the Venetians, in which his fleet was victorious, 1379. — PIETRO, who was compelled to surrender his whole fleet to Victor Pisani, 1380. — ANDREA, surnamed the "Father and Defender of his country," and created Prince of Melfi by Charles V., n. 1468. He early adopted the profession of arms, and distinguished himself in the service of different Italian states. At length his own country required his assistance against the rebels of Corsica, and these he defeated.

He was then appointed commander-in-chief of a fleet of galleys, and inflicted severe loss on the African pirate. On the revolution breaking out in Genoa, he entered into the service of Francis I. of France, which he quitted for that of Pope Clement VII., but shortly afterwards joined the party of Charles V. of Spain, and succeeded in driving the French out of Genoa. Charles now offered to invest Doria with the sovereignty of Genoa, but nobly refused it, stipulating only that the republic should continue under the imperial protection. Having delivered Genoa from the oppression of the French yoke, he was, in 1528, honored by the senate with the title of the "Father and Saviour of his country," and had a statue erected to his honor, and a palace built to him. He made his name famous throughout the Mediterranean by his naval exploits, particularly against Barbarossa and the African corsairs. *D.* 1560.

Dorian, a. Pertaining to Doris, in ancient Greece.

Doric, a. [*Fr.* *Dorique*, from Lat. *Doricus*, from *Doris*.] Pertaining or having reference to Doris, or to Dorians; as, the *Doric* dialect.

(*Arch.*) One of the five orders, and the oldest, strongest, and simplest of the three Grecian orders. The examples given in Fig. 851, are: 1, from the temple of Theseus at Athens, which is considered one of the best examples of Grecian Doric; and 2, from the Palazzo dei Ragione, at Vicenza, by Palladio, which is one of the best examples of Roman Doric. The principal points

1. Grecian Doric.

2. Roman Doric.

Fig. 851.

which the Grecian differs from the Roman Doric is that the former stands at once on the pavement of building, without socle, tori, or fillets; and that it presents a more pyramidal section than the latter, from great diminution given to it. Its flutes, too, are not deeply sunk; the capital has no astragal, but only six annulets to separate it from the shaft.

(*Mus.*) Denoting one of the three ancient kinds of music. Its character was majestic, inciting to cool and deliberate courage.

Doric Dialect. One of the four dialects of the ancient Greek language, being that spoken by the inhabitants of Doris. It was characterized by a certain roughness and harshness, and was much less polished than either the Ionic or Attic. Pindar, Theocritus, &c. Bion wrote in this dialect.

Doricism, Dor'ism, (dor'ik-izm), n. A phrase of the Doric idiom.

Dorippe, n. (Zoöl.) A genus of decapod Crustacea, the species of which exist at great depths in the sea. It is probable that they use the small feet, which are directed towards the back, to cover themselves with foreign bodies for concealment. They have been found in the Mediterranean, Adriatic, and Indian seas.

Do'ris, (Myth.) A goddess of the sea, daughter of Oceanus and Tethys, married her brother Nereus, whom she had 50 daughters, called *Nereides*.

(*Geog.*) A country of Greece, between Phocis, Thessaly, and Acarnania. It received its name from Dorus, the son of Deucalion, who made a settlement there. Its inhabitants colonized several different parts, which bore the same name as their native country. The most famous of these is *D.*, in Asia Minor, of which Halicarnassus was once the capital. — In Modern Greece, *D.* forms an eparchy of the government of Phocis.

(*Zoöl.*) A genus of naked Gasteropodous marine mollusca, which are likewise destitute of any internal calcareous plate. The mantle is covered with retractile papillae, and separated from the foot by a distinct duplicature. Towards this anterior margin are placed the two superior tentacula: these are retractile, surrounded at the base with a short sheath, and supported on

Fig. 852.—DORIPPE SIMA.

Fig. 853.—DORIS.—a, gill.

a slender stem, having an enlarged compound plicated summit. The mouth is in the form of a short trunk, leading to fleshy lips, within which the tongue is placed. The gullet is a simple membranaceous tube, terminating in a stomach. It is obvious, from the structure of the digestive organs, that the species subsist on soft food. The spawn is gelatinous and of a white color, and is deposited on sea-weed and stones.

(Astron.) An asteroid discovered by Goldschmidt in 1857. **Dork'ing**, a town of England, co. Surrey, 22 m. S.W. of London, celebrated for its breed of poultry: pop. 9,920.

Dormancy, *n.* State of being dormant; quiescence; abeyance; sleep.

Dormansville, in New York, a P. O. of Albany co. **Dormant**, *a.* [Fr., from *dormir*; Lat. *dormirus*, from *dormio*, to sleep.] Sleeping; at rest; quiescent; not in action; neglected; not used; suspended; inactive; not in exercise; as, to revive a *dormant* claim.

(Her.) See COUCHANT.

D. partner. (Com.) See SLEEPING-PARTNER.

D. window. (Arch.) See DORMER.

Dormant, **Dormant-tree**, *n.* (Arch.) A large beam lying across a room; a joist or sleeper.

Dormer, **Dormer-window**, **Dormant-window**, *n.* (Arch.) A window pierced through a sloping roof, and placed in a small gable which rises on the side of the roof, the frame being placed vertically on the rafters. (Fig. 554.) They are used to light attics or sleeping-rooms in the roof, instead of a skylight, which is in the plane of the roof.

Fig. 554. — DORMER.

Dormitive, *n.* [Fr. *dormitif*.] (Med.) An opiate; a narcotic; a soporific.

D. causing sleep; having somniferous properties.

Dormitory, *n.* [Lat. *dormitorium*; Fr. *dortoir*.] A sleeping-chamber, but especially applied to large apartments in a monastery, school, &c., calculated to hold a great number of beds.

Dormouse, *n.*; *pl.* DORMICES. (Zool.) See MYOMYS.

Dorn, *n.* (Zool.) See RAHIDE.

Dornach, (*dor'nak*), a village of Switzerland, 20 miles from Soleure, remarkable for the victory obtained by the Swiss over the Austrians in 1499, and which gave Switzerland her independence. Pop. 8,000.

Dornoch (**Frith of**), an arm of the sea in Scotland, dividing the county of Sutherland from Ross. The small town of Dornoch stands on its N. coast.

Dornock, *n.* A kind of stout linen cloth for table use; originally manufactured at Dornock, Scotland, whence its name.

Dor's Gold Mines, in S. Carolina, a post-office of Abbeville dist.

Dorogh, a town of Hungary, 20 m. N.N.W. of Debrecen; pop. 7,420.

Dorogobush, DOROGOBOUGE, a town of Russia, in the gov. of Smolensk, is situated on the left bank of the Nieper, about 50 m. E.N.E. of Smolensk. It is a small town, but pretty and well built, and has some manufactures. Pop. 3,000. — At *D.*, the French, under Prince Eugene, in their retreat from Moscow, encountered many disasters.

Dor'ron, *n.* [Gr., from *didomi*, to give.] A hand-breadth, palm; among the Greeks, their bricks or tiles were termed *tetradoron*, 4-hands' breadth, or *pentadoron*, 5 hands broad.

Dor'riem, *n.* (Bot.) A genus of plants, order *Geraceae*.

Dor'pat, a town in European Russia, 150 m. N.E. of Riga, Lat. 55° 22' N., Lon. 26° 43' E. It is the winter residence of the wealthy Livonians, and is the seat of a celebrated university founded by Gustavus Adolphus in 1632, suppressed in 1656 by the Muscovites, and reestablished by Alexander I. in 1802. Pop. 20,861.

Dor'rr, DORR-BEETLE, DORR-FLY, *n.* (Zool.) The COCKCHAFF-q. v.

Dor'rr, in Illinois, a thriving township of McHenry county.

Dor'rr, in Michigan, a post-village of Allegan co., in Dorrvnship.

Dor'rance, in Illinois, a village of Stark co.

Dor'rance, in Pennsylvania, a post-township of Luzerne co.

Dor'rr Rebellion. (Amer. Hist.) See RHODE ISLAND.

Dor'rrville, in Rhode Island, a small village of Washington co.

Dorsal, *a.* [L. Lat. *dorsalis*, from Lat. *dorsum*, the back.] Pertaining to the back; as, the *dorsal* fin of a fish.

Dorsal, *n.* See VERTEBRA.

Dor'say, ALFRED, COMTE, chiefly celebrated as a leader in fashion, and as one of the handsomest and most accomplished men of his day, was the son of Gen. D'Orsay and was b. in Paris in 1798. He entered the army in early age, and was quartered at Valence in 1822, when he became acquainted with Lord and Lady Blessington (q. v.), and renounced his military career for the pleasure of their society. In 1827 he married Lord Blessington's only daughter by a first marriage, but a separation followed at no distant period; and Lord Blessington died at Paris in 1829. COMTE D'Orsay returned to England with Lady Blessington, where they became the centre of a circle highly distinguished for art, rank, literature, and accomplishments. In the later period of life he displayed considerable artistic talent and taste, as a painter and sculptor. Having shown kindness and hospitality to Louis Napoleon when an exile in London, the Prince President was not ungrateful to his

former friend, and in 1852, soon after the *coup d'état*, D'Orsay was nominated Directeur des Beaux Arts, with a handsome salary; but he did not live to enjoy it. D. 1852.

Dorse, *n.* [L. Lat. *dorsale*.] The back covering of a book.

Dor'sel, *n.* A panier or basket. — A canopy. See DOSEL.
